mandate is not supported by the scientific evidence — which is why no European countries or other U.S. states have implemented their own.

California already has a mandate

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.ca.gov%2F2021%2F10%2Fbecomes-first-state-in-nation-to-announce-covid-19-vaccine-requirements-for-schools%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C59f39e683af349aabdad08d9ee4e9fc6%7C11> for children over 12, which will be triggered once the vaccines receive full approval. Pan's bill would go much further, requiring every child in K-12 to be vaccinated while the shots are still under emergency use authorization.

The stricter requirement is necessary, according to Pan

% of omicron infections, according to several studies that have yet to go through peer review. Even this benefit seems to evaporate a few months after the last shot

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medrxiv.org%2Fcontent%2F>

Insinuating mandating student vaccination will “keep schools open” or will “keep schools safe” is misleading. In fact, this messaging may result in students knowingly coming to school with symptoms because their parents think they can’t spread the virus.

While the protective benefits of vaccination are extremely clear for adults

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.sfgate.com%2Fcoronavirus%2Fvaccine-protection-hospital-COVID-immune-16709546.php&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C59f39e683af349aabdad08d9ee4e9fc6%7C>, the data for children is murkier. First, children are at extremely low risk of severe COVID-19. Even before the emergence of omicron

also suggests that children who have already caught and recovered from COVID-19 may benefit very little from vaccination.

Although serious side effects of immunization are exceedingly rare, mounting evidence suggests even those are more common than severe COVID-19 in some children, including teen boys. We should further study a specific — and rare — side effect called myocarditis that appears to occur in one in 3,000

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Facademic.oup.com%2Fcid%2Fadv-article-abstract%2Fdoi%2F10.1093%2Fcid%2Fciab989%2F6445179&data=04%7C01%7Cwsboh%40sboh.wa.gov>>

Subject: NO mandated covid vaccines!!

External Email

Attention public SERVANTS!

Vote NO on this proposed covid vaccine mandate for our school children. Data is showing people with the vaccine are catching the virus just as easily as those who have not been vaccinated. There is absolutely no justification for forced injections on free citizens, let alone our children who are not in serious danger of this virus. This outrageous government overreach needs to end NOW!! There are protests worldwide right now against these vaccinations and all of these unconstitutional mandates. Vote NO!!! Thousands of students will be removed from the public school system by their parents acrossed the state if this ridiculous and outrageous overreachis implemented. You should all be ashamed of yourselves! It's time to start listening to the people you work for, WE THE PEOPLE. You have forgotten your place, you are employees, not our dictators. End this outrageous overreach, END THE MANDATES and VOTE NO on covid vaccines for school children!!!

Subject: Concerns from Feb 10 TAG meeting

External Email

Hello, I attended portions of the Feb 10 TAG meeting and would like to provide some feedback.

Much data was presented at this meeting, but in my opinion much of it was misleading and/or inaccurate in my opinion.

For example, data was presented by Dr Loughgrin about deaths from covid in children (somewhere in the range of 66) as compared to deaths from Varicella, Rubella, etc (around 15 - 20). Lora Davis also presented on covid deaths in children, including presenting on the national "leading causes of death" in children. However, nothing was said to distinguish which children died FROM covid, vs those that died WITH covid. Co-existing conditions in children who died (ie "with" covid) was not addressed, thereby perpetuating fear about a disease that has been shown to be no more severe in children than seasonal influenza. As has become very clear over recent months, the questionable EUA testing protocols, combined with widespread/required testing, and inaccurate results from these tests make statistics gleaned from their results highly suspect. This was not addressed making policy based on suspect numbers is not a moral or ethical position.

Significantly, also not addressed was the horrifying report of deaths from suicide (#2 leading cause of death in children) - which has increased substantially due to terrible lockdown, distancing, and masking policies, all of which have been ineffective. Vaccine requirements for children, if enacted, would simply become another ineffective cause of harms that outweigh benefits.

In like manner, the presenter named Lora Davis presented a myriad of slides that discussed "case rates" in children. As noted above, if a "case" of covid is simply a positive (questionable) test, these data are questionable and invalid. This was not addressed. Also not addressed in any data is the potential for error in data accumulation when a fully vaccinated person is counted as an "unvaccinated" covid case if testing positive before the 2-week mark. This shoddy and misleading approach to data collection clearly elevates unvaccinated case numbers, and should not be relied upon for decision making.

The biggest takeaway from this meeting is that so much is unknown. Will there be future variants of covid? Unknown. Will vaccines be effective against such possible variants, since they proved to be ineffective against omicron? Unknown. What are the long-term effects of widespread vaccination in children. Unknown. We must not experiment on children in hopes of achieving a possible, unknown benefit.

It is absolutely NOT in the best interest of our children to force a vaccine which may cause injury and death upon them in the name "safety" for school settings. Any injury or death to a child that comes from a preventative vaccine intervention effectively negates the value of that intervention.

Thank you for your time,
Dr. Robert W. Davis

I am here to voice my concerns taking place in this State in regard to COVID 19 shots. I feel that every parent chooses what they feel is right for their children and themselves. Whether that means choosing to get a shot or not, just like choosing to breastfeed or use formula. Both are a right answer in what they choose for their family and that because it's a CHOICE. It should always be a choice to get a shot or not, just like the flu shot (Norway already views COVID as the flu so we really need to get on their level). Thousands of fellow parents will pull their kids out of school if this is required. I love my children too much to force junk in their body that has yet to even be proven effective from getting it spreading with the shot- so what the point of even getting it? Due to the thousands of parents pulling their children will only add to the falling economy... as teachers, bus drivers, cooks, etc. will no longer be needed since there will hardly be any children in school. Face it, COVID will not go away- people need to move on and live their life and realize it's not serious. People die from smoking... yet that's still ok....how many alcohol related deaths have there been? Millions... but yet let's still sell it and every venue, restaurant, and store. That makes sense. There isn't a Covid pandemic. There is a people with power pulling pandemic. Horrible people that do not respect the constitution. As you can see I am completely against forcing people and children from a shot that they feel is not good for them. And punishing those families who chose not to get it. This is un-American and I hope you are ashamed of yourselves.

Subject: Covid 19 vaccine as required for K-12 students. OPPOSE.

External Email

Hello,

I am a parent in Washington state. I listen to my pcp and pediatrician. We have open dialog and thorough discussions.

I read the news. Not just U.S. and local news, news from around the world.

I would like to discuss:

#6 Vaccinating against this disease reduces the risk of person-to-person transmission, with transmission in a school or child care setting or activity being given the highest priority.

That 12 of 17 individuals from TAG voted that Covid 19 vaccines meet the criteria to reduce transmission shows that they do not read U.S. or outside U.S. news. That the Covid 19 vaccine meets the statement of #6 is a blatant lie.

Example: In my workplace, which uses masking and testing, breakthrough cases are over 77% of the cases. Almost every breakthrough case tied to work is vaccinated to vaccinated or vaccinated to unvaccinated transmission.

The highest number of hospitalized individuals that I work with are fully vaccinated AND boosted. This is something everyone at work sees. Not a single soul that is not currently boosted that has vocalized their concerns is getting the booster.

Both vaccinated and unvaccinated discuss symptoms and experiences of Covid 19 infection: the symptoms and period of illness is almost identical with some nuances such as person A had a sore throat for a couple days longer, person B just had a runny nose and cough, person C had a more persistent cough and so forth.

Pfizer's data for children's trial studies, ages 5-11, was not large enough to accurately determine data. There were actually at least 7x more adverse events to the vaccinated group than the placebo group.

My pcp has advised that healthy people under 30yrs should not receive the vaccine and that the adverse effects of the vaccine are greater the younger the receiver is than the effects of Covid 19. My pcp did say if the youth has an underlying condition, like leukemia, that vaccinating for Covid 19 may help reduce their symptoms. My pcp noted that children with severe illness such as cancers are the majority having complications. My pediatrician has advised similar.

My own child has already had Covid 19. The disease came to my household, even with precautions taken. Multiple vaccinated individuals in my department passed it to several fellow employees (vaccinated to three vaccinated AND vaccinated to one unvaccinated)

My partner and I were terrified for our child and the imminent hospitalization and death to come... Our child was over Covid 19 in two and a half days and back to their normal

self in quick order. Zero negative effects, nothing detrimental, no death, no need to "reduce symptoms."

(We adults survived fine as well. One of us with autoimmune disease and pregnant and the other over-weight, pre-diabetic, with sleep apnea. No doctors, no hospitals, no deaths. Thank goodness as Delta symptoms.)

As we have known since the beginning of Covid 19: Children are mostly unaffected by this disease. So far a death rate near .003%.

The only positive I see in being sick and unvaccinated is that you know right away that your body is "off" and if you are honest, you will stay home, keep the kids home, and that alone will reduce transmission more than the vaccine appears to reduce transmission.

If adults or individuals at higher risk fear children, those individuals should mask and take proper precautions for themselves. Healthy children should not be given a medical treatment they do not need, especially via requirement for education; by coercive means. This is discrimination of the healthy based on medical procedure that has little to no benefit to them.

Reduce transmission by staying home and getting tested, even with "allergies." Coercion to utilize public and private education systems is wrong. Please note again, the vaccines do not stop transmission.

Hi,
This is getting and has been out of control. Our children DO NOT need to get this shot.
Covid doesn't even effect children! It's insane you are even thinking of putting this
poison in children!
Also, there is currently no published literature on pediatric Covid-19 vaccine effectiveness
in K-12 school setting.

I just wanted to state that this vaccine is totally unacceptable because it is experimental and the long term consequences are yet unknown. Pfizer has not even released their safety data. Many people were coerced or mandated to get it in order to keep their jobs or a lot more people would not have gotten it. There is a lot of controversy because highly vaccinated countries have the highest rates of transmission and countries with lower vaccination rates are seeing lower transmission. This vaccine may actually cause spread of the disease. Too many unknowns yet and not enough safety data to be giving it to kids who are absolutely not at risk from the disease, but are more at risk from the illness. What kind of society would sacrifice the health of their kids, long term consequences of this new technology are totally unknown, in order to protect themselves?

Absolutely unacceptable because safety trials were cut short.

Hello,
I oppose for forced vaccinations. Absolutely not okay to force this vaccine on children.
This is so wrong. We are seeing evidence that these vaccines are causing injury and
myochariditic issues.
Please stop this nonsense.
Sincerly,
Concerned citizen.

Breaking: FDA Postpones Meeting on COVID Shots for Kids Under 5 After Pfizer Says Not Enough Data. But Don't Let Up!

Citing insufficient data, Pfizer today said it will delay applying for Emergency Use Authorization of its COVID vaccine for infants and children 6 months to 4 years old.

children in that age group would need a three-dose regimen of the vaccine.

In what the New York Times described

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nytimes.com%2Flive%2F2022%2F01%2F15%2Fhealth%2Fpfizer-covid-vaccine-kids-fda-authorization-postponed-rcna15730&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cb4f1b590a19946516f5f08d9edb06320%7C11d0e2172>>
19-cases-
vaccine&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cb4f1b590a19946516f5f08d9edb06320%7C11d0e2172
as a "highly unusual move," the FDA urged
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ftwitter.com%2FDrWoodcockFDA%2Fstatus%2F1510766804&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cb4f1b590a19946516f5f08d9edb06320%7C11d0e2172>>
Pfizer to apply for EUA of the vaccine, even though two doses failed to produce the hoped-for immune response
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nytimes.com%2Flive%2F2022%2F01%2F15%2Fhealth%2Fpfizer-covid-vaccine-kids-fda-authorization-postponed-rcna15730&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cb4f1b590a19946516f5f08d9edb06320%7C11d0e2172>>
omicron-vaccines%2Fin-a-trial-pfizer-biontechs-low-dose-shot-did-not-provoke-an-adequate-immune-response-in-2-to-5-year-olds&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cb4f1b590a19946516f5f08d9edb06320%7C11d0e2172
among children 2 to 4 years old and the vaccine maker did not yet have data on the efficacy of a third shot.

Pfizer had planned to submit its application to the FDA next week, then provide additional data in the coming weeks on a third dose, NBC reported

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nbcnews.com%2Fhealth%2Fpfizer-covid-vaccine-kids-fda-authorization-postponed-rcna15730&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cb4f1b590a19946516f5f08d9edb06320%7C11d0e2172>>
news%2Fpfizer-covid-vaccine-kids-fda-authorization-postponed-rcna15730&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cb4f1b590a19946516f5f08d9edb06320%7C11d0e2172
.

The FDA did not say when the Feb. 15 meeting would be rescheduled, and Pfizer did not indicate when it would submit the application.

To whom it may concern:

As a concerned citizen, I am writing to voice my opposition to any and all attempts to force parents to vaccinate children against their will.

This a personal and private decision that should be made by families alone, and any mandates forcing parents to violate their conscience regarding medical privacy and choice, should be rejected.

Every mandate by unelected and elected officials pushes our nation one step closer toward totalitarianism, such as is currently opposed upon Chinese citizens.

The United States was founded upon the principle of the freedom to govern oneself, and it is not appropriate for the government, or appointed boards, to undermine this principle.

Sincerely,

Virginia Schnabel

Subject: COVID Vaccine

External Email

To whom it may concern,
Why are we even considering to make the COVID vaccine a requirement for schools?

Children are the least likely to get COVID and those that have have completely recovered. The vaccine has proven to be ineffective, rushed through testing and has been proven to be dangerous to kids. Most children hospitalizations have been of the vaccinated from side effects such as myocarditis (swelling of the heart) this can be fatal!!

Why are exemptions being denied when there have been exemptions for all the current vaccinations that have been tested through time? Why are religious and medical exemptions ok for other school vaccines but not this one?

Every other state is opening back up with no vaccine mandates and case counts are at all time low. COVID is a bad flu virus and as such should be treated like the flu. Flu Vaccines are per personal choice. Not mandatory.

Please leave the vaccines requirements up to parents and their drs. Do not add this dangerous vaccine that even the maker of said it is not doing what it should with the virus. Side effects are worse than getting COVID! Natural immunity should be honored as such.

Subject: No Vax Requirement

External Email

There is no reason to require children k-12 to have a covid vaccine. It should be optional, just like a flu shot. Do not make this a requirement. The people do not want it. There are no long term studies, we have no idea what the effects will be on our children. Do the right thing, make sure parents and children have a choice.

There is not enough current data on the current variant except that vaccinated people spread it as much as unvaccinated! What about the children that have tested positive already? CDC has admitted natural Immunity outweighs the vaccination. Please do not recommend This vaccination.

The thought that you are even considering implementing such a regulation based on the facts of kids and Covid is disgusting. The impact to children is not known. You will not only lose students, but will also lose community members. It is not your job to make decisions about my child's healthcare.

Other states are removing mandates, freeing our children...while you are still doing the exact opposite needlessly! The harm you are doing to our children is not something they will ever recover from!

Shame on you!

Subject: Public Hearing Feb 10 Comments on youth vaccine criteria 5 & 6

External Email

To the Board of Health Youth Vaccine Hearing Committee:

I believe the email provided in the Chat for public participant comments was sboh.wa.gov/Meetings/ProvidePublicComments It doesn't work so I called and was given this address. I'm not sure how many participants there were or how many wanted to comment. I will try to make up for a few of them.

A question I have is... I'm curious, since the virus hasn't been isolated, how does the vaccine contain antigens? Or is it the spike proteins that produce antigens?

"COVID-19 is the murder of billions by the Fauci created synthetic tripartite viral bioweapon monkey virus SARS COV2. The bioweapons spike protein contains the deadly sequences of HIV/ XMRV/ SARS. The weaponization (gain of function) of this man-made bio toxin began in the early 2000s. It has been injected into vulnerable populations via polio, MMR and Flu vaccines for at least two decades. The COVID "vaccine" is simply the injection of the disease causing spike protein in a synthetic virus. Dr. Judy Mikovits

It sounds like we've only just begun killing people! See below.

Taking into mind Criteria #5 example of measles vaccination, I do know about the MMR and its relationship to Non-Hodgkins Lymphoma which my 17-year old was diagnosed with.

Not YOUR DAUGHTER, MY DAUGHTER!!!

Deaths From Childhood Diseases Were Declining Before Vaccines

<https://childrenshealthdefense.org/child-health-topics/false-narratives/deaths-from-childhood-diseases-were-declining-before-vaccines/>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fchild-health-topics%2Ffalse-narratives%2Fdeaths-from-childhood-diseases-were-declining-before-vaccines%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Ce91b303e4468485d260b08d9ed9bf12f%7C>>

Why would we want to further spread these spike proteins by vaccinating more people, now targeting children? THIS IS UNTHINKABLE

Vaccination is causing mutations and infection. None of the COVID vaccines have been tested and FDA approved.

Plus there are 36,167 adverse events reported to VAERS as of February 4, 2022 in children under 18.

Why are we sacrificing children on the altar of the God of War Against Humanity? Kind of answers itself doesn't it.

The FDA will meet February 15, 2022 to discuss expanding the Emergency Use Authorization (EUA) for Pfizer's covid jab to children 6 months to 5 years old. Pfizer itself said the vaccine is not ready, but the White House asked them to submit an application anyway!

Every Friday, VAERS

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fde-jr-david-kessler-covid-vaccine-vaers%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Ce91b303e4468485d260b08d9ed9bf12f%7C11d> publishes vaccine injury reports received as of a specified date. Reports submitted to VAERS require further investigation before a causal relationship can be confirmed. Historically, VAERS has been shown to report only 1% of actual vaccine adverse events <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdigital.ahrq.gov%2Fsites%2Fdefault%2Ffiles%2Fvaccine%2Fvaers%2F2011.pdf&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Ce91b303e4468485d260b08d9ed9bf12f%7C11d>

U.S. VAERS data from Dec. 14, 2020, to Jan. 21, 2022, for 5- to 11-year-olds show:

of blood clotting disorders, with all cases attributed to Pfizer.

5. The vaccine containing this antigen prevents disease(s) that has significant morbidity and/or mortality in at least some sub-set of the population.

Vaccines have the potential to reduce, or in some cases even eliminate, diseases that can result in serious illness, long-term disability, or death. For example, before measles

vaccine was available, nearly everyone in the United States contracted measles and an average of 450 measles-associated deaths were reported each year between 1953 and 1963. The morbidity/mortality burden of measles was not equal for all members of the population. Examples of significant morbidity measures include rates of hospitalizations, long-term disability, disease incidence, and disproportionate impact.

Do any of the COVID-19 shots fulfill this criterion? No they do not prevent this "dis-ease" this flu.

I would like to share some information you may have not considered. So please just consider this:

In the first place it is unethical to use children as shields for adults.

Consider what Peter Doshi, Ph.D has said: "I want to address this idea of vaccinating children to protect adults. I encourage the Advisory Committee to read Dr. Lavine et al.'s editorial to explain why, "Vaccinating children is likely to be of marginal benefit in reducing the risk to others." And even if you think a small benefit is better than nothing, let's not forget that it's an unproven hypothetical benefit. We need confirmatory evidence, not just assumptions. And then there's the ethics and the law. FDA can only indicate a product for use in a given population if benefits outweigh risks in that same population. So if benefits don't outweigh risks in children themselves, it can't be indicated for children, full stop. Whether vaccinating children might help adults is a moot point." Comments before the Vaccines and Related Biological Products Advisory Committee, June 10, 2021, <https://www.fda.gov/media/150815/download> <[https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F150815%2Fdownload](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F150815%2Fdownload&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Ce91b303e4468485d260b08d9ed9bf12f%7C150815%2Fdownload) , pp. 171-172. (emphasis added)

Children and young adults are at an extremely low risk of mortality from COVID-19. When one subset of the population (children) carries a high risk for injury from an antigen but low risk for injury from the disease, we must consider the mandate of such an antigen to be unethical. Bhopal, "Children & Young People Remain at a Low Risk of Covid-19 Mortality," The Lancet Children & Adolescent Health, Correspondence, Vol 5, Issue 5, E12-E13, May 1, 2021.

IT ISN'T EVEN APPROVED FOR ADULTS, LET ALONE CHILDREN

6. Vaccinating against this disease reduces the risk of person-to-person transmission, with transmission in a school or child care setting or activity being given the highest priority.

Having a large proportion of the population vaccinated with the antigen helps to stem person to person transmission of the disease (i.e., herd immunity). Even community members who are not vaccinated (such as newborns and those with chronic illnesses) are offered some protection because the high immunization rate results in the disease having less opportunity to spread within the community. Vaccinating children in school and/or child care can increase the percentage of children in these groups who are immune and thus reduce the risk of outbreaks of the disease in these groups and in the community at large. Special consideration of disease transmission in a school or child care setting or activity should be given the highest priority. For the purpose of this criterion, “activity” refers to school or child care extracurricular activities including, but not limited to, field trips, sports events, or other activities held on or off campus.

Do any of the COVID-19 shots fulfill this criterion? No.

The Pfizer, Moderna, and Janssen products do not prevent transmission, serious disease, or death.

The CDC director says that vaccines do not prevent transmission. “Fully vaccinated people who get a Covid-19 breakthrough infection can transmit the virus, CDC chief says,” CNN Health, <https://www.cnn.com/2021/08/05/health/us-coronavirus-thursday/index.html>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cnn.com%2F2021%2F08%2F05%2Fhealth%2Fus-coronavirus-thursday%2Findex.html&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Ce91b303e4468485d260b08d9ed9>

Hello,

My name is April Thomas, I have 3 children aged 9,13 and 15. I am strongly against mandated COVID vaccines for our children to attend school. My children are vaccinated for all other diseases, but I don't believe the COVID vaccine is necessary for our children. I have a Master of Public Health and work at Evergreen hospital and since they have been tracking COVID by age there has been only 2 cases of COVID in children aged 18 and younger. I am not convinced the benefits of this experimental vaccine outweigh the potential risks to our children.

Thank you for your consideration,

April Thomas

I am watching the webinar right now.

The data being presented by all parties is doing a great job of demonstrating that COVID can be bad. But we already know that.

I want to remind you that the questions that need to be answered are as follows:

1. Does the vaccine prevent infection?
2. Does the vaccine prevent transmission?

To those questions, I will draw your attention to two major points:

1. The data shown by several, including Laura Newman, tell us that the vaccine's efficacy drops off significantly between 3 and 6 months after vaccination. This is not even the duration of a school year, and thus is not effective for the very thing that we are trying to accomplish.
2. To quote Chas DeBolt: "When community transmission was low, there was no association between in-person learning and community spread." This should tell all of us that kids should not be the target for mandates!

Subject: 2/10/22 TAG Meeting

Hello, it's my understanding that this morning we will be discussing the merits of including the COVID vaccine into WAC 246-105.

I appreciated that the last time a similar discussion took place, on whether or not to adopt a ban on emergency vaccinations from being included, the group's general consensus was essentially "We don't know enough right now to enforce a ban on responding to unknowns in the future." That is a very sensible approach!

And here we are again, and I'd ask the same question: do we know enough about the long-term impact to enforce the opposite, either? I appeal to your sensibilities and implore you to NOT include the vaccine into 246-105 WAC.

What we *do* know, however, is the following:

1. The vaccines do not prevent infection
2. The vaccines do not prevent the spread of infection
3. The efficacy of the vaccine does not even last the duration of a school year
4. Kids are the *least impacted* population by this virus

There are simply too many unknowns still to enforce something this far-reaching, and we cannot experiment with kids as the mechanism to address this pandemic. Kids cannot pay the price to keep the fear of adults at bay. The schools have done an incredible job of handling cases and doing everything necessary to keep our kids in the classrooms, and I applaud them for that.

Vaccines should remain highly available to every single individual that deems it necessary for their own well-being, and I encourage those that make the choice to get the vaccine. Enforcing it for kids at this time is just not the way to go.

Thank you for your time, and I look forward to the discussion!

There is NO evidence to support that the vaccine prevents transmission. Yet this is being discussed to be added to the list required for school attendance.

The vaccine is not even approved and has zero long-term efficacy and unknown safety profile.

Children are at ZERO risk of this disease that mutated to the point of becoming a vanilla common cold and this dangerous vaccine with myocarditis is being pushed to the kids in order to attend school is nothing but an attack on children's health.

The only lagging and underreported postmarketing data that is available (VAERS) shows a dangerous pattern yet zero attention is being given. Disgusting!

Statistics show that small children are highly unlikely to contract COVID-19. In rare cases where they do get it their chances of survival are close to 100%. The covid vaccine has been shown to increase risks of pericarditis and myocarditis. This was shown to be the case in a study published by the journal of the American Medical Association. (see attached file) The United Kingdom and other countries have banned the vaccine for children saying the benefits do not outweigh the risks. Please do not mandate vaccines for children or discriminate in any way against them or parents who choose not to have their children vaccinated.

Thank you,

 Supplemental content

IMPORTANCE Vaccination against COVID-19 provides clear public health benefits, but vaccination also carries potential risks. The risks and outcomes of myocarditis after COVID-19 vaccination are unclear.

OBJECTIVE To describe reports of myocarditis and the reporting rates after mRNA-based COVID-19 vaccination in the US.

DESIGN, SETTING, AND PARTICIPANTS Descriptive study of reports of myocarditis to the Vaccine Adverse Event Reporting System (VAERS) that occurred after mRNA-based COVID-19 vaccine administration between December 2020 and August 2021 in 192 405 448 individuals older than 12 years of age in the US; data were processed by VAERS as of September 30, 2021.

EXPOSURES Vaccination with BNT162b2 (Pfizer-BioNTech) or mRNA-1273 (Moderna).

MAIN OUTCOMES AND MEASURES Reports of myocarditis to VAERS were adjudicated and summarized for all age groups. Crude reporting rates were calculated across age and sex strata. Expected rates of myocarditis by age and sex were calculated using 2017-2019 claims data. For persons younger than 30 years of age, medical record reviews and clinician interviews were conducted to describe clinical presentation, diagnostic test results, treatment, and early outcomes.

RESULTS Among 192 405 448 persons receiving a total of 354 100 845 mRNA-based COVID-19 vaccines during the study period, there were 1991 reports of myocarditis to VAERS and 1626 of these reports met the case definition of myocarditis. Of those with myocarditis, the median age was 21 years (IQR, 16-31 years) and the median time to symptom onset was 2 days (IQR, 1-3 days). Males comprised 82% of the myocarditis cases for whom sex was reported. The crude reporting rates for cases of myocarditis within 7 days after COVID-19 vaccination exceeded the expected rates of myocarditis across multiple age and sex strata. The rates of myocarditis were highest after the second vaccination dose in adolescent males aged 12 to 15 years (70.7 per million doses of the BNT162b2 vaccine), in adolescent males aged 16 to 17 years (105.9 per million doses of the BNT162b2 vaccine), and in young men aged 18 to 24 years (52.4 and 56.3 per million doses of the BNT162b2 vaccine and the mRNA-1273 vaccine, respectively). There were 826 cases of myocarditis among those younger than 30 years of age who had detailed clinical information available; of these cases, 792 of 809 (98%) had elevated troponin levels, 569 of 794 (72%) had abnormal electrocardiogram results, and 223 of 312 (72%) had abnormal cardiac magnetic resonance imaging results. Approximately 96% of persons (784/813) were hospitalized and 87% (577/661) of these had resolution of presenting symptoms by hospital discharge. The most common treatment was nonsteroidal anti-inflammatory drugs (589/676; 87%).

CONCLUSIONS AND RELEVANCE Based on passive surveillance reporting in the US, the risk of myocarditis after receiving mRNA-based COVID-19 vaccines was increased across multiple age and sex strata and was highest after the second vaccination dose in adolescent males and young men. This risk should be considered in the context of the benefits of COVID-19 vaccination.

Myocarditis is an inflammatory condition of the heart muscle that has a bimodal peak incidence during infancy and adolescence or young adulthood.¹⁻⁴ The clinical presentation and course of myocarditis is variable, with some patients not requiring treatment and others experiencing severe heart failure that requires subsequent heart transplantation or leads to death.⁵ Onset of myocarditis typically follows an inciting process, often a viral illness; however, no antecedent cause is identified in many cases.⁶ It has been hypothesized that vaccination can serve as a trigger for myocarditis; however, only the smallpox vaccine has previously been causally associated with myocarditis based on reports among US military personnel, with cases typically occurring 7 to 12 days after vaccination.⁷

With the implementation of a large-scale, national COVID-19 vaccination program starting in December 2020, the US Centers for Disease Control and Prevention (CDC) and the US Food and Drug Administration began monitoring for a number of adverse events of special interest, including myocarditis and pericarditis, in the Vaccine Adverse Event Reporting System (VAERS), a long-standing national spontaneous reporting (passive surveillance) system.⁸ As the reports of myocarditis after COVID-19 vaccination were reported to VAERS, the Clinical Immunization Safety Assessment Project,⁹ a collaboration between the CDC and medical research centers, which includes physicians treating infectious diseases and other specialists (eg, cardiologists), consulted on several of the cases. In addition, reports from several countries raised concerns that mRNA-based COVID-19 vaccines may be associated with acute myocarditis.¹⁰⁻¹⁵

Given this concern, the aims were to describe reports and confirmed cases of myocarditis initially reported to VAERS after mRNA-based COVID-19 vaccination and to provide estimates of the risk of myocarditis after mRNA-based COVID-19 vaccination based on age, sex, and vaccine type.

Methods

Data Sources

VAERS is a US spontaneous reporting (passive surveillance) system that functions as an early warning system for potential vaccine adverse events.⁸ Co-administered by the CDC and the US Food and Drug Administration, VAERS accepts reports of all adverse events after vaccination from patients, parents, clinicians, vaccine manufacturers, and others regardless of whether the events could plausibly be associated with receipt of the vaccine. Reports to VAERS include information about the vaccinated person, the vaccine or vaccines administered, and the adverse events experienced by the vaccinated person. The reports to VAERS are then reviewed by third-party professional coders who have been trained in the assignment of Medical Dictionary for Regulatory Activities preferred terms.¹⁶ The coders then assign appropriate terms based on the information available in the reports.

This activity was reviewed by the CDC and was conducted to be consistent with applicable federal law and CDC

Key Points

Question What is the risk of myocarditis after mRNA-based COVID-19 vaccination in the US?

Findings In this descriptive study of 1626 cases of myocarditis in a national passive reporting system, the crude reporting rates within 7 days after vaccination exceeded the expected rates across multiple age and sex strata. The rates of myocarditis cases were highest after the second vaccination dose in adolescent males aged 12 to 15 years (70.7 per million doses of the BNT162b2 vaccine), in adolescent males aged 16 to 17 years (105.9 per million doses of the BNT162b2 vaccine), and in young men aged 18 to 24 years (52.4 and 56.3 per million doses of the BNT162b2 vaccine and the mRNA-1273 vaccine, respectively).

Meaning Based on passive surveillance reporting in the US, the risk of myocarditis after receiving mRNA-based COVID-19 vaccines was increased across multiple age and sex strata and was highest after the second vaccination dose in adolescent males and young men.

policy. The activities herein were confirmed to be nonresearch under the Common Rule in accordance with institutional procedures and therefore were not subject to institutional review board requirements. Informed consent was not obtained for this secondary use of existing information; see 45 CFR part 46.102(l)(2), 21 CFR part 56, 42 USC §241(d), 5 USC §552a, and 44 USC §3501 et seq.

Exposure

The exposure of concern was vaccination with one of the mRNA-based COVID-19 vaccines: the BNT162b2 vaccine (Pfizer-BioNTech) or the mRNA-1273 vaccine (Moderna). During the analytic period, persons aged 12 years or older were eligible for the BNT162b2 vaccine and persons aged 18 years or older were eligible for the mRNA-1273 vaccine. The number of COVID-19 vaccine doses administered during the analytic period was obtained through the CDC's COVID-19 Data Tracker.¹⁷

Outcomes

The primary outcome was the occurrence of myocarditis and the secondary outcome was pericarditis. Reports to VAERS with these outcomes were initially characterized using the Medical Dictionary for Regulatory Activities preferred terms of myocarditis or pericarditis (specific terms are listed in the eMethods in the [Supplement](#)). After initial review of reports of myocarditis to VAERS and review of the patient's medical records (when available), the reports were further reviewed by CDC physicians and public health professionals to verify that they met the CDC's case definition for probable or confirmed myocarditis (descriptions previously published and included in the eMethods in the [Supplement](#)).¹⁸ The CDC's case definition of probable myocarditis requires the presence of new concerning symptoms, abnormal cardiac test results, and no other identifiable cause of the symptoms and findings. Confirmed cases of myocarditis further require histopathological confirmation

of myocarditis or cardiac magnetic resonance imaging (MRI) findings consistent with myocarditis.

Deaths were included only if the individual had met the case definition for confirmed myocarditis and there was no other identifiable cause of death. Individual cases not involving death were included only if the person had met the case definition for probable myocarditis or confirmed myocarditis.

Statistical Analysis

We characterized reports of myocarditis or pericarditis after COVID-19 vaccination that met the CDC's case definition and were received by VAERS between December 14, 2020 (when COVID-19 vaccines were first publicly available in the US), and August 31, 2021, by age, sex, race, ethnicity, and vaccine type; data were processed by VAERS as of September 30, 2021. Race and ethnicity were optional fixed categories available by self-identification at the time of vaccination or by the individual filing a VAERS report. Race and ethnicity were included to provide the most complete baseline description possible for individual reports; however, further analyses were not stratified by race and ethnicity due to the high percentage of missing data. Reports of pericarditis with evidence of potential myocardial involvement were included in the review of reports of myocarditis. The eFigure in the [Supplement](#) outlines the categorization of the reports of myocarditis and pericarditis reviewed.

Further analyses were conducted only for myocarditis because of the preponderance of those reports to VAERS, in Clinical Immunization Safety Assessment Project consultations, and in published articles.^{10-12,19-21} Crude reporting rates for myocarditis during a 7-day risk interval were calculated using the number of reports of myocarditis to VAERS per million doses of COVID-19 vaccine administered during the analytic period and stratified by age, sex, vaccination dose (first, second, or unknown), and vaccine type. Expected rates of myocarditis by age and sex were calculated using 2017-2019 data from the IBM MarketScan Commercial Research Database. This database contains individual-level, deidentified, inpatient and outpatient medical and prescription drug claims, and enrollment information submitted to IBM Watson Health by large employers and health plans. The data were accessed using version 4.0 of the IBM MarketScan Treatment Pathways analytic platform. Age- and sex-specific rates were calculated by determining the number of individuals with myocarditis (*International Statistical Classification of Diseases and Related Health Problems, Tenth Revision [ICD-10]* codes B33.20, B33.22, B33.24, I40.0, I40.1, I40.8, I40.9, or I51.4)²² identified during an inpatient encounter in 2017-2019 relative to the number of individuals of similar age and sex who were continually enrolled during the year in which the myocarditis-related hospitalization occurred; individuals with any diagnosis of myocarditis prior to that year were excluded. Given the limitations of the IBM MarketScan Commercial Research Database to capture enrollees aged 65 years or older, an expected rate for myocarditis was not calculated for this population. A 95% CI was calculated using Poisson distribution in SAS version 9.4 (SAS Institute Inc)

for each expected rate of myocarditis and for each observed rate in a strata with at least 1 case.

In cases of probable or confirmed myocarditis among those younger than 30 years of age, their clinical course was then summarized to the extent possible based on medical review and clinician interviews. This clinical course included presenting symptoms, diagnostic test results, treatment, and early outcomes (abstraction form appears in the eMethods in the [Supplement](#)).²³

When applicable, missing data were delineated in the results or the numbers with complete data were listed. No assumptions or imputations were made regarding missing data. Any percentages that were calculated included only those cases of myocarditis with adequate data to calculate the percentages.

Results

Case Characteristics

Between December 14, 2020, and August 31, 2021, 192 405 448 individuals older than 12 years of age received a total of 354 100 845 mRNA-based COVID-19 vaccines. VAERS received 1991 reports of myocarditis (391 of which also included pericarditis) after receipt of at least 1 dose of mRNA-based COVID-19 vaccine (eTable 1 in the [Supplement](#)) and 684 reports of pericarditis without the presence of myocarditis (eTable 2 in the [Supplement](#)).

Of the 1991 reports of myocarditis, 1626 met the CDC's case definition for probable or confirmed myocarditis ([Table 1](#)). There were 208 reports that did not meet the CDC's case definition for myocarditis and 157 reports that required more information to perform adjudication (eTable 3 in the [Supplement](#)). Of the 1626 reports that met the CDC's case definition for myocarditis, 1195 (73%) were younger than 30 years of age, 543 (33%) were younger than 18 years of age, and the median age was 21 years (IQR, 16-31 years) ([Figure 1](#)). Of the reports of myocarditis with dose information, 82% (1265/1538) occurred after the second vaccination dose. Of those with a reported dose and time to symptom onset, the median time from vaccination to symptom onset was 3 days (IQR, 1-8 days) after the first vaccination dose and 74% (187/254) of myocarditis events occurred within 7 days. After the second vaccination dose, the median time to symptom onset was 2 days (IQR, 1-3 days) and 90% (1081/1199) of myocarditis events occurred within 7 days ([Figure 2](#)).

Males comprised 82% (1334/1625) of the cases of myocarditis for whom sex was reported. The largest proportions of cases of myocarditis were among White persons (non-Hispanic or ethnicity not reported; 69% [914/1330]) and Hispanic persons (of all races; 17% [228/1330]). Among persons younger than 30 years of age, there were no confirmed cases of myocarditis in those who died after mRNA-based COVID-19 vaccination without another identifiable cause and there was 1 probable case of myocarditis but there was insufficient information available for a thorough investigation. At the time of data review, there were 2 reports of

Table 1. Characteristics of Reports to VAERS After mRNA-Based COVID-19 Vaccination That Met the CDC's Case Definition for Myocarditis Between December 14, 2020, and August 31, 2021

	Vaccination with BNT162b2			Vaccination with mRNA-1273			Overall

^a Categories without ethnicity were either non-Hispanic or had no ethnicity reported.

death in persons younger than 30 years of age with potential myocarditis that remain under investigation and are not included in the case counts.

Reporting Rates of Myocarditis Within 7 Days After COVID-19 Vaccination

Symptom onset of myocarditis was within 7 days after vaccination for 947 reports of individuals who received the BNT162b2 vaccine and for 382 reports of individuals who received the mRNA-1273 vaccine. The rates of myocarditis varied by vaccine type, sex, age, and first or second vaccination dose (Table 2). The reporting rates of myocarditis were highest after the second vaccination dose in adolescent males aged 12 to 15 years (70.73 [95% CI, 61.68-81.11] per million doses of the BNT162b2 vaccine), in adolescent males aged 16 to 17 years (105.86 [95% CI, 91.65-122.27] per million doses of the BNT162b2 vaccine), and in young men aged 18 to 24 years (52.43 [95% CI, 45.56-60.33] per million doses of the BNT162b2 vaccine and 56.31 [95% CI, 47.08-67.34] per million doses of the mRNA-1273 vaccine). The lower estimate of the 95% CI for reporting rates of myocarditis in adolescent males and young men exceeded the upper bound of the expected rates after the first vaccination dose with the BNT162b2 vaccine in those aged 12 to 24 years, after the second vaccination dose with the BNT162b2 vaccine in those aged 12 to 49 years, after the first vaccination dose with the mRNA-1273 vaccine in those aged 18 to 39 years, and after the second vaccination dose with the mRNA-1273 vaccine in those aged 18 to 49 years.

The reporting rates of myocarditis in females were lower than those in males across all age strata younger than 50 years of age. The reporting rates of myocarditis were highest after the second vaccination dose in adolescent females aged 12 to 15 years (6.35 [95% CI, 4.05-9.96] per million doses of the BNT162b2 vaccine), in adolescent females aged 16 to 17 years (10.98 [95% CI, 7.16-16.84] per million doses of the BNT162b2 vaccine), in young women aged 18 to 24 years (6.87 [95% CI, 4.27-11.05] per million doses of the mRNA-1273 vaccine), and in women aged 25 to 29 years (8.22 [95% CI, 5.03-13.41] per million doses of the mRNA-1273 vaccine). The lower estimate of the 95% CI for reporting rates of myocarditis in females exceeded the upper bound of the expected rates after the second vaccination dose with the BNT162b2 vaccine in those aged 12 to 29 years and after the second vaccination dose with the mRNA-1273 vaccine in those aged 18 to 29 years.

Clinical Course of Myocarditis After COVID-19 Vaccination in Persons Younger Than 30 Years of Age

Among the 1372 reports of myocarditis in persons younger than 30 years of age, 1305 were able to be adjudicated, with 92% (1195/1305) meeting the CDC's case definition. Of these, chart abstractions or medical interviews were completed for 69% (826/1195) (Table 3). The symptoms commonly reported in the verified cases of myocarditis in persons younger than 30 years of age included chest pain, pressure, or discomfort (727/817; 89%) and dyspnea or shortness of breath (242/817; 30%). Troponin levels were elevated in 98% (792/809) of the

Figure 1. Cases of Myocarditis After mRNA-Based COVID-19 Vaccination by Age at Onset of Myocarditis

doses and 95 532 396 second vaccination doses; and for the mRNA-1273 vaccine, there were 78 158 611 and 66 163 001, respectively. The y-axis range differs between panels A and B.

The reports to the Vaccine Adverse Event Reporting System met the case definition of myocarditis (reported cases). Among individuals older than 40 years of age, there were no more than 8 reports of myocarditis for any individual age after receiving either vaccine. For the BNT162b2 vaccine, there were 114 246 837 first vaccination

Figure 2. Cases of Myocarditis After mRNA-Based COVID-19 Vaccination by Time From Vaccination to Symptom Onset

The reports to the Vaccine Adverse Event Reporting System met the case definition of myocarditis (reported cases). Among recipients of either vaccine, there were only 13 reports or less of myocarditis beyond 10 days for any individual time from vaccination to symptom onset. The y-axis range differs between panels A and B.

A, For the BNT162b2 vaccine, there were 138 reported cases of myocarditis with

known date for symptom onset and dose after 114 246 837 first vaccination doses and 888 reported cases after 95 532 396 second vaccination doses.

B, For the mRNA-1273 vaccine, there were 116 reported cases of myocarditis with known date for symptom onset and dose after 78 158 611 first vaccination doses and 311 reported cases after 66 163 001 second vaccination doses.

^a Of 1453 cases of myocarditis with known vaccination dose and time to symptom onset, 1267 had symptom onset within the 7-day risk interval.

^b The observed estimates were not calculated for the strata with 0 cases of myocarditis. In addition, the observed estimates were not calculated for the

strata with cases of myocarditis after administration of mRNA-1273 in those younger than aged 18 years. The mRNA-1273 vaccine had not been authorized for use in the US in this age group.

^c Estimated using data from the IBM MarketScan Commercial Research Database for 2017-2019. Rates were not calculated for those aged 65 years or older due to the limitations of the database.

Table 3. Symptoms, Treatment, and Outcomes in 826 Patients Younger Than 30 Years of Age With Myocarditis

	Cases of myocarditis, No./total (%)
Presenting symptoms	
Chest pain, pressure, or discomfort	727/817 (89.0)
Dyspnea or shortness of breath	242/817 (29.6)
Palpitations	65/817 (8.0)
Abnormal findings	
Elevated troponin level ^a	792/809 (97.9)
Electrocardiogram	569/794 (71.7)
Echocardiogram	123/721 (17.1)
Decreased LVEF (<50%) on echocardiogram	84/721 (11.7)
Cardiac magnetic resonance imaging ^b	223/312 (71.5)
Hospitalized	784/813 (96.4)
Treatment	
Nonsteroidal anti-inflammatory drugs	589/676 (87.1)
Glucocorticoids	81/676 (12.0)
Anticoagulant therapy	54/676 (8.0)
Antiarrhythmic therapy	18/676 (2.7)
Low- or high-flow nasal cannula oxygen support	12/676 (1.8)
Diuretics	11/676 (1.6)
Intensive therapy	
Intravenous immunoglobulin	78/676 (11.5)
Vasoactive medications	12/676 (1.8)
Intubation or mechanical ventilation	2/676 (0.3)
Heart transplant	0
Extracorporeal membrane oxygenation or ventricular assist device	0
Outcome among those who were hospitalized	
Discharged from the hospital	747/762 (98.0)
Still hospitalized at time of review	15/762 (2.0)
Died	0
Resolution of presenting symptoms by hospital discharge	577/661 (87.3)

Abbreviation: LVEF, left ventricular ejection fraction.

^a Abnormal per the reference range for the hospital or laboratory where the test was performed.

^b Consistent with myocarditis.

cases of myocarditis. The electrocardiogram result was abnormal in 72% (569/794) of cases of myocarditis. Of the patients who had received a cardiac MRI, 72% (223/312) had abnormal findings consistent with myocarditis. The echocardiogram results were available for 721 cases of myocarditis; of these, 84 (12%) demonstrated a notable decreased left ventricular ejection fraction (<50%). Among the 676 cases for whom treatment data were available, 589 (87%) received nonsteroidal anti-inflammatory drugs. Intravenous immunoglobulin and glucocorticoids were each used in 12% of the cases of myocarditis (78/676 and 81/676, respectively). Intensive therapies such as vasoactive medications (12 cases of myocarditis) and intubation or mechanical ventilation (2 cases) were rare. There were no verified cases of myocarditis requiring a heart transplant, extracorporeal membrane oxygenation, or a ventricular assist device. Of the 96% (784/813) of cases of myocarditis who were hospitalized, 98% (747/762) were discharged from the hospital at time of review. In 87% (577/661) of discharged cases of myocarditis, there was resolution of the presenting symptoms by hospital discharge.

Discussion

In this review of reports to VAERS between December 2020 and August 2021, myocarditis was identified as a rare but serious adverse event that can occur after mRNA-based COVID-19 vaccination, particularly in adolescent males and young men. However, this increased risk must be weighed against the benefits of COVID-19 vaccination.¹⁸

Compared with cases of non-vaccine-associated myocarditis, the reports of myocarditis to VAERS after mRNA-based COVID-19 vaccination were similar in demographic characteristics but different in their acute clinical course. First, the greater frequency noted among vaccine recipients aged 12 to 29 years vs those aged 30 years or older was similar to the age distribution seen in typical cases of myocarditis.^{2,4} This pattern may explain why cases of myocarditis were not discovered until months after initial Emergency Use Authorization of the vaccines in the US (ie, until the vaccines were widely available to younger persons). Second, the sex distribution in cases of myocarditis after COVID-19 vaccination was similar

to that seen in typical cases of myocarditis; there is a strong male predominance for both conditions.^{2,4}

However, the onset of myocarditis symptoms after exposure to a potential immunological trigger was shorter for COVID-19 vaccine-associated cases of myocarditis than is typical for myocarditis cases diagnosed after a viral illness.²⁴⁻²⁶ Cases of myocarditis reported after COVID-19 vaccination were typically diagnosed within days of vaccination, whereas cases of typical viral myocarditis can often have indolent courses with symptoms sometimes present for weeks to months after a trigger if the cause is ever identified.¹ The major presenting symptoms appeared to resolve faster in cases of myocarditis after COVID-19 vaccination than in typical viral cases of myocarditis. Even though almost all individuals with cases of myocarditis were hospitalized and clinically monitored, they typically experienced symptomatic recovery after receiving only pain management. In contrast, typical viral cases of myocarditis can have a more variable clinical course. For example, up to 6% of typical viral myocarditis cases in adolescents require a heart transplant or result in mortality.²⁷

In the current study, the initial evaluation and treatment of COVID-19 vaccine-associated myocarditis cases was similar to that of typical myocarditis cases.²⁸⁻³¹ Initial evaluation usually included measurement of troponin level, electrocardiography, and echocardiography.¹ Cardiac MRI was often used for diagnostic purposes and also for possible prognostic purposes.^{32,33} Supportive care was a mainstay of treatment, with specific cardiac or intensive care therapies as indicated by the patient's clinical status.

Long-term outcome data are not yet available for COVID-19 vaccine-associated myocarditis cases. The CDC has started active follow-up surveillance in adolescents and young adults to assess the health and functional status and cardiac outcomes at 3 to 6 months in probable and confirmed cases of myocarditis reported to VAERS after COVID-19 vaccination.³⁴ For patients with myocarditis, the American Heart Association and the American College of Cardiology guidelines advise that patients should be instructed to refrain from competitive sports for 3 to 6 months, and that documentation of a normal electrocardiogram result, ambulatory rhythm monitoring, and an exercise test should be obtained prior to resumption of sports.³⁵ The use of cardiac MRI is unclear, but it may be useful in evaluating the progression or resolution of myocarditis in those with abnormalities on the baseline cardiac MRI.³⁶ Further doses of mRNA-based COVID-19 vaccines should be deferred, but may be considered in select circumstances.³⁷

Limitations

This study has several limitations. First, although clinicians are required to report serious adverse events after COVID-19 vaccination, including all events leading to hospitalization, VAERS is a passive reporting system. As such, the reports of myocarditis to VAERS may be incomplete, and the quality of the information reported is variable. Missing data for sex, vaccination dose number, and race and ethnicity were not uncommon in the reports received; history of prior SARS-CoV-2 infection also was not known. Furthermore, as a passive system, VAERS data are subject to reporting biases in that both underreporting and overreporting are possible.³⁸ Given the high verification rate of reports of myocarditis to VAERS after mRNA-based COVID-19 vaccination, underreporting is more likely. Therefore, the actual rates of myocarditis per million doses of vaccine are likely higher than estimated.

Second, efforts by CDC investigators to obtain medical records or interview physicians were not always successful despite the special allowance for sharing information with the CDC under the Health Insurance Portability and Accountability Act of 1996.³⁹ This challenge limited the ability to perform case adjudication and complete investigations for some reports of myocarditis, although efforts are still ongoing when feasible.

Third, the data from vaccination administration were limited to what is reported to the CDC and thus may be incomplete, particularly with regard to demographics.

Fourth, calculation of expected rates from the IBM MarketScan Commercial Research Database relied on administrative data via the use of ICD-10 codes and there was no opportunity for clinical review. Furthermore, these data had limited information regarding the Medicare population; thus expected rates for those older than 65 years of age were not calculated. However, it is expected that the rates in those older than 65 years of age would not be higher than the rates in those aged 50 to 64 years.⁴

Conclusions

Based on passive surveillance reporting in the US, the risk of myocarditis after receiving mRNA-based COVID-19 vaccines was increased across multiple age and sex strata and was highest after the second vaccination dose in adolescent males and young men. This risk should be considered in the context of the benefits of COVID-19 vaccination.

ARTICLE INFORMATION

Accepted for Publication: December 16, 2021.

Author Contributions: Drs Oster and Su had full access to all of the data in the study and take responsibility for the integrity of the data and the accuracy of the data analysis.

Concept and design: Oster, Shay, Su, Creech, Edwards, Dendy, Schlaudecker, Woo, Shimabukuro.

Acquisition, analysis, or interpretation of data: Oster, Shay, Su, Gee, Creech, Broder, Edwards, Soslow, Schlaudecker, Lang, Barnett, Ruberg, Smith, Campbell, Lopes, Sperling, Baumbblatt,

Thompson, Marquez, Strid, Woo, Pugsley, Reagan-Steiner, DeStefano, Shimabukuro.

Drafting of the manuscript: Oster, Shay, Su, Gee, Creech, Marquez, Strid, Woo, Shimabukuro.

Critical revision of the manuscript for important intellectual content: Oster, Shay, Su, Creech, Broder, Edwards, Soslow, Dendy, Schlaudecker, Lang, Barnett, Ruberg, Smith, Campbell, Lopes, Sperling, Baumbblatt, Thompson, Pugsley, Reagan-Steiner, DeStefano, Shimabukuro.

Statistical analysis: Oster, Su, Marquez, Strid, Woo, Shimabukuro.

Obtained funding: Edwards, DeStefano.

Administrative, technical, or material support: Oster, Gee, Creech, Broder, Edwards, Soslow, Schlaudecker, Smith, Baumbblatt, Thompson, Reagan-Steiner, DeStefano.

Supervision: Su, Edwards, Soslow, Dendy, Schlaudecker, Campbell, Sperling, DeStefano, Shimabukuro.

Conflict of Interest Disclosures: Dr Creech reported receiving grants from the National Institutes of Health for the Moderna and Janssen clinical trials and receiving personal fees from Astellas and Horizon. Dr Edwards reported

receiving grants from the National Institutes of Health; receiving personal fees from BioNet, IBM, X-4 Pharma, Seqirus, Roche, Pfizer, Merck, Moderna, and Sanofi; and receiving compensation for being the associate editor of *Clinical Infectious Diseases*. Dr Soslow reported receiving personal fees from Esperare. Dr Schlaudecker reported receiving grants from Pfizer and receiving personal fees from Sanofi Pasteur. Drs Barnett, Ruberg, and Smith reported receiving grants from Pfizer. Dr Lopes reported receiving personal fees from Bayer, Boehringer Ingelheim, Bristol Myers Squibb, Daiichi Sankyo, GlaxoSmithKline, Medtronic, Merck, Pfizer, Portola, and Sanofi and receiving grants from Bristol Myers Squibb, GlaxoSmithKline, Medtronic, Pfizer, and Sanofi. No other disclosures were reported.

Funding/Support: This work was supported by contracts 200-2012-53709 (Boston Medical Center), 200-2012-53661 (Cincinnati Children's Hospital Medical Center), 200-2012-53663 (Duke University), and 200-2012-50430 (Vanderbilt University Medical Center) with the US Centers for Disease Control and Prevention (CDC) Clinical Immunization Safety Assessment Project.

Role of the Funder/Sponsor: The CDC provided funding via the Clinical Immunization Safety Assessment Project to Drs Creech, Edwards, Soslow, Dendy, Schlaudecker, Lang, Barnett, Ruberg, Smith, Campbell, and Lopes. The authors affiliated with the CDC along with the other coauthors conducted the investigations; performed collection, management, analysis, and interpretation of the data; were involved in the preparation, review, and approval of the manuscript; and made the decision to submit the manuscript for publication.

Disclaimer: The findings and conclusions in this article are those of the authors and do not necessarily represent the official position of the CDC or the US Food and Drug Administration. Mention of a product or company name is for identification purposes only and does not constitute endorsement by the CDC or the US Food and Drug Administration.

