HPV is not communicable in the classroom, and a mandate for a sexually transmitted infection for school attendance is HIGHLY inappropriate... If HPV is transmitted in the classroom, we have bigger concerns than HPV!! This vaccine has a very concerning safety record! WE need to have a right to what we put in our children's bodies. This vaccine is not proven effective or safe! Destry Roper, Vancouver Wa

WA BOH-

I am writing you to **express my concern about your proposed mandate of the HPV vaccine**. Please read the scientific literature and stop buying into Merck's deceitful marketing campaign. They have made billions on this vaccine, without actually proving that it has prevented even one case of cervical cancer. Did you know that cervical cancer rates in the US are 2.3/100,000, and the death rate of Gardasil was 85/100,000 which is 37 TIMES THAT OF CERVICAL CANCER. Please read the American College of Pediatrics position statement on this vaccine, and heed their concerns. several studies and FDA/CDC data are linked at the bottom.

Hello my name is Heidi Johnson-Sandall. I am a mother of 5 beautiful young adults, and a grandmother to 7 amazing grandchildren. I oppose adding this pharmaceutical product to the childhood immunization schedule. This product is NOT without risk and post marketing data, along with filed vaccine injury cases thru our national vaccine injury compensation court prove this product to be dangerous to say the least. This is NOT a communicable disease therefore should NOT be added to the schedule. A multitude of scientists & doctors have spoken out against this product, including one of the lead researchers, Dr. Diane Harper. We live in the United States of America and I believe in our freedom to choose which drugs/pharmaceutical products that are to be injected into the bodies of our children. WA State, along with many others are being persuaded to make vaccines mandatory by taking away our personal/philosophical belief exemptions & proposing bills to take away our religious and even medical exemptions. So, what happens then? This dangerous product is added to the schedule, and then a bill passes taking away more rights... this will no longer be a choice. Where there is risk, there must be choice!

Thank you for your time.

Heidi Johnson-Sandall
Granite Falls, WA

The HPV Vaccine on Trial: Guilty as Charged - The Thinking Moms' Revolution

October 20, 2018. When Merck's human papillomavirus (HPV) vaccine, Gardasil (since replaced by Gardasil 9), was first licensed in 2006, it was hailed as a tremendous achievement of modern medicine: a vaccine to prevent cancer! What could possibly be better? Of course, this is a dramatically oversimplified picture painted by the manufacturer's marketing team.

thinkingmomsrevolution.com

Alan Phillips, J.D. www.vaccinerights.com

Vaccine Fact Summary

1. In 2011, the U.S. Supreme Court ruled that vaccines are “unavoidably unsafe.” *Bruesewitz v. Wyeth LLC*, 131 S. Ct. 1068, 179 L.Ed.2d 1 (2011).¹
2. National Vaccine Injury Compensation Program (NVICP) vaccine injury and death payouts:² a. Total to date (1989-2015): \$ 3.1 Billion b. Average annual payout 2005-2009: \$ 75,630,051 per year c. Average annual payout 2010-2014: \$221,822,386 per year d. Cases pending: 1,943
3. There is vast under-reporting of vaccine adverse events. FDA: As few as 1% of serious adverse reactions are reported.³ CDC: Only about 10% are reported.⁴ Congress: Has heard testimony that medical students are told not to report suspected adverse events,⁵ despite federal law requiring doctors to report suspected adverse events.⁶ National Vaccine Information Center (NVIC) survey: 1 out of 40 doctor's offices (2.5%) in New York report a death or injury following vaccination.⁷ Association of American Physicians and Surgeons (AAPS): Only 10% of serious vaccine adverse events are reported.⁸
4. The Federal Court of Claims lists about 140 attorneys that accept vaccine injury and death cases.⁹ This number has been steadily increasing in recent years.
5. The National Childhood Vaccine Injury Act of 1986 (NCVIA) shields vaccine manufacturers from liability for the death and disability caused by their vaccines. There is no financial incentive for manufacturers to produce safer vaccines.¹⁰
6. 90-95% of 1900's childhood infectious disease mortality decline preceded the vaccines.¹¹ Absence of vaccination will not bring back infectious disease rates of pre-vaccine days.
7. According to the CDC: a. Vaccines are 85 – 95% effective (5 - 15% of children do not develop immunity from their vaccines), and most outbreaks start in vaccinated children.¹² b. The median vaccine exemption rate in the U.S. is 1.8%.¹³ There are 5+ times more non-immune *vaccinated* children than exempt children. c. Exempt children can get natural immunity, without even developing symptoms.¹⁴ You can't tell a child's immune status based on their immunization status.
8. The American Medical Association Code of Medical Ethics recommends “medical, religious, or philosophic” exemptions to immunizations for medical doctors.¹⁵
9. The pharmaceutical industry is the biggest defrauder of the federal government under the False Claims Act.¹⁶ In the last 5 years, \$19.2 billion were returned from attempts to defraud federal health programs, more than double that of the previous 5 years (as of February 2014).¹⁷
10. In 8 years (2004-2012), there were twenty pharmaceutical company settlements in the \$345 million to \$3 billion range.¹⁸ Criminal fines in the \$100's of millions are common, and have been as high as \$1 billion (Pfizer 2009, GlaxoSmithKline 2012). This is routine business practice.
11. Merck, manufacturer of the mumps vaccine, is going to trial in two separate lawsuits for allegedly falsifying the efficacy rate of its mumps vaccine. One suit was filed by former employee-whistleblowers, the other by pharmaceutical competitors.¹⁹

Conclusions: 1. There is insufficient data available to determine whether or not vaccines provide a net benefit.

2. There's no way to determine the risk of vaccine injury or death for any given individual.
3. Individual freedom of choice provides a necessary “check and balance” to the pharmaceutical industry's overreaching, liability-free, marketing influence over vaccine policy and law.
4. Many vaccine bills are really pharmaceutical marketing bills, and not true health bills.
5. Parents for their children, and adults for themselves, should be allowed to make vaccine decisions, in consultation with the healthcare professional of their choice.

Subject: Enforced Gardasil Vaccine
Date: Sunday, December 29, 2019 7:52:41 PM

Hello,

My concern is about the new school law for the HPV vaccine being required to come to school. This is insane.

First, let me say- By enforcing this so called “vaccine” you are basically insisting that ALL students are sexually active. While this may be somewhat true, this does not make it right to enforce.

Second, HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time. 95% OF THE TIME..... do you understand that OUR bodies were made to fight most things if we take care of ourselves. There is no need for EXTRA enforced injections.

Third, HPV infections alone rarely lead to cancer. Other factors, such as smoking, must be present. So a complete in-healthy individual MAY encounter cancer. In majority of most teenagers these things can clear on there own.

And Last, HPV vaccines have not been proven to prevent any type of cancer. THIS. The vaccine has NOT been proven to prevent any cancer, I’m sure this would be hard to prove. Therefore, why inject kids with it. It HAS in fact caused a LOT of people to get sick and Injured even cervical cancer itself because of the vaccine.

I VOTE NO!!! This should ultimately be up to the well-educated parent and teenager if this is what they want.

Brittanie Facchini

Please excuse any miss-typings, as this came from my phone.

I am writing to voice my staunch opposition to adding the Gardasil vaccine to the requirements for school entry. The idea is a gross overstep, to say the very least. The role of public health should not extend to the use of coercion to compel uptake of any pharmaceutical product.

