Hello,

I’m writing in regards to the WA State BOH considering adding HPV to the childhood immunization schedule for school attendance.

I’m very much opposed to this and ask that the Board does not add this vaccine to the immunization schedule. HPV is not a communicable disease. It is a sexually transmitted infection (STI). There is no reason why a child would need this immunization in order to attend school.

Please don’t add unnecessary immunizations and unnecessary amounts of aluminum, polysorbate 80 and other vaccine ingredients to our children’s growing bodies. Not only that but this vaccine comes with serious side effects. Hundreds and hundreds of girls have ended up with life-debilitating side effects, most ending up in wheelchairs, bed-ridden, with seizures or fainting spells, visual impairment and/or with extreme recurring pain and nerve damage. *Information from Dr. Mehlsen who heads an independent investigation into the HPV vaccine.

Please take the time to read the vaccine insert, study the reports from VAERS (the Vaccine Adverse Events Reporting System), and read the stories of those injured or have died as a result of this vaccine. Stories of Colton Berrett, Christina Tarsell, Chloe Brooks-Holder, Carly Steel and Mia Blesky just to name a few. Mia Blesky had her life turned upside down when as a 12 year old girl she was left tragically paralyzed from the neck down after receiving the HPV vaccine Gardasil. These are stories we need to listen to and as the Board of Health should be doing everything you can to stop any preventable injuries like this from happening to our children.

Thank you for your time in reading my email. I ask that you do NOT add HPV to the childhood immunization schedule.

Sincerely,

Meranda Davis

I would like to voice my OPPOSITION to adding Gardasil vaccine. HPV is not a public health crisis. *According to the American College of Pediatricians, the overwhelming majority (76%) of VAERS reports since 2006 with ovarian failure, premature menopause, and/or amenorrhea are associated solely with Gardasil. Making it a requirement for school does not make our schools safer or improve the health of our children! Please vote NO!

This vaccine is in no way necessary for school aged children, it is dangerous and deadly! I do not support this in any way. Please, please do the right thing and THINK about the well being of our our children. YOUR future doctors, pilots, teachers, artists, athletes, mammas, daddies, nurses, dentists, engineers, architects, politicians, and care takers.

Ashley Schick, I do not consent

Hi,
I am concerned about the consideration of adding the HPV vaccine to the child immunization schedule.
Here is a long list of scientific articles and research studies on this specific vaccine’s ineffectiveness and risks a friend put together. I have had personal friends injured from this vaccine in their teen years and am gravely concerned about young children receiving it.

After Gardasil was licensed and three doses recommended for 11-12 year old girls and teenagers, there were thousands of reports of sudden collapse with unconsciousness within 24 hours, seizures, muscle pain and weakness, disabling fatigue, Guillain Barre Syndrome (GBS), facial paralysis, brain inflammation, rheumatoid arthritis, lupus, blood clots, optic neuritis, multiple sclerosis, strokes, heart and other serious health problems, including death, following receipt of Gardasil vaccine.

The Japanese government stopped giving the Gardasil vaccine in 2013 after health officials recorded nearly 2,000 adverse reactions, according to the Tokyo Times.
http://www.tokyotimes.com/side-effects-in-young-girls-take.../

There is the MIT and Stanford educated medical doctor who also has a Master’s Degree in Public Health? The one who is a vaccine developer and has worked for Merck, the manufacturers of the Gardasil vaccine? Dr. Harper has repeatedly spoken out against the HPV vaccine and raised serious concerns about whether it is safe. As reported by CBS News in 2009:http://www.cbsnews.com/news/gardasil-researcher-speaks-out/

The thousands of parents who belong to this non-profit, the parents who followed their doctor’s orders and got the “cervical cancer jab,” as they like to call it in the U.K.

Dear WSBOH,

I see your January 8th meeting agenda includes a discussion to consider adding HPV vaccine mandate for school entry. This vaccine is very controversial and should not be added to school requirements. Many people that choose to vaccinate skip this vaccine because they are unsure the risk of this vaccine outweighs the benefit.

Human papilloma virus is not an airborne virus so the immune compromised are not at risk of catching this virus simply by breathing the same air as someone infected with it. In fact, kids with HPV are allowed to go to school.

This vaccine is not necessary to protect students while in school therefore it should be left up to the parents and doctors to choose whether this vaccine is right for them.

