Subject: Adding HPV vaccine to School Requirements
Date: Friday, January 3, 2020 3:51:56 AM

Dear committee,

I am asking you humbly, to please NOT add this vaccine to the non-stop growing list of vaccines required to attend school. Not only has the HPV vaccine NEVER been proven to prevent cancer and has serious and even deadly side effects, but HPV itself is NOT easily spreadable; it is a sexually transmitted disease, which I hope is not happening on school grounds during school hours. The development of cervical or related cancers in relation to this virus happens years after exposure and contraction well past school age.

This is an inappropriate recommendation as it does not make students or schools any safer. Please do what is right for the health of our citizens and not what benefits the pharmaceutical companies' and legislator's pockets.

Thank you,

Concerned parent
Ariana Lynn

Subject: Against mandatory vaccinations
Date: Friday, January 3, 2020 11:56:03 AM

I am against any govt mandated vaccines. When the vaccines manufactures are liable for their product then I would consider. The liability will be on the state of Washington if they mandate.

If Washington was worried about outbreaks they would not be supportive of unknown persons sneaking illegally into this country and not being concerned about what diseases they may be bringing in or the vagrants on the street pooping and creating a great environment for disease outbreak.

The democrats are sure not wanting to be voted back in with this medical tyranny decisions.

Betsy

Ps I wouldn't feed my dog anything out of China much less inject myself anything from there. They could on purpose taint vaccines to on purpose kill Americans.... homeland security issues.

January 3rd, 2019

WA State Board of Health

RE: January 8th 2019 Agenda – HPV

Dear Board of Health Members,

Please accept this as public comment in OPPOSITION to adding the HPV vaccine to the required schedule for school attendance.

This vaccine is so controversial and has so many side-effects being reported that I am in awe that we are even having this discussion. I personally know three of the 523 families who have lost their child to this unnecessary and dangerous vaccine. I was able to hug and cry with two of those moms in November at a vaccine injury epidemic event in DC. Two moms of the 523 who will never be able to hold their child again, who had to face the pain of another Christmas without them, who ache every day for one more conversation, one more hug, one more chance to go back in time and say “No!” to this vaccine that stole their child and stole their future.

Secretary Weisman sat in a room in April with one of these mothers as she told the heart-wrenching story of her daughter, Christina, developing a heart condition after Gardasil and dying alone in her college dorm. It was determined in Vaccine Court that the HPV vaccine caused Christina’s death.

There have been over 60,000 reported adverse events in the US alone. Reported. We know according to the Harvard Pilgrim Study that less than 1% of adverse events are reported. I have a 12-year-old daughter and see accounts of friends who suddenly start fainting after Gardasil, who suddenly develop diabetes, who either stop having their periods or never start; all adverse events associated with this liability-free pharmaceutical product.

Most of my daughter’s friends come from families who follow the CDC schedule, but many of them have chosen not to give their sons and daughters this vaccine; because they know it is dangerous. Because they know it is unproven. Because they know the death rate due to Gardasil (according to clinical trial data) is 37 times higher than the risk of death due to cervical cancer in the US. Because they know women are 100 times more likely to suffer a severe event following vaccination with Gardasil than they are to get cervical cancer. Because they know their daughters will have access to routine pap smears. Because they know countries like Columbia, Denmark, and Japan have stopped recommending it due to the vast number of reported injuries. Because they care about their children and have done the research and determined this vaccine is unproven, is unsafe, and is unnecessary for their child.

Those parents should have the right to make that informed decision. And their children should continue to have the right to attend school.

As Board of Health members, it is your duty and responsibility to set policy to protect and improve public health. While the HPV vaccine may be preventing the risk of cervical lesions, there is no evidence it is preventing cancer. As a cancer survivor, I want to work to prevent my children from ever having to face that diagnosis. This vaccine is not the answer. We have been sold a marketing ploy pulling on our

heart strings, pushing us to believe we can prevent cancer in our children if we give them this vaccine, brushing serious risks under the rug while vastly overstating its usefulness and effectiveness. The HPV vaccine is still in the experimental phases. It will be decades before we really know if it can prevent cervical cancer and as nature loves a vacuum, perhaps longer before we understand the far-reaching negative effects to our biological ecosystem, health, and fertility. This is not a vaccine that should be mandated. Parents should retain the right to determine what is best in protecting the health of their children.

Please oppose any consideration of adding the HPV vaccine to the required list for school attendance.

Sincerely,

Jena Dalpez

Subject: BOH Meeting Vaccine Requirements
Date: Friday, January 3, 2020 11:19:41 AM

Do not make Gardasil a required vaccination.

What is the motive behind doing so?

HPV is not a public health crisis.

Please use your public service position to help the community, rather than to impose and coerce a medical procedure that has proven harm and little benefit.

HPV is a sexually transmitted infection that is not caught in public settings such as daycare or school.

HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time.

HPV infections alone rarely lead to cancer. [Other factors](#), such as smoking, must be present.

HPV vaccines have not been proven to prevent any type of cancer.

HPV vaccines were never tested against inert saline placebos.

HPV vaccines don't eliminate the need for proper screening and treatment.

HPV screening and treatment are highly successful at preventing and treating associated cancers.

Subject: Chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine Preventable Diseases
Date: Friday, January 3, 2020 11:13:31 AM

Dear WA Board of Health:

As a Washington State Resident, I strongly oppose the proposed rule change to add the HPV vaccine to Chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine Preventable Diseases.

The risks are of the HPV Vaccine/Gardasil are **far greater** than the benefits. This proposed rule change should not be recommended for many reasons including but not limited to the following:

1. HPV is a sexually transmitted infection that is not caught in public settings such as daycare or school. HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time.
2. You have a higher chance of dying from the HPV vaccine product/Gardasil than getting or dying from a HPV associated cancer. The death rate of cervical cancer in the US is 2.3/100,000. The death rate in the Gardasil clinical trials was 85/100,000 or 37 times that of cervical cancer. The total HPV associated cancer rate of cervical, anal, vaginal and vulvar is 19.8/100,000.
3. According to the Gardasil insert there is a 2.3% chance of developing an autoimmune disease after receiving the HPV vaccine product/Gardasil. That means 2.3 out of every 100 children will develop a lifelong chronic disease such as arthritis, lupus, multiple sclerosis, etc. after receiving the liability free HPV vaccine product/Gardasil
4. Half (49.6%) of the clinical trial subjects who received Gardasil reported serious medical conditions within seven months. To avoid classifying these injuries as adverse events, Merck dismissed them as “new medical conditions.”
5. Females in the Gardasil clinical trials with evidence of current HPV infection and previous exposure to HPV had a 44% increased risk of developing cervical lesions or cancer following vaccination.
6. The HPV vaccine product/Gardasil has been associated with premature ovarian failure (teenage menopause!) and increased miscarriage rates 10-15% higher than the corresponding reproductive age group.
7. There have not been any real Gardasil safety studies conducted. In the Gardasil clinical trials, Merck used a neurotoxic aluminum adjuvant called AAHS instead of using an inert saline placebo. In the clinical trials, there was little to no difference in the safety profiles of the AAHS adjuvant and Gardasil. The World Health Organization has stated that using something other than an inert substance as a placebo creates a “methodological disadvantage”. This may make it “difficult or impossible” to assess vaccine safety properly without a true placebo. It is no surprise to learn that Merck is currently being sued for fraudulent Gardasil safety studies.

8. Japan removed the HPV vaccine product/Gardasil from their recommended list of childhood vaccines after an enormous amount of adverse events occurred after Gardasil was administered.

9. Informed choice and medical freedom are fundamental rights. As citizens and parents we have the right to decide what is injected into our bodies and our children's and a right to know the risks and benefits associated with each liability free pharmaceutical vaccine product.

10. According to the American Cancer Society, cervical cancer is preventable with proper screening tests.

I strongly urge you to get all the facts about the HPV vaccine product/Gardasil. I encourage you to read The HPV Vaccine on Trial and learn about the current case where Merck is being sued for fraudulent Gardasil safety studies.

I urge you to be one of the public health officials/politicians who is willing to put the health of our children first, ahead of political agendas and pharmaceutical profits. How many more of our children have to be diagnosed with lifelong chronic autoimmune diseases or die?

Sincerely,

Rebeka Gentian

Subject: Comments RE Adding HPV Vaccine to school vaccine schedule
Date: Friday, January 3, 2020 11:10:14 AM

To My State,

I am opposed to adding the HPV Vaccine to a mandated schedule for children in Washington State.

I do not understand why our elected and appointed government would let pharmaceutical companies mandate what our children must have in order to go to school. Are we listening to a balanced physician panel of those for and against these vaccinations? Are any physicians being listened to? Who is paying these physicians? Are we allowing "non sponsored" physicians to speak on the safety and necessity of these vaccines? Who does this benefit? The pharmaceutical companies and the pockets behind them. This is not for our children's safety and the further health of our adult population.

HPV is not a communicable disease.

95% of infections are asymptomatic and never amount to anything

There are 100 strains and only 13 of those are believed to increase cancer

The current vaccines only partially address less than half of those 13 strains

The studies by the manufacturers of these vaccines did not show that the antibodies created from these vaccines last longer than 5-8 years even with 3 doses, therefore including young children in this schedule makes no sense.

Gardasil9 vaccine contains the largest concentration of aluminium ever found in a vaccine series as an adjuvant. My daughter has a brain tumor. You know what the physicians say she MUST avoid? Aluminium in deodorant, personal care products, canned soda and foods. Why? Because it collects in brain tissue and creates the potential for further brain diseases.

Screenings remain the most effective means to prevent cervical cancer.

Cervical cancer is supposedly the main reason behind these vaccines.

Stop controlling our health with mandates of vaccines.

Let people live and solve their own health issues from their own choices.

Again I say this is not a communicable disease. It may possibly result from actions of choice later in life and the result is treatable.

Sincerely,

Valerie Cawlfeld

I'm writing today as a parent to express my concern with adding HPV to the childhood vaccine schedule. As you know, The vaccine safety itself is highly questionable and has caused many deaths. Furthermore, to mandate a cervical cancer drug designed for woman but given to growing children of both genders is nothing more then profit driven. It does not protect, it harms. These decisions are best left to the parents that care for these children. Lastly, coercing any parent into vaccinating their child for education votes their constitutional rights to life, liberty, and pursuit of happiness. It also is a major violation of the nuremburg code. Please consider my plea for my children. Do not add this to their all ready way overloaded little bodies. This is detrimental to their wellbeing.

Subject: Do not move forward with the HPV mandate for WA youth
Date: Friday, January 3, 2020 7:07:41 AM

Hello,

Choices for my children's health should not be coerced by who has the most money but that is undoubtedly what is happening. Pharmaceutical companies have ZERO LIABILITY and make all the profit. Who does not see the enormous conflict of interest? Not a single manufacturer of any other product has this blanket protection. If you can't look at this conflict of interest and see an issue, then you have been bought as well.

Regarding the HPV vaccine; This vaccine has not been proven to put a dent in lowering the cases of cervical cancer. How can you mandate a product that has far more dangers than any benefit?

WA DOH has said they mandate vaccines for schools and daycares because of the close proximity of children and the risk of contagious diseases. **Cervical cancer is not a communicable disease.**

This mandate would clearly be a move purely for monetary reasons and power.

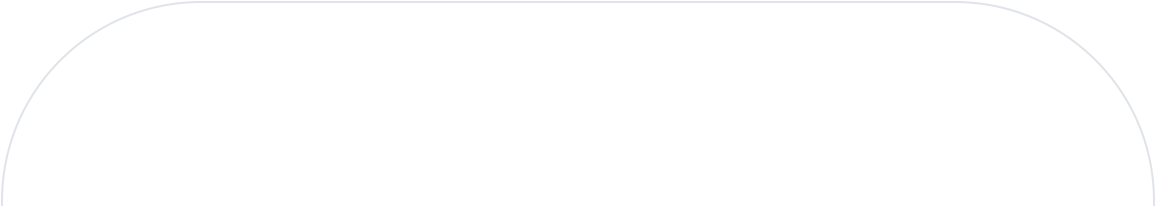

Those making these decisions for WA parents are obviously not listening to what is clearly known: **FACTS**

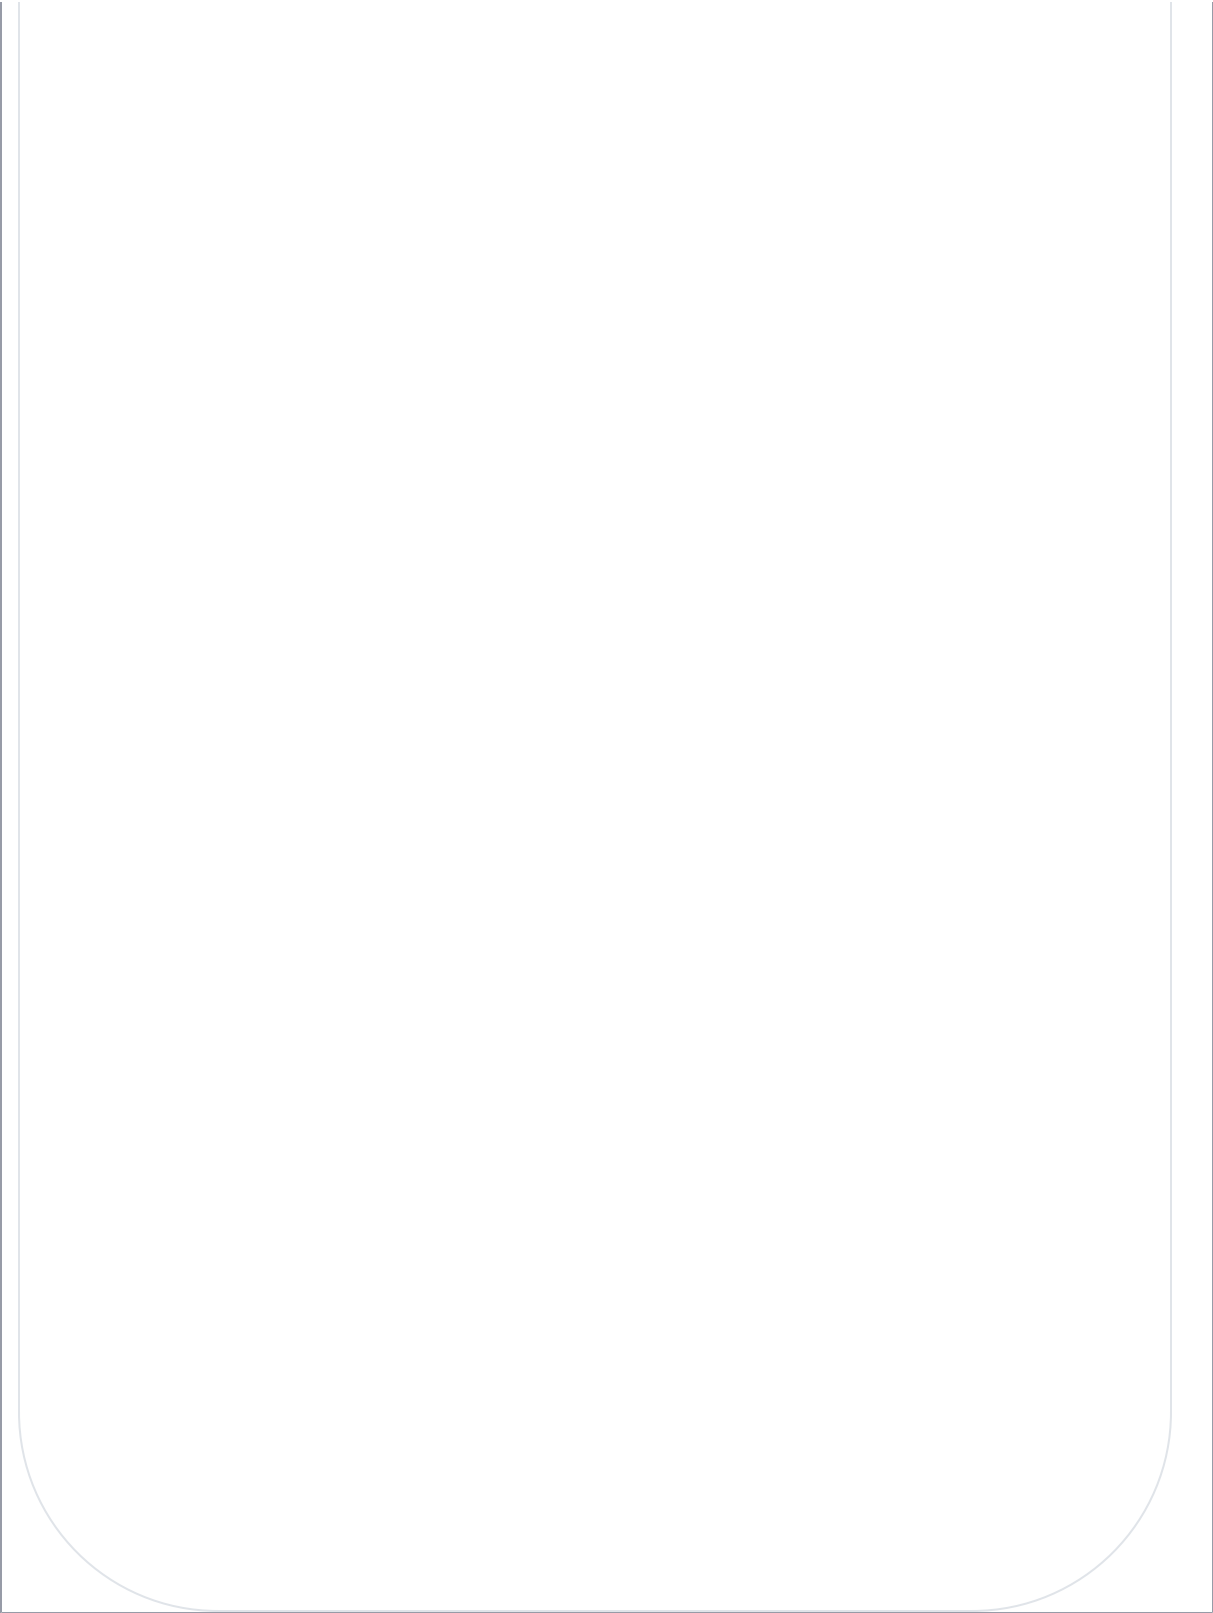

- 1) Lack of proper testing. There has never been a test done against an inert saline placebo: how can you say a vaccine is safe and effective if you have no proof? This would be lying to the public.
- 2) Evidence and science show that HPV is not the only cause of cancer.....there are other factors involved that need as much attention such as smoking and refraining from sexual activity which is clearly one of the main factors.
- 3) This mandate is extremely unethical. From the AMA Journal of Ethics: "In general, we presume parents appropriately exercise surrogate decision making for their children and that they are in a better position than the state to promote the child's best interests [6]. The Supreme Court has upheld parental autonomy on several occasions [10-12],"
So a parent should have the first right to choose for their child, NOT THE STATE!
- 4) Just because someone is vaccinated does NOT mean they won't get the disease. As is the recent case in Texas where a Catholic school had 100% vaccination rate against the whooping cough yet they ended up closing the school because of the whooping cough epidemic.

Parents who do not want **cancer-causing chemical ingredients in vaccines** injected into their children should have the right to choose for themselves, not forced or coerced based on what you think is best for them. You do not hold the "magic wand" over citizens by threatening them with denial of school entry if they are not vaccinated or hold the same beliefs you do about vaccine.

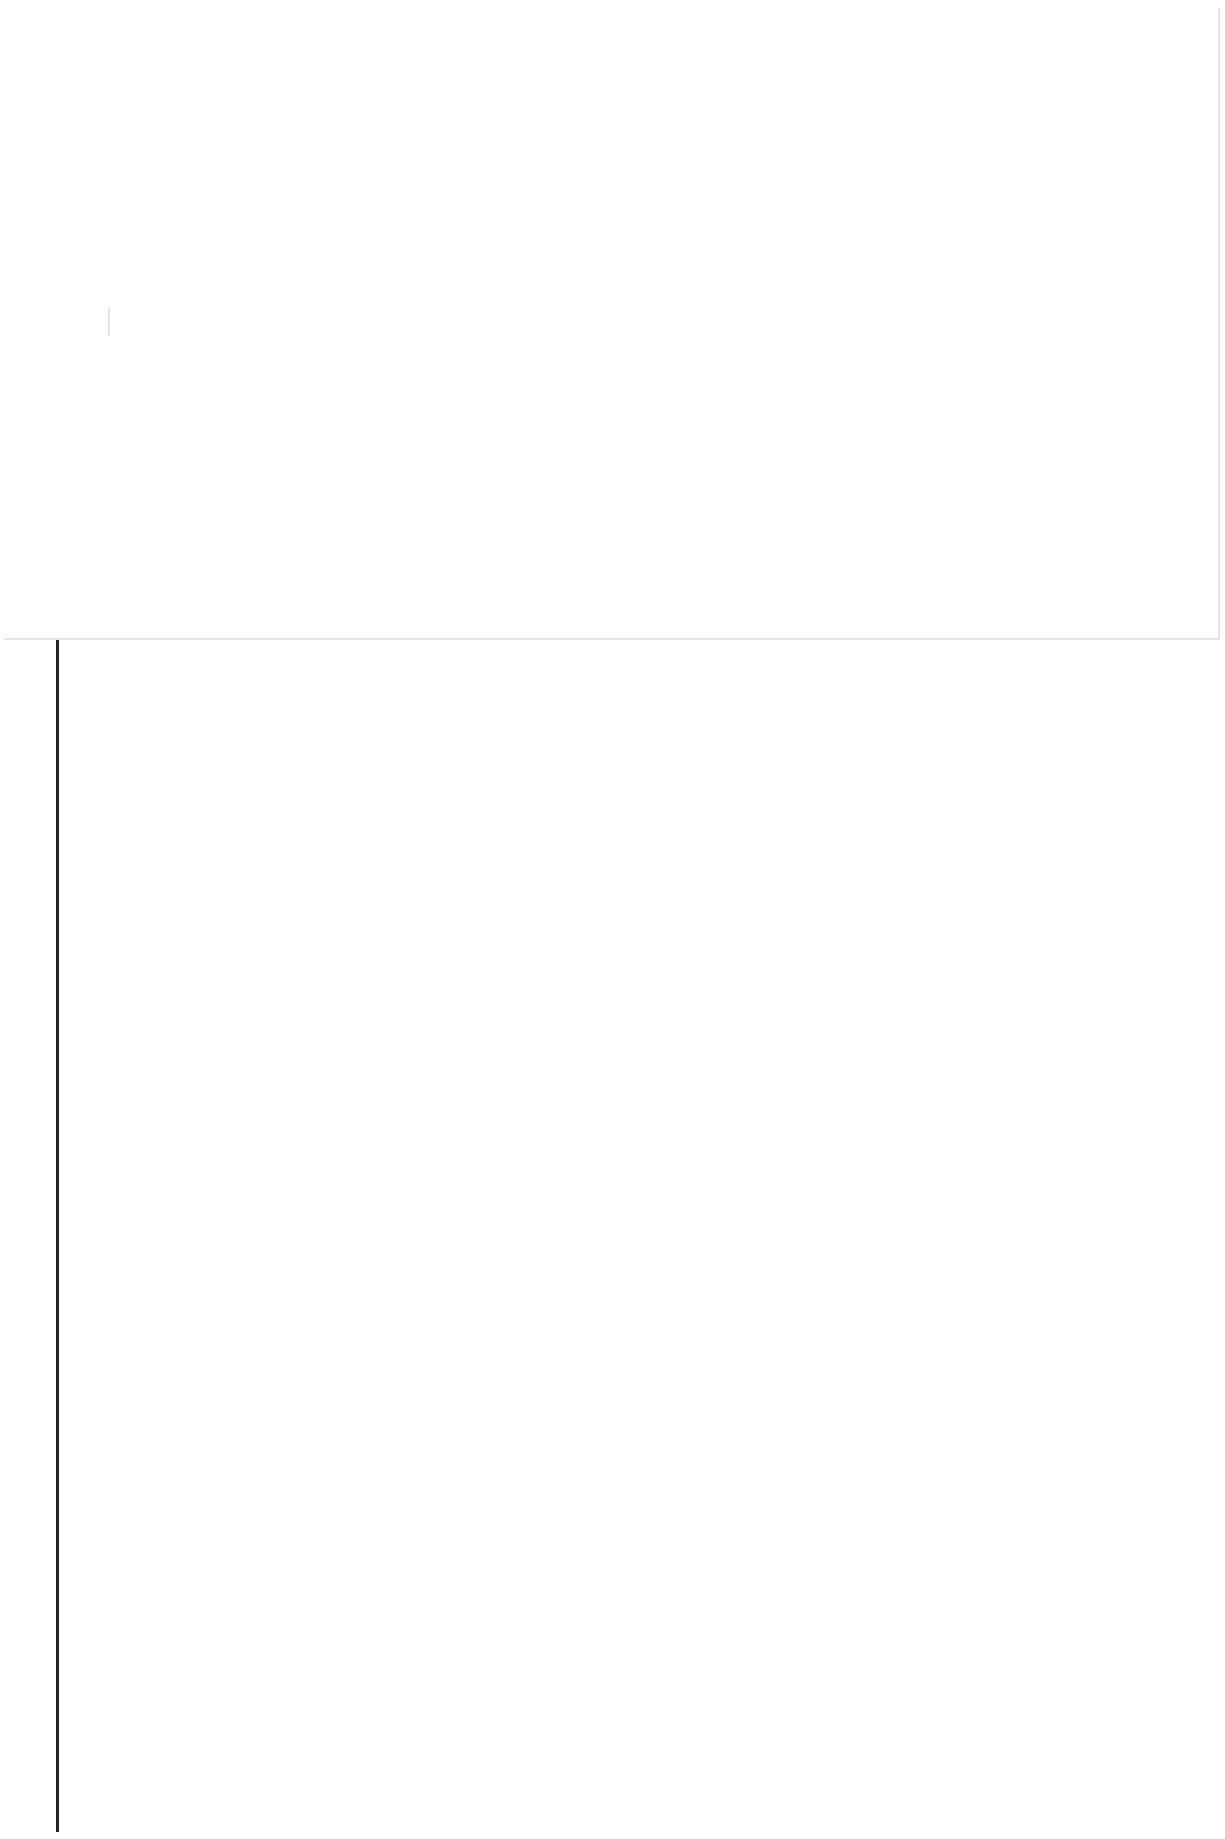

Do not move forward with the HPV mandate for Washington's youth!

Sincerely,
Cindy Rasmussen

As a former Washington resident living out of state but planning to move back home for a teaching position next year I implore you to reconsider mandating any vaccines for school enrollment and in particular the Gardasil vaccine.

It is a basic human right to choose the medical care for ourselves and our children.

It is unfair to coerce parents into vaccinations in this manner.

This is discrimination and it is un-American.

If this bill passes I will not accept a position in my home state.

When there is risk there must be choice.

Subject: Gardasil
Date: Friday, January 3, 2020 11:52:05 AM

I wanted to voice my opinion that I feel very strongly that the Gardasil Vaccine should not be added to the required vaccine schedule for children to attend school. As HPV is typically only spread sexually (extremely rare to unheard of from kissing) and most strains are non cancerous and go away on their own and not all cancerous strains are covered by this vaccine, there is no reason to require this vaccine but to continue to offer it as an optional vaccine. Pushing to require this vaccine creates more distrust in the vaccine industry and seems like it is more of a money making industry than a protecting people industry. Allow people to trust the industry by keeping this vaccine optional not required.

Thank you,
Gina Harris

I wanted to voice my opinion that I feel very strongly that the Gardasil Vaccine should not be added to the required vaccine schedule for children to attend school. As HPV is typically only spread sexually (extremely rare to unheard of from kissing) and most strains are non cancerous and go away on their own and not all cancerous strains are covered by this vaccine, there is no reason to require this vaccine but to continue to offer it as an optional vaccine. Pushing to require this vaccine creates more distrust in the vaccine industry and seems like it is more of a money making industry than a protecting people industry. Allow people to trust the industry by keeping this vaccine optional not required.

Thank you,
Gina Harris

Subject: HPV concerned against mandates
Date: Friday, January 3, 2020 10:14:00 AM

Good morning,

I am writing in opposition of Board of Health's support of mandating HPV vaccine. I strongly feel that no medical procedures should ever be mandated. I am not opposed to vaccines but it is never our government's place to mandate any medical procedure ever! Families should always work with their medical team to make medical choices that best serve the individual. The Board of Health should be focused on education and providing information to residents of the State of Washington not forcing or requiring medical treatments. All medical treatments come with a risk – if there is a risk an individual must have a choice.

Sincerely,

Lisa Kramer – Mother of 3 and 21 year voting resident of the State of Washington

Subject: HPV Consideration
Date: Friday, January 3, 2020 8:54:18 AM

To whom it may concern:

My name is Magen Netz. I am emailing you in regards to the HPV consideration scheduled for Jan. 8th, 2020. I disagree and oppose the policy change being considered.

First, cervical cancer annual deaths are 2.3/100,000. This is not a crisis. It is not something that needs to be vaccinated against with the percentages being extremely low. The death rate in the Gardasil clinical trials were 85/100,000 (35 times that of cervical cancer). On the Gardasil package inserts, it states women are 100 times more likely to suffer a sever event following vaccination than they are to get cervical cancer. I personally do not have children yet but I do have a niece. If I was given that information and was given the option to have an informed choice with the information in front of me, I would reject this vaccine from being injected into my niece. Why? Because there is MORE harm that comes than the chance of getting cervical cancer. (<https://childrenshealthdefense.org/news/25-reasons-to-avoid-the-gardasil-vaccine/>)

Second, there is no public health crisis when it comes to HPV. It is not caught in public settings. HPV naturally clears on its own 95% of the time. HPV infections rarely lead to cancer. HPV has not been proven to prevent any type e of cancer and the vaccines were never tested against inert saline placebos.

Personally, I was in middle school when the HPV vaccine was relatively new. I remember having a conversation with my mom whether I should receive it or not. We made the decision to not receive the HPV vaccine because there was ZERO need for it since I was not sexually active and was planning to not be till I was married. I am SO grateful my mom did not make me receive the HPV vaccine knowing what I know now about this vaccine.

I urge you, please oppose this policy change of adding the HPV vaccine to the mandatory vaccine schedule.

Thank you for your time,
Magen Netz

Subject: HPV CONSIDERATION
Date: Friday, January 3, 2020 11:40:17 AM

Subject: HPV CONSIDERATION

It is hard to even know where to start. What is the motivation behind adding the HPV vaccine to the childhood immunization schedule for KIDS to attend school?

Do I start with all the problems with the vaccine itself or the integrity of the vaccine manufacturer and the CDC OR the fact that HPV is a sexually caught infection and is not caught in public setting by coughing or sneezing.