First, even if driving down the number of cervical cancer deaths in Washington were a compelling state interest, forcing young children to receive HPV vaccinations is unnecessary to achieve that goal. HPV can only be transmitted through sexual intercourse. In addition, it can take decades for an HPV infection to cause cervical cancer, if it ever does. Vaccinating against the virus is therefore not essential to contain an imminent public-health crisis.

Second, because sexually transmitted diseases are preventable through lifestyle and behavioral choices that can be taught, injecting pathogens into children's bodies is needless. Third, the HPV vaccine only protects against some strains of the virus. Thus, even with the vaccine, a woman could still contract a strain that can lead to cancer.

Most of the time, HPV goes away on it's own, without causing health problems, Only a small percentage of woman whose bodies cannot clear the virus-estimated at about 10 percent-are at risk of developing cervical cancer, and only a fraction of them ever do.

Similarly, the contraction of HPV can be prevented through sexual education, use of condoms and premarital abstinence. Regular pap tests are successful at detecting cell changes on the cervix that might become cervical cancer. All of these are effective options that impose no restrictions on parent's constitutional rights to make decisions about the care of their children, a right that the Supreme Court long ago deemed fundamental.

Whenever government conduct infringes on a fundamental right, it must pass "strict scrutiny", the most exacting standard of review. Under this standard, the state must establish that the law is necessary to achieve a compelling government purpose, and that it interferes with protected rights no more than necessary. The decision whether to administer this vaccine to a child, regardless of it's efficacy, should be made by that child's parents, not the government, as this mandate does not pass the "strict scrutiny" requirement.

I urge you to abandon this action.

Regards,
Michele Johnston

As a women's health RN and a mother I urge you not to add Gardasil to the required vaccine schedule.

The benefit of this vaccine do not outweigh the risks! The occurrence rate of serious side effects related to this particular vaccine, including seizures, is high. When compared to the occurrence rate of cancer related to HPV virus it is clear that this vaccine is more likely to cause damage than protect the recipient from cancer as intended. The statistical data verifying this information is readily available through the CDC website and also on the Merck website.

As both a nurse and a mother I have chosen to forgo this vaccine for my children. I ask that you also forgo adding it to the required vaccine schedule. After all vaccines are meant to protect us not to harm us!!

Thank you,
Leslie Royce, RN- BSN

Subject: HPV Mandated for Schools
Date: Sunday, December 29, 2019 9:41:56 PM

To the WA State Board of Health,

I have recently gotten wind of the HPV vaccination being possibly added to the childhood immunization schedule which would in turn make it mandatory for children who are entering educational systems to have this vaccine.

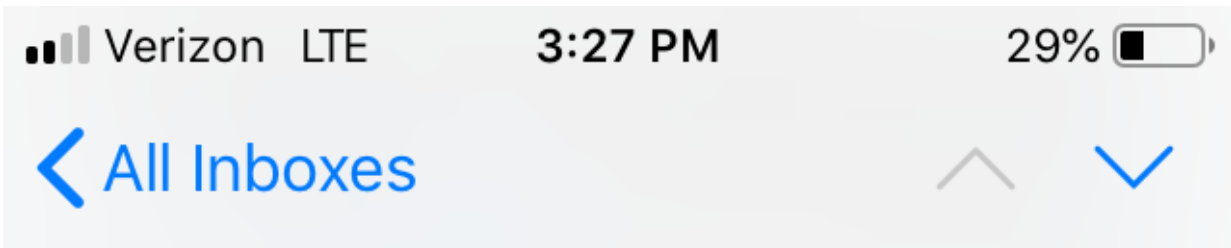

I cannot begin to communicate how passionately against this addition I am. I have personal history being vaccine injured by the HPV vaccine. It has changed my entire life, and not for the better. I will spare you the details of my medical history but I refuse to add this vaccine to my children's vaccinations knowing how dangerous it can be for this predisposed to autoimmune diseases (which is in my family).

At kindergarten, elementary age, etc my children will not be sexually active so in addition to the risks of potential vaccine injury, I cannot understand why a child so young would have to be vaccinated with a vaccine targeting a sexually transmitted disease. If your state's citizens' opinions mean anything to you...PLEASE DO NOT ADD HPV TO THE CHILDHOOD IMMUNIZATION SCHEDULE.

Sincerely,
Laura Atencio

Hello , I wanted to place my comment about if hpv vaccine should be required for school, That's a no from me , these are just a few of the many reasons below . Kids can't catch an STD at school, also, it's a human right to be able to decide any medical procedure that involves risks , and it's against human autonomy and human rights to mandate such things against their will. I thank you for your time on this very important matter . We all deserve to have a choice and be able to make decisions . Thanks for all of your hard work and listening to your citizens. Have a blessed day !

Park in Babylon, NY.

Gardasil has a terrible safety record. Gardasil has an alarming safety record. According to the federal Vaccine Adverse Event Reporting System as of 7/14/2019 there have been 62687 reported adverse incidents with HPV vaccines, including 510 deaths, 15,413 emergency room visits, 6,309 hospitalizations, and 3031 permanent disabilities. And according to Dr. David Kessler, who was the head of the FDA under Presidents George H. W. Bush and Bill Clinton, these injuries are probably less than 10% of the actual number. The safety record for HPV vaccines is so troubling that Japan ended their recommendation of HPV vaccination for Japanese girls in 2014.

Children do not know enough about their own medical history to consent. It is absurd to assume that a child of any age knows enough about their own medical history and the medical history of their family to provide informed consent. They must know if they had earlier adverse reactions to vaccines given to them as infants, whether they have allergies or sensitivities to vaccine ingredients, or if there is a family medical history that would contra-indicate a shot. A nine-year old, or younger, child will know this?

Merck is charged with submitting fraudulent documents in the licensing process. A lawsuit is under way in California, Robi v. Merck, that alleges Merck, the manufacturer of Gardasil, submitted fraudulent safety and efficacy data to the federal government during the licensing process.

The bill protects pedophiles. This bill also provides protection to pedophiles by subverting New York's "Mandated Reporter" law that requires licensed professionals to report suspected sexual abuse of children. What rational person would not suspect something was very wrong if a nine-year old requested an injection that purports to prevent a sexually-transmitted disease and he or she did not want their parents to know about it?

Who decides who can decide. A person giving the shot, who may have a financial incentive to do so, is allowed to use whatever reasons they want to determine if a minor

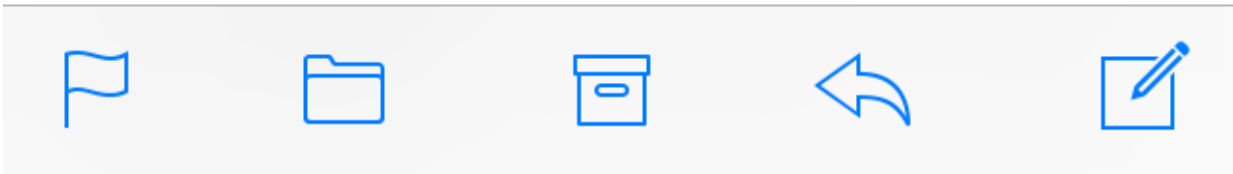

is capable of giving consent. Nor is there any language to prevent shots from being given to minors with intellectual or developmental disabilities.