Sincerely,
Barbara Jones
Monroe, WA

Dear School Board,
There have been over 500 deaths from this vaccine. It is NOT a necessary vaccine. HPV is absolutely curable and resolves on its own.

Please! Don’t do this. Look at the Vaers reports. Talk to pediatricians. It’s ridiculous to require this vaccine. The only one that really will benefit is Merck. My child, my choice!
The government has no business demanding an unnecessary vaccine. I vehemently oppose this.
Sincerely,
Penny West

Dear School Board,

There have been over 500 deaths from this vaccine. It is NOT a necessary vaccine. HPV is absolutely curable and resolves on its own.

Please! Don’t do this. Look at the Vaers reports. Talk to pediatricians. It’s ridiculous to require this vaccine. The only one that really will benefit is Merck. My child, my choice!
The government has no business demanding an unnecessary vaccine. I vehemently oppose this.

Sincerely,
Penny West
1731 Grand Ave

Please DO NOT add the HPV vaccine to the other required vaccines for school attendance in WA. Though I see sources proclaiming that the benefits of this vaccine outweigh the risks and others that the unknowns and the risks outnumber the benefits, the fact remains that this vaccine is not a public health issue in the same way that measles is because it is sexually transmitted! Schools and laws have no business intervening in this medical decision which should be between a minor and his or her parent and a doctor. Thank you for your time and consideration.

~Brianna Lyon
Dear board,

I am writing to you with concern about the possibility of the HPV vaccine being added to the childhood immunization schedule for Washington state. As a parent I feel that this vaccine being mandated is an intrusion of the privacy of my children. HPV is not a communicable disease and is better monitored through annual screening after sexual activity has begun. I very much oppose this vaccine being mandated.

Thank you for your time,

Sarah Perkins
Mother of 3 tween/teen daughters.

Please DO NOT add the HPV vaccine to required mandatory vaccines for school aged children. I am PRO Vaccines. But this is not for a disease or illness that can be transferred in a school setting. All 4 of my own children are up to date on vaccines. I am for keeping my family and those around me safe and healthy. I even have a son who has had a kidney transplant. I get low immunity issues. I have spoken with my childrens doctor. This vaccine is too new. To many unknowns still, like affecting reproductive health.

To whom it may concern:

It has come to my attention that there will be discussion regarding the HPV vaccine to be mandatory for a child to attend school.

With all due respect, unless they are allowing and/or teaching children to have sexual intercourse at school then this should never be considered. It should be left to the parents and the child, when the child is of an understanding and consenting age, not to lawmakers.

Sincerely,

Alicia Jonas

As a nurse, I am profoundly interested in the health of our young people. As a foster parent, I have raised other people’s disabled children. I believe immunizations are the responsibility of the parent (or caregiver) and the child. There is enough substantial evidence of harm being done to immunized children to warrant a closer look into mandatory immunizations. For the government to try to protect a society against itself brings many questions of health safety to mind. One wonders why in our modern industrialized society we have a greater annual increase in children with learning deficits, ADHD, autism spectrum dysfunction and other issues affecting classroom learning? We immunize more and more and are assisting with learning deficiencies less and less. Ask any classroom teacher. If the argument is for saving government dollars in medical expenses, let me bring up the conversation of promoting incentive sterilizations for drug addicts...Oh, the taxpayer fortunes that would be saved if that were allowed, (or mandatory)! To the Washington State Health Board and State Legislature, I implore you look again at statistics to discover our mandatory immunizations may be creating a whole other spectrum of disease. I am asking not to add HPV vaccines or any other to a mandatory immunization program. Thank you.

Dear Washington State Board of Health:

I am writing to express my strong opposition to adding HPV vaccines to the list of required childhood vaccinations for Washington state school children. HPV is not spread in a school or daycare setting, so it poses no risk to the public if someone shows up at school or daycare with an HPV infection. 95% of HPV infections go away on their own, with no treatment, and symptoms are mild. Additionally, the American Cancer Society says cervical cancer is preventable with screening such as Pap smears.

HPV is not a safe vaccine. For details on this vaccine’s regulatory failures, corruption, how it was fast-tracked through the approval process, how important safety concerns were egregiously ignored, and the result – thousands of injured boys and girls, please read *HPV: Vaccine in Trial* by Mary Holland, JD; Kim Mack Rosenberg, JD; and Eileen Iorio. Unfortunately, it is not fiction. It is a horror story and it is true.