I have refused the vaccine for many years. My OB told me that even though I am in a committed marriage of over 10 years I should get the vaccine to protect myself, for when my husband cheats on me and brings something home. She was rude and cold when I continued to refuse, this is ludicrous medicine. This hints at greed and manipulation, not the wellbeing of myself.

I do not support this policy change. I will fight and stand with the thousands how have followed medical advice and are now forever sick. I have a young daughter, not in school yet and this absolutely terrifies me.

I plead that you do not add the HPV vaccine to the mandatory schedule for school admission.

Annual deaths from cervical cancer in the U.S. are 2.3/100,000. The death rate in the Gardasil clinical trials was 85/100,000—or 37 times that of cervical cancer . . . According to Gardasil’s package insert, women are 100 times more likely to suffer a severe event following vaccination with Gardasil than they are to get cervical cancer.” Children’s Health Defense

Merck, the company found guilty of scientific fraud, deceptive marketing, and the death of approximately 60k users of their dangerous drug, Vioxx, is doing it all again with Gardasil. Only, this time they can't be sued for the injuries and death caused by Gardasil like they were for Vioxx. Gardasil is expected to be a \$40 billion windfall for Merck, because the NCVIA law protects them having to pay for the injuries they cause.

The pre-clinical trials for Gardasil were a deadly travesty of science. Previously healthy young female Gardasil pre-clinical trial subjects died as at a rate that was 20 times rates of the same ages in the general population. Despite the deaths, Gardasil was released to the public for reasons that no reasonable scientist or medical care provider should justify. Merck used a pseudoscientific "active control" methodology to mask the fact that Gardasil harmed or killed an extraordinary proportion of the young women in the study.

Gold standard science uses placebo-controls. Placebo-controlled studies are a way of testing a medical therapy in which, in addition to a group of subjects that receives the treatment to be evaluated, a separate control group receives a sham "placebo" treatment which is specifically designed to have no real effect. A true placebo is inert, unreactive, and stimulates no effect in the body. This is a critical element in the proper design of a scientific experiment.

Merck, however, ignored the gold-standard of placebo-controlled design and used a deceptive and dishonest methodology in the design of their control group. They didn't use a placebo-control group, they used an "active control" group.

Merck injected the standard Gardasil vaccine into their TREATMENT GROUP, a group of healthy young women between the ages of 9-26. Into the "ACTIVE CONTROL" group Merck scientists injected EVERYTHING found in the standard Gardasil vaccine, except the four strains of HPV antigens.

Let me say that again, the ACTIVE CONTROL GROUP received ALL THE SAME INGREDIENTS FOUND IN THE GARDASIL VACCINE, except the HPV viral antigens.

To be even more precise, the active control group received Merck's uniquely neurotoxic adjuvant, amorphous aluminum hydroxyphosphate sulfate (AAHS) and the blood-brain-barrier-opening-ingredient, polysorbate 80, as well as the yeast protein, sodium chloride, L-histidine, sodium borate also included in the Gardasil vaccine.

Unfortunately, even though "active control" experimental designs are devoid of merits beyond their ability to mask adverse events, they are the standard methodology used by the vaccine industry.

Does that sound like a reasonable scientific trial to you? It shouldn't, because it wasn't. And yet, it is the commonly used deceptive clinical trial methodology that has become the SOP of the vaccine industry.

These trials mask injuries and deaths by designing experiments that ensure adverse events occur equally in the treatment and control groups. Pseudoscientific experimental designs thus

give corrupt vaccine manufacturers the cover they use to frame lies that sound like this: "adverse events in the Gardasil treatment group did not occur at a rate that was significantly higher than the adverse events in the control group." What they don't want you to know is that extraordinary percentages of previously healthy young women were harmed or killed in both arms of the Gardasil pre-clinical trial!

Just like Vioxx, in which evidence of adverse events should have prevented the drug's release, Gardasil, from the beginning, was objectively demonstrated to be a dangerous vaccine. However, Merck's massive misinformation marketing engine managed to manipulate the complex science and unprovable cancer prevention claims into a message of fear. Merck knew (from the Vioxx scandal) that no matter how many young people they killed, they were positioned to make billions of dollars with Gardasil. They knew that long before real science exposed their fraud, before the public became aware, and before their sales tanked, they will have banked their profits and be well into designing their next deadly money-maker. As a physician, I would never recommend Gardasil to any patient. The trial design was fraudulently designed to mask the evidence of harm and death. I also understand Merck's history and the evidence that indicts it as the face of corporate corruption in the world today. What Merck did with Vioxx is the historical lesson that we must not be doomed to repeat with Gardasil. I honor my oath as a physician by making the public aware that they must protect their young (11-12 year old children and beyond) from the dangers of companies like Merck and vaccines like Gardasil.

Subject: HPV mandate for schools
Date: Friday, January 3, 2020 9:22:12 AM

As a parent and a registered voter in Washington, I am very concerned about the HPV vaccine being mandated for children to attend school.

There is significant relevant evidence & data to show that the HPV vaccine is dangerous, and causes the very cancers it claims to protect against. There is also documented evidence that shows it causes premature ovarian failure in young women as well as death. Merck is currently facing lawsuits due to the multitude of injuries this vaccine has caused across the world. The HPV vaccine has no place on the list of required vaccinations to enroll, or maintain enrollment, in our schools.

Sincerely,
Noelle Muske

Subject: HPV mandate
Date: Friday, January 3, 2020 8:36:16 AM

I respectfully would like to express my opposition to the HPV vaccine as a mandatory school vaccine.

This vaccine has been well documented to be related to significant deaths as well as permanent disabilities on VAERS. It has no data to support or refute the potential impact on fertility either and it is also being given to children before onset of puberty. Additionally it is under close scrutiny by other countries currently for risk vs benefit.

HPV is a sexually transmitted virus and does not pose a public health crisis in school age children. It is absurd to mandate this vaccine.

I also oppose this because all patients to have the right to informed consent. When something like this is mandated, it strips the very nature of informed consent. All physicians including myself are required to give patients the ability to make informed decisions about healthcare choices.

Kind regards,
Dr Karin Nealon

I respectfully would like to express my opposition to the HPV vaccine as a mandatory school vaccine.

This vaccine has been well documented to be related to significant deaths as well as permanent disabilities on VAERS. It has no data to support or refute the potential impact on fertility either and it is also being given to children before onset of puberty. Additionally it is under close scrutiny by other countries currently for risk vs benefit.

HPV is a sexually transmitted virus and does not pose a public health crisis in school age children. It is absurd to mandate this vaccine.

I also oppose this because all patients to have the right to informed consent. When something like this is mandated, it strips the very nature of informed consent. All physicians including myself are required to give patients the ability to make informed decisions about healthcare choices.

I am writing to protest your consideration of mandating the HPV vaccine to school age children. This vaccine has been shown to cause neurological damage, nerve damage, potential infertility, and death. This is not a vaccine that should be mandated, or in my opinion even given to children. It was developed for cervical cancer, but then it was decided that boys should get it also. Since boys don't have a cervix, not sure how this helps them. I guess that the pharmaceutical company figured they were missing out on half the population of children, missing out on that money. There are lawsuits in other countries and has been banned in some countries. The vaccine only covers less than 2% of HPV that does not clear up on it's own. Instead of giving this damaging vaccine to children, maybe safe sex should be taught, which would also cover the myriad of other STIs that one can contract. I hope that you make the right decision for the sake of our children.

Sincerely,
Catherine Westerlund, RN

Hello,

I am concerned about the petition to add HPV to the current requirements for school attendance. I do not agree with this suggestion and wish the consideration would be pulled. This is a highly controversial vaccine and there are many scientific studies and law suits that show it is not safe. Please do not support this addition.

To whom it may concern,

While I am a firm believer in having our children vaccinated, there is no reason we should be forced to administer the HPV to our children for them to go to school.

It is one thing for the immunizations that stave off polio, etc. as these diseases are devastating and communicable, they aren't an STD!

Parents should have a choice in deciding to have this vaccine given to their child, no one should be forced to have this.

Thank you,
Heather Cotton

Dear honorable members of Washington State Board of Health,

Thank you for caring and working hard to ensure our public health. I am a parent of a public school student, and am very concerned with the push for the HPV vaccine on the recommended school vaccine schedule.

I strongly appose the introduction of the HPV vaccine onto this schedule and ask that you say no to adding it to the schedule, as well.

This particular vaccine is incredibly unsafe. Please review VAERS data, and investigate schools who have added this across the country, where injury resulted on students. Many have been injured. This vaccine is unpredictable, and doesn't gaurantee prevention of cervical cancer, to the contrary it is causing damages instead of preventing them. The Human Paploma Virus is well known to not be a communicable disease, but rather passes from one single person to another through skin to skin "physical" contact , it is not air born so should be no cause for consern to our students well being, while in school.

Please say NO, to HPV being added to the required shot schedule.

Sincerely
Amy Seyss

Please DO NOT add the HPV vaccine to school requirements. I am shocked as to how the injections have multiplied greatly for children and am aware of children who have a vaccine injury. Sadly, autism has multiplied since vaccines have multiplied over the years. I no longer advise my daughter to stick with vaccine schedule for my grandson. It appears to be out of control, injecting children left and right can do more harm than good. Please do not force a parent to inject their child for school. Lori Wood --grandparent

For consideration into public comment on adding the HPV series vaccines to the required schedule for school.

Doctor Luc Montagnier M.D., Nobel prize winner for the discover of HIV, is quoted as saying "What this (HPV) vaccine is doing to thousands of our young world wide is a crime. Historically, vaccines have protected many people. Presently, over these last many years, too many vaccines, HPV and others, have harmed and killed so many people. Let us mandate that ALL vaccines be safe for everyone, this is possible. Our future depends on respect for medical ethics, according to the Hippocratic Oath." His full statement can be read in the book, *"The HPV Vaccine on trial, seeking justice for a generation betrayed."*

Until ever member of this deciding board has read the above listed book, as well spend copious amounts of time reviewing the information acquired by R.F. Kennedy Jr, through the freedom of information act that pertains to the vial ethics of the Merck team in reference to this Vaccine, they should not be making this decision. For one they openly joke that HPV vaccine is short for "Help Pay for Vioxx". Which, as being in the prominent positions you are, I hope that you know the billions in payouts Merck has and continues to have to make for damage Vioxx did to human lives world wide, all the while they knew the issues with it and continued to pump it into the hands of the worlds population. They comment on how there is no liability to hold them back with the HPV vaccine, unlike the liability they hold with pharmaceuticals.

This possibility is inappropriate, children are not exposed to HPV in public school settings unless there is an exchange of sexual fluids. There is no concern to the classroom for exposure any more then there would be if a child in the classroom had HIV. This vaccine has been and continues to be a point of great contention and as seeing HPV status has zero weight on the functioning of the classroom or exposure of other children in a school setting, the decision to give it to a child should be the decision of the parent only.

There are still studies taking place that express concern over this Vaccine, Please note the attached article from PubMed.gov, stating they believe that females that get they HPV Vaccine series are experiencing 25% more fertility issues. A quarter of the young women getting the HPV vaccine are having issues conceiving....that alone should send alarm bells through every person that has or may even ever consider having children in the future.

Per VAERS, this vaccine has the highest rate of vaccine injury payout (in correlation to the amount of people receiving the Vaccine) only second to the flu shot, the DTAP has more actually pay outs but a smaller population of injury based on how many people get that vaccine.

I am not going to bore you with hours of data that you will not pour through, I am sure you have that in droves, but what I do believe that you should hold near and dear to your heart is that when there is a risk there should always be a choice. Parents and children should have a choice to get the vaccine, if they choose to or not, not the choice of get the Vaccine or they

cannot go to school, schools paid for by the parents through taxes or tuition.

Hello,

My name is Michelle Nesary and I oppose the addition of the HPV vaccine to the school schedule. I hold firmly that bodily autonomy is a personal and constitutional right and believe the child, parent and pediatrician should be able to determine when and what vaccine is appropriate for that child's risk/well being. I have a sister and multiple friends who have had serious immune and fertility issues after this vaccine, and I also have a family friend who within 24hrs of the HPV vaccine developed Dysautonomia. She is 23 bed ridden and has to have a service dog now. This vaccines safety testing and effectiveness is questionable and in my opinion the risks outweigh the benefits. I also have three children who carry a genetic mutation called MTHFR, which affects their methylation cycle and doesn't allow them to detox the vaccine additives. Again this is why the parent and pediatrician should get to decide not the school board. Thank you for your time and listening ear and please oppose and vote no on the addition of the HPV vaccine to the mandatory school schedule.

Sincerely,
Michelle Nesary

Subject: HPV Vaccine Mandate - Opposition
Date: Friday, January 3, 2020 11:02:36 AM

WA BOH,

I am writing to express my opposition to your proposed mandate of the HPV vaccine.

- HPV is primarily a sexually transmitted disease that cannot be spread in a school setting.
- The mandate of this vaccine is opposed by the American College of Pediatricians.
- In Merck's own clinical studies, Gardasil increased the risk of cervical cancer by 44.6% in women who were exposed to HPV prior to receiving the vaccine.
- Many children between the ages of 3 and 11 have the HPV virus in their bodies from non-sexual contact (birth canal, etc.). By mandating this vaccine, we are actually putting them at increased risk for cancer.
- After years of decline in cervical cancer rates due to routine pap smears, cervical cancer rates actually increased in Australia, the UK and Sweden following introduction of the HPV vaccine.
- The vaccine was not tested against an inert placebo (such as saline), but instead against an injection that contained amorphous aluminum hydroxyphosphate (AAHS). This does not mimic the real live choice of deciding whether or not to receive an HPV vaccination.
- According to the most recent data (for the period from 2003 through 2007), the incidence rate for cervical cancer was 8.1 cases per 100,000 women per year in the United States. With the mortality rate of 2.4 deaths per 100,000 women per year. The death rate of the Gardasil (now know as the HPV Vaccine) was found to be 85 in 100,000 - **Over 35 times greater than the cancer itself!**
- Reported side effects of the HPV vaccine include paralysis, premature ovarian failure, POTS, and even death.

Every family needs to be able to decide for themselves if the risks outweigh the benefits in their child's specific situation. Do not mandate this vaccine for school attendance!

Thank You,
Mike Carper

Re: HPV Vaccine Addition to School Mandated List

During your discussions on mandating HPV vaccine, please present and answer the following questions:

- What is the purpose of mandating a vaccine for a sexually transmitted infection for school age children that is not a virus transmitted in a public setting? Refer to Criteria #6 in evaluating vaccines containing antigens.
- What were the outcomes from the double-blind inert placebo tests for Gardasil?
- What was the duration of the double-blind inert placebo tests for Gardasil?
- What is the safety profile of AAHS?
- WA State BoH states in the Immunization Advisory Committee Criteria (dated November, 2017) that it engaged immunization stakeholders that included parents. How many parents will be 'engaged' in 2020 to help determine mandating or not mandating Gardasil or another HPV vaccine? How are these parents and other stakeholders chosen?
- In Criteria number three, it is stated, "The vaccine containing this antigen is cost effective from a societal perspective." What is the cost-benefit analysis for mandating the HPV vaccine? This analysis needs to be documented and available to the public early in the process.

Subject: HPV vaccine policy change BOH
Date: Monday, December 30, 2019 2:18:18 PM

Please do not require the HPV vaccine as a new policy change for the Board Of Health. Dr. Stephan Baker explains:

The HPV vaccine accounts for more than 60% of ALL reported adverse events from vaccines. As of April 30th 2018, there's been 58,992 adverse reactions reported from this vaccine and 430 of those were DEATH.

For all females under the age of 30 deemed disabled, 82% of the time it's due to this vaccine.

Gardasil stats: HPV related cancers make up 2.74% of human cancer. Cervical cancer represents less than 1% of cancer based on U.S. stats. In 2005 (year before the vac release) cancer stats for cervical cancer made up 0.75% of all cancers. Fast forward to 2015 when the vaccine has been available on market for 9 years, now the rates of cervical cancer per capita are 0.77%. 9 years after the release of Gardasil (released in '06) there's still more cervical cancer anyways!

Typical reactions as well as other reactions like sudden collapse and unconsciousness within 24 hours of vac, seizures, muscle pain, disabling fatigue, guillain-barre syndrome, facial paralysis, brain inflammation, rheumatoid arthritis, lupus, bloodclots, pre-mature ovarian failure.

Source: Dr. Steven Baker

<https://youtu.be/VyMvnyVknk0>

PLEASE oppose this policy change, we do not consent. Support medical freedom & body autonomy. Thank you.

Subject: HPV Vaccine Public Schools
Date: Friday, January 3, 2020 11:39:38 AM

Hello,

My wife and I wanted to voice our comments and concerns regarding this decision to potentially add the HPV vaccine to the list of required vaccinations to attend public schools in Washington state. While this vaccination is very important as a cancer prevention effort in later years, we see absolutely no reason why this should be a mandatory vaccination in determining eligibility for attending public schools in Washington state. My wife and I do not disagree with vaccinations and believe they are safe, effective and necessary. We currently vaccinate our children to protect them and other members of their schools and society in general. However, we certainly disagree with the idea that the HPV vaccination has anything to do with public safety as it relates to the ability of a child to attend school. Measles, Rubella, Mumps, etc. all seem perfectly logical for students to be vaccinated against before attending public school as they are communicable via contact or airborne vectors. The fact that these vaccinations are not currently being enforced properly for students attending public school makes the thought of enforcing HPV wasteful. Please spend your efforts solving the problem of enforcing vaccinations of the disease that have always been required to be protected against before attempting to create a new policy for something that is not infections to students sitting in class doing schoolwork.

Please feel free to reach out to my wife and I if you would like to further discuss this.

Hello,

I am writing to express my concern over the proposal to add the HVP vaccine to the required list for schools. I feel this vaccine should be completely voluntary, as it is not a contagious disease that would cause an outbreak of sickness, and because of the medical reactions that it can cause. As a parent of two young teens, I do not approve of this vaccine becoming required.

Thank you for your time,

From: [Christopher Dowdy](#)
To: [DOH WSBOH](#)
Subject: HPV Vaccine
Date: Friday, January 3, 2020 11:27:12 AM

To whom it may concern,

My name is Christopher Dowdy. I am a Molecular/Microbiologist and have experience in my career working with vaccines. Adding Gardisil to the list of mandatory vaccines is very concerning to me, actually making any medical procedure government mandatory is very concerning. We as parents have the right to choose our children's welfare and while I believe in the methodology of vaccines, I do not believe in vaccine safety. There are many harmful metals and other adjuvants in vaccines. As a molecular biologist I know that the human body is very sensitive to any foreign material. The use of metals may be great to preserve the vaccine from contamination, but what effects have these metals had on our children. Especially when you are scheduling so many vaccines while children have essentially no immune system.

How do we really know for sure that these metals and adjuvants that are so commonly in these vaccines are not triggering negative responses in a child's auto-immune, learning or in their endocrine system. The answer is we do not know. The safety of vaccines has been blown off by politicians who simply chasing down more money from pharmaceutical companies. The answer is we are responsible as scientists and politicians to protect our children, not to pump their system with harmful metals. There should be more independent studies done in order to determine the safety of all vaccines. This study should be independent, non-biased. There are virtually no studies like this because any study that shows the truth is buried and researchers who bring this information to light are often regarded as "Quacks" and their research completely discredited.

Please consider that HPV is 100% avoidable through education, It is not a communicable disease and spread like influenza. You do not need a mandatory vaccine for an avoidable situation.

Thank you for your time

I am opposed to having the HPV vaccine added to the list of vaccines that are required to attend public or private school in Washington state. I believe a vaccine against an STD is absolutely unnecessary for receiving an education that my tax dollars pay for, that the vaccine has not had enough testing to be proven safe or effective, and that the board of health would be irresponsible adding it to the list when so many parents already avoid the Gardasil vaccine.

Kids aren't spreading HPV in schools during school hours, so they shouldn't have to be vaccinated for it to attend. While I realize that at this time there is still an opt-out option for many vaccines on that list, Washington State would like to take away that freedom later this year. So adding HPV to that list will likely make it so that we can't opt out of it if we want our children to attend school. It would be wrong for the state to hold education hostage for the sake of a vaccine that has absolutely nothing to do with education. Medical freedom of choice should have just as much to do with vaccination as it does with any other medicine my kids get injected in their bodies. It is a slippery slope to require this vaccine. The government should not have a say in my medical decisions.

Gardasil and the flu vaccine are the most hotly contested vaccines among parents of even fully vaccinated kids. We don't trust the gardasil vaccine because we have all heard the horror stories of vaccine injury. The study below shows that in 2016, 57% of parents didn't believe the HPV vaccine should be necessary for school attendance.

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5010506/>

One of the reasons the state requires certain vaccines for school is because, historically, the viruses we vaccinate against used to run through schools, causing epidemics, keeping kids from attending school, causing difficulties for working parents and stay at home parents alike. The theory is that eliminating certain viruses keeps schools running efficiently, and helps kids get a good education without missing as many school hours for illnesses, while potentially saving lives of kids who would otherwise be exposed to what were once considered common childhood illnesses. HPV doesn't cause school-wide epidemics, and if it were routinely being transmitted by kids during school hours, there would be a much bigger issue to address!

HPV is a sexually transmitted disease, and not remotely a common childhood virus. I've tried to be responsible for my kids' well-being, and given them protection from the common childhood viruses by vaccinating them. But, I intend to let my kids choose whether or not to get the HPV vaccine when they are older, when we have all seen the results of more research on this particular vaccine. According to the Gardasil vaccine package insert, women and girls who receive the vaccine are 100x more likely to receive an adverse effect from the vaccine, than they are to contract cervical cancer in their lifetime.

<https://www.fda.gov/media/74350/download>)To date there have been 523 Gardasil related deaths reported to VAERS, and 63,979 adverse effects reported! Many countries refuse to administer the HPV vaccine because of the adverse affects. Since vaccine companies don't have to do tests on how vaccines affect humans before releasing vaccines, our children are the test subjects. Since Gardasil (in various forms) has just been on the market since 2006, we are only now starting to see the effect it has on women of childbearing age, and men in their 20's. We don't know how this vaccine will affect our kids when they are older because there is

simply no data on it.

I'm not interested in using a medication on my kids that is essentially still in the testing stage, and the Board of Health has a responsibility to listen to the parents of kids that will be affected by their decision. Please, don't add this to the list of required vaccines for school aged kids. It's unnecessary, and potentially dangerous. Thank you for your time.

Dear WA Board of Health:

As a Washington State Resident who knows two children who were severely injured by the HPV vaccine product/Gardasil (autoimmune encephalitis and juvenile arthritis), I strongly oppose the proposed rule change to add the HPV vaccine to Chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine Preventable Diseases.

The risks are of the HPV Vaccine/Gardasil are far greater than the benefits. This proposed rule change should not be recommended for many reasons including but not limited to the following:

- 1. Informed choice and medical freedom are fundamental rights.** As citizens and parents we have the right to decide what is injected into our bodies and our children's and a right to know the risks and benefits associated with each liability free pharmaceutical vaccine product.
- 2. According to the [American Cancer Society](#), cervical cancer is preventable with proper screening tests.**
- 3. HPV is a sexually transmitted infection** that is not caught in public settings such as daycare or school. HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time.
- 4. You have a higher chance of dying from the HPV vaccine product/Gardasil than getting or dying from a HPV associated cancer.** The death rate of [cervical cancer](#) in the US is 2.3/100,000. The death rate in the Gardasil clinical trials was [85/100,000](#) or 37 times that of cervical cancer. The total [HPV associated cancer](#) rate of cervical, anal, vaginal and vulvar is 19.8/100,000. Do the math!
- 5. According to the [Gardasil insert](#) there is a 2.3% chance of developing an autoimmune disease** after receiving the HPV vaccine product/Gardasil. That means 2.3 out of every 100 children will develop a lifelong chronic disease such as arthritis, lupus, multiple sclerosis, etc. after receiving the liability free HPV vaccine product/Gardasil
- 6. [Half \(49.6%\)](#) of the clinical trial subjects who received Gardasil reported serious medical conditions** within seven months. To avoid classifying these injuries as adverse events, Merck dismissed them as "new medical conditions."

7. Females in the Gardasil clinical trials with evidence of current HPV infection and previous exposure to HPV had a [44%](#) **increased risk of developing cervical lesions or cancer following vaccination.**

8. The HPV vaccine product/Gardasil has been associated with **premature ovarian failure**([teenage menopause!](#)) and **increased miscarriage rates** [10-15%](#) higher than the corresponding reproductive age group.

9. **There have not been any real Gardasil safety studies conducted.** In the Gardasil clinical trials, Merck used a neurotoxic aluminum adjuvant called [AAHS](#) instead of using an inert saline placebo. In the clinical trials, there was little to no difference in the safety profiles of the [AAHS adjuvant and Gardasil](#). [The World Health Organization](#) has stated that using something other than an inert substance as a placebo creates a “methodological disadvantage”. This may make it “difficult or impossible” to assess vaccine safety properly without a true placebo. It is no surprise to learn that Merck is currently being sued for fraudulent Gardasil safety studies.

10. [Japan](#) **removed the HPV vaccine product/Gardasil from their recommended list of childhood vaccines** after an enormous amount of adverse events occurred after Gardasil was administered.

I strongly urge you to get all the facts about the HPV vaccine product/Gardasil. Below is a link to a video [presentation](#) by Children’s Health Defense that was put together for a current case where Merck is being sued for fraudulent Gardasil safety studies. I also encourage you to read [The HPV Vaccine on Trial](#).

It is only a matter a time before the horrible truth about Gardasil is out and the vaccine is recalled by the FDA. The truth is just too horrific to hide forever. ***I urge you to be one of the brave public health officials/politicians who is willing to put the health of our children first, ahead of political agendas and pharmaceutical profits.*** How many more of our children have to be diagnosed with lifelong chronic autoimmune diseases or die? **Those few braves souls who do will be the true heroes of the 21st century. Be brave!**

Sincerely,

Gretchen Little

I am a parent & do not want this vaccine added to the school requirements. HPV is not possibly transmitted at school & this vaccine is dangerous. This vaccine has already been stopped in other countries. This dangerous vaccine is without proper clinical trials & doesn't have any long term effects studies. HPV is an STD & the vaccine shouldn't be required for kids to go to school. Mandating this vaccine goes against the Hippocratic Oath! The choice to receive this vaccine should be a personal one. By mandating vaccines the government is overstepping their bounds. My body, my choice.

Thanks,

Tanya Ann

Hello,

I am a parent and I do not want this vaccine added to the required vaccines for school. This is a vaccine for STD and is not transmitted in school settings so there is no need. Please do not allow it to become part of the requirements.

To Whom It May Concern:

As a mother of 3 and a registered nurse, I object to making the HPV vaccine mandatory for attending school. I do believe in many vaccines, but this has proven to be a dangerous vaccine for many. By implementing this as a mandatory vaccine to attend school, you are removing our freedom and given rights to make these decisions for our children. This is not in the best interest of all children and their families. There have been many people whom have had life changing disabilities related to this vaccine and several deaths. Who are we to put those burdens on families when their loved ones experience these life changing responses to this vaccine? This is not an airborne or contact transmitted virus. This is spread through sexual activities. What does this have to do with attending school. I urge you to remove this mandate and allow individuals and/or parents to continue to make these decisions for themselves and stop letting Big Pharma continue their monopoly and causing harm in more ways than one. Stop building their empire at the sake of our children and our health. This is one vaccine I will continue to decline!

Sincerely,

A concerned mother and healthcare provider

Dear Washington Board of Public Health,

As a Washington State Resident who has multiple friends and family injured from the HPV vaccine product/Gardasil (ovarian failure, seizure disorder, multiple miscarriages, unable conceive), I strongly oppose the proposed rule change to add the HPV vaccine to Chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine Preventable Diseases.

I am beyond appalled that a dangerous vaccine for a sexually transmitted disease is even being discussed.

Kind regards,

Autumn Busick

To whom it may concern,

I strongly disagree with the action towards mandating the HPV vaccine for school entrance. The HPV vaccine is intended to protect against SEXUALLY transmitted diseases, NOT communicable community diseases. Furthermore, until the vaccine is properly placebo safety tested it is absolutely unethical to mandate this in our children.

Please visit the following link for more information on how vaccines are not properly safety tested.

<https://www.icandecide.org/wp-content/uploads/2019/09/VaccineSafety-Version-1.0-October-2-2017-1.pdf>

Thank you for your consideration.

As a parent, I am vehemently opposed to adding the HPV vaccine to the mandated school schedule. This is not a disease that is transmitted in normal school settings. This vaccine has a lot of issues associated with it and it must be an individual decision as to whether or not the risks outweigh any possible benefits.

Thank you.

To whom it may concern,

As a mother who has chosen to vaccinate her children, and as a registered nurse in the state of Washington, I would like to address the recent proposal of adding the HPV vaccine to the list required vaccinations for attending public schools. I strongly advise against this action. HPV is not a communicable disease therefore making this a requirement takes away families' choice which should always be maintained whenever the public is not at risk. Public schools are already teaching ways for kids to protect themselves, and data also says successfully so.

Again, please do not add HPV vaccine to the list of required vaccinations for attending public school.

Thank you,

Tiffany Hedin

To whom it may concern,

I am writing to comment on the potential action to add the HPV vaccine for students. I have multiple children in my family that are school age and I strongly oppose adding a vaccine to the schedule for a virus that is not communicable in a school setting.

The testimonials of the negative effects of this vaccine abundantly outweigh the concerned risk of the virus. Please do not put children in danger by adding this as a requirement for education services.

Thank you for your time and consideration.
Best regards,

SH

Please do not add the HPV gaurdisil vaccine to the mandatory schedule for school. My husband is a microbiologist who worked at Merck on this vaccine. While he worked there he not only saw data fraud among a massive push to get it through the clinical trials as fast as possible to get it to market at the speed of light. I personally know two young females who have been affected by this vaccine and no longer have a functioning reproductive system. There have been over 500 deaths and more injuries from this vaccine. The injuries are so rampant from this vaccine the Japan has stopped using it and there are multiple class action lawsuits in multiple other countries. The clinical trials were so very fraudulent there will be more lawsuits coming. HPV is not transmitted in a school setting and there is no need to add this to school requirements. If you add this to the schedule many will not conform and the school will loose tons of money because enrollment will be low. I personally know about 50 moms who are against this vaccine. This is a huge mistake if added to the mandatory schedule. Whatever happened to lessons from the NUremburg code? What about informed concent. No one knowingly knowing about the side affects of this vaccine will willingly give this to students. Huge mistake if you add this. If it happens it will ignite the flame even more and parents will uproar.