How can a parent make informed healthcare choices for their child? In the event of an adverse reaction, especially if a child is unconscious, how is a parent, first responder, or other healthcare professionals supposed to provide appropriate medical care to the child?

Nothing prevents children from consenting to experimental vaccines, There is nothing in the law that prevents children from "consenting" to experimental vaccines.

STDs are not transmissible in school, As a sexually-transmitted disease there is no chance that HPV can be transmitted via casual contact at school, or anywhere else.

Efficacy of Gardasil is in doubt, We also do not have solid evidence that vaccines actually prevent cervical cancer, which takes decades to develop and we have no solid data on how long the vaccine is allegedly effective.

Subject: HPV vaccine
Date: Sunday, December 29, 2019 10:44:58 PM

Dear members of WSBOH,

My name is Chelsey Richardson and I am a Doctor of Nursing Practice, Family Nurse Practitioner. I recently became aware of the discussion to possibly have the HPV vaccine mandated for school attendance which gives me great concerns. I am pro-vaccination, however, I find this possible mandate to be quite disturbing and infringing upon our freedom of choice.

HPV is not some illness that can be caught by attending an educational institute. It is primarily spread through sexual contact. People need to have the choice whether they want to receive this vaccine or not and should not be pressured by governmental or school institutions.

While HPV vaccine adds protection against cervical cancer and a few strains of genital warts it is not without adverse events. The public needs to be well informed, with informed consent of possible adverse effects. Most HPV infections clear on their own, and cervical cancer is rare, and can be prevented with proper screening and care.

Rather than making this a required vaccine for school attendance, improve the educational efforts to inform the public of their option to have this vaccination. Let's encourage our society to be thoughtful and responsible for their health so they can lead a generation of health conscious people.

Respectfully,

Chelsey Richardson, DNP, ARNP

I appreciate the desire of the Board of Health to act in what they feel is the best interest to maintain a healthy Washington State. The HPV vaccine is not a child hood communicable disease. It is a sexually transmitted disease. This vaccine should be one a young adult can choose to get if they feel they fit into a risk category. It is NOT a vaccine that should be mandated. It is completely immoral to consider forcing young children or middle school aged children to have a vaccine that has such a poor record of fraud, injury and death. Young men getting this vaccine are being diagnosed with POTS, which according to their organization, men have not been getting that diagnosis until this vaccine.

I encourage you to investigate all the information many people are sending you. We are being misled about the safety and I implore you to understand all vaccines have risk and the vaccine manufacturers have no liability and no reason to make them safer than they currently are.

Please DO NOT add the HPV vaccine to mandatory vaccines for children. Let parents, young adults and their medical provider dictate the care they receive and medical treatment necessary.

Subject: NO to adding HPV
Date: Sunday, December 29, 2019 8:25:09 PM

As a 28 year old female with children in the school system this is ridiculous to have mandatory. I had severe symptoms from this vaccine and will never recommend to anyone and turns out I have HPV even though I was vaccinated. I do not agree with this being put into place

HPV is a sexually transmitted infection that is not caught in public settings such as daycare or school.

HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time.

HPV infections alone rarely lead to cancer. [Other factors](#), such as smoking, must be present.

HPV vaccines have not been proven to prevent any type of cancer.

HPV vaccines were never tested against inert saline placebos.

HPV vaccines don't eliminate the need for proper screening and treatment.

HPV screening and treatment are highly successful at preventing and treating associated cancers.

From: [Colleen Palmer](#)
To: [DOH WSOH](#)
Subject: Oppose: HPV added to vaccine schedule. Request: WSOH inform citizens of VAERS on Gardasil.
Date: Sunday, December 29, 2019 9:59:37 PM

Dear Washington Board of Health,

I am writing to oppose the addition of the Gardasil HPV vaccine to the childhood vaccine schedule.

First of all, since HPV is a sexually transmitted disease, Gardasil is therefore not appropriate to be recommended or required for school attendance.

Secondly, there is not a HPV health crisis: Contraction of HPV does not always turn into cervical cancer, PAP smears are an effective mode to monitor pre-cancer for those who do have HPV, and Cervical Cancer kills only 2.3/100,000 people annually.

Third, Gardasil kills more people than it potentially saves: According to the Vaccine Adverse Event Reporting System as of December 2019 there have been 63,979 adverse reactions to Gardasil and 523 vaccine related deaths. The death rate of this vaccine during clinical trials as reported by Children's Health Defense was 85/100,000 (37 times that of cervical cancer) showing that not only is it unsafe, but actually more deadly than the disease itself.

In my view, we, the public, need the Washington State Health Department to be discerning when recommending vaccines. I ask that public health officials consider how unhealthy our population has become over the last few decades and tirelessly search for the root cause. According to HHS studies we now have 54% of children with a chronic disease up from 12.8% in the 1990s. Consequently, it can be argued that, the CDC has overseen the greatest health decline in recent history. Our independent state health department must address this, coming to conclusions about this public health crisis independently, instead of relying on the CDC to find the cause. There is evidence that the current bloated vaccine program may be contributing to the increase in chronic disease. Recent worldwide studies on aluminum toxicology and aluminum adjuvants point to vaccines as a potential problem.

I request that the Washington Health Department do their own independent investigation into the safety, efficacy and necessity of each recommended vaccine and ethically and honestly report findings to all the citizens of our state. When the CDC or the APA recommends a vaccine the state of Washington may not blindly fall in line. We, the citizens, expect integrity, independence, and diligent investigation from our officials and representatives.

Thank you for your work and integrity,

Subject: Public Comment - HPV Vaccinating
Date: Sunday, December 29, 2019 11:40:39 AM

Good Morning,

HPV vaccinations should NOT be required to go to school. It isn't like other vaccines (MMR) that help prevent airborne illnesses.

I will be strongly considering pulling my children from the public school system if this becomes a requirement.

Thank you,

Brenda Achey

Subject: Public Comment - HPV vaccine mandate proposal
Date: Sunday, December 29, 2019 11:10:21 AM

The desire to make the HPV vaccine mandatory for school is unnecessary, and more importantly, unsafe. HPV is not a communicable disease. In fact, being an STD, it is preventable through safe choices. And even if contracted, most cases resolve on their own, and of the ones that don't, only a minute fraction end up as cancerous. The state doesn't belong mandating a vaccine that has never been proven as safe or effective, without which has no impact on public health, and carries potential dangers, for children to go to school. This is a gross overreach of government power. No matter what one believes about vaccination, we should all agree that this is an unnecessary proposed mandate, and unfair to force on parents caring for their children, as there is risk to one's health from the vaccine and one can prevent HPV through safe sex practices. This is as well as the vaccine not taking over for the need of precaution or the need for regular screenings.

Sincerely,
A concerned parent
A woman that's had HPV resolve on its own without issues
Parent of a vaccine injured child

Subject: Public Comment - Re: HPV Vaccine
Date: Sunday, December 29, 2019 11:35:39 AM

To whom it may concern,

I learned that there will be discussion on Jan 8th, 2020, about adding the Gardasil vaccination to the list of required vaccines.