The HPV vaccine is so dangerous that Japan removed it from their recommended list of childhood vaccines after a huge amount of adverse events occurred from the vaccine and damaged their citizens. They found this unacceptable, and so should you. According to the [Gardasil insert](#), there is a **2.3% chance of developing an autoimmune disease** after receiving the HPV vaccine. This means 2.3 out of every 100 children will develop a lifelong chronic disease such as arthritis, lupus, multiple sclerosis, etc. after receiving the HPV vaccine. That is statistically significant, and not a risk I would ever take with myself or my children, especially when effective HPV screening measures exist.

I strongly oppose the proposed rule change to add the HPV vaccine to Chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine Preventable Diseases. It is the right of parents to decide what liability-free products (with known dangers) are injected into our children’s bodies. Removing this parental right is a human rights violation and does nothing to advance public health.

Dear WA State Board of Health:

I am writing to strongly oppose adding the HPV vaccine to the schedule of required vaccines for school children. HPV is not caught in the school setting, and it should be up to the parents to decide if they want this vaccine for their children.

My friend experienced a serious adverse reaction immediately following this vaccine – a full body rash which took over a year to heal. Sadly, this is not a unique experience. HPV vaccines were fast-tracked through the approval process, and major safety issues were ignored. The result: thousands of severely injured boys and girls, and parents left to deal with healing their children as best as they can while going broke financially. You see, vaccine injuries are generally not covered by insurance.

Do the right thing and do not add this highly problematic vaccine to the schedule. After extensive research on this vaccine, I would never give it to my children and I cannot recommend it to friends or family.

Sincerely,
Corrin Jackson

Thank you for taking the time to read this.
I strongly advise making the HPV vaccine a mandatory vaccination for public education. Prior
to living in Washington state I lived in Utah & know the horror a family faced there. If you
haven't read about Colton Berrett I'm begging you to look further into this.
Taking away parental rights in this fashion is extremely disturbing. Please do the right thing.
Thank you.

Good evening,

I am taking a few minutes today to write in regards to the proposed Meeting Agenda Item #7, “Petition for Rulemaking to add HPV to chapter 246-105WAC Immunization of Child Care and School Children Against Certain Vaccine-Preventable Diseases”. I am very much opposed to adding the HPV vaccine to Washington’s schedule.

Every vaccine should be voluntary. I would go so far as to suggest the mandatory public school schedule be struck down altogether.

Absolutely, the state can provide the schedule as a suggestion, as a recommendation. But all medical procedures/preventatives should be voluntary. Only tyranny seeks to take away basic human rights. This is why the United States signed the Nuremberg Code in 1949.

By definition, all medicine is considered experiential. No one knows how an individual’s body will respond to any foreign material/treatment. This is why possible side effects (and death) are listed on the vaccine insert page as well as on over the counter medicine warnings, and why patients must sign documentation prior to procedures indicating their full understanding and consent to said procedure. The government link is provided here: https://history.nih.gov/research/downloads/nuremberg.pdf

Technically, immunization exemption forms should not even exist precisely because individual Constitutional liberties - basic human rights - should not be made subject to tyranny. If vaccine schedules were suggestions, then exemption forms would be inherently unnecessary.

I urge you to carefully consider the full implications of your actions. All lawmakers hold a sacred duty to uphold basic human rights, for this is what every law is founded on.

The question is simple - Does adding the HPV vaccine to the schedule potentially violate basic human rights? Yes, it does.

Does the existence of a required/mandated schedule potentially violate basic human rights? Yes, it does.

Any vote otherwise is a tyrannical assault on humanity.

To the WSBOH,

I would like to voice my comment to OPPOSE the petition to adding the HPV Immunization to the chapter 246-105 WAC mandated schedule for children. 1986 National Vaccine Injury Compensation Act decided that manufacturers are no longer liable for their injuries connected to their products. The VAERS is the federal passive voluntary Vaccine Adverse Event Reporting System that a Harvard Study found captures less than 1% of adverse events — yet that flawed system is all we have to attempt to quantify vaccine injuries.

*According to the American College of Pediatricians, the overwhelming majority (76%) of VAERS reports since 2006 with ovarian failure, premature menopause, and/or amenorrhea are associated solely with Gardasil.