Hello,

My name is Kristin Fiedler and I oppose the addition of the HPV vaccine to the school schedule. I feel strongly that bodily autonomy is a personal and constitutional right and believe the child, parent and pediatrician should be able to determine when and what vaccine is appropriate for that child's risk/well being. I have multiple friends who have had serious immune and fertility issues after this vaccine, and I also have an acquaintance who within 24hrs of the HPV vaccine developed Dysautonomia. She is 23, bed ridden and has to have a service dog now. This vaccines safety testing and effectiveness is questionable and in my opinion the risks outweigh the benefits. My best friend has three children who carry a genetic mutation called MTHFR, which affects their methylation cycle and doesn't allow them to detox the vaccine additives. Again this is why the parent and pediatrician should get to decide not the school board. Thank you for your time and listening ear and please oppose and vote no on the addition of the HPV vaccine to the mandatory school schedule.

Sincerely,
Kristin Fiedler

To whom this may concern,
In becoming a parent I have become more aware of the dangers of the HPV vaccine. This vaccine should never be added to the vaccine schedule.

The information on this vaccine is overwhelming and I have included some below.

For the sake of our children please vote against adding the HPV vaccine.

Thank you for your time,
Amy Keller

After Gardasil was licensed and three doses were recommended for 11-12 year old girls and teenagers, there were thousands of reports of sudden collapse with unconsciousness within 24 hours, seizures, muscle pain and weakness, disabling fatigue, Guillain Barre Syndrome (GBS), facial paralysis, brain inflammation, rheumatoid arthritis, lupus, blood clots, optic neuritis, multiple sclerosis, strokes, heart and other serious health problems, including death, following receipt of the Gardasil vaccine.

The Japanese government stopped giving the Gardasil vaccine in 2013 after health officials recorded nearly 2,000 adverse reactions, according to the Tokyo Times.
<http://www.tokyotimes.com/side-effects-in-young-girls-take.../>

Dr. Harper, MIT and Stanford educated medical doctor who also has a Master's Degree in Public Health and worked as a vaccine developer for Merck (the manufacturers of the Gardasil vaccine), has repeatedly spoken out against the HPV vaccine and raised serious concerns about whether it is safe. As reported by CBS News in 2009:

To whom this may concern,
In becoming a parent I have become more aware of the dangers of the HPV vaccine. This vaccine should never be added to the vaccine schedule.

The information on this vaccine is overwhelming and I have included some below.

For the sake of our children please vote against adding the HPV vaccine.

Thank you for your time,
Amy Keller

After Gardasil was licensed and three doses were recommended for 11-12 year old girls and teenagers, there were thousands of reports of sudden collapse with unconsciousness within 24 hours, seizures, muscle pain and weakness, disabling fatigue, Guillain Barre Syndrome (GBS), facial paralysis, brain inflammation, rheumatoid arthritis, lupus, blood clots, optic neuritis, multiple sclerosis, strokes, heart and other serious health problems, including death, following receipt of the Gardasil vaccine.

The Japanese government stopped giving the Gardasil vaccine in 2013 after health officials recorded nearly 2,000 adverse reactions, according to the Tokyo Times.
<http://www.tokyotimes.com/side-effects-in-young-girls-take.../>

Dr. Harper, MIT and Stanford educated medical doctor who also has a Master's Degree in Public Health and worked as a vaccine developer for Merck (the manufacturers of the Gardasil vaccine), has repeatedly spoken out against the HPV vaccine and raised serious concerns about whether it is safe. As reported by CBS News in 2009:
<http://www.cbsnews.com/news/gardasil-researcher-speaks-out/>

The thousands of parents who belong to this non-profit, the parents who followed their doctor's orders and got the "cervical cancer jab," as they like to call it in the U.K.

Dear Washington State Board of Health,

First off let me say I am NOT an Anti-Vaxxer. I agree with vaccinations like the MMR, Polio, etc. I am aware of the issue going before the board and legislature to require the HPV/Gardasil vaccination for all students in Washington State. This is absurd as HPV is not contagious. More children/adolescents/young adults have died from this vaccine than it has protected. Please, PLEASE do NOT endanger our children and approve this as a mandatory vaccination for schooling! Thank you!

Sincerely,
Tammy L. Wilson

Dear Board of Health,

Please reconsider your proposition to add the HPV vaccine to the required school schedule. There is absolutely no reason a child should be required to receive this to attend school. If children are at risk of catching HPV in the school environment then we've got some bigger issues to deal with. Take the time to do the research, this vaccine is UNSAFE!! Do NOT add this to the school schedule.

A concerned mother,

Kylee C.

PLEASE VOTE NO

This is the United States of America, where ostensibly people are dedicated to preserving personal freedoms over their choices and their bodies - and that extends to their children's bodies.

It is unethical in light of our dedication to freedom to force any individual, ESPECIALLY any individual's choice over their child's health and well-being, to inject their child with questionable medical vaccines on pain of withholding the public education their tax dollars support. It is even more unethical in light of the growing evidence that this particular vaccine for HPV is directly responsible for devastating vaccine injury.

PLEASE VOTE NO against forcing foreign toxins into our children.

Thank you for your time and consideration

Subject: NO HPV Vaccine added to the schedule
Date: Friday, January 3, 2020 10:38:41 AM

To Whom It May Concern

I am writing to ask that the HPV vaccine not be added to the schedule of required vaccines for school. The HPV vaccine is well known to be a dangerous vaccine. The Gardasil vaccine has been completely banned in Denmark, other countries that have banned the shot or have current criminal lawsuits filed include Japan, India, France and Spain. This vaccine has been found to cause severe reactions and even death after administration. This vaccine is for a sexually transmitted virus, and not a communicable disease. Please stand for medical choice, and make the wise and sound decision to not add this vaccine.

Thank you,

Emily Laning

This vaccine has been found to cause severe reactions and even death after administration. This vaccine is for a sexually transmitted virus, and not a communicable disease. Please stand for medical choice, and make the wise and sound decision to not add this vaccine.

Thank you,

Emily Laning

HPV is not a communicable disease and should not be added to the required schedule.

The Japanese government stopped giving the Gardasil vaccine in 2013 after health officials recorded nearly 2,000 adverse reactions, according to the Tokyo Times. <http://www.tokyotimes.com/side-effects-in-young-girls-take.../>

American College of Pediatrics warns of ovarian failure linked to the HPV (Gardasil) cervical cancer vaccine. <http://bit.ly/2kwyX2A>

The College says that in addition to concerning correlations between Gardasil and Premature Ovarian Failure, they are also concerned with the pre-release vaccine testing methods utilized by Gardasil maker Merck.

Dear Board of Health,

I am writing to strongly object to the addition of the HPV vaccine to the list of requirements for school attendance.

This vaccine is for a disease that is typically spread through sexual intercourse; something my child absolutely better not engage in during school hours on school grounds.

I think this regulation adds BOH oversight to an issue that should not fall under the school district's domain.

Thank you

Hello,

My name is Emilee Meacham and I oppose the addition of the HPV vaccine to the school schedule. I hold firmly that bodily autonomy is a personal and constitutional right and believe the child, parent and pediatrician should be able to determine when and what vaccine is appropriate for that child's risk/well being. I received the HPV vaccine and have had serious immune and fertility issues after for over 10 years now, and I also have a family friend who within 24hrs of the HPV vaccine developed Dysautonomia. This vaccines safety testing and effectiveness is questionable and in my opinion not safe at all, the risks outweigh the benefits. I also have 2 children who carry a genetic mutation called MTHFR, which affects their methylation cycle and doesn't allow them to detox the vaccine additives. This is why the parent and pediatrician should get to decide not the school board. Thank you for your time and listening ear and please oppose and vote no on the addition of the HPV vaccine to the mandatory school schedule.

Sincerely,

Emilee Meacham

Dear WA State Board of Health Members,

I am a parent of school age children who have already moved from one state to another over vaccine mandates. I am writing to state my opposition to adding HPV 3 part series to the WA State school schedule. We will be forced to pull out of the school system if this is mandated. This will cost our schools heavily if every parent like myself does the same. HPV is not a communicable disease. My children should have zero risk catching this at school and if they are we have a bigger problem.

The HPV makers are under investigation for fraud over this vaccine. Its causing girls to go off to college and die in their beds of a heart attack. Its also causing seizures and death. It has not been proven safe and should not be added to the schedule.

If you would like to learn more I recommend The HPV Vaccine on Trial by Mary Holland.

Subject: Oppose HPV Vaccine Mandate
Date: Friday, January 3, 2020 1:20:11 AM

I am not anti-vaccination, but am pro-choice regarding what we put in our bodies, and our kids bodies. On that note, I support awareness, education and access to the vaccine; however, I oppose a school mandate controlling a parent's right to make choices concerning the welfare of their child.

I'm concerned that laws will start to hold too much say over what goes in our body, or our children's bodies.

Please consider the following:

1) While vaccines have a place in western medicine, is it safe to recommend that one vaccine works for every BODY? Just as with prescription medication, there are side effects to consider - some medicines work better for one person than another. I witness this all the time working in the health field.

2) Mandating all citizens to get a vaccine takes away the right to make an informed decision about our body and/or our child's body through discussion with our health care provider. It takes away the ability to make a decision based on medical and family history, and research. It can also leave those with sensitivities which they may or may not be aware of, at risk for experiencing side effects that can cause mild to severe complications that can potentially be costly to remedy - this is not acceptable. With exceptions being more difficult to get -especially if you have mild to moderate sensitivities, which can be difficult to get physicians to consider for exemption-citizens are yet again left with less say in what we do with our bodies.

My family has a history of sensitivities; this is why I research the vaccines we use, and at what age we will administer them. It is why it is important to me that we aren't required to put the HPV vaccine into our body without choosing to. I know others in the same situation as us in regards to sensitivities, and some worse off. Do we really want to start telling people and children what to do with their body without full knowledge of their health history? Please consider that this decision might be better left to primary care physicians and their patients.

Thank you for your consideration.

Dear Board of Health members,

I strongly oppose adding the HPV vaccine to the WA state school required schedule. You may think we have exemptions but they are getting very hard to get these days with how scared doctors are to write an exemption after what CA and NY did. Doctors are also paid more per office visit to vaccinate and given bonuses if they reach certain percentages of vaccinated. So the incentive to push to get to those rates are causing doctors to not take patients who choose not to vaccinate. Both these reasons are making it hard to get exemptions.

Please do not add the HPV vaccine to the WA state school schedule.

WA State Board of Health,

As a resident of WA state and a concerned parent I urge you to NOT add the HPV vaccine as a school requirement. To subject our children to this vaccine would pose a great risk of vaccine injury especially with the possibility of exemptions being eliminated. This is an unnecessary move to possibly make for our children to go to public and private schools here. It is not a public health issue and should only be administered with proper informed consent by reading the vaccine inserts prior. To subject children to the risk of this vaccine without proper informed consent is making them a product of the liability-free pharmaceutical companies only (due to the 1986 Vaccine Injury Act) before they are able to make their own choices. VAERS, evidence of fraud, vaccine inserts, testimonies and medical freedom of choice should all be considered in this matter. This makes me question the intentions of the WA SBOH if it gets added. Please reconsider and NOT add this as a school requirement.

Thank you,

Carmen Enochs

Good afternoon-- i'm putting this comment in because I am aware of our Declaration of Independence and the Constitution. WE the PEOPLE are the ones who govern over our OWN bodies! We are born with these fundamental rights as human beings, and anyone who wants to take away the rights that these powerful documents declare should be forbidden! Any true American citizen that pays attention to history and it's people knows that this is not right.

We shouldn't have to be in this position of losing our rights because this generation is the most ill. We can see plain as day what these vaccines are doing. To pass a law like this would mean forcing vaccinations on those who are susceptible to adverse reactions from the vaccine.

THIS IS BIOLOGICAL WARFARE.

Anyone who is going to take a stand for our rights will be remembered in history as others before are.

God bless America and the PEOPLE

Read the facts.

Is there any proof the HPV vaccine is dangerous?

After Gardasil was licensed and three doses recommended for 11-12 year old girls and teenagers, there were thousands of reports of sudden collapse with unconsciousness within 24 hours, seizures, muscle pain and weakness, disabling fatigue, Guillain Barre Syndrome (GBS), facial paralysis, brain inflammation, rheumatoid arthritis, lupus, blood clots, optic neuritis, multiple sclerosis, strokes, heart and other serious health problems, including death, following receipt of Gardasil vaccine.

The Japanese government stopped giving the Gardasil vaccine in 2013 after health officials recorded nearly 2,000 adverse reactions, according to the Tokyo Times.

<http://www.tokyotimes.com/side-effects-in-young-girls-take.../>

There is the MIT and Stanford educated medical doctor who also has a Master's Degree in Public Health? The one who is a vaccine developer and has worked for Merck, the manufacturers of the Gardasil vaccine? Dr. Harper has repeatedly spoken out against the HPV vaccine and raised serious concerns about whether it is safe. As reported by CBS News in 2009: <http://www.cbsnews.com/news/gardasil-researcher-speaks-out/>

The thousands of parents who belong to this non-profit, the parents who followed their doctor's orders and got the "cervical cancer jab," as they like to call it in the U.K.

Read the facts.

Is there any proof the HPV vaccine is dangerous?

After Gardasil was licensed and three doses recommended for 11-12 year old girls and teenagers, there were thousands of reports of sudden collapse with unconsciousness within 24 hours, seizures, muscle pain and weakness, disabling fatigue, Guillain Barre Syndrome (GBS), facial paralysis, brain inflammation, rheumatoid arthritis, lupus, blood clots, optic neuritis, multiple sclerosis, strokes, heart and other serious health problems, including death, following receipt of Gardasil vaccine.

The Japanese government stopped giving the Gardasil vaccine in 2013 after health officials recorded nearly 2,000 adverse reactions, according to the Tokyo Times.

<http://www.tokyotimes.com/side-effects-in-young-girls-take.../>

There is the MIT and Stanford educated medical doctor who also has a Master's Degree in Public Health? The one who is a vaccine developer and has worked for Merck, the manufacturers of the Gardasil vaccine? Dr. Harper has repeatedly spoken out against the HPV vaccine and raised serious concerns about whether it is safe. As reported by CBS News in 2009: <http://www.cbsnews.com/news/gardasil-researcher-speaks-out/>

The thousands of parents who belong to this non-profit, the parents who followed their doctor's orders and got the "cervical cancer jab," as they like to call it in the U.K.

I am by no means anti-vax, but this one goes too far. I was raised to save sex for marriage and I did that. This vaccine was pushed on me, but was completely unnecessary. Thankfully I knew to decline. Continue to promote it if there's question of promiscuity or if a parent/individual wants it, but please don't force this into a mandate. I want to raise my children to be guarded with their bodies, but if they choose a different path I want the OPTION of this vaccine.

Thank you,

Carolyn Bilyeu

To Whom it May Concern-

As a voter and a parent, I am strongly opposed to Washington state adding the HPV vaccine to the vaccine schedule for school aged children. HPV is a disease only transmitted through sexual contact; School aged children are not or should not be engaging in sexual activity, but when they make that choice, then they should have the freedom of *choice* to get the HPV vaccine as a preventive measure. This should not be forced on children who are too young to even think about sex or sexually transmitted diseases. Moreover, it definitely should not be government mandated on all for something that effects a few.

It is certainly not a disease that we need to be concerned about our children catching at school, like an outbreak of measels. If our legislators insist on adding this vaccine to the schedule, should we take this to mean that our educators expect our children to be engaging in sexual contact while at school? If so, that is an extremely concerning comment on our schools and we as parents will have to start evaluating just what is happening in school.

The HPV vaccine has caused many side effects in kids, including death. Key point: Where there is risk, there MUST be choice. Our children's education should not ever be in jeopardy based on our medical choices. If parents vaccinate their children with the HPV vaccine and they do have an adverse reaction, the parents and child have to live with those consequences for the rest of their lives, including the high costs of medical care. We should not be strong armed into making that choice by our education system. We should be allowed to evaluate these medical options and make our own choices, not be forced by our government to choose between education and risky medical procedures that deal only with sexual contact. For these reasons and more, I strongly oppose the HPV vaccine being added to the vaccine schedule.

Thank you,

Brandi Grenier

I do not feel comfortable giving my young children a vaccine for a sexually transmitted disease.

It's not a concern in the school setting.

There are over 60000 adverse reaction for HPV shot reported and it's been estimated that only 1% of people report these injuries.

Hpv vaccine has not been studied/followed up long enough to see if recipients do not develop cancer like the makers claim.

Too many adverse reactions in inserts.

Hpv clears up in 95% of cases within 3 years of diagnosis.

Children are being hurt by this vaccination, teenagers are being hurt by this vaccination.

Vaccines are not one size fits all. Please think of EVERY ONE.

Thank you,
Jasmine Uila

Subject: Opposition to adding HPV vaccine - Agenda Item #7
Date: Friday, January 3, 2020 11:29:49 AM

Good morning,

I am taking a few minutes this morning to write in regards to the proposed Meeting Agenda Item #7, "Petition for Rulemaking to add HPV to chapter 246-105WAC Immunization of Child Care and School Children Against Certain Vaccine-Preventable Diseases". My husband, Wescott Collom, and I are very much opposed to adding the HPV vaccine to Washington's schedule.

HPV is not anything you can catch while sitting next to someone in class. No vaccine is 100% safe according to the inserts I have read. If you are worried about cancer in our children which has been steadily increasing for the last 30 years it would be more effective to put our efforts into adding mandatory cooking and health classes to the public school curriculum. This would be 100% safe for all children something that unfortunately the HPV vaccine cannot say. Healthy eating and exercise is the number one thing a person can do to help them stay healthy their entire lives. I know society is looking for a magic pill to stop all health issues but really there is none. It comes down to a healthy ecosystem.

It seems that this is merely a money grab by the pharmaceutical industry. We could really put a dent in the cancer wheel by banning processed foods and soda drinks for youth. Why is it ok to allow those toxic things but mandate the HPV vaccine? I really am perplexed by society. The backwards logic really astounds me. I believe in our individual rights as parents to make this choice for our children. Also, once the child is an adult then they should have the right to have the HPV vaccination if they feel it is right for their lifestyle choice. It will still be effective later on in life. I personally asked my doctor about it many years ago and was advised against it due to my lifestyle choice. Let's give our children that same opportunity.

Science is constantly changing and learning more and more about how solving one problem can lead to a host of others. Just look at what has happened to antibiotics. We have strains of antibiotic resistant bacteria. We often mean well but we are a very, very complex system. In no way do we have all the answers and I think it is actually unscientific to question without regard the impact of vaccines to our health.

Please consider this and do not add the HPV vaccine to the already enormous schedule of vaccines. Let's be scientific and cautious in our approach, for humanities sake. We need to focus more on healthy food and water which intern will make us less susceptible to cancer and other diseases. Keep it simple. Thank you for listening to this very concerned mother.

Subject: Opposition to HPV Vaccine for School Children
Date: Friday, January 3, 2020 9:59:12 AM

Washington State Department of Health

To whom it may concern,
As a parent of two, healthy school-aged children, I am writing to voice my strong opposition to the HPV vaccine being added to the schedule for school children. Human Papilloma Virus is not communicable in a school setting. I will not comply if this vaccine becomes a part of the schedule, but will opt out of the public-school system.
I fully support the right of a parent to make health decisions for their children with the guidance of their family physician. Medical interventions should never be mandated by the government. This removes regard for the very personal and individual medical needs of each person.

Subject: Opposition to HPV Vaccine Mandate
Date: Friday, January 3, 2020 7:51:21 AM

Washington State Board of Health & all other concerned parties,

I do not support the potential mandate of the HPV vaccine, Gardasil. Mandating this vaccination is unnecessary & does not do a single thing to improve public health. Therefore, mandating this product is absolutely pointless.

HPV, Human Papillomavirus, is a sexually transmitted disease. Read that again. We are talking about school age children here! HPV is not transmitted in a school setting and there is absolutely no need to add it to the 'requirements'.

Statistically, most HPV infections clear on their own with no long standing issues. A very small number of those infected will go on to develop cancer. There are more than 100 strains of HPV, at least 14 of those can cause cancer. The vaccine only includes 4 strains. 2 that are cancer causing and 2 that cause warts. You can get this shot and still get any of the 96+ strains that are not covered with the shot and still end up with cancer or warts. Sounds like a huge win for public health!

The lack of safety regarding this vaccine is absolutely astounding. Over 500 deaths have been reported to VAERS, imagine how many more are unreported. The injuries from this vaccine are so rampant and catastrophic that Japan stopped using it, and there are class action lawsuits in multiple other countries. The clinical trials were so fraudulent that there will be lawsuits coming soon in the United States too.

This is unnecessary on so many levels. Washington state will lose residents due to folks leaving because of this nonsense. Do the right thing & allow parents to decide what is best for their family health along with their doctor.

I DO NOT CONSENT TO ANY MANDATE OF ANY SORT FOR THIS VACCINATION.

Respectfully,

Megann E Moorman

Subject: Opposition to Proposed HPV Vaccine Mandate
Date: Friday, January 3, 2020 11:15:14 AM

WA BOH,

I am writing to express my opposition to your proposed mandate of the HPV vaccine.

- HPV is primarily a sexually transmitted disease that cannot be spread in a school setting.
- The mandate of this vaccine is opposed by the American College of Pediatricians.
- In Merck's own clinical studies, Gardasil increased the risk of cervical cancer by 44.6% in women who were exposed to HPV prior to receiving the vaccine.
- Many children between the ages of 3 and 11 have the HPV virus in their bodies from non-sexual contact (birth canal, etc.). By mandating this vaccine, we are actually putting them at increased risk for cancer.
- After years of decline in cervical cancer rates due to routine pap smears, cervical cancer rates actually increased in Australia, the UK and Sweden following introduction of the HPV vaccine.
- The vaccine was not tested against an inert placebo (such as saline), but instead against an injection that contained amorphous aluminum hydroxyphosphate (AAHS). This does not mimic the real live choice of deciding whether or not to receive an HPV vaccination.
- According to the most recent data (for the period from 2003 through 2007), the incidence rate for cervical cancer was 8.1 cases per 100,000 women per year in the United States. With the mortality rate of 2.4 deaths per 100,000 women per year. The death rate of the Gardasil (now know as the HPV Vaccine) was found to be 85 in 100,000 - **Over 35 times greater than the cancer itself!**
- Reported side effects of the HPV vaccine include paralysis, premature ovarian failure, POTS, and even death.

Every parent needs to be able to decide for themselves if the risks outweigh the benefits in their child's specific situation. Do not mandate this vaccine for school attendance!

Thank You,

Christy Flynn

Hello,

I wish to voice my opposition to the proposed HPV vaccine being added to the CDC schedule. HPV is a sexually transmitted disease and should not be mandatory for my children to receive.

There are many cases of death and severe injury after children have received this vaccine. I personally know three families that have been affected.

Please do not allow the HPV vaccine to be a requirement. My family will move out of state if Washington makes this a requirement for my children to attend schools which we pay thousands of dollars to fund in our district.

Thank you,
Marie Garrett

Requiring vaccines, especially Gardasil, for children and teenagers to attend school or daycare is discriminatory. Like many others our children have had adverse reactions to vaccines, and getting medical exemption paperwork updated each time state laws change is time consuming and expensive, requiring time off from work that many families can not afford.

Until a better screening process can be developed to determine which children are appropriate candidates for vaccines, parents should not be required to assume this risk of both fatal and long term injury.

Thank you for considering the far reaching impacts of this policy.

Date: Friday, January 3, 2020 9:14:36 AM

Hello,

As a concerned parent, I am asking the board to reject the idea of requiring HPV vaccination for school attendance. It is not a contagious public health threat. These are the facts:

HPV is a sexually transmitted infection that is not caught in public settings such as daycare or school.

HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time.

HPV infections alone rarely lead to cancer. Other factors, such as smoking, must be present.

HPV vaccines have not been proven to prevent any type of cancer.

HPV vaccines were never tested against inert saline placebos.

HPV vaccines don't eliminate the need for proper screening and treatment.

HPV screening and treatment via Pap smears are highly successful at preventing and treating associated cancers.

Given the possible side effects that accompany all vaccines and medications and the lack of danger to the public posed by HPV, vaccine decisions should be left to families and their healthcare providers. Please do not continue to erode people's rights to body autonomy.

Thank you,

Jolyn Curfman

Ladies and Gentlemen of the Washington State Board of Health,

It has been brought to my attention you are seeking public input and gathering to discuss the consideration of adding Gardasil 9 to the required list of vaccinations for school attendance.

I am writing to OPPOSE adding Gardasil 9 to school attendance requirements. HPV is NOT a community-acquired infection and poses no threat to anyone in a classroom or group setting.

As a mother and RN, I am also concerned about the risks of this vaccine.

Firstly, this vaccine has not been evaluated for the potential to cause carcinogenicity, genotoxicity or impairment of male fertility. (section 13.1 https://www.fda.gov/media/90064/download?fbclid=IwAR09eGAQO3XzYhcGL_tefSQqcgqi6eTORLYEq7qV28OyUl4bKJ9eVKk3T1g)

Secondly, duration of immunity has not been determined and therefore I do not support the purported claims that benefits outweigh the risks for every single child/student. <https://www.merckvaccines.com/Products/Gardasil9>

Lastly, one of the lead researchers involved with the development of this vaccine, Dr. Diane Harper, has been openly speaking out about its dangers. <https://www.cbsnews.com/news/gardasil-researcher-speaks-out/>.

Thank you for allowing and considering public input.

Sincerely,
Angela Redinger, RN

Ladies and Gentlemen of the Washington State Board of Health,

It has been brought to my attention you are seeking public input and gathering to discuss the consideration of adding Gardasil 9 to the required list of vaccinations for school attendance.

I am writing to OPPOSE adding Gardasil 9 to school attendance requirements. HPV is NOT a community-acquired infection and poses no threat to anyone in a classroom or group setting.

As a mother and RN, I am also concerned about the risks of this vaccine.

Firstly, this vaccine has not been evaluated for the potential to cause carcinogenicity, genotoxicity or impairment of male fertility. (section 13.1 https://www.fda.gov/media/90064/download?fbclid=IwAR09eGAQO3XzYhcGL_tefSQqcgqi6eT0RLYEg7qV28OyUl4bKJ9eVKk3T1g)

Secondly, duration of immunity has not been determined and therefore I do not support the proposed claims that benefits outweigh the risks for every single child/student. <https://www.merckvaccines.com/Products/Gardasil9>

Lastly, one of the lead researchers involved with the development of this vaccine, Dr. Diane Harper, has been openly speaking out about its dangers. <https://www.cbsnews.com/news/gardasil-researcher-speaks-out/>.

Thank you for allowing and considering public input.

Sincerely,
Angela Redinger, RN

Subject: Public Comment do not add HPV vaccine to the schedule. Thanks
Date: Friday, January 3, 2020 11:57:06 AM

To whom it may concern,

I & my colleagues dismiss the intended mandate for HPV- Gardasil vaccine to be added to the CDC schedule for Washington State.

This vaccine is intended to prevent a sexually transmitted disease, and there for it does not need to be required of all students attending public schools.

This disease that the vaccine intends to mitigate, is not a threat to the public health of our students and staff.

This vaccine is not necessary to the well being of the students and staff within the public schools/ organizations which would take on this new mandate.

Please Do Not add HPV Gardasil vaccine to the Washington State vaccine schedule for public school students & staff.

We as parents do not consent to this vaccine. It is absolutely not necessary or safe vaccine for Washington State.

This vaccine is not safe for our students & is not necessary for the well being of our children.

This vaccine will cause more harm & damage.

Please do more research on this matter.

There are lawsuits against this vaccine, it is a fraud.

Please look out in the best interest of all of our children & protect them & do no harm.

I appreciate your time & understanding.

Thanks for adding my comment.

WA State Board of Health

RE: January 8th 2019 Agenda – HPV

Dear Board of Health Members,

Please accept this as public comment in OPPOSITION to adding the HPV vaccine to the required schedule for school attendance.

This vaccine is so controversial and has so many side-effects being reported that I am in awe that we are even having this discussion. I personally know three of the 523 families who have lost their child to this unnecessary and dangerous vaccine. I was able to hug and cry with two of those moms in November at a vaccine injury epidemic event in DC. Two moms of the 523 who will never be able to hold their child again, who had to face the pain of another Christmas without them, who ache every day for one more conversation, one more hug, one more chance to go back in time and say “No!” to this vaccine that stole their child and stole their future.

Secretary Weisman sat in a room in April with one of these mothers as she told the heart-wrenching story of her daughter, Christina, developing a heart condition after Gardasil and dying alone in her college dorm. It was determined in Vaccine Court that the HPV vaccine caused Christina’s death.

There have been over 60,000 reported adverse events in the US alone. Reported. We know according to the Harvard Pilgrim Study that less than 1% of adverse events are reported. I have a 12-year-old daughter and see accounts of friends who suddenly start fainting after Gardasil, who suddenly develop diabetes, who either stop having their periods or never start; all adverse events associated with this liability-free pharmaceutical product.

Most of my daughter’s friends come from families who follow the CDC schedule, but many of them have chosen not to give their sons and daughters this vaccine; because they know it is dangerous. Because they know it is unproven. Because they know the death rate due to Gardasil (according to clinical trial data) is 37 times higher than the risk of death due to cervical cancer in the US. Because they know women are 100 times more likely to suffer a severe event following vaccination with Gardasil than they are to get cervical cancer. Because they know their daughters will have access to routine pap smears. Because they know countries like Columbia, Denmark, and Japan have stopped recommending it due to the vast number of reported injuries. Because they care about their children and have done the research and determined this vaccine is unproven, is unsafe, and is unnecessary for their child.

Those parents should have the right to make that informed decision. And their children should continue to have the right to attend school.

As Board of Health members, it is your duty and responsibility to set policy to protect and improve public health. While the HPV vaccine may be preventing the risk of cervical lesions, there is no evidence it is preventing cancer. As a cancer survivor, I want to work to prevent my children from ever having to face that diagnosis. This vaccine is not the answer.

We have been sold a marketing ploy pulling on our heart strings, pushing us to believe we can prevent cancer in our children if we give them this vaccine, brushing serious risks under the rug while vastly overstating its usefulness and effectiveness. The HPV vaccine is still in the experimental phases. It will be decades before we really know if it can prevent cervical cancer and as nature loves a vacuum, perhaps longer before we understand the far-reaching negative effects to our biological ecosystem, health, and fertility. This is not a vaccine that should be mandated. Parents should retain the right to determine what is best in protecting the health of their children.

Please oppose any consideration of adding the HPV vaccine to the required list for school attendance.