I ask that you please objectively listen to those who oppose this. There have been too many adverse reactions to make the decision to mandate. I have two friends who have had their daughters been damaged by this vaccine. One is in 8th grade and has severe joint pain from the vaccine. She has to use a walker to walk. Another, 17 years old, has seizures and is diabetic due to a virus attacking her brain and pancreas. These symptoms came on soon after receiving her HPV vaccine. She will never be the same. These are families I personally know in my community- not from stories I read about on the internet. I am fortunate to be in a position to homeschool my children if/when this gets passed. There are other families who feel they aren't able to pull their children because of the financial burden their family would face.

All I ask is that you don't rush this through. Please step back and take an honest look at what this vaccine is doing to young children. Listen to the concerned parents who oppose this.

This will have irreversible damage to so many young children. The vaccine is too new to mandate. Please let parents continue to decide if this is a vaccine they want their child to have or not.

Thank you for your consideration. Thank you for all that you do for our communities.

I object to plans to add vaccinations against HPV to schedule of mandatory vaccinations. No parent should be forced to vaccinate their child to potentially prevent cervical cancer caused by an STD- don't over reach when we already have parents leery of the honesty of our arguments for mandatory vaccinations for truly life threatening communicable diseases- I'm an RN who supports that but NOT this- 'we' are already misrepresenting what the HPV vaccine is treating. To add to the lie.

I would like to voice my opposition to the HPV vaccine being required to attend school. This is an abuse of power to attempt to control our decision making. This is not a disease that is passed through common contact with individuals in a school setting, and therefore the choice to receive this vaccine should solely fall on the individual and their family. I would strongly consider homeschooling my children before forcing them to undergo this vaccination that has had many detrimental side effects.

Mandatory HPV vaccines

To whom it may concern,

This vaccine does more harm than good. HPV is not a communicable disease, it does not transmit through coughing or sneezing therefore should not be required to attend public schools.

Annual deaths from HPV cancer in the US is 2.3 per 100,000. The death rate from Gardasil clinical trials was 85 per 100,000...that's 37 times higher than the cancer!

This vaccine is not proven safe and should not be administered to anyone, let alone made mandatory for everyone attending public schools.

Please do not make HPV vaccine mandatory for public school attendance, this should be a voluntary choice only.

Sincerely,
Sonja Hild

I am a mother of 3 girls. I also received the hpv vaccine as a teenager. I personally had a negative reaction to the hov shot. Shortly after receiving these shots I developed alopecia, an autoimmune disease(a known and acknowledged adverse reaction noted on the gardisell vaccine insert). My oldest, now 6, is also vaccine brain injured. I know personally the devistating effects. No child should be forced to received a liability free shot for a sexuality transmitted disease to receive a public education. According to vaers data there have been 63,979 HPV vaccine-related adverse events 523 HPV vaccine-related deaths. Hpv is NOT caught in a public setting, most hpv infections clear on their own and rarely lead to cervical cancer. Instead of mandating a vaccine for a sexuality transmitted disease with known side effects the Washington board of health should be encouraging women to have regular cervical screenings. I urge you do not add the HVP to the immunization schedule!

Thank you,
A concerned mother

Please document my disagreement with your choice to add the hpv shot to the vaccine schedule. We have rights. We have choices. We the people do not agree with forced medical procedures. There have been several deaths from vaccination including but not limited to the Hpv shot you are considering adding to the schedule for children to attend school. How is it that injecting my child with the very thing you are afraid of them getting is going to save others from getting it? There is no logic, only greed. If this shot is so amazing, why the need for it to be forced? People aren't forced to eat healthy even though that could save their lives, but you will force an injection on a child by a company who is not going to be liable if something happens to that child. We have rights on what goes into our bodies, and should never be forced to subject ourselves or our children to poisonous ingredients. I encourage you all to look up the actual ingredients in these vaccines and tell me, would you willingly put that into your child, and would you like to be forced to do so? Think back to world war two, the nuremberg code was created for the very same reason. We have rights and we will stand up. Take New Jersey as an example of what we are willing to do to stand between tyrants and our children. We Will not be anyone's guiny pigs and we defend our rights to the pursuit of happiness. Do the right thing, don't infringe on our rights as human beings.

In God we trust.

Regarding the addition of the HPV vaccine I would like to highly express my concern of adding this to requirements to attend school. As a mother of a 12 year old girl I am highly against this being a required vaccination as HPV is not a disease that you would catch by sitting in a classroom and if our students are catching HPV at school we have a serious issue as this is a sexually transmitted disease. If our students are picking up STD while at school that is more of a concern. There are many parents choosing to not get this shot due to its new nature and reports of side effects that are still unclear. I just wanted to express my concerns about adding this as a required vaccination for school children and urge you to not consider this addition. Sincerely, Lisa Ralston.

Re: WA BOH meeting January 8, 2020 to consider adding HPV vaccine to school requirements.

Please be advised of my vehement opposition to you even considering adding this extremely controversial and dangerous vaccine to the schedule of vaccines required for school attendance. This is an abhorrent overreach of your duties and an obvious attempt at promoting a liability free pharmaceutical product that do not serve the public good. HPV is not transmitted in school settings and the vaccine has proved to do way more harm than good leaving many young victims maimed, infertile or dead. Even parents that vaccinate are not willing to take the risk on this vaccine and will definitely not consent.

Please continue to research the dangers of the HPV vaccine , listen to the victims and remove this agenda item from your meeting on January 8th and any meeting thereafter.

Respectfully,
Edilberta G. Boscovich

Hello,

I am writing to inquire about HPV vaccine being added to the required list of vaccines. As HPV is a STD, I don't understand how my children, who abstain from intercourse, should be required. This is not a highly contagious disease, this is a life style choice disease. Our religion teaches to wait until marriage for intercourses and be monogamous so I oppose this being required of my children. This vaccine needs to be looked at by a doctor and patient and decided on based upon lifestyle choice.

With a Thanks,
Heather Angelo, mother of three

Good evening,

Please vote NO to adding the HPV vaccine to WA chapter 246-105 WAC Immunization of Child Care and School Children Against Certain Vaccine-Preventable Diseases.

HPV is not a communicable disease. You get it from sexual intercourse, not coughing or sneezing. Requiring it for a public education or daycare makes no sense.

This should not be required for school entry!

There is no public health crisis and there are absolutely no grounds to provoke an infringement on medical freedom and informed choice when it comes to the HPV, gardasil vaccine.

I'd like to remind you that:

HPV is a sexually transmitted infection that is not caught in public settings (like daycare or school).

HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time. I had HPV in college and had regular Pap smears and mine cleared up in its own.

- HPV infections alone rarely lead to cancer.
- HPV vaccines have not been proven to prevent any type of cancer.
- HPV vaccines were never tested against inert saline placebos. (The gold standard in science).
- HPV vaccines don't eliminate the need for proper screening and treatment.
- HPV screening and treatment are highly successful at preventing and treating associated cancers.

Thank your for your time.

Forcing the HPV injection on minors is an infringement of Civil Liberties, #1 it's against my 2nd Amendment Right in the Constitution of the United States. HPV is a sexually transmitted disease, sex is not allowed on a school campus (during school hours), and if it occurs why are children unattended long enough for this to happen? By forcing any child to have this injection, the government is clearly violating the parents & child's constitutional "right to privacy", and "bodily integrity."