Additional Contributions: We thank the following CDC staff who contributed to this article without compensation outside their normal salaries (in alphabetical order and contribution specified in parenthesis at end of each list of names): Nickolas Agathis, MD, MPH, Stephen R. Benoit, MD, MPH, Beau B. Bruce, MD, PhD, Abigail L. Carlson, MD, MPH, Meredith G. Dixon, MD, Jonathan Duffy, MD, MPH, Charles Duke, MD, MPH, Charles Edge, MSN, MS, Robyn Neblett Fairfair, MD, MPH, Nathan W. Furukawa, MD, MPH, Gavin Grant, MD, MPH, Grace Marx, MD, MPH, Maureen J. Miller, MD, MPH, Pedro Moro, MD, MPH, Meredith Oakley, DVM, MPH, Kia Padgett, MPH, BSN, RN, Janice Perez-Padilla, MPH, BSN, RN, Robert Perry, MD, MPH, Nimia Reyes, MD, MPH, Ernest E. Smith, MD, MPH&TM, David Sniadack, MD, MPH, Pamela Tucker, MD, Edward C. Weiss, MD, MPH, Erin Whitehouse, PhD, MPH, RN, Pascale M. Wortley, MD, MPH, and Rachael Zacks, MD (for clinical investigations and interviews); Amelia Jazwa, MSPH, Tara Johnson, MPH, MS, and Jamila Shields, MPH (for project coordination); Charles Licata, PhD, and Bicheng Zhang, MS (for data acquisition and organization); Charles E. Rose, PhD (for statistical consultation); and Scott D. Grosse, PhD (for calculation of expected rates of myocarditis). We also thank the clinical staff

who cared for these patients and reported the adverse events to the Vaccine Adverse Event Reporting System.

Good morning,

I am concerned about the upcoming vote on including the covid vaccine as a school vaccine requirement. I have gotten all required vaccines for my children previously based on the effectiveness and extensive testing of them over the years. The covid vaccines have not been tested enough to be required for school enrollment. I am deeply concerned that our children should not be the test group for these new vaccines.

Thank you,
Tobi Leidy

I am writing in preparation for your vote tomorrow on whether or not to add Covid vaccines to the school schedule. I do not support adding this shot to the schedule. The subset population who wants to be vaccinated can do just that at any time they want to. I have a child in that "subset" who is technically considered high risk. He is unvaccinated and recently had Covid. He had no symptoms besides a tiny bit of congestion that lasted about a day. My friends kids have had worse reactions to the shot than Covid - tired for 48 hours, missed school. The shot also does NOT prevent transmission. Anyone who has talked to anyone else these last few weeks can tell you just about every vaccinated person they know has had Covid. My caregiver had symptomatic Covid 4 weeks after her booster. The shots don't prevent symptoms or transmission. We should not even be considering injecting a very low risk population knowing kids are having cardiovascular issues after injection, not to mention any other side effects that may pop up years from now. The "subset" population your talking about is still dying from this like RSV, Pneumonia, CMV, SUDEP and I'm larger numbers!!! Stop pretending like you actually care about this population. This will be the hill myself and other parents die upon. I will pull my kids out so fast and follow the others who have already left this state for a state that allows parents to choose what is best for their child, not the government. Those that want the shot can get it - anytime. If the rest of us wanted the shot we would have already gotten it.

Why take a vaccine for omnicron when it's mild and vaccine will still infect?
Why take a vaccine where none of the drug companies will release what's in the vaccine and all the risks?
Why take the vaccine when you still can transmit and get the virus?
Why not encourage using other means to help
Not get the virus and treatment that is better than a vaccine with proven effectiveness?
With religious exemptions and medical exemptions for the children, how can you keep teachers from segregation towards the unvaccinated?
Why even go this direction if the virus is so mild?

Members of the board,

I am a mother of 3 that attend public schools here in WA. I urge you NOT to add the COVID-19 vaccine as a requirement for public education. There is NO EVIDENCE that children are at high risk of severe complications from this virus. It's been clear from the very beginning. In addition, these vaccines DO NOT STOP THE VIRUS FROM SPREADING! How many vaccinated people do you know that have still gotten COVID after being fully vaccinated? And boosted! While the vaccine may lessen the threats to high risk individuals if they get the virus, it does not stop them from getting and spreading the virus! The real science proves that! Our children are not guinea pigs! They are not high risk and this vaccine should be a CHOICE not a requirement. The FDA approved this for EMERGENCY USE! There is no emergency. Mandates are dropping left and right now because they are not needed! I know many many people who will pull their children out of public education if this passes, including myself. It is not ok. These are our children!! We don't know the impact of future fertility complications or anything else yet. But we do know there is a SIGNIFICANT increased risk of myocarditis in young healthy individuals, specifically males. This is not okay! This vaccine should still be in clinical trials! Most have been tested for years before being required! I am not at all against immunizations but I think they need to be properly tested for long term effects and the data needs to be shared and transparent. Our kids are DYING! Not from COVID but from this vaccine! WAKE UP!!! I urge you to do more unbiased research and stop the madness!

Sincerely,
Stephanie Helling
A very concerned parent

Vote NO!!!

You better get ready for mass unenrollment across the state if you pass this mandate! Why aren't you using recent data? Are the vaxxed numbers that contradictory? You will not dictate this poison on my child! I will remove my child from the public school system! Thousands of other parents will too!! Who do you think you are?!?! Vote NO! Our children are not lab rats you fools!!!

To whom it may concern:

As a concerned citizen, I am writing to voice my opposition to any and all attempts to force parents to vaccinate children against their will.

This a personal and private decision that should be made by families alone, and any mandates forcing parents to violate their conscience regarding medical privacy and choice, should be rejected.

Every mandate by unelected and elected officials pushes our nation one step closer toward totalitarianism, such as is currently opposed upon Chinese citizens.

The United States was founded upon the principle of the freedom to govern oneself, and it is not appropriate for the government, or appointed boards, to undermine this principle.

Sincerely,
Virginia Schnabel

Subject: Public Comment for 2/10 TAG meeting

External Email

Based on Criteria #5 and ☐ #6, the Covid-19 vaccine does not meet the requirements for K-12 students.

Children are low-risk for Covid-19 and typically develop mild disease. Death is extremely rare. If there is an instance where a child has health conditions that indicates high-risk and benefits from the vaccine, it can be administered on an individual basis.

The vaccine does not reduce person-to-person transmission. Please see studies below.

Subramanian, S.V.; Kumar, A. Increases in COVID-19 are unrelated to levels of vaccination across 68 countries and 2947 counties in the United States. Eur J Epidemiol 2021, 1-4. doi: 10.1007/s10654-021-00808-7.

Kampf, G. The epidemiological relevance of the COVID-19-vaccinated population is increasing. The Lancet Regional Health - Europe 2021, 11 , 100272. doi: 10.1016/j.lanepe.2021.100272.

Thank you,
Holly Jorgensen

What is the history of other vaccines that are on the current vaccine schedule prior to them being officially assigned to the current schedule?

As far as trials go, what were the adverse reactions reported for what is under consideration to mandate?

What are the long term adverse reactions? What is considered long term? Myocarditis? Infertility?

Are these risks outweighing benefit?

Children have a survival of 99%, so why put this inside their bodies to stimulate risk?

What happened to optional? Like flu vaccine being optional? The variant will change consistently like flu virus, so the vaccine would change consistently like a flu shot?

The poor kids say 'oh I want the vaccine but my mommy wont let me because she is afraid.' Lets remember they are children. Innocent, impressionable children. As parents we are here to nurish and protect them from harm. Because the survival rate of children from covid is so high, why are we pushing this?

Lets end the coercion. These children just want the fiasco to end! We as their parents are using our critical thinking skills before rushing into such a new 'vaccine'. We know by choosing to be inoculated, it is irreversible. You can not undo this choice once made.

Here is a link to a testimony from a parent of a 12 year old who participated in the Pfizer COVID-19 trial. Please watch.

The following link is virology data on the injections under discussion. I recommend visiting and reading it thoroughly.

[https://www.cell.com/cell/fulltext/S0092-8674\(22\)00076-9](https://www.cell.com/cell/fulltext/S0092-8674(22)00076-9)

<[https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cell.com%2Fcell%2Ffulltext%2FS0092-8674\(22\)00076-9&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cb0a72e7008784213532008d9edb03d23%7C11d0e2](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cell.com%2Fcell%2Ffulltext%2FS0092-8674(22)00076-9&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cb0a72e7008784213532008d9edb03d23%7C11d0e2)

Please consider this inoculation to be optional to all of those who reside in Washington state. Looking at the USA in its entirety, 2 out of 50 states have implemented it as mandatory. This is equivalent to 4% of the USA. That is not the popular choice, obviously. Please listen to the community and what they are asking for. We are asking for freedom of choice in regards to the covid 19 inoculation.

Thank you so much for your time. I appreciate you. May God bless you and your family.

Respectfully,

Christina Thacker

Subject: Studies regarding the COVID vaccine's inability to prevent transmission

External Email

Dear WA State Board of Health members,

I observed the TAG meeting on February 10th. With reference to criteria #6 regarding person-to-person transmission:

The CDC has acknowledged that the vaccines are not capable of stopping the spread of the virus. CDC director Rochelle Walensky stated: "What they can't do anymore is prevent transmission." This is the CDC's rationale for masking regardless of vaccination status.

You learned during the presentations given on 2/10/22 that a study on NBA players found no difference in the level of viral load or persistence of the virus between vaccinated and unvaccinated individuals.

An additional study by UC Davis similarly found no significant difference in viral load between vaccinated and unvaccinated individuals who tested positive. It also found no significant difference between infected people with or without symptoms. Source: <https://www.ucdavis.edu/health/covid-19/news/viral-loads-similar-between-vaccinated-and-unvaccinated-people>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.ucdavis.edu%2Fhealth%2Fcovid-19%2Fnews%2Fviral-loads-similar-between-vaccinated-and-unvaccinated-people&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Ce5c6391174dd4c0ea68008d9ee4a2af3%7C11d0e2>

Literature in the prestigious medical journal The Lancet also supports the findings that vaccinated people carry very high viral loads and transmit readily to other individuals.

Source: <https://archive.ph/cGPH5>

<[https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Farchive.ph%2FcGPH5&data=04%](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Farchive.ph%2FcGPH5&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Ce5c6391174dd4c0ea68008d9ee4a2af3%7C11d0e2)

For a vaccine that does not prevent transmission and infection, there is absolutely ZERO rationale for mandating it to school children. The vaccine becomes a personal choice that individuals may consider for themselves and their own children, as they weigh the risks and benefits for themselves and their family. It is a medication intended to treat symptoms of a disease and nothing more. Just like any other such medication, the WA State Board of Health would not mandate such a drug to citizens. There is no "greater good" rationale for a mandate for a product that does not prevent transmission. I urge you to please take these points into consideration, just as I urge you to take into consideration the comments you have received from concerned parents thus far.

Thank you for your time and consideration on this issue.

Subject: facing what may prove to be the most important decision

External Email

Board members

You are involved in group think and group brain washing. You need to get out and see what the public thinks about your medical tyranny group.

We the people have had enough of peanut allergy's, autism and a raft of other side effects from your medical tyranny.

You live in a medical bubble and are not cognoscente of reality.

Date: January 7, 2021
To: The Washington State Board of Health Members and COVID-19 TAG
From: The Board and Members of Informed Choice WA

Dear Board of Health and TAG Members:

You are facing what may prove to be the most important decision you will ever face as a member of the board or a group, or perhaps in your life.

The mRNA and DNA COVID-19 shots are unlike any other vaccines given before. The global push for their uptake and the volume of reported adverse reactions and deaths following administration are unprecedented. The hundreds of thousands of medical and scientific professionals globally standing up and speaking out against the response to COVID and to the shots is unprecedented, as is censorship on scientific debate. When this nation's top doctors and scientists are being kicked off of social media platforms and being fired from their jobs for daring to speak on their findings and science critical of

current policies, it is clear something has gone terribly wrong.

The CDC acknowledges the shots do not prevent infection or transmission and that any protection afforded fades rapidly, yet they refuse to abandon their push for increased uptake and boosters, and they refuse to promote existing early treatment protocols or acknowledge the mountain of evidence of the superior safety and effectiveness of naturally-acquired immunity. The systemic capture of federal agencies by the drug industry and globalists has never been more obvious.

Public Health in the U.S. is currently suffering from a lack of checks and balances and a dangerous dilution of critical facts. If every citizen were to watch the FDA's Vaccine and Related Biologicals Advisory Committee (VRBAC) meetings and to read the entirety of the clinical trial submissions to the FDA and the injury and death reports filed with Pfizer and VAERS, they would understand the experimental nature of the COVID shots and the known and suspected risks. They would question the clinical trial irregularities, the buried data, the lack of independent evaluation, and the high levels of conflicts of interest. But most do not. Votes for recommendation are made by federal entities despite the lack of scientific justification and the details of the meetings are not incorporated into the language passed down to citizens. The messaging becomes, "The

vaccines are safe and effective and recommended by the CDC.” This simplistic false messaging creates division at all levels of society, undermines fully informed consent, violating federal regulations and human rights declarations.

If after the past two years of witnessing the erratic federal response to COVID you still have faith in federal recommendations, we ask you to consider one clear example that reveals the federal agencies and committees do not deserve your trust. In the absence of a single co-administration safety study, the ACIP approved and the CDC actively promotes this message:

“COVID-19 vaccine and other vaccines may be administered on the same day.”

This is not science. This is not safety. This is not in the best interest of vaccine recipients. This is using Americans, especially our children who are most impacted, as unwitting test subjects. This is human experimentation without informed consent. This is criminal.

We are asking you today to honor the Precautionary Principle and First Do No Harm. We are asking you to dismantle the TAG, to halt rulemaking consideration for adding COVID shots to school requirements, and to adopt our Rulemaking Petition for a new rule that would prohibit mandating Emergency Use Authorized products and licensed products that lack completed Phase 3 trials.

Attached is our preliminary response to the “Criteria for Reviewing Antigens for Potential Inclusion in WAC 246-105-030” that supports our requests. There is far more scientific and medical information available. We hope this is just the beginning of your reviewing the critically important information you have likely been missing until now.

Sincerely,

The ICWA Board

Bernadette Pajer, Yael Kantor, Heidi Hartnell, Angela Dye
Informed Choice Washington
Presents:

A review of the COVID-19 shots

(Pfizer, Moderna, Janssen)

using the Washington State Board of Health’s

“Criteria for Reviewing Antigens for Potential Inclusion in
WAC 246-105-030”

<https://sboh.wa.gov/Portals/7/Doc/Publications/ImmunizationCriteria-Update2017-Final.pdf>

Before proceeding, it must be noted that the COVID-19 shots currently available do not meet the definition of “immunizing agent” per WAC 246.105.020(13), which states: “Immunizing agent” means any vaccine or other immunologic drug licensed and approved by the United States Food and Drug Administration (FDA), or meeting World Health Organization (WHO) requirements, for immunization of persons against vaccine-preventable diseases.

None of the currently available COVID-19 shots are licensed and approved by the FDA for school-age children; the shots similarly do not meet WHO requirements and are only authorized by the WHO for emergency use.

WAC: <https://app.leg.wa.gov/WAC/default.aspx?cite=246-105-020>

For clarity, BOH’s criteria language is shown in red, and ICWA language is shown in black.

I. Criteria on the effectiveness of the vaccine

1. A vaccine containing this antigen is recommended by the Advisory Committee on Immunization Practices and included on its Recommended Childhood & Adolescent Immunization Schedule.

The vaccine must be recommended by the ACIP. The ACIP reviews licensed vaccines. It makes

recommendations for newly licensed vaccines and regularly updates its recommendations. Its

process includes:

page 1

(1) a review of the Food and Drug Administration (FDA) labeling/package inserts for each vaccine;

(2) a thorough review of the scientific literature (both published and unpublished, when available)

on the safety, efficacy, acceptability, and effectiveness of the immunizing agent, with consideration of the relevance, quality, and quantity of published and unpublished data;

(3) an assessment of cost effectiveness;

(4) a review of the morbidity and mortality associated with the disease in the population in general

and in specific risk groups;

(5) a review of the recommendations of other groups; and

(6) a consideration of the feasibility of vaccine use in existing child and adult immunization

programs. Feasibility issues include (but are not limited to) acceptability to the community,

parents, and patients; vaccine distribution and storage; access to vaccine and vaccine administration; impact on the various health care delivery systems; population distribution effects;

and social, legal, and ethical concerns. [emphasis added]

Do any of the COVID-19 shots fulfill this criterion? No.

The ACIP did NOT recommend a COVID-19 shot licensed by the FDA for use in ages 5-11 or 12-15, nor did it place such a shot on the CDC Recommended Schedule.

There is no FDA COVID-19 shot licensed for ages 5-15 and no COVID-19 shot whatsoever on any CDC Recommended Schedule for any age. CDC Immunization Schedules, <https://www.cdc.gov/vaccines/schedules/index.html>.

The CDC recommended schedule website page for ages 7-18 mentions the ACIP's EUA and BLA recommendations for COVID, but it DOES NOT include the shots on the schedule.

On May 12, 2021, the ACIP adopted the following recommendation: "The Pfizer-BioNTech COVID-19 vaccine is recommended for children 12-15 years of age in the U.S. population under the FDA's Emergency Use Authorization." May 12, 2021 ACIP Meeting - Discussion and Vote, CDC YouTube channel, <https://youtu.be/91FCQN1aYqk>. On November 2, 2021, the ACIP adopted a similar recommendation for 5-11 year olds. Nov 2, 2021 ACIP Meeting - Clinical considerations for COVID-19 vaccination & Votes, CDC YouTube channel, <https://youtu.be/Fknv90AxSn8>.

Federal Emergency Use Authorization statutes indirectly prohibit school mandates of EUA products by requiring recipients be informed they have the option to accept or refuse the vaccine:

"The possible side effects of the vaccine are still being studied in clinical trials. . .

Under the EUA, there is an option to accept or refuse receiving the vaccine."

Vaccine Information Fact Sheet for Recipients and Caregivers about the Pfizer-BioNTech COVID-19 Vaccine to Prevent Coronavirus Disease 2019
page 2

(COVID-19) for Use in Individuals 5 through 11 Years of Age, pp. 4-5,
<https://www.fda.gov/media/153717/download>.

The option to accept or refuse an EUA product is not conditioned upon written assertion of exemption. Medical, personal, or religious exemptions are not required in order to exercise the right to refuse. Under EUA law, a parent or guardian may simply decline a shot for their minor child, without providing explanation or paperwork. A state-level daycare or school requirement would introduce the need for filing of exemptions, unlawfully exceeding the parameters set forth by Congress for EUA products.

"FDA believes that the terms and conditions of an EUA issued under section 564 preempt state or local law, both legislative requirements and common-law duties, that impose different or additional requirements on the medical product for which the EUA was issued in the context of the emergency declared under section 564." Vaccine EUA Questions and Answers for Stakeholders, U.S. Food & Drug Administration,

<https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/vaccine-eua-questions-and-answers-stakeholders#61b6059d67093>

Alarming, the CDC and ACIP made this recommendation even though they acknowledged that for both age groups:

Regarding potential harms after vaccination, evidence was type 4 (very low certainty) for serious adverse events and type 1 (high certainty) for reactogenicity. No data were available to assess the other GRADE benefits and harms including prevention of hospitalization due to COVID-19, prevention of multisystem inflammatory syndrome in children (MIS-C), SARS-CoV-2 seroconversion to a non-spike protein, or prevention of asymptomatic SARS-CoV-2 infection.

The Advisory Committee on Immunization Practices' Interim Recommendation for Use of Pfizer-BioNTech COVID-19 Vaccine in Adolescents Aged 12–15 Years — United States, May 2021, CDC MMWR, May 21, 2021,

<https://www.cdc.gov/mmwr/volumes/70/wr/mm7020e1.htm> and The Advisory Committee

on Immunization Practices' Interim Recommendation for Use of Pfizer-BioNTech COVID-19 Vaccine in Children Aged 5–11 Years — United States, November 2021, CDC MMWR November 12, 2021,

<https://www.cdc.gov/mmwr/volumes/70/wr/mm7045e1.htm>.

**Informed Choice Washington Presents:
A review of the COVID-19 shots
(Pfizer, Moderna, Janssen)
using the Washington State Board of Health's
"Criteria for Reviewing Antigens for Potential Inclusion in
WAC 246-105-030"**

<https://sboh.wa.gov/Portals/7/Doc/Publications/ImmunizationCriteria-Update2017-Final.pdf>

Before proceeding, it must be noted that the COVID-19 shots currently available do not meet the definition of "immunizing agent" per WAC 246.105.020(13), which states:

"Immunizing agent" means any vaccine or other immunologic drug licensed and approved by the United States Food and Drug Administration (FDA), or meeting World Health Organization (WHO) requirements, for immunization of persons against vaccine-preventable diseases.

None of the currently available COVID-19 shots are licensed and approved by the FDA for school-age children; the shots similarly do not meet WHO requirements and are only authorized by the WHO for emergency use.

WAC: <https://app.leg.wa.gov/WAC/default.aspx?cite=246-105-020>

For clarity, BOH's criteria language is shown in red, and ICWA language is shown in black.

I. Criteria on the effectiveness of the vaccine

1. A vaccine containing this antigen is recommended by the Advisory Committee on Immunization Practices and included on its Recommended Childhood & Adolescent Immunization Schedule.

The vaccine **must** be recommended by the ACIP. The ACIP reviews **licensed** vaccines. It makes recommendations for newly licensed vaccines and regularly updates its recommendations. Its process includes:

- (1) a review of the Food and Drug Administration (FDA) labeling/package inserts for each vaccine;
- (2) a thorough review of the scientific literature (both published and unpublished, when available) on the safety, efficacy, acceptability, and effectiveness of the immunizing agent, with consideration of the relevance, quality, and quantity of published and unpublished data;
- (3) an assessment of cost effectiveness;
- (4) a review of the morbidity and mortality associated with the disease in the population in general and in specific risk groups;
- (5) a review of the recommendations of other groups; and
- (6) a consideration of the feasibility of vaccine use in existing child and adult immunization programs. Feasibility issues include (but are not limited to) acceptability to the community, parents, and patients; vaccine distribution and storage; access to vaccine and vaccine administration; impact on the various health care delivery systems; population distribution effects; and social, legal, and ethical concerns. [emphasis added]

Do any of the COVID-19 shots fulfill this criterion? No.

The ACIP did NOT recommend a COVID-19 shot licensed by the FDA for use in ages 5-11 or 12-15, nor did it place such a shot on the CDC Recommended Schedule.

There is no FDA COVID-19 shot licensed for ages 5-15 and no COVID-19 shot whatsoever on any CDC Recommended Schedule for any age. CDC Immunization Schedules, <https://www.cdc.gov/vaccines/schedules/index.html>.

The CDC recommended schedule website page for ages 7-18 mentions the ACIP's EUA and BLA recommendations for COVID, but it DOES NOT include the shots on the schedule.

On May 12, 2021, the ACIP adopted the following recommendation: "The Pfizer-BioNTech COVID-19 vaccine is recommended for children 12-15 years of age in the U.S. population under the FDA's Emergency Use Authorization." *May 12, 2021 ACIP Meeting - Discussion and Vote*, CDC YouTube channel, <https://youtu.be/91FCQN1aYqk>.

On November 2, 2021, the ACIP adopted a similar recommendation for 5-11 year olds. *Nov 2, 2021 ACIP Meeting - Clinical considerations for COVID-19 vaccination & Votes*, CDC YouTube channel, <https://youtu.be/Fknv90AxSn8>.

Federal Emergency Use Authorization statutes indirectly prohibit school mandates of EUA products by requiring recipients be informed they have the option to accept or refuse the vaccine:

"The possible side effects of the vaccine are still being studied in clinical trials. . . Under the EUA, there is an option to accept or refuse receiving the vaccine."
Vaccine Information Fact Sheet for Recipients and Caregivers about the Pfizer-BioNTech COVID-19 Vaccine to Prevent Coronavirus Disease 2019

(COVID-19) for Use in Individuals 5 through 11 Years of Age, pp. 4-5,
<https://www.fda.gov/media/153717/download>.

The option to accept or refuse an EUA product is not conditioned upon written assertion of exemption. Medical, personal, or religious exemptions are not required in order to exercise the right to refuse. Under EUA law, a parent or guardian may simply decline a shot for their minor child, without providing explanation or paperwork. A state-level daycare or school requirement would introduce the need for filing of exemptions, unlawfully exceeding the parameters set forth by Congress for EUA products.

“FDA believes that the terms and conditions of an EUA issued under section 564 preempt state or local law, both legislative requirements and common-law duties, that impose different or additional requirements on the medical product for which the EUA was issued in the context of the emergency declared under section 564.” *Vaccine EUA Questions and Answers for Stakeholders*, U.S. Food & Drug Administration,
<https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/vaccine-eua-questions-and-answers-stakeholders#61b6059d67093>

Alarming, the CDC and ACIP made this recommendation even though they acknowledged that for both age groups:

Regarding potential harms after vaccination, evidence was type 4 (very low certainty) for serious adverse events and type 1 (high certainty) for reactogenicity. No data were available to assess the other GRADE benefits and harms including prevention of hospitalization due to COVID-19, prevention of multisystem inflammatory syndrome in children (MIS-C), SARS-CoV-2 seroconversion to a non-spike protein, or prevention of asymptomatic SARS-CoV-2 infection.

The Advisory Committee on Immunization Practices’ Interim Recommendation for Use of Pfizer-BioNTech COVID-19 Vaccine in Adolescents Aged 12–15 Years — United States, May 2021, CDC MMWR, May 21, 2021,
<https://www.cdc.gov/mmwr/volumes/70/wr/mm7020e1.htm> and *The Advisory Committee on Immunization Practices’ Interim Recommendation for Use of Pfizer-BioNTech COVID-19 Vaccine in Children Aged 5–11 Years — United States, November 2021*, CDC MMWR November 12, 2021,
<https://www.cdc.gov/mmwr/volumes/70/wr/mm7045e1.htm>.

Vaccines and Related Biological Products Advisory Committee (VRBPAC) member Dr. Eric Rubin stated “[Just b]ecause we give an EUA to the vaccine, doesn’t mean we have to use it. And I think we would have to think hard about how to use it given all of the concerns that have been raised.” Transcript of *FOOD AND DRUG ADMINISTRATION (FDA) Center for Biologics Evaluation and Research (CBER) 166th Vaccines and Related Biological Products Advisory Committee (VRBPAC) Meeting*, June 10, 2021, p. 242. <https://www.fda.gov/media/150815/download>.

How can the CDC claim that benefits outweigh risks when they admit they do not know the risks?

Comirnaty is the only COVID-19 product that has ostensibly received FDA licensure for any pediatric populations—namely those 16 and up; however, that licensure is limited to manufacturing and delivery. The FDA has stated that this product is merely “**ready** for approval for **use** in individuals 16 years of age and older . . .” [emphasis added]. *August 23, 2021 Approval Letter - Comirnaty*, from FDA to BioNTech, p. 4, <https://www.fda.gov/media/151710/download>. The Comirnaty vaccine is not available anywhere in the United States, and there is debate about whether the vials of Pfizer’s EUA product are now “licensed” for those 16 and up, or if those are still EUA products. The FDA states that EUA Pfizer-BioNTech COVID-19 Vaccine and the Comirnaty (COVID-19 Vaccine, mRNA) “are legally distinct with certain differences that do not impact safety or effectiveness.” There is much debate over what “legally distinct” means, especially to consumers. If “legally distinct” means that the currently available Pfizer products in the U.S. are under EUA regulations, then there is no licensed product available for 16-18 year olds. Regardless of whether the Pfizer product is licensed for 16-18 year olds, the product lacks completed Phase 3 clinical trials, and the PREP Act still shields manufacturers for liability for injuries and deaths. As far as we can tell, never in history has the FDA licensed a product without completed clinical trials, nor when all the ongoing trials have been unblinded, subverting the ability to compare outcomes.

There are ZERO co-administration safety studies; therefore, it is highly concerning that the CDC states, and the Washington State Department of Health repeats: “COVID-19 vaccine and other vaccines may be administered on the same day.” CDC, Immunization Schedule, COVID-19 Vaccination, <https://www.cdc.gov/vaccines/schedules/hcp/imz/child-adolescent.html>

Disregarding the absence of any safety studies, the Washington DOH states, “Your child can get a COVID-19 vaccine at the same time they get other vaccines. You do not need to schedule your child’s required school vaccinations or other recommended vaccines separately from COVID-19 vaccination. A COVID-19 vaccine appointment is another opportunity to get your child caught up on all of their recommended vaccines.”

Washington State Department of Health, Vaccinating Youth,
<https://www.doh.wa.gov/Emergencies/COVID19/VaccineInformation/VaccinatingYouth#VaccineTiming>

As noted in our cover letter, this is not science. This is not safety. This is not in the best interest of vaccine recipients. This is using Americans, especially our children who are most impacted, as unwitting test subjects. This is human experimentation without informed consent. This is criminal.

2. The vaccine containing this antigen is effective as measured by immunogenicity* and population-based prevention data in Washington State, as available.

*Immunogenicity means the ability of an antigen or vaccine to stimulate the body to produce an immune response. Vaccines often include antigens that stimulate an immune response to a particular disease but are not necessarily the same as the organism that would cause the disease.

In the clinical development of a vaccine, the effectiveness of the vaccine is studied using FDA-approved research protocols that evaluate whether a vaccine protects individuals from contracting the disease in population-based studies or generates an immunologic response (immunogenicity) comparable to vaccines that have been shown to be effective in preventing disease. More information about its population-based effectiveness is gained from large trials and community-based analyses after FDA approval. There may or may not be effectiveness data from Washington State, but the disease prevalence and incidence in the state should be sought and reviewed.

Do any of the COVID-19 shots fulfill this criterion? No.

Immunogenicity: While the COVID-19 shots trigger the recipient's cells to create spike proteins, which then trigger an immune response and antibodies to the self-created spike proteins, this immune response has proven incapable of preventing infection or transmission. In short, the COVID shots do not prevent recipients from "contracting the disease."

Some studies show recipients may be afforded a short window—a few weeks or months—during which their risk of infection or risk of severe disease is minimally reduced in comparison to those without natural immunity, but even this protection appears to be dropping with each new variant.

This preprint study shows that PCR-positive tests for Delta variant occurred in a higher percentage of vaccinated individuals than in unvaccinated. From this it could be concluded that, regardless of vaccination status, all individuals are able to spread COVID-19 with similar viral loads. Riemersma et al., *Shedding of Infectious SARS-CoV-2 Despite Vaccination*,

<https://www.infosperber.ch/wp-content/uploads/2021/10/210731-Wisconsin.Viral-Load.pdf>.

Dr. Rochelle Walensky states that the vaccine does not prevent infection or transmission of the Delta variant, CNN interview with Wolf Blitzer, July 27, 2021, <https://www.youtube.com/watch?v=TKFWGvvlVLI>

Another pre-print study, Acharya et al., *No Significant Difference in Viral Load Between Vaccinated and Unvaccinated, Asymptomatic and Symptomatic Groups Infected with SARS-CoV-2 Delta Variant*, “found no significant difference in cycle threshold values between vaccinated and unvaccinated, asymptomatic and symptomatic groups infected with SARS-CoV-2 Delta.” <https://www.medrxiv.org/content/10.1101/2021.09.28.21264262v1>.

The CDC reported that among the first U.S. cases of COVID-19 attributed to the Omicron variant, 79% of the 43 cases studied occurred in fully vaccinated individuals, including 14 who had received booster doses. *SARS-CoV-2 B.1.1.529 (Omicron) Variant — United States, December 1–8, 2021*, CDC MMWR, December 17, 2021, <https://www.cdc.gov/mmwr/volumes/70/wr/mm7050e1.htm>.

The criterion explicitly requires that “information about population-based effectiveness is gained from large trials,” yet the clinical trial study on which the EUA was based for 5-11 year olds included only 2,268 children total. CDC and ACIP acknowledged that the study was too small to find serious adverse reactions. (See our response above to Criterion #1.) *Evaluation of the BNT162b2 Covid-19 Vaccine in Children 5 to 11 Years of Age*, N Engl J Med 2022; 386:35-46, DOI: 10.1056/NEJMoa2116298, <https://www.nejm.org/doi/full/10.1056/NEJMoa2116298>.

A pre-print study suggests that vaccine effectiveness wanes to negative effectiveness, therefore increasing chances of contracting COVID, after 90 days. The authors suggest a booster would be necessary in order to attain previous levels of protection. Do parents really want their child to get a booster every 90 days? Would this be practical or manageable? Hansen et al., *Vaccine effectiveness against SARS-CoV-2 infection with the Omicron or Delta variants following a two-dose or booster BNT162b2 or mRNA-1273 vaccination series: A Danish cohort study*, <https://www.medrxiv.org/content/10.1101/2021.12.20.21267966v3#p-5>

In contrast to the inability of the COVID shots to prevent disease, natural immunity has been found to prevent infection. This superior, broad protection will serve children well throughout their lives. “[C]hildren display a characteristically robust and sustained adaptive immune response against SARS-CoV-2 with substantial cross-reactivity against other hCoVs.” Dowel, et al., *Children develop robust and sustained*

cross-reactive spike-specific immune responses to SARS-CoV-2 infection,
<https://www.nature.com/articles/s41590-021-01089-8>

In study after study, it has been shown that natural immunity far exceeds vaccine-induced immunity in length and quality. Please view the following studies here that show the superiority of natural immunity: "144 Research Studies Affirm Naturally Acquired Immunity to Covid-19: Documented, Linked and Quoted," Brownstone Institute, October 17, 2021.

<https://brownstone.org/articles/79-research-studies-affirm-naturally-acquired-immunity-to-covid-19-documented-linked-and-quoted/>

3. The vaccine containing this antigen is cost effective from a societal perspective.

This analysis should consider both the costs of the immunization (e.g. antigen, storage, administration, medical and societal costs of adverse reactions to the immunization, etc.) and the benefits of the immunization (e.g. lives saved, medical and societal benefits of preventing adverse reactions from vaccine-preventable disease, etc.). This process may include consultation with an economist as resources allow. Vaccines may be cost effective without being cost saving. In other words, the direct costs of some vaccines (e.g. antigen, storage, administration) balanced against direct savings (e.g. medical care, disability, death) may not result in net savings. Societal or indirect costs (e.g. lost productivity of care takers of ill children) will also need to be taken into consideration. These costs are much harder to quantify. Not all vaccines recommended by the ACIP are cost saving or equally effective, so some determination of the vaccine's relative cost effectiveness may need to be made for comparison purposes when applying the criteria.

Do any of the COVID-19 shots fulfill this criterion? No.

To parents and members of Informed Choice Washington, the most important consideration in this criterion is the "medical and societal costs of adverse reactions to the immunization" as well as what the criterion overlooks:

- the cost of ignoring or outright censoring lifesaving preventative and early treatment protocols, which lead to superior natural immunity;
- the cost of exposing children to genetic therapies, such as DNA and mRNA injections, in the absence of adequately sized and designed safety studies for either short or long-term outcomes;
- and the cost of interrupting a child's natural immune response to what is now an endemic virus without a complete understanding of how that interruption will impact their immunity to the virus and its mutations in the future.

Please see risk information provided under Criterion #4 below, in particular, the two graphs summarizing data from Pfizer's clinical trials that have already demonstrated that any benefits from the shots are outweighed by the injuries and death they cause. This does not account for long-term and yet unknown harms.

4. Experience to date with the vaccine containing this antigen demonstrates that it is safe and has an acceptable level of side effects

Vaccinations are not without side effects. The known risks associated with each vaccine (or antigen) must be balanced against the risks of the disease. Vaccine safety will be evaluated using research and reports from: pre-licensure, the Vaccine Adverse Event Reporting System (VAERS) and the Vaccine Safety Datalink (VSD) project, and other reliable sources.

Do any of the COVID-19 shots fulfill this criterion? No.

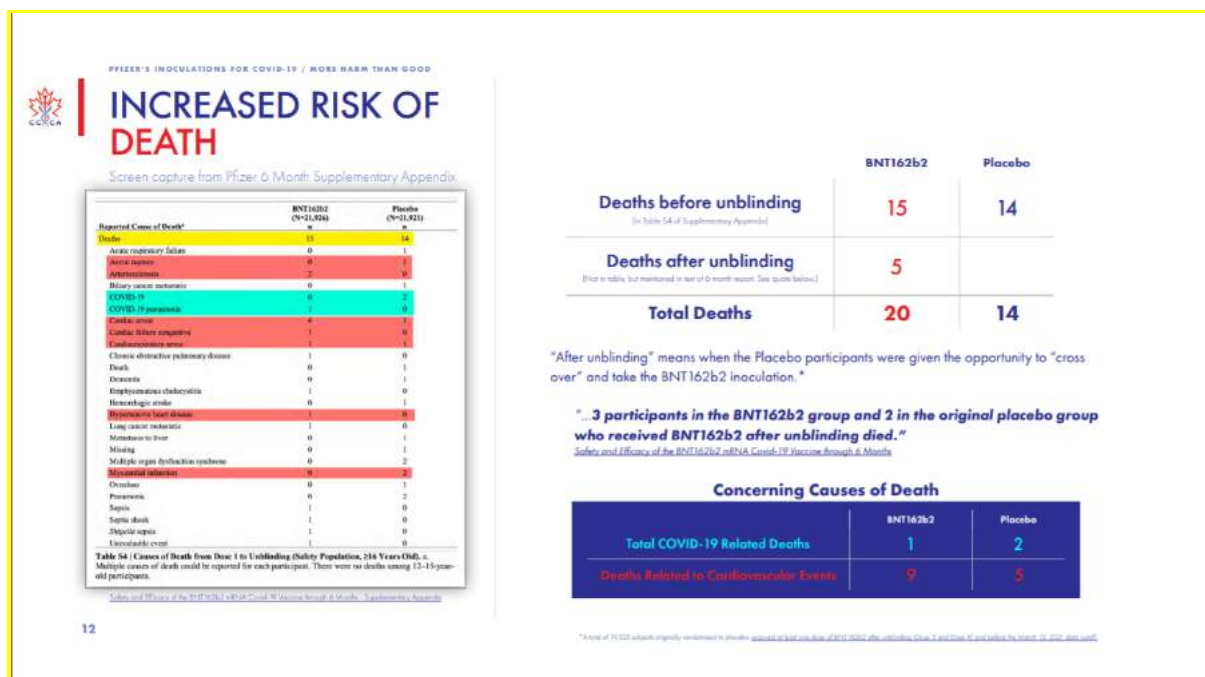

While Pfizer's own randomized control trial data indicated a decrease in positive cases, they also showed an increase in illnesses and deaths compared to the placebo group. There is no benefit to reducing cases if it comes at the cost of increased illness, hospitalizations, and death.

The graphic below includes Table S3, *Participants Reporting at Least 1 Adverse Event From Dose 1 to 1 Month After Dose 2 During the Blinded Follow-up Period*, on page 11 of [Pfizer's six-month supplementary appendix](#) to its study entitled [Safety and Efficacy of the BNT162b2 mRNA Covid-19 Vaccine through 6 Months](#). Vaccinees experienced worse health outcomes than did placebo recipients.

The following graphic, which includes Table S4, *Causes of Death from Dose 1 to Unblinding*, on page 12 of [Pfizer's six-month supplementary appendix](#) to its study entitled [Safety and Efficacy of the BNT162b2 mRNA Covid-19 Vaccine through 6 Months](#), illustrates the increase in deaths within six months for those who received the injections. Of particular concern are the types of death, including cardiovascular events

(in red); there are almost twice as many in the test group as in the control group. This is Level One evidence of harm, as the data is derived from a randomized control trial (RCT).

Although FDA press releases proclaim that the benefits of the product would outweigh its risks, this conclusion is based upon modeling, which is the lowest quality of evidence given its reliance on layers of assumptions and subjectivity. FDA already had access to a superior form of data: the RCT results from the manufacturer itself, which it disregarded; "Therefore, the FDA conducted its own benefit-risk assessment using modelling to predict how many symptomatic COVID-19 cases, hospitalizations, intensive care unit (ICU) admissions and deaths from COVID-19 the vaccine in children 5 through 11 years of age would prevent versus the number of potential myocarditis cases, hospitalizations, ICU admissions and deaths that the vaccine might cause. The FDA's model predicts that overall, the benefits of the vaccine would outweigh its risks in children 5 through 11 years of age." FDA NEWS RELEASE: "FDA Authorizes Pfizer-BioNTech COVID-19 Vaccine for Emergency Use in Children 5 through 11 Years of Age," U.S. Food & Drug Administration, <https://www.fda.gov/news-events/press-announcements/fda-authorizes-pfizer-biontech-covid-19-vaccine-emergency-use-children-5-through-11-years-age>

One 12-year-old child, Maddie de Garay, participated in Pfizer's study. She suffered multiple and severe injuries, requiring 9 ED visits and 3 hospital stays (totaling 64 days by June 1, 2021). She is still in a wheelchair today. The New England Journal of Medicine article in which Pfizer's RCT results was reported, [Safety and Efficacy of the](#)

[BNT162b2 mRNA Covid-19 Vaccine through 6 Months](#), failed to disclose any of Maddie's adverse reactions. Pfizer disingenuously mischaracterized her injuries as "functional abdominal pain" in its *Emergency Use Authorization (EUA) Amendment for an Unapproved Product Review Memorandum*, p. 30.

<https://www.fda.gov/media/148542/download>. Senator Ron Johnson held a roundtable, in which many individuals who took the COVID-19 vaccine shared their adverse reaction experiences that required medical attention.

<https://thehighwire.com/videos/stephanie-and-maddie-de-garay-testimony/> at 5:13.

This study asks a very pertinent question: Why are we vaccinating children against COVID-19? The abstract in this study explains the following:

A novel best-case scenario cost-benefit analysis showed very conservatively that there are five times the number of deaths attributable to each inoculation vs. those attributable to COVID-19 in the most vulnerable 65+ demographic. The risk of death from COVID-19 decreases drastically as age decreases, and the longer-term effects of the inoculations on lower age groups will increase their risk-benefit ratio, perhaps substantially... (emphasis added.)

This study goes on to say that:

... it will use the term 'inoculated' rather than vaccinated, because the injected material in the present COVID-19 inoculations prevents neither viral infection nor transmission (emphasis added.)

Kostoff, Ronald, et al., "Why Are We Vaccinating Children Against Covid-19?" Toxicology Reports, Vol 8 2021, pages 1665-1684,
<https://www.sciencedirect.com/science/article/pii/S221475002100161X>

Here is a list of websites where medical professionals and/or individuals have documented their experiences with reactions from the COVID-19 vaccine:

<https://openvaers.com/covid-data/adverse-events-by-state>

<https://vaers.hhs.gov/data.html>

<https://www.c19vaxreactions.com>,

<https://www.RealNotRare.com/>

<https://www.medalert.org>

<https://www.scivisionpub.com/pdfs/us-covid19-vaccines-proven-to-cause-more-harm-than-good-based-on-pivotal-clinical-trial-data-analyzed-using-the-proper-scientific--1811.pdf>

Dr. Cody Meissner, VRBPAC member, stated: “I want to be sure that the risk of the vaccine is less than the risk of hospitalization because four [COVID hospitalizations per million in children under 18] certainly does not constitute an emergency, and there are significant questions about the safety of this vaccine. . . . [This hospitalization rate is] on the CDC website. That is not an emergency. It is a very low hospitalization rate. And the rates may change as the season changes, but we’re starting from a tiny, tiny rate. . . . [T]he rates are also falling pretty dramatically among adults and children. So as more people are immunized and become immune from infection, I think it’s very likely that we’re going to get this pandemic under pretty good control. Now the issue -- so the issue to me is safety. . . . [W]e can look at the 2,000 or 2,200 adolescents who are enrolled in the Pfizer vaccine between 12 through 15 years of age -- 2,200, so half got the vaccine, half got placebo. Nobody was hospitalized. Nobody died. And there were some who got URIs[upper respiratory infections] So 2,200 is not going to address the issue of safety. I’m worried about myocarditis. . . . [W]e don’t know what that means on a longterm basis. Will there be scarring of the myocardium? Will there be a predisposition to arrhythmias later on? Will there be an early onset of heart failure? I think that’s unlikely, but we don’t know that. And so before we start vaccinating millions of adolescents and children, it is so important to find out what the consequences are because COVID-19 disease is disappearing in adolescents and children. And I think we have to be so clear about what we’re dealing with. Let me make one more point. In 2003, there was a publication in JAMA regarding myocarditis following the Dryvax vaccine, the smallpox vaccine which is, of course, a live vaccine. But in that situation, the military -- it was given to young recruits. The rates of myocarditis in the military young men -- because it was mostly men in those days -- was 2 per 100,000. And after the Dryvax vaccine the rates were 7.8 cases of myocarditis in the 30 days afterwards. So there was a three-fold increase. And in fact, Dr. Tony Fauci wrote an editorial in that same issue of JAMA discussing these rates of myocarditis. So I am really concerned that the FDA may by not insisting on a full BLA, which to me means at least 12 months, maybe even 18 or 24 months of follow up in children and adolescents, before they are recommended to receive this vaccine. I do not feel we can justify a EUA including children under an Emergency Use Authorization. The burden of disease is so small, and the risks are just not clear. We don’t know.” June 10, 2021, VRBPAC meeting transcript, p. 62, p. 225- 228. <https://www.fda.gov/media/150815/download>

From the front lines in medical care

Many medical professionals are speaking up and sharing their experiences of working in hospitals right now as they care for patients who are coming in with what they can associate to vaccine reactions. “More VC Nurses Blow Whistle on ‘Overwhelming’ Numbers of Heart Attacks, Clotting, Strokes,” *The Conejo Guardian*, December 14, 2021. <https://conejoguardian.org/2021/12/14/more-vc-nurses-blow-whistle-on-overwhelming-numbers-of-heart-attacks-clotting-strokes/>

Individuals are sharing their own experiences with their health while taking the COVID shots. U.S. Senator Ron Johnson hosted a round table on November 2, 2021, to allow these individuals to tell their stories.

<https://childrenshealthdefense.org/defender/nov-2-sen-ron-johnson-cdh-covid-vaccine-injuries-federal-mandates/>

Colette Martin, an RN of 17 years, testified in front of the Louisiana House about the harms of vaccine reactions that she has witnessed. She also stated that more children have died from the vaccine than from covid itself. Louisiana House of Representatives Health and Welfare Committee Hearing, December 6, 2021,

https://www.house.louisiana.gov/H_Video/VideoArchivePlayer?v=house/2021/dec/1206_21_HW (begin at 6:54:00)

In the first two and a half months after EUA was granted, 1,223 deaths were reported to Pfizer. This is a huge red flag that requires deep investigation. See Table 1, Page 7, showing fatal case outcomes in Pfizer’s “5.3.6 Cumulative Analysis of Post-Authorization Adverse Event Reports of PF-07302048 (BNT162B2) Received Through 28-Feb-2021”

<https://phmpt.org/wp-content/uploads/2021/11/5.3.6-postmarketing-experience.pdf>,

While critics commonly question the veracity of VAERS data, as reported on the U.S. government’s Healthy People 2020 site, 83% of the reporters to the Vaccine Adverse Events Reports System were health care workers or pharmaceutical and government-based sources during the years 1990-2010. “The majority of VAERS reports are submitted by vaccine manufacturers (37%) and health care providers (36%). The remaining reports are obtained from state immunization programs (10%), vaccine recipients (or their parents/guardians, 7%) [sic], and other sources (10%).” Office of Disease Prevention and Health Promotion, Vaccine Adverse Reporting System, <https://www.healthypeople.gov/2020/data-source/vaccine-adverse-event-reporting-system>.

Further, 72% of a sampling of 250 of the 1,644 VAERS reports of early death received in the first three months of 2021 were filed either by health service employees or pharmaceutical employees. “We identified health service employees as the reporter in at least 67% of the reports, while pharmaceutical employees were identified as the reporter in a further 5%.” Even though the sample contained only people vaccinated early in the rollout, *i.e.*, those who were elderly or with significant health conditions, an adverse vaccine reaction could be ruled out in only 14% of the cases. Mclachlan, et al., *Analysis of COVID-19 vaccine death reports from the Vaccine Adverse Events Reporting System (VAERS) Database Interim: Results and Analysis*. 10.13140/RG.2.2.26987.26402. (2021)

“While it seems that the incidence of pericarditis during the vaccination campaign period is increased, a more comprehensive data collection on a wider scale should be done. We hope this report will raise awareness to the subject and will serve as a reminder to report events as part of the post-marketing investigations and allow for a thorough adverse events following immunization analysis.” *Transient Cardiac Injury in Adolescents Receiving the BNT162b2 mRNA COVID-19 Vaccine*, https://journals.lww.com/pidj/Fulltext/2021/10000/Transient_Cardiac_Injury_in_Adolescents_Receiving.1.aspx

II. Disease Burden Criteria

5. The vaccine containing this antigen prevents disease(s) that has significant morbidity and/or mortality in at least some sub-set of the population.

Vaccines have the potential to reduce, or in some cases even eliminate, diseases that can result in serious illness, long-term disability, or death. For example, before measles vaccine was available, nearly everyone in the United States contracted measles and an average of 450 measles-associated deaths were reported each year between 1953 and 1963. The morbidity/mortality burden of measles was not equal for all members of the population. Examples of significant morbidity measures include rates of hospitalizations, long-term disability, disease incidence, and disproportionate impact.

Do any of the COVID-19 shots fulfill this criterion? No.

First, we must emphatically state that it is unethical to use children as shields for adults.

Peter Doshi, Ph.D: “I want to address this idea of vaccinating children to protect adults. I encourage the Advisory Committee to read Dr. Lavine et al.’s editorial to explain why, “Vaccinating children is likely to be of marginal benefit in reducing the risk to others.” And even if you think a small benefit is better than nothing, let’s not forget that it’s an unproven hypothetical benefit. We need confirmatory evidence, not just assumptions. And then there’s the ethics and the law. **FDA can only indicate a product for use in a**

given population if benefits outweigh risks in that same population. So if benefits don't outweigh risks in children themselves, it can't be indicated for children, full stop. Whether vaccinating children might help adults is a moot point." Comments before the Vaccines and Related Biological Products Advisory Committee, June 10, 2021 <https://www.fda.gov/media/150815/download>, pp. 171-172. (emphasis added)

Children and young adults are at an extremely low risk of mortality from COVID-19. When one subset of the population (children) carries a high risk for injury from an antigen but low risk for injury from the disease, we must consider the mandate of such an antigen to be unethical. Bhopal, "Children & Young People Remain at a Low Risk of Covid-19 Mortality," *The Lancet Children & Adolescent Health*, Correspondence, Vol 5, Issue 5, E12-E13, May 1, 2021.

[https://www.thelancet.com/journals/lanchi/article/PIIS2352-4642\(21\)00066-3/fulltext](https://www.thelancet.com/journals/lanchi/article/PIIS2352-4642(21)00066-3/fulltext)

The *Forbes* article "The Hideous Truths of Testing Vaccines on Humans" examined the testing of hepatitis vaccines on the residents of Willowbrook, a home for severely disabled children. The author states: "In 1966, renowned medical ethicist Henry K. Beecher published an article titled, "Ethics and Clinical Research," which listed Willowbrook as an example of an unethical clinical experiment and concluded that "there is no right to risk an injury to one person for the benefit of others." *Forbes*, June 12, 2020,

<https://www.forbes.com/sites/leahrosenbaum/2020/06/12/willowbrook-scandal-hepatitis-experiments-hideous-truths-of-testing-vaccines-on-humans/>

Second, the measles example given in this criterion reveals that historically the BOH and DOH have never stepped back to consider the long term or unintended consequences of mass-vaccination campaigns. We agree that nearly everyone in the United States used to be exposed to measles, mostly in childhood when it's safest to experience, and they developed lifetime immunity. Merck's on-trial-for-fraud MMR vaccine does not confer lifetime immunity for a significant portion of the population, pushing susceptibility into the very young and into adult populations. We are nearing a time when more people in the U.S. will be susceptible to measles than before the vaccines were released. And studies show a third dose doesn't help. Was there perhaps a better way to reduce those 450 annual deaths and the cases of very severe illness, without sacrificing superior natural immunity for the vast majority (99.99%) of the population—and without exposing millions of children annually to the risks of the MMR? What about the failure of the mumps portion of the shot? More information can be found here: <https://informedchoicewa.org/measles/> To learn about the politics surrounding the loss of the personal exemption to the MMR, see this post:

<https://informedchoicewa.org/education/were-wa-lawmakers-deceived-about-measles-last-session-part-1/>

Is there perhaps a better way to protect those susceptible to severe disease and fatal COVID-19 outcomes, without sacrificing superior natural immunity for the >99.9% of the population who fully recover and develop natural immunity? Optimal nutritional support, early treatment protocols, and the benefits of natural immunity are tragically not part of public health's approach with any vaccine-targeted infection. With COVID, the neglect of these public health tools has cost many lives.

Third: as shown in our response to Criterion #1, the shots do not prevent transmission; any unethical attempt to use children as shields will fail.

As of January 6, 2022, the seven-day case rate in Washington State for ages 4-11 was 504.8 per 100,000. The seven-day hospitalization rate was 1.2 in 100,000. Compare this with the risk of myocarditis in vaccinated adolescents, which is 18.52 in 100,000 as seen in <https://pubmed.ncbi.nlm.nih.gov/34849657/>

Age Group	7-Day Case Rate	7-Day Hospitalization Rate	7-Day Testing Rate	7-Day Percent Positivity
Ages 4-10	504.8	1.2	--	--
Ages 11-13	558.1	0.7	--	--
Ages 14-19	731.8	1.8	--	--
Ages 0-11	480.7	2.3	--	--
Ages 12-19	692.4	1.5	--	--
Ages 20-34	869.9	10.7	--	--
Ages 35-49	724.5	12.0	--	--
Ages 50-64	444.2	20.0	--	--
Ages 65-79	227.3	30.9	--	--
Ages 80+	211.2	56.2	--	--

Cases, Hospitalizations, Testing and Percent Positive by Age

Graph from <https://www.doh.wa.gov/Emergencies/COVID19/DataDashboard>

Between January 4, 2020, and January 6, 2022, 573 children between the ages of 5-18 have died with COVID in the entire United States. CDC Deaths by Sex, Ages 0-18 years, <https://data.cdc.gov/NCHS/Deaths-by-Sex-Ages-0-18-years/xa4b-4pzy>

On December 31, 2021, Anthony Fauci stated, “. . . [I]f a child goes into the hospital, they automatically get tested for COVID, and they get counted as a COVID-hospitalized individual, when in fact they may go in for a broken leg or appendicitis of something like that, so it's overcounting the number of children who are . . . hospitalized **with** COVID as opposed to **because** of COVID.” MSNBC interview, <https://twitter.com/TheEliKlein/status/1476917049435856925>

Vaccines and Related Biological Products Advisory Committee member Dr. Cody Meissner stated “[F]our per million [pediatric hospitalizations] certainly does not constitute an emergency, and there are significant questions about the safety of this product.” June 10, 2021, VRBPAC meeting transcript, p. 62.