*As of December 2019, the following have been reported to VAERS:
  63,979 HPV vaccine-related adverse events
  523 HPV vaccine-related deaths

*Of those, 650 adverse events and two deaths, in girls aged 11 and 13, occurred in Washington State. Gardasil is covered under the 1986 National Vaccine Injury Compensation Act. Injuries and deaths must go through what’s known as “Vaccine Court”, a no-fault no-jury system where vaccine makers do not have to participate. Several cases have made it through the lengthy and arduous process with the preponderance of the scientific evidence leading to the compensation of the victims.

HPV is a sexually transmitted disease and is not a high-risk priority for the state of WA children. Please OPPOSE adding Gardasil to the vaccination schedule. Where there is a risk there should always be a choice.

Thank you,
Lauren Huntington

Hello, I see there is a question to add Gardasil to the WA state board. Not every child is at risk for this disease. Please allow parents to make informed choices regarding their child’s health. Where there is a risk there must be a choice!!! Please protect parents rights and freedom to choose what shots our child gets. With an autoimmune disease myself, I need to have the choice for my child. Thank you.

Dear Dr. Pendergrass and members of the Washington State Board of Health,

I am writing on behalf of the advocacy group, Vaccinate Washington, to support Dr. Pendergrass’ proposal to add the HPV (human papillomavirus) vaccine to the schedule of vaccines required by WAC 246-105. About 35,000 Americans will be diagnosed with an HPV caused cancer this year, and many of them will die from this disease. Many VaxWA members have had personal experience with cancers caused by HPV, either in themselves or loved ones. I am one of these people, and my experience in dealing with my HPV-caused cancer has led me to share my story with the hope that others will not have to experience both the physical and psychological pain that all cancer patients endure. We have lost too many Americans to cancers caused by HPV. It is a modern miracle that science has given us a vaccine that can prevent cervical, anal, oropharyngeal, penile, vulvar, and vaginal cancers. This is a vaccine needed by both girls and boys, since the highest number of these cancers every year are oropharyngeal cancers that affect both men and women. We know there is a great deal of misinformation online about this vaccine and we want to support your point of view: this is a safe and effective vaccine, one that has been well-tested in studies all over the world and has an extremely low rate of serious side effects. HPV cancers are preventable. The HPV vaccine could prevent the vast majority of cancers caused by HPV from ever developing. Australia, which has led the world with it’s HPV vaccination program, is on track to actually eliminate cervical cancer in the next two decades.

Numerous studies have shown that the vaccine is incredibly safe and effective. I have compiled many of these studies on my HPVCancerResources.org website; take a look on the HPV Vaccine page. I urge you to review this information if you have any doubts at all about this fact. These studies are not just from the US, but include Australia, Scotland, the Nordic countries, and other parts of the world.

The vaccine is not perfect (none of them are), but the benefit/risk ratio is extremely high in favor of protecting people from developing cancer. I urge you to vote in favor of Dr. Pendergrass’ proposal. Should anti-vaccine groups try to sway you away from this vaccine, please remember that they are not going to give you valid information. This is not a “personal freedom” or religious issue. It is one of public health. Stories of vaccine injury are just that, stories, and as such many are unsupported by medical records backing up the claims. Anti-vaxxers who oppose this vaccine oppose ALL vaccines, which you can easily determine by simply asking them which vaccines they do approve of. They never answer this question, and will defer to some argument about how they only want better vaccines. We all want better vaccines, but that doesn’t mean we don’t use the current ones that have been shown to be very safe and effective. Ignore pseudoscience claims and debunked ideas (most of which come from attorneys, not scientists) that are employed to defame an extremely safe and effective vaccine. We are counting on you to know the difference between good and bad science when it comes to making decisions about our public health. Keep the great track record going by approving the addition of HPV vaccine to the schedule.
With great respect,

Stewart Lyman, PhD, member Vaccinate Washington

Dear members of the WA state board of health,

Happy new year and thank you for the work you do for our state.