Children, and parents, have a right to privacy regarding sexual health, and the HPV injection/prevention is included.

The research regarding the HPV injection is clear, and it's shameful that government wants to subject minors to this poison that has many side effects without a guarantee of prevention.

Medications and vaccines all have side effects. Each individual must retain the right to bodily integrity, deciding for themselves the pros and cons of medical treatment. The medical, pharmaceutical "for profit" industries have a track record of medications which have killed or crippled thousands of people. They cannot be trusted, especially with vaccines which do not meet "gold standard" testing. Must we suffer more deaths and lifelong crippling by forced toxins? America does not operate on tyranny.

Hello!

I'm writing in opposition of adding Gardasil to the required school vaccination schedule. There is absolutely ZERO reason to put this vaccine on the schedule for public schools. My children and my students have no chance of acquiring or spreading HPV as a result of school attendance. Also, this vaccine doesn't have a long record of safety. My children are mostly vaccinated, they however will not be getting this vaccination, and there is no reason to keep them or any of my students out of school because they are missing it. The only reason why I can see this vaccine being added is purely for profit for Merck and the politicians who are sponsored by Merck. This is a terrible overreach with no good reason. Please reconsider.

Thank You!

My comment is in regards to adding the HPV vaccine for school and daycare entry. Your topic on January 8th 2020.

Adding this vaccine for school entry is absurd, there are so many issues with this vaccine and it was only safety tested for 6 months. Countless children and adults are being injured and have died due to this dangerous vaccine (check VAERS).

Children are NOT engaging in sexual activity on school grounds and this should NOT be a vaccine that is needed for school entry. Do your due diligence and research the problems with this vaccine before mandating it for our children. You owe it to the public.

Thank you,

Charity Erikson

Please do NOT put Gardasil (HPV vaccine) on the required school list. HPV is not a communicable disease. It is an STD. You are not going to catch it sitting next to another kid at a desk. And despite the Push of Sexual ED curriculum, not all kids are having sex so this is not an epidemic risk.

This is a result of unprotected sex.

Not lack of hand washing or coughing on someone else.

I would say the same if an HIV vaccine came out. Give it as an *option* for sexually active Children.

It should be an option -but not a requirement. Every child is NOT having sex and many will NOT have sex in their school years.

Also there are many FDA documented side effects that have serious side effects when it comes to Gardasil.

*

This should be a choice.

Not a requirement. *

I am NOT an anti- vaxxer.

I am a licensed foster parent, and

My biological children are all fully vaccinated , including the flu shot.

Gardasil is the only vaccine I will not give my children.

I will never give this to my young children and I will move out of this state before i was forced to inject my children with this.

Sincerely,
Laura Guidry

To whom this may concern,

With regards to adding the HPV vaccine to school requirement in the state of Washington. As a mother this is an extremely alarming situation. The HPV vaccine is relatively new, KNOWN to cause adverse effects (VAERS) , and regular screening such as yearly pap exams are a successful way to catch early Pre cancerous or cancerous HPV infections.

HPV is a sexually transmitted infection, this is an in-home issue and the parent's job to inform and raise children with morals and standards, not the government's job to inject questionable and potentially debilitating materials into our children as a hail mary not to spread a disease that "Most **HPV** infections (9 out of 10) go away by themselves within two years" (CDC website) This is absolutely not something we need in Washington!

Outraged and Informed Washington mother,
Kayli Bowman.

From: [Danielle Corrigan](#)

Subject: Public Comment
Date: Sunday, December 29, 2019 1:56:45 PM

I, and my colleagues dismiss the intended mandate for HPV- Gardasil vaccine to be added to the CDC vaccine schedule for Washington State, on the grounds that, this vaccine is intended to prevent a sexually-transmitted disease, and therefore does not need to be required of all students attending public schools/organizations. This disease that the vaccine intends to mitigate, is not a threat to the public health of our students, and is not necessary to the well-being of the students and staff within the public school/organizations which would take on this new mandate. Do not add HPV (Gardasil) vaccine to the Washington State vaccine schedule for public school students and staff.

Thank you for your consideration into this comment.

WA BOH To Consider Adding Gardasil Injections To School Requirement on January 8, 2020.

Hello, my name is Valeriya and I would like to say that I do not consent to adding Gardasil to school requirement! I am against mandating vaccines, especially this one!

- There has been documented evidence that the HPV vaccine has caused more injuries than any other vaccination in history.
- According to the World Health Organisation's (WHO) [VigiAccess database](#), as of April 09, 2018, a total of 85,329 reports of adverse reactions have been filed regarding the HPV vaccination. These reports include 37,699 reports of nervous system disorders; 2450 cardiac disorders, (including 38 cardiac arrests) 533 reports of Postural orthostatic tachycardia syndrome (POTS); over 3200 reports of seizures or epilepsy, 8453 syncope and 389 deaths.
- **There is no public health crisis!**
- HPV is a sexually transmitted infection that is not caught in public settings such as daycare or school.
- HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time.
- HPV infections alone rarely lead to cancer.
- HPV vaccines have not been proven to prevent any type of cancer.
- HPV vaccines were never tested against inert saline placebos.
- HPV vaccines don't eliminate the need for proper screening and treatment.
- HPV screening and treatment are highly successful at preventing and treating associated cancers.
- "Annual deaths from cervical cancer in the U.S. are 2.3/100,000. The death rate in the Gardasil clinical trials was 85/100,000—or **37 times that of cervical cancer** . . . According to Gardasil's package insert, **women are 100 times more likely to suffer a severe event following vaccination with Gardasil than they are to get cervical cancer.**" [Children's Health Defense](#)
- Please watch this video (link below) about the Gardasil vaccine! I hope that this will truly change your mind about considering on mandating this vaccine! There are worldwide protests and lawsuits against Merck's HPV Gardasil vaccine, yet you want to mandate it? That is not for the people's good and safety! I am for medical freedom! **I repeat, I DO NOT CONSENT TO THIS VACCINE!**

I do not support the Gardasil vaccine being mandated! There has not been enough research or testing that it is safe and does not cause serious long term health conditions. Elementary school children are not at risk for sexually transmitted infections anyway. There is no proof that this vaccine offers more health benefit that outweighs the possible negative health affects. It is unfair to take away parents right and medical FREEDOM to decide what's injected into their children. Especially when there is no immediate health concerns around HPV in children and adolescents. HPV is not a communicable disease and therefore has no reason being mandated for the general public's health! I say NO to mandating Gardasil!!!

From: [Virginia Schnabel](#)
To: [DOH WSBOH](#)
Subject: Public Comment
Date: Sunday, December 29, 2019 1:37:23 PM

Gardasil is a dangerous and unnecessary vaccine which causes far more harm than good, and which has led to death, paralysis, sterility and many other non-reversible health conditions. To even consider imposing this vaccine on our children is negligent behavior by a government agency which has no right to usurp parental rights and authority.

As citizens of the U.S., with all of the rights afforded to us by the U.S. Constitution, those of us who understood the inherent dangers of this vaccine, and others like it, demand the repeal of laws which undermine parental authority and freedom of medical choice, and the restriction of any new vaccination requirements to U.S. citizens entering the public school system. This is not Nazi Germany, and it is time elected officials stood up for the rights of the citizens they are elected to represent, rather than trampling them down.