Sincerely,
Jena Dalpez
Kirkland, WA

Inappropriate placebos and comparisons

1. A placebo is supposed to be an inert substance that looks just like the drug being tested. But in the Gardasil clinical trials, Merck used a neurotoxic aluminum adjuvant called [AAHS](#) instead of using an inert saline placebo.
2. Among girls and women who received the vaccine *and* among girls and women who received AAHS, an astonishing [2.3%](#) in both groups experienced conditions indicative of “systemic autoimmune disorders,” many shortly after receiving Gardasil.
3. [Multiple scientific studies](#) associate aluminum not just with autoimmune diseases but with autism, Alzheimer’s disease, dementia and Parkinson’s disease as well as behavioral abnormalities in animals.
4. Merck lied to study participants, falsely saying that the clinical trials were not safety studies, that the vaccine had already been found to be safe and that the “placebo” was an inert saline solution. [Source: [The HPV Vaccine on Trial](#) (photo evidence, pp. 6 and 12).]
5. When Merck conducted clinical trials for its next HPV vaccine formulation, [Gardasil 9](#), it used Gardasil as the “placebo” in the control groups, again relying on the lack of an inert placebo to mask safety signals.
6. The 500 micrograms of aluminum adjuvant (AAHS) in [Gardasil 9](#) are more than double the amount of aluminum in [Gardasil](#); this raises the question of whether Gardasil 9’s heavy reliance on the Gardasil trials for comparison is justifiable.
7. The [World Health Organization](#) states that using a vaccine (rather than an inert substance) as a placebo creates a “methodological disadvantage” and also notes that it may be “difficult or impossible” to assess vaccine safety properly without a true placebo.

Inappropriate inclusion and exclusion criteria

8. In the only Gardasil trial in the target age group (11- and 12-year-old girls) with a [control group](#) design, fewer than 1200 children received the vaccine and fewer

than 600 served as controls. This single trial involving fewer than 1800 children set the stage for the vaccine's subsequent marketing to millions of healthy preteens all over the world.

9. The Gardasil clinical trials had numerous [exclusion criteria](#). Not allowed to participate in the trials were people with: severe allergies; prior abnormal Pap test results; over four lifetime sex partners; a history of immunological disorders and other chronic illnesses; reactions to vaccine ingredients, including aluminum, yeast, and benzonase; or a history of drug or alcohol abuse—yet Merck now recommends Gardasil for all of these groups.

Inadequate monitoring

10. Some of the study participants—but not all—were given “report cards” to record short-term reactions such as redness and itching. The report cards monitored reactions for a mere [14 days](#), however, and Merck [did not follow up](#) with participants who experienced serious adverse events such as systemic autoimmune or menstrual problems.
11. Injured participants complained that Merck [rebuffed their attempts](#) to report adverse side effects. In numerous instances, Merck maintained that these “weren't related to the vaccine.”
12. [Half \(49.6%\)](#) of the clinical trial subjects who received Gardasil reported serious medical conditions within seven months. To avoid classifying these injuries as adverse events, Merck dismissed them as “new medical conditions.”

Cervical cancer risk-benefit ratio not worth it

13. The median age of cervical cancer death is [58 years](#). Gardasil targets millions of healthy preadolescents and teens for whom the risk of dying from cervical cancer is practically zero. Interventions for healthy people must have a risk profile that is also practically zero.
14. Annual [deaths](#) from cervical cancer in the U.S. are 2.3/100,000. In the [Gardasil clinical trials](#), there were 40 deaths in the groups exposed to either the vaccine, the aluminum-containing “placebo” or a solution containing polysorbate 80 and borax. Although about half of the deaths were accident- or suicide-related, among the remaining fatalities (~65/100,000), many of the causes of death—such as

sepsis, cardiac events, and autoimmune conditions—could plausibly be vaccine-related.

15. With 76 million children vaccinated at an average cost of \$420 for the three-shot Gardasil series, the cost of saving one American life from cervical cancer amounts to about [\\$18.3 million dollars](#). By contrast, the value of a human life according to the Department of Health and Human Services's (HHS's) [National Vaccine Injury Compensation Program](#) is \$250,000—the maximum amount that the government program will award for a vaccine-related death.
16. According to Gardasil's package insert, women are [100 times more likely](#) to suffer a severe event following vaccination with Gardasil than they are to get cervical cancer.
17. The chances of getting an autoimmune disease from Gardasil, even if the vaccine works, are [1,000 times](#) greater than the chances of being saved from a cervical cancer death. (The link provided above goes to the Gardasil package insert. On page 8 of the insert is Table 9—girls/women who reported an “incident condition potentially indicative of a systemic autoimmune disorder”—which shows that 2.3% of Gardasil [and also AAHS] recipients reported an autoimmune disorder, and 2.3% is 2.3 per 100. If you convert that to a per 100,000 rate, it is 2300 per 100,000. The [U.S. SEER cancer database](#) shows that for 2016, cervical cancer mortality for all ages/races was 2.24 per 100,000. 2300 is approximately 1000 times greater than 2.24.)
18. Women in Gardasil clinical trials with evidence of current HPV infection and previous exposure to HPV had a [44% increased risk](#) of developing cervical lesions or cancer following vaccination.
19. Women who get the Gardasil vaccine as preteens or teens are more likely to [skip cervical cancer screening](#) as adults, mistakenly assuming that HPV vaccination is a replacement for screening and that the vaccine will eliminate all risk.

Fertility effects

20. Accumulating evidence points to Gardasil's potentially severe [adverse effects on fertility](#), including miscarriage and [premature ovarian failure](#).
21. Merck never tested the vaccine for fertility effects. However, [Gardasil](#) and [Gardasil 9](#) clinical trials showed high spontaneous miscarriage rates of [25%](#) and [27.4%](#),

respectively—significantly higher than the background rates of approximately [10%-15%](#) in this reproductive age group.

22. [Polysorbate 80](#) and [sodium borate](#) (Borax) are associated with infertility in animals. Both are Gardasil ingredients, and both were present in the one clinical trial protocol that professed to use a benign saline placebo.

Post-licensing

23. In 2015, Denmark opened [five new “HPV clinics”](#) to treat children injured by Gardasil. Over 1300 cases flooded the clinics shortly after their opening.
24. Since Gardasil came on the U.S. market in 2006, people have reported over [450 deaths and over 61,000 serious medical conditions](#) from HPV vaccines to the Vaccine Adverse Event Reporting System (VAERS).
25. Merck lied to VAERS about the case of Christina Tarsell’s death, falsely claiming that her doctor blamed a virus instead of Gardasil. [Source: [The HPV Vaccine on Trial](#) (p. 144).]

The vaccine that should never have been licensed

As suggested in the conclusion to the 2018 book *The HPV Vaccine on Trial*, the rollout of Gardasil in 125 countries worldwide has illustrated—in an all-too-real and shocking manner—the phenomenon that prompted Hans Christian Andersen to write “The Emperor’s New Clothes.” Around the world, [over 100,000](#) Gardasil-related adverse events have now been reported to the FDA and WHO, and accounts continue to multiply of “scandal, lawsuits, severe injuries, and deaths.” For almost 200 years, Andersen’s story has taught readers about the need to speak the truth, pay attention to evidence and listen to children. The rosy narrative manufactured for the dangerous Gardasil vaccine must not be allowed to hold sway any longer. It is time, in the words of the *HPV Vaccine on Trial* authors, to proclaim—loudly—that “the Emperor has no clothes.”

This disease that the vaccine intends to mitigate, is not a threat to the public health of our students and staff.

This vaccine is not necessary to the well being of the students and staff within the public schools/ organizations which would take on this new mandate.

Please Do not add HPV Gardasil vaccine to the Washington State vaccine schedule for public school students & staff. It is absolutely not necessary and not safe!

Hello,

Despite worldwide protests and lawsuits against Merck's controversial HPV vaccine Gardasil, How is this possible that WA State Board of Health would even be considering beginning the steps required to add HPV injections to the school required list?

The role of public health should not extend to the use of coercion to compel uptake of any pharmaceutical product.

This HPV Gardasil vaccine is not necessary or safe for our students or staff in Washington State or worldwide.

Please reconsider and Do not add this vaccine to the schedule for Washington State students and staff.

I would never allow my children to get this vaccine and none of parents would either. I have read the clinical trials & studies, this vaccine is a fraud. This will be the biggest mistake the Washington state health department makes. Please do not add this vaccine to the schedule.

Thank you for adding my comment.
I appreciate your time.

I am unable to attend the upcoming BOH meeting but wanted to leave comment regarding the possibility of the HPV vaccine being added to the schedule for school age children.

HPV is a sexually transmitted disease and is not spread in a school setting so I see zero logic to having this be a requirement for school entry. There are many concerns with the safety of this vaccine, and hundreds if not thousands of reported adverse reactions, including death.

There is also zero evidence that actually supports the claim that this vaccine can prevent cervical cancer.

Please do not add this dangerous and unnecessary pharmaceutical product to the recommended list for school age kids. I will pull my kids out of the public school system before I will comply with such a ridiculous requirement.

Thank you,

Elisabeth Morgan

Subject: Public Comment for Upcoming Proposal
Date: Friday, January 3, 2020 9:33:08 AM

To whom it may concern,

I am writing to voice my opinion as a life-long resident of Washington state in opposition of the proposal to add the HPV vaccine to the required school schedule. I find this to be a horrendous over reach of power. The human papillomavirus is NOT a highly infectious disease spread through casual contact. To require such a vaccine without any forethought as to the needs of the individual is a heinous act of disrespect towards our medical freedom and rights.

As I'm sure you know, HPV is a sexually transmitted disease, and is usually harmless and clears up on its own. There are instances of HPV leading to cancer, and the HPV vaccine does not even protect against all the strains of HPV that could cause cancer. It is a highly unnecessary and ineffective vaccine!

Additionally, there have been 500 deaths from this vaccine reported to VAERS, and injuries are so frequent that Japan has even stopped using it!

To force school aged children to take this vaccine for admittance into public schools removes parental rights; many children are taught to engage in safe sex, and some children abstain all together. This is a vaccine that should be ALLOWED TO BE CHOSEN when a person has reached the age of consent, which in Washington is 16 years old.

I hold an associates degree in criminal justice, have worked as a defense investigator for five years, and am a father to two school aged children. I urge you to vote against mandating the HPV vaccine.

Sincerely,
Jason A. Dowd

Subject: Public Comment HPV VACCINE OPPOSE
Date: Friday, January 3, 2020 7:47:19 AM

I am AGAINST the addition of the HPV vaccine to the mandated school schedule. This is not a communicable disease in a school setting. This is a virus transmitted through sex and very intimate behavior. Is that happening in school?? If yes, we've got a much bigger problem on our hands.

OPPOSE. DO NOT CONSENT.

I just have 1 simple question.

Are they allowing children to have sex in school now?

No?

Then why would you require a vaccine that is for a sexually transmitted disease?

You're overstepping your bounds and siding with a private industry that has zero liability for their product.

NO HPV FOR MY CHILDREN.

I wish to express my lack of support for adding the HPV vaccine to the required vaccinations for Washington state. I am a nurse and a mother of four. I am pro- vaccines in most cases and my kids are current on all required vaccines. However, I have chosen to pass on the HPV vaccine so far for my 15 and 13 year olds. I have done my own research and talked to my pediatrician and at this point I don't feel comfortable. There is too much varying evidence to make me feel like it is completely safe or necessary. I also firmly believe that since it is not a virus that can be transmitted in a normal school setting it is unnecessary to require it to attend school. I urge you not to take this choice away from families.

Thank you for listening.

I disagree for many reasons with requiring HPV as a vaccine. I have 4 children, I'm an assistant principal and I care deeply for our students. I understand the amazing benefits that vaccines have offered over the years and the horrible consequences Polio, measles and mumps can end with. I appreciate what vaccines can do for these easily communicable diseases.

I do not believe that we should be legislating every human decision. HPV is not a communicable disease during normal school activities and as such we should not force people to make this medical decision to take part in there FAPE rights. I'm unworried about my own children contracting HPV during school hours or sanctioned events. In fact, through research my wife (a nurse) and I have done we don't believe this vaccine is needed and possibly has side effect consequences that aren't worth it for our kids. Please do not over think this and over reach in making this a law. Please allow people freedom to choose, especially because I know as a VP that our students are not at risk of contracting this at school.

Thank you.

Kyle Grunenfelder.

Subject: Public Comment on Gardasil vaccine
Date: Friday, January 3, 2020 10:56:04 AM

Myself & my colleagues dismiss the intended mandate for HPV- Gardasil vaccine to be added to the CDC schedule for Washington State.

This vaccine is intended to prevent a sexually transmitted disease, and there for it does not need to be required of all students attending public schools.

This disease that the vaccine intends to mitigate, is not a threat to the public health of our students and staff.

This vaccine is not necessary to the well being of the students and staff within the public schools/ organizations which would take on this new mandate.

Please Do Not add HPV Gardasil vaccine to the Washington State vaccine schedule for public school students & staff. It is absolutely not necessary.

Why is all the evidence on Gardasil vaccine is being ignored by Washington State & Health officials?

FDA fast tracked approval for Merck's Gardasil vaccine. Proper safety have not been done. There are evidence of fraud & mounting scientific studies, the case against Gardasil is massive.

Some countries are pulling this vaccine off their market & other countries are suing for all the damages & injuries.

Is Washington State prepared to pay for all the injuries & deaths that this vaccine will cause? 49.6% of the clinical trial subjects who received Gardasil reported severe & serious medical conditions within 7 months.

63,979 HPV vaccine-related adverse events and 523 deaths have been reported to VAERS and this is only 1% reported.

Women are 100 times more likely to suffer a severe event following vaccination with the Gardasil than they are to get cervical cancer.

The median age of cervical cancer death is 58 yrs old.

Gardasil targets millions of healthy pre adolescents & teens for whom the risk of dying from cervical cancer is practically zero.

Please Do Not add this vaccine to the Washington State schedule for the students, it is not necessary & absolutely not safe.

I oppose this vaccine!

Thanks for your time.

Thank you for adding my comment.

To Whom it may concern,

I am distraught that you are planning, at the behest of the pharmaceutical industry, to add the HPV vaccine as a forced requirement for all school children. I have been reading about this particular vaccine for many years and it is one of the most dangerous and least effective vaccine produced. There have been hundreds of children's deaths associated with it and there is no good scientific evidence that it will prevent any cancers. In fact, what the evidence does show is that wherever it has been employed widely and systematically there has been an INCREASE in cervical cancers. If you have any conscience at all you simply can't approve it's mandatory use in children. You should realize that these continued actions on the part of public officials serving the greed of industry is driving more independent and even democratic voters toward the Republican Party, even with all the concerns that that also raises. Just for once will you please make a decision based on independent science and not on biased industry science which we know often cannot be trusted.

Sincerely,

Clayton Buerkle

Please DO NOT add Gardasil to required school vaccinations. THIS would absolutely be governmental overstep and an impingement on medical freedom.

Regardless of one's opinion on the safety and efficacy of vaccines, I do not believe that the government has the right to make medical decisions. That being said I can almost understand requiring vaccinations for highly contagious diseases (like measles) simply because they are so easily spread from person to person. However HPV is a sexually transmitted disease. A person with HPV has absolutely no risk of transmitting it simply by walking in a room. A family's choice to not get the HPV vaccine, for whatever reason, has no risk to anyone else unless a CHOICE is made to have intercourse. This choice to not get this vaccine could be due to safety concerns (which are very valid) or a religious principal and teaching of abstinence in regard to sex. Neither are your business.

The government has absolutely no business meddling in our medical choices. Especially in situations that have no risk towards others. Please do not overstep your bounds and tale away our constitutional freedoms.

Sincerely,
Laura Addressio

To DOH , as you are considering adding Gardasil/HPV to shots mandatory for school attendance Its important to note that the HPV is NOT transmitted by sharing pencils, textbooks or Keyboards, and is not airborne, so its quite unclear how this could possibly be justified, as transmission is thru direct body fluids?

I request these comments be on record, including the published research referenced here:

<http://link.springer.com/article/10.1007%2Fs10067-017-3575-z>

Additionally, here is more evidence that HPV/Gardasil should never be mandated;

After Gardasil was licensed and three doses were recommended for 11-12 year old girls and teenagers, there were thousands of reports of sudden collapse with unconsciousness within 24 hours, seizures, muscle pain and weakness, disabling fatigue, Guillain Barre Syndrome (GBS), facial paralysis, brain inflammation, rheumatoid arthritis, lupus, blood clots, optic neuritis, multiple sclerosis, strokes, heart and other serious health problems, including death, following receipt of the Gardasil vaccine.

The Japanese government stopped giving the Gardasil vaccine in 2013 after health officials recorded nearly 2,000 adverse reactions, according to the Tokyo Times. <http://www.tokyotimes.com/side-effects-in-young-girls-take.../>

Dr. Harper, MIT and Stanford educated medical doctor who also has a Master's Degree in Public Health and worked as a vaccine developer for Merck (the manufacturers of the Gardasil vaccine), has repeatedly spoken out against the HPV vaccine and raised serious concerns about whether it is safe. As reported by CBS News in 2009: <http://www.cbsnews.com/news/gardasil-researcher-speaks-out/>

Subject: Public Comment on HPV vaccine
Date: Friday, January 3, 2020 11:44:59 AM

To DOH , as you are considering adding Gardasil/HPV to shots mandatory for school attendance Its important to note that the HPV is NOT transmitted by sharing pencils, textbooks or Keyboards, and is not airborne, so its quite unclear how this could possibly be justified, as transmission is thru direct body fluids?

I request these comments be on record, including the published research referenced here:

Here's over 50 studies showing the dangers of HPV/Gardasil....

American College of Pediatrics warns of ovarian failure linked to the HPV (Gardasil) cervical cancer vaccine. Side effect or working exactly as designed? (You should already know the answer). <http://bit.ly/2kwyX2A>

vaccine randomized trial

<http://link.springer.com/article/10.1007%2Fs10067-017-3575-z>

Additionally, here is more evidence that HPV/Gardasil should never be mandated;

After Gardasil was licensed and three doses were recommended for 11-12 year old girls and teenagers, there were thousands of reports of sudden collapse with unconsciousness within 24 hours, seizures, muscle pain and weakness, disabling fatigue, Guillain Barre Syndrome (GBS), facial paralysis, brain inflammation, rheumatoid arthritis, lupus, blood clots, optic neuritis, multiple sclerosis, strokes, heart and other serious health problems, including death, following receipt of the Gardasil vaccine.

The Japanese government stopped giving the Gardasil vaccine in 2013 after health officials recorded nearly 2,000 adverse reactions, according to the Tokyo Times. <http://www.tokyotimes.com/side-effects-in-young-girls-take.../>

Dr. Harper, MIT and Stanford educated medical doctor who also has a Master's Degree in Public Health and worked as a vaccine developer for Merck (the manufacturers of the Gardasil vaccine), has repeatedly spoken out against the HPV vaccine and raised serious concerns about whether it is safe. As reported by CBS News in 2009: <http://www.cbsnews.com/news/gardasil-researcher-speaks-out/>

Dear board of health members,

I am contacting you to express my concerns regarding adding Gardasil vaccine to required vaccines to attend school which would remove a parent's right to medical choice for their children. I believe that the choice of if, when, and how a child is to be vaccinated needs to remain between a family and their doctor. Where there is a risk of injury or death, no matter how small the perceived risk may be, there must be a choice. To mandate a medical procedure with known risks is medically unethical and goes against our constitutional rights to freedom.

-The role of public health should not extend to the use of coercion to compel uptake of any pharmaceutical product

-Gardasil was approved by FDA on fast-track and was based on fraudulent science.

-Worldwide protests and lawsuits have occurred and are pending against Merck's Gardasil due to known dangers of its use.

-There is no public health crisis.

HPV is a sexually transmitted infection that is not caught in public settings such as daycare or school.

-use of vaccine is not only with great risk, but unwarranted. "Annual deaths from cervical cancer in the U.S. are 2.3/100,000. The death rate in the Gardasil clinical trials was 85/100,000—or 37 times that of cervical cancer . . . According to Gardasil's package insert, women are [100 times more likely](#) to suffer a severe event following vaccination with Gardasil than they are to get cervical cancer." [Children's Health Defense](#)

-HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time.

-HPV infections alone rarely lead to cancer. [Other factors](#), such as smoking, must be present.

-HPV vaccines have not been proven to prevent any type of cancer.

-HPV vaccines were never tested against inert saline placebos.

-HPV vaccines don't eliminate the need for proper screening.

-HPV screening and treatment are highly successful at preventing and treating associated cancers.

In conclusion, if we are not free to make informed, voluntary decisions about which pharmaceutical products we are willing to take or give to our precious children and grandchildren, then we are not free in any sense of the word.

Thank you for opposing the mandatory addition of HPV vaccine to the school required list.

I wish to register my voice as against a mandatory HPV vaccination. I am pro vaccination but also pro choice. My research says that all the strains covered by the current vaccine are sexually transmitted. While it is admirable to aim to lower the spread of diseases that can cause cancer and other issues, as the spread of this is not air or surface to skin, I say no. Our country is very much about personal freedom. Don't further erode this one. Leave the choice up to the parents and adults to make based on their feelings and the research.

Dear Board of Health members,

I am a resident of Cowlitz County and the mother of 6 children.

I would like to express my opposition to adding the HPV vaccine to the required school vaccine schedule.

HPV is not an air-borne disease. It cannot be "caught" in a school setting.

There are many concerns regarding the safety and efficacy of the HPV vaccine. Children have been injured by it.

Over 500 deaths have been reported to VAERS. Japan has stopped using it due to the injuries caused by it.

There are class action lawsuits in other countries and there will be lawsuits coming in the U.S. soon also.

Because HPV is a sexually transmitted disease, parental choice should be respected.

Thank you for recording my opposition.

Respectfully,

Jennifer Heffernan

Subject: Public Comment regarding Gardasil 9 proposed required vaccine...
Date: Friday, January 3, 2020 11:59:33 AM

Members of the Washington State Board of Health,

It has been brought to my attention you are seeking public input and gathering to discuss the consideration of adding Gardasil 9 to the required list of vaccinations for school attendance.

I am writing to OPPOSE adding Gardasil 9 to school attendance requirements. **HPV is NOT a community-acquired infection** and poses no threat to anyone in a classroom or group setting.

As a Father and educator, I am also concerned about the risks of this vaccine.

Firstly, this vaccine has not been evaluated for the potential to cause carcinogenicity, genotoxicity or impairment of male fertility. (section 13.1 https://www.fda.gov/media/90064/download?fbclid=IwAR09eGAQO3XzYhcGL_tefSQqcgqi6eTORLYEq7qV28OyUl4bKJ9eVKk3T1g)

Secondly, duration of immunity has not been determined and therefore I do not support the proposed claims that benefits outweigh the risks for every single child/student. <https://www.merckvaccines.com/Products/Gardasil9>

Lastly, one of the lead researchers involved with the development of this vaccine, Dr. Diane Harper, has been openly speaking out about its dangers. <https://www.cbsnews.com/news/gardasil-researcher-speaks-out/>.

Thank you for allowing and considering public input.

A concerned parent of three,
Ty Redinger

Subject: Public Comment regarding Gardasil Vaccine Mandate
Date: Friday, January 3, 2020 7:38:24 AM

There is no real evidence that should lead a government to enforce and take away freedom of choice for a vaccine that has risks, is not preventing a disease that is a public health crisis, is easily preventable, is tied up with a company that has been involved in fraudulent activity and has made billions of dollars in profits, and that has never been proven in its claims to prevent cancer. This is irresponsible and I strongly urge your reconsideration.

The proven risks of this immunization are clear in the reports that have come from VAERS such as:

- 63,979 HPV vaccine-related adverse events
- 523 HPV vaccine-related deaths

Of these, 650 adverse events and two deaths (in girls aged 11 and 13) occurred in Washington State.

WHERE THERE IS RISK THERE MUST BE FREEDOM OF CHOICE!!!!

It is immoral to enforce a person to inject a substance such as the HPV vaccine into their body with known. This is unconscionable for the state to even consider this when they are not responsible for the consequences that may follow. Who is to pay for the medical costs when injury does occur? Who stays at home with the child to care for them during that time? Who answers to the 523 deaths and spends the time coping with such losses?!?! Not the government who enforces such irresponsible laws. It's the family and the child that untimely pay the price. Given this, how can you morally enforce a law upon which you share none of the responsibility or liability? This is a clear government overstep.

The evidence of fraud around this vaccine is disheartening. It is interesting that you are considering pushing another vaccine mandate upon our children over a disease that is transmitted sexually, not one that is caught in public settings such as school. Could it be that there is pressure coming from pharmaceutical companies and those "in bed" with them who have now made more than \$3 billion in Gardasil sales just in the year 2018? Please do not forget that Merck (who puts out the Gardasil vaccine) has also been on trial more than once for fraud. Most recently regarding the MMR vaccine. Currently, the proof of this vaccine being effective against preventing cancer is nonexistent.

- HPV infections alone rarely lead to cancer. Other factors, such as smoking, must be present.
- HPV vaccines have not been proven to prevent any type of cancer.
- HPV vaccines were never tested against inert saline placebos.
- HPV vaccines don't eliminate the need for proper screening and treatment.
-

There is no real evidence that should lead a government to enforce and take away freedom of choice for a vaccine that has risks, is not preventing a disease that is a public health crisis, is easily preventable, is tied up with a company that has been involved in fraudulent activity and has made billions of dollars in profits, and that has never been proven in its claims to prevent cancer. This is irresponsible and I strongly urge your reconsideration.

Sincerely,
Melynnda Thiessen

There is no real evidence that should lead a government to enforce and take away freedom of choice for a vaccine that has risks, is not preventing a disease that is a public health crisis, is easily preventable, is tied up with a company that has been involved in fraudulent activity and has made billions of dollars in profits, and that has never been proven in its claims to prevent cancer. This is irresponsible and I strongly urge your reconsideration.

The proven risks of this immunization are clear in the reports that have come from VAERS such as:

- 63,979 HPV vaccine-related adverse events
- 523 HPV vaccine-related deaths

Of these, 650 adverse events and two deaths (in girls aged 11 and 13) occurred in Washington State.

WHERE THERE IS RISK THERE MUST BE FREEDOM OF CHOICE!!!!

It is immoral to enforce a person to inject a substance such as the HPV vaccine into their body with known. This is unconscionable for the state to even consider this when they are not responsible for the consequences that may follow. Who is to pay for the medical costs when injury does occur? Who stays at home with the child to care for them during that time? Who answers to the 523 deaths and spends the time coping with such losses?!?! Not the government who enforces such irresponsible laws. It's the family and the child that untimely pay the price. Given this, how can you morally enforce a law upon which you share none of the responsibility or liability? This is a clear government overstep.

The evidence of fraud around this vaccine is disheartening. It is interesting that you are considering pushing another vaccine mandate upon our children over a disease that is transmitted sexually, not one that is caught in public settings such as school. Could it be that there is pressure coming from pharmaceutical companies and those "in bed" with them who have now made more than \$3 billion in Gardasil sales just in the year 2018? Please do not forget that Merck (who puts out the Gardasil vaccine) has also been on trial more than once for fraud. Most recently regarding the MMR vaccine. Currently, the proof of this vaccine being effective against preventing cancer is nonexistent.

- HPV infections alone rarely lead to cancer. Other factors, such as smoking, must be present.
- HPV vaccines have not been proven to prevent any type of cancer.
- HPV vaccines were never tested against inert saline placebos.
- HPV vaccines don't eliminate the need for proper screening and treatment.
-

There is no real evidence that should lead a government to enforce and take away freedom of choice for a vaccine that has risks, is not preventing a disease that is a public health crisis, is easily preventable, is tied up with a company that has been involved in fraudulent activity and has made billions of dollars in profits, and that has never been proven in its claims to prevent cancer. This is irresponsible and I strongly urge your reconsideration.

Hello!

I want to tell you about my nephew who had the HPV shot

He developed a 107 degree fever and a permanent tic disorder that causes uncontrollable arm and leg movements. He was normal before the shot. The symptoms developed within 12 hours. This product is banned in Japan due to adverse reactions like this.

Now he has to take a monthly antibiotic shot to keep the movement tics under control. They are saying it could be PANDAs or chronic strep, but he has never tested positive for strep. Whatever the case...he would be in a wheelchair had it not been for quick action on Moms part getting him to a hospital...the first one they told her, "He obviously has behavior problems and you need to get that under control." They had no money so they had to hitchhike to the next hospital 2 hours away, where that doctor treated him to the best of his ability. We have videos of him seizing and crying and not understanding why it was happening.

Vaccine makers have NO LIABILITY FOR THEIR PRODUCTS, thanks to law signed in by Ronald Regan. So KIDS...our kids, your kids, are the scientific test subjects, and if we allow this to be mandated, now there is not even consent to this "science."

Merck, the maker of the HPV vaccine enjoys great profits from this vaccine, which has been great for their financial recovery from the drug, Vioxx, in which millions had to be paid out because it was killing people.

We should not trust this company with a liability-free product.

HPV is a non-communicable disease...not spread through the air or skin contact. It is a sexually transmitted disease ONLY... if our kids are having sex at school, that is another problem entirely!

Do not add this product as a requirement for school attendance!

Sincerely,

Angie Dittrich

A concerned parent of school-age kids, and an advocate of choice and better science that is not backed by financial interests, but by HEALTH!

WA Board of Health:

As a Washington State Resident who has heard/seen/read about many children who were severely injured by the HPV vaccine product/Gardasil (autoimmune encephalitis and juvenile arthritis), I strongly oppose the proposed rule change to add the HPV vaccine to Chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine Preventable Diseases.

The risks are of the HPV Vaccine/Gardasil are far greater than the benefits. This proposed rule change should not be recommended for many reasons including but not limited to the following:

- 1. Informed choice and medical freedom are fundamental rights.** As citizens and parents we have the right to decide what is injected into our bodies and our children's and a right to know the risks and benefits associated with each liability free pharmaceutical vaccine product.
- 2. According to the [American Cancer Society](#), cervical cancer is preventable with proper screening tests.**
- 3. HPV is a sexually transmitted infection** that is not caught in public settings such as daycare or school. HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time.
- 4. You have a higher chance of dying from the HPV vaccine product/Gardasil than getting or dying from a HPV associated cancer.** The death rate of [cervical cancer](#) in the US is 2.3/100,000. The death rate in the Gardasil clinical trials was [85/100,000](#) or 37 times that of cervical cancer. The total [HPV associated cancer](#) rate of cervical, anal, vaginal and vulvar is 19.8/100,000. I encourage you to do the math!
- 5. According to the [Gardasil insert](#) there is a 2.3% chance of developing an autoimmune disease** after receiving the HPV vaccine product/Gardasil. That means 2.3 out of every 100 children will develop a lifelong chronic disease such as arthritis, lupus, multiple sclerosis, etc. after receiving the liability free HPV vaccine product/Gardasil
- 6. [Half \(49.6%\)](#) of the clinical trial subjects who received Gardasil reported serious medical conditions** within seven months. To avoid classifying these

injuries as adverse events, Merck dismissed them as “new medical conditions.”

7. Females in the Gardasil clinical trials with evidence of current HPV infection and previous exposure to HPV had a [44%](#) **increased risk of developing cervical lesions or cancer following vaccination.**

8. The HPV vaccine product/Gardasil has been associated with **premature ovarian failure**([teenage menopause!](#)) and **increased miscarriage rates** [10-15%](#) higher than the corresponding reproductive age group.