<https://www.fda.gov/media/150815/download>

6. Vaccinating against this disease reduces the risk of person-to-person transmission, with transmission in a school or child care setting or activity being given the highest priority.

Having a large proportion of the population vaccinated with the antigen helps to stem person to person transmission of the disease (i.e., herd immunity). Even community members who are not vaccinated (such as newborns and those with chronic illnesses) are offered some protection because the high immunization rate results in the disease having less opportunity to spread within the community. Vaccinating children in school and/or child care can increase the percentage of children in these groups who are immune and thus reduce the risk of outbreaks of the disease in these groups and in the community at large. Special consideration of disease transmission in a school or child care setting or activity should be given the highest priority. For the purpose of this criterion, “activity” refers to school or child care extracurricular activities including, but not limited to, field trips, sports events, or other activities held on or off campus.

Do any of the COVID-19 shots fulfill this criterion? No.

The Pfizer, Moderna, and Janssen products do not prevent transmission, serious disease, or death.

The CDC director says that vaccines do not prevent transmission. “Fully vaccinated people who get a Covid-19 breakthrough infection can transmit the virus, CDC chief says,” *CNN Health*,

<https://www.cnn.com/2021/08/05/health/us-coronavirus-thursday/index.html>

“COVID-19 infections are increasing in Gibraltar, with 128 new infections reported on average each day. That’s 97% of the peak — the highest daily average reported on January 5. There have been 9,600 infections and 100 coronavirus-related deaths reported in the country since the pandemic began. . . Gibraltar has administered at least 108,323 doses of COVID vaccines so far. Assuming every person needs 2 doses, that’s enough to have vaccinated about 160.7% of the country’s population.” Reuters COVID-19 Tracker, accessed January 7, 2022,

<https://graphics.reuters.com/world-coronavirus-tracker-and-maps/countries-and-territories/gibraltar/>

Vaccinated people can still spread the Delta variant. Vaccination does not stop the transmission of COVID. “Testing a subset of low-Ct samples revealed infectious

SARS-CoV-2 in 15 of 17 specimens (88%) from unvaccinated individuals and 37 of 39 (95%) from vaccinated people.” Riemersma, “Shedding of Infectious SARS-CoV-2 Despite Vaccination,” <https://www.medrxiv.org/content/10.1101/2021.07.31.21261387v4>

Individuals who have been previously infected do not show a need to be vaccinated. This is consistent with Chapter 246-105-020 WAC: “fully immunized” means an immunization status where a child has proof of acquired immunity . . . ’ It is unreasonable to mandate that those with natural immunity be “boosted” with a vaccine when there is not scientific evidence that this practice is safe or effective in the long term. Boosting an individual’s levels of antibodies to the vaccine-induced spike protein—which no longer matches the dominant strain now circulating—is experimental. Also see Shrestha, “Necessity of COVID-19 vaccination in previously infected individuals,” <https://doi.org/10.1101/2021.06.01.21258176>.

Children have sustained and robust natural immunity after contracting COVID. Dowel, “Children develop robust and sustained cross-reactive spike-specific immune responses to SARS-CoV-2 infection,” *Nat Immunol* 23, 40–49 (2022). <https://doi.org/10.1038/s41590-021-01089-8>.

Long-term effects of the vaccine trials in children are unknown. Deaths in children are a fraction of the percentage of deaths in all other age categories. Kostoff, “Why are we vaccinating children against COVID-19?” *Toxicology Reports*, Vol 8, 2021, Pages 1665-1684, <https://doi.org/10.1016/j.toxrep.2021.08.010>.

Barnstable County, Massachusetts, had an outbreak amongst a population of tourists that was approximately 74% vaccinated, which indicates that vaccination does not prevent contracting or transmitting COVID. Brown, “Outbreak of SARS-CoV-2 Infections, Including COVID-19 Vaccine Breakthrough Infections, Associated with Large Public Gatherings - Barnstable County, Massachusetts, July 2021,” *MMWR Morb Mortal Wkly Rep*, 2021 Aug 6;70(31):1059-1062. <https://pubmed.ncbi.nlm.nih.gov/34351882/>.

Despite 100% vaccination rate, consistent testing, and quarantining, a research station in Antarctica still had an outbreak of COVID cases. “COVID-19 Outbreak Hits Research Station in Antarctica,” WebMD News Brief, <https://www.webmd.com/lung/news/20220103/covid-19-outbreakohitsoresearchostation-in-antarctica>

III. Implementation of the Criteria

7. The vaccine containing this antigen is acceptable to the medical community and the public.

It is possible to gauge the level of provider acceptance of a vaccine by querying state professional societies such as the Washington Academy of Family Physicians and the Washington State Chapter of the American Academy of Pediatrics. Vaccine uptake data are also available from the Department of Health to determine provider use of the vaccine. While there is generally a good correlation between the levels of physicians' and the general publics' acceptance of particular vaccines, the TAG should consider additional ways of accurately gauging public acceptance of the particular vaccine. Adding an antigen to WAC 246- 105-030 related to a vaccine with poor provider or public acceptance would likely be resisted. Postponing the regulation until there is greater approval of the vaccine would assure more effective policy.

Do any of the COVID-19 shots fulfill this criterion? No.

There has never been more opposition from the medical and scientific community or the public to any type of vaccine or vaccine policy than there is to the COVID-19 products and policies.

EXAMPLES OF MEDICAL AND SCIENTIFIC OPPOSITION

- Over 15,000 members of the [International Alliance of Physicians and Medical Scientists](#) published a declaration resolving that healthy children shall not be subject to forced vaccination. They state:
 - Negligible clinical risks from SARS-CoV-2 infection exist for healthy children under eighteen.
 - Long term safety of the current COVID vaccines in children cannot be determined prior to instituting such policies. Without high-powered, reproducible, long term safety data, risks to the long-term health status of children remain too high to support use in healthy children.
 - Children risk severe, adverse events from receiving the vaccine. Permanent physical damage to the brain, heart, immune and reproductive system associated with SARS-CoV-2 spike protein-based genetic vaccines has been demonstrated in children.
 - Healthy, unvaccinated children are critical to achieving herd immunity. Natural immunity is proven to tolerate infection, benefiting community protection while there is insufficient data to assess whether COVID vaccines assist herd immunity.

Supporting Evidence:

<https://doctorsandscientistsdeclaration.org/home/supporting-evidence/#children>

- More than 500 scientists, medical doctors and health care and other professionals united as the [Canadian Covid Care Alliance](https://www.canadiancovidcarealliance.org). Their presentation *More Harm Than Good* reviews Pfizer's six-month data and reveals that Pfizer's COVID-19 inoculations cause more illness than they prevent. See the *More Harm than Good* video and PDF slides here: <https://www.canadiancovidcarealliance.org>

"It's clear that Pfizer - and the agencies overseeing their trials - failed to follow established, high quality safety and efficacy protocols right from the beginning. . . Any government that approved this medical intervention for its citizens should have ensured that the trial had used the appropriate clinical endpoints and high quality safety science. . . Any government official who possesses this evidence and continues to allow its citizens to be inoculated with a toxic agent is, at the very least, negligent."

1. The [Association of American Physicians and Surgeons](#), established in 1943, opposes COVID-19 vaccination mandates. In regards to children, AAPS states:
 - a. In the testing, only 1,518 children received the shots, and 750 received a placebo. This is far too few to see uncommon side effects, such as myocarditis/pericarditis, as Pfizer admits.
 - b. Follow-up was for two months in one group and only 2.5 weeks in another. The Pfizer application states that long-term sequelae of post-vaccination myocarditis/pericarditis in participants 5 to 12 years of age will be studied after the vaccine is authorized for children.
 - c. The children were not examined for mild, asymptomatic myocarditis, which might cause long-term damage, as by checking troponin levels or echocardiograms, or for blood clotting problems, as by checking platelet counts and D-dimers.
 - d. The only FDA-approved product, BioNTech's Comirnaty (not yet available in the U.S.) is required to do studies on myocarditis lasting 5 years.
 - e. Monthly safety report cards on the three available vaccines, which have different dosages, are supposedly required, but none have been produced or released.
 - f. The claim of 91% relative effectiveness against symptomatic COVID in children is based on 16 cases of COVID in the placebo group and three cases in the vaccinated group over the brief follow-up period. This is an absolute risk reduction of about 2%.
 - g. We do not and cannot know the long-term effects on cancer, fertility, or autoimmune diseases. "But we're never going to learn about how safe this vaccine is unless we start giving it. That's just the way it goes," stated committee member Dr. Eric Rubin, physician at Boston's Brigham and

Women's Hospital, immunology professor at the Harvard T.H. Chan School of Public Health, and current editor-in-chief of the New England Journal of Medicine. The alternative to giving a product to most of an entire generation is animal studies or restricting use to a defined group most likely to benefit, with close follow-up.

- h. The dosage for children is one-third the adult dose. Dosage in pediatrics is generally determined by weight. Not all children weigh the same, and their weight does not triple between age 11.9 and 12.0 years.
 - i. The COVID products are not shown to interrupt infection and transmission. Masking and distancing are still being recommended or required for adults. Thus, hopes for a return to normalcy once vaccinated are misplaced.
 - j. To give truly informed consent, parents need complete information about possible side effects, such as the outcome for Maddie de Garay, a 12-year-old whose public-spirited parents enrolled her in a trial. Post-shot, she experienced excruciating pain and a 2-month hospitalization, and is now in a wheelchair. Pfizer has not acknowledged a connection to the shot, nor did it fully disclose her injuries in it. The reaction may be "extremely rare," but many would decline to take even a 1-in-1 million chance of this outcome.
 - k. The government has already ordered 68 million doses, so authorization is anticipated, and likely will be followed by mandates.
 - l. Several Nordic countries have paused the use of COVID vaccines in persons under the age of 30. Persons at low risk for COVID complications are more likely to die from the shot than from COVID.
 - m. Dr. Harvey Risch, Yale epidemiologist, stated that he would home-school his children if public schools mandated this vaccine.
 - n. No one should administer a COVID shot to a child unless parents have given fully informed, completely voluntary consent, without threats or inducements.
 - o. SOURCE:
<https://aapsonline.org/aaps-statement-on-covid-shots-for-children/>
2. The [Physicians for Informed Consent](#) have compiled a Pfizer Vaccine Risk Statement for children that highlights FDA, CDC, and Pfizer clinical trial data finding:
- a. The clinical trial found there were zero cases of severe COVID-19 in children of any age who did not receive the vaccine. In contrast, the trial found that the vaccine causes severe (grade 3) and grade 4 systemic reactions in children.

- b. The clinical trial indicates that vaccine efficacy declines significantly in less than six months. Although a booster dose of the vaccine is authorized for individuals 16 years of age or older, the clinical trial states that efficacy was not evaluated for Phase 3 BNT162b2 booster group participants. Instead, vaccine efficacy was inferred based on antibody levels observed in only about 300 vaccinated subjects over a one-month time period.
- c. The clinical trial provided no evidence that the vaccine prevents asymptomatic infection or transmission of SARS-CoV-2 or COVID-19. In addition, recent studies have observed that a significant proportion of severe, critical, and fatal cases of COVID-19 occurred in vaccinated individuals.

SOURCE:

<https://physiciansforinformedconsent.org/physicians-for-informed-consent-updates-its-pfizer-covid-19-vaccine-risk-statement-analyzes-new-safety-data-for-children/>

- 3. The [World Council for Health](#), whose leadership includes Dr. Tess Lawrie (PhD, MD, Founder, Evidence-Based Medicine Consultancy LTD, Bath, United Kingdom, 10-year Senior consultant to the WHO supporting health policy recommendations for countries globally), issued a statement in December 2021:
 - a. There is now more than enough evidence to declare the novel Covid-19 vaccines unsafe for use in humans. Victim testimonies and adverse reaction reporting systems have revealed millions of adverse reactions to the experimental vaccines, including life-changing injury and death.
 - b. The inoculations are capable of causing immeasurable harm to those who received them, with children being more likely to die from the Covid-19 vaccines than from actual SARS-CoV-2 infection.
 - c. World Council for Health anticipates that unprecedented humanitarian efforts will be essential to assist the people harmed by this global vaccination experiment, due to the known and unknown harms.
 - d. The World Council for Health demands an end to this crisis and hereby declares it illegal and unlawful for anyone to participate, directly or indirectly, in this harmful experimental vaccination programme. The World Council for Health declares individuals, governments, and other corporations will be held liable for their involvement.
 - e. World Council for Health Calls for an Immediate Stop to the Covid-19 Experimental “Vaccines” DECLARATION:
<https://worldcouncilforhealth.org/campaign/covid-19-vaccine-cease-and-desist/#full>

SOURCE: <https://worldcouncilforhealth.org/news/2021/12/covid-19-vaccines/14001/>

4. Paul E Alexander MSc PhD, Howard C. Tenenbaum DDS, Dip. Perio., PhD, Dr. Parvez Dara, MD, MBA: “We must not expose our children to ‘unnecessary’ harm. We must not expose them to a substance that has not been tested on children (or plan to be) in the way it should be and for as long as necessary. We must not expose children to a vaccine that based on their risk, is absolutely not needed. Moreover, they can become infected naturally, if their immunity is needed.”
<https://www.aier.org/article/why-we-must-not-be-forced-into-vaccinating-our-children-from-covid-beware/>
5. Dr. Robert Malone (MD, Northwestern School of Medicine, MS, UC San Diego and Salk Institute Molecular Biology and Virology Laboratories, Giannini Postdoctoral Research Fellow, UC Davis, Harvard Medical School fellow -- Global Clinical Research Scholar (2016), original inventor of the mRNA vaccine platform used in the Pfizer and Moderna COVID-19 vaccines as well as the DNA vaccine platform used by Inovio): Interview in which Dr. Malone voices his grave medical and scientific concerns for the use of any of the COVID shots, especially in children:
<https://unityprojectonline.com/news/dr-robert-malone-md-on-the-joe-rogan-experience/>
6. Dr. Peter McCullough (MD, FACC, FAHA, FASN, FNKF, FNLA, FCRSA, Chief Medical Advisor, Truth for Health Foundation; President, Cardiorenal Society of America; Editor-in-Chief, Reviews in Cardiovascular Medicine; one of the most highly published medical specialists in practice today and an authoritative commentator for major media on COVID-19). Dr. McCullough has been interviewed hundreds of times and testified to numerous legislatures and to Congress. He is a tireless proponent for early treatment to save lives, and although he at first administered the EUA shots to his patients, as information began to emerge, he stayed informed and up-to-date. He no longer supports use of any of the existing COVID-19 shots. His interview by Joe Rogan is extensive and can be found here:
<https://unityprojectonline.com/news/dr-peter-a-mccullough-on-the-joe-rogan-experience/>

In an [interview in August 2021](#), Dr. McCullough reviewed his five main points of education:

- a. COVID-19 is NOT spread asymptotically
- b. Asymptomatic people should not get tested

- c. Natural immunity is robust complete and durable
- d. COVID-19, no matter what variant, is easily treatable at home
- e. Current COVID-19 vaccines are obsolete and should be considered unfit for human use. “They [the vaccines] do not cover the new variants; patients are failing on these vaccines. They’re being hospitalized and getting sick despite having had the vaccines . . .the vaccines at this point in time have amounted to record mortality and injury and should be considered unsafe and unfit for human use.”

“Dr. Peter McCullough’s 5 most important truths about COVID-19,” LifeSiteNews, August 4, 2021,

EXAMPLES OF U.S. PUBLIC OPPOSITION

Evidence that half the country refusing; people willing to lose jobs rather than comply; large organizations of professionals publishing position papers; example of LA Unified School district; Enumclaw example?

<https://www.cityofenumclaw.net/DocumentCenter/View/6670/Res-1734---Covid-19-Vaccine-Verification-Discrimination>

Less than half of parents support a requirement for middle and high school students to be vaccinated for COVID. "About One in Five Americans Remain Vaccine-Resistant," Gallup, August 6, 2021,

<https://news.gallup.com/poll/353081/one-five-americans-remain-vaccine-resistant.aspx>

Healthcare workers are willing to lose their job rather than take the COVID vaccine.

"Roughly 3,000 hospital workers lost jobs over Washington's COVID-19 vaccine mandate," KING 5 News, November 17, 2021,

<https://www.king5.com/article/news/local/washington-hospitals-lose-roughly-3000-workers-over-covid-19-vaccine-mandate/281-b0ff14de-27b6-4b0a-bcca-ed924c314ca0>

As of October 19, 2021, nearly 2,000 state workers chose to be fired rather than take the vaccine. "Nearly 1,900 Washington state workers quit or are fired over COVID vaccine mandate," *The Seattle Times*, October 19, 2021,

<https://www.seattletimes.com/seattle-news/politics/nearly-1900-washington-state-workers-quit-or-are-fired-over-covid-vaccine-mandate/>

There have also been many stories in the news describing our service members who are being discharged secondary to their declination of the shots.

8. The administrative burdens of delivery and tracking of vaccine containing this antigen are reasonable.

Many institutions and individuals are involved in implementation of the rule when the Board adds a new vaccine to WAC 246-105-030. These include: the Department of Health, the Department of Social and Health Services, the Office of Superintendent of Public Instruction (OSPI), local health jurisdictions, schools, child care, health plans, health care providers, and families. For each of these key players, there are issues that affect the feasibility of implementing an immunization recommendation. For example, introduction of a new vaccine can result in schools conducting more parental follow-up and making changes to record and information systems—this in turn can impact school staff workload. Assuring that a reasonable burden of work is present will enhance the effectiveness of the policy. The TAG includes representatives from affected parties such as OSPI, schools, and child care when assessing an antigen against this criterion.

Do any of the COVID-19 shots fulfill this criterion? No.

The burden on school nurses for tracking COVID cases and for managing all the COVID measures is already unreasonable. ICWA board member Heidi Hartnell is a teacher in Washington State and can speak to the amount of time schools already spend tracking COVID cases and close contacts. If the requirement of vaccination is added to the existing required measures, this would create an extensive amount of maintenance and updating of immunization records. She says, “With the demonstrated waning efficacy of the COVID vaccination in adults, it would seem that this would also be true with children. If children are required to be “up to date” with a booster every six months, this will be a huge burden on schools as vaccination records will constantly need to be checked and updated. Currently, a majority of the required vaccinations are completed by the time a child enters kindergarten and these forms do not require frequent updating. However, if the COVID shot and subsequent boosters were to be added, this would place a hardship on already wearied teachers and school personnel. Ultimately these shots do not prevent contracting or transmitting the virus, and so this work achieves nothing in the public health sense.”

The only thing that makes sense, given that >99.9% of children are at zero risk from COVID, is to simply enforce the “stay at home if symptomatic” rules that have served public health well for decades. We can never achieve, nor would we want to achieve, zero exposure schools. Children’s immune systems need exposure to the microbial world, including to viruses, to properly develop and protect them as adults. This is just as true for COVID, which has become endemic, so children will be encountering the virus and mutations for the rest of their lives. More than 140 studies demonstrate that natural immunity will serve them well and far longer than the shots, and it is their

parents who should make the risk-benefit decision, not the State of Washington. "144 Research Studies Affirm Naturally Acquired Immunity to Covid-19: Documented, Linked and Quoted," Brownstone Institute, October 17, 2021.

<https://brownstone.org/articles/79-research-studies-affirm-naturally-acquired-immunity-to-covid-19-documented-linked-and-quoted/>

Public health would be even better served if the BOH would acknowledge natural immunity, and support and promote early treatment protocols, so that everyone of all ages and of any vaccination status could see better outcomes.

<https://www.cdc.gov/media/releases/2021/s1227-isolation-quarantine-guidance.html> -

9. The burden of compliance for the vaccine containing this antigen is reasonable for the parent/caregiver.

Parents and caregivers are often involved in obtaining vaccines for children. This can include: transporting children to medical appointments, taking time off of work for medical appointments, maintaining the child's immunization records, etc. When a vaccine is required for child care and/or school entry it affects the health decisions that parents make on their child's behalf because parents must, at the very least, take the required vaccine into account.

Do any of the COVID-19 shots fulfill this criterion? No.

Considering the risks discussed in Criterion #4 above, the burden of compliance on parents is unacceptable.

Considering that any injury sustained by a child is borne completely by the parents because the manufacturers are shielded under the Public Readiness and Emergency Preparedness (PREP) Act, the burden of compliance is unacceptable.

<https://aspr.hhs.gov/legal/PREPact/Pages/default.aspx>

The shots are available everywhere, even grocery stores often without an appointment, so it is easy for most parents to find an opportunity to get their child a shot if they so choose, but for those parents who choose to opt out of a school vaccine requirement, the burden is out of balance.

Parents can't go to Safeway or Rite Aid for an appointment with a practitioner to get the required risk-benefit consultation and signature. They must make an appointment with a practitioner, take time off work, arrange transportation, etc. That first step is now the most burdensome. For the past several years, it has been increasingly difficult for parents to find any practitioner willing to give them the required risk-benefit consultation. Many doctors and clinics are kicking families out of their practices who do not vaccinate, or who do not fully vaccinate according to the CDC schedule. This has nothing to do with health or protection and everything to do with the financial incentives built into the

insurance and public health systems that reward high vaccination uptake. This practice is supported by the American Academy of Pediatrics, which has critical conflicts of interest associations with the pharmaceutical and medical industries. “The AAP recently issued a clinical report that stated it is an “acceptable option for pediatric care clinicians to dismiss families who refuse vaccines”

<https://www.infectiousdiseaseadvisor.com/home/topics/prevention/new-aap-policy-on-patient-dismissal-for-vaccine-refusal-may-erode-solidarity-among-pediatricians/>

The BOH’s criterion is based on the assumption that “a process exists to opt out of immunization requirements by children attending either child care or school.” If parents are unable to find a practitioner willing to provide the required risk-benefit consultation and sign an exemption form or letter stating that they have done so, then that opt-out does not exist.

And finally, a tremendous burden exists in the coercive aspect of any vaccine requirement. Parents who opt their children out of one or more vaccinations experience emotional and psychological stress because they know they face scrutiny by school staff, by health care providers, by surveillance systems, as well as cultural pressure. Children who lack one or more vaccinations are singled out at various times, excluded from school and extracurricular activities. If a vaccine is NOT on the schedule, a parent is able to choose what is best for their child without the added stress. It is an unreasonable burden to stress entire families with a requirement that should be a personal medical decision. It is incomprehensible that the Board would even consider such a requirement with products that cannot prevent infection or transmission.

BOARD CRITERIA FRAMEWORK:

The only purpose for which power can rightfully be exercised over any member of a civilized community, against his will, is to prevent harm to others. His own good, either physical or moral, is not a sufficient warrant.” Harm to others cannot be prevented by requiring children attending school to take this vaccine.

Hello,

I wanted to write to voice my concern again about required vaccines for attending public school. As a parent we all try to protect our children in every way possible, including researching vaccines. I would urge that there be information providing the effectiveness with these covid vaccines. I know many people who are fully vaccinated that are still getting sick with covid. I know many people who aren't vaccinated who haven't gotten covid. From what I have found, vaccines are tested for many years before they are given. I have also looked at deaths from the vaccine and other side effects, and I don't understand with even what is reported how this is still continuing on, and now discussing that it be required to attend school, ridiculous!

This should be stopped immediately. I know for myself, my kids would have to be pulled from school as I will not give this experimental vaccine to my children.

Thank you

To whom it may concern,
It is unreasonable and detrimental to our children's physical and mental health to require them to keep their faces covered 35+ hours a week while in a formal learning setting. The kids' emotional health is suffering as well as their ability to receive the education they have a right to. We ask that those making these decisions consider our childrens' well-being and discontinue the mask mandate in schools.
Thank you,
Bryan and Toni Williamson

To Whom it May Concern,

I respectfully ask that you not mandate Covid 19 vaccinations for school aged children. Our whole family has had Covid and my two school aged boys had symptoms that were less then the common cold. The only way we found out they had covid is because they were required to be tested to play in their sports activities. Our bodies are made to create natural immunities. No mandate should be based on positive case counts only on hospital cases and death rates.

Hello,

Instead of writing a lengthy email, I have made a short video of my views regarding the addition of the Covid-19 vaccine to the vaccine schedule requirement for school aged children. Please take the few minutes and watch.

Thank you very much for your time and thoughtful consideration of this most crucial issue.

Sincerely,
Kelley Bouma

Good morning,

Thank you for all that you do for our community!

I really wish there was something that we could do to support the children in our community pertaining their right to breathe fresh air. It is so unnecessary that they wear masks at school for this virus that is 99% survival rate in children's age group.

We need to see their smiling faces.

They need to see their friend's smiling faces.

They need to see their teacher's smiling faces.

They need it as part of feeling connection to our community. We need to help their mental health and growing brains receive the air they are entitled to breathe. This is just absurd this has gone on this long. This isn't fair.

Please help end this.

Also,

Please DO NOT enforce Gene Therapy AKA covid inoculation requirements for children in our state. This would be discrimination against me and my family. I know of many other families as well that this would discriminate against as well.

We live in the United States of America. We are entitled to our freedom of making our own personal medical choices. For ourselves and for our children. Personal medical autonomy has decades of established law decided at the Supreme Court. Please watch the attached video for more information about the VAERS coming from Pfizer. Which is very alarming.

/

Please remember that VAERS is a statutory requirement of the fda. How is covid-19 a true state of emergency still when the survival rate is so high?

I have chosen to not be inoculated and contracted covid right after Christmas. And I am ok! My entire family is ok! Everything is ok! Everyone should be allowed to make the

personal choice of medical treatment, period. we have natural immunity! Let's focus on natural immunity and healthy hygiene.

Please do not make Gene Therapy AKA, EUA (which has a 99% survival rate) ' Covid Vaccine', a requirement for public schools. Promoting myocarditis (which is a common side effect of the inoculation) in our youth is completely unethical. The risk simply outweighs any benefit, because what is the benefit? They would still catch and spread virus, so there are absolutely NO benefits.

There is already discrimination happening if my child has a common cold and I call to her school office to let them know she will be absent. They ask right away if she is vaccinated. I ask, "with what?" They say, "covid vaccine." This is no one's business if my child is injected with gene therapy. But once they get an answer from me, they put our situation in a "side A" or "side B" flow sheet. (Brings times back to NO BLACKS ALLOWED AT THIS WATER FOUNTAIN for example) Just like they do with the volunteers at the school district. This is creating MASSIVE SEGREGATION.

The current situation for having a cold and staying home to get well school process is performing unconstitutional discrimination against my family. Religious beliefs and personal medical choices are personal choices. Please set an example in our state to show that we honor our people of America and allow them the freedom that our constitution states we all have!

Lets spread kindness and love and promote healthy hand washing, not discrimination and segregation.

Please help end this.

Thank you for your time.

May God Bless you and your loved ones,

Christina Thacker

I would like to express my extreme opposition to implementation of a COVID 19 vaccine requirement for schools in Washington State.

* Almost 100% of kids don't suffer from severe COVID. In fact, many have no symptoms at all. Thus, they may have already had COVID which is another excellent reason not to get the vaccine.

* The World Health Organization (WHO) has announced that young people should not take the vaccine.

* A concerning number of young people, especially those under 30, are suffering from myocarditis (heart inflammation), blood clots, low platelets and more following COVID-19 vaccination.

* The risks of COVID-19 vaccination adverse outcomes certainly outweigh the benefits to children and young adults who are considered low risk populations.

* Parental rights to make independent, informed decisions regarding their children's medical interventions, including vaccines, are being threatened.

* Some scientists have raised concerns that the safety risk of COVID-19 vaccinations have been underestimated. As of January 28th 2022, there have been 1,088,558 vaccine injuries including 23,149 deaths following COVID-19 vaccination.

* Clinical trials in children and young adults are ongoing and will not be completed for at least one year.

* Not a single published study has demonstrated that patients who have had a prior COVID-19 infection benefit from the vaccination.

Please do not require Covid-19 vaccine for school .

Sincerely,

Kimberly Y

To whom it may concern,

If vaccine Mandates are made in Washington you will see a mass Exodus of students from the public school system. If you think the Trucker brigade in Canada is big, just wait.

I promise that if you decide to inject something we know little about into our kids, my kids will be taken out of public schools.

Do not make this mistake. You will not win. Listen to science. Out body, or choice.

Dear Washington State Board of Health,

Our state government should NOT be mandating Covid vaccines on our children. Children are at extremely low risk for Covid and these medical decisions should be left in the hands of parents.

Sincerely,

The Citizens of Washington State

Dear Mr. Ford, the Administration of St. Patrick's, the Seattle Archdiocese, and the WA State Board of Health,

I am writing today on behalf of my student, as well as several concerned St. Patrick's families who have reached out to me directly after the St. Patrick's parents group was turned off because of polite discussion about the ongoing mask requirement at school. I am imploring you to stand up for our children's health and well-being and take a stand against the mask mandates. The Seattle Archdiocese represents a well-respected number of facilities, students, and families across Western Washington. You have the ability to show the residents of Washington State that you are an organization that puts their student's safety first, not politics, like the Baltimore Archdiocese is doing
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.baltimoresun.com%2Feducation/md-school-masking-20220211-20220211-w62eycynu5fybgztpujemsuwa-story.html%3Ffbclid%3DIwAR1xe8ncPOmITYxyAOFAkx7IDyI7ycxmek4TocY5sUR2ia9XBBVvkKTY8u4&data=>!>

It is our understanding that the current mask requirements were adopted by the Seattle Archdiocese last fall at the suggestion of the Washington State Board of Health. Since that time, innumerable studies have been published across the world on all aspects COVID-19, from the inherent risk factors & most impacted age cohorts, the efficacy and side-effects of pharmaceutical preventions, early treatment protocols and non-medicinal mitigation strategies such as masking and school shutdowns. Yet with new scientific evidence, there has been no update to the masking protocols and mitigation strategies in schools across our state.

A little about me – no – I'm not a "COVID denier" that many believe those asking for choice in masking are! In fact, our family began watching very closely what was happening in China in December of 2019, when it was just a conspiracy and nothing to worry about. By late-January, I was one of the "crazy people" doing my grocery shopping in an N95 mask and gloves. At that time our 3 children all attended public school, and we made the decision to stop sending the kids to school 2-weeks prior to the official shut-down. And who doesn't remember wiping down groceries and mail with sanitizing wipes, or simply leaving things outside for days before allowing them into our houses! We chuckle about all of that now, but it important to reflect on. Why did we do all of that?

Simply put, inn March of 2020, there was quite literally nothing known about this new

illness everyone was calling COVID-19. Was it transmitted by touch, airborne droplets like the flu, or truly aerosolized? Could it survive on surfaces? Who were the most at risk for hospitalization and death? We knew nothing. So, we took what are now known to be silly, and in some cases drastically damaging, measures. We call them lessons learned. However, what we've learned is not being put in to practice through policy change. Instead, we are continuing with measures science has proven are causing more harm than good!

We understand now what ages and comorbidities are at the highest risk. We know how to treat COVID at home, and what simple, proactive steps everyone can take to prevent serious illness. Doctors know how to treat serious cases in hospital, and what treatments to avoid. Large percentages of people now carry natural immunity, and vaccines are available to those who choose to take them. And, most importantly, we know that our children, thank God, are the absolute lowest risk cohort. Yet those children have unfairly borne the brunt of mandates in the cruelest of ways under the guise of safety.

It is common knowledge that the cloth and surgical masks worn by students do not prevent the transmission of viruses. That is how my son was able to contract COVID while at school! That's also the very reason there was not a single N95 available to purchase in April 2020! At their largest measurement (0.3 microns), 250 aerosolized COVID viruses can fit inside the average human hair. Now consider those gaping holes in the sides of the student's surgical and cloth masks as you welcome them to school.

Even the CDC's own study, and associated infographic, "proving" masking efficacy has an asterisk noting the protection offered by cloth masks was "not statistically significant." Only N95s prove any amount of statistically significant results. CDC - Mask Effectiveness Indoors

<<https://qcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fmmwr%2Fvolum>

Another CDC resource clearly states that the filtration of masks “Does NOT provided the wearer with a reliable level of protection from inhaling smaller airborne particles and is not considered respiratory protection.” CDC – Masks vs. Respirators

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fniosh%2Fnpptl%2F508.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cca22643f16c6482161c808d9f0a2e1bf%7C11d>

The ACGIH, a non-profit of occupational and environmental health and sciences experts, has compiled the results of much of their research regarding how to protect workers during the COVID pandemic into an infographic for employers. Even when both parties are wearing cloth or surgical masks correctly, the amount of protection offered is only 27 minutes and 60 minutes, respectively. How does that very limited amount of protection justify the mental and emotional consequences of masking students? COVID-19 Worker Safety - Masks

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.acgih.org%2F covid-19-fact-sheet-worker-resp%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cca22643f16c6482161c808d9f0a2e1>

It is also for this reason that whenever you purchase surgical masks, you find on all of the packaging warnings that state they are non-medical and/or do not prevent illness. (For example, I clicked on the first link on an Amazon search for "surgical masks" and right in the description it says are non-medical. Amazon Surgical Mask

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fsmile.amazon.com%2FHDFK-Disposable-Protective-Breathable-Non-Woven%2Fdp%2FB088YJCQ7Z%2Fref%3Dsr_1_2_sspa%3Fcrd%3DX9O3K75VJ277%26keywords%3Dsurg2-spons%26psc%3D1%26spLa%3DZW5jcnlwdGVkUXVhbGlmaWVyPUEyUUUFNTVISFRGQVBGJmVuY3J5cHRIZ

) It is widely known that masks do not prevent the passage of particles as small as aerosolized viruses.

One of the pre-eminent experts on PPE and industrial exposure in the U.S. is Stephen Petty. He advises large industrial companies on Industrial Hygiene (aka, worker safety) and testifies as a subject matter expert on class-action lawsuits, like that of Monsanto, regarding industrial PPE protocols - such as with dangerous chemicals - when inhaled particulate is life or death every day. In the presentation linked below he covers COVID specifically. While I'm sure you are receiving many messages like mine full of links and references, I cannot urge you enough to take the time to watch this video presentation. In his world where PPE actually needs to protect, masks are not even considered an option, nor is facial hair! Stephen Petty - On PPE and Aerosols

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.youtube.com%2Fwatch%3Fv=JL4yoUssHhJesfGpD1rYOwYams2Pfs93XuEoBE-HrzrKWpfyVjWS0&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cca22643f16c6482161c808d9f0a2e1bf%7C>

Included in this next link is over 150 mask studies with conclusions, in part, against the effectiveness of masks due to a variety of variables. I found while doing my own researching that resources providing a lot of information in one place was very helpful.

150+ Comparative Studies and Articles on Masks

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fbrownstone.org%2Farticles%2Fmore-than-150-comparative-studies-and-articles-on-mask-ineffectiveness-and-harms%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cca22643f16c6482161c808d9f0a2e1bf%7C>

Lastly, on the science of whether masks work, I would challenge that after 2-years of continual and aggressive research, study, and retrospective review throughout the world, one should expect to see clear, overwhelming, and consistent data from the scientific community proving without a shadow of a doubt that masks provide a strong level of protection. That data simply doesn't exist.

Here's where common sense can help to fill in the blanks. Masking in schools is not widespread across the country. Only 15 states have previously had mandatory masking in schools, though that number is reducing by the day. IF masking students really is the lynchpin that has kept our state's elderly and high-risk population safe and we simply cannot do without it, how is it there isn't overwhelming hospitalization and death of the elderly and high-risk in the 35 states who didn't mask students?

All masking science aside, in my opinion the most important topic to consider is the how masking and the subsequent enforcement of masking is having on our children. There is a steady outpouring of data showing negative consequences for our children, from faltering to outright failing test scores, startlingly high rates of referral to speech therapy in young learners, massive increases in anxiety, self-harm and depression among adolescents and teens, and a basic lack of excitement and connection to school communities. The Educational Consequences of Masking Children

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nationalreview.com%2F2022/02/22/educational-consequences-of-masking-children%2F%3Ffbclid%3DIwAR0E9-jL4yoUssHhJesfGpD1rYOwYams2Pfs93XuEoBE-HrzrKWpfyVjWS0&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cca22643f16c6482161c808d9f0a2e1bf%7C>

However, I don't think that linking study after study is needed to make this point. You are professional educators, and you know children! You know how they learn, and how they grow. You know how they respond to a smile. You know how they watch a teacher's mouth move when they are reading aloud, or when hearing a new word. You know how children instinctively see another child's frown and respond with kindness. Or how they see another child's smile and return it with a smile of their own. Or how children see someone react poorly to an unkind word they said, so they apologize, realizing the impact of their words on others. Without seeing that frown, they cannot know that

impact. These little connections and the learning of social queues are truly the work of childhood, and that has been taken from them. Think back to your favorite teacher as a child – then imagine not knowing what that teacher looks like without a mask on!

And what about the students who are not okay, and who are blending in and disappearing into a sea of masks? What about the children who have anxiety? What about the students who are embarrassed to ask for help, or feel left out? Without seeing the emotions on their faces, how can we be sure they aren't slipping through the cracks?

The data says they are. JAMA Pediatrics – Mental Health & Wellbeing

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fjamanetwork.com%2Fjournals%2F4bc0-45d3-b2bb->

We have also taken our most innocent and easily influenced segment of the population, and over the last two years taught them that they should fear the air around them. They should fear their own breath. If they take their mask off, they could be responsible for infecting someone who dies. Or that their good friends or classmates could get them sick. Instead, they must keep their face hidden, not speak during lunchtime, and don't get too close to one another because that's just too risky and unsafe. This is not okay!

I'm a Public School Teacher. The Kids Aren't Alright.

Though we are a new family to St. Pats, my father & his family all matriculated through parochial school, so many of the teachings we are seeing resonate deeply in my heart, including the fostering of strong community bonds. But that community collapses without smiles in the hallways, with parents unable to meet and know one another at events, without the hugs over a scraped knee on the playground, without the sarcastic smirks of middle school, and without the ability see someone's frown and help to make them smile.

The Strength of Weak Ties

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cse.wustl.edu%2F~m.neuma>

The residents of this state, and specifically the parents of school age students, have been understanding of restrictions, and, more recently, patient in waiting for policies to be adjusted in response to the data. But as the data continues to build against mask mandates with no changes to policy, we are asking you to push back on behalf of the health and education of our children.

We teach our kids to follow their morals, to do what's right even when it's hard, and to respectfully disagree when necessary. Now is the time for the school administration, and the leadership at the Seattle Archdiocese, to recognize that our children need us to stand up for them. It's time to respectfully disagree and stand up for what is right on behalf of the students in your care.

We are asking you to do better for our children.

We are asking you to do better for our communities.

We are asking you to do better.

Thank you for your time and thoughtful consideration,

Dani Kessler, 253-459-2449

P.S. And please – take the time to watch the Stephen Petty video on PPE linked above.
It's worth all 26 minutes.

Dear Mr. Ford, the Administration of St. Patrick's, the Seattle Archdiocese, and the WA State Board of Health,

I am writing today on behalf of my student, as well as several concerned St. Patrick's families who have reached out to me directly after the St. Patrick's parents group was turned off because of polite discussion about the ongoing mask requirement at school. Think back to your favorite teacher as a child – then imagine not knowing what that teacher looks like without a mask on!

And what about the students who are not okay, and who are blending in and disappearing into a sea of masks? What about the children who have anxiety? What about the students who are embarrassed to ask for help, or feel left out? Without seeing the emotions on their faces, how can we be sure they aren't slipping through the cracks? The data says they are. [JAMA Pediatrics – Mental Health & Wellbeing](#)

We have also taken our most innocent and easily influenced segment of the population, and over the last two years taught them that they should fear the air around them. They should fear their own breath. If they take their mask off, they could be responsible for infecting someone who dies. Or that their good friends or classmates could get them sick. Instead, they must keep their face hidden, not speak during lunchtime, and don't get too close to one another because that's just too risky and unsafe. This is not okay!

[I'm a Public School Teacher. The Kids Aren't Alright.](#)

[Masked Schoolchildren](#)

Though we are a new family to St. Pats, my father & his family all matriculated through parochial school, so many of the teachings we are seeing resonate deeply in my heart, including the fostering of strong community bonds. But that community collapses without smiles in the hallways, with parents unable to meet and know one another at events, without the hugs over a scraped knee on the playground, without the sarcastic smirks of middle school, and without the ability see someone's frown and help to make them smile. [The Strength of Weak Ties](#)

The residents of this state, and specifically the parents of school age students, have been understanding of restrictions, and, more recently, patient in waiting for policies to be adjusted in response to the data. But as the data continues to build against mask mandates with no changes to policy, we are asking you to push back on behalf of the health and education of our children.

We teach our kids to follow their morals, to do what's right even when it's hard, and to respectfully disagree when necessary. Now is the time for the school administration, and the leadership at the Seattle Archdiocese, to recognize that our children need us to stand up for them. It's time to respectfully disagree and stand up for what is right on behalf of the students in your care.

We are asking you to do better for our children.

We are asking you to do better for our communities.

We are asking you to do better.

Thank you for your time and thoughtful consideration,
Dani Kessler, 253-459-2449

P.S. And please – take the time to watch the Stephen Petty video on PPE linked above. It's worth all 26 minutes.

Subject: Mandating Covid Vaccines for school children

External Email

Dear TAG Members,

I have been monitoring the last few TAG zoom meetings and it is apparent to me that members of this advisory group are not analyzing the most relevant current data or being guided by the overwhelming number of scientists, researchers and doctors that have concluded that Covid Vaccines for children present higher risks for VARES than the virus does. I urge you to not attempt to remove parental rights to chose to do what is in the best interest and safety of their children. Take off your blinders and search out recent evidence, research and opinions that differs from Anthony Fauci who has been proven to be so wrong so often and done much harm. You will be held responsible if your vote is to advise the WABOH to mandate vaccines. I know from talking to concerned parents that there will be a mass exodus from public schools if this becomes a mandate. Do the right thing.

Sincerely,

Linda D. Hisey

To the Washington State Board of Health:

I am writing to you to ask that you do NOT make the COVID vaccine a mandate in order for children to attend public school and here is why:

- * The vaccine has only been approved for emergency use only at this point. No other vaccines that are required to go to school are for emergency use ONLY.
- * There are no long-term studies on the side effects of the vaccine and we don't know what kind of harm it could cause our children in the future.
- * We know that there is a risk for teens and young adults to get myocarditis and pericarditis from the vaccine. We also know that children have died from taking the vaccine.
- * Kids are not dying from COVID.
- * The vaccine does not stop the spread of COVID nor does it prevent someone from getting COVID.
- * This is not a vaccine like the Measles, Mumps, Polio, Chicken Pox, and it shouldn't be required just like the flu shot is not required.
- * This should be a parent decision on whether a child should get the vaccine.
- * There have already been about 40K children removed from public schools within the last year, if you make the vaccine a requirement you are going to see thousands more.

Thank you for taking the time to hear my concerns and the concerns of many other Washington parents.

*Tina Patton

I am beyond angry that covid vaccines for kids are even being considered to enter school. With no studies on long-term side effects of these basically experimental vaccines, the risk to children and especially young teenage boys is far greater than covid. Besides that, children have an almost 100% chance of recovery from Covid. This is not a childhood disease! I can tell you with absolute certainty there is NO WAY my healthy teenage son is ever getting another one of these Covid vaccines.

External Email

I am a parent of a public school 3rd grader.

I write today to request that the covid immunization not be added to the required immunizations for public school.

Covid is not showing to be a large risk to children and is still under emergency use authorization.

I am concerned and torn about my son's future if this trial vaccine becomes required as my son thrives in the public school environment but I can't with good conscience give him an immunization that is so new, no long-term studies and for a virus that has been proven to not cause significant damage to the younger ages.

I will be forced to home school if this immunization becomes required. Washington state has already lost 55,000 enrolled public school children this school year. I am active and involved in multiple mothers groups in my community and the large majority are in the same situation, I fear if you make the immunization a requirement you will lose many many more thousand enrolled students, which will drastically decrease federal funding and cause voters to no longer approve bonds and levies; therefore, impacting the children still in the public school system.

I fear that the communities of color will be the hardest hit by the loss of these funding sources, as statistics and history have proven those communities do not have resources to home school, they will have no choice but to immunize their children to continue attending public school which will be struggling due to the loss of federal funding and the inevitable loss of bonds and levys.

Please consider my words and look at the big picture when you vote on the immunization requirements for this next school year.

Thanks for your time

Good afternoon,

I am writing with deep concern about the direction of this state. Your intrusion on personal medical decisions is alarming at best, but more likely along the lines of abuse, bullying and total disregard of the constitution.

Our children belong to us, not the state. Covid is a very insignificant issue with regard the vast majority of healthy Americans and especially to children (serious illness or death is nearly 0%). Juvenile mental health is at a crisis level, largely due to poor state leadership that has resulted in years of failed liberal policies that don't, in fact, follow any kind of real and valid science (not limited to Covid).

Shutting down discourse you disagree with doesn't make your position correct or valid. In fact, it nullifies it. "Science" that can't be questioned becomes propaganda. "Leaders" who rule rather than serve are tyrants. These are all the very things our forefathers warned of and protected us against in the constitution.

Leave our children alone — any attempt to force vaccination on them is purely evil. Parents are free to make the decision they believe best based on informed medical consent. Again, I repeat, leave our children alone.

With great dissatisfaction in our state,
Becky

Board of health,

This is just wrong.

I listened to the TAG meeting the other day and kept hearing more than once that they did not have enough data to support this of that they needed more evidence. They are going to get data from the colleges and I heard the NBA - how can you compare a basketball player to a 12 year old child? That is not a fair comparison at all.

The shot is not a "vaccine" - it is a jab that can injure or kill kids. I have seen people talk about the effects on their kids.

I implore you to vote no on this when the time comes - I know there are a lot of parents who will be pulling kids from schools - with our governor the way he is I am seriously considering moving out of state and starting over someplace that will care about my son.

I await your responses.

Subject: Covid Vaccine should NOT be mandatory for students

External Email

I implore you NOT to make the covid vaccine mandatory for school aged children. There is zero emergency to make this mandatory, covid is not and has not been a pediatric disease. The flu is more dangerous to our children than covid and the flu vaccine is not mandatory - why would this one be mandatory?

Beyond that, you can not force something on children - that is not your right or responsibility. That responsibility falls on the parents/guardian - the ones financially responsible for them. Are you prepared financially to assist families of children that experience adverse reactions from these vaccines? No, you wouldn't.

Each family is different, and you have no idea about their family history when it comes to health. It is a family's right to make an informed decision based on their individual family needs, not to have one forced upon them by the government.

It is not right and please do not consider making this vaccine mandatory in our children. Plus, it's not even fully approved I don't even know why its being considered at this point. However, I'm sure it will eventually get approved and even at that point it is not necessary for children - it should be a choice made by the parent if they feel it is necessary for their child(ren).

Subject: NO to mandatory CoViD vaccine for public schools!

External Email

To whom it may concern,

Please do not make the CoViD vaccine a requirement for public schools in Washington state. A choice for that shot needs to be up to the parents. Further, there is not enough science to back up this requirement. It does not stop one from acquiring the virus. It does not stop one from spreading the virus. There are ZERO long term safety studies.

It would actually be more effective as a board of health to recommend vitamin D, proper nutrition, exercise & rest.

If you vote this CoViD vaccine through as a requirement, you will see a massive uprising & thousands of children will be pulled from the public school system to homeschool. Mark my words.

Thank you,
Valerie Raschko

Hi SBOH,

It seems that the question of mandating COVID vaccinations for school children are on the agenda. As a vaccinated parent of two vaccinated children, I strongly oppose such mandates. Vaccination is a surgical procedure that should be strictly voluntary. It is the forced nature of COVID vaccination that gives it such a bad reputation, and causes people to avoid vaccinating.

Cheers,

Please Don't Call This 'Science': How FDA, CDC Justified Approval of Moderna's Spikevax

The U.S. Food and Drug Administration's approval last week of Moderna's Spikevax COVID vaccine — backed by the Centers for Disease Control and Prevention — made a mockery of science and the regulatory process.

Josh Mitteldorf, Ph.D.
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fauthor/josh-mitteldorf-ph-d%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21>>

Miss a day, miss a lot. Subscribe to The Defender's Top News of the Day
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fsubscribe-us%2Fsign-up%2F%3Futm_source%3Dtop_of_article%26utm_medium%3Dthe_defender%26utm_campaign%3Dsign-up%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21>
. It's free.

The U.S. Food and Drug Administration (FDA) and Centers for Disease Control and Prevention (CDC) did it again.

The FDA last week granted
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fdefender/full-approval-moderna-spikevax-covid->>

vaccine%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e1
its seal of approval for a ghost vaccine that is unavailable in the United States — and it
did so using a preordained process that made a mockery of “science” and of “regulation.”

Days later, the CDC backed
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fdeaths-cdc-moderna-spikevax-covid-vaccine-injuries%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e1>
the FDA’s decision, using similarly flawed data and reasoning.

The approval of Moderna’s Spikevax COVID-19
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fdeaths-moderna-spikevax-covid-vaccine%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e1>
vaccine was an even greater travesty than the FDA’s approval
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fdeaths-health-defense-sues-fda-pfizer-comirnaty-covid-vaccine%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e1>
last August of Pfizer’s Comirnaty shot.

That’s because Moderna
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fdeaths-attkisson-steven-gundry-pfizer-moderna-vaccines-heart-attack-risk%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e1>
has been even more secretive than Pfizer
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fdeaths-fda-lose-bid-delay-release-covid-vaccine-safety-data%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e1>
about its trial data, and because Moderna’s shot is linked
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.bmj.com%2Fcontent%2F375%2Fbmj-2021-068665&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e1>
to an even higher rate of heart disease than Pfizer’s.

The FDA’s approval of the Pfizer Comirnaty vaccine led people to believe
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fdeaths-media-fda-approval-pfizer-vaccine%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e1>
they would get a fully licensed, FDA-approved vaccine — when in fact they were still
getting the Pfizer-BioNTech vaccine distributed under Emergency Use Authorization
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Femergency-preparedness-and-response%2Fmcm-legal-regulatory-and-policy-framework%2Femergency-use-authorization&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e1>
(EUA).

People can ask for the Comirnaty vaccine as often as they like — but it is not
being distributed
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fdeaths-fda-media-pfizer-comirnaty-vaccine%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e1>
in the U.S. The Comirnaty vaccine is supposed to be the same formulation as the old
Pfizer-BioNTech vaccine, but the vials labeled “Comirnaty” are in a legal class
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fdeaths-one-can-force-you-pfizers-comirnaty-vaccine%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e1>
of their own.

Why this Kabuki theater?

Because any adult who is harmed or killed as a side effect of an “FDA-approved” vaccine can sue the manufacturer. But if you are harmed in exactly the same way by an EUA vaccine, you are out of luck — the manufacturer and everyone in the chain of delivery has full immunity from lawsuits. The law depends on the label.

Now Moderna has the same legal advantage as Pfizer. Its "Spikevax" is the same formula as the old Moderna vaccine, but only if you are dosed with a vial bearing the "Spikevax" label can you sue for bodily harm. So, of course, the Moderna vaccine continues to be distributed, but Spikevax is not available in the U.S.

The approval of Spikevax is not just a legal sham. It's also a scientific sham. FDA approval is supposed to include long-term safety testing, but there is no long-term data available for a product that has been in existence less than a year.

The FDA hearings on the licensing of Spikevax were one-sided and dominated by self-congratulatory rhetoric. They also raised more questions than answers.

Questions for the FDA

* Besides offering publicity to the manufacturer and sowing confusion in the public mind, why would the manufacturers want FDA approval for a vaccine that is not available in the U.S.?

* Neither Pfizer nor Moderna explicitly specified the content of their placebos, but a published review

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nejm.org%2Fdoi%2F10.1056>
claims they were simple saline. If this is the case, why is the rate of medical problems following injection with a “placebo” so much higher with Moderna’s placebo compared to Pfizer’s placebo?

For example, 18 people out of 15,000
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nejm.org%2Fdoi%2Fsuppl%2F10.1056/NEJMs2100001>
 in the Moderna placebo group died before the start of the trial (2 weeks from the second
 vaccination), while only 4 people out of 22,000
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F144241>
 who received Pfizer's placebo dose died in a comparable period. There were 31 "severe
 adverse events" in the placebo group of the Moderna trial, and zero in the (larger) Pfizer
 placebo group. What was in that "placebo" that killed 18 people and sent 31 to the
 hospital?

* The FDA relies on the Vaccines and Related Biological Products Advisory Committee (VRBPAC
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fadvisory-committees%2Fblood-vaccines-and-other-biologics%2Fvaccines-and-related-biological-products-advisory-committee&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d>
) to help assess the safety of vaccines before approval. There was an animated debate at the VRBPAC meeting for the Pfizer vaccine. Why was VRBPAC not invited to convene for the Moderna vaccine? The answer is given in this letter of approval
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F15581>
I from the FDA to Moderna (January 31, 2022):

"We did not refer your application to the Vaccines and Related Biological Products Advisory Committee because our review of information submitted in your BLA [Biologics

License Application], including the clinical study design and trial results, did not raise concerns or controversial issues that would have benefited from an advisory committee discussion.”

* The FDA plainly states that it limited the scope of its analysis to the trial data alone. Why isn't the FDA interested in the enormous amount of data that has become available in the last year?

Safety: Did FDA cook the books?

Deaths and disabilities associated with the mRNA “vaccines” have occurred with shocking frequency, 90 times as many as the worst vaccine in the past. There have been more than 1 million COVID vaccine reactions reported to the Vaccine Adverse Event Reporting System (VAERS), compared to 11,000 for the worst vaccine in 2020 (Shingrix).

There were more than twice as many
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fopenvaers.com%2Findex.php&data=04%7C01%7C66110732-4056-4131-8003-601100007208%7C%7C%7C%7C&isRedactedAddress=true>
deaths related to the COVID vaccines this year as the sum total of all vaccine deaths in
the 30-year history of VAERS.

To rig the approval process in favor of such a product, the FDA needed to rewrite the rule book. The agency did this with a new statistical criterion, masking murder with mathematics. I am grateful to Matthew Crawford
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fgroundingtheearth.substack.com%2Faway-vaccine-safety-signals&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e2> for having decoded the algebra and sounded the alarm.

The safety criterion chosen by the FDA is an obscure computation called PRR, which stands for Proportional Reporting Ratio. As the name implies, it is based on RATIOS of different event types and is utterly blind to the ABSOLUTE RATE of such events.

PRR measures the distribution of different kinds of adverse events, e.g. blood clots, heart attacks and deaths. If those ratios are severely out of line with the great variety of vaccine reactions in the past, PRR would detect that.

For example, if the new vaccines caused an extraordinary risk of myocarditis
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fdeuk-regulators-reassess-covid-vaccines-children%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C1>
, but everything else was low, then PRR would flag that. But if myocarditis was just one risk among many that have been reported from past vaccines, then PRR would not pick that up.