Sincerely,
Virginia Schnabel

Date: Sunday, December 29, 2019 1:32:23 PM

Hello,

I am writing in hopes that you will not vote in favor of adding the HPV vaccine to the school vaccine requirements. HPV is not a communicable disease and if children are getting HPV in high school than you have much bigger problems. After all, you can only get HPV from unsafe sex. This should be a decision that is left up to a adolescent and their parents. It is one that hold religious and personal preferences. Requiring a vaccine is not the answer. Please do not add the HPV vaccine to the schedule.

Thank you,
Lindsey Allen

Please do not pass the bill to add the HPV vaccine to childhood immunizations. This vaccine has been more detrimental than helpful. There are many adverse effects and even deaths that have occurred from this vaccine. This is a horrible vaccine to be mandated for children. Reproductive health has been affected in young women from this vaccination. Please look at the data and evidence of peer reviewed and researched papers before voting for this vaccination

Sincerely, Paisha Andersen

I object to plans to add vaccinations against HPV to schedule of mandatory vaccinations. No parent should be forced to vaccinate their child to potentially prevent cervical cancer caused by an STD- don't over reach when we already have parents leery of the honesty of our arguments for mandatory vaccinations for truly life threatening communicable diseases- I'm an RN who supports that but NOT this- 'we' are already misrepresenting what the HPV vaccine is treating. To add to the lie.

I would like to voice my opposition to the HPV vaccine being required to attend school. This is an abuse of power to attempt to control our decision making. This is not a disease that is passed through common contact with individuals in a school setting, and therefore the choice to receive this vaccine should solely fall on the individual and their family. I would strongly consider homeschooling my children before forcing them to undergo this vaccination that has had many detrimental side effects.

Mandatory HPV vaccines

To whom it may concern,

This vaccine does more harm than good. HPV is not a communicable disease, it does not transmit through coughing or sneezing therefore should not be required to attend public schools.

Annual deaths from HPV cancer in the US is 2.3 per 100,000. The death rate from Gardasil clinical trials was 85 per 100,000...that's 37 times higher than the cancer!

This vaccine is not proven safe and should not be administered to anyone, let alone made mandatory for everyone attending public schools.

Please do not make HPV vaccine mandatory for public school attendance, this should be a voluntary choice only.

Sincerely,
Sonja Hild

I am a mother of 3 girls. I also received the hpv vaccine as a teenager. I personally had a negative reaction to the hov shot. Shortly after receiving these shots I developed alopecia, an autoimmune disease(a known and acknowledged adverse reaction noted on the gardisell vaccine insert). My oldest, now 6, is also vaccine brain injured. I know personally the devistating effects. No child should be forced to received a liability free shot for a sexuality transmitted disease to receive a public education. According to vaers data there have been 63,979 HPV vaccine-related adverse events 523 HPV vaccine-related deaths. Hpv is NOT caught in a public setting, most hpv infections clear on their own and rarely lead to cervical cancer. Instead of mandating a vaccine for a sexuality transmitted disease with known side effects the Washington board of health should be encouraging women to have regular cervical screenings. I urge you do not add the HVP to the immunization schedule!

Thank you,
A concerned mother

I am against adding HPV to the school vaccine schedule! HPV is not a communicable disease and there are no studies proving the hpv vaccine prevents cancer or hpv, 95% of HPV cases clear up on their own with mostly no symptoms and developing cancer from HPV is extremely rare! Please vote no on this bill and protect our children!

I would prefer that you not add the HPV vaccination to my childhood immunization schedule. I prefer the liberty to weigh the risk to decide if it's right for me and my family. It doesn't vaccinate against something that would affect school attendance or cause an outbreak, so I suspect corporate interests are a driving factor more than public health outbreaks.

Thank you for considering my comments.

Please document my disagreement with your choice to add the hpv shot to the vaccine schedule. We have rights. We have choices. We the people do not agree with forced medical procedures. There have been several deaths from vaccination including but not limited to the Hpv shot you are considering adding to the schedule for children to attend school. How is it that injecting my child with the very thing you are afraid of them getting is going to save others from getting it? There is no logic, only greed. If this shot is so amazing, why the need for it to be forced? People aren't forced to eat healthy even though that could save their lives, but you will force an injection on a child by a company who is not going to be liable if something happens to that child. We have rights on what goes into our bodies, and should never be forced to subject ourselves or our children to poisonous ingredients. I encourage you all to look up the actual ingredients in these vaccines and tell me, would you willingly put that into your child, and would you like to be forced to do so? Think back to world war two, the nuremberg code was created for the very same reason. We have rights and we will stand up. Take New Jersey as an example of what we are willing to do to stand between tyrants and our children. We Will not be anyone's guiny pigs and we defend our rights to the pursuit of happiness. Do the right thing, don't infringe on our rights as human beings.

In God we trust.

Regarding the addition of the HPV vaccine I would like to highly express my concern of adding this to requirements to attend school. As a mother of a 12 year old girl I am highly against this being a required vaccination as HPV is not a disease that you would catch by sitting in a classroom and if our students are catching HPV at school we have a serious issue as this is a sexually transmitted disease. If our students are picking up STD while at school that is more of a concern. There are many parents choosing to not get this shot due to its new nature and reports of side effects that are still unclear. I just wanted to express my concerns about adding this as a required vaccination for school children and urge you to not consider this addition. Sincerely, Lisa Ralston.

Re: WA BOH meeting January 8, 2020 to consider adding HPV vaccine to school requirements.

Please be advised of my vehement opposition to you even considering adding this extremely controversial and dangerous vaccine to the schedule of vaccines required for school attendance. This is an abhorrent overreach of your duties and an obvious attempt at promoting a liability free pharmaceutical product that do not serve the public good. HPV is not transmitted in school settings and the vaccine has proved to do way more harm than good leaving many young victims maimed, infertile or dead. Even parents that vaccinate are not willing to take the risk on this vaccine and will definitely not consent.

Please continue to research the dangers of the HPV vaccine , listen to the victims and remove this agenda item from your meeting on January 8th and any meeting thereafter.

Respectfully,
Edilberta G. Boscovich

Hello,

I am writing to inquire about HPV vaccine being added to the required list of vaccines. As HPV is a STD, I don't understand how my children, who abstain from intercourse, should be required. This is not a highly contagious disease, this is a life style choice disease. Our religion teaches to wait until marriage for intercourses and be monogamous so I oppose this being required of my children. This vaccine needs to be looked at by a doctor and patient and decided on based upon lifestyle choice.

With a Thanks,
Heather Angelo, mother of three

Subject: Re: CH 246-105 WAC Immunization Policy
Date: Sunday, December 29, 2019 4:05:35 PM

Good Afternoon,

My name is Sarah, I am writing to strongly oppose the suggestion of the HPV Vaccine addition to the school immunization requirement. As a mother of two healthy kids, focused on long term and immediate health of myself and my children, I find the possible addition of the VERY DANGEROUS HPV vaccine to the list of school required vaccines atrocious. I respect and share the desire of the state to encourage (NOT mandate) children to be protected against communicable disease, however, HPV is NOT a communicable disease. We know the dangers of HPV and how it is transmitted- as parents and educators it is our job to educate our children on how to stay safe. Remaining in control of ones own body and making good choices about who you have sexual interactions with is strictly up to the people involved. Protecting themselves against possible diseases is also strictly up to the people directly involved. Who will be liable for the vaccine injured if this bill is passed? You? Who of those voting has educated themselves on the incredible failure of this vaccine and the off the charts damage it has caused to once healthy children?