9. **There have not been any real Gardasil safety studies conducted.** In the Gardasil clinical trials, Merck used a neurotoxic aluminum adjuvant called [AAHS](#) instead of using an inert saline placebo. In the clinical trials, there was little to no difference in the safety profiles of the [AAHS adjuvant and Gardasil](#). [The World Health Organization](#) has stated that using something other than an inert substance as a placebo creates a “methodological disadvantage”. This may make it “difficult or impossible” to assess vaccine safety properly without a true placebo. It is no surprise to learn that Merck is currently being sued for fraudulent Gardasil safety studies.

10. [Japan](#) **removed the HPV vaccine product/Gardasil from their recommended list of childhood vaccines** after an enormous amount of adverse events occurred after Gardasil was administered.

11. There are **too many unknowns** about this relatively new vaccine to make assessments related to making it required.

I strongly urge you to get all the facts about the HPV vaccine product/Gardasil.

Below is a link to a video [presentation](#) by Children’s Health Defense that was put together for a current case where Merck is being sued for fraudulent Gardasil safety studies. I also encourage you to read [The HPV Vaccine on Trial](#).

It is only a matter a time before the horrible truth about Gardasil is out and the vaccine is recalled by the FDA. ***I urge you to be one of the brave public health officials/politicians who is willing to put the health of our children first, ahead of political agendas and pharmaceutical profits.*** How many more of our children have to be diagnosed with lifelong chronic autoimmune diseases or die? **Those few braves souls who do will be the true heroes of the 21st century. Be brave!**

Thank you for your time and sincere attention/contemplation. It is so valued!

Respectfully,
Julie

Myself & my colleagues dismiss the intended mandate for HPV- Gardasil vaccine to be added to the CDC schedule for Washington State.

This vaccine is intended to prevent a sexually transmitted disease, and there for it does not need to be required of all students attending public schools.

This disease that the vaccine intends to mitigate, is not a threat to the public health of our students and staff.

This vaccine is not necessary to the well being of the students and staff within the public schools/ organizations which would take on this new mandate.

Please Do not add HPV Gardasil vaccine to the Washington State vaccine schedule for public school students & staff.

It is absolutely not necessary or safe vaccine for students & staff.

Please protect our children.

Thanks for your understanding & adding my comment.

Dear DOH members,

HPV vaccine should be a choice of an individual and never is the list of vaccines mandated to attend schools. There will never be a HPV epidemic therefore it is not a public health matter, it is an individual health decision. Mandates for the HPV vaccines would only benefit one entity - and that is a corporations that manufactures this vaccines. A corporate profits should never be put before the individual rights.

There is no clear science to back up both safety and effectiveness of this vaccines. According to the MedLine, it "MAY prevent CERTAIN type of HPV related cancers while more than 60,000 cases of injury and death are reported to VAERS - the only system that tracks vaccines adverse reactions. Why are you even considering mandating this vaccine? Please stand on the right side of the history on January 8th and stop unnecessary death and injuries among our children.

thank you,
Julia Kenck

- 4. You have a higher chance of dying from the HPV vaccine product/Gardasil than getting or dying from a HPV associated cancer.** The death rate of [cervical cancer](#) in the US is 2.3/100,000. The death rate in the Gardasil clinical trials was [85/100,000](#) or 37 times that of cervical cancer. The total [HPV associated cancer](#) rate of cervical, anal, vaginal and vulvar is 19.8/100,000. Do the math!
- 5. According to the [Gardasil insert](#) there is a 2.3% chance of developing an autoimmune disease** after receiving the HPV vaccine product/Gardasil. That means 2.3 out of every 100 children will develop a lifelong chronic disease such as arthritis, lupus, multiple sclerosis, etc. after receiving the liability free HPV vaccine product/Gardasil
- 6. [Half \(49.6%\)](#) of the clinical trial subjects who received Gardasil reported serious medical conditions** within seven months. To avoid classifying these injuries as adverse events, Merck dismissed them as "new medical conditions."
- 7. Females in the Gardasil clinical trials with evidence of current HPV infection**

and previous exposure to HPV had a [44%](#) **increased risk of developing cervical lesions or cancer following vaccination.**

8. The HPV vaccine product/Gardasil has been associated with **premature ovarian failure(teenage menopause!)** and **increased miscarriage rates [10-15%](#)** higher than the corresponding reproductive age group.

9. **There have not been any real Gardasil safety studies conducted.** In the Gardasil clinical trials, Merck used a neurotoxic aluminum adjuvant called [AAHS](#) instead of using an inert saline placebo. In the clinical trials, there was little to no difference in the safety profiles of the [AAHS adjuvant and Gardasil](#). [The World Health Organization](#) has stated that using something other than an inert substance as a placebo creates a “methodological disadvantage”. This may make it “difficult or impossible” to assess vaccine safety properly without a true placebo. It is no surprise to learn that Merck is currently being sued for fraudulent Gardasil safety studies.

10. [Japan](#) **removed the HPV vaccine product/Gardasil from their recommended list of childhood vaccines** after an enormous amount of adverse events occurred after Gardasil was administered.

I strongly urge you to get all the facts about the HPV vaccine product/Gardasil.

Below is a link to a video [presentation](#) by Children’s Health Defense that was put together for a current case where Merck is being sued for fraudulent Gardasil safety studies. I also encourage you to read [The HPV Vaccine on Trial](#).

It is only a matter of time before the horrible truth about Gardasil is out and the vaccine is recalled by the FDA. The truth is just too horrific to hide forever. ***I urge you to be one of the brave public health officials/politicians who is willing to put the health of our children first, ahead of political agendas and pharmaceutical profits.*** How many more of our children have to be diagnosed with lifelong chronic autoimmune diseases or die? **Those few brave souls who do will be the true heroes of the 21st century. Be brave!**

Sincerely,

Christine Christensen

Dear WA Board of Health:

As a Washington State Resident I strongly oppose the proposed rule change to add the HPV vaccine to Chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine Preventable Diseases.

The risks are of the HPV Vaccine/Gardasil are far greater than the benefits. This proposed rule change should not be recommended for many reasons including but not limited to the following:

- 1. Informed choice and medical freedom are fundamental rights.** As citizens and parents we have the right to decide what is injected into our bodies and our children's and a right to know the risks and benefits associated with each liability free pharmaceutical vaccine product.
- 2. According to the [American Cancer Society](#), cervical cancer is preventable with proper screening tests.**
- 3. HPV is a sexually transmitted infection** that is not caught in public settings such as daycare or school. HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time.
- 4. You have a higher chance of dying from the HPV vaccine product/Gardasil than getting or dying from a HPV associated cancer.** The death rate of [cervical cancer](#) in the US is 2.3/100,000. To members of the Board of Health,

I am writing to strongly oppose the requirement of the HPV vaccine to the childhood.

HPV is not a communicable disease in schools, as it is only transmitted sexually. This is a CHOICE if individuals engage in situations that may expose themselves.

The HPV vaccine also has significant possible side effects, as it contains the highest amount of aluminum of any vaccine. Aluminum is a known neurotoxin in the body.

Please consider leaving this vaccine for individual and family CHOICE, and oppose the requirement into the childhood vaccine schedule.

Sincerely,
Dr. Elizabeth Lyter

To Whom it may Concern,

I have heard that the state is considering requiring the HPV vaccine for children in school. I consider myself pro vaccine. However, I do not agree with requiring the HPV vaccine. Being a sexually transmitted virus, children cannot get it from normal interaction at school or around the community. Also, being a newer vaccine, I have concerns with it's safety.

This vaccine should remain a choice and not a requirement. Thank you.

Hello,

My name is Amanda Gurau and I oppose the addition of the HPV immunization to the school schedule.

I hold firmly that bodily autonomy is a personal and constitutional right and believe the child, parent and pediatrician should be able to determine when and what immunization is appropriate for that child's well being.

HPV is not a communicable disease. In addition, the HPV immunization poses risk itself, clearly stated on the immunization insert.

Where there is risk, there must be choice.

Thank you for your time and listening ear and please oppose and vote no on the addition of the HPV immunization to the mandatory school schedule.

Sincerely, Amanda Gurau

To who it may concern,

I absolutely disagree with adding an HPV vaccine to the required school schedule! This is not a disease that is spread like the flu, measles or chicken pox. There is ZERO reason to force this vaccine and it's ill side effects on anyone of the population, especially children. This needs to be removed as a proposed requirement and should be left up to individual discretion.

Sincerely
Tabitha Summerhill

Dear committee members,

I plead with you all to not submit to the religion of vaccines that requires unquestioning compliance and instead be intellectually honest and recognize that not all medical procedures are created equally. Not all vaccines are created equally as well.

The HPV vaccine is an especially egregious vaccine which has caused an enormous amount of harm and death in those who have received it. Two young girls who died after receiving the vaccine were from Washington State. My own husband who is a healthcare worker saw first-hand an adverse event directly following an HPV vaccine. The incidence of serious adverse events following the HPV vaccination far outweigh the possibility of getting cervical cancer. In fact, countries in Europe requiring and pushing the vaccine have seen a rise in cervical cancer since the introduction of the HPV vaccine. Italy, however, who has not required the HPV vaccine and has a very low uptake of said vaccine have seen a lowering in cervical cancer rates compared to the rest of Europe.

This vaccine was tested against a aluminum containing adjuvant instead of a saline inert placebo and then the second version was tested against the first. In both groups of the second vaccines trails, the percentage of adverse events following vaccination far outweighed the percentage of those who get cervical cancer. HPV does not always lead to cervical cancer and many who get the virus clear it from their body with no problem without any cancer development. The greatest tool for cancer prevention is regular pap smears, not an ineffective and dangerous vaccine.

The HPV virus is not communicable by means of coughing or sneezing or any other way that typical vaccine-preventable viruses are spread and instead is a sexually transmitted virus. It does not make sense to require a vaccine for a sexually transmitted virus, especially to kids.

Please do your due diligence and really understand the impact that this vaccine could have on our children. Please do not be influenced by the financial powers that be including the drug companies and the politicians whose pockets are lined by them. I plead for your intellectual honesty and integrity and to let people make educated and informed decisions on their children's health without coercion.

Sincerely,
Sariah Agostinelli

HPV vaccine causes premature ovarian failure
<https://www.ncbi.nlm.nih.gov/pubmed/26425627>

"Three young women who developed premature ovarian insufficiency following quadrivalent human papillomavirus (HPV) vaccination presented to a general practitioner in rural New South Wales, Australia. The unrelated girls were aged 16, 16, and 18 years at diagnosis. Each had received HPV vaccinations prior to the onset of ovarian decline. Vaccinations had been administered in different regions of the state of New South Wales and the 3 girls lived in different towns in that state. Each had been prescribed the oral contraceptive pill to treat menstrual cycle abnormalities prior to investigation and diagnosis. Vaccine research does not present an ovary histology report of tested rats but does present a testicular histology

report. Enduring ovarian capacity and duration of function following vaccination is unresearched in preclinical studies, clinical and postlicensure studies. Postmarketing surveillance does not accurately represent diagnoses in adverse event notifications and can neither represent unnotified cases nor compare incident statistics with vaccine course administration rates. The potential significance of a case series of adolescents with idiopathic premature ovarian insufficiency following HPV vaccination presenting to a general practice warrants further research."

HPV causes fertility problems

<https://www.ncbi.nlm.nih.gov/pubmed/29889622>

"Birth rates in the United States have recently fallen. Birth rates per 1000 females aged 25-29 fell from 118 in 2007 to 105 in 2015. One factor may involve the vaccination against the human papillomavirus (HPV). Shortly after the vaccine was licensed, several reports of recipients experiencing primary ovarian failure emerged. This study analyzed information gathered in National Health and Nutrition Examination Survey, which represented 8 million 25-to-29-year-old women residing in the United States between 2007 and 2014. Approximately 60% of women who did not receive the HPV vaccine had been pregnant at least once, whereas only 35% of women who were exposed to the vaccine had conceived. For married women, 75% who did not receive the shot were found to conceive, while only 50% who received the vaccine had ever been pregnant. Using logistic regression to analyze the data, the probability of having been pregnant was estimated for females who received an HPV vaccine compared with females who did not receive the shot. Results suggest that females who received the HPV shot were less likely to have ever been pregnant than women in the same age group who did not receive the shot. If 100% of females in this study had received the HPV vaccine, data suggest the number of women having ever conceived would have fallen by 2 million. Further study into the influence of HPV vaccine on fertility is thus warranted."

Premature Ovarian Failure after HPV vaccine

<https://www.ncbi.nlm.nih.gov/pubmed/23902317>

"We documented here the evidence of the potential of the HPV vaccine to trigger a life-disabling autoimmune condition. The increasing number of similar reports of post HPV vaccine-linked autoimmunity and the uncertainty of long-term clinical benefits of HPV vaccination are a matter of public health that warrants further rigorous inquiry."

Increase in cervical cancer following HPV vaccination

This study analyzed information gathered in National Health and Nutrition Examination Survey, which represented 8 million 25-to-29-year-old women residing in the United States between 2007 and 2014. Approximately 60% of women who did not receive the HPV vaccine had been pregnant at least once, whereas only 35% of women who were exposed to the vaccine had conceived. For married women, 75% who did not receive the shot were found to conceive, while only 50% who received the vaccine had ever been pregnant. Using logistic regression to analyze the data, the probability of having been pregnant was estimated for females who received an HPV vaccine compared with females who did not receive the shot. Results suggest that females who received the HPV shot were less likely to have ever been pregnant than women in the same age group who did not receive the shot. If 100% of females in this study had received the HPV vaccine, data suggest the number of women having ever conceived would have fallen by 2 million. Further study into the influence of HPV vaccine on fertility is thus warranted."

Premature Ovarian Failure after HPV vaccine

<https://www.ncbi.nlm.nih.gov/pubmed/23902317>

"We documented here the evidence of the potential of the HPV vaccine to trigger a life-disabling autoimmune condition. The increasing number of similar reports of post HPV vaccine-linked autoimmunity and the uncertainty of long-term clinical benefits of HPV vaccination are a matter of public health that warrants further rigorous inquiry."

Increase in cervical cancer following HPV vaccination

Dear WA Board of Health:

As a mother of 2 now-grown daughters, I have closely followed the Gardasil vaccine campaign since they were teens when it was first introduced.

I strongly oppose the proposed rule change to add the HPV vaccine to Chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine Preventable Diseases.

The risks are of the HPV Vaccine/Gardasil are far greater than the benefits. This proposed rule change should not be recommended for many reasons including but not limited to the following:

1. **Informed choice and medical freedom are fundamental rights.** As citizens and parents we have the right to decide what is injected into our bodies and our children's and a right to know the risks and benefits associated with each liability free pharmaceutical vaccine product.
2. According to the [American Cancer Society](#), **cervical cancer is preventable with proper screening tests.**
3. **HPV is a sexually transmitted infection** that is not caught in public settings such as daycare or school. HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time.
4. You have a **higher chance of dying from the HPV vaccine product/Gardasil than getting or dying from a HPV associated cancer.** The death rate of [cervical cancer](#) in the US is 2.3/100,000. The death rate in the Gardasil clinical trials was [85/100,000](#) or 37 times that of cervical cancer. The total [HPV associated cancer](#) rate of cervical, anal, vaginal and vulvar is 19.8/100,000. Do the math!
5. According to the [Gardasil insert](#) there is a **2.3% chance of developing an autoimmune disease** after receiving the HPV vaccine product/Gardasil. That means 2.3 out of every 100 children will develop a lifelong chronic disease such as arthritis, lupus, multiple sclerosis, etc. after receiving the liability free HPV vaccine product/Gardasil
6. [Half \(49.6%\) of the clinical trial subjects who received Gardasil reported serious medical conditions](#) within seven months. To avoid classifying these injuries as adverse events, Merck dismissed them as "new medical conditions."
7. Females in the Gardasil clinical trials with evidence of current HPV infection and previous exposure to HPV had a [44% increased risk of developing cervical lesions or cancer following vaccination.](#)
8. The HPV vaccine product/Gardasil has been associated with **premature ovarian failure ([teenage menopause!](#)) and increased miscarriage rates [10-15%](#)** higher than the corresponding reproductive age group.
9. **There have not been any real Gardasil safety studies conducted.** In the Gardasil clinical trials, Merck used a neurotoxic aluminum adjuvant called [AAHS](#) instead of using an inert saline placebo. In the clinical trials, there was little to no difference in the safety profiles of the AAHS adjuvant and Gardasil. The World Health Organization has stated that using something other than an inert substance as a placebo creates a "methodological disadvantage". This may make it "difficult or impossible" to assess vaccine safety properly without a true placebo. It is no surprise to learn that Merck is currently being sued for fraudulent Gardasil safety studies.
10. [Japan removed the HPV vaccine product/Gardasil from their recommended list of childhood vaccines](#) after an enormous amount of adverse events occurred after Gardasil was administered.

I strongly urge you to get all the facts about the HPV vaccine product/Gardasil. Below is a link to a video [presentation](#) by Children's Health Defense that was put together for a current case where Merck is being sued for fraudulent Gardasil safety studies. I also encourage you to read [The HPV Vaccine on Trial](#).

It is only a matter a time before the horrible truth about Gardasil is out and the vaccine is recalled by the FDA. The truth is just too horrific to hide forever. ***I urge you to be one of the brave public health officials/politicians who is willing to put the health of our children first, ahead of political agendas and pharmaceutical profits.*** How many more of our children have to be diagnosed with lifelong chronic autoimmune diseases or die? **Those few braves souls who do will be the true heroes of**

the 21st century. Be brave!

Sincerely,

Nancy Gellos

I'm writing in objection to HPV vaccine being a requirement for school/child care/ preschool admission. There is no possible way for HPV to cause an epidemic in the school system. Missing school and parents missing work are not issues, as with other mandatory vaccinations) as there are other methods of protection against HPV. There is no reason to tie this vaccine to school admission.

I am a parent of 2 school-aged children. I strongly oppose the new mandate you are trying to pass that require all school-age children be required to receive the HPV vaccine. This is a clear violation of our medical freedom rights and this vaccine has been proven dangerous to our children. Please stand with parents across the country and uphold our right to medical freedom for our children.

Thank You,
Michelle Scellick-Burns

To whom it may concern,

This legislation is extremely disturbing to me and should be researched more before in acted. To require a vaccine that has been shown to harm and injury young children should not be the choice of our state and schools to decide but left to the choice of parents. This vaccine is not a public health risk and is not a disease that spreads within public spaces. Please reconsider this and do not make this a requirement. Thank you for your time.

Sincerely,
Diane Dutton

Hello, my comment on this issue is a comment against adding the HPV vaccine to the list of mandatory vaccines. I do not support forcing any child or parent to get vaccinated to attend school. It's not your job to weigh in on a child's health, or how parents choose to vaccinate. It's unconstitutional. I personally believe this vaccine is the most unsafe one to date. I received this vaccine at 14 and have serious feminine health issues and GI issues ever since and cannot gain control over them. It's not right or healthy to demand this vaccine on anyone. I personally will choose to home school or pay for a private school who doesn't force this or any other vaccine on my child before I send them to public school. This is not right.

- 6. [Half \(49.6%\)](#) of the clinical trial subjects who received Gardasil reported serious medical conditions** within seven months. To avoid classifying these injuries as adverse events, Merck dismissed them as "new medical conditions."

7. Females in the Gardasil clinical trials with evidence of current HPV infection and previous exposure to HPV had a [44%](#) **increased risk of developing cervical lesions or cancer following vaccination.**

8. The HPV vaccine product/Gardasil has been associated with **premature ovarian failure**([teenage menopause!](#)) and **increased miscarriage rates** [10-15%](#) higher than the corresponding reproductive age group.

9. **There have not been any real Gardasil safety studies conducted.** In the Gardasil clinical trials, Merck used a neurotoxic aluminum adjuvant called [AAHS](#) instead of using an inert saline placebo. In the clinical trials, there was little to no difference in the safety profiles of the [AAHS adjuvant and Gardasil](#). [The World Health Organization](#) has stated that using something other than an inert substance as a placebo creates a “methodological disadvantage”. This may make it “difficult or impossible” to assess vaccine safety properly without a true placebo. It is no surprise to learn that Merck is currently being sued for fraudulent Gardasil safety studies.

10. [Japan](#) **removed the HPV vaccine product/Gardasil from their recommended list of childhood vaccines** after an enormous amount of adverse events occurred after Gardasil was administered.

I strongly urge you to get all the facts about the HPV vaccine product/Gardasil. Below is a link to a video [presentation](#) by Children’s Health Defense that was put together for a current case where Merck is being sued for fraudulent Gardasil safety studies. I also encourage you to read [The HPV Vaccine on Trial](#).

It is only a matter a time before the horrible truth about Gardasil is out and the vaccine is recalled by the FDA. The truth is just too horrific to hide forever. ***I urge you to be one of the brave public health officials/politicians who is willing to put the health of our children first, ahead of political agendas and pharmaceutical profits.*** How many more of our children have to be diagnosed with lifelong chronic autoimmune diseases or die? **Those few braves souls who do will be the true heroes of the 21st century. Be brave!**

Sincerely,
Trisha Oetman

WA Board of Health:

I live in Tri Cities, Washington and have come across many people locally who attest suffering adverse events following Gardasil. Some of the more severe events told to me are ADEM, autoimmune disease, and transverse myelitis. I fiercely oppose the proposed rule change to add the HPV vaccine to the requirements to attend school. Risks from the HPV Vaccine/Gardasil are far greater than benefits; this vaccine should always be a CHOICE.

The voluntary consent of the human subject is absolutely essential. As consumers we have the right to decide what is injected into our bodies and our children's bodies. We are sovereign citizens that have the right to investigate consumer products and choose whether to buy them or not.

According to the [American Cancer Society](#), cervical cancer is preventable with proper screening tests. <https://www.cancer.org/cancer/cervical-cancer/causes-risks-prevention/prevention.html>

It is more likely to die from the HPV vaccine, than from an HPV associated cancer. The death rate of cervical cancer in the US is 2.3/100,000. <https://cancerstatisticscenter.cancer.org/#!/cancer-site/Cervix> Total HPV associated cancer rate (vaginal, cervical, anal, and vulvar) is 19.8/100,000. <https://cancerstatisticscenter.cancer.org/#!/>

Mortality rate in the Gardasil clinical trials was 85/100,000. <https://www.fda.gov/media/74350/download>

40 people died during the clinical trial for the original Gardasil. The manufacture inserts for Gardasil and the new Gardasil 9 reveal some interesting and disturbing facts. The original Gardasil was tested against Amorphous Aluminum Hydroxyphosphate Sulfate as the placebo, meaning all clinical trial participants were injected with a powerful neurotoxin. This was done to try to make adverse events between the Gardasil group and the 'placebo' group seem insignificant. Even more insane is the newer Gardasil 9 was tested against the original Gardasil as the 'placebo' in those clinical trials.

HPV is a sexually transmitted infection that is not caught in public settings such as daycare or school. HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time. There are around 100 total strains of HPV, 13 of which are believed to increase cancer risk in infected humans. The current HPV vaccine, Gardasil9 is indicated to prevent 7 strains thought to be linked to cancer and 2 strains linked to genital warts.

According to the [Gardasil insert](#) there is a 2.3% chance of developing an autoimmune disease after receiving this product. That means 2.3 out of every 100 children will develop a lifelong chronic disease such as lupus, arthritis, MS, etc. after receiving the liability free vaccine.

49.6% of the subjects in the clinical trial who received Gardasil reported serious medical conditions within seven months. To avoid classifying these injuries as adverse events, Merck dismissed them as “new medical conditions.”

Females in the Gardasil clinical trials with evidence of current HPV infection and previous exposure to HPV had a 44% increased risk of developing cervical lesions or cancer following vaccination.

The HPV vaccine product/Gardasil has been associated with premature ovarian failure and increased miscarriage rates 10-15% higher than the corresponding reproductive age group. <http://wayback.archive-it.org/7993/20170113074137/http://www.fda.gov/downloads/BiologicsBloodVaccines/Vaccines/ApprovedProducts/UCM111287.pdf>

Please look at this link to a video presentation that was put together for a lawsuit against Merck for fraudulent Gardasil safety studies by Children's Health Defense. https://www.youtube.com/watch?v=aluDs5SQjD8&feature=emb_title Also PLEASE read The HPV Vaccine On Trial: Seeking Justice For A Generation Betrayed; and look into the credible references listed in the book. <https://www.amazon.com/HPV-Vaccine-Trial-Generation-Betrayed/dp/1510710809>

If there is any justice left in this country, Gardasil will be recalled by the FDA, and join the list of products such as Vioxx and Thalidomide. The truth is too horrendous to not come into the light. **IF YOU HAVE READ THIS EMAIL TO THE END, I BEG YOU TO DO THE RIGHT THING.** Use your God given discernment to look into this vaccine product. Please do not force consumers to buy this product.

Sincerely,

Lacey Walter

Dear WA Board of Health:

As a Washington State Resident who has been injured by the HPV vaccine product/Gardasil (juvenile arthritis), I strongly oppose the proposed rule change to add the HPV vaccine to Chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine Preventable Diseases.

The risks are of the HPV Vaccine/Gardasil are far greater than the benefits. This proposed rule change should not be recommended for many reasons including but not limited to the following:

1. **Informed choice and medical freedom are fundamental rights.** As citizens and parents we have the right to decide what is injected into our bodies and our children's and a right to know the risks and benefits associated with each liability free pharmaceutical vaccine product.
2. According to the [American Cancer Society](#), **cervical cancer is preventable with proper screening tests.**
3. **HPV is a sexually transmitted infection** that is not caught in public settings such as daycare or school. HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time.
4. You have a **higher chance of dying from the HPV vaccine product/Gardasil than getting or dying from a HPV associated cancer.** The death rate of [cervical cancer](#) in the US is 2.3/100,000. The death rate in the Gardasil clinical trials was [85/100,000](#) or 37 times that of cervical cancer. The total [HPV associated cancer](#) rate of cervical, anal, vaginal and vulvar is 19.8/100,000. Do the math!
5. According to the [Gardasil insert](#) there is a **2.3% chance of developing an autoimmune disease** after receiving the HPV vaccine product/Gardasil. That means 2.3 out of every 100 children will develop a lifelong chronic disease such as arthritis, lupus, multiple sclerosis, etc. after receiving the liability free HPV vaccine product/Gardasil
6. [Half \(49.6%\) of the clinical trial subjects who received Gardasil reported serious medical conditions](#) within seven months. To avoid classifying these injuries as adverse events, Merck dismissed them as "new medical conditions."
7. Females in the Gardasil clinical trials with evidence of current HPV infection and previous exposure to HPV had a [44% increased risk of developing cervical lesions or cancer following vaccination.](#)
8. The HPV vaccine product/Gardasil has been associated with **premature ovarian failure** ([teenage menopause!](#)) and **increased miscarriage rates** [10-15%](#) higher than the corresponding reproductive age group.
9. **There have not been any real Gardasil safety studies conducted.** In the Gardasil clinical trials, Merck

used a neurotoxic aluminum adjuvant called [AAHS](#) instead of using an inert saline placebo. In the clinical trials, there was little to no difference in the safety profiles of the [AAHS adjuvant and Gardasil](#). [The World Health Organization](#) has stated that using something other than an inert substance as a placebo creates a “methodological disadvantage”. This may make it “difficult or impossible” to assess vaccine safety properly without a true placebo. It is no surprise to learn that Merck is currently being sued for fraudulent Gardasil safety studies.

10. [Japan](#) removed the HPV vaccine product/Gardasil from their recommended list of childhood vaccines after an enormous amount of adverse events occurred after Gardasil was administered.

My name is Rebecca Wojinski. I am a parent of 5, and have worked with children from birth through school age, as well as volunteer positions with middle and high schoolers my entire life. I would like to voice in on the proposed plan to make the HPV vaccine a mandate for school attendance in Washington State.

We DO NOT support the HPV vaccine as a requirement, and hope the board takes into consideration the health and well being of our children. As a board, I would hope common sense is still in play in such a clear decision for the health of our children.

In what world, or state, do we live in where an STD is a risk in an elementary school setting?

It is not a contagious public health threat like Measles. These are the facts:

HPV is a sexually transmitted infection that is not caught in public settings such as daycare or school.

HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time.

HPV infections alone rarely lead to cancer. Other factors, such as smoking, must be present.

HPV vaccines have not been proven to prevent any type of cancer.

HPV vaccines were never tested against inert saline placebos.

HPV vaccines don't eliminate the need for proper screening and treatment.

HPV screening and treatment are highly successful at preventing and treating associated cancers.

Given the possible side effects that accompany all vaccines and medications and the lack of danger to the public posed by HPV, vaccine decisions for it should be left to families and their healthcare providers. Please do not continue to erode people's rights to body autonomy when the public is not at risk.

Rebecca Wojinski

Good morning,

I am taking a few minutes this morning to write in regards to the proposed Meeting Agenda Item #7, "Petition for Rulemaking to add HPV to chapter 246-105WAC Immunization of Child Care and School Children Against Certain Vaccine-Preventable Diseases". My husband, Michael Fiskum, and I are very much opposed to adding the HPV vaccine to Washington's schedule.

The push to have the HPV vaccine added to the schedule is purely a money-grab (\$3 BILLION dollars is a lot of money).

Anyone can go to the doctor and get a vaccine. Before going overseas, I voluntarily got a vaccine for Japanese Encephalitis - and ended up having a series of documented seizures. CAT scans, MRI's, and EEG's showed slowed activity and misfiring in the left frontal lobe of my brain. But the decision to receive that vaccination was voluntary. It was my choice. Unfortunately, I was never told about the VAERS reporting system. I didn't even know it existed. I am the 99% that is unreported.

As of December 2019, the HPV vaccine has caused 63,979 adverse events and 523 deaths, all of which have been reported to VAERS.

Of those, 650 adverse events and two deaths (girls aged 11 and 13) occurred right here in Washington State.

Gardasil is covered under the 1986 National Vaccine Injury Compensation Act. Injuries and deaths must go through what's known as "Vaccine Court", a no-fault no-jury system where vaccine makers do not have to participate. Several cases have made it through the lengthy and arduous process with the preponderance of the scientific evidence leading to compensation of the victims.

I have included a government link to an 8-page, easy to read PDF of just one of those cases, Donna Ramsay. She received a lump sum payment of \$1,274,658.50 for her HPV vaccine-related injuries. While the court document highlights findings and payment, it does not discuss in detail the everyday trauma Donna must succumb to for the rest of her life.

https://ecf.cofc.uscourts.gov/cgi-bin/show_public_doc...

HPV is a sexually transmitted infection that is not caught in public settings such as daycare or school. HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time. HPV infections alone rarely lead to cancer (other factors, such as smoking, must be present). HPV vaccines have not been proven to prevent any type of cancer. HPV vaccines were never tested against inert saline placebos. HPV vaccines don't eliminate the need for proper screening and treatment.