The real scandal is that PRR is blind to the absolute risk numbers. PRR is defined in such a way as to look for unusual PATTERNS of adverse events, but it is completely insensitive to unusual RATES of adverse events.

Of course, it is the rates and not the patterns that are of primary concern, and the PRR is designed NOT to reflect that.

Subscribe to The Defender - It's Free!

For example, suppose we have two vaccines:

- * Vaccine A has 1 reported death per million vaccinations, 3 reported heart attacks per million, and 20 reported headaches per million.
- * Vaccine B has 1 reported death per hundred vaccinations, 3 reported heart attacks per hundred, and 20 reported headaches per hundred.

Vaccine A is quite safe, and vaccine B is extremely dangerous. And yet the formula for PRR will produce the same result for vaccine A and B!

Clearly, PRR is not an appropriate criterion for evaluating the safety of any particular vaccine. Did the FDA use PRR in order to cook the books?

In Moderna's own trials, 1.3% of vaccine recipients
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nejm.org%2Fdoi%2Ffull%2F10.1056/NEJMoa2002438>>
had a reaction to the vaccine that was severe enough to require medical attention. The following possible side effects were listed in information given to doctors:

"Anaphylaxis and other severe allergic reactions, myocarditis, pericarditis, and syncope have been reported following administration of the Moderna COVID-19 Vaccine during mass vaccination outside of clinical trials."

Off with his head! — the CDC's ACIP hearings

In Alice's Wonderland
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gutenberg.org%2Ffiles%2F11-h%2F11-h.htm&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21726-4&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21726-4>>
, the Red Queen's justice began with the execution, then there was a verdict — and finally a trial.

The FDA hearing was followed by a meeting of the Advisory Committee on Immunization Practices (ACIP), which reports to the CDC.

The committee on Feb. 4 voted to recommend
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fdocs%2Fcdc-moderna-spikevax-covid-vaccine-injuries%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21726-4&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21726-4>>
the Moderna Spikevax. Only after that action step had been secured did the committee hear testimony
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ffive.childrenshealthdefense.org%2Fdocs%2Feb-4&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21726-4&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21726-4>>
from the Public Health Agency of Canada that Moderna's vaccine was associated with a myocarditis risk five times higher than Pfizer's.

Questions for the CDC

- * All-cause mortality was equal in both placebo and vaccine groups (16 deaths in each). In the midst of a pandemic, Moderna's vaccine demonstrated no survival benefit. This should have been enough to end any further consideration of approval.
- * We have detailed data on myocarditis from decades of past history. One-fourth of myocarditis patients
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.sciencedirect.com%2Fscience>>

are dead within 5 years, but the same study reports that if the myocarditis is caused by human immunodeficiency virus, then three-fourths die in the same 5 years.

We have no long-term data on vaccine-induced myocarditis, but we do have some 6-month data, which show 39% of cases still had their activity restricted by their doctors, 20% were still on heart medication, 32% still reported chest pain, 22% still had shortness of breath, 22% had palpitations and 25% still reported fatigue. Thirteen vaccine recipients died. (All these numbers were presented at the ACIP hearing on Feb. 4

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ffive.childrenshealthdefense.org%2Ffeb-4&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21726>.)

Why should we have confidence that the course of vaccine-induced myocarditis will be much less severe than other forms of the disease?

* The Moderna trial, like the Pfizer trial, was limited to healthy people, mostly young, with no pre-existing problems. Pregnant women were explicitly excluded. Why is the vaccine being approved as safe for everyone, including diabetics and immune-compromised, elderly and pregnant women

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fcoronavirus%2Fncov%2Fvaccines%2Frecommendations%2Fpregnancy.html&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21726>?

* When mRNA vaccines were approved on an emergency basis, the FDA promised to track all safety concerns with a new cell phone app called V-Safe

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fcoronavirus%2Fncov%2Fvaccines%2Fsafety%2Fvsafe.html&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21726>. Why are the results of V-Safe being withheld from the public?

* The FDA was considering approval of Moderna's vaccine in January 2022. There was a full year's experience with side effects reported from nearly 200 million doses of the Moderna vaccine in the U.S. alone. But the FDA limited its consideration to the 15,000 subjects who were in the Moderna trial, ending March 26, 2021. Why was this huge trove of data on vaccine safety not reviewed by the FDA?

* Yes, we understand that the vaccine doesn't become fully effective until 2 weeks after the second shot. But is that a reason to exclude from consideration the damage that is inflicted by enhanced vulnerability to disease during those two weeks, or, for that matter, the four weeks between shots? These have been counted as diseases of the "unvaccinated," but in fact, people in this stage of treatment are much more vulnerable than the truly unvaccinated.

* France
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.courthousenews.com%2Ffrederick-jab%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21726> parents-sue-after-daughter-mistakenly-gets-moderna-and Germany

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.reuters.com%2Fworld%2Fhealth%2Fmoderna-recommends-only-biontechpfizer-vaccine-people-under-30-2021-11-10%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21726>

do not recommend Moderna's vaccination for young people, presumably because the Moderna vaccine is associated with a higher rate

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.bmj.com%2Fcontent%2F371%2Fg068665&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21726>

of myocarditis than the Pfizer vaccine. How did our FDA come to a different conclusion?

* Anaphylaxis following vaccination is an immediate, life-threatening and an undeniable consequence of the vaccine. The CDC claimed the rate of anaphylaxis is 6 per 1 million.

However, in March of 2021, an examination
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fjamanetwork.com%2Fjournals%2Fjama%2Farticle%2F2768211>
of anaphylaxis following mRNA vaccines revealed a much higher incidence of this adverse
event. In fact, 9 of 38,971 Moderna vaccine recipients suffered documented anaphylaxis.
This equates to 230 per million, or 38 times higher than the CDC estimate.

Efficacy — but at what cost?

The proper measure of the efficacy of any medication is how it affects all aspects of a patient's health. But in evaluating the Moderna vaccine, the FDA looked only at its effect on COVID.

There are early but disturbing indications that vaccination worldwide has had dramatic effects on other aspects of health, unrelated to COVID. Insurance company trade journals report

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fdeaths%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11> companies-report-increase-premature-

deaths%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11 that they are paying life insurance claims for adults 18-64 years of age at a rate 40% higher than during any normal year.

[illegible]

Could it be that the vaccines have had a small benefit for COVID severity and disastrous impact on other aspects of human health?

We now have some real-world experience with the efficacy of vaccines. For example, we know the virus mutated to a more contagious, less lethal form. Omicron <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fde-surges-fda-vaccine-strategy-question%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C1>> is now the dominant form of the virus in the U.S. and most other parts of the world today.

The Omicron mutations are concentrated in the spike protein — the only part of the virus to which the vaccinated population has immunity. This suggests the virus is

mutating in response to the vaccine, and mutations are an important factor affecting efficacy in the long run

Nevertheless, the FDA considered efficacy data predominantly from the first five months of data (through March 26, 2021

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F15593>
) in making its decision to fully license Spikevax, with an absolute cutoff in November, before Omicron became dominant.

More questions

- * Almost all subjects in the original Moderna trial who received placebo initially were subsequently given the vaccine. How will we ever know the long-term effects of the vaccine if we have no controls with which to compare?

- * Why do CDC studies of death rates based on vaccination status differ so markedly from the same question asked by independent groups in other countries?

Here, for example, is a report from Public Health Scotland

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fpublichealthscotland.scot%2Fmedia%2F15593>
01-19-covid19-

winter_publication_report.pdf&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21726

stating that vaccination increases vulnerability to Omicron. Here is a similar report from England

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.healthdata.org%2Fsites%2F15593>
. This study

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Flink.springer.com%2Farticle%2F10021-00808-7>

7&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21726

shows countries with higher vaccination rates tend to have higher rates of COVID, and this one

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fosf.io%2Fym7ta%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21726>
confirms the same result for U.S. states.

- * We are now in an era dominated by the Omicron variant, against which all the vaccines seem much less effective. But even “follow-up data” was analyzed only through March 26, 2021

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F15593>
, nine months before Omicron took over. Why did the FDA base its decision on data only from older variants?

- * The secondary efficacy endpoint was the prevention of severe COVID-19. Now that it is accepted that there is little, if any, protective effect of mRNA vaccines from infection, the prevention of severe disease should be the primary focus of approval determination.

Moderna claims its vaccine efficacy is an astonishing 98.2% in preventing severe COVID-19 (Table 8

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F15593>
) . Pfizer’s was 96.7% (Table S6

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medrxiv.org%2Fcontent%2F10021-00808-7>
material&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf298f442561e4ea1d67408d9ec4d34f5%7C11d0e21726

).

The reason for the calculated difference in efficacy between these two products was not from a lower incidence of severe disease in the vaccine arm of Moderna’s trial (it was lower in Pfizer’s trial). It was because the incidence of severe disease in Moderna’s placebo group was much higher than in Pfizer’s.

Severe COVID-19 in Pfizer’s placebo group occurred in 30 participants out of

23,0379. In Moderna's, severe disease occurred in 106 participants out of 14,164 that received a placebo. Why was the incidence of severe COVID-19 nearly six times higher in Moderna's placebo group than Pfizer's?

Postscript: Failure was never an option

In America, why are clinical trials for new drugs run by the same companies that own the drugs, and will profit from them if the trial is successful?

It's a glaring conflict of interest, but necessary within a capitalist system. Since the trials cost, typically, hundreds of millions of dollars, only the company that will profit from the drug is motivated to invest such huge sums in testing.

In the case of the COVID vaccines, however, the development and the trials were both publicly funded. There was no excuse for contracting the same organization both to develop and test their own product.

[illegible]

This leaves us wondering, did our government ever want a fair and unbiased evaluation of the COVID vaccines? Or — after a full year of telling the public that vaccines were the only path out of the COVID crisis — did NIH feel they could not risk the possibility that the trials might fail?

There were no animal tests. There was no time to experimentally optimize dosage and delivery. They had to guess right the first time.

Maybe they thought this is what the exigency of a pandemic required — but please don't call it "science."

2. No

10.

Are you testifying on a specific proposal under consideration by the board?

1. Yes

Mandatory child vaccination for covid 19

11.

Are you Pro or Con on the proposal?

2. Con

I do not believe that children need to be vaccinated. If teachers are already vaccinated they should have nothing to worry about. A child's immune system is very resilient. I'm not against children being vaccinated, but I am against forcing families to vaccinate their child or be forced to take them out of school. Covid 19 has already had a substantial negative impact on the youth in America. Further forcing parents and children(old enough to make their own choice) to vaccinate or be subject to dropping out is only going to set them back even further. I am a person who is vaccinated because I was forced to. I didn't not want it nor did I think I needed it. The children in our household have been exposed many times throughout the pandemic to each variant and have yet to get sick. If our children want the vaccine we will provide it to them, if they don't we will not. It is their choice, not ours, and certainly not anyone's choice whom is outside the household.

Regarding the Feb. 10 TAG Meeting: Public Comment

Good Morning,

I have been a licensed health care provider for the past 17 years. I have a 12 year old in LWSD. PLEASE do not recommend mandating COVID-19 vaccination for our school children.

I feel motivated to state that I am not anti-vaccine. I have been vaccinated with all schedules, as has my daughter (except for this one, as I have grave concerns with the need and safety of this vaccine in her age group).

* The vaccine was made for 5 variants ago.

- * Studies have noted continuing decline in protection against Omicron, as well as declining protection over 90 days.
- * Omicron is declining. We have no idea if this will remain the variant, or, if a new variant will pop up and we have no idea if the wild type vaccine will be effective against the new variant.
- * The age group has a near nil risk of anything related to COVID.
- * These shots do not stop infection, nor transmission.
- * Pfizer states that they will need 5 years to study the safety data for this age group.
- * There are very concerning trends with adverse events and these must be investigated to the fullest.

Because of these points above, pushing this as a mandate is optics only; creating a false sense of protection to the parents who want this.

The flu is more deadly to our children than COVID. We do not mask, isolate, mandate, close contact trace, nor do we mandate an annual shot (because at times these are only 14% effective) to our children. PLEASE stop this insanity.

I respectfully submit that I will remove my 12 year old from public school if this mandate is approved.

Warmly,

Angela,

Angela Pifer, Ms, Functional Medicine Nutritionist, LCN, CN

Thank you. When will a decision be made? I need information to plan for my children's future if it is passed as we will not be vaccinating our kids and pull them from public school. A timeline of the decision, when it will take affect, and information on exemptions would be appreciated. I am operating under the understanding that this will pass and the rest of the meetings are just a formality. If you can connect me with someone who has this information, it would be greatly appreciated as this will impact our lives in innumerable ways, including considering moving from the state. I need to make plans.

Subject: No to mandatory Covid 19 injections for school eligibility

External Email

Dear members of the Board of Health Committee,

I would like to strongly urge you not to make the Covid-19 injections mandatory for children to enter schools in the fall of 2022 or any time thereafter. As you are probably aware, the public schools are losing students at a rapid rate for a variety of reasons. A mandatory Covid-19 shot will only serve to exacerbate that trend since we, as parents, can read and we understand the following:

1. Data from the CDC and WHO explicitly shows that children 18 and under have negligible risk from severe illness or death from Covid-19
2. The Covid injection is still under Emergency Use Authorization and short and long term effects have not been sufficiently studied and analyzed
3. It is abundantly clear that the Covid-19 injections do not prevent the spread or infection of Covid rendering them utterly useless to a cohort who already has negligible risks from the virus
4. There are already evident risks of adverse effects--especially in young males--for myocarditis (and other risks) as documented in various studies and data from VAERS

Thank you,

Kara Whelan

Subject: TAG meeting February 10th 2022

External Email

Hi,

I wanted to express concern about the TAG meeting today and the information that they are reviewing. They are reviewing information that comes from all ages of vaccinated and unvaccinated people. They are looking to make a vote/recommendation to you all about whether or not to vaccinate school children. Why are they not ONLY reviewing school age children vaccinated/unvaccinated data? Because there is none. There is not enough data for anyone to be able to make an educated and informed decision on these children. Vaccinating the age groups who are impacted by SARS-COV2 the SMALLEST/LEAST, and with whom there is the SMALLEST/LEAST amount of data on is completely unacceptable! We ALL owe it to our children to keep them safe. The virus has more than a 99% survival rate to begin with, there is an even higher survival rate amongst our youth. There is NO reason to vaccinate anyone let alone children when there are ZERO long term studies on a "vaccine" that does not prevent the spread of a virus. This virus affects any/every person differently and no one knows why yet, so you cannot say that it reduces hospitalization and death. There are too many studies that are being investigated for discluding certain data. In 5, 10 or 15 years (however long it takes) when there's enough accurate data to be able to make a decision on mandatory vaccination, then we should be discussing this. Not now.

Thank you,

Danylle Guerrero

Why not see the effects all of this is happening to all our children? Suicide has gone up drastically I see this is more a concern than the virus.

The mandate to add covid vaccine to the state vaccine requirements to school age children is completely inappropriate. They long term studies to fertility, autoimmune disease and long term effects are unknown. My children have had covid and recovered. I WILL NOT VACCINE MY CHILDREN WITH MNR. I am not alone. I will fight for my children's right to live without fear of what a vaccine that will not protect them might do to their bodies. Stop this mandate! Unmask our children. Let people live their life how they see fit. Personally choice and personally responsibility NOT GOVERNOR mandates!!

As a mother of 2 school age children in this state it is my hope that the Technical Advisory Group will vote NO to add c19 injections for children to attend school. I have made sure my children have every immunization they need at the direction of their doctors. This injection though is not the same as those already on the list for entering school. These are new & there is no currently published literature on pediatric Covid 19 vaccine effectiveness in K-12 school setting. Also, these injections are widely available for any one wanting to get it, children in this state have been getting them for some time now. There is no mandate for children to get the flu shot for school and for years we've dealt with how that affected teachers, staff & student's attendance with out mandating the shot. It also seems that Covid 19 is on the downturn and we are coming to the end of the pandemic, which as a mom would tell me, there is no need to mandate such an injection on the masses of our students. Thank you for your time.

I am here to voice my concerns taking place in this State in regard to COVID 19 shots.

I feel that every parent chooses what they feel is right for their children and themselves. Whether that means choosing to get a shot or not, just like choosing to breastfeed or use formula. Both are a right answer in what they choose for their family and that because it's a CHOICE. It should always be a choice to get a shot or not, just like the flu shot (Norway already views COVID as the flu so we really need to get on their level).

Thousands of fellow parents will pull their kids out of school if this is required. I love my children too much to force junk in their body that has yet to even be proven effective from getting it spreading with the shot- so what the point of even getting it? Due to the thousands of parents pulling their children will only add to the falling economy... as teachers, bus drivers, cooks, etc. will no longer be needed since there will hardly be any children in school.

Face it, COVID will not go away- people need to move on and live their life and realize it's not serious. People die from smoking... yet that's still ok....how many alcohol related deaths have there been? Millions... but yet let's still sell it and every venue, restaurant, and store.

That makes sense.

There isn't a Covid pandemic. There is a people with power pulling pandemic. Horrible people that do not respect the constitution. As you can see I am completely against forcing people and children

from a shot that they feel is not good for them. And punishing those families who chose not to get it. This is un-American and I hope you are ashamed of yourselves.

Please do NOT proceed with adding any Covid vaccine to the school requirements. This particular vaccine does not meet any requirements for a childhood mandate and we have already decided to move out of state before getting this for our daughter:

- No consensus on schedule or doses. It currently triples on twelfth birthday.
- EUA
- Does not prevent transmission
- People under 18 are at very low risk of serious illness

2. Con

The mRNA and DNA COVID-19 shots are unlike any other vaccines given before. The global push for their uptake and the volume of reported adverse reactions and deaths following administration are unprecedented. The hundreds of thousands of medical and scientific professionals globally standing up and speaking out against the response to COVID and to the shots is unprecedented, as is censorship on scientific debate. When this nation's top doctors and scientists are being kicked off of social media platforms and being fired from their jobs for daring to speak on their findings and science critical of current policies, it is clear something has gone terribly wrong. - The CDC acknowledges the shots do not prevent infection or transmission and that any protection afforded fades rapidly, yet they refuse to abandon their push for increased uptake and boosters, and they refuse to promote existing early treatment protocols or acknowledge the mountain of evidence of the superior safety and effectiveness of naturally-acquired immunity. "Fully vaccinated people who get a Covid-19 breakthrough infection can transmit the virus, CDC chief says," CNN Health, <https://www.cnn.com/2021/08/05/health/us-coronavirus-thursday/index.html> - Children and young adults are at extremely low risk of mortality from COVID-19. When one subset of the population (children) carries a high risk for injury from an antigen but low risk for injury from the disease, we must consider the mandate of such an antigen to be unethical. Bhopal, "Children & Young People Remain at a Low Risk of Covid-19 Mortality," The Lancet Children & Adolescent Health, Correspondence, Vol 5, Issue 5, E12-E13, May 1, 2021. [https://www.thelancet.com/journals/lanchi/article/PIIS2352-4642\(21\)00066-3/fulltext](https://www.thelancet.com/journals/lanchi/article/PIIS2352-4642(21)00066-3/fulltext) - Many medical professionals are speaking up and sharing their experiences of working in hospitals right now as they care for patients who are coming in with what they can associate to vaccine reactions. "More VC Nurses Blow Whistle on 'Overwhelming' Numbers of Heart Attacks, Clotting, Strokes," The Conejo Guardian, December 14, 2021. <https://conejoguardian.org/2021/12/14/more-vc-nurses-blow-whistle-on-overwhelming-numbers-of-heart-attacks-clotting-strokes/> - Individuals are sharing their own experiences with their health while taking the COVID shots. U.S. Senator Ron Johnson hosted a round table on November 2, 2021, to allow these individuals to tell their stories. <https://childrenshealthdefense.org/defender/nov-2-sen-ron-johnson-cdh-covid-vaccine-injuries-federal-mandates/> - Most importantly, the long-term effects of the vaccine trials in children are unknown. Deaths in children are a fraction of the percentage of deaths in all other age categories. Kostoff, "Why are we vaccinating children against COVID-19?" Toxicology Reports, Vol 8, 2021, Pages 1665-1684, <https://doi.org/10.1016/j.toxrep.2021.08.010>. The COVID-19 shots DO NOT fulfill the criterion of BIOETHICS and DO NO HARM principle. It is incomprehensible that the Board would even consider such a requirement with products that cannot prevent infection or transmission.

The mast majority of parents will not have their child vaccinated as the data clearly shows it is not beneficial and the very well documented and know side effects are far too dangerously. Additionally the CDC clearly states long term side effects will not be know for many years. If you pass this you will essentially dismantle the public school system as there will be a mass exodus of students from the public school system. I personally do not know any parent who supports this and I'm heavily involved in the community, school systems and state wide issues.
Parents will pull children, parents will relocate to other states.

Leave our kids alone, we as parents know what's best for our child.

Vaccine Mandates are ILLEGAL.

The FDA admitted when they approved the shot for children that the only way to find out if it is safe for this age group is to start administering the shots and find out.

To MANDATE it (especially before there have been any long-term safety studies) is a violation of the Nuremberg code and is a violation of international and constitutional law.

Anyone who enforces this mandate will be subject to punishment by national and international law. Do right by everyone including yourselves and refrain from mandating this shot. The repercussions will be devastating for you and for the children.

Sincerely,
A parent in Mead School District

10.

Are you testifying on a specific proposal under consideration by the board?

1. Yes

I do not want any of my four school aged children to get the covid 19 vacation

11.

Are you Pro or Con on the proposal?

2. Con

I believe it is in needed and it is 100% unwanted for our children to be test subjects for the covid 19 vacation. Their is not enough data for it and I know a few children that have gotten it and already have long lasting effects due to the vaccine that they did not have before. Do not force our children to get the vax our you will see a huge drop in numbers of students that are in our schools now.

Subject: Public Comment-Review of Criteria 5 & 6

External Email

This is regarding Washington's BOH TAG meeting on Feb 10, 2022 to review and vote on criteria 5 and 6 for school children as related to the Pfizer Covid -19 vaccine. Criteria 5 and 6 are reproduced below from what was given to TAG members at the meeting:
#5: The vaccine containing this antigen prevents disease(s) that has significant morbidity and/or mortality in at least some sub-set of the population.

#6: Vaccinating against this disease reduces the risk of person-to-person transmission, with transmission in a school or child care setting or activity being given the highest priority.

Comments:

There is no evidence, and none was presented, that even suggests the vaccine in question(Pfizer) or any of the other vaccines, prevent infection and disease by any of SARS Cov-2 variants. All current vaccines, by definition, fail to satisfy criterion 5. Furthermore, the overwhelming majority of data to date demonstrate that healthy school age children have nearly zero risk of serious outcomes from infection. For example, the UK Office of Statistics, recently reported that in the entire population of England and Wales, about 60 million total population, only 3 children under 19 died in the nearly 2 year period from Feb 1, 2020 to Dec 31, 2021 on whose death certificate the only cause of death was Covid-19, in other words healthy children with no co-morbidities, link below.

<https://www.ons.gov.uk/aboutus/transparencyandgovernance/freedomofinformationfoi/covid19deathsanda>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.ons.gov.uk%2Faboutus%2F>

The data presented on disease and death of children from Covid-19 at the meeting did not separate healthy children from those with co-morbidities. Given how small the number of deaths in children are from all diseases, it is significant to know what fraction had such comorbidities as cancer, or other serious underlying conditions. Clearly, a very small subset of children have serious underlying conditions. To lump all children who died with Covid with those who died from Covid paints a confusing picture when assessing risks versus benefits for all children.

The entire question of risks, especially in view of the lack of Covid vaccine long term data and the existence of significant signals from VAERS on pericarditis and other serious heart conditions in children, would be sufficient cause for pause, even if the the vaccine(s) prevented disease.

I thanks you for the opportunity to participate in this important process.

Regards,

Farhad Mazandarany

Subject: Comments for the Immunizations Technical Advisory Group

External Email

It is widely known that school children are least likely to be infected with Covid viruses and if they do become infected the symptoms will be mild. The latest virus Omicron, while highly contagious, generally has mild symptoms similar to a cold.

The CDC has acknowledged that the vaccines have limited efficacy and as a result promote boosters. Other medical experts state that successive vaccinations weaken the immune system.

It is also being revealed that the vaccines cause heart problems, strokes and blood clots especially among younger people. Even a three year old had died from a heart attack after being vaccinated. Many young athletes have either died or had very serious complications from vaccines.

The risks of giving Covid vaccines to children far out weigh any potential benefit. Therefore I strongly urge the Technical Advisory Group to recommend no vaccine mandate for Washington school children.

Concerning mandatory COVID vaccine for private, public and childcare. Although you have heard public outcry regarding this vaccine being added to the list of vaccination. I feel the need to reintegrate that children have a low rate of death and health effects from COVID or any of the variants. In fact it's not in the top concerns of mortality with school age children. Suicide, drowning, car accidents unfortunately are far higher on the list. I urge you to NOT add this to the vaccination list. The benefits are very minuet. Studies are short term, limited and not released to the public to view in entirety. Transparency should be available within our own state health department. I will not have my children attending public school if this becomes mandatory. Consideration of moving out of state is increasing and my tax dollars and property tax will be spent in a state who listens to it's citizens. We have an excellent school board and district that continues to relay the parents concerns to the Health Department, Superintendent of Public Schools and Governor throughout this whole pandemic. I'm thinking it falls a deaf ears because no response from either is sent back as requested. Our public school district might see a decrease 70% student attendance if it mimics the survey the school district sent out to parents regarding mandatory COVID vaccine. We have over 10,000 children attend out school district. At \$12,000 per student annually, the public education system will feel the burden of your choice. Thank you for saying No to adding this onto the vaccination list. A concerned parent and Washingtonian, Shannon McHenry

First and foremost I asked to be put on the list serve last month via email and still have not been added.

☐

As far as my questions:

☐

☐ Are you going to show the data for VACCINATION injuries for Children and Adults ?

☐

☐ Are you going to allow Parents to weight in since the TAG group all seem to come from one "narrative" back ground and does not seem to come from an unbiased stand point. ☐

☐

☐ How can you suggest a vaccine requirement for a vaccination that has not had any long term study, and that you can not give long term data on especially in children?

☐

☐ How can you regulate a requirement for Children vaccination for public schools with a vaccination that is only approved in Emergency Use?

☐

☐ Do you believe in God?

☐

Thank you,
Christina Riley

You all seem to be in a rush to recommend the COVID vaccine for children to attend Washington State schools, however as a whole every single person in this group doesn't seem to care about studies out there unless it suits their agenda. Your agenda was very telling yesterday by what was presented by the "experts" yesterday. There are many "experts" with the same impressive credentials that could present another side to the story. These people are left out of the conversation because the leaders of the TAG and the State of Washington aren't interested in what they have to say. Why is this? Your decision will greatly impact every single child in Washington.

You all say this vaccine is "safe" and "effective" but yet every day I see articles such as this posted without me even looking. These studies are largely ignored. Why aren't conversations about the safety of this vaccine happening? Do you all just assume because the FDA/CDC deemed it safe that it actually is? Plenty of other countries say the risk of vaccinating children with the covid vaccine far outweighs the benefit - why is this? Why do we have such a different approach? Is it because many of you get funding from BigPharma or the NIH? I don't believe one person that sits on this TAG genuinely has the best interest of my children at hand, rather they have an agenda to push.

Do better and be honest. My children do not deserve to have their life destroyed by people like you all.

Subject: Please oppose inclusion of the experimental shot for school age kids

External Email

Currently, there is no published literature on pediatric Covid-19 vaccine effectiveness in K-12 school setting. Covid-19 is far down the list of causes of death for Washington children. Yet, suicide is the 3rd leading cause of death for our teenagers ages 15-19. This is an EXPERIMENTAL shot. Kids have a greater chance of dying on their way to school in an auto accident. I remain deeply concerned about the long term effects of this experimental jab for children. Please do not include this as a requirement for these innocent kids. We will unenroll and encourage others to unenroll if this is required.

Please do not add any covid virus to the current legislation governing vaccination requirement for public school enrollment. The mass confusion over what this pandemic is and how it is being handled is reason alone to wait until things settle and everyone has a chance to review the real impact of the virus and the response.

1. Yes

Covid vaccine required for students

11.

Are you Pro or Con on the proposal?

2. Con

Much of what was presented was reported to be "predictive" or had "limited data." The vaccine was reported to be "not without risk" and only have "short term" outcomes. This information does not seem robust enough to require an emergency vaccine. It should remain optional. Finally, I am not sure increase cases in the past few months is a good argument. There has been a huge increase in testing and testing of non-symptomatic people. I employee you NOT to recommend this vaccine as required. Let parents make their own choice.

Governor Inslee & Washington State Board of Health,

The need for the immunization for Covid needs to be up to each individual, just like the flu shot is. It is not necessary for those people that have already had Covid to receive the shot as they will have natural immunity from the virus. We are at the end of the pandemic and this experimental shot is not justifiable at this point. If the government is not willing to hold the manufacturers accountable for deaths or illnesses that may be caused by the shot, then you should not be able to force it on anyone. There are major red flags when the drug companies don't want the compiled data to be released to the public for another 75 years. What are they hiding?

Sincerely,

Natalie Bush

Subject: Feb 10 BOH Meeting

External Email

Dear BOH,

It remains unethical to mandate a drug or treatment against a person's will. The pediatric research with Covid-19 vaccines will not be completed until next year. How and why is this even being considered without long-term research data? These are our children. They are at least risk of severe disease and death.

Therefore, I would love to know how/why this mandatory vaccination can be clinically justified.

I will be in attendance at the February meeting, as I was at the January meeting. Please inform us and explain your rationale for those of you choose to vote yes.

There will be a massive exodus from the public school system state-wide if this is mandated.

Please, do the right thing; vote no on mandatory vaccination to attend public school. Thank you!

Respectfully,
Ella Mae Kurashige RN, BSN, MSN

Date: Friday, January 7, 2022, 11:51 AM -0800
Subject: Jan 12 BOH Meeting

Dear BOH,

☐ Clinical research is a body of knowledge regulated by the FDA, 21CFR, and numerous ethical entities, such as the Helsinki Declaration and the Nuremberg Code, ICH, and others. It is my understanding the 2 covid-19 products from Pfizer are regulated according to these laws and guidelines.

I have grave concerns about what is happening in this state regarding the covid-19 product that received a continuance of its EUA-approval last year. It is illegal and unethical to mandate an EUA-approved drug; knowledge of risks and free will consent must be obtained. If it ever does receive FDA approval, it remains unethical to mandate

treatment or drugs against a person's will and should not be tied with school attendance. If it is, exemptions need to be in place and granted. Knowledge of risks and written, informed consent is required. Additionally, long term studies begun recently in children will not be complete for another 1-2 years; children have a well-functioning thymus gland with a strong immune system that places them at minimal risk from this virus.

Therefore, I oppose the Board's formation of a TAG to review information about covid-19 shots for possible mandates in WA state schools. I oppose mandates, period, due to the above ethical and legal issues as noted in 21CFR and above-referenced bio-ethical standards.

Therefore, I support Item #11 on the above-referenced agenda to prohibit the Board from adding any EUA product, or any licensed product that lacks completed Phase 3 trial studies, to the school required list.

Where there is risk, there is consent.

Respectfully, □

Ella Mae Kurashige RN, BSN, MSN

Subject: Commit to no COVID vaccine mandates on children

External Email

Dear Washington State Board of Health,

Our state government should NOT be mandating Covid vaccines on our children. Children are at extremely low risk for Covid and these medical decisions should be left in the hands of parents.

Sincerely,

The Citizens of Washington State

Subject: No Mandatory Vaccinations

External Email

I urge the board to not even consider making the Covid-19 vaccination mandatory for schools.

As a vaccine-injured parent, I will do whatever I can to bring awareness to the lack of safety information for these vaccines. The trials and safety data have cut so many corners to date, and there is no emergency for the children. Covid has equaled, at worse, the impact of the yearly flu in children. And, no flu vaccines have ever been mandated on children. The Board has already mandated several vaccines for school and this one is not needed, as it does not stop transmission and children are not at serious risk.

Children should not have to submit to any sort of passport system to live their lives, especially from a vaccine that has not been rigorously tested and injuries are being ignored. I would be happy to testify as to the experience of a vaccine-injured person and how difficult it is to get treatment. The medical community has not been advised on vaccine-caused injuries because apparently the pharmaceutical manufacturers and governmental bodies are still choosing to ignore injuries. If the manufacturer cannot be held liable, maybe other bodies that mandate them can be? Please also remember that the FDA has required the manufacturer to provide additional safety data, such as for myocarditis, that won't be completed for several years. I'm sure the Board would not want to mandate a medical injection for something that ultimately turns out less safe than first promised.

As I'm sure you are already aware, but the amount of parents choosing to get their children vaccinated is low. Children have been through enough disruption and should not be forced with yet another medical decision made for them.

Thank you,
Dawn Van Diest

Covid vaccination of kids for school and daycare

11.

Are you Pro or Con on the proposal?

2. Con

Children should not be required to have a covid vaccination to attend school or daycare. There is limited data on what hospitalization of children included, i.e. were they seen and released, kept for observation, or required icu care etc. Unfortunately it has had a greter morbidity rate for our elderly. The vaccine doesn't have long term side effects known given it hasn't been out for years to provide the data.

I am opposed to making COVID-19 shots mandatory for school admission or childcare in our State for the following reasons: 1. There is no medical justification for making the shot mandatory. 2. There are dozens of studies worldwide showing the near zero mortality rate for children associated with COVID-19. 3. The shot does not prevent transmission nor infection and as such, cannot be used as a justification to "slow the spread" as it does not do so. 4. The shot does not have a single commercially available or distributed dose in the United States that has passed FDA approval. 5. There has been zero release as to the actual ingredients in the vaccine. 6. There are no long-term efficacy studies to determine risk. 7. Parents and legal guardians retain the legal rights to all medical decisions for their children. 8. There are several therapeutic and reasonable options for early treatment, including for children, that would be more effective than a shot that does not reduce transmission or infection. 9. Lastly, your data being presented today does not take any co-morbidities into account which we know from recent data is a MAJOR contributor to people having more severe Covid outcomes. Thank you, Carrie Swanson

I would like to express my extreme opposition to implementation of a COVID 19 vaccine requirement for schools in Washington State.

* Almost 100% of kids don't suffer from severe COVID. In fact, many have no symptoms at all. Thus, they may have already had COVID which is another excellent reason not to get the vaccine.

* The World Health Organization (WHO) has announced that young people should not take the vaccine.

* A concerning number of young people, especially those under 30, are suffering from myocarditis (heart inflammation), blood clots, low platelets and more following COVID-19 vaccination.

Subject: Comments for the Immunizations Technical Advisory Group

External Email

Dear Board of Health Members

Please do not include the Covid-19 shots as an immunization requirement for kids to enter school in WA state.

The COVID-19 shots are approved as Emergency Use only. As such, it cannot be mandated. This is an experimental drug and is unlawful to mandate it in kids, see the Nuremberg Code.

In addition, per the VAERS data, kids have died from the shots, are more likely to have heart inflammation which will lead to increased morbidity and mortality, experience permanent health consequences, heart palpitations which can lead to stokes, strokes, and neurological damage after the COVID-19 shots) versus they have a 99.99% recovery rate from the virus. In addition, kids are not super spreaders of this virus.

Your vote to NOT include the COVID-19 shots as mandatory for school entrance is most appreciated.

Sincerely,

Krista

For the record, I am strongly against the COVID vaccine mandate for children in public schools in Washington. In fact, I am again any sort of mandate that supports showing a vaccination card to get into a restaurant, event or public place of any sort.

Parents are the only ones who have the right to decide what, if any, vaccines a parent gives their child.

I and many other parents who tuned in yesterday were appalled. Numbers were skewed to present a narrative. This shot does not in any way meet criteria #5. And I think you all know that. The last question of your meeting pertained to transmission and the woman who answered could not present any measurable data on the shot preventing transmission.

#6 is also not applicable because the shot has not been proven to reduce transmission from any measurable data source study. And again, children are at virtually zero risk of dying from this disease. They are however at risk of heart issues and unknown long term effects. We know it can affect menstrual cycles.....but definitely not fertility?? How would you feel if an entire generation was infertile? These are the types of issues on your shoulders with a shot with no long term studies.

I have heard that your committee was appointed by our governor....who seems to have a monetary (not health) interest in vaccinating every living thing, natural immunity or not.

We as parents beg you to reconsider moving forward. My family could up and move since we own a home in another state, but many families who have already been hit hard will lose more education when they are pulled from school. As you probably heard when you allowed public comments last month many of us will NEVER inject our children with this product.

Thank you for your consideration and doing the right, moral thing and not allowing yourself to be paid or coerced.

Subject: No mandates

External Email

I urge that there be no mandates at all for children to take Covid shots. There is evidence accumulating that shows that younger adults (all below age 64) have experienced an increased death rate - 40% above the norm for heart/circulatory deaths, just in 2021 (this info comes from insurance companies). We don't know the reason for this but might suspect that the heart issues (including myocarditis) may have been caused by the spike protein in these shots. It is bad enough that almost the whole American public has been used as guinea pigs for the drug companies.

These so-called "vaccines" were never fully tested and certainly have not been tested on children. Do not force them on the children. Look at the real science and leave the children alone.

Sincerely,
Janice Moerschel

Subject: SuperBowl & The Big Game

Greetings...

Issaquah, Bellevue, Lake WA School Districts, OSPI, WA State Education, WSBOH, and
King County Commissioner.

That sure was quite the Half Time SuperBowl Show, wasn't it? As 70k mask-less fans
adorned the stadium in CA for the 'big game', it sure brought attention to millions sitting
at home watching that we have been played. We've been played by our State Schools
and Government.

We are no longer asking. We are demanding that immediately mask mandates be
rescinded from our schools and release our children from these harmful practices.

Thank you kindly,

Tanya Goodman

Protective and Loving Mother

<data:image/png;base64,iVBORw0KGgoAAAANSUhEUgAAAAEAAAABCAQAAAC1HAwCAAAAC0IEQVR42mNk

The CEO of the OneAmerica insurance company
recently disclosed
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Finsurance-forums.com%2Flife-insurance%2Foneamerica-ceo-says-death-rates-among-working-age-people-up-40%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C754b9243d76649c568a008d9ecc78f66%7C11d0e

that mortality in the 18-64 age group was 40 percent higher during the 3rd and 4th quarters of 2021 than during pre-pandemic levels. For reference, the CEO indicated that a 10 percent increase would have been a 1-in-200-year event. Furthermore, most of the deaths were not attributed to Covid.

<data:image/png;base64,iVBORw0KGgoAAAANSUhEUgAAAAEAAAABCAQAAAC1HAWCAAAAC0IEQVR42mNK

Figure 1: US weekly deaths by age group. Data
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fncchs%2Fnvss%2Fmortality%2Fweekly%2Fdeaths%2Fby%2Fage%2Fgroup%2F>
is from the CDC. The gold curve is data for 2021. The red curve is data for 2020. The gray curves are data for 2015-2019.

The OneAmerica insurance company serves a subset of the US population. The CDC collects mortality data
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fncchs%2Fnvss%2Fmortality%2Fweekly%2Fdeaths%2Fby%2Fage%2Fgroup%2F>
for the entire US population. Figure 1 illustrates the weekly US mortality from 2015-2021 by age group. Several generalizations are readily apparent. The years 2015-2019 were very similar for all age groups forming a tight band of usual expectation. The tightness of the band for 2015-2019 means that relatively small increases in mortality are very significant events. There has been nothing unusual about mortality for the Under-25 age group during the Covid period compared to recent history. The last 10 weeks of data for 2021 are incomplete due to delays in reporting death certificates. Otherwise, mortality for the Over-25 age groups have been higher than historic norms starting in about March of 2020 and continuing to the present time with one big exception for the 85+ age group.

There is a very interesting interval from Week 10 (March 7) 2021 to Week 24 (June 13) 2021. Deaths in the 85+ Age Group are LOWER than average during this interval. Total deaths for Weeks 10-24 averaged 248,536 during 2015-2019, but were 242,372 during 2021. For the 25-44 age group, total deaths for Weeks 10-24 averaged 38,955 during 2015-2019, but were 54,789 (40.6 percent higher) during 2021. Daily Covid deaths (7-day moving average)
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.worldometers.info%2Fcoronavirus%2Fus%2F>
in the US were declining from 1,689 on March 7, 2021, to 387 on June 13, 2021. This time period was the decline phase of the winter outbreak that peaked around January 18, 2021, and reached a nadir around July 8, 2021 prior to the Delta surge. One cannot plausibly attribute the above average deaths for the 25-44 age group during this time period to Covid. What was responsible for these deaths?

<data:image/png;base64,iVBORw0KGgoAAAANSUhEUgAAAAEAAAABCAQAAAC1HAWCAAAAC0IEQVR42mNK

Figure 2: Weekly US mortality by Cause Group. Data is from the CDC. The gold curve is data for 2021. The red curve is data for 2020. The gray curves are data for 2015-2019.

Clearly there is a very significant above average number of deaths across the US that cannot be attributed to Covid. As was the case for the Age Group graphs, data for the last 10 weeks are incomplete due to delays in reporting of death certificates. Deaths attributed to Malignant Neoplasms were average during the entire pandemic period. Although there was an increase in deaths from Alzheimer Disease and dementia in 2020 after the onset of the pandemic, this was less apparent during 2021. There was an increase in deaths attributed to Other select causes (which include suicides and drug overdoses), but the magnitude was much smaller than what is seen in the Circulatory diseases category. Deaths attributed to Circulatory diseases include strokes, heart attacks, and heart failure (including myocarditis). The Circulatory diseases category is clearly the most important category for excess deaths during 2020 and 2021. Notably, deaths attributed to Respiratory diseases were below average during 2021 for the period of interest between Week 10 and Week 24 of 2021. Covid is a respiratory disease and leads to acute respiratory distress syndrome with hypoxemia and respiratory failure in severe cases. During the period of interest between Week 10 and Week 24 of 2021, Covid deaths were steadily declining, deaths attributed to Respiratory diseases were below average, but deaths due to Circulatory diseases were significantly above average. It is difficult to explain the data between Week 10 and Week 24 of 2021 on the basis of lung injury caused by Covid infection.

The spike protein enables entry of the virus into the host cells. The spike protein targets the angiotensin converting enzyme-2 (ACE-2) receptor. Angiotensin converting enzymes play an important role in the regulation of blood pressure. Angiotensin receptor blockers (ARB) and angiotensin converting enzyme (ACE) inhibitors are both important classes of drugs used to treat hypertension. It does not require a stretch of the imagination to suspect that the spike protein could cause elevation of blood pressure. Acute elevation in blood pressure is known to be a risk factor for stroke, acute myocardial infarction (heart attack), and congestive heart failure. Spike protein is also associated with clotting, presumably due to endothelial injury, which would also increase risk for myocardial infarction and stroke. It is not clear why spike protein from the Covid virus would explain above average deaths attributed to Circulatory diseases during a time period when Covid cases and deaths were declining. However, the Covid virus was not the only source of spike protein during this time period. The mRNA vaccines led to the production of spike protein by host cells and Weeks 10-24 of 2021 were immediately followed by the mass introduction of mRNA vaccines to the US public. The data is not proof, but it is certainly a red flag.

The appropriate method to assess vaccine efficacy and safety is all cause mortality. Deaths from all causes are compared between the vaccine group and a control unvaccinated group. This method has not been used. Rather, the CDC and FDA determine on a case-by-case basis whether reported adverse events can be attributed to the vaccine. If a footballer drops dead during a game, one would not be inclined to attribute the cause to a vaccine given 10 weeks earlier. However, when 5 footballers drop dead every week, one will be looking for ANY common denominator between the dead footballers. Neither the CDC nor the FDA are impartial observers of vaccine safety. Both agencies have vested interests in promoting the vaccines. When the CDC or FDA analyze events on a case-by-case basis, they are inclined to say that an event was not due to a vaccine (especially if the people at the CDC and FDA include former executives from Pfizer). However, when the entire US population has a significant number of events compared to historic basis, one must look for the common denominators in the people with the events. The existing data is not proof that the vaccines are causing deaths due to Circulatory diseases. The burden of proof, however, lies with the CDC and FDA to prove that the vaccines are not causing deaths due to spike protein. It is scientific irresponsibility to eliminate the control group via vaccine mandates and make future assessment of vaccine safety scientifically impossible.

The risk of Covid 19 needs to also be measured against the risk of the covid 19 vaccine to make a educated decision. The risk of covid 19 vaccine should not be looked at in a vacuum. Also, the absolute risk needs to be considered as well, not just relative risk.

Debra Wells

On Thursday, February 10, 2022 9:28 AM, Debra Wells <debrakwells@startmail.com> wrote:

Please do not require or force the COVID 19 vaccines on children. More children have been negatively affected by vaccines than have been sick or died from covid. The children that have passed away had other medical issues that put them at particular risk; however, the vast majority are not at risk of covid 19. However, with the vaccines, myocarditis is more deadly to children than covid 19 and this has played out in the numbers.

We also don't know the long term effects on fertility and this vaccine should not be allowed or approved for children at any age.

Please follow biological science and not political science. It is very apparent that the majority of decision makers have been following political science and not biological science. Please do NOT harm our children with these untested vaccines. It's one thing to require the measles vaccines that have been around for decades; however, covid 19 vaccines have only been around just over a year. The numbers are not looking good for the safety of the covid 19 vaccine. The numbers from the Military are alarming. The numbers from insurance companies, that are required to review actual death rates and why so they can set premium rates, are extremely alarming. Ignoring these warning signs is gross negligence. We must protect our most vulnerable from even the most well meaning individuals/decision makers. We should not be making rash decisions that will have long standing impact that can't be reversed. We need more data on the vaccines before we force it on children.

Please vote NO on requiring Covid vaccines for children under 18.

To Whom It May Concern. I listened to the initial meeting to determine criteria about Covid shots in children. I oppose any and all mandatory covid vaccine for any children. There is NOT enough evidence to support safety for this age group. Unfortunately, if this measure is proved, hundreds of parents will remove their children from public school. More and more families are leaving Washington state. Please vote No on covid vaccines for children and leave the decision up to families.

Please do not add the COVID-19 vaccine to the vaccine requirements for children to attend school. If we wanted our children to have this vaccine we would have already had them receive it. This requirement is not necessary seeing as though most children have already had COVID and have had no lasting affects or complications. Parents should have the freedom to choose what is put into their child's body and should not be forced Inject their children with an experimental vaccine in which we have no long-term data that shows that it's affective at protecting people from COVID-19. The data shows that people who are vaccinated currently are still getting COVID-19. So, there's no need to get the vaccine.

We have no long-term data that shows how the make up of the COVID-19 vaccine will impact our children's overall health, cancer rates, infertility rates, miscarriage and stillbirth rates, or how it will affect their heart. There are some major concerns with this vaccine and its long term impact. It is 100% experimental I do not wish to have my child be enrolled in this experiment. I believe that this will have a negative impact on the public school system as many people who choose not to vaccinate their children like myself will pull their children from public schools and will fight to have the funding for their child go with their child and not to the public school. The people have spoken and do not want this added to the vaccine requirements to attend public school.

Respectfully,
Heather Clerget

Subject: Public comment on potential covid vaccine mandate

External Email

Good evening. My name is Lynn Nelson. I am a graduate prepared pediatric RN, and a mom and grandma. I also am the Director of Health Services at a regional education office, where I provide RN staffing, consultation, and support for 45 school districts.

Today I was able to view the data presented to the TAG group, during the live public meeting. I have also been reflecting on what I hear from professional educators from the state superintendent level down to individual district leadership, as well as looking at the political posturing going on in our state, especially as it relates to withdrawing the in school mask mandate. The data are compelling. I want to go on record as saying I strongly support mandatory COVID vaccines for children to attend public school, with reasonable, limited exemption availability (requiring provider consultation, as per current law).

While I understand concerns about burden on school staff, including nurses, and fears about potential loss of students, I would encourage you not to give into the fear based decision making that is happening in response to what I believe is a vocal minority. Public health decisions should be based on public health data, not political agendas.

Thank you for considering my input.

It is my firm belief , after much research, that the possible negative effects of the vaccine for children far outweigh the benefits. Statistics show that the vaccine is not necessary and can be detrimental. I'm asking that you use the data to make this decision for school children. Thank you , Mary Menard

Subject: I am voicing my concern of mandating covid 19 vaccines and the panel discussion's questions

External Email

I am writing to voice my concern over the COVID 19 vaccine and the panel discussion that is currently in progress.

I have many concerns over the process that is taking place to evaluate whether or not covid vaccinations should be added to the mandatory list of vaccines. I watched the zoom broadcast on Thursday January 10th and the discussions ultimately ended in a vote on 2 convoluted questions that someone could questionably vote yes on despite disagreeing with the statement based on other facts. This voting process doesn't provide a way to address all of the concerns that out-weigh any benefit. I fear that the adverse events data will be overlooked if the decision makers of these vaccine mandates only care about receiving yes or no votes to questions that are favorable to pushing the vaccine.

Also, please consider that the vaccines were formulated for the original COVID19 and we are now dealing with other more prevalent variants of COVID that the vaccine has not shown to be effective against, such as Omicron. It doesn't make sense to force an outdated vaccine on an ever changing virus. Plus, if new formulas are introduced each year, those also will not have had proper long term testing. Also natural immunity needs to be a bigger consideration in moving forward, and the side effects that are coming to light need to be taken into consideration. Even boosters don't prevent catching COVID as we can see with representative Alex Ocasio Cortez and W. Virginia Governor Jim Justice, and Canadian Prime Minister Justin Trudeau and Prince Charles who were all fully vaccinated and boosted.

To even consider mandating these vaccines to school children has several concerns, beyond its lack of effectiveness against new strains, but also that school aged children are less susceptible to adverse reactions from the virus. For many, it affects them with mild cold symptoms. It's impossible to know the long term effects that the vaccine will bring, even the presenters during the meeting pointed out that they have a lack of data, that there isn't a lot of studies yet that have been done on school aged children. I do not want my sons to be part of an experiment or part of this study. Also, there were only 2 side effects that were really touched on in the panel presentation, myocarditis and MIS-C (however, I missed the first 30 minutes of the broadcast so there may have been more).

With so many "breakthrough" cases and the reality that the vaccine's efficacy wears off quickly, mandating these vaccines does not make sense. There are known side effects, that make any benefit from the vaccine not worth the risk. Some of these side effects include myocarditis, blood clots, bleeding, aneurysms, neurological disorders, bell's palsy, Guillain-Barré syndrome, menstruation issues, and death. Further down I will provide links to adverse events data, websites, first hand accounts, and other helpful links to emphasize the concern over mandating these vaccines for all.

The slides presented by Eric Lofgren showed that there had been only 100 serious event reports in VAERS. This number seems extremely low considering other reports. Plus it should have been mentioned that VAERS represents only 1 - 10% of actual events according to the FDA

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.accessdata.fda.gov%2Fscrip>
. (I cited the source with a link)

<https://www.bitchute.com/video/Y0VBA3nX9krs/>

This is an outstanding number of deaths among athletes in the prime of their life in a short time frame. In the recent Pfizer FOIA request document dump it was shown that "as of February 2021, when Pfizer's shot was being rolled out worldwide on an emergency basis, the drugmaker had compiled more than 42,000 case reports detailing nearly 160,000 adverse reactions to the jab. These reactions ranged from the mild to the severe, and 1,223 were fatal." <https://www.rt.com/usa/543001-pfizer-vaccine-side-effects/>

effects%2F&data=04%7C01%7CWSBOH%40sboh.wa.gov%7C9b6d70d1d4e3497b4d5608d9ef9d71f2%7C1

experience.pdf&clen=1007157&chunk=true> . If you do a search for the word "fatal" you will find the number mentioned.

The two questions that were to be voted on were :

#6 Vaccinating against this disease reduces the risk of person-to-person transmission, with transmission in a school or child care setting or activity being given the highest priority.

Question 6 is worded badly to begin with. I'm not sure what this part of the question, "with transmission in a school or child care setting or activity being given the highest priority" has to do with the first part of the question. And this problem was voiced by several of the panelists.

I would not have known about this zoom meeting if I had not reached out to my senator to express my concern over the possible future vaccine mandates of school aged children. More effort needs to be given to promote awareness that these debates/panels are occurring.

The panel

I do not know how the panel was created. But from what I could see there were around 20 individuals who were on the zoom call who had the ability to ask questions and vote. The rest of us could only watch. I feel like every parent should be given a voice in this matter. Not making these discussions known to all parents and allowing them to voice their concerns or ask questions is troubling. I had no idea where to look or express my concerns. I started with contacting my state representatives. One of which let me know about these zoom meetings.

My experience with COVID

I have nieces who tested positive for COVID when their parents became sick with the virus. Neither had significant symptoms, and wouldn't have even known they had a cold or COVID if they hadn't been tested. I also have a friend who was fully vaccinated around October of last year. In January he caught COVID and had to go to the hospital to get help. The vaccine did not appear to help my fully vaccinated friend.

Also, it is now acknowledged that even if you are vaccinated you can get and transmit covid. We often hear about these cases in the news as "break-through" cases. It is also now known that those who are vaccinated and become sick with COVID carry a higher viral load than those who are unvaccinated. This creates a "super spreader" effect.

I am pro vaccine, but I don't want my children forced to take an experimental vaccine that has a lack of long term data and major safety concerns to attend school. Especially with seeing how many vaccine injuries and deaths have been attributed to them. Young men are especially susceptible to myocarditis. Heart conditions run in my family and I worry this would exasperate it. If the vaccines are mandated I don't expect the school would give my sons an exception based on heart conditions running in the family. My dad has a-fib, but it took 50 years for it to be caught while my dad was in a doctor's office while he was experiencing a case of it. Prior to that, he knew he had something wrong, but the episode of a-fib would pass before he could be seen by a doctor and for many people the option of rushing to an Emergency room to be diagnosed is not a reality as each visit would likely cost thousands of dollars. My point is, proving a heart condition isn't an easy task, so mandating a vaccine for all and assuming that a doctor would be willing to write a note to accommodate those with heart concerns is not a logical approach either. Mandating a vaccine that is known to cause heart troubles, blood clotting, and other health issues just seems abusive and irrational.

I've been watching/reading/studying all that I can about the vaccines and their benefits vs their risks. I'm seriously considering homeschooling if the covid vaccines become mandatory. I really don't want to have to homeschool, as a single mom working full time, that would be very hard. My kids are fully up to date with their vaccines, so please don't consider me an "anti-vaxxer", but these vaccines may not be safe for all and they do not appear to be created equally as certain batches are showing higher death rates than others. This website has compiled statistics on death rates per batch number

<https://www.howbadismybatch.com/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.howbadismybatch.com%2F8>

You will see at this site that certain batches have higher numbers of death associated with them than others. Why that is, is not known, but is a major cause for concern and investigation.