Each and every individual in any position of authority and/or representation of the Children in Washington State should be REQUIRED to read the following 25 pages of the Gardasil Vaccine Insert on the FDA.gov site, link provided below.

<https://www.fda.gov/media/90064/download>

Please notice especially sections:

Section 6.1 - Autoimmune Disease development = 2.2% of those who received Gardasil 9.
3.3% of those who received Gardasil.

* This is unnecessary and unacceptable

Section 8.1- Untested on Pregnant women

‘There are NO adequate well controlled studies of Gardasil 9 in pregnant patients’

* Unacceptable. Not Safe.

Please also read the linked article on a study done showing the link between Gardasil and young women's Infertility.

<https://healthimpactnews.com/2018/study-hpv-gardasil-vaccine-linked-to-decline-in-fertility-rates-in-u-s-women-aged-25-29/>

All in all, if the government begins mandating insufficiently tested, non communicable disease vaccines for children to attend school, where then will the line be drawn? Have they also tested the long term effects on children of adding another vaccine to the schedule? No. If they HAVE, please make that available I would love to see it. The fact is that the current corruption between Big Pharma and State is already a catastrophic relationship and our children are suffering. We have the HIGHEST infant mortality rate of any developed nation, we have the HIGHEST rate of chronic childhood illness, and coincidentally we have the HIGHEST rate of vaccination with the most invasive schedule on the planet. Please consider these FACTS before adding any unnecessary vaccines to the states schedule now, and in the future.

Thank you for your time and consideration on this very important matter.

10. Are you testifying on a specific proposal under consideration by the board?

1. Yes

To add HPV vaccine to school schedule

11. Are you Pro or Con on the proposal?

2. Con

I have seen too much data documenting the dangers of this particular vaccine. We are not talking

about a communicable disease like polio or measles or flu. This should very much be a personal choice, more so with the high risk of vaccine injury compared to risk of cervical cancer. When the time comes for my children, I will consult with our doctor and asses risk individually. This should NOT be a mandated vaccine. I would likely leave my profession, for which I've invested years and tens of thousands of dollars in school loans, to home school my kids over this one single vaccine on the schedule. I feel that strongly.

1. Yes

Proposal to add the Gardasil/HPV vaccination to the required vaccines for entry into public school.

11. Are you Pro or Con on the proposal?

2. Con

I am writing to voice my staunch opposition to adding the Gardasil vaccine to the requirements for school entry. The idea is a gross overstep, to say the very least. The role of public health should not extend to the use of coercion to compel uptake of any pharmaceutical product. First, even if driving down the number of cervical cancer deaths in Washington were a compelling state interest, forcing young children to receive HPV vaccinations is unnecessary to achieve that goal. HPV can only be transmitted through sexual intercourse. In addition, it can take decades for an HPV infection to cause cervical cancer, if it ever does. Vaccinating against the virus is therefore not essential to contain an imminent public-health crisis. Second, because sexually transmitted diseases are preventable through lifestyle and behavioral choices that can be taught, injecting pathogens into children's bodies is needless. Third, the HPV vaccine only protects against some strains of the virus. Thus, even with the vaccine, a woman could still contract a strain that can lead to cancer. Most of the time, HPV goes away on its own, without causing health problems. Only a small percentage of women whose bodies cannot clear the virus—estimated at about 10 percent—are at risk of developing cervical cancer, and only a fraction of them ever do. Similarly, the contraction of HPV can be prevented through sexual education, use of condoms and premarital abstinence. Regular pap tests are successful at detecting cell changes on the cervix that might become cervical cancer. All of these are effective options that impose no restrictions on parents' constitutional rights to make decisions about the care of their children, a right that the Supreme Court long ago deemed fundamental. Whenever government conduct infringes on a fundamental right, it must pass "strict scrutiny", the most exacting standard of review. Under this standard, the state must establish that the law is necessary to achieve a compelling government purpose, and that it interferes with protected rights no more than necessary. The decision whether to administer this vaccine to a child, regardless of its efficacy, should be made by that child's parents, not the government, as this mandate does not pass the "strict scrutiny" requirement. I urge you to abandon this action. Regards, Michele Johnston Spokane, WA

Adding the HPV vaccine for school entry is absurd. There is no public health crisis for HPV. This vaccine has many many issues and has injured countless adults and children (you can see this through VAERS.) I urge you to research this vaccine extensively before mandating anything. Your first

concern needs to be public health, this vaccine will destroy the health of many young children and it will be the health departments fault for the outright neglect of scientific studies and countless testimonials.

2. No

11. Are you Pro or Con on the proposal?

2. Con

To whom this may concern, With regards to adding the HPV vaccine to school requirement in the state of Washington. As a mother this is an extremely alarming situation. The HPV vaccine is relatively new, KNOWN to cause adverse effects (VAERS) , and regular screening such as yearly pap exams are a successful way to catch early Pre cancerous or cancerous HPV infections. HPV is a sexually transmitted infection, this is an in-home issue and the parent's job to inform and raise children with morals and standards, not the government's job to inject questionable and potentially debilitating materials into our children as a hail mary not to spread a disease that "Most HPV infections (9 out of 10) go away by themselves within two years" (CDC website) This is absolutely not something we need in Washington! Outraged and Informed Washington mother, Kayli Bowman.

9. Do you have any special expertise relevant to this topic?

1. Yes

I have seen the devastating affects of this dangerous vaccine.

10. Are you testifying on a specific proposal under consideration by the board?

1. Yes

HPV is not appropriate for young school age children unless the parents have it. My preschoolers are not at risk of catching this at school, so it must not be the governments choice.. Besides the effective will have waned by college age.

11. Are you Pro or Con on the proposal?

2. Con

Between evidence of fraud and mounting scientific studies, the case against Gardasil is massive. Why is it all being ignored by WA State Public Health officials? Likely because the multi-million dollar marketing campaigns, funded by Merck (more than \$3 billion in Gardasil sales in 2018) and the CDC, are even more massive, saturating every level of Public Health. Neither Merck nor the CDC are responsible for injuries or deaths caused by Gardasil — they only collect the profits. The CDC collects profits from the sale of every Gardasil vaccine because they hold patents to key components. They have refused to release just how much they have made despite Freedom of Information Act Requests. When the same government agency that profits from a product is also in charge of promoting that product and monitoring it for safety, there is an irreconcilable conflict of interest. There is no public health crisis. HPV is a sexually transmitted infection that is not caught in public settings such as daycare or school. HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time. HPV infections alone rarely lead to cancer. Other factors, such as smoking, must be present. HPV vaccines have not been proven to prevent any type of cancer. HPV vaccines were never tested against inert saline placebos. HPV vaccines don't eliminate the need for proper screening and treatment. HPV screening and treatment are highly successful at preventing and treating associated cancers. We urge you to say not to adding HPV vaccine to the school schedule. Mrs. and Mrs. Allor

2. Con

Human papilloma virus is not a public health matter. This vaccine is particularly controversial because

of many terrible adverse reactions reported in previously healthy teenagers. Annual deaths from cervical cancer in the U.S. are 2.3/100,000. The death rate in the Gardasil clinical trials was 85/100,000—or 37 times that of cervical cancer . . . According to Gardasil’s package insert, women are 100 times more likely to suffer a severe event following vaccination with Gardasil than they are to get cervical cancer. This dangerous vaccine should absolutely not be mandated, and should be a matter of choice for patients and families.