I recently noticed that you have an agenda for including HPV vaccine to the schedule. As a parent, I feel that this vaccine should not be administered to children without proper screening criteria before the young children receive the HPV vaccine. The HPV vaccine is one of the vaccines which contains a very high dose of aluminum as an adjuvant. My son was injured by many of the childhood vaccines he had received until age 5. He has responded with severe eczema and developmental delays for vaccines containing high doses of aluminum like the hepatitis B vaccine. It wasn’t until many years later when we did a genetic test did we find out that he has the MTHFR mutation. There is plenty of peer reviewed research out there about the inability of persons with the MTHFR mutation to detox the heavy metals. The HPV vaccine is also not one tested against a true placebo which means that the test results in the vaccine insert are highly inaccurate. The vaccine has been studied against an aluminum adjuvant placebo.

Personally my family has spent thousands of dollars out of pocket the past 4 years in detoxing my son’s body of heavy metals. This has still not helped with recovery from it 100%. While “Prevention is better than cure” is considered common sense, for my family the experience has been “Preventing vaccine injury is better than cure”. This is the reason why parents like me believe in strengthening the immune system to face the challenges. The amount of resources spent by my family in terms of money and time is not something every parent can afford to do. It would be a devastating blow to low income families to sustain vaccine injured children for the rest of their lifetime. If we are truly interested in creating healthy individual for our society, we must start with providing good balanced nutrition and exercise which would be a better place to focus by our WA state Board of Health. So, I strongly oppose the proposed rule change to add the HPV vaccine to Chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine Preventable Diseases.

Below are some research about the HPV vaccine and aluminum adjuvants that I hope will be useful information to all of you in this decision.

- Unequivocal identification of intracellular aluminum adjuvant in a monocytic THP-1 cell line [https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4155332/](https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4155332/)
- Biopersistence and Brain Translocation of Aluminum Adjuvants of Vaccines [https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4318414/](https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4318414/)
• Genetic Epidemiology and Insights into Interactive Genetic and Environmental Effects in Autism Spectrum Disorders https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4260177/

Sincerely,

Sandhya

To the Members of the BOH:

It was recently brought to my attention that you will soon be meeting to consider adding the highly controversial HPV Gardasil Vaccine to the childhood immunization schedule for school entry. Before I get into some of my grave concerns about this I would first like to note that I have attached a video by RFK Jr. that I found to be incredibly helpful and that served as a great resource when I began my research into the HPV Gardasil vaccine. It not only helped me make an informed decision to not pursue this for my children, but I have shared with several others who have found it to be equally as enlightening. RFK not only describes the many problems associated with the development and safety of this vaccine, but he also shows exactly how a vaccine associated with so many health-related issues could possibly receive FDA approval and then be recommended by our CDC. I strongly encourage all board members to carve out some time to watch this video with an open mind. I truly believe it will shed some serious light on the dangers behind this vaccine.

As previously mentioned there are several factors pertaining to this vaccine that give me great pause and concern. I would like to bring a few of them to your attention.

1. HPV is NOT truly a communicable disease spread by casual contact and most certainly is NOT a concern among elementary aged children. If herpes, a sexually transmitted disease, is your biggest worry or fear among school aged kids then I whole heartedly believe we have far more to be concerned about than herpes or cervical cancer.

2. There are lawsuits pending right this very minute against Merck, the manufacturer of this dangerous vaccine, by countries such as Columbia and Ireland, for the sheer number of injuries and deaths caused in hundreds and thousands of their young girls and boys following the use of Gardasil. Japan even pulled this vaccine from its recommended schedule because of the many dangerous side effects (seizures, GBS, chronic fatigue, autoimmune diseases, and death just to name a few).

3. Gardasil has never been shown to prevent one single case of cervical cancer in anyone, and in fact, research shows there has been an increase in ovarian failure in young women across the globe as a result of using this vaccine.

4. HPV infections are extremely common and naturally clear on their own 95% of the time and rarely lead to cervical cancer or any other cancer for that matter.

5. There has never been one single double-blind placebo-controlled safety study using an inert placebo (such as saline) prior to the marketing and approval of the HPV Gardasil.

6. As of just last month, VAERS (the Vaccine Adverse Event Reporting System) had captured over 63,000 HPV related adverse events and over 500 deaths. And this voluntary system was found by a Harvard study to capture LESS THAN 1% of all adverse events related to vaccines. Let that sink in for a moment. This voluntary passive reporting system was found to capture LESS THAN 1% of all vaccine related adverse events!
How can you possibly mandate a vaccine that has no long term (or short term) safety studies, has never proven to prevent a case of cervical cancer, and has caused far greater number of injuries and deaths from use of the vaccine than it does in preventing the very thing it was intended to do? The risk in no way, shape or form outweighs the benefits, and where there is risk there MUST be choice.