Vaccine Injuries and Deaths

It baffles me that the vaccines are still being pushed and even mandated when so many people have been injured or died from them, and why anyone that mentions injuries or death from the vaccines are just dismissed as if we are foolish for even thinking that people have been harmed by these vaccines. Even in the zoom broadcast a presenter mentioned that people possibly have not been educated on the vaccines...I would beg to differ and suggest that we are more educated on the vaccines and their risks, watching the FDA discussion videos, trying to hear both sides of the story and find the truth

despite a major cancellation culture of anyone who questions the safety and efficacy of the vaccines. This website <https://www.c19vaxreactions.com/real-video-stories.html> <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.c19vaxreactions.com%2F&> contains videos of people (or their family if the person had died) telling of their vaccine injury or death of their loved one due to the vaccine.

People who have had vaccine injuries or died within a short time frame of having taken the shot are being dismissed as if there is no correlation. For me to feel that the vaccines are safe, that needs to be addressed, not hidden. Senator Ron Johnson tried to give some of the vaccine injured a voice in his meeting which can be watched here <https://www.youtube.com/watch?v=6mxqC9SiRh8>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.youtube.com%2Fwatch%3F> where families tell of their adverse reactions to the vaccines. Senator Johnson, a couple weeks ago, met again with doctors to discuss covid, the vaccine and what they had seen occur to their patients. Here is a link to some highlights of that 5 hour meeting. <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fumble.com%2Fvtamrn-covid-19-a-second-opinion-shorter-highlight-video.html&data=04%7C01%7CWSBOH%40sboh.wa.gov%7C9b6d70d1d4e3497b4d5608d9ef9d71f2%7C1>

Emergency use is not the same thing as being fully tested, formulated so that side effects are minimal, major risks are removed, and accountability is in place. We don't know the long term effects of these vaccines, so how can they be considered safe and fully tested? For me to believe the vaccine is safe, it can't cause death and injury at such a high rate. Or at all for that matter. The short term effects and death rate are quite alarming already. And who would take the blame when students become injured from these vaccines? Does the school board compensate families because they mandate the vaccines?

There is something seriously wrong with forcing people to inject an experiment with so many unknowns. Especially when the manufacturer intended to hide the ingredients and testing for 75 years and not release a version that they can be held accountable for or sued for injury over. <https://www.reuters.com/legal/government/paramount-importance-judge-orders-fda-hasten-release-pfizer-vaccine-docs-2022-01-07/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.reuters.com%2Flegal%2Fgo> importance-judge-orders-fda-hasten-release-pfizer-vaccine-docs-2022-01-07%2F&data=04%7C01%7CWSBOH%40sboh.wa.gov%7C9b6d70d1d4e3497b4d5608d9ef9d71f2%7C11d0 Even now, Pfizer still uses their emergency use vaccine, preventing them from being sued for any vaccine injuries or deaths. The vaccine that was fully approved does not seem to be available in the USA. The drug makers immunity protection needs to be removed so that the vaccine injuries can be addressed and they have motivation to correct the problems causing the injuries. This should be done at minimum before any recommendation or mandate is permitted.

If the covid vaccines become mandatory it seems we have no way to opt out other than find an alternative to public school.

Natural immunity is shown to be more effective.

The mandates do not take into consideration natural immunity. Mandates don't take into consideration the harm that the vaccines can cause, which in turn can result in a lifetime of health problems, as is the case for Everest Romney

<https://www.c19vaxreactions.com/real-video-stories.html>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.c19vaxreactions.com%2Frea> video-

stories.html&data=04%7C01%7CWSBOH%40sboh.wa.gov%7C9b6d70d1d4e3497b4d5608d9ef9d71f2%7C who now has to deal with blood clots in his brain. People who become injured from the vaccine or die from it have no recourse. It doesn't make sense that everyone should be forced to take an experimental jab, essentially playing roulette with their health, in order to participate in society or play school sports--especially, when they have proven to not be effective, or safe.

The video at <https://rumble.com/vn12v1-attorney-thomas-renz-we-got-them.-fact-check-this-all-new-whistleblower-inf.html>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Frumble.com%2Fvn12v1-attorney-thomas-renz-we-got-them.-fact-check-this-all-new-whistleblower-inf.html&data=04%7C01%7CWSBOH%40sboh.wa.gov%7C9b6d70d1d4e3497b4d5608d9ef9d71f2%7C11d> shows raw data from the medicare servers that a whistleblower provided documenting 48,465 deaths within 14 days of Covid vaccination among Medicare patients alone, according to attorney Thomas Renz. "This is raw data. There's no analysis, and these death numbers are from less than 20% of the U.S. population." The video is from October but these numbers should alarm anyone that the vaccine could cause so many deaths.

Here are a few links showing people who died from vaccine injury that you may have heard of, some within Washington State.

Jessica Berg, a Seattle area mom who was 37 and against the vaccine, but took it to comply with a school mandate so she could be a "room mom". She took the J&J shot Aug. 26, 2021. She died less than two weeks later on Sept. 7, 2021. <https://www.king5.com/article/news/health/coronavirus/vaccine/king-county-dies-rare-covid-vaccine-related-blood-clot-coronavirus-death-pandemic-johnson/281-1ad26cec-0519-45a4-abbd-aa48d7093ae4>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.king5.com%2Farticle%2Fnews%2Fhealth%2Fcoronavirus%2Fvaccine%2Fking-county-dies-rare-covid-vaccine-related-blood-clot-coronavirus-death-pandemic-johnson%2F281-1ad26cec-0519-45a4-abbd-aa48d7093ae4&data=04%7C01%7CWSBOH%40sboh.wa.gov%7C9b6d70d1d4e3497b4d5608d9ef9d71f2%7C11d> This story claims that she was only the 4th to die from this rare blood clot, but if you look at other sources that number seems unrealistically low and a testament to how much is being hidden by main news sources.

Ernest Ramirez's 16 year old son, died after receiving his first dose of the Pfizer vaccine. <https://www.publishedreporter.com/2021/11/08/texas-father-my-government-lied-to-me-they-said-it-was-safe-now-i-go-home-to-an-empty-house/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.publishedreporter.com%2F2021%2F11%2F08%2Ftexas-father-my-government-lied-to-me-they-said-it-was-safe-now-i-go-home-to-an-empty-house%2F&data=04%7C01%7CWSBOH%40sboh.wa.gov%7C9b6d70d1d4e3497b4d5608d9ef9d71f2%7C11d>

8th grader, Jacob Clynick, dies in his sleep three days after his second dose of the Pfizer vaccine <https://www.freep.com/story/news/2021/07/02/jacob-clynick-pfizer-covid-vaccine/5323095001/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.freep.com%2Fstory%2Fnews%2F2021%2F07%2F02%2Fjacob-clynick-pfizer-covid-vaccine%2F5323095001%2F&data=04%7C01%7CWSBOH%40sboh.wa.gov%7C9b6d70d1d4e3497b4d5608d9ef9d71f2%7C11d>

Michael Granata vaccine injury showed up after a few days, died shortly after.

Documenting a few post Pfizer related deaths within Washington

<https://www.clarkcountytoday.com/news/report-two-more-deaths-from-heart-failure-following-pfizer-vaccine/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.clarkcountytoday.com%2Fnews%2Freport-two-more-deaths-from-heart-failure-following-pfizer-vaccine%2F&data=04%7C01%7CWSBOH%40sboh.wa.gov%7C9b6d70d1d4e3497b4d5608d9ef9d71f2%7C11d0>

Senator Ron Johsnon lays out some good reasoning and understanding about what is going on with the mandates and the vaccines:

<https://www.youtube.com/watch?v=b08Hi3kBpSs>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.youtube.com%2Fwatch%3Fv%3Db08Hi3kBpSs%3F&data=04%7C01%7CWSBOH%40sboh.wa.gov%7C9b6d70d1d4e3497b4d5608d9ef9d71f2%7C11d0>

There is a lot more information out there, doctors speaking out, victims and their families speaking out, information from the FDA that showed 160,000 adverse reactions to the Pfizer vaccine in the initial months of the rollout (1,223 were fatal)

<https://www.rt.com/usa/543001-pfizer-vaccine-side-effects/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.rt.com%2Fusa%2F543001-pfizer-vaccine-side-effects%2F&data=04%7C01%7CWSBOH%40sboh.wa.gov%7C9b6d70d1d4e3497b4d5608d9ef9d71f2%7C11d0>

Here is a list of 495 athletes who have either collapsed or died over the last year after having taken the covid vaccine. <https://goodsciencing.com/covid/athletes-suffer-cardiac-arrest-die-after-covid-shot/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fgoodsciencing.com%2Fcovid%2Fathletes-suffer-cardiac-arrest-die-after-covid-shot%2F&data=04%7C01%7CWSBOH%40sboh.wa.gov%7C9b6d70d1d4e3497b4d5608d9ef9d71f2%7C11d0>

This is significant, because this many athletes dropping dead or collapsing is abnormal.

An 8 day vaccinated BYU basketball player, Richard Harward, experienced heart damage and had to be carried off the court. You can see the video here:

<https://citizenfreepress.com/column-1/vaccinated-byu-starting-center-i-will-miss-the-rest-of-season-due-to-heart-damage/>

More information on this can be found here:

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcitizenfreepress.com%2Fcolumn-1%2Fvaccinated-byu-starting-center-i-will-miss-the-rest-of-season-due-to-heart-damage%2F&data=04%7C01%7CWSBOH%40sboh.wa.gov%7C9b6d70d1d4e3497b4d5608d9ef9d71f2%7C11d0>

<https://www.deseret.com/2021/12/14/22834713/byu-cougars-basketball-big-man-richard-harward-says-hell-miss-the-rest-of-the-season>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcitizenfreepress.com%2Fcolumn-1%2Fvaccinated-byu-starting-center-i-will-miss-the-rest-of-season-due-to-heart-damage%2F&data=04%7C01%7CWSBOH%40sboh.wa.gov%7C9b6d70d1d4e3497b4d5608d9ef9d71f2%7C11d0>

There are more examples out there that I can gather for you if you need more evidence that these experimental vaccines are not safe for everyone and should not be forced upon everyone.

Subject: Mandated covid vac for children in public school

External Email

Dear Board of Health Members

Please do not mandate the emergency use covid vaccine for children to attend public school, daycare or for any reason whatsoever. No vaccine being used right now has been approved by the FDA. If children are harmed, are you willing to take responsibility? Dr. Robert Malone, who is not spreading "misinformation" but is a well respected immunologist, top researcher, virologist and is the inventor of the current mRNA vaccine technology being used is speaking out against giving these covid shots to our children. Here is an excerpt from his statement:

"Before you inject your child – a decision that is irreversible – I wanted to let you know the scientific facts about this genetic vaccine, which is based on the mRNA vaccine technology I created:

There are three issues parents need to understand:

- The first is that a viral gene will be injected into your children's cells. This gene forces your child's body to make toxic spike proteins. These proteins often cause permanent damage in children's critical organs, including

- ☐ Their brain and nervous system

- ☐ Their heart and blood vessels, including blood clots

- ☐ Their reproductive system

- ☐ And this vaccine can trigger fundamental changes to their immune system

- The most alarming point about this is that once these damages have occurred, they are irreparable

- ☐ You can't fix the lesions within their brain

- ☐ You can't repair heart tissue scarring

- ☐ You can't repair a genetically reset immune system, and

- ☐ This vaccine can cause reproductive damage that could affect future generations of your family

- The second thing you need to know about is the fact that this novel technology has not been adequately tested.

- ☐ We need at least 5 years of testing/research before we can really understand the risks

- ☐ Harms and risks from new medicines often become revealed many years later

- Ask yourself if you want your own child to be part of the most radical medical

experiment in human history

- One final point: the reason they're giving you to vaccinate your child is a lie.

- ☐ Your children represent no danger to their parents or grandparents

- ☐ It's actually the opposite. Their immunity, after getting COVID, is critical to save your family if not the world from this disease

In summary: there is no benefit for your children or your family to be vaccinating your children against the small risks of the virus, given the known health risks of the vaccine that as a parent, you and your children may have to live with for the rest of their lives.

The risk/benefit analysis isn't even close.

As a parent and grandparent, my recommendation to you is to resist and fight to protect your children."

Also over 16,000 medical scientists and physicians around the world have signed a declaration publicly declaring that healthy children should NOT BE VACCINATED for covid.

Subject: Covid Vaccines PLEASE VOTE NO

External Email

Please, we are asking you to listen to terrified parents statewide. These vaccines are proving to be very dangerous. Children do NOT have risk from Covid-19 but have serious risk of injury and death from these emergency use products.

They do NOT have full approval. It is unethical to require children to take an unapproved medical product for a virus they have relatively zero risk from.

There is no longterm safety data. We do not know what damage will be done to healthy children in the longterm.

Currently, there is no published literature on pediatric Covid-19 vaccine effectiveness in K-12 school setting. It would be unethical to make a health decision for children with zero data to support it. You cannot use data of adults to make a decision for children.

Please, we beg of you, vote NO!

Jennifer Groeneweg

Subject: Our Children

External Email

☐WE NEED MORE DATA FROM PFIZER.

A moratorium needs to put on the vaccine distribution and administration immediately, until the public receives more data and information from Pfizer.

Pfizer has to be held accountable and must testify at the legislative committees, and we must be completely satisfied with their answers before we allow approval for further distribution, especially to our children, who are not at risk and cannot be subject to fast-tracked vaccination.

We do not know the long-term, let alone the short-term effects. We know that it's a leaky vaccine, and people are being injured or worse, dying, from taking the shots. This needs to stop immediately, and the FDA needs to do their part to protect the people as was the reason this institution was established in the first place."

Kindly,

Ron

The risk of Covid 19 needs to also be measured against the risk of the covid 19 vaccine to make a educated decision. The risk of covid 19 vaccine should not be looked at in a vacuum. Also, the absolute risk needs to be considered as well, not just relative risk.

Debra Wells

On Thursday, February 10, 2022 9:28 AM, Debra Wells <debrakwells@startmail.com> wrote:

Please do not require or force the COVID 19 vaccines on children. More children have been negatively affected by vaccines than have been sick or died from covid. The children that have passed away had other medical issues that put them at particular risk; however, the vast majority are not at risk of covid 19. However, with the vaccines, myocarditis is more deadly to children than covid 19 and this has played out in the numbers.

We also don't know the long term effects on fertility and this vaccine should not be allowed or approved for children at any age.

Please follow biological science and not political science. It is very apparent that the majority of decision makers have been following political science and not biological

science. Please do NOT harm our children with these untested vaccines. It's one thing to require the measles vaccines that have been around for decades; however, covid 19 vaccines have only been around just over a year. The numbers are not looking good for the safety of the covid 19 vaccine. The numbers from the Military are alarming. The numbers from insurance companies, that are required to review actual death rates and why so they can set premium rates, are extremely alarming. Ignoring these warning signs is gross negligence. We must protect our most vulnerable from even the most well meaning individuals/decision makers. We should not be making rash decisions that will have long standing impact that can't be reversed. We need more data on the vaccines before we force it on children.

Please vote NO on requiring Covid vaccines for children under 18.

Dear Board of Health and TAG members,

Currently no published literature on pediatric Covid-19 vaccine effectiveness in K-12 school setting

These are unapproved, emergency use authorization products which are being illegally forced on American Citizens.

Children (and the majority of all population) have relatively zero risk from Covid-19 but tremendous risk from emergency use products with no long-term safety data.

To proceed in this direction is shameful, child abuse and represents an evil action against humanity.

PLEASE VOTE NO on adding any of the COVID "vaccinations" to the "required" inoculation list for students.

Thank you for listening.

Sincerely,
Beth

I am beyond angry that covid vaccines for kids are even being considered to enter school. With no studies on long-term side effects of these basically experimental vaccines, the risk to children and especially young teenage boys is far greater than covid. Besides that, children have an almost 100% chance of recovery from Covid. This is not a childhood disease! I can tell you with absolute certainty there is NO WAY my healthy teenage son is ever getting another one of these Covid vaccines.

Please do not add the COVID-19 vaccine to the vaccine requirements for children to attend school. If we wanted our children to have this vaccine we would have already had them receive it. This requirement is not necessary seeing as though most children have already had COVID and have had no lasting affects or complications. Parents should have the freedom to choose what is put into their child's body and should not be forced Inject their children with an experimental vaccine in which we have no long-term data that shows that it's affective at protecting people from COVID-19. The data shows that people who are vaccinated currently are still getting COVID-19. So, there's no need to get the vaccine.

We have no long-term data that shows how the make up of the COVID-19 vaccine will impact our children's overall health, cancer rates, infertility rates, miscarriage and stillbirth rates, or how it will affect their heart. There are some major concerns with this vaccine and its long term impact. It is 100% experimental I do not wish to have my child be enrolled in this experiment. I believe that this will have a negative impact on the public school system as many people who choose not to vaccinate their children like myself will pull their children from public schools and will fight to have the funding for their child go with their child and not to the public school. The people have spoken and do not want this added to the vaccine requirements to attend public school.

Respectfully,
Heather Clerget

Watching the live ZOOM session now.

We ask that you do NOT move forward with making these covid-19 shots required for our students. How do you explain all of the adverse effects caused by the vaccines that are significantly higher than the deaths of kids from covid-19? See the data in the 1,000 studies below? Also, in your own materials, you state that there currently is no published literature on pediatric Covid-19 vaccine effectiveness in K-12 school settings. Also, suicide is the 3rd leading cause of death for our teenagers ages 15-19, NOT Covid-19!!! These are our children and we are responsible for making their health decisions.

We need to look at all of the data. Again, PLEASE DO NOT MOVE FORWARD WITH MAKING THESE SHOTS MANDATED. PEOPLE WILL CONTINUE TO LEAVE THIS STATE!

Respectfully, Rachel Alleman

Subject: Vaccine Mandates

External Email

To whom it may concern,

If vaccine Mandates are made in Washington you will see a mass Exodus of students from the public school system. If you think the Trucker brigade in Canada is big, just wait.

I promise that if you decide to inject something we know little about into our kids, my kids will be taken out of public schools.

Do not make this mistake. You will not win. Listen to science. Out body, or choice.

Thoughts after listening to Immunizations TAG meeting on 2/10/2022

- * Why have COVID rates increased dramatically AFTER vaccines were rolled out? Yes, they may reduce severity, but they're not stopping transmission from person to person. If they stopped transmission we wouldn't have had the huge peaks of Delta and Omicron.
- * In Ms. DeBolt's presentation she cited a study from China. This should not be considered in your determination because China does not utilize the MRNA vaccine technology.
- * The questions in Spanish needs to be interpreted for the community of listeners not just the TAG group. You are leaving the public out of the process.
- * There was NO evidence presented during their presented that indicates vaccines reduce the transmission of school and yet all but 4 said this vaccine met that criteria. No data even exists despite the best efforts to say otherwise. That's extremely disengenious and further discredits you all as a whole.
- * Maybe you all should move towards banning tampons, those cause toxic shock syndrome, which in return causes MISC.
- * You all talk about how these COVID deaths and MISC cases are peoples children, let's remember too when we talk about myocarditis. You say its mild. Tell that to the parent of a child who goes through it. Also many studies out there state doctors don't know long term consequences of having myo/pericarditis.
- * Key take away is you all have your decision made up and you're going through the motions just as the FDA does. This will be on the immunizations to attend school in fall 2022. I have absolutely no confidence that you all will do the right thing and evaluate this vaccine without any prejudice. Public Health is a joke.

I am beyond angry that covid vaccines for kids are even being considered to enter school. With no studies on long-term side effects of these basically experimental vaccines, the risk to children and especially young teenage boys is far greater than covid. Besides that, children have an almost 100% chance of recovery from Covid. This is not a childhood disease! I can tell you with absolute certainty there is NO WAY my healthy teenage son is ever getting another one of these Covid vaccines.

Hello,

We do not need to be forcing vaccine mandates in schools for younger children!

It's time to closely look at what we're doing to our children! Aside from our economy, our children have had to suffer the most during this pandemic. They've had to deal with isolation, loss of friends and community, and most importantly, education and development. Interestingly enough, they're suffering while the lower age brackets are shown to be at the least amount of risk.

Any thought of vaccine mandates needs to go. Forcing vaccines that are not proving to provide long-lasting immunity into our children is wrong. Where will the cycle end if we start down this path? mRNA vaccine technology is not 100%, and we know this. We know that people who have gotten the vaccine can still become ill, carry, and transmit the virus. Sure, the severe disease might be reduced by the vaccine in some cases in the short term, but children are already at the lowest risk of severe disease anyway. At this point in the pandemic, I'm sure most of us can name a handful of people who have become ill with COVID and recovered. I'm sure there have been many cases undetected or unrecorded in the school-age range as a result of these infections. We need to step back from our apprehensions and fears of becoming ill as adults. Science shows that very few children have severe disease from this virus and this should be left up to the individual parent and child to decide what is right for them. Obviously, if there is a risk due to underlying health issues, they may want to consider this more, but honestly, there is little to no risk for most of the children I know personally.

We're currently stuck in this cycle of thinking that everyone and everything needs to be vaccinated. Where's the rationality of this? As an adult, if you're vaccinated and boosted or have natural immunity from a previous infection, what does it matter if someone around you is or isn't vaccinated? If the vaccines are "so" effective, why are we pushing them so hard on everyone? Individuals who are vaccinated should feel comfortable with their vaccine and not worry about everyone else. Furthermore, why aren't we taking this approach with people in the community with lifelong diseases like HIV or AIDS or other communicable diseases? We're respecting certain people's privacy and personal rights but not others...why?

Let's maintain our freedoms and our right to individual choice!

Thank you,

MIke Janes

Members of WSBOH:

I am strongly against requiring Covid-19 vaccinations for children in WA state to attend childcare and schools. In your own materials prepared for the TAG meeting to discuss child vaccinations, a quote from John Stuart Mill is cited, stating

"The only purpose for which power can rightfully be exercised over any member of a civilized community, against his will, is to prevent harm to others. His own good, either physical or moral, is not a sufficient warrant."

It has been demonstrated and documented in schools across the globe that children are not superspreaders of Covid, and therefore do not harm others in the community if they remain unvaccinated. If children contract Covid, the overwhelming number of cases are either asymptomatic or very mild infections with a low risk of harm. An influenza infection has a higher risk of severe illness and death in children than a Covid-19 infection, and we do not mandate or require flu vaccine for children to attend school in WA state. In contrast, the mRNA vaccines do have risks and may cause potentially significant harm in some individuals, particularly young males. Scientific studies and data from countries such as Israel and Great Britain have shown that males up to age 25, and in particular ages 12-17, are at risk for developing myocarditis from mRNA vaccinations for Covid-19. The risk of developing this complication is higher than the risks associated with a Covid-19 infection for this age group. Studies in Great Britain and Israel have also shown that 95% of the males in this age group that develop myocarditis are hospitalized due to this complication, with likely lifelong heart and health issues due to this vaccine side effect. Considering this documented information and the fact that unvaccinated children do not pose a high risk to other citizens or contribute to significant spread, "his own good, either physical or moral," as stated by Mill, IS a sufficient warrant.

Vaccinations for Covid-19 should not be mandated for all ages of Washingtonians. The risk of Covid-19 infection is not the same across all age groups, and the health of each individual need also be considered when weighing the risks and benefits of Covid-19 infection vs. vaccination.

Washingtonians have a right to Covid-19 vaccinations-to make an informed decision in relation to their own age and health status as to whether the vaccine is the right choice for them. But citizens in this state also have a right to choose not to receive the vaccine, particularly if the risks of vaccination outweigh the risks of contracting the Covid-19 virus itself. It is wrong to unilaterally decide to require Covid-19 vaccination for all Washingtonians regardless of age or health, and to apply the risks of infection for older citizens to healthy young children whose risk profile with Covid-19 is entirely different from older adults and the elderly.

I respectfully oppose requiring Covid-19 vaccinations for children to attend childcare and school in WA state.

Thank you,

Emily Ling

Subject: No mandatory CV-19 shot for school students

External Email

To the WA State Board of Health Directors:

As demonstrated in the WA State Health Standards there is currently no published literature on pediatric Covid-19 vaccine effectiveness in a K-12 school setting.

SARS-CoV-2 (aka COVID-19) is far down the list of causes of death for Washington children. Yet, suicide is the 3rd leading cause of death for our teenagers ages 15-19. And let's not forget the uptick in heart issues (i.e. myocarditis, cardiac arrests, etc.) in young people (specifically young people who have received the CV injection).

CV-19 injections should absolutely NOT be part of the required vaccines for school entry due to lack of data, research and actual FDA authorization, minimal risk from SARS-CV-2 infection and the life changing effects of the CV injection. Just recently, a young man I know, fell face down from a cardiac arrest episode. His face was smashed in because he fell on concrete and his heart will never be the same. He is a long-distance runner and will not be able to run anymore due to his current, irreversible heart condition.

It is appalling that CV-19 injection is even being considered to give to young people. This must stop immediately.

Best Regards,

Stephanie Lofquist - King County

Subject: TAG Meeting Covid 19 "Vaccine" k-12

attachments\88344E15ED154989_Attachment B - Nuremberg Code.pdf

External Email

To whom it may concern,

I am strongly in opposition of the requirement of the covid "vaccine" for children K-12.

Criteria 2 - "The vaccine containing this antigen is effective as measured by immunogenicity..." False: The COVID "vaccine" should not be considered a vaccine because it is not effective at PREVENTING transmission of the disease, so says the Director of the CDC.¹

Criteria 4 - "Experience to date with the vaccine containing this antigen demonstrates that it is safe and has an acceptable level of side effects." False: The COVID "vaccines" have passed the one-million mark for adverse effects. For the negative effects on children, please see attached data spreadsheet "Attachment A - VAERS Report Children 5 - 11," (an excerpt from the VAERS data report for 2021)². The report is shocking and illuminating in that many "accidents" are reported as occurring as a result of the administration of the shot, thus making the jab by untrained personnel almost as dangerous as the "vaccine". Also in this report are the suicides; sixty-six children, ages 5-11, committed suicide in 2021, their deaths counted as COVID.

Why is TAG and BOH taking such unnecessary risks with our children when our children are not in danger of dying from the disease,³ or of experiencing much more than flu like symptoms?⁴ That's the million-dollar question: WHY ARE YOU DOING THIS TO OUR CHILDREN?

How many members of the Technical Advisory Group adopt science based, critical thinking in your decision making? Have any of you carried out any research into alternatives to the "vaccine"? (It is estimated that 500,000 people have died in the last eighteen months because they were denied (by Fauci) preventative

treatments like Ivermectin and hydroxychloroquine.)

5 How many in this Group have conducted research into the corrupt and sociopathic practices of Anthony Fauci and Bill Gates, amongst others? (Gates, Fauci and other world leaders are currently being investigated in preparation to present before a Grand Jury, in an International Court for Crimes Against Humanity.^{6 7}

Fact, every doctor, nurse, health care worker, politician, educator, and others in positions of power that promotes the COVID "vaccine" as the ONLY effective treatment against COVID is guilty of Crimes Against Humanity under the Nuremberg Code. Mandating this "vaccine" breaks not one but every one of the ten "crimes" under the Nuremberg Code (Attachment B). Current scientific studies do not support you and your position in the Technical Advisory Group will not protect you if you approve this "vaccine" for children. On Thursday, February 10, 2022, you will be deciding the future of the children of the State of Washington— will 99.996% of them live if they get COVID or will some of them die unnecessarily from the "vaccines" adverse effects? That's not a question asked for dramatic impact. Your recommendation to Washington State Board of Health holds weight and children's lives are dependent upon you doing the right thing by them. And let's be clear, to say that parents can opt out of the "vaccine" is as hollow as proclaiming the rest of us have that luxury. Two years of draconian mandates have declared otherwise.

Your recommendation to BOH should be a resounding NO to the COVID "vaccine" K-12 mandate.

Thank you for your consideration,

Sincerely,

Leandra Watson

THE NUREMBERG CODE

1. The voluntary consent of the human subject is absolutely essential.

This means that the person involved should have legal capacity to give consent; should be so situated as to be able to exercise free power of choice, without the intervention of any element of force, fraud, deceit, duress, over-reaching, or other ulterior form of constraint or coercion; and should have sufficient knowledge and comprehension of the elements of the subject matter involved, as to enable him to make an understanding and enlightened decision. This latter element requires that, before the acceptance of an affirmative decision by the experimental subject, there should be made known to him the nature, duration, and purpose of the experiment; the method and means by which it is to be conducted; all inconveniences and hazards reasonably to be expected; and the effects upon his health or person, which may possibly come from his participation in the experiment.

The duty and responsibility for ascertaining the quality of the consent rests upon each individual who initiates, directs or engages in the experiment. It is a personal duty and responsibility which may not be delegated to another with impunity.

2. The experiment should be such as to yield fruitful results for the good of society, unprocurable by other methods or means of study, and not random and unnecessary in nature.
3. The experiment should be so designed and based on the results of animal experimentation and a knowledge of the natural history of the disease or other problem under study, that the anticipated results will justify the performance of the experiment.
4. The experiment should be so conducted as to avoid all unnecessary physical and mental suffering and injury.
5. No experiment should be conducted, where there is an a priori reason to believe that death or disabling injury will occur; except, perhaps, in those experiments where the experimental physicians also serve as subjects.
6. The degree of risk to be taken should never exceed that determined by the humanitarian importance of the problem to be solved by the experiment.
7. Proper preparations should be made and adequate facilities provided to protect the experimental subject against even remote possibilities of injury, disability, or death.
8. The experiment should be conducted only by scientifically qualified persons. The highest degree of skill and care should be required through all stages of the experiment of those who conduct or engage in the experiment.
9. During the course of the experiment, the human subject should be at liberty to bring the experiment to an end, if he has reached the physical or mental state, where continuation of the experiment seemed to him to be impossible.
10. During the course of the experiment, the scientist in charge must be prepared to terminate the experiment at any stage, if he has probable cause to believe, in the exercise of the good faith, superior skill and careful judgement required of him, that a continuation of the experiment is likely to result in injury, disability, or death to the experimental subject.

External Email

It is not the school's or government's right to tell parents they must insert a potentially lethal substance into our children especially when children are least susceptible to the "virus" and we do not know the long term effects of this new substance that has been created and the "virus" has a 99% survival rate. If this passes I'll encourage everyone I know to pull their children out of school and I will never vote for another school bond levy.

For the record Katie, I am strongly against the COVID vaccine mandate for children in public schools in Washington. In fact. I am again any sort of mandate that supports showing a vaccination card to get into a restaurant, event or public place of any sort. By the way, it is NOT a vaccine, it's a flu shot.

Parents are the only ones who have the right to decide what, if any, vaccines a parent gives their child.

Dear Washington State Board of Health,

Our state government should NOT be mandating Covid vaccines on our children. Children are at extremely low risk for Covid and these medical decisions should be left in the hands of parents.

Sincerely,

The Citizens of Washington State

Vaccine mandate for school should in no way be a requirement. At a minimum we know that vaccinated people are still able to contract and spread covid. We also know that kids have a 99.99% survivability to the virus.

It does not have full FDA approval. There have been thousands of adverse effects submitted to VAERS. The vaccine does not prevent infection like Polio or other vaccines. On top of that the use of aborted fetal cells used to test the vaccine is against religious commands from God. Not to murder, especially not to murder our most vulnerable, children in the womb.

You will cause further divide and gaps in communities by requiring it. Let it be free choice of the parents and families. Thank you

Good morning!

Please vote no today and choose informed medical choice instead.

Leave this vaccine in the hands of families, parents and doctors to make this decision instead of mandating it for kids to go to school.

We need long term safety data to evaluate and study, and we do not have that yet. What we are seeing though, is that children are developing myocarditis and pericarditis after receiving the covid vaccine. More so in boys. This is alarming!

There will be even more of a mass exodus from schools in WA, if this shot is made mandatory.

Vote no.

Thank you.

Subject: Re: URGENT: SAY NO on Vaccine Mandates for Kids!

External Email

The definition of fully vaccinated...meaning two weeks AFTER being vaccinated. Has the question been asked whether the vaccine itself in this two week time period could have caused a weakening of the immune system which then causes the child to get covid more easily? While they are vaccinated..they are counted in your numbers as unvaccinated.

Thanks.

☐

Watching the live ZOOM session now.

We ask that you do NOT move forward with making these covid-19 shots required for our students. How do you explain all of the adverse effects caused by the vaccines that are significantly higher than the deaths of kids from covid-19? See the data in the 1,000 studies below? Also, in your own materials, you state that there currently is no published literature on pediatric Covid-19 vaccine effectiveness in K-12 school settings. Also, suicide is the 3rd leading cause of death for our teenagers ages 15-19, NOT Covid-19!!! These are our children and we are responsible for making their health decisions.

We need to look at all of the data. Again, PLEASE DO NOT MOVE FORWARD WITH MAKING THESE SHOTS MANDATED. PEOPLE WILL CONTINUE TO LEAVE THIS STATE!

Respectfully, Rachel Alleman

Subject: Considering Inclusion of Covid-19 Shot for School Students

External Email

Dear Board Members,

Please do not add Covid-19 shots to a mandatory list for school students. These have not been fully studied for safety and no one knows the long term impact. For older people this is not as great a concern as it is for children. I listened to the FDA board debate and vote. The board members all noted that they did not know what the impact on the health of children would be. They decided they had to vaccinate to find out. I am not making that up. My jaw dropped as several doctors noted the lack of information or study for impact on children and yet voted for Emergency Use. Certainly this should not then be made mandatory.

In addition there is a newly released peer-reviewed study in Cell magazine that has found the mRNA from the vaccine is found in the lymph glands for as long as 60 days beyond vaccination. (It is not known for how long this mRNA lasts, the study was for 60 days--so it could be longer.) This means the body continues producing the bioactive spike protein for much longer than originally claimed. We were told the body breaks it down quite quickly. But now we know the synthetic mRNA is not broken down quickly and also is found in the lymph glands. The study also found that there is as much spike protein produced in the vaccinated as in people severely ill with Covid-19. This is a brand new finding and should cause a pause in the whole program, but at least in any consideration of mandating vaccines for children.

To whom it may concern,

As a parent of a high school child, I am writing to inform you that if these unconstitutional vaccine mandates are passed, I will immediately removed my child from public school. I will then spend every moment of my free time reaching out to other parents to help inform them of way we can join together to avoid using the public school system and its agenda. The masks were already too far. This is absolutely despicable.

Greetings,

As the Kettle Falls example proves, school districts do not have to and should not be enforcing the mask mandates because they are useless and harmful to our children.

First, the District's mask mandate is purely for show – even the CDC has now acknowledged that cloth masks are effectively useless. The District's policy permits cloth masks and thus compliance is purely decorative – the policy does not provide any meaningful protections.

Second, the mask requirement stunts the students' educational development. For all of human history up until Spring 2020, there was universal recognition that facial cues provide a distinct and important aspect of human communication. Part of your mission is to help our children develop strong communication skills and you are stunting that learning by requiring them to hide their faces and those important communicative cues under these useless masks.

Third, the mask requirement is causing affirmative harm to students. Children are becoming dependent on masks and experience anxiety when confronted with large groups of maskless persons. When covid ends, our children will have to interact with the maskless. By causing our children to become dependent on masks, you are straddling them with anxieties that they will have to overcome to interact in the maskless world. School is supposed to help prepare our children to face the world, not make them afraid to face that world

If parents are concerned, they can protect their children by sending them to school in top-quality, properly fitted N-95 masks. But the time has come to allow parents to make that decision for their own children and stop mandating a flawed one-size-fits-all policy.

Especially when that one-size-fits-all policy is useless, debilitating, and harmful; a policy that only serves to make some people who do not keep up with the science feel better without providing any meaningful benefit to our children. Please follow Kettle Falls' lead and stop enforcement of the mask mandates.

Ramsey Ramerman, parent of a LWSD student

On Tue, Feb 15, 2022 at 7:50 AM Tyler Litzenberger <TLitz@vectorrecorp.com
<mailto:TLitz@vectorrecorp.com> > wrote:

We were told by a LWSD Board Member that the Board has no authority in decision making regarding masking. Apparently that's proven to be untrue. We've lost trust in our elected "leaders". This masking exercise has never been about Covid, it's entirely about control, and using children as pawns to force control is as bad as it gets from politicians. Kettle Falls showed Washingtonian parents leadership yesterday and we're very proud of them for doing so.

In the numerous parent teacher conferences my wife and I have had since Covid, we've learned teachers are over it. They're seeing the drop in educational value. They're frustrated at masking. They're frustrated at mandates and hearing complaints daily from parents, and many of them are turning on their Unions. Our parent groups are fully behind the teachers, support the teachers and encourage the teachers to turn against their unions. Withdraw from their unions, whatever it takes.

Masking needs to end immediately. And trading the clot shot for masking is a non-starter.

The evidence that children have a 99.98% survival rate against the November 2019 variant of Covid is a risk we're all willing to take as a society; considering we all know that Omicron is a) far less concerning and b) numbers of deaths are nearly zero across all age groups.

Where did Washington's share of the \$130B in Covid Relief Funds go? Those funds were explicitly sent to the States for air filtration in schools. What was completed in the LWSD, Bellevue and Issaquah districts? It's pretty embarrassing that after spending all that money on air filtration, you folks are still requiring children with a 100% survival rate to wear a cloth over their nose and mouth. Absolutely awful.

The real questions are, why should we listen to you about anything else going forward? Why should we trust you?

End the mandates immediately. They never should have been passed in the first place.

Issaquah, Bellevue, LakeWA School Districts, OSPI, WA State Education, WSBOH and King county commissioner.

If you still have some conscience left in you, after watching that Super Bowl, you will act upon and immediately remove the mask mandates from the schools. You might think you have helped the children by masking them but have no idea how badly it has affected the children and their health. Enough of big talks and researching on this topic, it's time to act and the best action is to remove mandates. If some parents still feel they need masks they can send their kids with masks on and no one will stop them. But parents like us who strongly believe in science and have enough research to prove that masks don't work demand you to end this mandates and now.

Thanks and Regards,

Lokesh Marenayakanapalya

Qualified enough to speak on behalf of my daughter and all the kids/parents that are suffering due to these mandates.

Subject: Criteria #7 Comments

External Email

Dear Washington State Board of Health,

Here are three points that I would like you to consider when deciding whether the covid-19 vaccines fulfill criteria #7 The vaccine containing this antigen is acceptable to the medical community and the public.

There has never been more opposition from the medical and scientific community or the public to any type of vaccine or vaccine policy than there is to the COVID-19 products and policies.

#1 Over 17,000 doctors & scientists have signed a declaration which states the following -

RESOLVED, THAT HEALTHY CHILDREN SHALL NOT BE SUBJECT TO FORCED VACCINATION (view supporting evidence <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdoctorsandscientistsdeclaration.org/evidence%2F%23children&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C05c8f3a498604300527a08d9e0>>)

- * Negligible clinical risks from SARS-CoV-2 infection exist for healthy children under eighteen.
- * Long term safety of the current COVID vaccines in children cannot be determined prior to instituting such policies. Without high-powered, reproducible, long term safety data, risks to the long-term health status of children remain too high to support use in healthy children.
- * Children risk severe, adverse events from receiving the vaccine. Permanent physical damage to the brain, heart, immune and reproductive system associated with SARS-CoV-2 spike protein-based genetic vaccines has been demonstrated in children.
- * Healthy, unvaccinated children are critical to achieving herd immunity. Natural immunity is proven to tolerate infection, benefiting community protection while there is insufficient data to assess whether Covid vaccines assist herd immunity.

#2 Reviews of the Pfizer's six-month data reveals that Pfizer's COVID-19 inoculations cause more illness than they prevent. More than 500 scientists, medical doctors, health care and other professionals united as the Canadian Covid Care Alliance to present , "More Harm Than Good" video and PDF slides here: <https://www.canadiancovidcarealliance.org> <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.canadiancovidcarealliance.org>>

#3 The currently available vaccines are "obsolete." This includes, AstraZeneca, Johnson & Johnson, Pfizer, and Moderna shots.

According to Dr Peter McCullough, "They do not cover the new variants; patients are

failing on these vaccines. They're being hospitalized and getting sick despite having had the vaccines," he said, adding, "the vaccines at this point in time have amounted to record mortality and injury and should be considered unsafe and unfit for human use."

I believe the covid-19 vaccines do not meet criteria #7 and I appreciate you taking the time to consider my reasons.

Sincerely,

Deanna Leslie

I personally think all parents should remove their precious children from government schools. And many are doing just that. Have you noticed? However, for those who feel they must continue public education, it is tyrannical to demand that these precious children risk their bodies because of your edicts. Please let me know where you have published your bibliography of actual quality studies proving that these shots stop infection, transmission and cause NO HARM to anyone. You cannot do that, I'm sure. The astronomical number of adverse event reports is staggering. Has your committee read the FDA VAERS report?

Vaccine manufacturers and the US government have no liability for vaccine injuries. YOU will be liable.

I look forward to seeing all of you at the Feb 24 presentations by Dr Robert Malone and Dr Ryan Cole in Gig Harbor to which you all have been invited. The private sector has procured these world-renowned experts. It is incumbent upon you, as our public servants, to avail yourself of this opportunity.

Show yourselves to be true truth seekers.

Subject: Vote NO on child vaccines!

External Email

Attention public SERVANTS!

Vote NO on this proposed covid vaccine mandate for our school children. Data is showing people with the vaccine are still transmitting and catching the virus just as easily as those who have not been vaccinated. There is absolutely no justification for forced injections on free citizens, let alone our children who are not in serious danger of this virus. This outrageous government overreach needs to end NOW!! There are protests worldwide right now against these vaccinations and all of these unconstitutional mandates. Vote NO!!! Thousands of students will be removed from the public school system by their parents across the state if this ridiculous and outrageous overreach is implemented. You should all be ashamed of yourselves! It's time to start listening to the people you work for, WE THE PEOPLE. You have forgotten your place, you are employees, not our dictators. End this outrageous overreach, END THE MANDATES and VOTE NO on covid vaccines for school children!!!

I am here to voice my concerns taking place in this State in regard to COVID 19 shots. I feel that every parent chooses what they feel is right for their children and themselves. Whether that means choosing to get a shot or not, just like choosing to breastfeed or use formula. Both are a right answer in what they choose for their family and that because it's a CHOICE. It should always be a choice to get a shot or not, just like the flu shot (Norway already views COVID as the flu so we really need to get on their level). Thousands of fellow parents will pull their kids out of school if this is required. I love my children too much to force junk in their body that has yet to even be proven effective from getting it spreading with the shot- so what the point of even getting it? Due to the thousands of parents pulling their children will only add to the falling economy... as teachers, bus drivers, cooks, etc. will no longer be needed since there will hardly be any children in school.

Face it, COVID will not go away- people need to move on and live their life and realize it's not serious. People die from smoking... yet that's still ok....how many alcohol related deaths have there been? Millions... but yet let's still sell it and every venue, restaurant, and store.

That makes sense.

There isn't a Covid pandemic. There are people with power pulling pandemic. Horrible people that do not respect the constitution.

As you can see I am completely against forcing people and children from a shot that they feel is not good for them. And punishing those families who chose not to get it. This is un-American and I hope you are ashamed of yourselves.

I am writing to let you know as a parent I STRONGLY OPPOSE adding the Covid shot to required vaccines required to attend public schools. I have already pulled my children from the public school for this 2021-2022 school year but would love to have them attend next year. If this "shot" becomes a requirement I will NOT put them back into public schools. There is no proof that the shot helps children but there is proof that it can harm them....myocarditis to be specific. The risk is too great and I will not put an unknown, trial based, human study in the works shot into my children....PERIOD!!! You need to start listening to the parents and we DO NOT WANT THIS FOR OUR CHILDREN!!!

Subject: Feb 17, 2022 TAG COVID-19 Meeting - Feedback from Dr. Clifford

External Email

Hi,

I am emailing to encourage you to vote NO for requiring COVID-19 vaccination and on Criteria 1, 2, and 4 for the following reasons:

- 1) The COVID-19 vaccines are BROKEN. They do not work as advertised. According to King County Covid Data - the majority of Covid cases are Fully Vaccinated people, the majority of deaths are Fully Vaccinated people and half the hospitalizations are Fully Vaccinated people.
- 2) The COVID-19 vaccines carry risk of myocarditis, blood clots and over 100 other adverse side effects
- 3) They do not prevent people from getting COVID and they do not prevent people from spreading COVID.
- 4) THEY DO NOT WORK.

Requiring children to risk adverse side effects by being required to take a broken product, or be denied their constitutional right to an education is wrong.

I am still available to testify on how screwed up WA DOH COVID data is if you would like. There is no reliable data to make public policy from - per my public records requests.

Respectfully,

Dr. Clifford Knopik

Dr. Clifford Knopik has a Doctorate in Computer Science from Colorado Technical University. He also has a Masters in Information Systems from Penn State, a Masters in Homeland Security from Penn State, a Masters in Information Assurance from Dakota State University, a Bachelors in Social Studies from Washington State University, an Associate in Emergency Management from Clackamas Community College, and an Associate in Computer Programming from Pierce College. He was honored to serve for five years in the Washington State Guard where he received emergency management training through FEMA and the Washington Emergency Management Department.

For the record Hannah. I am strongly against the COVID vaccine mandate for children in public schools in Washington. In fact. I am again any sort of mandate that supports showing a vaccination card to get into a restaurant, event or public place of any sort. By the way, it is NOT a vaccine, it's a flu shot.

Parents are the only ones who have the right to decide what, if any, vaccines a parent gives their child.

We will continue to flood your office with phone calls, emails and oppose any mandate on social media.

We will not give up or back off.

I am astounded that you have been asked to consider mandating an unapproved injection for schoolchildren in Washington state. If you have not educated yourselves about the adverse effects from these Covid injections and blindly follow the government mantra that children are at risk from Covid if not injected, you will sadly carry that the rest of your lives. Most people know someone personally now who has suffered from the unapproved injections, that means people understand what you are doing by contemplating this. Please open your eyes and follow the money and reject the expectation that we continue to feed big pharma at the expense of our health, and now our children's health. Please protect our children, do not infringe on the rights of families to make medical decisions. Do not coerce compliance by holding back the right to a public education that we as taxpayers have funded.

Subject: Covid-19 vaccination in k-12 schools

External Email

I vote No. There is not enough published literature on pediatric COVID-19 vaccine effectiveness in K-12 setting.

I will pull my child from school if this becomes mandatory. We will go to another state that does not require it.

It is criminal to mandate this shot when it hasn't been FDA approved. The data on vaccine injured is skewed. Myocarditis should be enough to say NO to this.

I also have a concern about the board members. You have one from UW and Wa state.

We know that those two colleges have mandated the shot in order for kids to go to school there so how is their vote not biased? Cherry picking data that suits them and their view. Of course they are for mandating in schools. This angers many and I promise that if this gets put on the vaccine schedule, you will see a mass exodus in Washington schools.

We are watching. 99.99% survival rate for our youth!

Mandatory vaccine for children attending school

11.

Are you Pro or Con on the proposal?

2. Con

A mandatory vaccine for a vaccine that hasn't been properly tested or had a long enough trial period is outrageous to me. This is against peoples religions, the safety of our children, and our privacy. The outcome of this vaccine has been less effective than the unvaccinated. It has caused death, deathly side effects, and changes peoples physical bodies/lives negatively.

I am beyond angry that covid vaccines for kids are even being considered to enter school. With no studies on long-term side effects of these basically experimental vaccines, the risk to children and especially young teenage boys is far greater than covid. Besides that, children have an almost 100% chance of recovery from Covid. This is not a childhood disease! I can tell you with absolute certainty there is NO WAY my healthy teenage son is ever getting another one of these Covid vaccines.

A group of scientists and researchers critical of the current mass COVID-19 vaccine campaign recently submitted an appeal to the European Parliament (@Europarl_EN) /

Twitter

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ftwitter.com%2FEuroparl_EN&data
to reconsider their COVID-19 policies regarding children. PANDA About – PANDA

(pandata.org)

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.pandata.org%2Fabout%2F&>

(Pandemics Data & Analytics) positions itself as a group of multi-disciplinary professions organized in response to what they consider overreach by national governments during the COVID-19 pandemic. Concerns in particular center on lockdowns, and now, the PANDA group expresses concerns about universal COVID vaccination involving young people.

A public health professional and one of the organization's leaders, Abir Ballan, recently reported that the group filed the petition with the European Parliament to reconsider COVID-19 policies regarding Children. The petition was filed by Professor Martin Zizi

<https://qcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ftwitter.com%2Fmartinz_uncut&da

on behalf of approximately 200 physicians and scientists from Europe and other parts of the world.

What's their argument?

In a nutshell, PANDA positions that an accurate risk-benefit analysis would lead to a very different outcome than the universal vaccination mandate now underway in Europe. In the petition, they raise several legal bases such as Article 24 of the Charter of Fundamental Rights of the European Union regarding the protection of children and “in particular the provision whereby in all actions relating to the children, whether taken by public authorities or private institutions, the child’s best interests must be a primary consideration.”

The group references other legal provisions from the World Health Organization (WHO) Constitution, to UNRC, the Lisbon Treaty, and the organization's own Declaration for the Protection of Children and Young People from the Covid-19 Response. Declaration for the Protection of Children and Young People from the COVID-19 Response – PANDA

2. Con

The COVID Vaccine does not prevent the illness. This is commonly accepted, thus it would not qualify under the WAC as a "vaccine-preventable disease." Children are disproportionately NOT impacted by COVID, and the illness is mutating so quickly that not a single one of the injections available actually has an impact on the (current) dominant variant of Omicron. Additionally - there are concerning side effects with the injection for young people, especially boys. The minimal risk from the infection does not justify the risk of side-effects from the injection that LARGELY is ineffective and doesn't actually prevent disease. This is no complicated! Personally - our 3 students have homeschooled since COVID. We had intended to return them all to education outside of the home next year, but we will not do so if this is added to the vaccine schedule. I personally am helping prepare a number of relatives and family friends with the steps for selecting homeschool curriculum in preparation for their withdrawal should this be added to the vaccine schedule.

Subject: Regarding TAG agenda item for Thursday, February 10th

External Email

I understand the Technical Advisory Group (TAG) will meet to consider requiring Covid-19 shots for public school students on Thursday, February 10th. Considering the ample evidence that children are not at any severe risk for Covid hospitalization/death, and that the vaccines do not stop the spread, and that there are numerous proven Covid treatment protocols, and that there is plentiful proof of adverse reactions to Covid vaccine - I urge you to do the right thing and do NOT add any requirement for Covid shots for public school students. Let us stop this madness now.

Regards,
Rick Moulton

The chat is conveniently disabled during this zoom.

The vaccine should NOT be required for schools. It should NOT be required for anybody. This vaccine does NOT prevent anybody from contracting or spreading covid. The fact that you all are trying to push this vaccine on our youth is disgusting and a show of control.

A vaccine should PREVENT. The covid vaccine does NOT prevent. It is less effective than the flu vaccine...and the flu shot is not required.

Stop with the control. Stop with the unnecessary force. This vaccine should NOT be required for anybody.

I do not believe that the Covid vaccine should be a requirement for children to go to school. It has been proven to be ineffective and dangerous. Many people have had heart attacks, blood clotting, strokes and even death after being injected with this experimental vaccine. Please don't force this on the innocent children. How will you feel when the children start having adverse effects? How will you feel when children start having heart attacks? The Covid vaccine doesn't work so why bother? Think and pray about this horrible requirement.

Subject: Covid-19 vaccine for children

External Email

Good day,
I am a 38 year resident of Kitsap county, wife and mother of two children. I believe it should be optional for this inoculation that is being discussed currently as a covid-19 vaccine.

I have a few questions about the vaccine getting added to the vaccine schedule for children.

Since these injections are EUA, does that mean that there is no liability of manufacturers if there is an adverse reaction?

What is the history of other vaccines that are on the current vaccine schedule prior to them being officially assigned to the current schedule?

As far as trials go, what were the adverse reactions reported for what is under consideration to mandate?

What are the long term adverse reactions? What is considered long term? Myocarditis? Infertility?

Are these risks outweighing benefit?

Children have a survival of 99%, so why put this inside their bodies to stimulate risk?

What happened to optional? Like flu vaccine being optional? The variant will change consistently like flu virus, so the vaccine would change consistently like a flu shot?

The poor kids say 'oh I want the vaccine but my mommy wont let me because she is afraid.' Lets remember they are children. Innocent, impressionable children. As parents we are here to nurish and protect them from harm. Because the survival rate of children from covid is so high, why are we pushing this?

Lets end the coercion. These children just want the fiasco to end! We as their parents are using our critical thinking skills before rushing into such a new 'vaccine'. We know by

choosing to be inoculated, it is irreversible. You can not undo this choice once made.

Here is a link to a testimony from a parent of a 12 year old who participated in the Pfizer COVID-19 trial. Please watch.

https://youtu.be/L2GKPYzL_JQ

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fyoutu.be%2FL2GKPYzL_JQ&data=

Please watch this link as well, it is another video with a panel of covid-19 vaccine injured people presented by senator Ron Johnson.

<https://youtu.be/6mxqC9SiRh8>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fyoutu.be%2F6mxqC9SiRh8&data=>

The following link is virology data on the injections under discussion. I recommend visiting and reading it thoroughly.

[https://www.cell.com/cell/fulltext/S0092-8674\(22\)00076-9](https://www.cell.com/cell/fulltext/S0092-8674(22)00076-9)

<[https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cell.com%2Fcell%2Ffulltext%2FS0092-8674\(22\)00076-](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cell.com%2Fcell%2Ffulltext%2FS0092-8674(22)00076-9&data=)

9&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cdded834c69d24d6f0a3308d9edb0963b%7C11d0e21

Please consider this inoculation to be optional to all of those who reside in Washington state. Looking at the USA in it's entirety, 2 out of 50 states have implemented it as mandatory. This is equivalent to 4% of the USA. That is not the popular choice, obviously. Please listen to the community and what they are asking for. We are asking for freedom of choice in regards to the covid 19 inoculation.

Thank you so much for your time. I appreciate you. May God bless you and your family.

Respectfully,
Christina Thacker

Subject: Vaccines!

External Email

To All of You Involved:

The first of these 3 meetings to discuss two criteria was COMPLETELY ONE SIDED!! There was no in-depth discussions or presentations of the many studies showing the harm these vaccines are causing! You presented one sided information that only supported your agenda.