Every vaccine should be voluntary. I would go so far as to suggest the mandatory public school schedule be struck down altogether. Absolutely, the state can provide the schedule as a suggestion, as a recommendation. But all medical procedures/preventatives should be voluntary. Only tyranny seeks to take away basic human rights. This is why the United States signed the Nuremberg Code in 1949.

By definition, all medicine is considered experiential. No one knows how an individual's body will respond to any foreign material/treatment. This is why possible side effects (and death) are listed on the vaccine insert page as well as on over the counter medicine warnings, and why patients must sign documentation prior to procedures indicating their full understanding and consent to said procedure. The government link is provided here:

<https://history.nih.gov/research/downloads/nuremberg.pdf>

Technically, immunization exemption forms should not even exist precisely because individual Constitutional liberties - basic human rights - should not be made subject to tyranny. If vaccine schedules were suggestions, then exemption forms would be inherently unnecessary.

I would also point out that according to the Nuremberg Code, Article 5, if any adverse reactions or death is possible, then those administering the experimental medicine should experiment on themselves first - and even then, the human subject in question retains the right to consent or refuse. Therefore, all administering physicians, nurses, dentists (yes, dentists), and neighborhood pharmacists must first be fully immunized with the HPV vaccine - and every other immunization currently on the schedule. All 72+ doses. And yet, we the people, the human subjects, still retain our human right to say no. Or yes. Simply because we are human.

We urge you to carefully consider the full implications of your actions. All lawmakers hold a sacred duty to uphold basic human rights, for this is what every law is founded on.

The question is simple - Does adding the HPV vaccine to the schedule potentially violate basic human rights? Yes, it does.

Does the existence of a required/mandated schedule potentially violate basic human rights? Yes, it does.

Any vote otherwise is a tyrannical assault on humanity.

Sincerely,
Toni Egger

Dear Washington State Board of Health,

I am writing today to voice my opposition to the HPV vaccine being added to the required vaccine schedule for Washington school children. This vaccine is for a sexually transmitted disease. It is not communicable in a school setting, so it makes zero sense to mandate it for school attendance. I feel that my 11 year old daughter should have the choice whether or not to put it into her body.

Beyond the issue of choice, this vaccine is too new to fully understand the risks vs benefits to the community.

Thank you for your time and consideration.

Megan Kink Katzenberg

I'm a mother of a vaccine injured son

My son, cannot get any vaccines and is going to be going to college next fall. I oppose HPV vaccine being added to school schedule, there is very little safety testing on this vaccine and many teens are getting paralyzed or dying, or ending with chronic health issues from it. The chances of getting cancer from HPV are low, but when you get vaccinated with it you get a whole lot more. This is not a vaccine that should be added

Period!! Please educate yourself and do the research before you endanger more children's lives. See the movie Vaxxed. And Vaxxed 2, The US has the sickest kids, that's because of the vaccine schedule and all the toxins in those vaccines. Have you read the ingredients in vaccines? If not take a look. Would you buy foods with those ingredients in them to feed your children? Probably not! If not then why would you inject them into your child. HPV is one of the worst vaccines out there .

Please do not add this vaccine to the mandatory list. If you do you will see more kids get sick, autoimmune diseases or become paralyzed or die.

Parents should have a right to choose. What about all the kids who can't get vaccines? They lose out on getting an education? That's not fair.

This isn't one size fits all and all kids react to vaccines differently. Please do not add this to mandatory vaccine requirement.

Please do not put into policy that we must use HPV in our children, as a school entry requirement. HPV vaccine should not be a required vaccination to enter school. I have seen data already that over 500 deaths have been a direct result of this particular vaccine. I love my children. Please do not require me to put my three kids in harm way. I would have to homeschool them, which would be challenging as I am a single mom. Rebecca Garrison

I don't think this should be a mandatory shot. If kids are responsible, like they should be, this is not a concern. This is preventable. The side effects to this shot are not worth the risk of getting it. I as well as many other never received this shot and am just fine. Please don't risk my children's lives by making them take this shot.

Dear Members of the Washington State Board of Health,

I am a lifetime resident of Washington State and mother of four school age children, who are vaccinated to current Washington State BOH school vaccination requirements. I am begging you to look at all the evidence of the HPV Vaccine and to NOT add the HPV Vaccine to the list of required vaccines to enter public school in Washington State.

Doing so will have four outcomes that I can see:

1. The most hoped for outcome: children of parents who comply with your suggested HPV requirement will be unharmed.
- 2: Children whose parents complied With the suggested HPV requirement will be harmed by the vaccine.
- 3: Parents who do not wish to risk injury to their child by the HPV Vaccine will pull their children out of Washington State Government funded schools and either find private schools or homeschool.
4. Parents who do not wish to risk injury to their child by the HPV Vaccine will move to a parent friendly state who values parental rights over pharmaceutical profits to protect their own children.

I felt compelled to write this letter to you because I have done my research on the HPV Vaccine and I do not believe this vaccine should be on the market. Let alone a requirement to attend school. I am asking you to NOT put this vaccine on the required list for Children to get a good education in our fine Washington State Schools.

Thank You for your consideration,
Christina Lamb

Dear BOH,

Why would you even think of requiring a vaccine that the disease is only sexually transmitted? This vaccine is marred with problems from it's onset. This has nothing to do with public health and everything to do with appeasing pharmaceutical companies. You're wanting to line our children for slaughter and cause our females to be sterile which is exactly what this vaccine can do in some girls. God help you. You know all the side effects from this vaccine. But you want to put profits over people.

Dear DOH,

I'm a parent and do not want the HPV vaccine to added to the school requirements. Please also consider that all of us are made differently, with different body chemistries, and whether or a vaccine/vaccines should or should not be administered, should be decision between the physician and the patient. ALL health issues should be considered.

One person's medicine is another person's poison.

Thank You

Christine Moody

Thankfully my girls are out of school now. We know so many young women affected by this vaccine, how can you guys ethically recommend this?'

Take a look at the science on the HPV vaccine:

After Gardasil was licensed and three doses were recommended for 11-12 year old girls and teenagers, there were thousands of reports of sudden collapse with unconsciousness within 24 hours, seizures, muscle pain and weakness, disabling fatigue, Guillain Barre Syndrome (GBS), facial paralysis, brain inflammation, rheumatoid arthritis, lupus, blood clots, optic neuritis, multiple sclerosis, strokes, heart and other serious health problems, including death, following receipt of the Gardasil vaccine.

The Japanese government stopped giving the Gardasil vaccine in 2013 after health officials recorded nearly 2,000 adverse reactions, according to the Tokyo Times. <http://www.tokyotimes.com/side-effects-in-young-girls-take.../>

Dr. Harper, MIT and Stanford educated medical doctor who also has a Master's Degree in Public Health and worked as a vaccine developer for Merck (the manufacturers of the Gardasil vaccine), has repeatedly spoken out against the HPV vaccine and raised serious concerns about whether it is safe. As reported by CBS News in 2009: <http://www.cbsnews.com/news/gardasil-researcher-speaks-out/>

The thousands of parents who belong to this non-profit, the parents who followed their doctor's orders and got the "cervical cancer jab," as they like to call it in the U.K. <http://sanevax.org/uk-association-of-hpv-vaccine-injured-d.../>

I do not agree with Gardasil being a requirement for school and especially not preschool. It's is for a sexually transmitted disease not anything contagious. It does not cover every strain of HPV or even all of the several strains that cause cancer. Also, there have been so many vaccine injuries and well as deaths with this vaccine. Please reconsider this and do not pass it.

Merck's Gardasil vaccine for HPV has no business being mandated for school entry. It goes against medical freedom of choice. It goes against personal freedom of choice. It goes against a parent's right to choose what is best for their child. HPV is a non-communicable disease. There is NOT a public health threat being prevented by the forced and/or coerced injection(s) of Merck's Gardasil poison. Yes, I will call it poison. Its safety record is horrendous. Its side effects are in no way worth the slight possible benefits. Requiring this vaccination for school attendance is the equivalent to medical kidnapping of our precious children.

Please reject the addition of Gardasil to the school mandated vaccination schedule.

I vehemently oppose the HPV vaccine being added as a requirement for school attendance.

Since this disease it's transmitted by sexual contact can you explain how this is needed in a school setting? Are we having classes in school demonstrating sex, and having the children participate, not using protection?

This is a completely unnecessary vaccine in a school setting, the disease it's not contracting through casual contact. Leave health decisions to the parents.

Dear WA Board of Health:

As a Washington State Resident, mother of two and Registered Nurse, I strongly oppose the proposed rule change to add the HPV vaccine to Chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine Preventable Diseases.

The risks are of the HPV Vaccine/Gardasil are far greater than the benefits. This proposed rule change should not be recommended for many reasons including but not limited to the following:

- 1. Informed choice and medical freedom are fundamental rights.** As citizens and parents we have the right to decide what is injected into our bodies and our children's and a right to know the risks and benefits associated with each liability free pharmaceutical vaccine product.
- 2. According to the [American Cancer Society](#), cervical cancer is preventable with proper screening tests.**
- 3. HPV is a sexually transmitted infection** that is not caught in public settings such as daycare or school. HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time.
- 4. You have a higher chance of dying from the HPV vaccine product/Gardasil than getting or dying from a HPV associated cancer.** The death rate of [cervical cancer](#) in the US is 2.3/100,000. The death rate in the Gardasil clinical trials was [85/100,000](#) or 37 times that of cervical cancer. The total [HPV associated cancer](#) rate of cervical, anal, vaginal and vulvar is 19.8/100,000. Do the math!
- 5. According to the [Gardasil insert](#) there is a 2.3% chance of developing an autoimmune disease** after receiving the HPV vaccine product/Gardasil. That means 2.3 out of every 100 children will develop a lifelong chronic disease such as arthritis, lupus, multiple sclerosis, etc. after receiving the liability free HPV vaccine product/Gardasil
- 6. [Half \(49.6%\) of the clinical trial subjects who received Gardasil reported serious medical conditions](#) within seven months. To avoid classifying these injuries as adverse events, Merck dismissed them as "new medical conditions."**
- 7. Females in the Gardasil clinical trials with evidence of current HPV infection and previous exposure to HPV had a [44% increased risk of developing cervical lesions or cancer following vaccination.](#)**

8. The HPV vaccine product/Gardasil has been associated with **premature ovarian failure**([teenage menopause!](#)) and **increased miscarriage rates** [10-15%](#) higher than the corresponding reproductive age group.

9. **There have not been any real Gardasil safety studies conducted.** In the Gardasil clinical trials, Merck used a neurotoxic aluminum adjuvant called [AAHS](#) instead of using an inert saline placebo. In the clinical trials, there was little to no difference in the safety profiles of the [AAHS adjuvant and Gardasil](#). [The World Health Organization](#) has stated that using something other than an inert substance as a placebo creates a “methodological disadvantage”. This may make it “difficult or impossible” to assess vaccine safety properly without a true placebo. It is no surprise to learn that Merck is currently being sued for fraudulent Gardasil safety studies.

10. [Japan](#) removed the HPV vaccine product/Gardasil from their recommended list of **childhood vaccines** after an enormous amount of adverse events occurred after Gardasil was administered.

I strongly urge you to get all the facts about the HPV vaccine product/Gardasil. Below is a link to a video [presentation](#) by Children’s Health Defense that was put together for a current case where Merck is being sued for fraudulent Gardasil safety studies. I also encourage you to read [The HPV Vaccine on Trial](#).

It is only a matter a time before the horrible truth about Gardasil is out and the vaccine is recalled by the FDA. The truth is just too horrific to hide forever. ***I urge you to be one of the brave public health officials/politicians who is willing to put the health of our children first, ahead of political agendas and pharmaceutical profits.*** How many more of our children have to be diagnosed with lifelong chronic autoimmune diseases or die? **Those few braves souls who do will be the true heroes of the 21st century. Be brave!**

Sincerely,

Erica Swedberg, RN, BSN

To Whom It May Concern:

It has brought to my attention that actions are being taken regarding adding the HPV vaccination to the schedule of required vaccines for students attending school in WA state. I am extremely opposed to this course of action. Gardasil has been shown to be a very risky vaccine.

VAERS is the passive federal voluntary Vaccine Adverse Event Reporting System that a Harvard study found *captures less than 1% of adverse events* — yet that flawed system is all we have to attempt to quantify vaccine injuries. As of December 2019, the following have been reported to VAERS:

- 63,979 HPV vaccine-related adverse events
- 523 HPV vaccine-related deaths

Of these, 650 adverse events and two deaths (in girls aged 11 and 13) occurred in Washington State.

Gardasil is covered under the 1986 National Vaccine Injury Compensation Act, which shields manufacturers from liability. Causes of action for injury and death must be brought before the federally-administered “Vaccine Court”, a no-fault, no-jury federal system to which *vaccine makers are not a party*. Several cases have made it through the lengthy and arduous process with the preponderance of the scientific evidence leading to compensation of the victims.

EXAMPLES:

- [Ruling on Entitlement](#) finding petitioner entitled to compensation based on an injury *caused-in-fact* by a covered vaccine on May 22, 2015. **Encephalitis, intractable epilepsy, and subsequent developmental delay**. A lump sum payment of \$1,428,188.00, representing compensation for lost earnings (\$1,055,056.01), pain and suffering (\$250,000.00), and life care expenses for Year One (\$123,131.99).
- [Petitioner had proven](#), by a preponderance of the evidence, that her JIA (**Juvenile Idiopathic Arthritis**) was caused by her HPV vaccinations. A lump sum payment of \$1,274,658.50, representing compensation for life care expenses expected to be incurred during the first year after judgment (\$37,793.01), lost earnings.
- [Petitioner has put forth preponderant evidence](#) that the HPV vaccine caused her to suffer a **chronic autoimmune demyelinating illness**. A lump sum payment of \$1,473,004.35, representing compensation for life care expenses expected to be

incurred during the first year after judgment (\$260,249.52), lost earnings (\$962,754.83), and pain and suffering (\$250,000,000).

There is no public health crisis.

- HPV is a sexually transmitted infection that is not caught in public settings such as daycare or school.
- HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time.
- HPV infections alone rarely lead to cancer. [Other factors](#), such as smoking, must be present.
- HPV vaccines have not been proven to prevent any type of cancer.
- HPV vaccines were never tested against inert saline placebos.
- HPV vaccines don't eliminate the need for proper screening and treatment.
- HPV screening and treatment are highly successful at preventing and treating associated cancers.

Thank you for your time.

Sincerely

Gabriel Sovereign

- HPV vaccines have not been proven to prevent any type of cancer.
- HPV vaccines were never tested against inert saline placebos.
- HPV vaccines don't eliminate the need for proper screening and treatment.
- HPV screening and treatment are highly successful at preventing and treating associated cancers.

Thank you for your time.

Sincerely

Gabriel Sovereign

Dear Washington Board of Health and to whom it may concern:

We are not an “anti-vax” family. We believe in the power and need for vaccines, and the science behind them. But this particular vaccine scares us. It should scare the educated public. We hope you consider all the stories of how it has harmed countless people over its short existence.

In 2010, a student of my wife’s took the Gardasil vaccine in order to help prevent HPV. Within two weeks, her nerve endings fried and she was not able to function without extreme pain constantly in her everyday normal life. She contemplated suicide and to this day, is on watch.

HPV, as you know, is not communicable in a school setting, the vaccine is an unmitigated failure, and its harmful effects have been widespread during its comparatively short time on the market.

I implore you to not add this vaccine to the already required list of vaccines. My three daughters, Katie, Brianna and Natalie, are in 4th, 6th and 8th grades. They have received every vaccine except for this as we have seen the devastating effects first-hand of Gardasil.

Thank you,
Dr. Russell Seaton

Dear Members of the Washington State Board of Health,

I am writing in response to the petition to consider adding the HPV vaccine to the required vaccines for school attendance in Washington State. While I deeply understand the desire to protect as many members of the public from as many illnesses as possible, I am concerned about a requirement for the HPV vaccine for school attendance for many reasons. As a healthcare professional I am not anti-vaccine, but I am concerned about the BOH and DOH eliminating parental medical decision making when it comes to vaccines for illnesses that are neither contagious in a casual contact setting (school) nor presenting as an epidemic. While parents currently have the right to utilize a philosophical or religious exemption for school related vaccination, we all know that this right is in jeopardy and that should non-medical exemptions be removed, the HPV vaccination, if it were on the school required list, would become mandatory for any family wishing to fully participate in an organized school programs. Several other countries have withdrawn their recommendation for the vaccine entirely, including Japan, which has one of the best health outcomes in the world. Removal of family medical decision rights for a vaccine that has been rejected by other countries with better health outcomes and that is currently involved in a fraud lawsuit when there is no public health emergency is, what I would consider, an alarming overstep into medical freedom.

Since there have been several severe reactions to the HPV vaccine compensated for through the national childhood vaccine injury compensation program, several of which have included death or permanent disability, increased coercion around the vaccine would seem unethical to me. All medical decision making should include informed consent with freedom from coercion, especially where there is no imminent threat. PAP smear screening is highly effective at preventing most cases of cervical cancer and the HPV vaccine does not protect against all strains of HPV. As there is risk from the vaccination and there is no public health emergency, I strongly believe that this vaccine should NOT be added to the list of required vaccines for school attendance in WA state. Public health was designed to create guidelines and policies to protect the masses. Guidelines for the masses were never meant to be laws applied to the individual without consideration for their individual needs and situation.

Given the current tension regarding vaccines at this time and that HPV is one of the most controversial of the vaccines on the childhood schedule, a decision to keep it off the required school vaccines list would actually help engender more trust between vaccine hesitant parents and the BOH.

With Deepest Respect,

Krista Heron, ND, DHANP

I would like to voice my concern about adding the HPV vaccine to the required vaccine list. This vaccine does not seem like it should be on a list with those that are for disease that can be spread through public contact. Children at school are not at risk when others do not have this vaccine.

There are still way too many problems with people having adverse reactions to this vaccine.

Please do not put this vaccine on the same level as others that do have a good track record.

Date: Friday, January 3, 2020 5:11:36 AM

To whom this may concern,

I strongly oppose the addition of the hpv vaccine to the childhood vaccine schedule.

This is a very dangerous vaccine. Serious adverse events were collected throughout the entire study period (range one month to 48 months post-last dose) for the seven clinical studies for GARDASIL 9. Out of the 15,705 individuals who were administered GARDASIL 9 and had safety follow-up, 354 reported a serious adverse event; representing 2.3% of the population. As a comparison, of the 7,378 individuals who were administered GARDASIL and had safety follow-up, 185 reported a serious adverse event; representing 2.5% of the population.

I do not understand how the Democratic Party has a major issue with the pharmaceutical companies in regards to the opioid epidemic, their outrageous price gauging for medications, their corruption of science and their fraud with drugs such as vioxx, yet is in full support of their vaccine program - one that they have no liability for.

No vaccine should be approved or ever mandated without the same standards given other medications - double-blind, placebo controlled studies.

Sincerely
Yael kantor

I'm writing to voice my opinion against adding the HPV vaccine to the school requirements list. The logic behind vaccination requirements for school is to try to reduce the spread of communicable illnesses. So why mandate the HPV shots? HPV is NOT a disease that can be transmitted through causal contact, which is what happens at school.

Furthermore, this shot has been shown to be devastating to the health of many young women and men around the world, and should never be mandated. Public schools in Washington will possibly be losing thousands of students if this mandate goes through. Parents will not stand for medical tyranny, which this is quickly approaching.

Respectfully, Shelley Winje

To whom it may concern:

I am writing to express my disagreement with the proposal requiring the gardasil HPV vaccination for public school attendance. This vaccination poses a greater health risk to it's recipients than to those who have not received it. HPV is not a casually communicable disease, and therefore should not be treated as a public health risk.

Please consider the very real risks associated with this vaccination and do not require our children be subjected to it.

Thank you,

Allison Montoya

Washington State Board of Health:

This is in regards to the consideration of adding Gardasil injections to school requirement.

I strongly oppose this recommendation.

This liability free pharmaceutical product was improperly safety tested; and many thousands of consumers around the country and the world have been harmed. ... All for a vaccine against an common infection said to lead to cancer. With investigation, it is apparent there isn't even not hard evidence HPV leads to cancer.

Gardasil contains an adjuvant: AAHS: amorphus aluminum hydroxyphosphate sulfate. Please view this presentation by double board certified medical doctor: https://www.youtube.com/watch?v=qbnqO_vJVOk&fbclid=IwAR3YjMIGrnvWC3y5horDF_fKo9_2qaFI3J6I3BaNtzJeEqhzTuSVH6tUkKc

To whom it may concern,

Myself & my colleagues dismiss the intended mandate for HPV- Gardasil vaccine to be added to the CDC schedule for Washington State.

This vaccine is intended to prevent a sexually transmitted disease, and there for it does not need to be required of all students attending public schools.

This disease that the vaccine intends to mitigate, is not a threat to the public health of our students and staff.

This vaccine is not necessary to the well being of the students and staff within the public schools/ organizations which would take on this new mandate.

Please Do not add HPV Gardasil vaccine to the Washington State vaccine schedule for public school students & staff. It is absolutely not necessary.

Thanks

Sincerely Vera

Subject: Public Comment-Oppose Proposed HPV Vaccine Rulemaking
Date: Friday, January 3, 2020 1:14:58 AM

Dear Honorable Council:

It is concerning that rulemaking to mandate HPV vaccination is being considered by the Board while a Consumer Representative seat is vacant, considering the severity of the consequence to consumers.

It is more concerning that rulemaking to mandate HPV vaccination is being considered at all by members of this Board tasked with upholding public health and welfare, considering the risk to public health and welfare posed by the HPV vaccine.

Individuals are more likely to die if they receive the HPV vaccine.

Females:

0.02% death rate for cervical cancer.
4% death rate from HPV shot.

Males:

83 per 100,000 death rate due to 'natural' causes
467 per 100,000 death rate for HPV shot

And those statistics exclude all the injuries endured after the HPV vaccine which did not result in death.

Besides, the manufacturer claims the HPV vaccine is only effective for 4 years, so this vaccine cannot effectively accomplish the stated purpose in 246-105-010 WAC.

Please protect the public.

Please oppose rulemaking that would add HPV immunization to chapter 246-105 WAC.

Respectfully submitted,

Brian Thompson

Hi,

I'm writing to you about the upcoming Department of Health meeting next week's agenda. I see that the topic of potentially adding the HPV vaccine as a requirement for childhood vaccines is on the list of discussion items.

I am a Seattle resident who believes in vaccines but I personally know two families affected by terrible disabilities from this vaccine. Both involving severe auto-immune disability and requiring missing much school and the inability to participate in extra-curriculars. The amount of time and money these families have had to devote to finding help for their child is beyond what most families could endure. Vaccines should be required as a means to improve the health and lives of children not to take away their health. I strongly oppose the proposed rule change to add the HPV vaccine to Chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine Preventable Diseases. Please consider that HPV is a sexually transmitted disease and not transmitted in a public setting. Children should not be prevented from attending school because of not having this controversial and reactive vaccine.

Thank you for your time.

Roseann Bentley

Hi,

I'm writing to you about the upcoming Department of Health meeting next week's agenda. I see that the topic of potentially adding the HPV vaccine as a requirement for childhood vaccines is on the list of discussion items.

I am a Seattle resident who believes in vaccines but I personally know two families affected by terrible disabilities from this vaccine. Both involving severe auto-immune disability and requiring missing much school and the inability to participate in extra-curriculars. The amount of time and money these families have had to devote to finding help for their child is beyond what most families could endure. Vaccines should be required as a means to improve the health and lives of children not to take away their health. I strongly oppose the proposed rule change to add the HPV vaccine to Chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine Preventable Diseases. Please consider that HPV is a sexually transmitted disease and not transmitted in a public setting. Children should not be prevented from attending school because of not having this controversial and reactive vaccine.

Thank you for your time.

Roseann Bentley

I do NOT want the gardasil vaccine added to the school mandates. It's not even a illness that can be passed at school. It's way over reaching to even think about adding it. ones business who dos or dos not choose that vaccine. They have pulled it in other countries because its it's dangerous and has no proof that it even works. It's also known to cause little girls to be sterile for life! Please if you want to make our kids healthier provide better food and teach nutrition and better mental self care. Vaccines are not even truly placebo safety tested.

Please do not move forward with mandating the HPV vaccine for students. It is riddled with controversy and so many reports of vaccine injury and even deaths as a result of this vaccine. Over 500 deaths have been reported to VAERS, and the injuries are so rampant that Japan stopped using it.

Before Merck's aggressive marketing campaign, there was no HPV public health emergency. HPV was considered a benign infection that most people cleared without ever knowing they had it. Cervical cancer is rare in the US.

HPV is not transmitted in a school setting and there's no need to add it to school requirements. Where there is a risk, there must always be a choice.

Thank you,

Dori Fagan

To Whom It May Concern

Do not add the HPV vaccine to the schedule of required vaccines for school. The four HPV virus's which the vaccine is designed to be protective against are not communicable except by sexual intercourse. Unless sexual intercourse is rampant at public schools (which I hope it isn't), the HPV vaccine is completely unnecessary for students.

The HPV vaccine is well known to be a dangerous vaccine. The Gardasil vaccine has been completely banned in Denmark, other countries that have banned the shot or have current criminal lawsuits filed include Japan, India, France and Spain. This vaccine has been found to cause severe reactions and even death after administration. I reiterate, this vaccine is for a sexually transmitted virus, and not a communicable disease. Please stand for medical choice, and make the wise and sound decision to not add this vaccine.

Thank you,

Lindsay Donahue

Subject: Regarding the possibility of requiring the HPV vaccine for school attendance
Date: Friday, January 3, 2020 8:57:03 AM

To whom it may concern,

Hello. My name is Lacie Soler and I am a wife and mother of 4 who has lived in Washington state my whole life. I love this state and think it is a wonderful place to live. However, I am deeply concerned about the possibility of requiring the HPV vaccine for school attendance in Washington state.

As you may know, U.S. law regards vaccines as unavoidably unsafe. There are courts specifically dedicated to adverse reactions to vaccines and taxpayer money which is used to pay families who have suffered due to vaccines.

Should something that can and does cause harm be mandatory for anyone let alone children who are more susceptible to injury due to their immature immune systems?

There are valid concerns with the effectiveness and risks of the HPV vaccine specifically that should be addressed before the thought of mandating the vaccine ever enters conversation. Here is an article where a Gardasil researcher is cautioning about the use of the vaccine.
<https://www.cbsnews.com/news/gardasil-researcher-speaks-out/>

Please look beyond what you personally believe is good for human health and consider if mandating any medical procedure is moral and right. Children should not be deprived of an education because their parents have chosen not to subject their bodies to the aggressive vaccination schedule.

I appreciate you taking this into consideration and hope the decision is made by clearly looking at the facts and taking into account our very precious right to bodily integrity.

Sincerely,
Lacie Soler

Dear Members of the Washington Board of Health,

I am writing to ask you to reject the proposal to add HPV vaccination to the list of required shots for attending school. While there has been a trend in the US to add this injection, many other countries are losing their enthusiasm for a product that promised so much and delivered so little. In fact, it has hurt so many young women, and ruined enough lives that books and films have been made about this health reversing shot. But its damage also hit close to our family.

My daughter's best friend started this series of HPV shots. She became very ill with gut and balance issues. She had to drop out of competitive Irish dancing and was unable to attend school. She suffered intense daily pain and the inability to stand long enough to brush her teeth. This is not an uncommon adverse reaction to HPV shots. It doesn't make sense to require this risk for a infection that is not a communicable risk to the student throughout their school day.

“Annual deaths from cervical cancer in the U.S. are 2.3/100,000. The death rate in the Gardasil clinical trials was 85/100,000—or **37 times that of cervical cancer** . . . According to Gardasil’s package insert, **women are 100 times more likely to suffer a severe event following vaccination with Gardasil than they are to get cervical cancer.**” -[Children’s Health Defense](#)

Please vote against this recommendation.

Thank you,
Charis Keller

Oppose SBOH making HPV a school attendance required vaccination.

The original, understandable rationale for school attendance vaccination requirements was to prevent schools from being an infection hub for the casually transmissible, airborne Smallpox infection.

At the time these policies were in place (1905 and prior), Smallpox was largely untreatable. This is a time in medicine some 4 decades prior to the introduction of antibiotics into clinical use, (post WW2).

Physicians were still arguing over whether handwashing was really an effective intervention. Joseph Lister's work into proper medical hygiene and sterile procedures was still being adopted.

"Joseph Lister refined his techniques until he had enough proof that everything he did was successful, and went on to publish everything he discovered in a medical journal "The Lancet" in 1867.

As expected, it took a long time for other people in the medical field to accept Lister's findings. A lot of them were incredulous at the thought that organisms too small to be seen were causing all the post-operation deaths. Some found it tiring to have to go through the sterilization process before performing an operation. And although some of them tried Lister's methods, majority of them did it incorrectly that their efforts proved to be useless."

<https://www.famousscientists.org/joseph-lister/>

Many physicians continued to ascribe to the "humors" theory of medicine. This philosophy assigned ill health to an imbalance of the 4 "humors" or bodily fluids- fire, air, water, and earth. Treatments to "balance" the humors often involved aggressive emetics (arsenic & mercury), laxatives, cauterizing flesh and bloodletting. These medical treatments persisted into the late 1880's and some long- time physicians held onto the training into the 20th century.

<http://broughttolife.sciencemuseum.org.uk/broughttolife/techniques/humours>

The first virus was only identified in the 1890's, related to tobacco agriculture.

<https://www.ncbi.nlm.nih.gov/pubmed/11570281/>

It would be 1931 before invention of the electron microscope allowed the observation of a virus some years later. <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2772359/>

Public sanitation was still in the planning stages. Electricity use was very rare, there was no refrigeration for fresh foods. Transportation and commercial shipping in cities, towns, and villages away from train stations was by horse drawn carriages and wagons, with the accompanying manure flies being a continuous concern.

Against this backdrop of low living standards and often ineffective or even detrimental medical care the acute phase of the Smallpox infection was capable of being fatal in up to 30% of the cases.

There was an understandable "Public Safety" rationale for these original statutes.

A student could conceivably contract a potentially deadly infection from simply being near another student. An infection that surpassed the ability of the majority of the health care practitioners to treat.

This is in a deep and stark contrast to the HPV infection.

The HPV infection is not casually transmissible. It requires the voluntary actions of some level of intimate contact with another person with the exchange of body fluids. It can be prevented by safe sex practices or abstinence.

This infection does not cause harm in its acute phase. A person does not contract HPV, become immediately ill and die. The majority of infections clear by themselves and the individual becomes immune. HPV vaccination is intended to prevent the development of various warts and lesions which can over dozens of years can eventually result in cancer.