In short, I am appalled that you would even consider using/abusing your state power to make the HPV Gardasil vaccine a requirement in order for children at any level to attend school. The for-profit pharmaceutical industry has no business dictating what is injected into my child- especially when they are a liability free industry who stand to lose billions should this vaccine be exposed to the general public for precisely what it is. I strongly urge you to watch this video and consider the dangers of which you would be placing directly on the backs of our young sons and daughters who have no voice in this matter.

Thank you for your time and consideration regarding this extremely important matter.

To the Members of the BOH:

It was recently brought to my attention that you will soon be meeting to consider adding the highly controversial HPV Gardasil Vaccine to the childhood immunization schedule for school entry. Before I get into some of my grave concerns about this I would first like to note that I have attached a video by RFK Jr. that I found to be incredibly helpful and that served as a great resource when I began my research into the HPV Gardasil vaccine. It not only helped me make an informed decision to not pursue this for my children, but I have shared with several others who have found it to be equally as enlightening. RFK not only describes the many problems associated with the development and safety of this vaccine, but he also shows exactly how a vaccine associated with so many health-related issues could possibly receive FDA approval and then be recommended by our CDC. I strongly encourage all board members to carve out some time to watch this video with an open mind. I truly believe it will shed some serious light on the dangers behind this vaccine.

As previously mentioned there are several factors pertaining to this vaccine that give me great pause and concern. I would like to bring a few of them to your attention.

1. HPV is NOT truly a communicable disease spread by casual contact and most certainly is NOT a concern among elementary aged children. If herpes, a sexually transmitted disease, is your biggest worry or fear among school aged kids then I whole heartedly believe we have far more to be concerned about than herpes or cervical cancer.

2. There are lawsuits pending right this very minute against Merck, the manufacturer of this dangerous vaccine, by countries such as Columbia and Ireland, for the shear number of injuries and deaths caused in hundreds and thousands of their young girls and boys following the use of Gardasil. Japan even pulled this vaccine from its recommended schedule because of the many dangerous side effects (seizures, GBS, chronic fatigue, autoimmune diseases, and death just to name a few).

3. Gardasil has never been shown to prevent one single case of cervical cancer in anyone, and in fact, research shows there has been an increase in ovarian failure in young women across the globe as a result of using this vaccine.

4. HPV infections are extremely common and naturally clear on their own 95% of the time and rarely lead to cervical cancer or any other cancer for that matter.

I have watched and read about GardIcil since it first came out on the market.

The girls who have died or gotten disabling side effects. The culmination for me, is one of the woman who helped formulate it came out with a statement against it!

This is a dangerous drug which should not be given to school children.

All of this drug should be incinerated immediately!

Do not make it mandatory. Not for my granddaughters!

Sincerely,

Diane Crossley

Dear Washington State board of health,

I am emailing you today to inform you that adding the HPV vaccine to the childhood immunization schedule for school attendance is WRONG on so many levels and I completely DISAGREE. HPV is NOT a communicable disease. Do not give into pharmas schemes, instead get educated. There have been 63,979 (reported) vaccine related adverse reactions. And 523 (reported) hpv VACCINE related deaths. How many reactions or deaths do you think have not actually been reported? Annual deaths in the US for cervical cancer are 2.3/100,000. The death rate for the gardisal clinical trials was 85/100,000. 37 times(!!!) that of cervical cancer. Again, I DISAGREE. And please read an insert.

Sincerely,

a concerned parent.

I'm a mom and a scientist, and adding HPV vaccination to the required immunizations list is a step in the wrong direction. HPV cannot be spread during normal school contact (such as sneezing, shaking hands, sharing pencils, etc). My children are vaccinated for other diseases, but at this time I will not be vaccinating my 10 year old daughter for HPV. I worked as a scientist for the NIH for 15 years before I moved to Washington, and I am fully capable of finding, reading and understanding research papers. All vaccines carry risk, period. At this point, the risks associated with HPV vaccination may outweigh the benefits, and until I see more research concerning the long term safety of this vaccine, I will maintain my right as a parent to say no to this vaccine.