10. Are you testifying on a specific proposal under consideration by the board?

2. No

11. Are you Pro or Con on the proposal?

2. Con

HPV is not a communicable disease. The hypothesis that the vaccine prevents cervical cancer has not even been proven because none of the people who have received it have even reached the average age that women typically get cervical cancer. The HPV vaccine has one of the highest side effect profiles of any vaccine and it should be solely a parental choice to weigh the risks and benefits of this vaccine. Safety studies were not done using a double blind placebo and there is not enough evidence to indicate that the perceived benefits outweigh the risks. It is not reasonable to add it to the school schedule considering the activities that spread HPV would not be happening at school, HPV typically resolves on it's own, and there are significant safety issues with the vaccine.

Adding Gardasil to list of mandatory vaccines for school enrollment.

11. Are you Pro or Con on the proposal?

2. Con

I do not want Gardasil added to the list of mandatory vaccines for public school enrollment. I have 3

children in school and would be very upset if this was added to their vaccination schedule as a prerequisite for school. HPV is a sexually transmitted disease and as such I will be working with my children to understand the consequences of sexual contact. My son is only 8 years old, and I do not believe he needs a vaccine against sexually transmitted diseases. My daughters are 12 and 10 years old and do not need a vaccine against an STD. I believe proper sexual education and health screenings are better than another vaccine. I believe as long as pharmaceutical companies don't have any repercussions for instances where vaccines harm, we shouldn't be pushing more vaccines. I believe in the right to choose what is put into my body and the bodies of my children. I understand the need to protect the health of our communities and my children have received vaccines for such diseases that might cause harm to the community as a whole. I do not believe HPV is such a disease. Thank you for your time and consideration.

My children have received all required vaccines, but we will choose not to use Gardasil. This vaccine is completely unnecessary for public safety, has not been proven to be effective, and the risks of reactions far outweigh the risk of cervical cancer or other diseases. Moreover, there is no

accountability for vaccine related injuries and deaths - which I believe is a problem for all vaccines, but particularly one that is so profitable. Please respect the rights of parents to determine what goes into their children's bodies. Look into the studies surrounding this vaccine. Look at the profits generated by a contract such as this. This is not necessary for public health. Thank you.

10. Are you testifying on a specific proposal under consideration by the board?

1. Yes

The agenda item is very clear on this. Proposal is to require child care locations and schools to only admit children who received the vaccine Gardasil.

11. Are you Pro or Con on the proposal?

2. Con

The proposal is to require a medical procedure that has not be scientifically tested to be either safe or effective using the standard of a double blind inert placebo test. The voluntary use of this vaccine in Washington State has already yielded 650 recorded adverse effects and two deaths directly related to the vaccine. My personal opinion is that is should be not allowed until proven safe, but at the minimum it should not be required for use by anyone who prefers to avoid it until proven scientifically to be safe and effective.

From: [Beverly Allor](#)
To: [DOH WSBOH](#)
Subject: Why vote no on adding HPV to school schedule.
Date: Sunday, December 29, 2019 12:40:53 PM

As of December 2019, the following have been reported to VAERS:

63,979 HPV vaccine-related adverse events

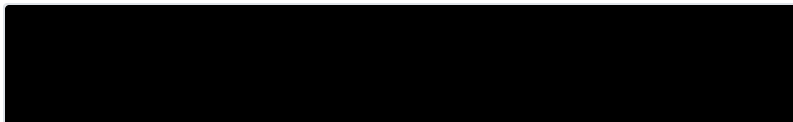

523 HPV vaccine-related deaths

Of those, 650 adverse events and two deaths, in girls aged 11 and 13, occurred in Washington State. Gardasil is covered under the 1986 National Vaccine Injury Compensation Act. Injuries and deaths must go through what's known as "Vaccine Court", a no-fault no-jury system where vaccine makers do not have to participate. Several cases have made it through the lengthy and arduous process with the preponderance of the scientific evidence leading to compensation of the victims.

Annual deaths from cervical cancer in the U.S. are 2.3/100,000. The death rate in the Gardasil clinical trials was 85/100,000—or **37 times that of cervical cancer** . . . According to Gardasil's package insert, **women are 100 times more likely to suffer a severe event following vaccination with Gardasil than they are to get cervical cancer.** *Children's Health Defense*

Between **evidence of fraud** and mounting scientific studies, the case against Gardasil is massive. Why is it all being ignored by WA State Public Health officials?

Likely because the multi-million dollar marketing campaigns, funded by Merck (more than **\$3 billion** in Gardasil sales in 2018) and the CDC, are even more massive, saturating every level of Public Health. Neither Merck nor the CDC are responsible for injuries or deaths caused by Gardasil — they only collect the profits. The CDC collects profits from the sale of every Gardasil vaccine because they hold patents to key components. They have refused to release just how much they have made despite Freedom of Information Act Requests. When the same government agency that profits from a product is also in charge of promoting that product and monitoring it for safety, there is an irreconcilable conflict of interest.

Merck's Leadership In HPV Vaccines Market

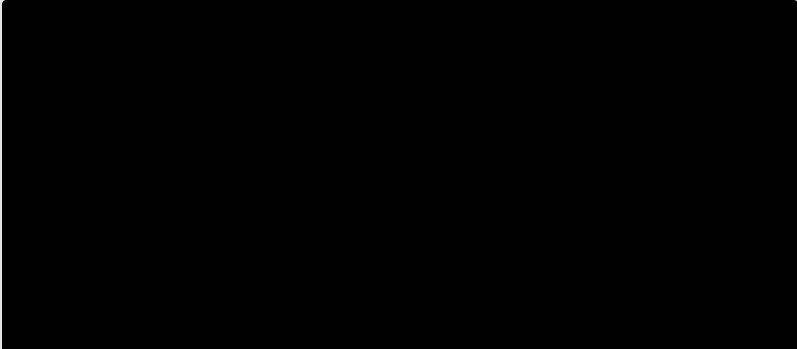

Merck's (NYSE:MRK) Gardasil is the leader in the human papillomavirus (HPV) vaccines market. HPV is a group of m...

There is no public health crisis.

HPV is a sexually transmitted infection that is not caught in public settings such as daycare or school.

HPV infections are very common, mostly symptom-free, and naturally clear on their own 95% of the time.

HPV infections alone rarely lead to cancer. **Other factors**, such as smoking, must be present.

An overview of prevention and early detection of cervical cancers

Cervical cancer still remains the most common cancer affecting the Indian women. India alone contributes 25.41% ...

HPV vaccines have not been proven to prevent any type of cancer.

HPV vaccines were never tested against inert saline placebos.

HPV vaccines don't eliminate the need for proper screening and treatment.

HPV screening and treatment are highly successful at preventing and treating associated cancers.

It is inappropriate for the Board of Health to even consider using state power to coerce the use of the controversial HPV vaccine.

Sincerely,

Mrs. B. Allor