The cancers considered to be linked to HPV infections are very preventable and treatable with the current standard of care. This standard of care includes screening at regular intervals, and appropriate treatment. The HPV treating community maintains that a patient who follows the standard of care is at very low risk of a fatal outcome.

The original developers of the HPV vaccine had intended that it be used in countries which lack the health care infrastructure to provide modern, standard of care gynecological services. Women without access to proper care are at the highest risk of a poor outcome. This application failed because the countries where the vaccine would be most warranted are unable to afford its usage.

Even with HPV vaccination regular pap smears and other screening practices are indicated.

WA RCW 28A.210.080 already requires that all WA students receive information regarding HPV vaccination.

3)(a) Beginning with sixth grade entry, every public school in the state shall provide parents and guardians with information about human papillomavirus disease and its vaccine at the beginning of every school year. The information about human papillomavirus disease shall include:

(i) Its causes and symptoms, how human papillomavirus disease is spread, and the places where parents and guardians may obtain additional information and vaccinations for their children; and

(ii) Current recommendations from the United States centers for disease control and prevention regarding the receipt of vaccines for human papillomavirus disease and where the vaccination can be received.

(b) This subsection shall not be construed to require the department of health or the school to provide human papillomavirus vaccination to students.

(c) The department of health shall prepare the informational materials and shall consult with the office of the superintendent of public instruction.

(d) This subsection does not create a private right of action.

(4) Private schools are required by state law to notify parents that information on the human papillomavirus disease prepared by the department of health is available.

<https://apps.leg.wa.gov/RCW/default.aspx?cite=28A.210.080>

The state is already providing support for HPV vaccination.

Families are consulting with their personal Health Care Providers about the appropriateness of HPV vaccination in their individual circumstances.

If the information provided by the State, and a families' health care provider does not result in vaccination, why is it the place of the State to step in?

There is no Public Safety interest in this vaccination for school attendance. These students do not represent any exigent threat to any other students.

Universal HPV vaccination can be a Public Health objective. It does not meet the standard of a Public Safety concern.

The question is not should a student be vaccinated, but should a student forfeit their right to a taxpayer supported, constitutionally guaranteed Free and Appropriate Education for failing to receive this vaccine?

Adding the HPV to the school schedule would be an abuse of the school attendance requirements.

Where does it stop?

Will female students who meet certain demographic criteria that make them a high risk for an unintended pregnancy be required to receive birth control products to attend school?

A Public Health argument could be made for requiring contraception.

Will children with challenging personalities be required to receive ADD or ADHD drugs to attend school?

The schools do not want to be the "vaccination police". Many school board members, administrators, and teachers would not welcome another intrusion into the personal decisions of the families of their students.

Legislation to require HPV vaccination has been introduced in New York State. Districts there are organizing to provide a unified opposition to this abuse of the school attendance requirements. <https://www.wshu.org/post/long-island-school-districts-push-back-hpv-flu-vaccine-mandates#stream/0>

A Superintendent from Central Washington made this comment regarding the HPV proposal;

"I certainly agree with you (100%) that refusal of such a vaccination should in no way interfere with a student's right to a public education. I know that our board would feel the same way."

Please refrain from this action.

Respectfully Submitted,

Karl Kanthak

Subject: STRONG OPPOSITION to adding the HPV/Gardasil series to the WA schedule
Date: Friday, January 3, 2020 1:12:33 AM

Dear Board of Health Representatives,

As a 10 year WA State resident and parent of two healthy school-aged children, I implore you to **not** proceed with your proposal to add the Gardasil/HPV vaccine series to the schedule. I strongly oppose adding this vaccine series to WA's vaccination schedule for several reasons. I have been researching the Gardasil/HPV vaccine for a few years and have compiled hundreds of peer-reviewed studies, articles, videos, interviews, have spoken to numerous doctors, and personally covered several Gardasil/HPV vaccine injury cases. This vaccine has caused debilitating injuries and death and is one of the top vaccines that cause serious adverse reactions, other than the flu shot.

My OB/GYN and doctors state that most HPV bacteria clear on their own and self-resolve. Bi-annual pap smears are highly effective in detecting HPV. Just because someone has HPV doesn't mean this will lead to cancer. This vaccine has **never** been evaluated or tested for impairment of fertility, carcinogenic, or mutagenic effects. Please do not add this to the vaccination schedule - it is unnecessary, unsafe, and inappropriate. Are you aware that Merck is currently in court for fraud and deceit regarding the Gardasil vaccine and they did *not* test this medical product against a true placebo, but an aluminum adjuvant and Hep. A vaccine? How Gardasil was even approved and put on the market is astounding.

Here are just a few resources to consider of the 20 pages of hundreds of links I have gathered:

"In an unprecedented move, the American College of Pediatricians has issued a warning against a vaccine that has been approved by the FDA and CDC. The College says that they are committed to the health and well-being of children, and due to their commitment to children's health, they feel that safety concerns regarding the Human Papillomavirus Vaccine Gardasil should be made public.

The College says that in addition to concerning correlations between Gardasil and Premature Ovarian Failure, they are also concerned with the pre-release vaccine testing methods utilized by Gardasil maker Merck. Pre-licensure safety trials for Gardasil used a placebo that contained polysorbate 80 as well as an aluminum adjuvant, which are both contained within the vaccine. Therefore, if either of these ingredients could cause ovarian dysfunction, an increase in amenorrhea probably would not have been detected. The College notes that the placebo-controlled trials were highly questionable due to the fact that the placebos were actually not placebos at all."

<https://www.acped.org/the-college-speaks/position-statements/health-issues/new-concerns-about-the-human-papillomavirus-vaccine>

"Dr. Peter Duesberg, professor of molecular and cell biology at the University of California, claims that HPV does not cause cervical cancer and has warned that the HPV vaccine is both "useless" and "dangerous." <https://newspunch.com/dr-peter-duesberg-hpv-cervical-cancer/>

In a paper recently published in Molecular Cytogenetic entitled, "Individual karyotypes at the origins of cervical carcinomas," researchers conclude that the vaccine against human papillomavirus (HPV) is extremely unlikely to protect against cervical cancer".

https://nworeport.me/2018/03/26/dr-peter-duesberg-hpv-does-not-cause-cervical-cancer/?fbclid=IwAR3TP8wZd1gBkpOIMPkU7b9U-B_OM3l65B1j2wVhplNYq5gwGD2vy_knNDg

1/30/19 "The first scan of Gardasil 9 has been completed by our friends in the Italian research group. The vaccine is bursting with bacterial contamination, mouse DNA, intact foreign viral DNA, and molluscum virus."

https://www.corvelva.it/speciali-corvelva/analisi/vaccinegate-metagenomic-analysis-report-on-gardasil-9.html?fbclid=IwAR2jhhKJl405RquBQlaOWxlxedM6_I-skGtIQ0N2LKUJgjPf-DIR_O5F8xl

Payouts Total Nearly \$6 Million to Victims of HPV Vaccine Reactions

<https://www.myvaccinelawyer.com/blog/payouts-total-nearly-6-million-to-victims-of-hpv-vaccine-reactions>

Signal detection of human papillomavirus vaccines using the Korea Adverse Events Reporting System database, between 2005 and 2016.

A newly published South Korean study describes almost 100 safety warnings among the almost 4800 adverse reactions related to the HPV vaccine reported to the "Korea adverse event reporting system" database between 2005 and 2016. The study discovered that 19 types of serious adverse events were not even listed on HPV VACCINE CARDS IN THIS COUNTRY: Neuralgia, tremor, neuritis, depersonalization, Axillary pain, personality disorder, increase in salivation, peptic ulcer, failure insufficiency, hypotension, ischemia Peripheral, cerebral hemorrhage, urination disorder, facial oedema, ovarian cysts, weight gain, pain anxiety, oral oedema and back pain. <https://www.ncbi.nlm.nih.gov/pubmed/31313003>

Human Papillomavirus Epitope Mimicry and Autoimmunity: The Molecular Truth of Peptide Sharing.

A brand new study with critical information for anyone considering Gardasil. Want to know one of the major reasons so many kids are being damaged by Gardasil? The opportunity for peptide cross-reactivity is off the charts:

"The final data show that the totality of the immunoreactive HPV L1 epitopes is mostly composed by peptides present in human proteins."

"The data highlight a cross-reactive potential for a spectrum of autoimmune diseases that includes ovarian failure, systemic lupus erythematosus (SLE), breast cancer and sudden death, among others."

Oct 8, 2019 - <https://www.ncbi.nlm.nih.gov/pubmed/31593963>

"Merck has known since the beginning that Gardasil kills. In their own Vaccine Manufacturer's Insert, on page 7, Merck reports there were 29,323 subjects in the clinical trials for Gardasil. Of that number, there were 40 deaths. FORTY DEAD TEST SUBJECTS. That's a death ratio of 1 in 733. (Here is the Manufacturer's insert for Gardasil. See page 7.)

<http://www.fda.gov/downloads/BiologicsBloodVaccines/Vaccines/ApprovedProducts/UCM111263.pdf>

Merck says those deaths were "coincidence" and could be expected to happen anyway. They say this because there was no statistically significant difference between the number of deaths in the experimental (vaccine) group (21), and the number of deaths in the "control/placebo" (aluminum adjuvant/hepatitis A vaccine) group (19).

The test subjects were healthy children, adolescents, and adults ranging in age from 9 to 45 years. They were cleared of any significant health problems prior to being admitted into the study. Merck reports the most frequent cause of death among the study group was motor vehicle accident (5 in the Gardasil group; 4 in the aluminum adjuvant group). Among the non-fatal adverse reactions to Gardasil AND to the aluminum adjuvant, neurological events were the most commonly reported events. Seizures and syncope, to be exact. Everyone knows what a seizure is and what it does. Syncope is a sudden loss of consciousness. Both of which can result in fatal car accidents."

Subject: STRONG OPPOSITION to adding the HPV/Gardasil series to the WA schedule
Date: Friday, January 3, 2020 1:12:33 AM

Dear Board of Health Representatives,

As a 10 year WA State resident and parent of two healthy school-aged children, I implore you to **not** proceed with your proposal to add the Gardasil/HPV vaccine series to the schedule. I strongly oppose adding this vaccine series to WA's vaccination schedule for several reasons. I have been researching the Gardasil/HPV vaccine for a few years and have compiled hundreds of peer-reviewed studies, articles, videos, interviews, have spoken to numerous doctors, and personally covered several Gardasil/HPV vaccine injury cases. This vaccine has caused debilitating injuries and death and is one of the top vaccines that cause serious adverse reactions, other than the flu shot.

My OB/GYN and doctors state that most HPV bacteria clear on their own and self-resolve. Bi-annual pap smears are highly effective in detecting HPV. Just because someone has HPV doesn't mean this will lead to cancer. This vaccine has **never** been evaluated or tested for impairment of fertility, carcinogenic, or mutagenic effects. Please do not add this to the vaccination schedule - it is unnecessary, unsafe, and inappropriate. Are you aware that Merck is currently in court for fraud and deceit regarding the Gardasil vaccine and they did *not* test this medical product against a true placebo, but an aluminum adjuvant and Hep. A vaccine? How Gardasil was even approved and put on the market is astounding.

Here are just a few resources to consider of the 20 pages of hundreds of links I have gathered:

"In an unprecedented move, the American College of Pediatricians has issued a warning against a vaccine that has been approved by the FDA and CDC. The College says that they are committed to the health and well-being of children, and due to their commitment to children's health, they feel that safety concerns regarding the Human Papillomavirus Vaccine Gardasil should be made public.

The College says that in addition to concerning correlations between Gardasil and Premature Ovarian Failure, they are also concerned with the pre-release vaccine testing methods utilized by Gardasil maker Merck. Pre-licensure safety trials for Gardasil used a placebo that contained polysorbate 80 as well as an aluminum adjuvant, which are both contained within the vaccine. Therefore, if either of these ingredients could cause ovarian dysfunction, an increase in amenorrhea probably would not have been detected. The College notes that the placebo-controlled trials were highly questionable due to the fact that the placebos were actually not placebos at al."

<https://www.acpeds.org/the-college-speaks/position-statements/health-issues/new-concerns-about-the-human-papillomavirus-vaccine>

"Dr. Peter Duesberg, professor of molecular and cell biology at the University of California, claims that HPV does not cause cervical cancer and has warned that the HPV vaccine is both "useless" and "dangerous." <https://newspunch.com/dr-peter-duesberg-hpv-cervical-cancer/>

In a paper recently published in Molecular Cytogenetic entitled, "Individual karyotypes at the origins of cervical carcinomas," researchers conclude that the vaccine against human papillomavirus (HPV) is extremely unlikely to protect against cervical cancer".

https://nworeport.me/2018/03/26/dr-peter-duesberg-hpv-does-not-cause-cervical-cancer/?fbclid=IwAR3TP8wZd1gBkpOIMPkU7b9U-B_OM3l65B1j2wVhplNYq5gwGD2vy_knNDg

1/30/19 "The first scan of Gardasil 9 has been completed by our friends in the Italian research group. The vaccine is bursting with bacterial contamination, mouse DNA, intact foreign viral DNA, and molluscum virus."

https://www.corvelva.it/speciali-corvelva/analisi/vaccinegate-metagenomic-analysis-report-on-gardasil-9.html?fbclid=IwAR2jhhKJl405RquBQlaOWxlxedM6_I-skGtIQ0N2LKUJgjPf-DIR_O5F8xl

Payouts Total Nearly \$6 Million to Victims of HPV Vaccine Reactions

<https://www.myvaccinelawyer.com/blog/payouts-total-nearly-6-million-to-victims-of-hpv-vaccine-reactions>

Signal detection of human papillomavirus vaccines using the Korea Adverse Events Reporting System database, between 2005 and 2016.

A newly published South Korean study describes almost 100 safety warnings among the almost 4800 adverse reactions related to the HPV vaccine reported to the "Korea adverse event reporting system" database between 2005 and 2016. The study discovered that 19 types of serious adverse events were not even listed on HPV VACCINE CARDS IN THIS COUNTRY: Neuralgia, tremor, neuritis, depersonalization, Axillary pain, personality disorder, increase in salivation, peptic ulcer, failure insufficiency, hypotension, ischemia Peripheral, cerebral hemorrhage, urination disorder, facial oedema, ovarian cysts, weight gain, pain anxiety, oral oedema and back pain. <https://www.ncbi.nlm.nih.gov/pubmed/31313003>

Human Papillomavirus Epitope Mimicry and Autoimmunity: The Molecular Truth of Peptide Sharing.

A brand new study with critical information for anyone considering Gardasil. Want to know one of the major reasons so many kids are being damaged by Gardasil? The opportunity for peptide cross-reactivity is off the charts:

"The final data show that the totality of the immunoreactive HPV L1 epitopes is mostly composed by peptides present in human proteins."

"The data highlight a cross-reactive potential for a spectrum of autoimmune diseases that includes ovarian failure, systemic lupus erythematosus (SLE), breast cancer and sudden death, among others."

Oct 8, 2019 - <https://www.ncbi.nlm.nih.gov/pubmed/31593963>

"Merck has known since the beginning that Gardasil kills. In their own Vaccine Manufacturer's Insert, on page 7, Merck reports there were 29,323 subjects in the clinical trials for Gardasil. Of that number, there were 40 deaths. FORTY DEAD TEST SUBJECTS. That's a death ratio of 1 in 733. (Here is the Manufacturer's insert for Gardasil. See page 7.)

<http://www.fda.gov/downloads/BiologicsBloodVaccines/Vaccines/ApprovedProducts/UCM111263.pdf>

Merck says those deaths were "coincidence" and could be expected to happen anyway. They say this because there was no statistically significant difference between the number of deaths in the experimental (vaccine) group (21), and the number of deaths in the "control/placebo" (aluminum adjuvant/hepatitis A vaccine) group (19).

The test subjects were healthy children, adolescents, and adults ranging in age from 9 to 45 years. They were cleared of any significant health problems prior to being admitted into the study. Merck reports the most frequent cause of death among the study group was motor vehicle accident (5 in the Gardasil group; 4 in the aluminum adjuvant group). Among the non-fatal adverse reactions to Gardasil AND to the aluminum adjuvant, neurological events were the most commonly reported events. Seizures and syncope, to be exact. Everyone knows what a seizure is and what it does. Syncope is a sudden loss of consciousness. Both of which can result in fatal car accidents."

Adding HPV to the school attendance rules

11. Are you Pro or Con on the proposal?

2. Con

Oppose SBOH making HPV a school attendance required vaccination. The original, understandable rationale for school attendance vaccination requirements was to prevent schools from being an infection hubs for the casually transmissible, airborne Smallpox infection. At the time these policies were in place (1905 and prior), Smallpox was largely untreatable. This is a time in medicine some 4 decades prior to the introduction of antibiotics into clinical use, (post WW2). Physicians were still arguing over whether handwashing was really an effective intervention. Joseph Lister's work into proper medical hygiene and sterile procedures. "Joseph Lister refined his techniques until he had enough proof that everything he did was successful, and went on to publish everything he discovered in a medical journal "The Lancet" in 1867. As expected, it took a long time for other people in the medical field to accept Lister's findings. A lot of them were incredulous at the thought that organisms too small to be seen were causing all the post-operation deaths. Some found it tiring to have to go through the sterilization process before performing an operation. And although some of them tried Lister's methods, majority of them did it incorrectly that their efforts proved to be useless." <https://www.famousscientists.org/joseph-lister/> Many physicians continued to ascribe to the "humors" theory of medicine. This philosophy assigned ill health to an imbalance of the 4 "humors" or bodily fluids- fire, air, water, and earth. Treatments to "balance" the humors often involved aggressive emetics (arsenic & mercury), laxatives, cauterizing flesh and bloodletting. These medical treatments persisted into the late 1880's and some long-time physicians held onto the training into the 20th century. <http://broughttolife.sciencemuseum.org.uk/broughttolife/techniques/humours> The first virus was only identified in the 1890's, related to tobacco agriculture. <https://www.ncbi.nlm.nih.gov/pubmed/11570281/> It would be 1931 before invention of the electron microscope allowed the observation of a virus some years later. <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2772359/> Public sanitation was still in the planning stages. Electricity use was very rare, there was no refrigeration for fresh foods. Transportation and commercial shipping in cities, towns, and villages away from train stations was by horse drawn carriages and wagons, with the accompanying manure flies being a continuous concern. Against this backdrop of low living standards and often ineffective or even detrimental medical care the acute phase of the Smallpox infection was capable of being fatal in up to 30% of the cases. There was an understandable "Public Safety" rationale for these original statutes. A student could conceivably contract a potentially deadly infection from simply being near another student. An infection that surpassed the ability of the majority of the health care practitioners to treat. This is in a deep and stark contrast to the HPV infection. The HPV infection is not casually transmissible. It requires the voluntary actions of some level of intimate contact with another person with the exchange of body fluids. It can be prevented by safe sex practices or abstinence. This infection does not cause harm in its acute phase. A person does not contract HPV, become immediately ill and die. The majority of infections clear by themselves and the individual becomes immune. HPV vaccination is intended to prevent the development of various warts and lesions which can over dozens of years can eventually result in cancer. The cancers considered to be linked to HPV infections are very preventable and treatable with the current standard of care. This standard of care includes screening at regular intervals, and appropriate treatment. The HPV treating community maintains that a patient who follows the standard of care is at very low risk of a fatal outcome. The original developers of the HPV vaccine had intended that it be used in countries which lack the health care infrastructure to provide modern, standard of care gynecological services. Women without access to proper care are at the highest risk of a poor outcome. This application failed because the countries where the vaccine would be most warranted are unable to afford its usage. Even with HPV vaccination regular pap smears and other screening practices are indicated. WA RCW 28A.210.080 already requires that all WA students receive information regarding HPV vaccination. 3)(a) Beginning with sixth grade entry, every public school in the state shall provide parents and guardians with information about human papillomavirus disease and its vaccine at the beginning of every school year. The information about human papillomavirus disease shall include: (i) Its causes and symptoms, how human papillomavirus disease is spread, and the places where parents and guardians may obtain additional information and vaccinations for their children; and (ii) Current recommendations from the United States centers for disease control and prevention regarding the receipt of vaccines for human papillomavirus disease and where the vaccination can be received. (b) This subsection shall not be construed to require the department of health or the school to provide human papillomavirus vaccination to students. (c) The department of health shall prepare the informational materials and shall consult with the office of the superintendent of public instruction. (d) This subsection does not create a private right of action. (4) Private schools are required by state law to notify parents that information on the human papillomavirus disease prepared by the department of health is available. <https://apps.leg.wa.gov/RCW/default.aspx?cite=28A.210.080> The state is already providing support for HPV vaccination. Families are consulting with their personal Health Care Providers about the appropriateness of HPV vaccination in their individual circumstances. If the information provided by the State, and a families' health care provider does not result in vaccination, why is it the place of the State to step in? There is no Public Safety interest in this vaccination for school attendance. These students do not represent any exigent threat to any other students. Universal HPV vaccination can be a Public Health objective. It does not meet the standard of a Public Safety concern. The question is

not should a student be vaccinated, but should a student forfeit their right to a taxpayer supported, constitutionally guaranteed Free and Appropriate Education for failing to receive this vaccine? Adding the HPV to the school schedule would be an abuse of the school attendance requirements. Where does it stop? Will female students who meet certain demographic criteria that make them a high risk for an unintended pregnancy be required to receive birth control products to attend school? A Public Health argument could be made for requiring contraception. Will children with challenging personalities be required to receive ADD or ADHD drugs to attend school? The schools do not want to be the "vaccination police". Many school board members, administrators, and teachers would not welcome another intrusion into the personal decisions of the families of their students. Legislation to require HPV vaccination has been introduced in New York State. Districts there are organizing to provide a unified opposition to this abuse of the school attendance requirements.

<https://www.wshu.org/post/long-island-school-districts-push-back-hpv-flu-vaccine-mandates#stream/0> A Superintendent from Central Washington made this comment regarding the HPV proposal; "I certainly agree with you (100%) that refusal of such a vaccination should in no way interfere with a student's right to a public education. I know that our board would feel the same way." Please refrain from this action. Respectfully Submitted, Karl Kanthak Educators for Responsible Vaccination Policy

The HPV treating community maintains that a patient who follows the standard of care is at very low risk of a fatal outcome. The original developers of the HPV vaccine had intended that it be used in countries which lack the health care infrastructure to provide modern, standard of care gynecological services. Women without access to proper care are at the highest risk of a poor outcome. This application failed because the countries where the vaccine would be most warranted are unable to afford its usage. Even with HPV vaccination regular pap smears and other screening practices are indicated. WA RCW 28A.210.080 already requires that all WA students receive information regarding HPV vaccination. 3)(a) Beginning with sixth grade entry, every public school in the state shall provide parents and guardians with information about human papillomavirus disease and its vaccine at the beginning of every school year. The information about human papillomavirus disease shall include: (i) Its causes and symptoms, how human papillomavirus disease is spread, and the places where parents and guardians may obtain additional information and vaccinations for their children; and (ii) Current recommendations from the United States centers for disease control and prevention regarding the receipt of vaccines for human papillomavirus disease and where the vaccination can be received. (b) This subsection shall not be construed to require the department of health or the school to provide human papillomavirus vaccination to students. (c) The department of health shall prepare the informational materials and shall consult with the office of the superintendent of public instruction. (d) This subsection does not create a private right of action. (4) Private schools are required by state law to notify parents that information on the human papillomavirus disease prepared by the department of health is available. <https://apps.leg.wa.gov/RCW/default.aspx?cite=28A.210.080> The state is already providing support for HPV vaccination. Families are consulting with their personal Health Care Providers about the appropriateness of HPV vaccination in their individual circumstances. If the information provided by the State, and a families' health care provider does not result in vaccination, why is it the place of the State to step in? There is no Public Safety interest in this vaccination for school attendance. These students do not represent any exigent threat to any other students. Universal HPV vaccination can be a Public Health objective. It does not meet the standard of a Public Safety concern. The question is

not should a student be vaccinated, but should a student forfeit their right to a taxpayer supported, constitutionally guaranteed Free and Appropriate Education for failing to receive this vaccine? Adding the HPV to the school schedule would be an abuse of the school attendance requirements. Where does it stop? Will female students who meet certain demographic criteria that make them a high risk for an unintended pregnancy be required to receive birth control products to attend school? A Public Health argument could be made for requiring contraception. Will children with challenging personalities be required to receive ADD or ADHD drugs to attend school? The schools do not want to be the "vaccination police". Many school board members, administrators, and teachers would not welcome another intrusion into the personal decisions of the families of their students. Legislation to require HPV vaccination has been introduced in New York State. Districts there are organizing to provide a unified opposition to this abuse of the school attendance requirements.

<https://www.wshu.org/post/long-island-school-districts-push-back-hpv-flu-vaccine-mandates#stream/0> A Superintendent from Central Washington made this comment regarding the HPV proposal; "I certainly agree with you (100%) that refusal of such a vaccination should in no way interfere with a student's right to a public education. I know that our board would feel the same way." Please refrain from this action. Respectfully Submitted, Karl Kanthak Educators for Responsible Vaccination Policy

The following survey response is submitted:

1. State Board of Health Meeting Date:

1/8/2020

2. Agenda Item or Issue:

Adding HPV Vaccine to list of required vaccines for school aged children

3. Your Name:

Deborah McKee

4. Do you have a professional title?

2. No

5. Are you representing an organization?

2. No

6. Address:

6822 Riverdale Dr SE Tumwater WA 98501

7. Email:

mckee.debbie@live.com

8. Phone Number (Include Area Code):

360-561-9082

9. Do you have any special expertise relevant to this topic?

2. No

10. Are you testifying on a specific proposal under consideration by the board?

1. Yes

Adding HPV Vaccine to the list of required vaccines for school aged children.

11. Are you Pro or Con on the proposal?

2. Con

This vaccine is highly controversial. There are concerns over it's safety and the necessity of

vaccinating children for an STD. HPV is not a public health threat in a school setting, it is not on the same level as things such as measles or whooping cough and is preventable through safe sex practices. Adding this to the list of vaccines required for school will lead to more people asking for a waiver when it comes to vaccinations.

This goes against our constitutional right to choose, According to Gardasil's package insert, women

are 100 times more likely to suffer a severe event following vaccination with Gardasil than they are to get cervical cancer. Our children should not be subject to trial just to attend public school. We are putting our youth at risk for lifelong disease or even death. HPV is a sexually transmitted infection that is not caught in public settings such as daycare or school. HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time. HPV vaccines have not been proven to prevent any type of cancer. HPV vaccines were never tested against inert saline placebos. HPV vaccines don't eliminate the need for proper screening and treatment. HPV screening and treatment are highly successful at preventing and treating associated cancers Recommend screenings to young adults ... vs poison.

According to the American Cancer Society, cervical cancer is preventable with proper screening tests that are covered by all insurances. HPV is a sexually transmitted disease that is not transmitted in a public setting like school or daycare. This does not need to be required to attend school and I

personally know several families who vaccinated their children with all vaccines but when they received the HPV vaccine within days they developed debilitating disability that severely affected their quality of life. They are not able to participate in the activities that they had done successfully (sports, drama, etc). I have never observed a vaccine with so many adverse events. Please do not require this to be on the list to attend school. Keep it as an advised vaccine but let doctors and parents have the choice.

9. Do you have any special expertise relevant to this topic?

2. No

10. Are you testifying on a specific proposal under consideration by the board?

1. Yes

HPV Vaccine should not be added to the state's mandated list of school-entry vaccines since there is inadequate safety and effectiveness of the product. It is not transmissible in a school setting. The risk-benefit is not proven even after years on the market.

11. Are you Pro or Con on the proposal?

2. Con

I write to save the state money and to spare random victimization of children by another marginally safe and effective vaccine. Notes on criteria the Technical Advisory Group (TAG) will evaluate. Criteria #2 Effectiveness. Sweden's Center for Cervical Cancer Prevention reported in 2017 that the incidence of invasive cervical cancer has reversed course and is climbing in nearly all its counties. 80% HPV coverage corresponded with a 20% increase in cervical cancer. This in a country that was showing declining cancer rates before the vaccine. Further, given that there are over 100 variant strains of HPV, while the vaccine only addresses four. It doesn't stand to reason that the HPV could be that effective, and while addressing the supposedly most common strains, it will only result in strain replacement where other strains become more prevalent and problematic. Criteria #4: Safety. HPV has resulted in over 500 deaths, many of which have been compensated for in the Vaccine Court. No death from a man-made intervention is acceptable. Criteria #6: Human Papilloma Virus (HPV) vaccine will never meet criteria #6 - reducing the risk of person-to-person transmission in a school or day-care setting. Our state has other problems if children are having sex in schools or during extra-curricular activities. This same criterion was apparently overlooked for the Hep B vaccine, which should also be removed from the state-mandated list. This vaccine is more trouble than it's worth, and only enriches the manufacturer - who is free from liability. Do not support the flimsy theory that it's helping save lives. Save state funds and reject consideration to mandate this product.

I am against adding the HPV vaccine to the mandatory vaccine list. I don't believe it's benefits outweigh the risks, that it is proven safe, or that parental rights should be waved. It is alarming to me as a mother of school-aged children that this is even up for consideration. Thank you for your time.

Sincerely, Jessica Emmans

9. Do you have any special expertise relevant to this topic?

2. No

10. Are you testifying on a specific proposal under consideration by the board?

1. Yes

Adding Gardasil to the routine vaccine schedule required for admission to daycare or public/private schools.

11. Are you Pro or Con on the proposal?

2. Con

As the mother of children who will be directly impacted by this decision, I strongly oppose adding Gardasil to the vaccine schedule, for the following reasons: 1) Gardasil is not a risk for children in daycare or educational settings. You cannot contract HPV through casual contact. It is a specifically sexually-transmitted infection. 2) In Washington State alone, 650 adverse events and two deaths have been reported. Several incidents have met the VAERS requirements, resulting in significant settlements for the families of the affected children. 3) Children are 100 times more likely to have an adverse reaction to a Gardasil vaccine than they are to contract HPV. 4) Though often cited as a reason for requiring vaccination, Gardasil will not help with "herd" or community immunity. 5) HPV is not a public health crisis. 6) The Gardasil vaccine has not been proven effective at preventing cervical cancer, which is the stated reason for creating the vaccine. 7) Gardasil alone is not sufficient protection against HPV, and requiring the vaccine will not change any of the other causative factors. 8) Requiring Gardasil will increase the potential for adverse effects, thereby putting those requiring the vaccine at risk for lawsuits. As a mother, former nurse, and humanitarian worker, I have seen the consequences of unimmunized children. My own children are vaccinated. This is not about unfounded fears or uneducated opinions. I am not a conspiracy theorist. This is a result of looking at the risks vs the benefits and seeing that the risks currently outweigh the benefits to a significant degree. Adding this requirement is not guaranteed to produce the expected results. It may, in fact, have significant (albeit unintended) negative consequences.