As a scientist, I have first hand experience with conflicts of interest. I worked on research projects that were funded by companies that would financially benefit from positive results. I have never worked for Merck or Pfizer, but please remember that these companies carry no liability for the vaccines that they manufacture (there is a federal law that protects them- please look it up if you are not familiar). There are large amounts of money being made, intense lobbying and conflicts of interest everywhere. While vaccines are a product of “science”, it is not “pro-science” to blindly promote them. Real scientists ask questions, have open minds, and dig deep to find the truth.

I never write letters like this, but this is a subject that I feel strongly about. I dislike the current national attitude that to love science, you must never question or have any doubts about current vaccination policy.

Please feel free to contact me with any questions. We live in Mason county.

I am writing to oppose the addition of the HPV vaccine to the required school vaccines schedule.

This vaccine is unnecessary for small children. It is a treatable cancer and rare if regular screening is done. The vaccine is also very dangerous and has had many reactions! This should be left to the parent to decide for their own child for this vaccine. Please leave the choice up to parents!!!
Thank you,
Miriam Hunt

To the WA State Board of Health,

I am outraged that my state is considering requiring the HPV vaccine for children! This shot was intended for teenagers NOT children. If you take the time to look at the horrific track record of the HPV vaccine, you’ll see the huge risks you are putting on our children. The HPV shot has been outlawed in Japan, and the US should follow their lead! The state has no business holding children’s educations hostage due to the whims of the pharmaceutical industry. Our children are NOT their guinea pigs!!

There is not public health crisis due to HPV infections. This shot is unnecessary and an unwelcome grab at parental rights. Citizens in this state will NOT put up with this kind of government overreach!!

Sincerely,

Lora Brady

HPV is not for me...or my boys. I am for immunizations. I believe in preventing life threatening diseases that can be caught at your local grocery store and at schools. HPV is NOT one of those diseases.

Although I immunize my children, the HPV vaccine is one I've purposely opted out of. The benefits are NOT greater than the risks. If my children seemed as though they may end up promiscuous I may make a different choice...for THAT child. That's just it: I know my children, I know their hearts and intentions, I know if they are at risk for this or not, and they're not.

If legislators keep taking away parental and human rights over stuff like this then even those who are for societal issues are going to push back. This IS an abuse of power. Keep your power by keeping your trust. Keep your power by using it responsibly. Keep your power by using it when it matters. Forcing the HPV vaccine on children is a degradation of that power.

Hello -

It is my understanding that the Washington State Board of Health is considering adding HPV vaccine, Gardisil, to the required list of vaccines for children to be able to attend school.

I believe in vaccinations, and am thankful to know that I nor my son will ever come down with polio, which my mother survived.

However, I respectfully request that you do NOT add Gardisil to the list of required vaccines for school children. There are too many severe reactions that happen, often with life threatening or life alternating consequences. In addition, HPV can only be transmitted sexually, so there will not be times of epidemic when children will be exposed through the normal ways of transmission such as breathing. As the risks for the vaccine are substantial, and HPV is not an epidemic disease that kills vast amounts of people, it should not be required. In fact, according to the Oncologist/Surgeon that I consulted, 80%-90% of HPV resolves itself and goes away on its own.

Please do NOT add this vaccine to the list of required vaccines for school children. People should have the ability to make the decision for themselves regarding an elective vaccine that has so many potential life-altering side effects.

Respectfully,
Cherlyn Johnson

We oppose any action requiring further vaccines as a requirement for children to enter school, especially a dangerous and highly controversial vaccine such as guardasil. My children are fully immunized and we chose not to vaccinate with the flu shot or Guardasil. Parents need to be able to make informed choices about what their children receive and this violates our ability to do so. Please do not enact this into law.

Kadi Absalonson

To Whom this may concern,

I urge you to please reconsider making the gardasil vaccine mandatory for public school students. We are not having a cervical cancer public health crisis in our schools. Statistically, the majority of children in public schools are not even sexually active. Also, the rate of sexually active high school students has been dropping rapidly every year since 2007. The CDC says, "In 2017, the percentage sexually active [high school students] was down to 28.7%, and the percentage who had ever had intercourse was 39.5%."

Gardasil needs to be a voluntary vaccine. Don't stop public school children from getting an education simply because their families are not getting a vaccine for them, that is not needed in their stage in life. It is a private medical decision, that doesn't require government intervention.