These so called "vaccines" should NEVER have been unleashed on our children! This is a money driven, politically driven scam and our children will be the ones that suffer from it.

There is NO WAY to prove the long term effects these shots will have on our children for a virus that is NOT killing children! Our children ARE the trials and the outcome of this experiment should weigh heavy on your consciences.

We've been told we're conspiracy theorists if we listen to any other medical doctors who are providing different information that is being labeled as "misinformation". We're only "allowed" to listen to government chosen medical "experts" who have BEEN WRONG ABOUT SO MANY THINGS!

The parents need to make the choice that is best for their children and government and bureaucrats need to back off!! The FDA, the CDC, the federal and local governments are more concerned with money and power than they are with the health of our children!!! This Technical Advisory Group needs to look into ALL OF THE INFORMATION available on these MRNA shots and not just the info that supports your narrative.

Shame on all of you for not having different point of views during this process. Parents already know you're going to give the recommendation to the BOH to move forward with this atrocity. This is all a just a show.

Sincerely,
A very angry parent, Barbara

Subject: Please do not authorize the COVID-19 "vaccines" for children or authorize them as a requirement for education. Here is why...

External Email

Dear State Officials,

Please do not authorize the experimental mRNA "vaccines" for children or mandate them for education. We now know that COVID-19 hardly affects children and that these so-called COVID-19 vaccines do not work and are causing serious health problems and death. Furthermore, we now know that COVID-19-which has a recovery rate of 99.5% for most people-can be safely and effectively treated with Ivermectin and Hydroxychloroquine.

Here are 1000 peer-reviewed scientific papers that show that these COVID-19 drugs injections are not safe:

<https://www.informedchoiceaustralia.com/post/1000-peer-reviewed-studies-questioning-covid-19-vaccine-safety>

Here are some of those scientific studies:

1. Myocarditis after mRNA vaccination against SARS-CoV-2, a case series:

<https://www.sciencedirect.com/science/article/pii/S2666602221000409>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.sciencedirect.com%2Fscience>

2. Myocarditis after immunization with COVID-19 mRNA vaccines in members of the US military. This article reports that in "23 male patients, including 22 previously healthy military members, myocarditis was identified within 4 days after receipt of the vaccine":

<https://jamanetwork.com/journals/jamacardiology/fullarticle/2781601>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fjamanetwork.com%2Fjournals%2>

3. Association of myocarditis with the BNT162b2 messenger RNA COVID-19 vaccine in a case series of children: <https://pubmed.ncbi.nlm.nih.gov/34374740/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fpubmed.ncbi.nlm.nih.gov%2F343>

4. Acute symptomatic myocarditis in seven adolescents after Pfizer-BioNTech COVID-19 vaccination:

Here is commentary I posted to the FDA recently. It is a request that they do not authorize the injection of children with the experimental mRNA COVID-19 drugs:

I oppose authorizing the experimental mRNA COVID drugs for children. All our research indicates that these experimental drugs are more dangerous for children than COVID-19, which has a recovery rate of 99.5% for most people. The COVID-19 recovery rate comes from the CDC. That is a recovery rate that is similar to the common flu, and the recovery rate for children is even higher--children are virtually unaffected by COVID-19.

These experimental mRNA drugs are not vaccines as they do not provide immunity. They use a novel mRNA process that we do not know the long-term effects of. We DO KNOW, however, that they are maiming and killing literally millions of people. These numbers come from the European and American vaccine adverse event reporting systems. The reports from the VAERS reporting system can be accessed here: <https://openvaers.com/> According to the VAERS reporting system and the European Medicines Agency, there are over 50,000 deaths linked to these experimental drugs. There are 22,000 reports of deaths in the VAERS system and over 30,000 in the European tracking system: <https://www.thegatewaypundit.com/2021/11/european-medicines-agency-data-shows-1163356-adverse-drug-reactions-30551-fatalities-covid-19-vaccinations/>

It appears that these experimental drugs were hastily developed, hastily approved, they are still under Emergency Use Authorization (despite claims to the contrary). After a year of injections we now have a great deal of scientific evidence for

how and why these experimental mRNA drugs are maiming and killing so many people. For example, here is a collection of 1000 peer-reviewed scientific reports detailing the serious adverse health effects of these mRNA drugs:

<https://www.informedchoiceaustralia.com/post/1000-peer-reviewed-studies-questioning-covid-19-vaccine-safety>

These adverse effects include blood clots, heart inflammation, heart attacks, stroke, gangrene, disabling neurological damage, etc. Tens of thousands and perhaps hundreds of thousands of people have been disabled for life by these experimental drugs, which leads to the following questions: Why are these drugs still being injecting into people-why are they not being pulled from use immediately? Why are the governments of the world, the Media and the pharmaceutical companies entirely silent on the massive carnage being inflicted on the population by these drugs? As noted earlier, COVID-19 is about as dangerous as the common flu and as such it does not warrant the use of these dangerous and deadly experimental drugs.

Injecting children with these experimental mRNA drugs to protect them from a bad flu is completely irrational

What makes this idea even more irrational is that it appears that whatever effectiveness these experimental drugs may have in stopping COVID-19, their effectiveness quickly wanes, and they end up giving NEGATIVE efficacy. That is, the injection of these experimental drugs makes it MORE LIKELY that people will get infected with and get sick with COVID-19. We can see this effect in the massive spike of COVID-19 hospitalizations of the "vaccinated" in countries which have the highest COVID-19 "vaccination" rates. It is abundantly clear that these so-called "vaccines" do not work (long term) and are actually making things worse:

<https://newsrescue.com/australia-israel-report-95-99-hospitalized-fully-vaccinated/>

EXCERPT: Reports coming out of Israel claim hospitals are being filled with vaccinated people, 95 percent of whom are suffering serious illness being fully vaccinated.

"I understand that most of the patients are vaccinated, even 'severe' patients. Exactly. Naturally occurring. Old people, most of them are vaccinated," Israeli Dr. Kobi Haviv told News Israel 13 Thursday.

A nurse whistle-blower says that most of the patients said to have COVID are actually people who were vaccinated and are having adverse effects:

<https://www.theburningplatform.com/2021/09/10/patients-filling-the-hospitals-are-vaccinated-period/>

The Vaccinated Are Getting Sick at High Rates as Scientists Are Clueless As to Why

<https://peckford42.wordpress.com/2021/08/24/the-vaccinated-are-getting-sick-at-high-rates-as-scientists-are-clueless-as-to-why/>

Covid: 54% of hospital patients with virus are fully vaccinated

Rising proportion of vaccinated people in hospital reflects greater numbers in population getting vaccines:

<https://www.irishtimes.com/news/health/covid-54-of-hospital-patients-with-virus-are-fully-vaccinated-1.4670229>

CDC study shows 74% of people infected in Massachusetts Covid outbreak were fully vaccinated

<https://www.cnbc.com/2021/07/30/cdc-study-shows-74percent-of-people-infected-in-massachusetts-covid-outbreak-were-fully-vaccinated.html>

60% of people admitted to UK hospitals with COVID-19 are double-jabbed

<https://www.vanguardngr.com/2021/07/60-of-people-admitted-to-uk-hospitals-with-covid-19-are-double-jabbed/>

Science Shows that there is a Pandemic of the Vaccinated

<https://freedomfirstnetwork.com/2021/11/science-shows-that-there-is-a-pandemic-of-the-vaccinated>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ffreedomfirstnetwork.com%2F2021/11/science-shows-that-there-is-a-pandemic-of-the-vaccinated&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C2554afa1f4b54cb8493d08d9ed8a00f2%7C11d>

Lastly, we now know that COVID-19 can be safely and effectively treated with the off-the-shelf drugs Ivermectin and hydroxychloroquine--if these drugs are administered early on. The FDA and related agencies should be promoting these treatments rather than these experimental mRNA drugs, which clearly do not work, are now known to be dangerous and deadly, and actually appear to make those who have been injected with them MORE LIKELY to get infected with COVID-19, get sick with COVID-19, and die. The FDA should not even be considering the authorization of these experimental mRNA drugs for children.

-End of FDA comment-

Here are the searchable VAERS reports of injuries and deaths associated with injections of the COVID-19 "vaccines":

<https://openvaers.com/openvaers>

Something else I would like to note is that the PCR tests which have been used to determine who does and who does not have COVID-19 are notoriously faulty, and are now known to give almost all false positives. So a positive PCR test in the absence of symptoms DO NOT show that a person actually has COVID-19. Using COVID-19 "case" counts to determine policy is wrong and leads to bad policies.

I would be happy to provide more information on this matter if you desire it.
Thank you for your time and consideration.

Respectfully,

Brooks Trubee

To whom it may concern,

As a parent of a high school child, I am writing to inform you that if these unconstitutional vaccine mandates are passed, I will immediately removed my child from public school. I will then spend every moment of my free time reaching out to other parents to help inform them of way we can join together to avoid using the public school system and its agenda. The masks were already too far. This is absolutely despicable.

Subject: Against COVID-19 vaccine requirement for school

External Email

Dear WSBOH members,

I am disappointed and, quite frankly, frightened when I read your criteria and the corresponding agreeance and non-agreeance counts regarding COVID-19 vaccination as a requirement for attending public schools.

I am frightened that public health is being decided by individuals that are completely blinded to obvious facts, science, and data. COVID-19 is shifting to an endemic and should be managed accordingly. Stop treating this virus like it is a major threat, especially to school age children because it is not! The potential side effects of the vaccine are far greater than the virus itself. It would be a gross and reckless misstep on your part to require this vaccine based on the potential side effects alone.

This virus has a high survival rate without the vaccine, and robust natural immunity after contracting it. Why would you make this a vaccination requirement when, for most, this simply presents like a cold/flu? Our human immune systems are quite capable of fighting off this virus without a vaccine! As health "officials", you believe in the power and science of the human body, right?

How do you reconcile the high number of COVID cases in fully vaccinated individuals with the consideration of making this a requirement? It just doesn't make sense. Fully vaccinated people are contracting COVID like crazy! I personally know way more fully vaccinated people that have contracted COVID than non-vaccinated people. Have you seen the data coming out of Israel? Your consideration to make this a vaccination requirement for school aged kids is not logical!

Basic virology shows that viruses continue to weaken over time. We have already seen this happening with the COVID-19 virus. And, because it continues to change, the COVID-19 vaccine is showing it's inefficiency in controlling it, hence the need for booster after booster. When will it stop? The answer is, it won't. Learning to live with the COVID-19 virus is the answer. Vaccines and boosters and vaccine requirements are not the answer.

What does make sense is letting people and parents choose for themselves and their kids...like getting the flu shot, for example. Lots of people opt to get a flu shot for themselves and their kids. Conversely, lots of people opt not to get the flu shot for themselves and their kids. Every year, both groups of people, with and without the flu shot contract the flu and survive. This happens year after year and it's not a public health emergency, or crisis, or a vaccine requirement. COVID-19 should be treated the same.

Let's look at a couple of your "criteria".

Criteria 5: The vaccine containing this antigen prevents disease(s) that has significant morbidity and/or mortality in at least some sub-set of the population.

17 yes

0 No

First, the sub-set in question here is school age children. There is NOT significant morbidity and/or mortality among children, nor has there ever been! Second, I am shocked at the number of yeses because it suggests that you are unaware or blatantly choosing not to acknowledge that school age children fare just fine in fighting this virus!

Next...

Criteria 6: Vaccinating against this disease reduces the risk of person-to-person transmission, with transmission in a school or child care setting or activity being given the highest priority.

12 yes

1 no

4 undecided

I applaud the 1 person who disagrees with this as they are aware of what is actually happening; what reality is! As I stated earlier, vaccinated people are contracting and spreading COVID-19 like crazy! It is well known that the COVID-19 vaccine does NOT prevent anyone from contracting or spreading the virus! I will circle back to my earlier comment where I said I am frightened that public health is in the hands of individuals that are unaware or blatantly choose not to acknowledge this fact! This virus spreads and presents no worse than the common cold or the flu, especially in school age children and should be treated as those viruses are.

Making this a vaccine requirement for school age kids, simply does not make sense and I am completely against it. Why are you continuing to consider it? Be done. Take this issue off the table for once and for all. Do what is right and let parents decide what is best for their children regarding COVID-19 and the COVID-19 vaccine. There is no public health emergency or threat for school age kids!

NO COVID-19 VACCINATION REQUIREMENT FOR SCHOOLS!!!

Respectfully,

Michelle Katsel

1. Yes

Independent fact checker

10.

Are you testifying on a specific proposal under consideration by the board?

1. Yes

Forceful vaccination of children and teachers.

11.

Are you Pro or Con on the proposal?

2. Con

I do not believe that children and teacher do not need to be vaccinated if they do not wish to. A child's immune system is very resilient. I'm not against children or teachers being vaccinated, but I am against forcing families to be vaccinated when there is scientific evidence that goes against the vaccine as well. So if their child or that teacher chooses to not take it we will fire or take them out of school? That is unjust and disgusting display of ones position of power. Covid 19 has already had a substantial negative impact on the youth in America. Further forcing parents and children(old enough to make their own choice) to vaccinate or be subject to dropping out is only going to set them back even further. The children in our household have been exposed many times throughout the pandemic to each variant and have yet to get sick. If our children want the vaccine we will provide it to them, if they don't we will not. It is their choice, not ours, and certainly not anyone's choice whom is outside the household. This is an outlandish subject that is an overreach. My child who attends Jefferson elementary was in the nurses office and was about to be sent home due to a headache and tummy ache, since the school neglected her and wouldn't allow her to drink water without her own bottle and says "nothing we can do" this has turned into complete ignorance of the staff. The duty's of the schools and board is to educate and teach children to help develop the future and make the world better. Not force their opinions and standpoints on children and kids. It's the choice of the parents and non of yours.

I do NOT WANT THE KIDS OR BABIES TO BE VACCINATED!!! They do not need it. The numbers are very very low in deaths. There were more deaths from the flu the Covid. There has been over 800,000 deaths with adults with the vaccine and over that amount in adverse reactions. I know of 10 and 12 year olds that got the vaccine and have heart problems. They were totally healthy. A 20'year old got afib . No heart problems before. These kids will have heart damage the rest of their life. Do you want to be responsible for all the adverse affects. If that was your child, grandchildren etc, how would you feel. You made a choice to damage their life. Listen to all the drs that you sensor from telling the truth and the lies you are telling the American people so you can have power, more money. The vaccine companies need to be held accountable for all the deaths and adverse reactions. The American people need the truth. Stop lying.

Subject: In Regard to requiring the COVID vaccine

External Email

Hello,

I saw that the Board of Health was requesting public input about this topic, and I wanted to add my thoughts as a concerned citizen of Washington state.

I do not think requiring this immunization to attend school is a good idea.
I am not an anti-science quack, like some of the people who object.
I have devoted my life and career to science. Real scientific questioning should still be allowed even if there is a lot of disinformation flowing.

This vaccine is based on a relatively new mRNA technology. Most vaccines undergo 10+ years of long term safety testing, which I know is not really practical in this situation. But that is one of the many reasons COVID vaccination should be a suggestion and a choice. There are known and possibly unknown risks to this vaccination. While the risk of myocarditis is slight, it is still there. There are 1 million or more kids in the WA state school system. Are you ok with forcing 106 or more children to get myocarditis? I am not. I am worried about my son's chances of being one of those 106.

I believe in body autonomy for all. In regards to women's right, human rights, and medical rights.

The important point I think it should be up to the individuals to decide if the slight risk of myocarditis is better than their individual chances of complications for the virus. This comes down to the basic rights of body autonomy. Don't you have a choice about what happens to your body?

!. VAERS is KNOWN to only have 1% of the actual incidents reported - therefore 100 reported adverse effects of vax is really closer to 1000

2. Are you willing to be held liable for those poor children who end up paralyzed permanently from the vax???

3. Masks are KNOWN to reduce the immune system's ability to fight off communicable disease - Could 6-8 hours of mask wearing reduce the children's immune system - therefore causing sickness?

For the record, I am strongly against the COVID vaccine mandate for children in public schools in Washington. In fact. I am again any sort of mandate that supports showing a vaccination card to get into a restaurant, event or public place of any sort.

Parents are the only ones who have the right to decide what, if any, vaccines a parent gives their child.

JUST STOP ALREADY!!!

Stop imposing restrictions/limitations on children that make zero sense and that science has proven to be ineffective!

We, parents/citizens/human beings, are plain fed up with all of it. We are tired of your mandates that have not been fully vetted, we are tired of your pandering to whatever narrative is being pushed by the media, the administration and/or whoever's deep pockets are encouraging your rush to judgment.

There has been no evidence of criteria # 6(the vaxx reduces transmission in school settings) exists, that was discussed at length and yet 12/17 people voted this vaxx met that criteria. In fact, there has only been evidence to suggest the EXACT opposite.

There have been ZERO studies to test the efficacy and long term side effects associated with ANY of these vaccines, HOW DARE YOU suggest otherwise.

And without ANY of these studies, NO ONE can safely make an informed decision. I will not subject my kids to any vaccine that has not been fully vetted on the above mentioned criteria.

Let the parents make their own decision in this matter, do not play God and force this on any child in order for them to receive an education.

Sincerely,

Kelley Littlefield

Reading Time: 5 minutes

The CEO of the OneAmerica insurance company recently disclosed <https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Finsurance-forums.com%2Flife-insurance%2Foneamerica-ceo-says-death-rates-among-working-age-people-up-40%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C5898f40ac5424e60befe08d9ecc070bf%7C11d0e2> that mortality in the 18-64 age group was 40 percent higher during the 3rd and 4th quarters of 2021 than during pre-pandemic levels. For reference, the CEO indicated that a 10 percent increase would have been a 1-in-200-year event. Furthermore, most of the deaths were not attributed to Covid.

Figure 1: US weekly deaths by age group. Data
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fnchs%2Fnvss%2Fdeaths%2Fweekly-deaths-by-age-group>
 is from the CDC. The gold curve is data for 2021. The red curve is data for 2020. The gray curves are data for 2015-2019.

The OneAmerica insurance company serves a subset of the US population. The CDC collects mortality data <https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fnchs%2Fnvss%2Fmortality%2Fweekly%2Ffigures%2Ffigure_1.html> for the entire US population. Figure 1 illustrates the weekly US mortality from 2015-2021 by age group. Several generalizations are readily apparent. The years 2015-2019 were very similar for all age groups forming a tight band of usual expectation. The tightness of the band for 2015-2019 means that relatively small increases in mortality are very significant events. There has been nothing unusual about mortality for the Under-25 age group during the Covid period compared to recent history. The last 10 weeks of data for

2021 are incomplete due to delays in reporting death certificates. Otherwise, mortality for the Over-25 age groups have been higher than historic norms starting in about March of 2020 and continuing to the present time with one big exception for the 85+ age group.

There is a very interesting interval from Week 10 (March 7) 2021 to Week 24 (June 13) 2021. Deaths in the 85+ Age Group are LOWER than average during this interval. Total deaths for Weeks 10-24 averaged 248,536 during 2015-2019, but were 242,372 during 2021. For the 25-44 age group, total deaths for Weeks 10-24 averaged 38,955 during 2015-2019, but were 54,789 (40.6 percent higher) during 2021. Daily Covid deaths (7-day moving average)

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.worldometers.info%2Fcoronavirus%2Fus/> in the US were declining from 1,689 on March 7, 2021, to 387 on June 13, 2021. This time period was the decline phase of the winter outbreak that peaked around January 18, 2021, and reached a nadir around July 8, 2021 prior to the Delta surge. One cannot plausibly attribute the above average deaths for the 25-44 age group during this time period to Covid. What was responsible for these deaths?

<data:image/png;base64,iVBORw0KGgoAAAANSUhEUgAAAAEAAAABCAQAAAC1HAWCAAAAC0IEQVR42mNk

Figure 2: Weekly US mortality by Cause Group. Data

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fnchs%2Fnvss%2Fdata%2Fweekly%2Fmortality%2Fus/> is from the CDC. The gold curve is data for 2021. The red curve is data for 2020. The gray curves are data for 2015-2019.

Clearly there is a very significant above average number of deaths across the US that cannot be attributed to Covid. As was the case for the Age Group graphs, data for the last 10 weeks are incomplete due to delays in reporting of death certificates. Deaths attributed to Malignant Neoplasms were average during the entire pandemic period. Although there was an increase in deaths from Alzheimer Disease and dementia in 2020 after the onset of the pandemic, this was less apparent during 2021. There was an increase in deaths attributed to Other select causes (which include suicides and drug overdoses), but the magnitude was much smaller than what is seen in the Circulatory diseases category. Deaths attributed to Circulatory diseases include strokes, heart attacks, and heart failure (including myocarditis). The Circulatory diseases category is clearly the most important category for excess deaths during 2020 and 2021. Notably, deaths attributed to Respiratory diseases were below average during 2021 for the period of interest between Week 10 and Week 24 of 2021. Covid is a respiratory disease and leads to acute respiratory distress syndrome with hypoxemia and respiratory failure in severe cases. During the period of interest between Week 10 and Week 24 of 2021, Covid deaths were steadily declining, deaths attributed to Respiratory diseases were below average, but deaths due to Circulatory diseases were significantly above average. It is difficult to explain the data between Week 10 and Week 24 of 2021 on the basis of

lung injury caused by Covid infection.

The spike protein enables entry of the virus into the host cells. The spike protein targets the angiotensin converting enzyme-2 (ACE-2) receptor. Angiotensin converting enzymes play an important role in the regulation of blood pressure. Angiotensin receptor blockers (ARB) and angiotensin converting enzyme (ACE) inhibitors are both important classes of drugs used to treat hypertension. It does not require a stretch of the imagination to suspect that the spike protein could cause elevation of blood pressure. Acute elevation in blood pressure is known to be a risk factor for stroke, acute myocardial infarction (heart attack), and congestive heart failure. Spike protein is also associated with clotting, presumably due to endothelial injury, which would also increase risk for myocardial infarction and stroke. It is not clear why spike protein from the Covid virus would explain above average deaths attributed to Circulatory diseases during a time period when Covid cases and deaths were declining. However, the Covid virus was not the only source of spike protein during this time period. The mRNA vaccines led to the production of spike protein by host cells and Weeks 10-24 of 2021 were immediately followed by the mass introduction of mRNA vaccines to the US public. The data is not proof, but it is certainly a red flag.

The appropriate method to assess vaccine efficacy and safety is all cause mortality. Deaths from all causes are compared between the vaccine group and a control unvaccinated group. This method has not been used. Rather, the CDC and FDA determine on a case-by-case basis whether reported adverse events can be attributed to the vaccine. If a footballer drops dead during a game, one would not be inclined to attribute the cause to a vaccine given 10 weeks earlier. However, when 5 footballers drop dead every week, one will be looking for ANY common denominator between the dead footballers. Neither the CDC nor the FDA are impartial observers of vaccine safety. Both agencies have vested interests in promoting the vaccines. When the CDC or FDA analyze events on a case-by-case basis, they are inclined to say that an event was not due to a vaccine (especially if the people at the CDC and FDA include former executives from Pfizer). However, when the entire US population has a significant number of events compared to historic basis, one must look for the common denominators in the people with the events. The existing data is not proof that the vaccines are causing deaths due to Circulatory diseases. The burden of proof, however, lies with the CDC and FDA to prove that the vaccines are not causing deaths due to spike protein. It is scientific irresponsibility to eliminate the control group via vaccine mandates and make future assessment of vaccine safety scientifically impossible.

<debrakwells@startmail.com> wrote:

Please do not require or force the COVID 19 vaccines on children. More children have been negatively affected by vaccines than have been sick or died from covid. The children that have passed away had other medical issues that put them at particular risk; however, the vast majority are not at risk of covid 19. However, with the vaccines, myocarditis is more deadly to children than covid 19 and this has played out in the numbers.

We also don't know the long term effects on fertility and this vaccine should not be allowed or approved for children at any age.

Please follow biological science and not political science. It is very apparent that the majority of decision makers have been following political science and not biological science. Please do NOT harm our children with these untested vaccines. It's one thing to require the measles vaccines that have been around for decades; however, covid 19 vaccines have only been around just over a year. The numbers are not looking good for the safety of the covid 19 vaccine. The numbers from the Military are alarming. The numbers from insurance companies, that are required to review actual death rates and why so they can set premium rates, are extremely alarming. Ignoring these warning signs is gross negligence. We must protect our most vulnerable from even the most well meaning individuals/decision makers. We should not

be making rash decisions that will have long standing impact that can't be reversed. We need more data on the vaccines before we force it on children.

18.

Please vote NO on requiring Covid vaccines for children under

To WSBOH, we are sadly disappointed in the TAG recommendation to the board to consider COVID 19 shots for inclusion in chapter 246-105 WAC. There is not enough known about the long term effects of the shot. It has not been studied sufficiently. In fact, just this week the FDA postponed their meeting on COVID shots for kids under 5 after Pfizer says not enough data is available as to efficacy & safety. Pfizer also said 2 shots were not effective on this group - so now they are testing 3 shot efficacy! This is outrageous. Children under 18 have the lowest risk for serious COVID of all age groups.

Please consider the facts as they've developed over the past year. Please review the CDC's own VAERs report. Consider the warnings that Pfizer was forced to add to their insert of the increased risk of myocarditis, especially in young males.

It's been proven that pfizer shots are NOT vaccines in the same definition & protection provided by all other childhood vaccines. Ask why the CDC changed the definition of vaccine last month, due to the recognition that the COVID shot does not stop transmission.

Johns Hopkins just completed a study on natural immunity from infection. That study and others out of UK & Israel found natural immunity more effective than the vaccines against transmission & protection against future virus variants. The Johns Hopkins study was published in the WALL Street Journal last week. Many kids have natural immunity & could be harmed by the COVID shot.

You are tasked with a very important decision that will affect the health & well being of current & future children. It is your responsibility to know the facts, not just what the narrative might be from the CDC / FDA & media in general. You must know that our health agencies, charged with protecting us, are actually massively funded by the very drug companies that they are supposed to be regulating. This creates a dangerous conflict of interest that cannot be denied. Please - take the time to read & research for yourselves the full story & adverse side effects being reported & ignored by too many with the power to control the health & well being of our children. Thank you,

Dena Gregory

State Board of Health Representatives,

We do not support vaccine mandates of any kind within our state- vaccine passports, and vaccine requirements for school attendance and employment. Anything one puts into their body must remain personal choice, and even more so when the vaccine in question is still in early stages of use, without a vetted history of safety, and is showing much higher rates of vaccine injury and death than any other vaccine since the data has been tracked by VAERS.

If you choose to vote for vaccine mandates in our state it will not be well received by our citizens. I implore you to be mindful of the people's desires in this matter.

To whom this may concern,

Government and bureaucrats have no business requiring anything regarding ones health. Health is a personal issue for each to decide. When in regards to children until the child is old enough to decide this is a parents obligation not Government not bureaucrats. The vaers data doesn't support the force you all have been using. Your emergency powers do not subside my right constitutionally or morally. I have a question are you going to require the shot to pay taxes? Of course not because the government is taxpayer funded. The lord gave mankind an immune system and free will. I as a citizen suggest that you do not "mandate" this for our youth.

Why is Dr. Malone not invited to your meetings about these vaccines for children if he is the inventor of the mRNA vaccine? Also why did you not have any doctors on there talking about immunity and how children have antibodies after they get Covid why did you not have any parents in the community from Washington state in this group .Out children are going to Forced to take his vaccine and you had no parents on the tag board that is so biased we as taxpayers should have an opinion.

Please do your research and see why most other countries are not giving the covid vaccine to children, and many not to anyone under 31. It is absolutely shameful that our Board of Health thinks that they can support the vaccine manufacturers and completely ignore the statistics that children are virtually unaffected by Covid. It shows that essentially anyone pushing this vaccine on children is a vaccine industry shill, you know it, and we all know it. Just be honest for once, without long term data, this is a crime against children.

To whom it may concern, please stop the mandates for masking and immunizations for school age children! As a family we choose to get vaccinated but had the mandates been in place, I don't think we would have gone that route. These mandates are divisive and causing more damage to our communities, state, and children! I don't think they are working. People have been given the opportunity to get vaccinated and for that I am so thankful! The roll out & administration of the vaccines has been great. It's time for people to stop feeling angry with the overreach and make wise decisions for themselves and their family.

Thank you for your consideration!

External Email

Hello,

Please protect your kids, grandkids, and great grandkids. They are children that we are supposed to protect. There are too many unknowns about these vaccines and the long term affects on adults let alone children.

We know that the vaccines cause myocarditis in children. We know that it also affects the menstrual cycle in women and has even caused menopausal women to start their menstrual cycle again.

Many more tests need to be done to ensure them safe for our children. Young children have literally less than a 1 percent chance of being hurt by COVID, why would you require a vaccine that is more likely to hurt them?

If you think it is going to protect their older relatives, that isn't good enough. Our children deserve better. Older people have already lived their lives and it would be extremely selfish and wrong to sacrifice the children for us.

This virus is not going away and nearly everyone will get it and build up antibodies. Since Omicron spreads more readily than the others, the majority will get that strain which kills way less. That is a good thing.

We know that girls are born with all of the eggs their bodies will ever have in their life. What affect do you think this vaccine is doing to them knowing that it goes and rests within the ovaries. It is doing something that's for sure. We may not know what and that's why more tests and studies are needed.

It doesn't make sense that this is even being discussed. Why? The good most certainly does not outway the bad. This is a no brainer yet here we are.

Please do the right thing and do not let the COVID-19 vax be added.

Thank you for listening,

WA state board of health I oppose the covid vaccine for school kids~

1. OPPOSE the Board's formation of a Technical Advisory Group (TAG) to review information about COVID-19 shots for consideration of mandating the shots for school. I oppose COVID-19 shot mandates, period!
2. SUPPORT Informed Choice Washington's Petition for Rulemaking (see below) — our petition is item 11 on the January 12th agenda. It was filed by Xavier Figueroa, PhD, on behalf of ICWA, and asks the Board to establish a new rule that prohibits them from adding any Emergency Use Authorized (EUA) product, or any licensed product that lacks completed Phase 3 trial studies, to the school required list.

Sincerely,

Kristin Nelson

Regarding vaccine shots for kids,
These COVID-19 shots are not vetted over years of testing to be forced upon or given to children without long term data reviewed. Leading causes of death in children are accidents, murder, suicide, cancer, heart disease. These top causes should be dealt with upmost priority! The suicide rate has doubled since the lockdown and mandates have been implemented. Children are not at risk for death of Covid but are indeed risk for vaccine injury. The cost/ benefit is not in favor. Regarding mask mandates. The N95 masks are for viruses grater than 0.3 microns. The SARS-CoV viruses are 0.06-0.14 microns. In other words, the virus is smaller and can go through even the N95 masks. These masks are face decor at best! We must be able to let our children see each other and their teachers for optimal learning to take place. We are one of just a few states with mandates that have been proven not to work. John's Hopkins study has found 0.2% benefits to lockdown and it's mandates. John's Hopkins study also proves of natural immunity robust for now 22 months and going. We must change course from the current failing course we've been on for the past two years.

Dear Washington State Board of Health,

I am 100% against these vaccine mandates for our kids and echo all the information listed below!

Re: WSBOH Public Meeting agenda on 9-Feb to discuss "Technical Advisory Group to Consider COVID-19 for Inclusion in chapter 246-105 WAC"

To the Washington State Board of Health,

I wish to formally state my objections to the forthcoming proposal on mandating the experimental Covid-19 vaccinations for childcare and school entry. It is well documented through government sanctioned resources, such as the CDC's VAERS and the World Health Organization, as well as numerous international government bodies, that have reported on the efficacy of this experimental mRNA gene therapy, currently authorized for emergency use only, as being unsuccessful in reducing the spread and severity of the virus, including all variants. This is further evident in the continued increase in recorded breakthrough positive cases amongst the fully vaccinated throughout the state.

It is the role of this board and institution to thoroughly evaluate the risks vs. the benefits of these experimental vaccinees and protect our children from harmful medical intervention. It is beyond clear that these experimental vaccines have not been properly tested and peer-reviewed for safety, as required to ensure the protection of our children, and therefore presents an unacceptable risk to their wellbeing. I would further call to your attention the high risk to our children of adverse reactions from the experimental vaccines as reported by the CDC's VAERS systems which has documented hundreds of thousands of adverse reactions to the vaccines and over 20,000+ deaths (US data <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fvaers.hhs.gov%2F&data=04%7C>, Dec 2020).

Furthermore, in September 2021, the CDC changed the definition of the terms "vaccine"

and "vaccination" to accommodate for the experimental mRNA gene therapy (see reference below). These new definitions...

- * No longer cite that a vaccine produces immunity, rather, cites they now stimulate an immune response.
- * No longer cite that vaccination produces immunity, rather, cites they will now produce protection.

As a result of the new CDC definitions, the experimental Covid-19 vaccinations are not in compliance with RCW 70.290.010

<<https://gcc02.safelinks.protection.outlook.com/?url=http%3A%2F%2Fapp.leg.wa.gov%2FRCW%2Fdefault> which states the following:

"Vaccine" means a preparation of killed or attenuated living microorganisms, or fraction thereof, that upon administration stimulates immunity that protects against disease and is approved by the federal food and drug administration as safe and effective and recommended by the advisory committee on immunization practices of the centers for disease control and prevention for administration to children under the age of nineteen years.

Effective immediately, the WSBOH shall be put on notice that by making the experimental Covid-19 vaccinations compulsory for childcare and school entry, you will be in violation of the Washington State Constitution (RCW 70.290.010).

Finally, this mandate will have a detrimental effect on Washington State citizens, families and children, most notably:

- * Washington State parents pulling their children from both public and private institutions at an even more alarming rate than experienced to date (4.5% lower, or over 50,334 reported in Nov 2021, <http://www.cfc.wa.gov/Documents/ForecastNarratives.pdf> <<https://gcc02.safelinks.protection.outlook.com/?url=http%3A%2F%2Fwww.cfc.wa.gov%2FDocuments%2F>).
- * Decrease in federal funding for Washington State public education system.
- * Increase in parental hardships securing new education system(s) and/or institutions for their children.
- * Increase in mental and physical health issues for families.

It is of the utmost importance our children's safety is the top priority of this board.

Regards,

Nora Berry

<<https://gcc02.safelinks.protection.outlook.com/?url=http%3A%2F%2Fapp.leg.wa.gov%2FRCW%2Fdefault>
DEFINITIONS

Vaccine: A product that stimulates a person's immune system to produce immunity to a specific disease, protecting the person from that disease. Vaccines are usually administered through needle injections, but can also be administered by mouth or sprayed into the nose.

Vaccination: The act of introducing a vaccine into the body to produce immunity to a specific disease.

Vaccine: A preparation that is used to stimulate the body's immune response against diseases. Vaccines are usually administered through needle injections, but some can be administered by mouth or sprayed into the nose.

Vaccination: The act of introducing a vaccine into the body to produce protection from a specific disease.

"Vaccine" means a preparation of killed or attenuated living microorganisms, or fraction thereof, that upon administration stimulates immunity that protects against disease and is approved by the federal food and drug administration as safe and effective and recommended by the advisory committee on immunization practices of the centers for disease control and prevention for administration to children under the age of nineteen years.

I am a parent of a 16 year old daughter. I STRONGLY object to making the covid 19 vaccine a requirement for the next school year. The side effects are not safe for children and not fully studied. It is not a deadly virus that we need to require young children to be taking. It is also not your responsibility to decide what is best for my daughter. It is my responsibility to act in her best interest.

Please do not require this for next year.

Subject: No mandates

External Email

With all respect to your authority: a decent society does not force experimental injections on its citizens against their will, and certainly not on children. No mandates. Consider your place in history. We look back in outrage on our past of forced interments and medical interventions without consent. We wonder how it could have happened. Please look in the mirror and ask, how will our grandchildren look back at us?

Thank you,
Jeff Beauvoir

Dear Washington State Board of Health,

Our state government should NOT be mandating Covid vaccines on our children. Children are at extremely low risk for Covid and these medical decisions should be left in the hands of parents.

Sincerely,

The Citizens of Washington State

I am here to voice my concerns taking place in this State in regard to COVID 19 shots. I feel that every parent chooses what they feel is right for their children and themselves. Whether that means choosing to get a shot or not, just like choosing to breastfeed or use formula. Both are a right answer in what they choose for their family and that because it's a CHOICE. It should always be a choice to get a shot or not, just like the flu shot (Norway already views COVID as the flu so we really need to get on their level). Thousands of fellow parents will pull their kids out of school if this is required. I love my children too much to force junk in their body that has yet to even be proven effective from getting it spreading with the shot- so what the point of even getting it? Due to the thousands of parents pulling their children will only add to the falling economy... as teachers, bus drivers, cooks, etc. will no longer be needed since there will hardly be any children in school. Face it, COVID will not go away- people need to move on and live their life and realize it's not serious. People die from smoking... yet that's still ok....how many alcohol related deaths have there been? Millions... but yet let's still sell it and every venue, restaurant, and store. That makes sense. There isn't a Covid pandemic. There are people with power pulling pandemic. Horrible people that do not respect the constitution. As you can see I am completely against forcing people and children from a shot that they feel is not good for them. And punishing those families who chose not to get it. This is un-American and I hope you are ashamed of yourselves.

Hi,

We are a small private school in Bellevue and would like to add our comments regarding mandating Covid-19 vaccines in schools:

* Vaccines are THE way to prevent deaths from Covid, particularly as other measures loosen, more variants emerge and more people contract the virus, just like with Omicron. These are not just deaths of children, who often suffer few consequences that we know of, but also deaths of older family members, infants and the immunocompromised (who may not know it yet). We vaccinate to protect others as well as ourselves.

* The goal is to keep as many children as possible in school, and to keep sick children home. Vaccines limit the number of sick children, and the number who stay home because of immunocompromised family members.

* When we had a measles outbreak in southern Washington, the measles vaccine was mandated without personal exemption. That was a localized outbreak, and became a mandate. Covid is much more widespread, so it is even more important to mandate the vaccine.

* Varicella is required for schools, and varicella is not typically dangerous to children, and shingles is not anywhere near as deadly as Covid to an adult. But numerous children missed school for a week and there were consequences both to themselves and family members, as well as to those with Shingles when they were older, so Varicella became a required vaccine. Illness and death from Varicella pale in comparison to illness and death from Covid.

* This is our best, most timely opportunity to mandate the vaccine, while it is still uppermost in the minds of so many families.

* Many parents only go through the effort of having their children vaccinated because vaccines are required for school attendance. Schools are the "drivers" of all community vaccination.

Additionally, if vaccines are not mandated, we are likely to have to restart this cycle of illness, missed school, testing, school closures, and teachers retiring early or quitting for the next several years at least, because this virus isn't going away, and vaccines are the only real way to control the spread. If we do not do this now, our children will continue to suffer from lost education and socialization, and the related depression. All vaccines raised objections when they were new. So did seatbelts. When the hoopla dies down, it will be another case of "remember when..." Please make the right decision for our children.

Thank you!

Subject: Please DO NOT Require Covid Vaccinations for Our School Children!

External Email

I am very disheartened to learn that the Board is still considering the Covid vaccination for our children. Covid is not a significant threat to children, and science now shows that having the vaccine neither prevents one from acquiring the virus or from transmitting it to others. It should be a personal choice of the parents!

The Covid vaccine is still under emergency use authorization only, as long-term effects are unknown. Please do not mandate the vaccine for schools.

Subject: covid vaccine mandate

External Email

Hello,

I would like to comment on the potential covid vaccine mandate for schools.

If Washington implements a covid vaccine mandate for schools, it should include the ability to submit proof of infection and recovery, as it does for other diseases. Failure to include this aspect given the current state of research about the protection of previous infection indicates a decision-making process solely focused on politics rather than data. An insistence on two doses of vaccine on top of infection rather than only one will only underscore this fact.

Good afternoon,

I am one of MANY concerned parents who do not approve of the decisions being made to add the covid shot as a requirement for school aged children to attend school. I watched your virtual meeting yesterday between the Technical Advisory Group (TAG) and the WA State Board of Health (SBOH). Your "data" presented was not sufficient to even make an educated decision on Criteria #5 or #6 (or any of the 9 criteria for that matter), many of you even said so yourself. Please understand that your vote, your unanimous recommendation to the Department of Health, affects ALL of us parents.

For those of us parents who do not want our children being forced to take this

experimental shot, please hear us out. If the tables were turned, and the government was trying to pass a law or new code/requirement that would force YOU to either do something to your child that you wholeheartedly did not approve of or pull them from school and uproot your whole life and everything you've worked for to move somewhere else to stand up for what you believe in, how would that make you feel? I have lived in Washington my entire life, so have my parents and my grandparents did too. Everything I know, love and have worked so hard for, is here. All of you with TAG and SBOH and many other agencies/organizations of government are jeopardizing every aspect of my life with your decisions. The public no longer has a voice, we are being ignored and censored left and right. PLEASE. Hear me. I am begging you. I will not allow my children to be injected with an experimental shot. My kids and myself are otherwise fully vaccinated and get our flu shots. I am NOT anti-vaccine. I am simply a very concerned mama bear who wants to protect my cubs. Imagine for a moment if the most important people in your life were being forced to do something they did not want with every fiber of their being and ask yourself how you would feel. My heart is SO heavy. Tears are flowing as I write this. Please understand that the choices you are making affect people who may not have the same opinions, views, beliefs as you do. Are you really ok with harming others just because they think differently than you do?

Since when is it a crime to protect your own child?! I have been called so many awful, ugly names, because I will not make my toddler wear a face covering in public. How is this ok? I don't call people names because they choose to wear a mask or get a shot. I truly respect everyone and the decisions they make for their children. We are all trying to do what is best for ourselves and our loved ones. Why can't that be respected? Why are you trying to rip that CHOICE away from me? What would it take for you to understand how I am feeling? Would it make a difference if I sat in front of you crying while holding my children? This is not fair. Surely you can see that. The vaccine is too new for me to trust it. We don't know long term effects. There is no way that we could! Covid has only been around for a few years and the vaccines even less time. Can you imagine if you voted yes for this to be implemented and years down the road we saw all kinds of defects and illnesses and deaths associated with these vaccines and boosters?? The blood would be on your hands. PLEASE, PLEASE, PLEASE. Let the PARENTS make the choices for their own children. Let ME decide if MY child needs this shot. I promise you I am far from alone on this. I know SO many people who feel this way. Our livelihood rests in your hands. Please speak up for us. Please understand that even though we may have different views, different beliefs, different opinions, that I still care about you. I would still save your life if given the chance. Love thy neighbor, right? I grew up in a household with one parent who was typically Democrat and the other typically Republican. They loved each other all the more, while cancelling one another's votes. Let's get back to standing together, respecting one another, helping each other and being neighborly. I would never want to force YOU to do something you didn't want to do. Please show some respect, and don't force me to either. United we stand, Divided we fall. Help us END the division by allowing us all to make CHOICES for ourselves. What is right for you, may not be right for me.

Much love and respect,

A Concerned Mama Bear

Subject: No on Mandatory Covid 19 Shots for Schoolchildren

External Email

□Washington State Board of Health,

I know that tomorrow February 10th the Technical Advisory Group is meeting to consider a Covid 19 vaccine requirement for school aged children in the state of Washington. As a citizen and a parent I am vehemently opposed to any such requirement.

This is not at all comparable to any other school required vaccines, which have spent years not only to be produced and tested, but have taken years to be required for children. The speed at which this vaccine has been rolled out has not allowed for adequate testing for side effects. Some are already documented, such as heart problems like myocarditis and time will tell how many others will develop.

This is also a vaccine for a respiratory virus akin to the the flu shot. It has already been proven that it does not stop transmission which was the entire basis for the massive vaccine mandates in the general population. These coronavirus strains have already proven to cause little to no symptoms in children. Every other childhood vaccine required for school aged children prevents transmission of said disease and protects the person who has received the vaccine. There has also always been an option for medical or religious exemptions from previous established vaccines for children.

I urge you to please use facts in any decisions the board makes. Public health hysteria has in the past produced disturbing and horrific outcomes that are always in danger of being repeated.

Do not make this Covid 19 shot mandatory for Washington state school children.

Do NOT cave to the Teacher Union's draconian request to make it mandatory for all children to get the Covid-19 vaccination to attend school!

This is not based on science. The vaccines have only been around for a little more than a year and no one knows the effects of the vaccine long term. The vaccine has been proven to do more harm than good for children and others.

Children are not at risk for getting or spreading the Covid-19 virus.

Parents should and must be the ones who decide if their child gets vaccinated ~ NOT the government!

The vaccines do not stop a person from getting or spreading Covid-19. So, mandating it would only be a power play on your part.

A mandate to get vaccinated would tell me that you think you know more than my doctor and me what should be injected into my child's body.

I wish to submit a comment on vaccinating kids attending school for covid. The question I have is where has this board been when more kids have and continue to die of flu minus these last 2 years of years. Yet we never required the flu shots or mandated masking. But covid which still has taken less children in a year than a regular flu season needs vaccination? Little boys have a higher risk of microdisis from a covid vaccine than from catching covid and developing it. Life has never been risk free. I am a parent of 3 boys ages 13 to 8. It's my choice what risks they take, not yours. Your board lacks diversity of any thought when you vote 12 to 4 on a vaccine reducing transmission. Observable data and the cdc have rendered this false. I may be saying this too strongly but the reduction in transmission is so little they require vaccinated to mask the exact same as non vaccinated. In the age of increase autoimmune disorders, allergies, and autism (one of my kids has this) the last thing we should be doing is putting more things into kids bodies. Especially when you consider the fact that the rate of significant impact from Covid on a child's health is a fraction of this kids impacted by autism. Criteria 5 is not backed by any data when you look at kids. They do not today nor through this whole pandemic had significant risk of mortality from covid. This board is the choir preaching to itself. You need to ask yourself how do you change and reflect the diversity of thought that is in your communities on this board. There are serious issues for kids and their health, but covid is not One.

Please do not require mandatory COVID vaccines for our children.
I will have to pull my children from public school. The benefits do not out weight the risks for most relatively healthy children.
I will not risk my children's health and future; Public school is not worth trading that for.
My children have nature immunity now, as well as most of thier classmates.
COVID is no longer deadly for relatively healthy people, the emergency is over.

To whom it may concern,

It concerns us all, as children truly are our future.

As restrictions on masks and covid related restrictions lift in countries, providence, counties.... and states... watching hospitalizations and infection numbers drop... What is the benefit of requiring healthy children with low risk of death and severe illness due to covid a right choice?

I see none for most situations... but that is me. It should be on each families choice to calculate their own child's health risk and decide with their doctor whether or not a covid vaccine is right for them. There is no talk for all the families and children that have already tested positive and recovered.

That should be a healthy talking point of discussion to whether or not you even need a vaccine!

This should not be a decision other than personal choice. Vaccines do not stop infection or spread of the virus.

There is not enough evidence to back mandating this especially since children have been back in school 6 months and everyone is functioning well, despite some shortages and closures due to quarantine precautions...even in a shortage of teachers and substitutes its still working.

Mandating this is an unjust move because there is not clear unbiased studies that show the benefits for or against mandatory covid vaccinations in children.

I will not support this move as I see the world easing restrictions because they see the falling of COVID-19 cases and hospitalizations.

Thank you and I am waiting for the day for Washington to be able to see each other face to face. For the day we can see each others sides and agree on freedom of choice. Whether it's who you want to marry, who you vote for, what you believe in, what sex you identify as and what your COVID-19 vax status is.

We are ALL people seeking to pursue our ☐☐

How can we do that when our jobs are threatened, when our kids are forced to hide under a mask, vaccinated or not? When recommended we can't see friends and family without isolation and negative covid tests?

Please look out for the children and consider the ramifications of masking and mandatory covid vaccinations.

Socially and emotionally not being able to see friends and teachers faces, non native English speakers learning language And children in general learning language and reading. The fear that comes with "wearing a mask" to be safe... this is showing them their air isn't safe, their friends, teachers, family, community isn't safe.

And by in large it is. Covid doesn't kill everyone or half or 90% of the population.... in Washington I believe Covid death rate is .8%...

Why is this even a discussion at such a low rate?

Sincerely Allegra Colebank

Subject: NO to mandatory CoViD vaccine for public schools!

External Email

To whom it may concern,

Please do not make the CoViD vaccine a requirement for public schools in Washington state. A choice for that shot needs to be up to the parents. Further, there is not enough science to back up this requirement. It does not stop one from acquiring the virus. It does not stop one from spreading the virus. There are ZERO long term safety studies.

It would actually be more effective as a board of health to recommend vitamin D, proper nutrition, exercise & rest.

If you vote this CoViD vaccine through as a requirement, you will see a massive uprising & thousands of children will be pulled from the public school system to homeschool. Mark my words.

Thank you,
Valerie Raschko

Thanks for the opportunity to share my thoughts on this issue.

We're a cooperative elementary school with a very high level of interaction between adults and students so we decided, prior to the State vaccine mandate for education staff & volunteers, that we were going to require vaccination of all adults who interacted with our students. We felt this was prudent given that students in our community were not yet eligible for vaccination. Until the State mandated this same requirement, we got pushback from families. However, once the State made the mandate, it made it easier for us as an institution to enforce it.

When the State or OSPI makes a decision on behalf of all schools, it simplifies enforcement and takes the burden off of the institutions themselves.

I recognize that ultimately as a private school we have more flexibility and freedom to choose how we run things, however, again, having State support made it easier for us this year, and I feel it would do the same if a student vaccine mandate is put in place.

Thanks for all the work you're doing to support our staff & kiddos.

To whom it may concern,

As a parent of a high school child, I am writing to inform you that if these unconstitutional vaccine mandates are passed, I will immediately removed my child from public school. I will then spend every moment of my free time reaching out to other parents to help inform them of way we can join together to avoid using the public school system and its agenda. The masks were already too far. This is absolutely despicable.

As we know, the Omicron variant is much lower risk for children than the previous variants, which were also statistically not a high risk for children, requiring a vaccination that was designed for the previous variants, for a group that is very low risk doesn't make any sense.

Further, as we now know from CDC data released in January of 2022, immunity from natural infection is better than protection from the available vaccines. My children, and all of their friends and classmates that we know of, have either been vaccinated or have had covid (often both). To require a vaccine for those with natural immunity is nonsensical: should we require adults who have had Chickenpox or Mumps to also now get a vaccine for those?

Also, per Dr Vinay Prasad (a highly respected hematologist and professor and author), and a recent study from Kaiser Permanente in Oregon, the risk of myocarditis is much higher for young males from the mRNA vaccines than from a Covid infection, - especially the less severe Omicron variant. To require a young male who has already had covid and recovered to take a series of vaccines, which would unnecessarily increase the risk of myocarditis is unscientific.

I do support vaccination for all individuals with significant risk factors (per consultation with their doctors, on an individual basis), but to require it for children, most of whom have by now had covid is nonsense. And by the time the mandate would go into effect, the wave will be over, and all schoolchildren will have been most certainly been exposed.

thank you.

I am a 38 year resident of Kitsap county, wife and mother of two children. I believe it should be optional for this inoculation that is being discussed currently as a covid-19 vaccine.

I have a few questions about the vaccine getting added to the vaccine schedule for children.

Since these injections are EUA, does that mean that there is no liability of manufacturers if there is an adverse reaction?

What is the history of other vaccines that are on the current vaccine schedule prior to them being officially assigned to the current schedule?

As far as trials go, what were the adverse reactions reported?

What are the long term adverse reactions? What is considered long term? Myocarditis? Sterilization of fertility?

Are these risks outweighing benefit?

Children have a survival of 99%, so why put this inside their bodies to stimulate risk?

What happened to optional? Like flu vaccine being optional? The variant will change consistently like flu virus, so the vaccine would change consistently?

The poor kids say 'oh I want the vaccine but my mommy wont let me because she is afraid.' Lets remember they are children. Innocent, impressionable children and as parents we are here to nurish and protect them from harm. Because the survival rate of children from covid is so high, why are we pushing this?

Lets end the coercion. These children just want the fiasco to end! We as their parents are being critical thinkers before choosing to be inoculated because we know you can not UNDO an inoculation.

The following link is virology data on the injections under discussion. I reccomend visiting and reading it thoroughly.

I'm disgusted you all ignored the fact the covid shot doesn't prevent transmission either way, and all the reports to VAERS. All your feedback from the public has been AGAINST experimenting on our kids, yet you still all voted yes. Unbelievable!

How do you sleep at night? There has been no long term studies, no animal trials, and hundreds of thousands of reported, confirmed deaths after taking the shots. And now you want to mandate it on our children?

You are sick, wicked people who will burn in hell for this!

Please allow for me to speak. Thank you

Our children shape our future. The pandemic quarantines and mask mandates have already shown very vividly how they have affected our children. Although necessary in the beginning, it is telling how much the government does not consider or care at this point in the process!

I believe the entire mandate agenda caused an insurmountable amount of confusion, chaos and a steady ripple effect that has employees still retiring even after they have received full vaccination. The mental anguish and systemic coercion.

It is unconstitutional. Based on Judge Dave Larson letter to fellow Chief Justice Gonzalez, there is no place in our government for our leaders, to create laws into effect, emergency or not. They can waive them or suspend them. That is all! The Supreme Court has no legislative or executive authority to pass vaccine mandates. Likewise, my choice to follow a very effective naturopathic lifestyle creates the need for me to never have a prescription from the money driven pharmaceuticals that have been married to government since the Flexnor report. On the contrary, I seek what Asian (Qi), Indian (Ayurveda), and First Nation (Wisdom keepers) people have perfected over centuries of time. Let's go back in time and have a history lesson. In 1910, Rockefeller paid a host of people to produce this book. But mainly, he so divisively used Andrew Carnegie's popular influence to market. It shut down many apothecaries, indigenous clinics, which resulted in many proprietary formulas and plant medicines to be entirely forgotten about. These were very tried and true practices and modalities, deeply rooted in the sacred tribes. All in the name of petro-chemicals. Which, moreover, was the cause of the first plastic, which we are now back pedaling to remove out of society.

For me, personally, and the legacy that I will leave, there is absolutely no reason to bring home steroids, statins, antibiotics, chemotherapy, what not. They are all going against our natural biorhythm and should only be used in a hospital level need. There is a time and place for synthetic chemicals. But not in prevention and optimum maintenance of health.

PLEASE STAND UP FOR THE CARE TAKERS OF THIS WORLD. KEEP IT SACRED AND TEACH OUR CHILDREN THIS AWARENESS FOR THEIR BRIGHT FUTURE.

It is no longer useful to compare vaccinated versus unvaccinated children, but what seems to matter most is WHEN was the vaccine (or natural immunity) administered. Since both the vaccine and natural immunity seem to wane over time. Example: children who have been vaccinated in November/December 2021, might have less protection/immunity against Covid come the Fall of 2022 versus an unvaccinated child who acquired natural immunity through infection a month before school began.