Mandate fo HPV Immunization as early as nine years old

11. Are you Pro or Con on the proposal?

2. Con

I'm concerned with mandates as a condition of public school enrollment that apply to children who are

not in the at risk population i.e., sexually active adolescents. A nine year old is not likely to sexually active outside of very extreme cases.

9. Do you have any special expertise relevant to this topic?

2. No

10. Are you testifying on a specific proposal under consideration by the board?

1. Yes

Mandate fo HPV Immunization as early as nine years old

11. Are you Pro or Con on the proposal?

2. Con

I'm concerned with mandates as a condition of public school enrollment that apply to children who are

not in the at risk population i.e., sexually active adolescents. A nine year old is not likely to sexually active outside of very extreme cases.

9. Do you have any special expertise relevant to this topic?

1. Yes

The HPV vaccine is on trail. Healthy lives have been ruined taken and taken by this vaccine.

10. Are you testifying on a specific proposal under consideration by the board?

1. Yes

The Proposal/Petition is to add HPV vaccine to the list of required childhood vaccinations

11. Are you Pro or Con on the proposal?

2. Con

As a mother with a school aged child, I do not support adding more vaccines to the required list of vaccinations. The HPV vaccine is dangerous, it is irresponsible and reckless to require it. The vaccine has not lessened the occurrences of the disease, furthermore, there is treatment available for HPV. Please do not add an injection that was never tested properly and is harmful to the point that it is liability free. Please don't add this vaccine to a required schedule. Medical procedures are a personal and private issue. The state should not be dictating injections into it's people. Thank you for your time, Yekaterina Negrov

The HPV vaccine is extremely dangerous, and unnecessary. The virus comes and goes on its own, and is not a problem for the general public. Plus, parents should have the FREEDOM TO CHOOSE to vaccinate their kids or not, in a FREE COUNTRY. If vaccines continue to be mandated to attend public

school, and WA takes away exemptions, and if the HPV is added to the schedule, ALL of my kids (4) will be homeschooled, 100% on my own (not through a school district program) so NO school district will get any money for my kids. In fact, I know LOTS of parents who will not allow their kids to get this shot. That will be A LOT of kids being home schooled, and therefore LOTS of MONEY being lost by the school districts.

7. Email:

alissanjohnson@gmail.com

8. Phone Number (Include Area Code):

5033806248

9. Do you have any special expertise relevant to this topic?

1. Yes

I am an informed female - a person who has been recommended to receive this vaccine on many occasions. After educating myself and determining what I'd like to put into my body - I have learned that the Gardasil vaccine is not worth the risk, nor is it necessary as HPV cannot be caught by any other means other than sexual contact. If someone is not sexually active, there is no need to get the vaccine.

10. Are you testifying on a specific proposal under consideration by the board?

1. Yes

I strongly oppose the proposed rule change to add the HPV vaccine to Chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine Preventable Diseases.

11. Are you Pro or Con on the proposal?

2. Con

Dear WA Board of Health: I strongly oppose the proposed rule change to add the HPV vaccine to Chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine Preventable Diseases. The risks are of the HPV Vaccine/Gardasil are far greater than the benefits. This proposed rule change should not be recommended for many reasons including but not limited to the following: 1. Informed choice and medical freedom are fundamental rights. As citizens and parents we have the right to decide what is injected into our bodies and our children's and a right to know the risks and benefits associated with each liability free pharmaceutical vaccine product. 2. According to the American Cancer Society, cervical cancer is preventable with proper screening tests. 3. HPV is a sexually transmitted infection that is not caught in public settings such as daycare or school. HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time. 4. You have a higher chance of dying from the HPV vaccine product/Gardasil than getting or dying from a HPV associated cancer. The death rate of cervical cancer in the US is 2.3/100,000. The death rate in the Gardasil clinical trials was 85/100,000 or 37 times that of cervical cancer. The total HPV associated cancer rate of cervical, anal, vaginal and vulvar is 19.8/100,000. Do the math! 5. According to the Gardasil insert there is a 2.3% chance of developing an autoimmune disease after receiving the HPV vaccine product/Gardasil. That means 2.3 out of every 100 children will develop a lifelong chronic disease such as arthritis, lupus, etc. after receiving the liability free HPV vaccine product/Gardasil 6. Half (49.6%) of the clinical trial subjects who received Gardasil reported serious medical conditions within seven months. To avoid classifying these injuries as adverse events, Merck dismissed them as "new medical conditions." 7. Females in the Gardasil clinical trials with evidence of current HPV infection and previous exposure to HPV had a 44% increased risk of developing cervical lesions or cancer following vaccination. 8. The HPV vaccine product/Gardasil has been associated with premature ovarian failure (teenage menopause!) and increased miscarriage rates 10-15% higher than the corresponding reproductive age group. 9. There have not been any real Gardasil safety studies conducted. In the Gardasil clinical trials, Merck used a neurotoxic aluminum adjuvant called AAHS instead of using an inert saline placebo. In the clinical trials, there was little to no difference in the safety profiles of the AAHS adjuvant and Gardasil. The World Health Organization has stated that using something other than an inert substance as a placebo creates a "methodological disadvantage". This may make it "difficult or impossible" to assess vaccine safety properly without a true placebo. It is no surprise to learn that Merck is currently being sued for fraudulent Gardasil safety studies. 10. Japan removed the HPV vaccine product/Gardasil from their recommended list of childhood vaccines after an enormous amount of adverse events occurred after Gardasil was administered. I strongly urge you to get all the facts about the HPV vaccine product/Gardasil. Below is a link to a video presentation by Children's Health Defense that was put together for a current case where Merck is being sued for fraudulent Gardasil safety studies. I also encourage you to read The HPV Vaccine on Trial. It is only a matter a time before the horrible truth about Gardasil is out and the vaccine is recalled by the FDA. The truth is just too horrific to hide forever. I urge you to be one of the brave public health officials/politicians who is willing to put the health of our children first, ahead of political agendas and pharmaceutical profits. How many more of our children have to be diagnosed with lifelong chronic autoimmune diseases or die? Those few braves souls who do will be the true heroes of the 21st century. Be brave!

The following survey response is submitted:

1. State Board of Health Meeting Date:

1/8/2020

2. Agenda Item or Issue:

HPV Vaccine Mandate

3. Your Name:

Michael Carper

4. Do you have a professional title?

2. No

5. Are you representing an organization?

2. No

6. Address:

1322 176th Ave NE Bellevue, WA 98008

7. Email:

mike.carper@gmail.com

8. Phone Number (Include Area Code):

213-268-0990

9. Do you have any special expertise relevant to this topic?

2. No

10. Are you testifying on a specific proposal under consideration by the board?

1. Yes

Proposal to add HPV vaccine to the childhood immunization schedule for school attendance.

11. Are you Pro or Con on the proposal?

2. Con

HPV is primarily a sexually transmitted disease that cannot be spread in a school setting. The

mandate of this vaccine is opposed by the American College of Pediatricians. In Merck's own clinical studies, Gardasil increased the risk of cervical cancer by 44.6% in women who were exposed to HPV prior to receiving the vaccine. Many children between the ages of 3 and 11 have the HPV virus in their bodies from non-sexual contact (birth canal, etc.). By mandating this vaccine, we are actually putting them at increased risk for cancer. After years of decline in cervical cancer rates due to routine pap smears, cervical cancer rates actually increased in Australia, the UK and Sweden following introduction of the HPV vaccine. The vaccine was not tested against an inert placebo (such as saline), but instead against an injection that contained amorphous aluminum hydroxyphosphate (AAHS). This does not mimic the real live choice of deciding whether or not to receive an HPV vaccination. According to the most recent data (for the period from 2003 through 2007), the incidence rate for cervical cancer was 8.1 cases per 100,000 women per year in the United States. With the mortality rate of 2.4 deaths per 100,000 women per year. The death rate of the Gardasil (now know as the HPV Vaccine) was found to be 85 in 100,000 - Over 35 times greater than the cancer itself! Reported side effects of the HPV vaccine include paralysis, premature ovarian failure, POTS, and even death. Every family needs to be able to decide for themselves if the risks outweigh the benefits in their child's specific situation. Do not mandate this vaccine for school attendance!

9. Do you have any special expertise relevant to this topic?

2. No

10. Are you testifying on a specific proposal under consideration by the board?

1. Yes

Proposal to add the HPV vaccine to the childhood immunization schedule for school attendance.

11. Are you Pro or Con on the proposal?

2. Con

HPV is primarily a sexually transmitted disease that cannot be spread in a school setting. The

mandate of this vaccine is opposed by the American College of Pediatricians. In Merck's own clinical studies, Gardasil increased the risk of cervical cancer by 44.6% in women who were exposed to HPV prior to receiving the vaccine. Many children between the ages of 3 and 11 have the HPV virus in their bodies from non-sexual contact (birth canal, etc.). By mandating this vaccine, we are actually putting them at increased risk for cancer. After years of decline in cervical cancer rates due to routine pap smears, cervical cancer rates actually increased in Australia, the UK and Sweden following introduction of the HPV vaccine. The vaccine was not tested against an inert placebo (such as saline), but instead against an injection that contained amorphous aluminum hydroxyphosphate (AAHS). This does not mimic the real live choice of deciding whether or not to receive an HPV vaccination. According to the most recent data (for the period from 2003 through 2007), the incidence rate for cervical cancer was 8.1 cases per 100,000 women per year in the United States. With the mortality rate of 2.4 deaths per 100,000 women per year. The death rate of the Gardasil (now know as the HPV Vaccine) was found to be 85 in 100,000 - Over 35 times greater than the cancer itself! Reported side effects of the HPV vaccine include paralysis, premature ovarian failure, POTS, and even death. Every family needs to be able to decide for themselves if the risks outweigh the benefits in their child's specific situation. Do not mandate this vaccine for school attendance!

I am a childbirth and parenting educator and one of the topics I answer questions on for parents is vaccination.

10. Are you testifying on a specific proposal under consideration by the board?

2. No

11. Are you Pro or Con on the proposal?

2. Con

I am STRONGLY OPPOSED to the addition of Gardasil/HPV to the vaccine schedule for school attendance, for several reasons: 1) This vaccine has unequivocally the worst safety record of any vaccine. In fact, looking at VAERS reports and the infrequency of cancers this vaccine is meant to guard against, you may very well have a higher risk of death by getting the vaccine than by avoiding it. Any medical intervention with that terrible a risk-benefit profile ought NEVER be mandated. 2) This vaccine, unlike others, has NOTHING to do with a student's suitability to be in a school setting. Vaccination for school attendance should be about making sure that schools are safe and free of contagious diseases that can be spread through the course of normal school activity, not about controlling the health care decisions of the population. The addition of this vaccine to the schedule would constitute a naked attempt to force a specific health care decision, rather than affording a concrete benefit in keeping schooling safe. The government should not be leveraging the ability to attend school (a right for which we all pay) as blackmail to strongarm citizens into choosing health interventions they do not desire for themselves and their children. 3) By the very nature of this vaccine and what it protects against, receiving it or not is a deeply personal choice based on a student's and family's values and philosophy. Families and students should have the right to make that decision, free from government coercion.

bb010912@gmail.com

8. Phone Number (Include Area Code):

3608010880

9. Do you have any special expertise relevant to this topic?

1. Yes

Well educated in vaccine safety, also personally injured by the HPV vaccine (Gardasil)

10. Are you testifying on a specific proposal under consideration by the board?

1. Yes

Proposed rule change to add the HPV vaccine to Chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine Preventable Diseases

11. Are you Pro or Con on the proposal?

2. Con

Dear WA Board of Health: As a Washington State Resident who has been injured by the HPV vaccine product/Gardasil (juvenile arthritis), I strongly oppose the proposed rule change to add the HPV vaccine to Chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine Preventable Diseases. The risks of the HPV Vaccine/Gardasil are far greater than the benefits. This proposed rule change should not be recommended for many reasons including but not limited to the following: 1. Informed choice and medical freedom are fundamental rights. As citizens and parents we have the right to decide what is injected into our bodies and our children's and a right to know the risks and benefits associated with each liability free pharmaceutical vaccine product. 2. According to the American Cancer Society, cervical cancer is preventable with proper screening tests. 3. HPV is a sexually transmitted infection that is not caught in public settings such as daycare or school. HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time. 4. You have a higher chance of dying from the HPV vaccine product/Gardasil than getting or dying from a HPV associated cancer. The death rate of cervical cancer in the US is 2.3/100,000. The death rate in the Gardasil clinical trials was 85/100,000 or 37 times that of cervical cancer. The total HPV associated cancer rate of cervical, anal, vaginal and vulvar is 19.8/100,000. Do the math! 5. According to the Gardasil insert there is a 2.3% chance of developing an autoimmune disease after receiving the HPV vaccine product/Gardasil. That means 2.3 out of every 100 children will develop a lifelong chronic disease such as arthritis, lupus, multiple sclerosis, etc. after receiving the liability free HPV vaccine product/Gardasil 6. Half (49.6%) of the clinical trial subjects who received Gardasil reported serious medical conditions within seven months. To avoid classifying these injuries as adverse events, Merck dismissed them as "new medical conditions." 7. Females in the Gardasil clinical trials with evidence of current HPV infection and previous exposure to HPV had a 44% increased risk of developing cervical lesions or cancer following vaccination. 8. The HPV vaccine product/Gardasil has been associated with premature ovarian failure (teenage menopause!) and increased miscarriage rates 10-15% higher than the corresponding reproductive age group. 9. There have not been any real Gardasil safety studies conducted. In the Gardasil clinical trials, Merck used a neurotoxic aluminum adjuvant called AAHS instead of using an inert saline placebo. In the clinical trials, there was little to no difference in the safety profiles of the AAHS adjuvant and Gardasil. The World Health Organization has stated that using something other than an inert substance as a placebo creates a "methodological disadvantage". This may make it "difficult or impossible" to assess vaccine safety properly without a true placebo. It is no surprise to learn that Merck is currently being sued for fraudulent Gardasil safety studies. 10. Japan removed the HPV vaccine product/Gardasil from their recommended list of childhood vaccines after an enormous amount of adverse events occurred after Gardasil was administered. I strongly urge you to get all the facts about the HPV vaccine product/Gardasil. Below is a link to a video presentation by Children's Health Defense that was put together for a current case where Merck is being sued for fraudulent Gardasil safety studies. I also encourage you to read The HPV Vaccine on Trial. It is only a matter a time before the horrible truth about Gardasil is out and the vaccine is recalled by the FDA. The truth is just too horrific to hide forever. I urge you to be one of the brave public health officials/politicians who is willing to put the health of our children first, ahead of political agendas and pharmaceutical profits. How many more of our children have to be diagnosed with lifelong chronic autoimmune diseases or die? Those few brave souls who do will be the true heroes of the 21st century. Be brave! Sincerely, Brittani Brennan

All vaccines have risk, as it is a medical procedure. We should not force people to get a vaccine that

has injured many. We have the right to go to school, and for the people that choose not to get the HPV vaccine, you are going to take that away. One size will never fit all, and when it comes to vaccines, that statement is still held true. If there is a risk, there is a choice. I oppose.

Vaccines that are mandatory for school attendance are varieties of viruses that are easily spread through standard public interactions. HPV is spread by more personal, intimate set of activities that should not be taking place in a school day. Therefore, since there is no risk of transfer during normal school day or general public activity, it is out the realm of school matters. It is also a newer vaccine that has not been available long enough to realize the full long term risks. There have been many debilitating cases thus far. Enough to debate questionable reward versus risk.

5. Are you representing an organization?

2. No

6. Address:

PO Box 1076, Wapato WA 98951

7. Email:

Pressnallpeardon@hotmail.com

8. Phone Number (Include Area Code):

609-660-1462

9. Do you have any special expertise relevant to this topic?

2. No

10. Are you testifying on a specific proposal under consideration by the board?

1. Yes

Making HPVvaccine mandatory for school age young people to go to school.

11. Are you Pro or Con on the proposal?

2. Con

I was school age when I was forced to test 3 polio vaccines. Everyone in my school received it. I was

a young mother when I was forced to have my autistic son mandatory vaccines (he was allergic to) or we would not receive early childhood education for him. His first vaccine cost him and us as he has 5 areas of brain damage. I'm not against vaccines although I have a right to be. I'm against this board taking away parental rights to chose what is best for their child! How dare you! Just because you are the board of health you think you know more? Please don't do this! Allow parents to make these decisions.

1. Yes

Please vote NO to adding HVP to the vaccine schedule.

11. Are you Pro or Con on the proposal?

2. Con

I don't understand why the Washington Board of Health would consider a vaccine with so many adverse reactions as well as a lawsuit against the manufacturer for adverse reactions due to HPV. As a mother of a vaccine injured child, I have seen the injuries that can occur from the current CDC schedule. My daughter's symptoms escalated with each round of vaccines. She developed a head tick and had delayed motor development. When she was learning to walk she would fall hard on her knees, not cry, stand back up, fall again. I later found out she was having absence seizures, losing motor control and falling. Her symptoms got worse with each round of vaccinations. Her worst reaction was when she was 2.5 years old, after her last vaccine. She had three half hour long seizures, followed by a 45 minute post ictal (recovery) phase. Her whole body switched, her lips turned blue and her eyes glazed over with each half hour long seizure. That wasn't the end. After that day, my daughter developed 100's of myoclonic atonic (muscle twitching, body dropping seizures). She couldn't walk without falling. In pre-school and kindergarten she wore a helmet. My daughter is on an IEP, has had multiple other therapies all of her life, extreme behavior issues and an Autism Spectrum diagnosis. My daughter's symptoms are written in the vaccine inserts that the doctors never share. Our doctor also didn't think her symptoms deserved a vaccine exemption. My daughter's symptoms are a direct result of the vaccines she received. To add this controversial HPV vaccine with many adverse reactions including death to the CDC's list of vaccines, would be reckless of the Washington Board of Health. Vote against adding HPV to the current CDC schedule.

1. Yes

The proposal of adding the HPV vaccine to the public school vaccination requirements

11. Are you Pro or Con on the proposal?

2. Con

Since 2006 76% of all adverse reactions reported to the Vaccine Adverse Events Reporting System (VAERS) have been from Gardasil. 1 in 30 require surgical or medical procedures following HPV vaccination. The American Association of Cancer Research reported in 2015 that vaccinated girls had higher prevalence (70.7%) of HPVs than that of unvaccinated girls (56.1%). People are 37% more likely to die from the vaccine than from cervical cancer. Those who were previously exposed to HPV before vaccination are 44.6% more likely to get cervical cancer. Only a third of cervical cancers are associated with HPVs This vaccine only targets 9 out of 200+ strains. 80% of the population will get HPV in their lifetime, but 90% will clear up naturally. Of the remaining 10%, less than .05% of those people will have HPV that leads to cervical cancer (and that can take up to 30 years to develop) Side effects most reported shortly following injections include but are not limited to; suicide, heart failure, onset of seizure disorders, Dysautonomia;(dysfunction of nerves that regulate involuntary body functions, such as heart rate, blood pressure, and sweating), new autoimmune disease, onset of migraines, nausea, vomiting, dizziness, and even Death. And over time there is a horrifyingly large number of young women experiencing Primary Ovarian Failure (premature menopause). Each Gardasil shot contains 500mcg of aluminum (safe limit according to the FDA is 25mcg). These vaccines also contain the carcinogen polysorbate 80, which is known to cause infertility. This vaccine is so dangerous and ineffective that in Japan they removed it from the educational vaccination schedule. These are my reasons for contesting this vaccine.

9. Do you have any special expertise relevant to this topic?

1. Yes

I am a biological woman whom has had HPV

10. Are you testifying on a specific proposal under consideration by the board?

1. Yes

Adding the HPV vaccination named Gardasil to the school/childhood schedule

11. Are you Pro or Con on the proposal?

2. Con

HPV is a non communicable disease that clears itself 90% of the time without intervention. Why do we need to add it to the schedule for every child if those children are not sexually active? In WA state alone 650 adverse events have been reported to VAERS in direct relation to having this vaccine. I personally know 2 teens that have died as result of this vaccine and 1 young woman that is struggling everyday to live as result of taking the vaccine in her 20s. Can I ask this board a serious question? We know that top health officials have stated they are willing to accept a certain casualty rate to achieve community immunity, what is this boards casualty rate? How many children are allowed to die before the so called benefit outweighs the risk? This vaccine needs to remain an "optional" vaccine where families can utilize their Health Care Professionals for more information. Once on the school schedule coercion tactics are used to demand every child receive these. We cannot morally do that knowing it causes death in some of the population.

Mandating the HPV Vaccine

11. Are you Pro or Con on the proposal?

2. Con

To: Washington State Board of Health From: Kathryn Bauer, Vancouver resident Re: HPV Vaccine

Addition to School Mandated List During your discussions on mandating HPV vaccine, please present and answer the following questions:

- What is the purpose of mandating a vaccine for a sexually transmitted infection for school age children that is not a virus transmitted in a public setting? Refer to Criteria #6 in evaluating vaccines containing antigens.
- What were the outcomes from the double-blind inert placebo tests for Gardasil?
- What was the duration of the double-blind inert placebo tests for Gardasil?
- What is the safety profile of AAHS?
- WA State BoH states in the Immunization Advisory Committee Criteria (dated November, 2017) that it engaged immunization stakeholders that included parents. How many parents will be 'engaged' in 2020 to help determine mandating or not mandating Gardasil or another HPV vaccine? How are these parents and other stakeholders chosen?
- In Criteria number three, it is stated, "The vaccine containing this antigen is cost effective from a societal perspective." What is the cost-benefit analysis for mandating the HPV vaccine? This analysis needs to be documented and available to the public early in the process.

HPV is sexual transmitted and not a communicable disease, thus should not be required for school attendance. Gardasil, in particular, is an extremely lethal vaccine and is currently under investigation as such. This is a horrible experiment on our children. I urge a strong NO vote on any proposal to move forward with these requirements.

10. Are you testifying on a specific proposal under consideration by the board?

1. Yes

Making HPV vaccine required for school

11. Are you Pro or Con on the proposal?**2. Con**

HPV isn't passed through casual contact, so the argument that this is a public health risk to other children in school is difficult to argue with parents. I work with many vaccine hesitant parents, and the families I talk to often are open to the vaccine unless they feel "required" to do it. Then they're angry and less likely to agree to the vaccine. Thank you for your consideration of this issue!

As a PCP I have read the clinical trials and the data is concerning regarding the placebo vs experimental treatment/intervention (HPV vaccine in this case.) The placebo was not saline in all of the trials and the adverse reactions that are reported for systemic concerns are reported using the adjuvanted solution rather than the saline. The number of injuries I have seen in person are concerning to me. The Vaccine Compensation program has repeatedly paid out for injuries and deaths from this vaccine. Leaving it optional keeps the door open for dialogue and allows us time to continue to monitor an intervention that other countries have removed due to the damages it has caused.

HPV is a sexually transmitted disease. It should not be a mandatory vaccine in the vaccine schedule. "Annual deaths from cervical cancer in the U.S. are 2.3/100,000. The death rate in the Gardasil clinical trials was 85/100,000—or 37 times that of cervical cancer . . . According to Gardasil's package

insert, women are 100 times more likely to suffer a severe event following vaccination with Gardasil than they are to get cervical cancer.” Children’s Health Defense. There is ZERO health crisis when it comes to HPV so there is absolute NO need to make this a mandatory injection into children who are already receiving up to 70 doses while following the CDC recommended schedule. When I was in middle school in the mid 2000s, HPV vaccine was a newer thing and my mother made the choice to not get me vaccinated against it because it made ZERO sense. I was not sexually active therefore did not need protection in that form and I am so thankful she made the choice she did. It should be a choice of what we should inject into our bodies. And there is no need to make something mandatory if it isn't a crisis.

Data & Statistics

The United States has the safest, most effective vaccine supply in history. In the majority of cases, vaccines cause no side effects, however they can occur, as with any medication—but most are mild. Very rarely, people experience more serious side effects, like allergic reactions. In those instances, the National Vaccine Injury Compensation Program (VICP) allows individuals to file a petition for compensation.

What does it mean to be awarded compensation?

Being awarded compensation for a petition does not necessarily mean that the vaccine caused the alleged injury. In fact:

- Approximately 70 percent of all compensation awarded by the VICP comes as result of a negotiated settlement between the parties in which HHS has not concluded, based upon review of the evidence, that the alleged vaccine(s) caused the alleged injury.
- Attorneys are eligible for reasonable attorneys' fees, whether or not the petitioner is awarded compensation by the Court, if certain minimal requirements are met. In those circumstances, attorneys are paid by the VICP directly. By statute, attorneys may not charge any other fee, including a contingency fee, for his or her services in representing a petitioner in the VICP.

What reasons might a petition result in a negotiated settlement?

- Consideration of prior U.S. Court of Federal Claims decisions, both parties decide to minimize risk of loss through settlement
- A desire to minimize the time and expense of litigating a case
- The desire to resolve a petition quickly

How many petitions have been awarded compensation?

According to the CDC, from 2006 to 2017 over 3.4 billion doses of covered vaccines were distributed in the U.S. For petitions filed in this time period, 6,552 petitions were adjudicated by the Court, and of those 4,509 were compensated. This means for every 1 million doses of vaccine that were distributed, approximately 1 individual was compensated.

Since 1988, over 21,396 petitions have been filed with the VICP. Over that 30-year time period, 18,418 petitions have been adjudicated, with 6,994 of those determined to be compensable, while 11,424 were dismissed. Total compensation paid over the life of the program is approximately \$4.2 billion.

This information reflects the current thinking of the United States Department of Health and Human Services on the topics addressed. This information is not legal advice and does not create or confer any rights for or on any person and does not operate to bind the Department or the public. The ultimate decision about the scope of the statutes authorizing the VICP is within the authority of the United States Court of Federal Claims, which is responsible for resolving petitions for compensation under the VICP.

Notes on the Adjudication Categories Table

The date range of 01/01/2006 through 12/31/2017 was selected to reflect petitions filed since the inclusion of influenza vaccine in July 2005. Influenza vaccine now is named in the majority of all VICP petitions.

In addition to the first vaccine alleged by a petitioner, which is the vaccine listed in this table, a VICP petition may allege other vaccines, which may form the basis of compensation.

Vaccine doses are self-reported distribution data provided by US-licensed vaccine manufacturers. The data provide an estimate of the annual national distribution and do not represent vaccine administration. In order to maintain confidentiality of an individual manufacturer or brand, the data are presented in an aggregate format by vaccine type. Flu doses are derived from CDC's FluFinder tracking system, which includes data provided to CDC by US-licensed influenza vaccine manufacturers as well as their first line distributors.

"Unspecified" means insufficient information was submitted to make an initial determination. The conceded "unspecified" petition was for multiple unidentified vaccines that caused abscess formation at the vaccination site(s), and the "unspecified" settlements were for multiple vaccines later identified in the Special Masters' decisions

Definitions

Compensable – The injured person who filed a petition was paid money by the VICP. Compensation can be achieved through a concession by the U.S. Department of Health and Human Services (HHS), a decision on the merits of the petition by a special master or a judge of the U.S. Court of Federal Claims (Court), or a settlement between the parties.

- **Concession:** HHS concludes that a petition should be compensated based on a thorough review and analysis of the evidence, including medical records and the scientific and medical literature. The HHS review concludes that the petitioner is entitled to compensation, including a determination either that it is more likely than not that the vaccine caused the injury or the evidence supports fulfillment of the criteria of the Vaccine Injury Table. The Court also determines that the petition should be compensated.
- **Court Decision:** A special master or the court, within the United States Court of Federal Claims, issues a legal decision after weighing the evidence presented by both sides. HHS abides by the ultimate Court decision even if it maintains its position that the petitioner was not entitled to compensation (e.g., that the injury was not caused by the vaccine).
For injury petitions, compensable court decisions are based in part on one of the following determinations by the court:
 1. The evidence is legally sufficient to show that the vaccine more likely than not caused (or significantly aggravated) the injury; or
 2. The injury is listed on, and meets all of the requirements of, the Vaccine Injury Table, and HHS has not proven that a factor unrelated to the vaccine more likely than not caused or significantly aggravated the injury. An injury listed on the Table and meeting all Table requirements is given the legal presumption of causation. It should be noted that conditions are placed on the Table for both scientific and policy reasons.
- **Settlement:** The petition is resolved via a negotiated settlement between the parties. This settlement is not an admission by the United States or the Secretary of Health and Human Services that the vaccine caused the petitioner's alleged injuries, and, in settled cases, the Court does not determine that the vaccine caused the injury. A settlement therefore cannot be characterized as a decision by HHS or by the Court that the vaccine caused an injury. Petitions may be resolved by settlement for many reasons, including consideration of prior court decisions; a recognition by both parties that there is a risk of loss in proceeding to a decision by the Court making the certainty of settlement more desirable; a desire by both parties to minimize the time and expense associated with litigating a case to conclusion; and a desire by both parties to resolve a case quickly and efficiently.
- **Non-compensable/Dismissed:** The injured person who filed a petition was ultimately not paid money. Non-compensable Court decisions include the following:
 1. The Court determines that the person who filed the petition did not demonstrate that the injury was caused (or significantly aggravated) by a covered vaccine or meet the requirements of the Table (for injuries listed on the Table).
 2. The petition was dismissed for not meeting other statutory requirements (such as not meeting the filing deadline, not receiving a covered vaccine, and not meeting the statute's severity requirement).
 3. The injured person voluntarily withdrew his or her petition.

NOTE: Some previous fiscal year data has been updated as a result of the receipt and entry of data from documents issued by the Court and system updates which included petitioners' costs reimbursements in outlay totals,

"Compensated" are petitions that have been paid as a result of a settlement between parties or a decision made by the U.S. Court of Federal Claims (Court). The # of awards is the number of petitioner awards paid, including the attorneys' fees/costs payments, if made during a fiscal year. However, petitioners' awards and attorneys' fees/costs are not necessarily paid in the same fiscal year as when the petitions/petitions are determined compensable. "Dismissed" includes the # of payments to attorneys and the total amount of payments for attorneys' fees/costs per fiscal year. The VICP will pay attorneys' fees/costs related to the petition, whether or not the petition/petition is awarded compensation by the Court, if certain minimal requirements are met. "Total Outlays" are the total amount of funds expended for compensation and attorneys' fees/costs from the Vaccine Injury Compensation Trust Fund by fiscal year.

Since influenza vaccines (vaccines administered to large numbers of adults each year) were added to the VICP in 2005, many adult petitions related to that vaccine have been filed, thus changing the proportion of children to adults receiving compensation.

As a Washington resident I strongly disagree with mandating the HPV vaccine. Please research with an open mind. You may find this interesting...

In 2019 alone, 650 adverse events to the HPV vaccine were reported in Washington state alone in girls aged 11-13. 2 deaths resulted. This is of huge concern to me. Please do NOT support mandating this vaccine.

Yes, I'd like to receive email notices about Board of Health rulemaking, meetings, and more.
Thank you.

Cheers,
gf