Thank you,

Carrie Benitez

Please do not force my child to get a vaccination for something she most likely won’t be exposed to until much older. I know the side effects to this can be detrimental and I don’t want to be forced into getting her vaccinated at such a young age and taking those risks. I would rather wait until her body is fully developed to consider such a risky vaccination.

Thank you,

Kristen Watrous, concerned registered voter in Camas WA

Agenda item at 11:15 am January 8th regarding the HPV vaccine:
I strongly urge you to vote against mandating this dangerous vaccine. Show us you highly value informed consent and medical freedom by not adopting this misguided idea.
If you adopt this, you will be held responsible like the Nazis were at Nuremberg for violating their own people. Children will be harmed by the known and suspected risks, and you will be held accountable.
Do not allow the massive profits of this pharmaceutical corporation to bias you into harming our children. There is a good reason these corporations have 15,000 paid lobbyists in the USA.
Dylan Craig

I wanted to write to say I strongly oppose the potential addition of the hpv vaccine to the vaccination schedule. It is not a communicable disease and so regardless of stance on vaccines should be a decision made by the dr, parent and patient not lawmakers, especially considering some of possible side effects. Thank you.

Hello,
I’m writing today to share my concerns about the upcoming meeting to decide whether or not to move forward toward mandating the HPV vaccine in school aged children and possibly child care workers.
I believe in medical freedom, first and foremost and I also support a parents right to make choices regarding their family.
It’s also very concerning that the state would select a product who’s manufacturer, Merck, is on trial for fraud. There are also an alarming number of vaccine injuries and death that have been reported to VAERS as a result of HPV administration!
Here are the numbers reported to VAERS in 2019 alone:

- 63,979 HPV vaccine-related adverse events
- 523 HPV vaccine-related deaths
- Of these, 650 adverse events and two deaths (in girls aged 11 and 13) occurred in Washington State.

There is no public health crisis.

- HPV is a sexually transmitted infection that is not caught in public settings such as daycare or school.
- HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time.
- HPV infections alone rarely lead to cancer. Other factors, such as smoking, must be present.
- HPV vaccines have not been proven to prevent any type of cancer.
- HPV vaccines were never tested against inert saline placebos.
- HPV vaccines don’t eliminate the need for proper screening and treatment.
- HPV screening and treatment are highly successful at preventing and treating associated cancers.

I appreciate you taking the time to read this. I hope you will realize that this is not a necessary step and that you’ll stop the process of moving forward with this.

Thank you,

Kim Helm

To the WSBOH,

I would like to voice my comment to OPPOSE the petition to adding the HPV Immunization to the chapter 246-105 WAC mandated schedule for children. 1986 National Vaccine Injury Compensation Act decided that manufacturers are no longer liable for their injuries connected to their products. The VAERS is the federal passive voluntary Vaccine Adverse Event Reporting System that a Harvard Study found captures less than 1% of adverse events — yet that flawed system is all we have to attempt to quantify vaccine injuries.

*According to the American College of Pediatricians, the overwhelming majority (76%) of VAERS reports since 2006 with ovarian failure, premature menopause, and/or amenorrhea are associated solely with Gardasil.

*As of December 2019, the following have been reported to VAERS:
  63,979 HPV vaccine-related adverse events
  523 HPV vaccine-related deaths

*Of those, 650 adverse events and two deaths, in girls aged 11 and 13, occurred in Washington State. Gardasil is covered under the 1986 National Vaccine Injury Compensation Act. Injuries and deaths must go through what’s known as “Vaccine Court”, a no-fault no-jury system where vaccine makers do not have to participate. Several cases have made it through the lengthy and arduous process with the preponderance of the scientific evidence leading to the compensation of the victims.

HPV is a sexually transmitted disease and is not a high-risk priority for the state of WA children. Please OPPOSE adding Gardasil to the vaccination schedule. Where there is a risk there should always be a choice.

Thank you,
Angela Ishmael
WA Concerned Parent

I am completely opposed to adding the HPV vaccine to Washington's schedule to go to school. There are already 69 required doses for kids. When does this end? There are no safety tests that show giving these massive amounts of vaccines to children are safe. These are liability free products, and I am completely opposed to mandating the HPV. This is very concerning to me especially since this vaccine has had so many issues around the world with adverse reactions. Thank you, Jennifer Zehrung