Thanks,

Mirel.

External Email

Dear Mr. Ford, the Administration of St. Patrick's, the Seattle Archdiocese, and the WA State Board of Health,

I am writing today on behalf of my student, as well as several concerned St. Patrick's families who have reached out to me directly after the St. Patrick's parents group was turned off because of polite discussion about the ongoing mask requirement at school. I am imploring you to stand up for our children's health and well-being and take a stand against the mask mandates. The Seattle Archdiocese represents a well-respected number of facilities, students, and families across Western Washington. You have the ability to show the residents of Washington State that you are an organization that puts their student's safety first, not politics, like the Baltimore Archdiocese is doing

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.baltimoresun.com%2Feducation/md-school-masking-20220211-20220211-w62eycynu5fybgztpujemsuwga-story.html%3Ffbclid%3DIwAR1xe8ncPOmITYxyAOfAkx7IDyI7ycxmek4TocY5sUR2ia9XBBVvkKTY8u4&data=>>

!

It is our understanding that the current mask requirements were adopted by the Seattle Archdiocese last fall at the suggestion of the Washington State Board of Health. Since that time, innumerable studies have been published across the world on all aspects COVID-19, from the inherent risk factors & most impacted age cohorts, the efficacy and side-effects of pharmaceutical preventions, early treatment protocols and non-medicinal mitigation strategies such as masking and school shutdowns. Yet with new scientific evidence, there has been no update to the masking protocols and mitigation strategies in schools across our state.

A little about me – no – I’m not a “COVID denier” that many believe those asking for choice in masking are! In fact, our family began watching very closely what was happening in China in December of 2019, when it was just a conspiracy and nothing to worry about. By late-January, I was one of the “crazy people” doing my grocery shopping in an N95 mask and gloves. At that time our 3 children all attended public school, and we made the decision to stop sending the kids to school 2-weeks prior to the official shutdown. And who doesn’t remember wiping down groceries and mail with sanitizing wipes, or simply leaving things outside for days before allowing them into our houses! We chuckle about all of that now, but it important to reflect on. Why did we do all of that?

Simply put, in March of 2020, there was quite literally nothing known about this new illness everyone was calling COVID-19. Was it transmitted by touch, airborne droplets like the flu, or truly aerosolized? Could it survive on surfaces? Who were the most at risk for hospitalization and death? We knew nothing. So, we took what are now known to be silly, and in some cases drastically damaging, measures. We call them lessons learned. However, what we’ve learned is not being put in to practice through policy change. Instead, we are continuing with measures science has proven are causing more harm than good!

We understand now what ages and comorbidities are at the highest risk. We know how to treat COVID at home, and what simple, proactive steps everyone can take to prevent serious illness. Doctors know how to treat serious cases in hospital, and what treatments to avoid. Large percentages of people now carry natural immunity, and vaccines are available to those who choose to take them. And, most importantly, we know that our children, thank God, are the absolute lowest risk cohort. Yet those children have unfairly borne the brunt of mandates in the cruelest of ways under the guise of safety.

It is common knowledge that the cloth and surgical masks worn by students do not prevent the transmission of viruses. That is how my son was able to contract COVID while at school! That’s also the very reason there was not a single N95 available to purchase in April 2020! At their largest measurement (0.3 microns), 250 aerosolized COVID viruses can fit inside the average human hair. Now consider those gaping holes in the sides of the student’s surgical and cloth masks as you welcome them to school.

Even the CDC’s own study, and associated infographic, “proving” masking efficacy has an asterisk noting the protection offered by cloth masks was “not statistically significant.” Only N95s prove any amount of statistically significant results. CDC - Mask Effectiveness Indoors

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fmmwr%2Fvolu>

Another CDC resource clearly states that the filtration of masks “Does NOT provided the wearer with a reliable level of protection from inhaling smaller airborne particles and is not considered respiratory protection.” CDC – Masks vs. Respirators

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fniosh%2Fnpptl%508.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7C51f6abfc4b004f33de2a08d9f0aee780%7C11d>

The ACGIH, a non-profit of occupational and environmental health and sciences experts, has compiled the results of much of their research regarding how to protect workers during the COVID pandemic into an infographic for employers. Even when both parties are wearing cloth or surgical masks correctly, the amount of protection offered is only 27 minutes and 60 minutes, respectively. How does that very limited amount of protection justify the mental and emotional consequences of masking students? COVID-19 Worker Safety - Masks

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.acgih.org%2F covid-19-fact-sheet-worker-resp%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7C51f6abfc4b004f33de2a08d9f0aee780%7C11>

It is also for this reason that whenever you purchase surgical masks, you find on all of the packaging warnings that state they are non-medical and/or do not prevent illness. (For example, I clicked on the first link on an Amazon search for "surgical masks" and right in the description it says are non-medical. Amazon Surgical Mask

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fsmile.amazon.com%2FHDFK-Disposable-Protective-Breathable-Non-Woven%2Fdp%2FB088YJCQ7Z%2Fref%3Dsr_1_2_sspa%3Fcrd%3DX903K75VJ277%26keywords%3Dsurg 2-spons%26psc%3D1%26spLa%3DZW5jcnlwdGVkUXVhbGlmaWVyPUEyUUFFNTVISFRGQVBGJmVuY3J5cHRIZ

) It is widely known that masks do not prevent the passage of particles as small as aerosolized viruses.

One of the pre-eminent experts on PPE and industrial exposure in the U.S. is Stephen Petty. He advises large industrial companies on Industrial Hygiene (aka, worker safety) and testifies as a subject matter expert on class-action lawsuits, like that of Monsanto, regarding industrial PPE protocols - such as with dangerous chemicals - when inhaled particulate is life or death every day. In the presentation linked below he covers COVID specifically. While I'm sure you are receiving many messages like mine full of links and references, I cannot urge you enough to take the time to watch this video presentation. In his world where PPE actually needs to protect, masks are not even considered an option, nor is facial hair! Stephen Petty - On PPE and Aerosols

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.youtube.com%2Fwatch%3F>

Included in this next link is over 150 mask studies with conclusions, in part, against the effectiveness of masks due to a variety of variables. I found while doing my own researching that resources providing a lot of information in one place was very helpful. 150+ Comparative Studies and Articles on Masks

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fbrownstone.org%2Farticles%2Fmore-than-150-comparative-studies-and-articles-on-mask-ineffectiveness-and-harms%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7C51f6abfc4b004f33de2a08d9f0aee780%7C11>

Lastly, on the science of whether masks work, I would challenge that after 2-years of continual and aggressive research, study, and retrospective review throughout the world, one should expect to see clear, overwhelming, and consistent data from the scientific community proving without a shadow of a doubt that masks provide a strong level of protection. That data simply doesn't exist.

Here's where common sense can help to fill in the blanks. Masking in schools is not widespread across the country. Only 15 states have previously had mandatory masking in schools, though that number is reducing by the day. IF masking students really is the lynchpin that has kept our state's elderly and high-risk population safe and we simply cannot do without it, how is it there isn't overwhelming hospitalization and death of the elderly and high-risk in the 35 states who didn't mask students?

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nationalreview.com%2F2022%2F02%2Feducational-consequences-of-masking-children%2F%3Ffbclid%3DIwAR0E9-jL4yoUssHhJesfGpD1rYOWYams2Pfs93XuEoBE-HrZrKWpfyVjWS0&data=04%7C01%7CWsBOH%40sBOH.WA.GOV%7C51f6abfc4b004f33de2a08d9f0aee78>

And what about the students who are not okay, and who are blending in and disappearing into a sea of masks? What about the children who have anxiety? What about the students who are embarrassed to ask for help, or feel left out? Without seeing the emotions on their faces, how can we be sure they aren't slipping through the cracks? The data says they are. JAMA Pediatrics – Mental Health & Wellbeing

We have also taken our most innocent and easily influenced segment of the population, and over the last two years taught them that they should fear the air around them. They should fear their own breath. If they take their mask off, they could be responsible for infecting someone who dies. Or that their good friends or classmates could get them sick. Instead, they must keep their face hidden, not speak during lunchtime, and don't get too close to one another because that's just too risky and unsafe. This is not okay!

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fbariweiss.substack.com%2Fp%2Fa-public-school-teacher-the-kids&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7C51f6abfc4b004f33de2a08d9f0aee780%7C11d0e2

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.tabletmag.com%2Fsections%2Fmasked-schoolchildren%3Ffbclid%3DIwAR00OBNXMp3yJRFUQyreoce8AXfbqTOiJU8tU3qheAUGJSAoSKNP8iJ4sW8&d>

Though we are a new family to St. Pats, my father & his family all matriculated through parochial school, so many of the teachings we are seeing resonate deeply in my heart, including the fostering of strong community bonds. But that community collapses without

smiles in the hallways, with parents unable to meet and know one another at events, without the hugs over a scraped knee on the playground, without the sarcastic smirks of middle school, and without the ability see someone's frown and help to make them smile.
The Strength of Weak Ties

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cse.wustl.edu%2F~m.neuma>

The residents of this state, and specifically the parents of school age students, have been understanding of restrictions, and, more recently, patient in waiting for policies to be adjusted in response to the data. But as the data continues to build against mask mandates with no changes to policy, we are asking you to push back on behalf of the health and education of our children.

We teach our kids to follow their morals, to do what's right even when it's hard, and to respectfully disagree when necessary. Now is the time for the school administration, and the leadership at the Seattle Archdiocese, to recognize that our children need us to stand up for them. It's time to respectfully disagree and stand up for what is right on behalf of the students in your care.

We are asking you to do better for our children.

We are asking you to do better for our communities.

We are asking you to do better.

Thank you for your time and thoughtful consideration,

Dani Kessler, 253-459-2449

P.S. And please – take the time to watch the Stephen Petty video on PPE linked above. It's worth all 26 minutes.

Dear Mr. Ford, the Administration of St. Patrick's, the Seattle Archdiocese, and the WA State Board of Health,

I am writing today on behalf of my student, as well as several concerned St. Patrick's families who have reached out to me directly after the St. Patrick's parents group was turned off because of polite discussion about the ongoing mask requirement at school. I am imploring you to stand up for our children's health and well-being and take a stand against the mask mandates. The Seattle Archdiocese represents a well-respected number of facilities, students, and families across Western Washington. You have the ability to show the residents of Washington State that you are an organization that puts their student's safety first, not politics, like the [Baltimore Archdiocese is doing!](#)

It is our understanding that the current mask requirements were adopted by the Seattle Archdiocese last fall at the suggestion of the Washington State Board of Health. Since that time, innumerable studies have been published across the world on all aspects COVID-19, from the inherent risk factors & most impacted age cohorts, the efficacy and side-effects of pharmaceutical preventions, early treatment protocols and non-medicinal mitigation strategies such as masking and school shutdowns. Yet with new scientific evidence, there has been no update to the masking protocols and mitigation strategies in schools across our state.

A little about me – no – I'm not a "COVID denier" that many believe those asking for choice in masking are! In fact, our family began watching very closely what was happening in China in December of 2019, when it was just a conspiracy and nothing to worry about. By late-January, I was one of the "crazy people" doing my grocery shopping in an N95 mask and gloves. At that time our 3 children all attended public school, and we made the decision to stop sending the kids to school 2-weeks prior to the official shut-down. And who doesn't remember wiping down groceries and mail with sanitizing wipes, or simply leaving things outside for days before allowing them into our houses! We chuckle about all of that now, but it important to reflect on. Why did we do all of that?

Simply put, in March of 2020, there was quite literally nothing known about this new illness everyone was calling COVID-19. Was it transmitted by touch, airborne droplets like the flu, or truly aerosolized? Could it survive on surfaces? Who were the most at risk for hospitalization and death? We knew nothing. So, we took what are now known to be silly, and in some cases drastically damaging, measures. We call them lessons learned. However, what we've learned is not being put in to practice through policy change. Instead, we are continuing with measures science has proven are causing more harm than good!

We understand now what ages and comorbidities are at the highest risk. We know how to treat COVID at home, and what simple, proactive steps everyone can take to prevent serious illness. Doctors know how to treat serious cases in hospital, and what treatments to avoid. Large percentages of people now carry natural immunity, and vaccines are available to those who choose to take them. And, most importantly, we know that our children, thank God, are the absolute lowest risk cohort. Yet those children have unfairly borne the brunt of mandates in the cruelest of ways under the guise of safety.

It is common knowledge that the cloth and surgical masks worn by students do not prevent the transmission of viruses. That is how my son was able to contract COVID while at school! That's also the very reason there was not a single N95 available to purchase in April 2020! At their largest measurement (0.3 microns), 250 aerosolized COVID viruses can fit inside the average human hair. Now consider those gaping holes in the sides of the student's surgical and cloth masks as you welcome them to school.

Even the CDC's own study, and associated infographic, "proving" masking efficacy has an asterisk noting the protection offered by cloth masks was "not statistically significant." Only N95s prove any amount of statistically significant results. [CDC - Mask Effectiveness Indoors](#)

Another CDC resource clearly states that the filtration of masks “Does NOT provided the wearer with a reliable level of protection from inhaling smaller airborne particles and is not considered respiratory protection.” [CDC – Masks vs. Respirators](#)

The ACGIH, a non-profit of occupational and environmental health and sciences experts, has compiled the results of much of their research regarding how to protect workers during the COVID pandemic into an infographic for employers. Even when both parties are wearing cloth or surgical masks *correctly*, the amount of protection offered is only 27 minutes and 60 minutes, respectively. How does that very limited amount of protection justify the mental and emotional consequences of masking students? [COVID-19 Worker Safety - Masks](#)

It is also for this reason that whenever you purchase surgical masks, you find on all of the packaging warnings that state they are non-medical and/or do not prevent illness. (For example, I clicked on the first link on an Amazon search for “surgical masks” and right in the description it says are non-medical. [Amazon Surgical Mask](#)) It is widely known that masks do not prevent the passage of particles as small as aerosolized viruses.

One of the pre-eminent experts on PPE and industrial exposure in the U.S. is Stephen Petty. He advises large industrial companies on Industrial Hygiene (aka, worker safety) and testifies as a subject matter expert on class-action lawsuits, like that of Monsanto, regarding industrial PPE protocols - such as with dangerous chemicals – when inhaled particulate is life or death every day. In the presentation linked below he covers COVID specifically. While I’m sure you are receiving many messages like mine full of links and references, I cannot urge you enough to take the time to watch this video presentation. In his world where PPE actually needs to protect, masks are not even considered an option, nor is facial hair! [Stephen Petty - On PPE and Aerosols](#)

Included in this next link is over 150 mask studies with conclusions, in part, against the effectiveness of masks due to a variety of variables. I found while doing my own researching that resources providing a lot of information in one place was very helpful. [150+ Comparative Studies and Articles on Masks](#)

Lastly, on the science of whether masks work, I would challenge that after 2-years of continual and aggressive research, study, and retrospective review throughout the world, one should expect to see clear, overwhelming, and consistent data from the scientific community proving without a shadow of a doubt that masks provide a strong level of protection. That data simply doesn’t exist.

Here’s where common sense can help to fill in the blanks. Masking in schools is not widespread across the country. Only 15 states have previously had mandatory masking in schools, though that number is reducing by the day. IF masking students really is the lynchpin that has kept our state’s elderly and high-risk population safe and we simply cannot do without it, how is it there isn’t overwhelming hospitalization and death of the elderly and high-risk in the 35 states who didn’t mask students?

All masking science aside, in my opinion the most important topic to consider is the how masking and *the subsequent enforcement of masking* is having on our children. There is a steady outpouring of data showing negative consequences for our children, from faltering to outright failing test scores, startlingly high rates of referral to speech therapy in young learners, massive increases in anxiety, self-harm and depression among adolescents and teens, and a basic lack of excitement and connection to school communities. [The Educational Consequences of Masking Children](#)

However, I don’t think that linking study after study is needed to make this point. You are professional educators, and you know children! You know how they learn, and how they grow. You know how they respond to a smile. You know how they watch a teacher’s mouth move when they are reading aloud, or when hearing a new word. You know how children instinctively see another child’s frown and respond with kindness. Or how they see another child’s smile and return it with a smile of their own. Or how children see someone react poorly to an unkind word

they said, so they apologize, realizing the impact of their words on others. Without seeing that frown, they cannot know that impact. These little connections and the learning of social queues are truly the work of childhood, and that has been taken from them. Think back to your favorite teacher as a child – then imagine not knowing what that teacher looks like without a mask on!

And what about the students who are not okay, and who are blending in and disappearing into a sea of masks? What about the children who have anxiety? What about the students who are embarrassed to ask for help, or feel left out? Without seeing the emotions on their faces, how can we be sure they aren't slipping through the cracks? The data says they are. [JAMA Pediatrics – Mental Health & Wellbeing](#)

We have also taken our most innocent and easily influenced segment of the population, and over the last two years taught them that they should fear the air around them. They should fear their own breath. If they take their mask off, they could be responsible for infecting someone who dies. Or that their good friends or classmates could get them sick. Instead, they must keep their face hidden, not speak during lunchtime, and don't get too close to one another because that's just too risky and unsafe. This is not okay!

[I'm a Public School Teacher. The Kids Aren't Alright.](#)

[Masked Schoolchildren](#)

Though we are a new family to St. Pats, my father & his family all matriculated through parochial school, so many of the teachings we are seeing resonate deeply in my heart, including the fostering of strong community bonds. But that community collapses without smiles in the hallways, with parents unable to meet and know one another at events, without the hugs over a scraped knee on the playground, without the sarcastic smirks of middle school, and without the ability see someone's frown and help to make them smile. [The Strength of Weak Ties](#)

The residents of this state, and specifically the parents of school age students, have been understanding of restrictions, and, more recently, patient in waiting for policies to be adjusted in response to the data. But as the data continues to build against mask mandates with no changes to policy, we are asking you to push back on behalf of the health and education of our children.

We teach our kids to follow their morals, to do what's right even when it's hard, and to respectfully disagree when necessary. Now is the time for the school administration, and the leadership at the Seattle Archdiocese, to recognize that our children need us to stand up for them. It's time to respectfully disagree and stand up for what is right on behalf of the students in your care.

We are asking you to do better for our children.

We are asking you to do better for our communities.

We are asking you to do better.

Thank you for your time and thoughtful consideration,
Dani Kessler, 253-459-2449

P.S. And please – take the time to watch the Stephen Petty video on PPE linked above. It's worth all 26 minutes.

Subject: WASHINGTON STATE BOARD OF HEALTH TAG MEETING FEBRUARY 10, 2022
REVIEW OF VACCINES FOR COVID

External Email

Washington State Board of Health and TAG Group -

Upon review of the material and TVW broadcast provided, I find information considerably incomplete. When reviewing the studies no mention referenced on the deaths for children as to whether co-morbidities existed in the numbers provided or not. You also failed to cite the fact that 98% of cases of the virus also live - THEY LIVE in Washington State. You only focus on deaths and death numbers - both figures of deaths and covid survivors are a part of the 100% and that information should be included. Not to be insensitive to those who have died or gone through the illness but the number of people who now have natural immunity and lived is crucial to any review calling for an expensive and invasive vaccine. That's the most important number - since hospitals carry so much liability and the Covid funds provide for hospitalization - not even the number of hospitalizations is the true way to view vaccinations but rather whether we are in an Epidemic Emergency Situation any more at all. We are not.

Furthermore, no differentiation for natural immunity which follows the course of initial virus into more contagious yet less lethal variants was reviewed either - all was credited to vaccinations when both are happening at the same time and you provided only vaccinations patterns concluding vaccinations as the only factor - this is not a comprehensive review of science. Immunity also occurs in the cycles from variant to variant. Crediting the vaccinations is also misleading - they are not VACCINATED since they are still getting Covid which continues to build cases too into the data and not properly broken out. This Coronavirus is in the same family of virus as the common cold vs Polio and others that are only transmissible human-to-human only and yet your review did not cite or refer to comparison of viruses and the difference of classes nor the fact Covid is part of this common cold family we will need to live with now - don't you think it is of worthy mention - it is relevant and germane to any recommendation you are considering. We the people do. We don't want JUST choice, we want all the information to be reviewed and verified before ANY policy is made.

You also gave NO REVIEW of Early treatments - policy cannot be made with regard to vaccinations of ANY kind adult or children to be complete until all considerations are covered. Period. Furthermore, the review by the actual practicing physicians is what PEER REVIEW means for any drug, vaccine or treatment - below please see several links to congressional testimony by Dr. Ryan Cole, Mayo Clinic Physician, Dr. Kory, Dr. Fareed, Dr. McCullough, and Dr. Risch who are frontrunners both by Ivy League Education (such as Harvard and Yale) and their expertise including virology, years of practice even with off label uses of approved medications, published findings (which out published the only Health Official Physician that was paid by grants to do studies of which he had done none on early treatment - EMBARRASSING for him!) but have much to add to this presentation for consideration. These very Physicians forecast the run of the virus we just went through from last November - that apparently many including Washington State - ground zero for the virus - ignored and many have suffered because of no options for early, out-patient treatment - that means you have incurred a liability against the people of this state - this is where it started and all considerations should have been and still should. be allowed, especially by battled-tested physicians who save lives daily.

Dr. Cole - <https://www.youtube.com/watch?v=9K73ZnbOeQI&authuser=0>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.youtube.com%2Fwatch%3F>

Dr. Kory - <https://www.c-span.org/video/?c4930160/user-clip-dr-pierre-kory-senate-hearing-ivermectin-100-cure-covid-19>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.c-span.org%2Fvideo%2F%3Fc4930160%2Fuser-clip-dr-pierre-kory-senate-hearing-ivermectin-100-cure-covid-19&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C991639fa5f154f7a5e1508d9f02902ca%7C11d0e21726>

Dr. Fareed, Risch, & McCullough - <https://www.c-span.org/video/?c4930160/user-clip-dr-pierre-kory-senate-hearing-ivermectin-100-cure-covid-19>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.c-span.org%2Fvideo%2F%3Fc4930160%2Fuser-clip-dr-pierre-kory-senate-hearing-ivermectin-100-cure-covid-19&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C991639fa5f154f7a5e1508d9f02902ca%7C11d0e21726>

Also - please review JAMA information highlighted in recent news clips as follows but also missing from your TAG Review that released a study on adults with natural immunity lasts at least 20 months - children have even better immune systems and you also provided no study for that - here are several news articles in case you missed them plus the JAMA article itself:

<https://video.foxnews.com/v/6295325197001#sp=show-clips>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fvideo.foxnews.com%2Fv%2F6295325197001#sp=show-clips&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C991639fa5f154f7a5e1508d9f02902ca%7C11d0e21726>

<https://video.foxnews.com/v/6173848311001#sp=show-clips>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fvideo.foxnews.com%2Fv%2F6173848311001#sp=show-clips&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C991639fa5f154f7a5e1508d9f02902ca%7C11d0e21726>

And Finally an extensive article citing a multitude of studies on masks and why they should be taken off of our children immediately including the impact on the environment

- <https://brownstone.org/articles/why-mask-mandates-should-be-immediately-banned/>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fbrownstone.org%2Farticles%2Fwhy-mask-mandates-should-be-immediately-banned%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C991639fa5f154f7a5e1508d9f02902ca%7C11d0e21726>

Here's what Washingtonians State Board of Health should be doing instead of moving forward on unnecessary vaccines for our kids or anyone any further - many countries have stopped vaccinating and many more are looking at early treatments such as Prades, India leading the way, not to mention, states in America who are recovered, mask free, jab optional and early treatments including monoclonal treatments are and always will be more effective with this class of viruses. This group and the State Board of

Health has not only let Washingtonians down - they have done more harm than good according to the data from around the world and the U.S. and citizens know it.

Here is what Douglas County, COLORADO put out and EXACTLY what you should be doing: <https://www.douglas.co.us/health-department/covid-19/>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.douglas.co.us%2Fhealth-department%2Fcovid-19%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C991639fa5f154f7a5e1508d9f02902ca%7C11d0e2>
- not exactly a conservative state which is telling.

There has been a prolonged reign of fear cast over Washington State that has damaged our health, economy and literally no aspect of this state has gone unaffected. Simple graphs such as was produced with an oversimplified focus on vaccinated vs unvaccinated does not paint the whole picture -we deserve only the WHOLE TRUTH, and NOTHING BUT THE TRUTH.

Please review and follow-up on the information provided - and call for hearings and studies on Early Treatment - Health Officials are not the physicians referred to as PEER Review Physicians from the field and should listen to the Physicians that are as a part of the information regarding our - OUR HEALTH. We object to any forcible government edict to vaccinate when other options are available and battle tested by the very best physicians this country has put out.

Kindly but pointedly,

--

We have also taken our most innocent and easily influenced segment of the population, and over the last two years taught them that they should fear the air around them. They should fear their own breath. If they take their mask off, they could be responsible for infecting someone who dies. Or that their good friends or classmates could get them sick. Instead, they must keep their face hidden, not speak during lunchtime, and don't get too close to one another because that's just too risky and unsafe. This is not okay!

I'm a Public School Teacher. The Kids Aren't Alright.

Though we are a new family to St. Pats, my father & his family all matriculated through parochial school, so many of the teachings we are seeing resonate deeply in my heart, including the fostering of strong community bonds. But that community collapses without

smiles in the hallways, with parents unable to meet and know one another at events, without the hugs over a scraped knee on the playground, without the sarcastic smirks of middle school, and without the ability see someone's frown and help to make them smile.
The Strength of Weak Ties

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cse.wustl.edu%2F~m.neuma>

The residents of this state, and specifically the parents of school age students, have been understanding of restrictions, and, more recently, patient in waiting for policies to be adjusted in response to the data. But as the data continues to build against mask mandates with no changes to policy, we are asking you to push back on behalf of the health and education of our children.

We teach our kids to follow their morals, to do what's right even when it's hard, and to respectfully disagree when necessary. Now is the time for the school administration, and the leadership at the Seattle Archdiocese, to recognize that our children need us to stand up for them. It's time to respectfully disagree and stand up for what is right on behalf of the students in your care.

We are asking you to do better for our children.

We are asking you to do better for our communities.

We are asking you to do better.

Thank you for your time and thoughtful consideration,

Dani Kessler, 253-459-2449

P.S. And please – take the time to watch the Stephen Petty video on PPE linked above. It's worth all 26 minutes.

Dear Mr. Ford, the Administration of St. Patrick's, the Seattle Archdiocese, and the WA State Board of Health,

I am writing today on behalf of my student, as well as several concerned St. Patrick's families who have reached out to me directly after the St. Patrick's parents group was turned off because of polite discussion about the ongoing mask requirement at school. I am imploring you to stand up for our children's health and well-being and take a stand against the mask mandates. The Seattle Archdiocese represents a well-respected number of facilities, students, and families across Western Washington. You have the ability to show the residents of Washington State that you are an organization that puts their student's safety first, not politics, like the [Baltimore Archdiocese is doing!](#)

It is our understanding that the current mask requirements were adopted by the Seattle Archdiocese last fall at the suggestion of the Washington State Board of Health. Since that time, innumerable studies have been published across the world on all aspects COVID-19, from the inherent risk factors & most impacted age cohorts, the efficacy and side-effects of pharmaceutical preventions, early treatment protocols and non-medicinal mitigation strategies such as masking and school shutdowns. Yet with new scientific evidence, there has been no update to the masking protocols and mitigation strategies in schools across our state.

A little about me – no – I'm not a "COVID denier" that many believe those asking for choice in masking are! In fact, our family began watching very closely what was happening in China in December of 2019, when it was just a conspiracy and nothing to worry about. By late-January, I was one of the "crazy people" doing my grocery shopping in an N95 mask and gloves. At that time our 3 children all attended public school, and we made the decision to stop sending the kids to school 2-weeks prior to the official shut-down. And who doesn't remember wiping down groceries and mail with sanitizing wipes, or simply leaving things outside for days before allowing them into our houses! We chuckle about all of that now, but it important to reflect on. Why did we do all of that?

Simply put, in March of 2020, there was quite literally nothing known about this new illness everyone was calling COVID-19. Was it transmitted by touch, airborne droplets like the flu, or truly aerosolized? Could it survive on surfaces? Who were the most at risk for hospitalization and death? We knew nothing. So, we took what are now known to be silly, and in some cases drastically damaging, measures. We call them lessons learned. However, what we've learned is not being put in to practice through policy change. Instead, we are continuing with measures science has proven are causing more harm than good!

We understand now what ages and comorbidities are at the highest risk. We know how to treat COVID at home, and what simple, proactive steps everyone can take to prevent serious illness. Doctors know how to treat serious cases in hospital, and what treatments to avoid. Large percentages of people now carry natural immunity, and vaccines are available to those who choose to take them. And, most importantly, we know that our children, thank God, are the absolute lowest risk cohort. Yet those children have unfairly borne the brunt of mandates in the cruelest of ways under the guise of safety.

It is common knowledge that the cloth and surgical masks worn by students do not prevent the transmission of viruses. That is how my son was able to contract COVID while at school! That's also the very reason there was not a single N95 available to purchase in April 2020! At their largest measurement (0.3 microns), 250 aerosolized COVID viruses can fit inside the average human hair. Now consider those gaping holes in the sides of the student's surgical and cloth masks as you welcome them to school.

Even the CDC's own study, and associated infographic, "proving" masking efficacy has an asterisk noting the protection offered by cloth masks was "not statistically significant." Only N95s prove any amount of statistically significant results. [CDC - Mask Effectiveness Indoors](#)

Another CDC resource clearly states that the filtration of masks “Does NOT provided the wearer with a reliable level of protection from inhaling smaller airborne particles and is not considered respiratory protection.” [CDC – Masks vs. Respirators](#)

The ACGIH, a non-profit of occupational and environmental health and sciences experts, has compiled the results of much of their research regarding how to protect workers during the COVID pandemic into an infographic for employers. Even when both parties are wearing cloth or surgical masks *correctly*, the amount of protection offered is only 27 minutes and 60 minutes, respectively. How does that very limited amount of protection justify the mental and emotional consequences of masking students? [COVID-19 Worker Safety - Masks](#)

It is also for this reason that whenever you purchase surgical masks, you find on all of the packaging warnings that state they are non-medical and/or do not prevent illness. (For example, I clicked on the first link on an Amazon search for “surgical masks” and right in the description it says are non-medical. [Amazon Surgical Mask](#)) It is widely known that masks do not prevent the passage of particles as small as aerosolized viruses.

One of the pre-eminent experts on PPE and industrial exposure in the U.S. is Stephen Petty. He advises large industrial companies on Industrial Hygiene (aka, worker safety) and testifies as a subject matter expert on class-action lawsuits, like that of Monsanto, regarding industrial PPE protocols - such as with dangerous chemicals – when inhaled particulate is life or death every day. In the presentation linked below he covers COVID specifically. While I’m sure you are receiving many messages like mine full of links and references, I cannot urge you enough to take the time to watch this video presentation. In his world where PPE actually needs to protect, masks are not even considered an option, nor is facial hair! [Stephen Petty - On PPE and Aerosols](#)

Included in this next link is over 150 mask studies with conclusions, in part, against the effectiveness of masks due to a variety of variables. I found while doing my own researching that resources providing a lot of information in one place was very helpful. [150+ Comparative Studies and Articles on Masks](#)

Lastly, on the science of whether masks work, I would challenge that after 2-years of continual and aggressive research, study, and retrospective review throughout the world, one should expect to see clear, overwhelming, and consistent data from the scientific community proving without a shadow of a doubt that masks provide a strong level of protection. That data simply doesn’t exist.

Here’s where common sense can help to fill in the blanks. Masking in schools is not widespread across the country. Only 15 states have previously had mandatory masking in schools, though that number is reducing by the day. IF masking students really is the lynchpin that has kept our state’s elderly and high-risk population safe and we simply cannot do without it, how is it there isn’t overwhelming hospitalization and death of the elderly and high-risk in the 35 states who didn’t mask students?

All masking science aside, in my opinion the most important topic to consider is the how masking and *the subsequent enforcement of masking* is having on our children. There is a steady outpouring of data showing negative consequences for our children, from faltering to outright failing test scores, startlingly high rates of referral to speech therapy in young learners, massive increases in anxiety, self-harm and depression among adolescents and teens, and a basic lack of excitement and connection to school communities. [The Educational Consequences of Masking Children](#)

However, I don’t think that linking study after study is needed to make this point. You are professional educators, and you know children! You know how they learn, and how they grow. You know how they respond to a smile. You know how they watch a teacher’s mouth move when they are reading aloud, or when hearing a new word. You know how children instinctively see another child’s frown and respond with kindness. Or how they see another child’s smile and return it with a smile of their own. Or how children see someone react poorly to an unkind word

they said, so they apologize, realizing the impact of their words on others. Without seeing that frown, they cannot know that impact. These little connections and the learning of social queues are truly the work of childhood, and that has been taken from them. Think back to your favorite teacher as a child – then imagine not knowing what that teacher looks like without a mask on!

And what about the students who are not okay, and who are blending in and disappearing into a sea of masks? What about the children who have anxiety? What about the students who are embarrassed to ask for help, or feel left out? Without seeing the emotions on their faces, how can we be sure they aren't slipping through the cracks? The data says they are. [JAMA Pediatrics – Mental Health & Wellbeing](#)

We have also taken our most innocent and easily influenced segment of the population, and over the last two years taught them that they should fear the air around them. They should fear their own breath. If they take their mask off, they could be responsible for infecting someone who dies. Or that their good friends or classmates could get them sick. Instead, they must keep their face hidden, not speak during lunchtime, and don't get too close to one another because that's just too risky and unsafe. This is not okay!

[I'm a Public School Teacher. The Kids Aren't Alright.](#)

[Masked Schoolchildren](#)

Subject: Survey Response: Testify Online *

The following survey response is submitted:

1.

State Board of Health Meeting Date:

Feb 17th

2.

Agenda Item or Issue:

Mandatory shots for children

3.

Your Name:

Adam ritting

4.

Do you have a professional title?

2. No

5.

Are you representing an organization?

2. No

6.

Address:

1620 s. 25th st. Tacoma wa 98405

7.

Email:

Skyghost@earthlink.net

8.

Phone Number (Include Area Code):

2533760059

9.

Do you have any special expertise relevant to this topic?

1. Yes

Common sense.

10.

Are you testifying on a specific proposal under consideration by the board?

1. Yes

The introduction of these "vaccines" as they are so named, are not by definition a "vaccine." As you are probably aware, the definition of "vaccine" as is referenced just a short time ago is now being changed. Why? Because the process used to validate through proper time frames any detrimental long term effects are not being used. The process and formulations are not like anything in structure to what a "vaccine" is or includes processes formally accepted as scientific method. To test this on developing human beings is an abomination and a travesty for which I and an increasing number of other parents are vehemently against.

11.

Are you Pro or Con on the proposal?

2. Con

Read statement above.

Greetings...

Issaquah, Bellevue, Lake WA School Districts, OSPI, WA State Education, WSBOH, and King County Commissioner.

You're behind the (global) ball with your cherry-picked science and Covid-19 decision making, namely around mask mandates. In recent news...

- * Kettle Falls School District (Washington State) moves to make masks optional effective immediately.
- * Washington State and Hawaii remain the only states requiring mask mandates for school aged children. In more recent news, D.C., Oregon, California, New Mexico, Illinois, Connecticut and New Jersey have drawn a line in the sand to protect our children.
- * Entire countries have revoked all Covid-19 restrictions including Sweden, Norway, Denmark, Switzerland – to name a few.

Single handedly you've lost the confidence of parents across Washington State in standing up for the health and safety of our children. We understand now, more than ever, your motivation to play into political theatre than truly following the science. We understand our children's health and safety is not your top priority when, again, using cherry-picked science to make critical decision.

Rest assured, what you have done is created mama and papa bear WARRIORS! We've never been more involved in our school districts, in our education system(s), our board of health and more. We're well-educated leaders, we're organized and we will see this change in Washington State – just like in Kettle Falls. What's more is we're teaching our children. They're going to be the next generation of patriots with a keen understanding of our God-given rights, Common Law, the U.S. Constitution and our Washington State Constitution.

Please, stand with us and remove mask mandates effective today.

Peacefully and respectfully,

Melissa

LWSD parent of 2, currently visiting another state where their BOH is on the right side of history

Subject: SuperBowl & The Big Game

Greetings...

Issaquah, Bellevue, Lake WA School Districts, OSPI, WA State Education, WSBOH, and King County Commissioner.

That sure was quite the Half Time SuperBowl Show, wasn't it? As 70k mask-less fans adorned the stadium in CA for the 'big game', it sure brought attention to millions sitting at home watching that we have been played. We've been played by our State Schools and Government.

We are no longer asking. We are demanding that immediately mask mandates be rescinded from our schools and release our children from these harmful practices.

Thank you kindly,

Tanya Goodman

Protective and Loving Mother

The vaccine does NOT prevent transmission. What is the point if it does not prevent transmission? There is no point. Recent study out of Japan shows that c19 can easily be treated by over the counter means. Beside children are not at All at risk of C19. To impose a vaccine causes little to no danger to children would be outrageous and Criminal.

The vaccines posses a greater threat to childrens well being. From myocarditis to cancer fertility issue to death. Leaked department of defence Medical finding show an increase in of heart attack, cancer by 300% HIV 500% neurological issues 1000% among the Vaccinated. All this can be found on defence attorney's web site renz-law.com. it's time to end this madness.

Thank you for doing what's right.

I OPPOSE the use of illegal force to detain ANY family OR children. This is insane!! Have we not learned about the holocaust and internment camps? What you are trying to pass is illegal and unconstitutional! There are thousands of us trying to leave comments on this matter and we will continue. I will be on every zoom or meeting you have throughout this charade! I will comment every time because this is against Washington Constitution!!

There are studies that show this type of agenda does not reduce transmission whatsoever. I would love to hear your thoughts on the vaccinated still being able to get Covid and spread it. According to even more studies this plandemic didn't get out of hand until the experimental shots were starting to be administered.

Forced mandates opposes our rights as free Americans- it also disrupts an active healthy immune response. Many studies now conclude that the highest vaccinated areas are highest for deaths and risky health concerns. Freedom of choice should never be infringed upon.

THE PEOPLE HAVE SPOKEN AND WE THE PEOPLE SAY NO!

WE THE PEOPLE SAY NO!

Just in case you forgot, WE the PEOPLE saw the WAC 246-100-040 on the agenda you tried to hide.

Subject: Medical Exemption Censorship / Medical Coercion in Washington State

External Email

Doctors and medical providers in Washington State are not providing medical exemptions due to the fear that they will lose their professional licenses; this is leading to medical coercion in Washington State.

In the past year, my children have been forced to wear a mask despite their having developed speech impediments; they would be required to wear a mask even while in Speech Therapy, as would their Speech Therapist with the only option being to do mask-free therapy over Zoom, which is less effective. I cannot get a medical provider to make an exemption to the mask rule for this, although if my child and a Speech Therapist were at a restaurant, they could eat across from each other or side by side at a table mask-free. Because of the fear of medical license suspension, my children have to receive a medical intervention with a mask on, which negates the benefit from this intervention. The barrier for a signed medical exemption from a medical provider is too high, since professional licensing boards may exert pressure on their members not to provide exemptions.

In addition, my son was born with a social/ emotional delay. During his therapy, he was taught to look at faces and make correlations to emotions. This was not an innate skill for him, he had to be taught by a therapist through ages 2-5. At age 9, even though he is no longer in therapy, our family and his school are still working to teach him social/ emotional skills. Despite the clear benefit to him seeing faces, our family's recovery from Covid-19, and the community wide immunity that our state has developed from Covid-19 over the past few years (which has not been clearly documented because King County has refused to collect data on antibody tests), my son, his public-school teacher and his public-school classmates are all forced to wear masks in Washington State.

My daughter also has serious asthma and allergy (anaphylaxis). Wearing a mask poses a risk to her: during the early stages of her anaphylaxis, the only visible sign is flushed cheeks, slight drooling, runny nose and slight swelling of the lips and tongue. If allergy is caught at this stage, it can be well treated by Cetirizine (Zyrtec) or Diphenhydramine HCL (Benadryl). If her allergy is allowed to progress, the anaphylaxis does not turn into a rash: the anaphylaxis progresses to extreme swelling (airway closure), extreme low blood pressure/ hypoxia, or extreme asthma-like symptoms. Without a clear ability to view my daughter's face, her allergic reaction could be missed at the early stage and/ or misdiagnosed and treated with her Albuterol Inhaler rather than an antihistamine. In spite of this medical risk, medical providers are unwilling to provide a mask exemption due to the pressure they are facing from their licensing boards.

It has become clear that medicine has become politicized; medical providers are not at liberty to freely dispense medical exemptions without the threat to their professional licenses.

I am asking the Washington State Board of Health to remove the requirement that medical exemptions for masks and vaccination be signed off by a medical provider / holder of professional license.

As we have witness during the past 2 years in Washington state, medical providers are being censored and coerced into denying medical exemptions, and this is leading to harms to Washington State children.

Sincerely,

Vanessa Erwin

Attention public SERVANTS!

Vote NO on this proposed covid vaccine mandate for our school children. Data is showing people with the vaccine are catching the virus just as easily as those who have not been vaccinated. There is absolutely no justification for forced injections on free citizens, let alone our children who are not in serious danger of this virus. This outrageous government overreach needs to end NOW!! There are protests worldwide right now against these vaccinations and all of these unconstitutional mandates. Vote NO!!!

Thousands of students will be removed from the public school system by their parents acrossed the state if this ridiculous and outrageous overreach is implemented. You should all be ashamed of yourselves! It's time to start listening to the people you work for, WE THE PEOPLE. You have forgotten your place, you are employees, not our dictators. End this outrageous overreach, END THE MANDATES and VOTE NO on covid vaccines for school children!!!

Good Afternoon TAG,

Our children cannot be subject to an experimental vaccine that is still under the EAU. Furthermore, the FDA approved Comirnaty and Spikevax are not even available at this time in the US for any person. It typically takes 15 years for a vaccine to be approved. We don't know the long term effects of this vaccine, let alone the short term. Our kids are not getting sick from covid, let alone dying from it. People who have had it are inoculated, just like any other virus, such as chicken pox. What makes Covid any different other than a catalyst for a means to control and undermine people.

CHILDREN ARE NOT AT RISK! IT'S AN EXPERIMENTAL THERAPEUTIC THAT DOES NOT EVEN CREATE

ThankYou for reading and considering

Hello, I am a mom of 2 girls. And I will NEVER give my girls any Covid vaccine ever. The vaccine is NOT safe and effective. There is 0 percent benefit for my girls if they get these vaccine. Also if the Covid vaccine is mandated for school I will pull my girls out of school and we as a family will move out of the state. I have already decided this last year. We have already had many friends move out of this state because of all the mandates. The masks also have 0 percent benefit for my kids. Masking anyone, mandating vaccine is NOT follow science.
Have a good day.

Subject: Significant concerns re Covid-19 shots for WA school students

External Email

I think it is extremely premature to require Covid-19 shots for WA school students. With Covid barely impacting children on any serious level, why would the State require a shot that is currently an unknown? We don't know what the future impact will be on children with these shots - and to expect parents to comply or pull their children out of public schools over a shot that you have very little data on for a virus that is less of a threat to children than the flu - simply makes no sense.

And whatever accountability the BOH would have if these shots prove to be a risk to children's health, it will be too late for those children/families negatively impacted. Please put a pause on this and review the data over the next couple of years before making what could be a very serious/tragic decision.

Subject: No on vaccine mandate

External Email

It's time that Americans are given their God given right to FREEDOM! Parents have the right to decide what if good for them and their children!

When did America become a socialist country?

Our representatives were not elected to turn their back on citizens and interject their own agenda. Remember you represent the people!

Vaccines have not been proven to stop Covid. Shame on you for putting our children at risk. This will be remembered in history as one of the greatest harm to humanity. This will be on your hands if you pass this horrendous bill forcing parents to vaccinate their children.

I feel you will see a huge decline in public school enrollment as parents will seek alternative education for their children.

What a disgrace!

This shot in no way should be required for children to be in school. It does not meet the requirements to be considered. It does not prevent the spread of the virus and it does not prevent people from spreading it. There is a 99.9 survival rate and children are even less affected from it. My children have already tested positive. My son had a mild sore throat and my daughter had a headache for two days. They have fully recovered and now have natural immunity which is better than any "vaccine". They have been exposed to the entire virus not just a genetically made spike protein. Those who want their children to have this shot have already gotten it for their children. Those who haven't aren't going to get it for their children. Those who have gotten the shot most of them have still gotten Covid, some multiple times. Requiring this shot is only going to result in exemptions or parents withdrawing their kids from public schools. Should this become a requirement I will be pulling my kids. Please do not add this shot to the vaccine requirements for children to be in school and while discussing requirements for children in school consider dropping all mask mandates as they are also not preventing anything and are causing more harm than good.

Subject: Comments for the Immunizations Technical Advisory Group

External Email

Dear Sir or Madam:

Below is the Open Letter I sent to the Washington State Board of Health on January 11 regarding the matter of vaccinating school age children. You will note that there is no approved vaccine available for the 5-15 age group. Passing a law which will force an unproven, unauthorized vaccine upon children, could result in serious legal repercussions at a later date. I sincerely suggest you do not include these experimental vaccines in the group of required vaccines for school age children.

Sincerely,

Raymond C. Andrews, M.D.

Open Letter to the Washington State Board of Health

Dear Sirs:

My name is Raymond Andrews. I retired after 40 years as a physician in the practice of medicine in the US and Italy where I was a founding father of their 911 emergency response system.

After having read the agenda of the Washington State Board of Health public meeting to be held on 12 January, I felt it necessary to comment on the proposed vaccination of school age children with the COVID-19 vaccines.

According to the Immunization Criteria Board Process step 1, the "Advisory Committee on Immunization Practice recommends a fully FDA approved immunization against a specific antigen for the school aged population."

Contrary to what is touted in the main stream media, on August 23, 2021 the COVID-19 vaccines were not approved by the FDA, they were reissued an emergency use authorization (EUA). What the FDA did approve was Comirnaty, the Pfizer-BioNTech COVID-19 vaccine marketed in Europe. This is not available in the US. In a footnote to its decision, it states "Although Comirnaty...is approved to prevent COVID-19 in individuals 16 years of age and older, there is not sufficient approved vaccine available for distribution to this population in its entirety at the time of the reissuance of this EUA. Additionally there are no Covid-19 vaccines that are approved to provide COVID-19 vaccination in individuals 5 through 15 years of age...."

Pfizer et al received their EUAs for the vaccines available in this country after convincing the FDA that no medications were available to treat COVID-19. This, of course, is false.

In addition, approval means they would be financially and legally responsible for any injuries or deaths their vaccines cause, which is not the case if they are issued EUAs.

The WSBOH specifies it will be receiving a briefing on progress from a technical advisory group (TAG), which is convened to consider COVID-19 for inclusion under Chapter 246-105. Since the FDA specifically stated "there are no COVID-19 vaccines that are approved to provide COVID-19 vaccination in individuals 5 through 15 years of age," any input regarding these vaccines for use in school aged children by the TAG is moot.

In addition, the FDA established as a "condition of authorization" that its "Fact Sheet for Recipients and Caregivers" be made available to vaccine recipients. Pfizer's Fact Sheet states: "It is your choice to receive or not receive the Pfizer-BioNTech COVID-19 Vaccine. Should you decide not to receive it, it will not change your standard medical care."

Historical Precedent:

The Doctors' Trial is the unofficial name for the particular Nuremberg Trial held before a U.S. military court for 20 Nazi medical doctors and 3 officials accused of criminal human experimentation and mass murder. The trial began on December 9, 1946, and concluded on August 20, 1947. Seven defendants were acquitted, seven received death sentences, and the remainder served prison sentences from 10 years to life. The Trial led to the Nuremberg Code, a set of ethical standards for research with human subjects, which played a pivotal role in the development of other ethical codes for researchers.

Since the COVID-19 vaccines are experimental and unapproved in the U.S., before making them obligatory, we must carefully and completely understand two of the Nuremberg Code's ten principles:

1. The voluntary consent of the human subject is absolutely essential.

The subject should have legal capacity to give consent; should be able to exercise free choice without the element of force, fraud, deceit, duress, over-reaching or other ulterior form of constraint or coercion; and should have sufficient knowledge and comprehension to enable him to make an understanding and enlightened decision. He must know all inconveniences and hazards reasonably to be expected. The responsibility for ascertaining the quality of the consent rests upon the individual who initiates, directs or engages in the experiment. It may not be delegated to another with impunity.

To my knowledge, informed consent is lacking in the present experimental vaccination scheme, which is itself ineffective since it will not prevent us from getting COVID-19 or from transmitting it to others. This is the antithesis of a true vaccine. We are not vaccinated against Polio so that we can catch the disease and pass it on to others. We are vaccinated to prevent us from catching it. Unfortunately data now shows that the majority of people hospitalized and dying from COVID-19 is far greater among the vaccinated than the unvaccinated.

5. No experiment should be conducted where there is an a priori reason to believe that death or disabling injury will occur; except where the experimental physicians also serve as subjects.

These vaccines cause death or disabling injury. According to the Vaccine Adverse Event Reporting System (VAERS), between 9/20 and 9/21 there were 21,002 deaths directly attributed to these vaccines, and 1,000,229 serious and permanent side-effects. These figures are known to represent only 1-10% of the total deaths and injuries. This means that the total deaths directly attributed to the vaccines is between 200,000 and 2,000,000, and the total number of adverse effects is 10 to 100 million people.

The Players in this Orwellian Drama:

Anthony Fauci. Robert F. Kennedy has detailed his role in this and other misadventures, and I cannot add to his fine work, *The Real Anthony Fauci*, other than to say I don't share Dr. Fauci's exalted opinion of himself.

Bill Gates. A businessman who uncannily predicted when the virus would appear, and decided how often you should take his vaccines. Since he is not a member of the medical profession, he should not be offering opinions on TV about how long this pandemic will last and how many of his boosters we'll need to survive it and the next, but Fauci has allowed this.

Albert Bourla. CEO of Pfizer which was fined \$2.3 billion in 2009 for fraudulent marketing, for causing false claims to be submitted to health care programs, and to resolve allegations that it paid kickbacks to health care providers to induce them to prescribe its drugs.

Although these people presently control the narrative, it is not going well for them across the world:

A filing to the International Criminal Court in The Hague on December 6, accused Anthony Fauci, William Gates III, and 14 others of violations of the Nuremberg Code, including crimes against humanity and war crimes as defined by the Rome Statutes.

In Poland, German lawyer Dr. Reiner Fuellmich, is leading a team of lawyers in the world's largest tort case (Nuremberg 2 Trials) against all protagonists and accomplices in 'The COVID-19 Scandal'.

The Portuguese Judge Fonseca e Castro has denounced the President of the Republic, the Prime Minister and the Government for CRIMES AGAINST HUMANITY.

Mexico's health minister has warned that hindering a child's immune system with a completely inorganic structure such as a vaccine runs counter to public health.

I presume other nations will follow in their condemnation of these people. I would rather not see a Nuremberg 2 Trial in this country, however, based upon charges of violations of human rights and genocide currently being filed in England against those who instigated this crime against humanity, the worst in the history of mankind, down to and including those administering these vaccines (arrest warrants are already circulating), I fear it may happen here in the near future.

Esteemed members of the Board, your duty is to protect our health based upon true science, not faucian science. I am sure you understand the concept *Primum non nocere*, "first do no harm." Forcing unapproved, experimental vaccinations on adults that choose not to accept them, and on children that have no possibility of dying from covid (nor of giving informed consent), violates that rule as well as the first principle of the Nuremberg Code, the Universal Declaration on Bioethics and Human Rights, and other international documents. A tragic example of this abuse is 3-year-old Ámbar Suárez, who just before Christmas, died of heart attack one day after a mandatory COVID-19 injection. Three year-olds do not die from heart attacks, nor should healthy athletes and young males die from myocarditis and heart attacks as they are doing in large numbers, unless we inject them with fraudulent therapies. Can you imagine what Ámbar's grief-stricken family's Christmas was like? Can you imagine what your Christmas would have been like had Ámbar been your child or grandchild?

Please do not make the COVID-19 vaccines mandatory for any age, and lift all the mandates which have served only to cripple us, physically, mentally, and financially. Rather than continuing to lead us into Medieval Darkness, instead be a Beacon of Light in a land that has lost its direction.

This is ridiculous! What we should be focusing on are the benefits of early treatment which are MUCH safer than these Covid shots that have huge side effects and have hurt millions of people!! These shots should NOT even be an option! They are not safe. This bozo, Eric Lofgren is going on and on about how Myocarditis isn't that serious and the majority of children feel better within a few days. NO! Myocarditis causes permanent heart damage. We all know that the PCR Tests are fake, phony, and false! So how can they get a true number of people infected with covid 19?

Let's focus on early treatment instead and take these kill shots off the market NOW!
Save our children!

THANK YOU TO ALL OF YOU FOR YOUR PARTICIPATION ON THE TAG TEAM -

I listened to the 2/10 meeting and appreciated the need for more evidence to be presented. This decision to vx our children is extremely important because they are our future.

Please look at these two resources -

Here is a very insightful interview with data from DOD - a very accurate reporting system. https://x22report.com/aiovg_videos/thomas-renz-the-coverup-phase-has-begun-the-evidence-will-bring-down-big-pharma-fauci
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fx22report.com%2Faiovg_videos%2Fthomas-renz-the-coverup-phase-has-begun-the-evidence-will-bring-down-big-pharma-fauci&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7C2ff9be7a44a7451c2c3808d9ef1864fe%7C11d0e>

Also, here is a graph disproving the misinformation that deaths are due to c19 when in reality deaths are due to vaccines:

I (We) am disgusted with the results of yesterday's "meeting." All of your presenters were biased on the side of vaccine enforcement. You allow and hose ZERO of the opposing side. And, please don't blame it on TAG and say we're just taking their input. Take the public's input, not your selected group's input. Unfortunately, I didn't get to attend the Zoom yesterday but I did get to attend some of the previous. And, EVERY person who called in on that previous Zoom opposed vaccines. Enough is enough already! The true fact is, what nobody in your positions will talk about, is that there is a real and significant danger to vaccines. There ARE adverse reactions. What do you tell the people whose children develop negative, lifelong side effects? Sorry, that's part of the casualty of progress? Stop ignoring this and address it. There's one voice and one opinion that comes from the SBOH. There is no understanding, listening, patience, or care. When you do enforce (or strongly suggest to school districts) vaccine mandates, enrollments are going to drop, guaranteed. Let people make the choice whether or not to vaccinate their own children. Do not force them out of public education! The vaccines have not been able to be time tested to make sure they're long term safe, to see long term effects. I'm not anti-vax. My kids are vaccinated against other things, as am I. However, this has not had time to see the long term. Have a heart, give a shit about an opinion that differs from your own.

I'm sure you won't reply. I know you hate real conversation.

To whom it may concern,

I am writing to share my thoughts on the Covid-19 vaccination being considered 2/10/2022.

This vaccine has not had any published material on the effectiveness of it in a K-12 setting, per your own materials.

The number of deaths from Covid in children is very low. Where suicides rate the 3rd leading cause of death in 15-19 year olds.

This is an experimental shot that is not proving to be effective in stopping or spreading the virus. The new variant is not deadly and is more like the flu, I know, my whole family has had it and those who were vaccinated had more symptoms than those who were not. And natural immunity is better than any vaccination offered.

If you are to pass this and make the Covid 19 vaccine required for public schooling, I will be pulling my children and homeschooling them. We currently are in a public online school due to the restricting and unnecessary mask mandates you have in the public schools.

Thank you for your time. I truly hope you consider my thoughts and think about how many kids will be homeschooled next year.

Subject: Analyzing the data

External Email

Analyze this data: COVID Vaccine Data (openvaers.com)

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fopenvaers.com%2F covid-data&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C79acf78745ed471eb3b708d9ecc79384%7C11d0e21>

It cannot be ignored. What say you? Will you take part in this fraud against innocent children? This is still an investigational medicine with NO long term safety data (the trials will not officially end until May 30, 2023). These vaccines pose more harm to children than the so called virus. Read the studies and you will come to that conclusion as well. Parents should be trusted to make their own medical decisions for their children based on their unique medical history. This one size fits all medical treatment has been a disaster of epic proportions.

1

1/21 In the evil state of Washington, last week, the Board of Health failed to include "Use law enforcement to detain the unvaccinated" and "vaccination mandate in school" in their agenda. But they would not accept their failure. They know there are all kinds of left-wing White, Black, Yellow, Spanish here, so they put out an online survey, in an effort to support their "adding COVID-19 vaccine as a requirement for school entry" proposal.

NO MATTER WHERE YOU ARE, I want you to help me fill this out which can be done in just 1 minute. Your small effort will help me bring debacle to these evil fake health officials' attempt to harm my children. Join us, let your voice be your weapon.

As far as the first question is concerned, just use "Washington School District".

Obviously, he is encouraging 12k people, many of whom are not even living in the US, let alone WA state residents, to flood the survey with faked WA residents data, which obviously pose a serious threat to the public health of the community and commit a crime. In the screenshot, you can also see he is openly asking people (including non-US citizens) to submit the survey more than once and in vulgar languages.

In particular, his agitation scheme to sway health official opinions could result in tremendous health risk consequences to the millions of children in Washington state.

Please ask the appropriate department to step in, investigate and defeat this egregious cyber attack! At the minimum, denounce such fraud in your next public meeting with this evidence.

Thanks to you for keeping the Washington state communities and children healthy!

Jennifer

Subject: No Covid Vaccine Mandates for School

External Email

Your agenda specifically mentions two criteria to review to see if the covid, so-called, vaccines meet criteria for you to mandate them for children to attend school, and these points are easily proven to not be met.

#5 - Children are in almost no danger of serious illness or dying from covid. While WA State DOH Website no longer shows covid deaths by age, lucky for you, I saved off copies, such as from May 11, 2021 below, which shows almost 0% deaths in anyone under 20 years old. Now you can rest easy, that significant morbidity for covid is in the over age 70 population (retired), so no one working at schools needs to worry either.

#5 - The so-called covid vaccination does not meet Washington State Code definition for you to mandate it: RCW 70.290.010

<<https://gcc02.safelinks.protection.outlook.com/?url=http%3A%2F%2Fapp.leg.wa.gov%2FRCW%2Fdefault.aspx?cite=70.290.010>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fapp.leg.wa.gov%2FRCW%2Fdefault.aspx?cite=70.290.010>

(10) "Vaccine" means a preparation of killed or attenuated living microorganisms, or fraction thereof, that upon administration stimulates immunity that protects against disease.

The virus has never been isolated, there is no killed or attenuated living microorganisms in these injections.

Even if this injection were a vaccine, Federal law prevents you from mandating it for 5-11 year olds, because it is in use under emergency authorization only.

Pfizer & Bayer Executives reveal these are NOT vaccines. Pfizer CEO Calls mRNA Technology "Gene Editing" <https://rumble.com/voz921-pfizer-ceo-mrna-gene-editing-vaccines-can-cure-people-born-with-a-mistake-i.html>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Frumble.com%2Fvoz921-pfizer-ceo-mrna-gene-editing-vaccines-can-cure-people-born-with-a-mistake-i.html&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Ccc61f73fb6e84a6d1c9b08d9ec523302%7C11d0e21>

trust%252F%253ASgWWu10dO_8kfINPtdjWLWCvDA8%26cuid%3D3540134&data=04%7C01%7Cwsboh%

#5 - The covid injection does not prevent disease based on the manufacturers safety data sheets and statistics over the last year. Natural immunity has proven to be superior. The risk of vaccine injury is astronomically higher in children. Just look at the VAERS data, invite representatives from the life insurers to present their data on claims trends. It has been all over the news that claims for young people have dramatically increased.

#6 - The covid injection does not prevent transmission of covid, again right from the manufacturers safety data sheets and statistics over the last year. The data sheets specifically state to avoid close contact with others for 4-6 weeks due to shedding from the injection. Countries with the highest vaccination rates have the highest incidence of re-infection.

Recipient become more susceptible to other pathogens, being re-infected and as the 'vaccine' manufacturer states, they can transmit by "Inhalation or Skin Contact" making them Super Spreaders.

Pfizer starting on page 62: <https://thecovidblog.com/wp-content/uploads/2021/03/C4591001-Pfizer-Clinical-Protocol.pdf#page=62>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fthecovidblog.com%2Fwp-content%2Fuploads%2F2021%2F03%2FC4591001-Pfizer-Clinical-Protocol.pdf%23page%3D62&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Ccc61f73fb6e84a6d1c9b08d9>

All of this information is readily available from reputable health organizations and I am happy to send you information to back up the statements, but you should already know this. It's your business.

You have poked the bear and parents are not giving up on this one. Stop trying to mandate covid vaccines for school attendance. What you are trying to do is unlawful and indefensible. Do you really want to give parents another reason to pull their kids out of our already lousy WA State schools?

Sincerely,

Annette Kessler

Edmonds School District resident

Hi.

I am writing regarding the decisions being made about future vaccine requirements. I am not sure what science you would base that decision on for Covid.

First of all, there is zero statistical risk for kids from any form of the variants and certainly not from the current and continuing weakened variants.

Second, the science has shown that the "vaccine" is only a therapeutic and it does not stop someone from getting or spreading covid.

Third, there are risks with any "vaccine" and this one has shown to have had the most adverse effects of any "vaccine" in history.

Fourth, you will drive kids out of traditional education and the state if you make this decision and there will be many unintended negative consequences.

Thanks for your rational consideration.

Good morning,

I have attended the last 2 zoom meetings regarding adding the Covid 19 experimental shot to the childhood immunizations to attend school.

I have many questions.

1. Who on this board and/or the TAG team are bonded? If SO I would like a copy of your bonds.
2. Who is licensed to give out medical advise?
3. How really is this going to be implemented when they have been proved not to work?
4. How many shots are going to be needed a year?
5. Is this really necessary when they do not Work?

I find this all disturbing and unnecessary, you are putting stress on parents that is not needed.

For you all to think you know what is best instead of Parents is disgusting.

All the mis information I have listened to you all speak about is really appalling as well.

VAERS has covered up many deaths and adverse reactions are not being recorded, CDC has admitted these shots and masks don't work.

Show me the peer reviews~ show me the paperwork that says this virus has been isolated, None of this has been approved,

Pfizer and Moderna shots that are so called approved, are not even available~

This is all EUA and we are in charge of our own bodys, Not the government!

Please respond back to my email with the questions I have asked.

Thank You

Tracy Hanning

Concerned parent

Also when are the next 2 meetings on this subject~

I want to express my concern regarding requiring children to be vaccinated with the current COVID vaccine.

Please do not be fooled by the projections and graphs. These models and research records are not enough for you to make an informed decision. No talk about the immunity gotten by students after catching COVID, no matter what variant. The fact that morbidity is lower for children catching COVID than taking the vaccine is unacceptable. They can paint this picture 7 ways to 7,000 ways but the truth is not going away. There has not been any case studies of a significant matter that help you make an informed decision.

Think about the fact that testing came available and widely used late 2022 and, the numbers are being shown that cases are going up. Don't believe all of the vaccine information When most of it is missing crucial parts. And most importantly, the affects of the vaccine on children, the injuries, the lack of reversing any adverse reactions and the fact that drug companies are not liable.

You will be held accountable for crimes against humanity. We will not let this be our recommendations without taking you all to court.

We were told by a LWSD Board Member that the Board has no authority in decision making regarding masking. Apparently that's proven to be untrue. We've lost trust in our elected "leaders". This masking exercise has never been about Covid, it's entirely about control, and using children as pawns to force control is as bad as it gets from politicians. Kettle Falls showed Washingtonian parents leadership yesterday and we're very proud of them for doing so.

In the numerous parent teacher conferences my wife and I have had since Covid, we've learned teachers are over it. They're seeing the drop in educational value. They're frustrated at masking. They're frustrated at mandates and hearing complaints daily from parents, and many of them are turning on their Unions. Our parent groups are fully behind the teachers, support the teachers and encourage the teachers to turn against their unions. Withdraw from their unions, whatever it takes.

Masking needs to end immediately. And trading the clot shot for masking is a non-starter.

The evidence that children have a 99.98% survival rate against the November 2019 variant of Covid is a risk we're all willing to take as a society; considering we all know that Omicron is a) far less concerning and b) numbers of deaths are nearly zero across all age groups.

Where did Washington's share of the \$130B in Covid Relief Funds go? Those funds were explicitly sent to the States for air filtration in schools. What was completed in the LWSD, Bellevue and Issaquah districts? It's pretty embarrassing that after spending all that money on air filtration, you folks are still requiring children with a 100% survival rate to wear a cloth over their nose and mouth. Absolutely awful.

The real questions are, why should we listen to you about anything else going forward? Why should we trust you?

End the mandates immediately. They never should have been passed in the first place.

Subject: Re: SuperBowl & The Big Game

Issaquah, Bellevue, LakeWA School Districts, OSPI, WA State Education, WSBOH and
King county commissioner.

If you still have some conscience left in you, after watching that Super Bowl, you will act upon and immediately remove the mask mandates from the schools. You might think you have helped the children by masking them but have no idea how badly it has affected the children and their health. Enough of big talks and researching on this topic, it's time to act and the best action is to remove mandates. If some parents still feel they need masks they can send their kids with masks on and no one will stop them. But parents like us who strongly believe in science and have enough research to prove that masks don't work demand you to end this mandates and now.

Thanks and Regards,

Lokesh Marenayakanapalya

Qualified enough to speak on behalf of my daughter and all the kids/parents that are suffering due to these mandates.

(For the records: ISD parent)

Subject: TAG considering Covid vaccine for school children

External Email

Hello.

I am a parent of 3 children in Washington public schools, as well as a school district employee. I listened to most of the TAG meeting on Feb. 10. A number of things caught my attention that caused concern, so I am sending them to you to consider, as you prepare to consider whatever recommendation the TAG makes at the end of their process.

1 – There was considerable concern and a lot of conversation around criteria 6, “vaccinating against this disease reduces the risk of person-to-person transmission, with transmission in a school or child care setting or activity being given the highest priority.” Conversation centered around this being an “unstable disease” with different variants calling for different answers to that question, and recognition that by the time a decision and implementation of a mandate would happen, conditions will be different again, in ways we cannot foresee. TAG members were not even sure what to base their answer to this question on – the current situation, their best-guess projections for the future? Given that this virus is new and changing frequently, putting a permanent requirement into place now hoping that it is effective down the road is wildly inappropriate.

2 – The lack of data and studies specific to children stood out a number of times. Several presenters (the doctors in particular) gave statistics about the rate of infection/hospitalization/death for children throughout the pandemic, as well as discussion of some of the more severe outcomes. However, there were not studies to present for how vaccination rates affect the rate of illness or spread in children. There were not studies about the age range that this requirement would impact. One presenter brought up the universities who have implemented vaccine requirements and how things have gone there. Another presenter brought up studies about NBA players. While interesting, those are not children. That information cannot be the basis of deciding whether to require a vaccine for children – studies involving large numbers of children over time are what would allow for that to be done in an appropriate manner. It is not the role of Washington state to project data from studies of young and healthy adults onto a population of children and decide to require such a new, untested vaccine. Medical care for children is different. One TAG member spoke up about representing the children in child-care settings, where there are not nurses on staff, where there are children who are not yet eligible for the vaccine even on an emergency use basis. How could the state possibly make a requirement in such a situation? There is literally zero data because no kids 0-4 have received the vaccine yet.

3 – Given the discussions above, the question of timing was raised. The answer from one of the co-chairs was alarming. He said that this process is in place now because it allows

for the steps to be taken in order to get the vaccine requirement established and implemented for the 2022-23 school year. He said that if data evolves over the next few weeks, TAG members could change their votes on the criteria from the 2/10 meeting. That is not right! If the data is changing so fast that a committee member would need to change his/her vote during a 2 month process, the data is changing too fast to be making such a weighty decision. Things need to stabilize before we can implement a requirement! Why the rush? It certainly should not be that the goal of a certain timeline causes the process to be rushed. The process needs to be completed in full and each criteria answered clearly and without the concern of all this uncertainty, no matter when that clarity would come. If the TAG or BOH is approaching this with a timeline goal in mind, the due diligence to fully answer these questions cannot be carried out. Don't rush this.

I understand that the TAG has a specific role in this process, evaluating the Covid vaccine in light of the 9 criteria items. I have a number of additional concerns that I will send along in a different email. The above are specifically related to the TAG meeting of 2/10. The general feel I walked away from that meeting with was that this is being rushed. That is not right. The presentations and discussion yesterday would be reasonable grounds for the BOH giving a Recommendation to Vaccinate statement, but any decision other than "wait", based on what is known and unknown now, is irresponsible at best, and will have damaging ramifications in a number of areas for the children of Washington. Do not add the Covid vaccine to required immunizations for schools.

Thank you for hearing and considering these thoughts.

Jennifer Bandy

Issaquah, Bellevue, Lake WA School Districts, OSPI, WA State Education, WSBOH, and King County Commissioner,

I had two interesting conversations with the King County Health Department. Both employees told me that they cloth and surgical masks do not help against Omicron and we should wear N95s. Obviously, you aren't going to put N95 masks on our kids for 7 – 12 hours/day. If the health department is saying the masks don't help, why the heck are our kids still in masks? It seems punitive at this point. □

To whom it may concern,

If vaccine Mandates are made in Washington you will see a mass Exodus of students from the public school system. If you think the Trucker brigade in Canada is big, just wait.

I promise that if you decide to inject something we know little about into our kids, my kids will be taken out of public schools.

Do not make this mistake. You will not win. Listen to science. Out body, or choice.

Subject: Vaccine mandate for K-12

External Email

I am writing you to ask you to vote NO to vaccine requirements for K-12 Wa children. This requirement is wrong. You are recommending an experimental gene therapy on our precious children. There are no long term effect studies, this vaccine does not work to prevent Covid. Children are the least at risk for getting sick from Covid. I feel that anyone who forces this on any person, especially children, should be charged with violating the Nuremburg Code. Everything about these forced mandates is against civil rights and the Constitution. Lawsuits are pending. Do not force this dangerous experiment on our children.

To whom it may concern,
I am strongly opposed to requiring a Covid vaccine as part of the mandatory vaccines needed for children to attend school. Studies show that school age children have a 99.9% survivability rate when they contract Covid. The side effect profile of the available EMERGENCY vaccines are greater than 0.01% in which case it is safer for our children to contract Covid and then have natural immunity, which is stronger than vaccine immunity, than to be vaccinated and have potential side effects from the vaccine. In addition, receiving the Covid vaccine does NOT prevent acquiring or transmitting Covid so it should not even be considered a vaccine, it is more like the flu shot which could prevent some disease but is not a cure for the flu. The Covid vaccine should be a parental choice and not a government mandate. Period. Please vote NO to requiring the vaccine for children attending school.
Best, Heather

I am writing for voice my concern about requiring the Covid Vaccine for school children of any age. I do not feel that my child nor anyone else's child be required to be vaccinated for Covid to attend school. This is a decision that should made by myself as a parent, my child and our child's doctor. I feel there has not been enough research done on the vaccine and we do not know the long term effects of it.

This virus is constantly changing as well as the directives from our Chief Medical Advisor Dr. Fauci. Children are our greatest asset and the future of our Nation, we need to make sure that we are doing what is best. In this current time with everything constantly changing, the number of shots required, masking or not masking. Different options of treatment we need to wait on requiring this vaccine for our children, we cannot take back the vaccine once we give it.

Thank you

Nathan,

Thank you, still new to this . . . appreciate the help.

So, looking at the agenda, there's no K-12 school children vax issue on the agenda, right?

Cheers,

Ryan

The draft agenda

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fsboh.wa.gov%2FPortals%2F7%2F2021-11-10-Draft.a.pdf%3Fver%3D2021-10-27-160810-400&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7C2aebdcf844964aa3c5a308d9ecf5a896%7C11d0e2>>
Agenda-2021-11-10-Draft.a.pdf%3Fver%3D2021-10-27-160810-400&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7C2aebdcf844964aa3c5a308d9ecf5a896%7C11d0e2
is now available for the State Board of Health's public meeting on Wednesday, November
10. We will meet from 10:00 a.m. – 2:35 p.m. Meeting materials will be available on our
website on Friday, November 5 by 5:00 p.m. Please read the proposed draft agenda for
more information about the meeting, including how to give public comments and when to
give testimony on the Communicable and Other Certain Diseases rules hearing.

To access and register for the meeting:

https://us02web.zoom.us/webinar/register/WN_S8YQaN8HQY2TIXVHX7SFtQ
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fus02web.zoom.us%2Fwebinar%2F>>

A Special Note about Public Comment:

* We encourage you to submit written public comments to the Board in advance of

the meeting. To help ensure Board members have an opportunity to read and consider your comments before the meeting, please email us your comments <<mailto:wsboh@sboh.wa.gov?subject=My%20Public%20Comments>> by Friday, November 5 by 12:00 Noon. Written comments received after 12:00 Noon on Friday will be shared with Board members; however, Board members may not have the capacity to read or consider your comments over the weekend before the meeting or during the meeting. You may give verbal comments at the meeting during the public comment or rules hearing segments.

Other Meeting Information:

- * This meeting will be held online through the Zoom Webinar application
- * Board members, presenters, and staff will participate remotely.

Subject: Comments for the Immunizations Technical Advisory Group

External Email

I am writing to voice my opinion about mandatory Covid-19 vaccination as a requirement for attending schools in WA state. I do not believe that this vaccination should be mandatory but rather a choice. Each individual should be considered in this matter as the cost vs. benefit to receiving this is not the same for all. If this is mandated in WA state it will cause undue harm to students being forced to receive the vaccination when their personal risk of harm from covid is negligible, especially as we can all see that the Covid-19 vaccinations do not remove the possibility of getting or spreading Sars-Cov-2.

We will move to another state if there is no other option but to vaccinate our children with the Covid-19 vaccines, and I know we are not the only family that feels this way.

Dear Washington State Board of Health,

Our state government should NOT be mandating Covid vaccines on our children. Children are at extremely low risk for Covid and these medical decisions should be left in the hands of parents.

Sincerely,

The Citizens of Washington State

Re: School Covid-19 vaccine requirement for school entry. (CON)

To whom it may concern,

It is too soon to make this very permanent decision, there is too much polarization, and most importantly not enough long term study regarding this particular vaccine on our children! There are side effects that one must admit, if they are being truthful and following the cases, that are very unnatural and dangerous, damaging, or if nothing else, scary and even requiring hospitalization. True, they are not commonplace, but they are much more than previous immunizations cause, that were in trials and studies for much, much longer. An example of a previous vaccine released and given to children/infants that had been suspended after appx a year of use in children and infants(!!)

(ex:Rotavirus: The Government said: "Events surrounding the withdrawal of the Rotashield vaccine illustrate how well this system functions in practice. ... In the space of about one year, a vaccine was licensed and recommended for routine administration, adverse events raised a concern, further studies were conducted, and the manufacturer withdrew the vaccine knowing the government and physician community were ready to respond." (Brief 2010

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.ncbi.nlm.nih.gov%2Fpmc%2F3423242/>, 23-24)) The point is we have no long term (even short, long term studies on this particular Covid-19 vaccine in our innocent children! They have no choice. They must do what their parents say or what the government or school system tells their parents to do. They are the long term test, themselves. Many parents will say No. Record levels of parents have already pulled their children from the WA school system during this pandemic. Mandating these vaccines will not change it improve that, and in fact will make the issue even worse for the State school system enrollment issues.

Currently no published literature on pediatric Covid-19 vaccine effectiveness in K-12 school setting. With such studies having not even been done yet -and no long term health studies as of yet- why would we want to risk our children, the futures of America? To nearly every child, the risk of COVID-19 severe sickness, is almost non-existent when you look at the numbers. To them it is a cold. And parents of immunocompromised children have the option to protect them with the vaccine and/or further with other measures.

The number of vaccines we are already required to put into our children is staggering! And with this vaccine, they are still able to contract and spread! Many parents will choose to willingly vaccinated their child. Nearly as many will choose not to.

According to Washington Department of Health, K-12 currently are required a minimum of about 21 doses of various vaccines into their bodies.

Please do not force yet another, particularly this newer vaccine. I personally know quite a few right now that it would be the breaking point for them. They WILL pull their child out of the public school system, (or keep them out as the case may be) or even are ready to move from the area or state so their child can have an education. (This is not meant to appear in any way as a threat, it's just simply the truth.)

The adults are largely vaccinated, the teachers are already required.

I sincerely and respectfully ask that you please respect the many parents who believe in this case we should leave the children with their own immune systems, which is already proving (and has proved) to be very, very strong against this virus. It has not even been around long enough to know how their immune student systems will build over time! Or how the virus may weaken over time. There is too much unknown to mess with our precious children's amazing natural immune systems. Ultimately, this decision belongs between the parent and their child's doctor, not the State, political or school system.

Thank you for reading and considering.

Respectfully,
Shawnene Hersey

Subject: Review of Criteria 5 and 6 - Vaccines for School Age Children - 2/10 Meeting

External Email

Washington State Board of Health,

I am opposed to the requirement of Covid vaccines for children to attend school. Criteria #5 and #6 state, "the vaccine containing this antigen prevents disease(s) that has significant morbidity and/or mortality in at least some sub-set of the population" and "vaccinating against this disease reduces the risk of person-to-person transmission, with transmission in a school or child care setting or activity being given the highest priority." Children are at very low risk of getting Covid and most cases, regardless of age, are mild. This is simply the flu or common cold and no vaccine is needed. In addition, an alarming number of vaccine injuries have occurred in children to include neurological issues and myocarditis. Children are more likely to be harmed or die from the vaccine than benefit from it. The media has been suppressing the deaths and vaccine injuries that have been occurring in the population. It has also been found that the vaccine is far more harmful to children than adults. I implore the TAG to do the right thing to protect the children which is to oppose any requirements for Covid vaccines in children of any age.

Issaquah, Bellevue, LakeWA School Districts, OSPI, WA State Education, WSBOH and King county commissioner.

The gig is up. We are not interested in your cherry-picked junk science any more. REMOVE mask mandates on our children with immediate effect. It's a DEMAND, not a REQUEST. We already know that schools receive money to keep our kids inhaling their exhaust all day at school under their masks. Our children are falling sick, very sick. If 70K+ people could gather for the SuperBowl unmasked, it doesn't leave a doubt even in the youngest kindergarteners of our state that masks were never about safety. If you 'mandate pushers' have any iota of conscience remaining, you will hurry up and restore the basic right (of breathing freely) of our children, NOW.

Enough is enough. End all the mandates now.

Perhaps if our kids were rich and famous they wouldn't have to wear their masks to school every day like the 70k fans at the super bowl last night. The hypocrisy is deafening.

Are you ready to be held fully responsible and personally liable for any potential trespass by harm to sons and daughters if this goes forth? I, along with many others, intend to hold you responsible for any irreversible health damage from the Covid 19 vaccine, so please vote from your innermost consciousness and the scientific data, assessing risks and benefits carefully.

Please PROTECT our children by NOT requiring the Covid 19 vaccination to attend childcare or school. Thank you for your consideration in this matter.

Kind regards,
Christiana Nelson

To whom it may concern,

If vaccine Mandates are made in Washington you will see a mass Exodus of students from the public school system. If you think the Trucker brigade in Canada is big, just wait.

I promise that if you decide to inject something we know little about into our kids, my kids will be taken out of public schools.

Do not make this mistake. You will not win. Listen to science. Out body, or choice.

Washington State Board of Health and TAG Group -

Upon review of the material and TVW broadcast provided, I find information considerably incomplete. When reviewing the studies no mention referenced on the deaths for children as to whether co-morbidities existed in the numbers provided or not. You also failed to cite the fact that 98% of cases of the virus also live - THEY LIVE in Washington State. You only focus on deaths and death numbers - both figures of deaths and covid survivors are a part of the 100% and that information should be included. Not to be insensitive to those who have died or gone through the illness but the number of people who now have natural immunity and lived is crucial to any review calling for an expensive and invasive vaccine. That's the most important number - since hospitals carry so much liability and the Covid funds provide for hospitalization - not even the number of hospitalizations is the true way to view vaccinations but rather whether we are in an Epidemic Emergency Situation any more at all. We are not.

Furthermore, no differentiation for natural immunity which follows the course of initial virus into more contagious yet less lethal variants was reviewed either - all was credited to vaccinations when both are happening at the same time and you provided only

vaccinations patterns concluding vaccinations as the only factor - this is not a comprehensive review of science. Immunity also occurs in the cycles from variant to variant. Crediting the vaccinations is also misleading - they are not VACCINATED since they are still getting Covid which continues to build cases too into the data and not properly broken out. This Coronavirus is in the same family of virus as the common cold vs Polio and others that are only transmissible human-to-human only and yet your review did not cite or refer to comparison of viruses and the difference of classes nor the fact Covid is part of this common cold family we will need to live with now - don't you think it is of worthy mention - it is relevant and germane to any recommendation you are considering. We the people do. We don't want JUST choice, we want all the information to be reviewed and verified before ANY policy is made.

You also gave NO REVIEW of Early treatments - policy cannot be made with regard to vaccinations of ANY kind adult or children to be complete until all considerations are covered. Period. Furthermore, the review by the actual practicing physicians is what PEER REVIEW means for any drug, vaccine or treatment - below please see several links to congressional testimony by Dr. Ryan Cole, Mayo Clinic Physician, Dr. Kory, Dr. Fareed, Dr. McCullough, and Dr. Risch who are frontrunners both by Ivy League Education (such as Harvard and Yale) and their expertise including virology, years of practice even with off label uses of approved medications, published findings (which out published the only Health Official Physician that was paid by grants to do studies of which he had done none on early treatment - EMBARRASSING for him!) but have much to add to this presentation for consideration. These very Physicians forecast the run of the virus we just went through from last November - that apparently many including Washington State - ground zero for the virus - ignored and many have suffered because of no options for early, out-patient treatment - that means you have incurred a liability against the people of this state - this is where it started and all considerations should have been and still should. be allowed, especially by battled-tested physicians who save lives daily.

Dr. Cole - <https://www.youtube.com/watch?v=9K73ZnbOeQI&authuser=0>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.youtube.com%2Fwatch%3Fv=9K73ZnbOeQI&authuser=0>

Dr. Kory - <https://www.c-span.org/video/?c4930160/user-clip-dr-pierre-kory-senate-hearing-ivermectin-100-cure-covid-19>

.

Also - please review JAMA information highlighted in recent news clips as follows but also missing from your TAG Review that released a study on adults with natural immunity lasts at least 20 months - children have even better immune systems and you also provided no study for that - here are several news articles in case you missed them plus the JAMA article itself:

<https://video.foxnews.com/v/6295325197001#sp=show-clips>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fvideo.foxnews.com%2Fv%2F6295325197001#sp=show-clips&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C68bac694cf0f4bd0923408d9f02a0c32%7C11d0e21726>

<https://video.foxnews.com/v/6173848311001#sp=show-clips>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fvideo.foxnews.com%2Fv%2F6173848311001#sp=show-clips&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C68bac694cf0f4bd0923408d9f02a0c32%7C11d0e217>>

And Finally an extensive article citing a multitude of studies on masks and why they should be taken off of our children immediately including the impact on the environment
- <https://brownstone.org/articles/why-mask-mandates-should-be-immediately-banned/>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fbrownstone.org%2Farticles%2Fwhy-mask-mandates-should-be-immediately-banned%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C68bac694cf0f4bd0923408d9f02a0c32%7C11d0e217>>

Here's what Washingtonians State Board of Health should be doing instead of moving forward on unnecessary vaccines for our kids or anyone any further - many countries have stopped vaccinating and many more are looking at early treatments such as Prades, India leading the way, not to mention, states in America who are recovered, mask free, jab optional and early treatments including monoclonal treatments are and always will be more effective with this class of viruses. This group and the State Board of Health has not only let Washingtonians down - they have done more harm than good according to the data from around the world and the U.S. and citizens know it.

Here is what Douglas County, COLORADO put out and EXACTLY what you should be doing: <https://www.douglas.co.us/health-department/covid-19/>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.douglas.co.us%2Fhealth-department%2Fcovid-19%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C68bac694cf0f4bd0923408d9f02a0c32%7C11d0e217>>
- not exactly a conservative state which is telling.

There has been a prolonged reign of fear cast over Washington State that has damaged our health, economy and literally no aspect of this state has gone unaffected. Simple graphs such as was produced with an oversimplified focus on vaccinated vs unvaccinated does not paint the whole picture -we deserve only the WHOLE TRUTH, and NOTHING BUT THE TRUTH.

Please review and follow-up on the information provided - and call for hearings and studies on Early Treatment - Health Officials are not the physicians referred to as PEER Review Physicians from the field and should listen to the Physicians that are as a part of the information regarding our - OUR HEALTH. We object to any forcible government edict to vaccinate when other options are available and battle tested by the very best physicians this country has put out.

Kindly but pointedly,

Michelle M. Andres

Subject: Cov 19 Vaccine for Kids

External Email

To Whom It May Concern,

I am pro vaccine, fully vaccinated against covid 19, have taken every other vaccine that has been recommended to me, vaccinated my kids to the CDC schedule and I do not think the covid 19 vaccine should be mandated for kids to go to school at this time.

These one size fits all mandates are rigid and harmful and until you fix what is wrong with the vaccine program in this county (as someone who has cared for a vaccine injured family member, I have plenty of insight for you should you care to discuss) the trust in these programs and public health officials in general will continue to decline.

Thank you for your time!

Katie

Hello,

I am writing you to ask not to implement the mandatory vaccination fir kids K-12. I was attending the last zoom meeting and got impression that all public comments were against.

I think you will have a tremendous push back if the mandat pass. The school will loose a lot of children and parents support.

Please,take it in consideration.

Thank you,

Tatiana

Subject: BOH meeting Feb 10, 2022

External Email

Good Afternoon TAG members and BOH members,

I've read through the slide presentations for Thursday's meeting.

Please read through Dr. Lofgren's slides, there are 2 spelling errors ("did" instead of "died" and "mails" instead of "males").

Also, I find it rather tricky that the numbers are made to look as though they are percentages instead of cases per 100,000. Therefore, 0.6 isn't even a whole person out of 100,000. Rather clever. It works well if the desire is to incite fear.

You all speak of "cases" as though they are deaths. They are not. Cases are merely infections of the virus as reported by unreliable testing procedures (high PCR cycles greater than 25, and rapid tests that have a high false-positive rate). People catch a cold and influenza all the time, yet they do not die. Very few of those who catch colds or influenza actually die. The morbidity rate should be our focus, and at that, in context of what else the child is inflicted with (diabetes, cancer, lymphoma, autoimmune disease...). "Cases" mean nothing, the word has zero value added to the conversation, if we are to be honest. And if we are to be honest, no one even knows how many kids have had covid. Most families don't report it or seek a test. There's no reason to. A positive test doesn't change the fact that covid has been contracted, nor does it influence the treatment of it. It will pass, just like the cold or influenza. We don't need to test. If you're sick, you stay home. And by the way, it'll come back around next winter when cold and flu season hits.

The slides continuously use percentages, but you fail to use the actual numbers. This is intentionally misleading. It's like if one person has covid and then one more catches it, you report a 100% increase in covid cases. The math is accurate, but the intention is shameful. Shame on you for inciting fear.

We all know that the risk of death from covid for a child 17 and under is far less than the risk of adverse effects as a result of the shots. The numbers reflect that no matter how you try to spin them. And no one knows what the long-term effects of this gene therapy will be on our kids. Only time will tell that. It is evil to allow the government to use kids as guinea pigs for their experiments.

You should not add these covid gene therapy shots to the immunization regimen for children. They are not vaccines; they do not produce immunity to the virus. Change the definition to fit the narrative all you want, but it doesn't change the facts. Please act responsibly for our children and do not add these shots.

Sincerely,
S. J. Thirtyacre

February 11, 2022

Currently the WA State DOH TAG board is doing Klaus Schwab's bidding via Inslee's push for the demand for vaccination against covid to attend school in this state.

They are dropping the narrative as Crimes against Humanity court cases are being pursued against those people, including politicians, doctors, and government officials, who were instrumental in creating the events of these last two years.

ALL of the 'data' upon which the 'covid' narrative of lockdowns, restrictions, divisiveness, destruction of business, livelihoods, and the vaxx push are being REEXAMINED for REPUBLICATION by the 'authorities' now that the public has become aware of their manipulation, and lying.

The ENTIRE covid narrative is collapsing. This includes all the misinformation, deliberate

lies, and propaganda produced by the WEF, and its allies including the WHO, over these last two years. The rate of collapse speeds by the day.
Secrets Revealed: Yours are visible.

1.

ALL decisions about vaccination by Legislators needs to be grasped as within the context of the Law of War manual. Those officials pressing the agenda of the Occupying Power to 'distress, wound, damage, maim, disable, or kill, by any, and all means' will suffer the consequences of retribution as Devolution proceeds.

2.

Most recent past examples of the Crimes against Humanity laws being applied led to convictions of politicians, civil servants, doctors, nurses, press reporters, and others. Such convictions frequently result in the death penalty being applied. It is expected that this will repeat in relation to the millions of people damaged by the 'vaccination program' as it has already been applied.

3.

Every Legislator needs to understand that they will be held personally liable for each, any, and all, deaths or injuries that result from their acquiesce to Foreign, and Occupying Power's agenda of Damage to the Populace, including attacks on children. The People are watching, there is no hiding from either participation, nor consequences.

4.

With death rates as measured by life insurance claims already up 268% so far this year for adults, and steadily rising still, the WA state legislator needs to consider that the 'vaccination program' is NOT what has been sold to them by the pharmaceutical industry captured doctors and CIVIL SERVANTS. How many WA ST employees are captured, and on the payroll of Pfizer & Moderna? Are they advising you to take a path that leads to your personal Trial for Crimes against Humanity? Legislator, Be Advised.

5.

Time is fleeting, fast reducing ANY margin for error that you may have had relative to your stance on the 'covid narrative'. As events unfold in these next weeks, your range of motion will be even further constrained as ALL YOUR PAST ACTIONS over these last two years will be the focus of public, and professional scrutiny.

6.

There is much that may be done, however, your advisors are schooled, not educated, and do not know how, nor do they practice, critical thinking. This will compound your errors over these next few years. In times of War, mistakes frequently have fatal consequences.

In order to assist you in overcoming the difficulties of filtered information in this modern age, I will be sending emails such as this periodically, and as manifesting events may warrant.

Resources

Again, to repeat:

During a time of War, all actions taken by Officials will be viewed and judged against the

larger background of the Conflict. Legislators and other officials, in all capacities, including supporting personnel, would be well advised to obtain, and read, the DOD Law of War Manual.

To download a PDF copy of the DOD LAW of War Manual:

Subject: St. Patrick Catholic School - Parent Feedback

External Email

Dear Mr. Ford, the Administration of St. Patrick's, the Seattle Archdiocese, and the WA State Board of Health,

I am writing today on behalf of my student, as well as several concerned St. Patrick's families who have reached out to me directly after the St. Patrick's parents group was turned off because of polite discussion about the ongoing mask requirement at school. I am imploring you to stand up for our children's health and well-being and take a stand against the mask mandates. The Seattle Archdiocese represents a well-respected number of facilities, students, and families across Western Washington. You have the ability to show the residents of Washington State that you are an organization that puts their student's safety first, not politics, like the Baltimore Archdiocese is doing
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.baltimoresun.com%2Feducation%2Fmd-school-masking-20220211-20220211-w62eycynu5fybgztpujemsuwga-story.html%3Ffbclid%3DIwAR1xe8ncPOmITYxyAOFAkx7IDyI7ycxmek4TocY5sUR2ia9XBBVvkKTY8u4&data=>>
!

It is our understanding that the current mask requirements were adopted by the Seattle Archdiocese last fall at the suggestion of the Washington State Board of Health. Since that time, innumerable studies have been published across the world on all aspects COVID-19, from the inherent risk factors & most impacted age cohorts, the efficacy and side-effects of pharmaceutical preventions, early treatment protocols and non-medicinal mitigation strategies such as masking and school shutdowns. Yet with new scientific evidence, there has been no update to the masking protocols and mitigation strategies in schools across our state.

A little about me – no – I'm not a "COVID denier" that many believe those asking for choice in masking are! In fact, our family began watching very closely what was happening in China in December of 2019, when it was just a conspiracy and nothing to worry about. By late-January, I was one of the "crazy people" doing my grocery shopping in an N95 mask and gloves. At that time our 3 children all attended public school, and we made the decision to stop sending the kids to school 2-weeks prior to the official shut-down. And who doesn't remember wiping down groceries and mail with sanitizing wipes, or simply leaving things outside for days before allowing them into our houses! We chuckle about all of that now, but it important to reflect on. Why did we do all of that?

Simply put, in March of 2020, there was quite literally nothing known about this new

illness everyone was calling COVID-19. Was it transmitted by touch, airborne droplets like the flu, or truly aerosolized? Could it survive on surfaces? Who were the most at risk for hospitalization and death? We knew nothing. So, we took what are now known to be silly, and in some cases drastically damaging, measures. We call them lessons learned. However, what we've learned is not being put in to practice through policy change. Instead, we are continuing with measures science has proven are causing more harm than good!

We understand now what ages and comorbidities are at the highest risk. We know how to treat COVID at home, and what simple, proactive steps everyone can take to prevent serious illness. Doctors know how to treat serious cases in hospital, and what treatments to avoid. Large percentages of people now carry natural immunity, and vaccines are available to those who choose to take them. And, most importantly, we know that our children, thank God, are the absolute lowest risk cohort. Yet those children have unfairly borne the brunt of mandates in the cruelest of ways under the guise of safety.

It is common knowledge that the cloth and surgical masks worn by students do not prevent the transmission of viruses. That is how my son was able to contract COVID while at school! That's also the very reason there was not a single N95 available to purchase in April 2020! At their largest measurement (0.3 microns), 250 aerosolized COVID viruses can fit inside the average human hair. Now consider those gaping holes in the sides of the student's surgical and cloth masks as you welcome them to school.

Even the CDC's own study, and associated infographic, "proving" masking efficacy has an asterisk noting the protection offered by cloth masks was "not statistically significant." Only N95s prove any amount of statistically significant results. CDC - Mask Effectiveness Indoors

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fmmwr%2Fvolu>

Another CDC resource clearly states that the filtration of masks "Does NOT provided the wearer with a reliable level of protection from inhaling smaller airborne particles and is not considered respiratory protection." CDC – Masks vs. Respirators

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fniosh%2Fnpptl%508.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7C71c5002f230a49890fa708d9f0a298b9%7C1>

The ACGIH, a non-profit of occupational and environmental health and sciences experts, has compiled the results of much of their research regarding how to protect workers during the COVID pandemic into an infographic for employers. Even when both parties are wearing cloth or surgical masks correctly, the amount of protection offered is only 27 minutes and 60 minutes, respectively. How does that very limited amount of protection justify the mental and emotional consequences of masking students? COVID-19 Worker Safety - Masks

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.acgih.org%2F covid-19-fact-sheet-worker-resp%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7C71c5002f230a49890fa708d9f0a298b9%7C1>

It is also for this reason that whenever you purchase surgical masks, you find on all of the packaging warnings that state they are non-medical and/or do not prevent illness. (For example, I clicked on the first link on an Amazon search for "surgical masks" and right in the description it says are non-medical. Amazon Surgical Mask

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fsmile.amazon.com%2FHDFK-Disposable-Protective-Breathable-Non-Woven%2Fd%2FB088YJCQ7Z%2Fref%3Dsr_1_2_sspa%3Fcrd%3DX903K75VJ277%26keywords%3Dsurg2-spons%26psc%3D1%26spLa%3DZW5jcnlwdGVkUXVhbGlmaWVyPUEyUUFFNTVISFRGQVBGJmVuY3J5cHRIZ

) It is widely known that masks do not prevent the passage of particles as small as aerosolized viruses.

One of the pre-eminent experts on PPE and industrial exposure in the U.S. is Stephen Petty. He advises large industrial companies on Industrial Hygiene (aka, worker safety) and testifies as a subject matter expert on class-action lawsuits, like that of Monsanto, regarding industrial PPE protocols - such as with dangerous chemicals - when inhaled particulate is life or death every day. In the presentation linked below he covers COVID specifically. While I'm sure you are receiving many messages like mine full of links and references, I cannot urge you enough to take the time to watch this video presentation. In his world where PPE actually needs to protect, masks are not even considered an option, nor is facial hair! Stephen Petty - On PPE and Aerosols

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.youtube.com%2Fwatch%3F>

Included in this next link is over 150 mask studies with conclusions, in part, against the effectiveness of masks due to a variety of variables. I found while doing my own researching that resources providing a lot of information in one place was very helpful.

150+ Comparative Studies and Articles on Masks

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fbrownstone.org%2Farticles%2Fmore-than-150-comparative-studies-and-articles-on-mask-ineffectiveness-and-harms%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7C71c5002f230a49890fa708d9f0a298b9%7C>

Lastly, on the science of whether masks work, I would challenge that after 2-years of continual and aggressive research, study, and retrospective review throughout the world, one should expect to see clear, overwhelming, and consistent data from the scientific community proving without a shadow of a doubt that masks provide a strong level of protection. That data simply doesn't exist.

Here's where common sense can help to fill in the blanks. Masking in schools is not widespread across the country. Only 15 states have previously had mandatory masking in schools, though that number is reducing by the day. IF masking students really is the lynchpin that has kept our state's elderly and high-risk population safe and we simply cannot do without it, how is it there isn't overwhelming hospitalization and death of the elderly and high-risk in the 35 states who didn't mask students?

All masking science aside, in my opinion the most important topic to consider is the how masking and the subsequent enforcement of masking is having on our children. There is a steady outpouring of data showing negative consequences for our children, from faltering to outright failing test scores, startlingly high rates of referral to speech therapy in young learners, massive increases in anxiety, self-harm and depression among adolescents and teens, and a basic lack of excitement and connection to school communities. The Educational Consequences of Masking Children

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nationalreview.com%2F2022/02/22/educational-consequences-of-masking-children%2F%3Ffbclid%3DIwAR0E9-jL4yoUssHhJesfGpD1rYOwYams2Pfs93XuEoBE-HrzrKWpfyVjWS0&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7C71c5002f230a49890fa708d9f0a298b9%7C>

However, I don't think that linking study after study is needed to make this point. You are professional educators, and you know children! You know how they learn, and how they grow. You know how they respond to a smile. You know how they watch a teacher's mouth move when they are reading aloud, or when hearing a new word. You know how children instinctively see another child's frown and respond with kindness. Or how they see another child's smile and return it with a smile of their own. Or how children see someone react poorly to an unkind word they said, so they apologize, realizing the impact of their words on others. Without seeing that frown, they cannot know that

impact. These little connections and the learning of social queues are truly the work of childhood, and that has been taken from them. Think back to your favorite teacher as a child – then imagine not knowing what that teacher looks like without a mask on!

And what about the students who are not okay, and who are blending in and disappearing into a sea of masks? What about the children who have anxiety? What about the students who are embarrassed to ask for help, or feel left out? Without seeing the emotions on their faces, how can we be sure they aren't slipping through the cracks?

The data says they are. JAMA Pediatrics – Mental Health & Wellbeing

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fjamanetwork.com%2Fjournals%2F4bc0-45d3-b2bb->

[b9c227e1313f%26utm_source%3DFor_The_Media%26utm_medium%3Dreferral%26utm_campaign%3Dfor-the-media](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fjamanetwork.com%2Fjournals%2F4bc0-45d3-b2bb-b9c227e1313f%26utm_source%3DFor_The_Media%26utm_medium%3Dreferral%26utm_campaign%3Dfor-the-media)

We have also taken our most innocent and easily influenced segment of the population, and over the last two years taught them that they should fear the air around them. They should fear their own breath. If they take their mask off, they could be responsible for infecting someone who dies. Or that their good friends or classmates could get them sick. Instead, they must keep their face hidden, not speak during lunchtime, and don't get too close to one another because that's just too risky and unsafe. This is not okay!

I'm a Public School Teacher. The Kids Aren't Alright.

Though we are a new family to St. Pats, my father & his family all matriculated through parochial school, so many of the teachings we are seeing resonate deeply in my heart, including the fostering of strong community bonds. But that community collapses without smiles in the hallways, with parents unable to meet and know one another at events, without the hugs over a scraped knee on the playground, without the sarcastic smirks of middle school, and without the ability see someone's frown and help to make them smile.

The Strength of Weak Ties

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cse.wustl.edu%2F~m.neuma>

The residents of this state, and specifically the parents of school age students, have been understanding of restrictions, and, more recently, patient in waiting for policies to be adjusted in response to the data. But as the data continues to build against mask mandates with no changes to policy, we are asking you to push back on behalf of the health and education of our children.

We teach our kids to follow their morals, to do what's right even when it's hard, and to respectfully disagree when necessary. Now is the time for the school administration, and the leadership at the Seattle Archdiocese, to recognize that our children need us to stand up for them. It's time to respectfully disagree and stand up for what is right on behalf of the students in your care.

We are asking you to do better for our children.

We are asking you to do better for our communities.

We are asking you to do better.

Thank you for your time and thoughtful consideration,

Dani Kessler, 253-459-2449

P.S. And please – take the time to watch the Stephen Petty video on PPE linked above.
It's worth all 26 minutes.

Dear Mr. Ford, the Administration of St. Patrick's, the Seattle Archdiocese, and the WA State Board of Health,

[Amazon Surgical Mask](#)) It is widely known that masks do not prevent the passage of particles as small as aerosolized viruses.

One of the pre-eminent experts on PPE and industrial exposure in the U.S. is Stephen Petty. He advises large industrial companies on Industrial Hygiene (aka, worker safety) and testifies as a subject matter expert on class-action lawsuits, like that of Monsanto, regarding industrial PPE protocols - such as with dangerous chemicals – when inhaled particulate is life or death every day. In the presentation linked below he covers COVID specifically. While I’m sure you are receiving many messages like mine full of links and references, I cannot urge you enough to take the time to watch this video presentation. In his world where PPE actually needs to protect, masks are not even considered an option, nor is facial hair! [Stephen Petty - On PPE and Aerosols](#)

Included in this next link is over 150 mask studies with conclusions, in part, against the effectiveness of masks due to a variety of variables. I found while doing my own researching that resources providing a lot of information in one place was very helpful. [150+ Comparative Studies and Articles on Masks](#)

Lastly, on the science of whether masks work, I would challenge that after 2-years of continual and aggressive research, study, and retrospective review throughout the world, one should expect to see clear, overwhelming, and consistent data from the scientific community proving without a shadow of a doubt that masks provide a strong level of protection. That data simply doesn’t exist.

Here’s where common sense can help to fill in the blanks. Masking in schools is not widespread across the country. Only 15 states have previously had mandatory masking in schools, though that number is reducing by the day. IF masking students really is the lynchpin that has kept our state’s elderly and high-risk population safe and we simply cannot do without it, how is it there isn’t overwhelming hospitalization and death of the elderly and high-risk in the 35 states who didn’t mask students?

All masking science aside, in my opinion the most important topic to consider is the how masking and *the subsequent enforcement of masking* is having on our children. There is a steady outpouring of data showing negative consequences for our children, from faltering to outright failing test scores, startlingly high rates of referral to speech therapy in young learners, massive increases in anxiety, self-harm and depression among adolescents and teens, and a basic lack of excitement and connection to school communities. [The Educational Consequences of Masking Children](#)

However, I don’t think that linking study after study is needed to make this point. You are professional educators, and you know children! You know how they learn, and how they grow. You know how they respond to a smile. You know how they watch a teacher’s mouth move when they are reading aloud, or when hearing a new word. You know how children instinctively see another child’s frown and respond with kindness. Or how they see another child’s smile and return it with a smile of their own. Or how children see someone react poorly to an unkind word

they said, so they apologize, realizing the impact of their words on others. Without seeing that frown, they cannot know that impact. These little connections and the learning of social queues are truly the work of childhood, and that has been taken from them. Think back to your favorite teacher as a child – then imagine not knowing what that teacher looks like without a mask on!

And what about the students who are not okay, and who are blending in and disappearing into a sea of masks? What about the children who have anxiety? What about the students who are embarrassed to ask for help, or feel left out? Without seeing the emotions on their faces, how can we be sure they aren't slipping through the cracks? The data says they are. [JAMA Pediatrics – Mental Health & Wellbeing](#)

We have also taken our most innocent and easily influenced segment of the population, and over the last two years taught them that they should fear the air around them. They should fear their own breath. If they take their mask off, they could be responsible for infecting someone who dies. Or that their good friends or classmates could get them sick. Instead, they must keep their face hidden, not speak during lunchtime, and don't get too close to one another because that's just too risky and unsafe. This is not okay!

[I'm a Public School Teacher. The Kids Aren't Alright.](#)

[Masked Schoolchildren](#)

Though we are a new family to St. Pats, my father & his family all matriculated through parochial school, so many of the teachings we are seeing resonate deeply in my heart, including the fostering of strong community bonds. But that community collapses without smiles in the hallways, with parents unable to meet and know one another at events, without the hugs over a scraped knee on the playground, without the sarcastic smirks of middle school, and without the ability see someone's frown and help to make them smile. [The Strength of Weak Ties](#)

The residents of this state, and specifically the parents of school age students, have been understanding of restrictions, and, more recently, patient in waiting for policies to be adjusted in response to the data. But as the data continues to build against mask mandates with no changes to policy, we are asking you to push back on behalf of the health and education of our children.

We teach our kids to follow their morals, to do what's right even when it's hard, and to respectfully disagree when necessary. Now is the time for the school administration, and the leadership at the Seattle Archdiocese, to recognize that our children need us to stand up for them. It's time to respectfully disagree and stand up for what is right on behalf of the students in your care.

We are asking you to do better for our children.

We are asking you to do better for our communities.

We are asking you to do better.

Thank you for your time and thoughtful consideration,
Dani Kessler, 253-459-2449

P.S. And please – take the time to watch the Stephen Petty video on PPE linked above. It's worth all 26 minutes.

RE: 2-10-22 Vote on Mandating vaccines for children to attend public schools
Washington State Board of Health TAG:

I am writing as a concerned parent of 2 children, ages 5 & 7.
I strongly disagree with mandating Covid vaccinations for children.
There is both minimal data and statistics available on long term effects on our precious children. Currently, there is also no published literature on pediatric Covid-19 vaccine effectiveness in the K-12 school setting!

Also worth noting, Covid-19 is far down the list of causes of death for Washington children. Yet, suicide is the 3rd leading cause of death for our teenagers ages 15-19!! My children are 20x more likely to die in an accident or assault than from Covid-19.

If these vaccines are mandated for children to attend public schools I will, without pause, pull my children and homeschool them. This will affect both the bottom line of the state and local education budgets.

To whom it may concern,
I am a concerned citizen of Washington state as well as a mother to two young children. It has come to my attention that the Washington State Board of Health is considering making Covid-19 vaccines mandatory for school children in Washington. This is a very bad idea for many different reasons.

Children are not at high risk from dying of Covid-19. Covid-19 is different from other diseases that affect children such as pertussis, measles, mumps, rubella, polio, etc. Those diseases are very dangerous for children, whereas Covid-19 has an extremely low mortality rate for children. Far more children die from the flu or pneumonia than from Covid-19. In addition, the vaccines mentioned above have been in use for decades so there are decades of research and outcomes for parents to make informed decisions, which is not the case for the new Covid-19 vaccines.

The Covid-19 vaccines offer very little protection for the Omicron variant. By the time a new variant is discovered, it will have spread around the world, reached its peak, and be in decline by the time a variant-specific vaccine could be produced.

In addition, there are serious concerns about the long-term effects of the current Covid-19 vaccines. We simply do not know what the long-term outcomes of these vaccinations will be, especially in regard to myocarditis in young men and fertility in young women.

I support parents' rights to weigh the risks and benefits of the Covid-19 vaccines for their own children in consultation with their pediatricians. The state should not force or coerce children to receive these new vaccines.

Kind regards,

Margaret Weeks

Subject: Public Comment Regarding TAG Meeting

External Email

Hello,

I was able to listen to the second part of yesterday's meeting by the Technical Advisory Group (TAG) and heard the group debating about making COVID vaccination mandatory for school attendance. I hope everyone who is responsible for making this life-altering decision is able to ignore the politics and only look at it objectively as a question of health.

I'm couldn't listen to the first part, but in the second part of the discussion I heard the group discussing the risk of severe side-effects from a covid infection for children. Did the group also discuss the risk of severe side-effects from a COVID vaccination? To make this decision completely objective, you must recognize that there are risks to both COVID infection and COVID vaccination.

I also was concerned that the discussion compared "unvaccinated" verses "vaccinated" children. Not once did I hear anyone in the group mention unvaccinated children who have immunity from a previous infection. You must include native immunity in this discussion! Assuming that all "unvaccinated" children have no immunity is not a fair comparison. You must make this decision comparing "vaccinated" verses "non-vaccinated with previous infection" verses "non-vaccinated with no previous infection".

Again, I didn't listen to the first half, so these points might have been discussed before I joined the webinar. However, I was disappointed that nobody mentioned them in the second half, especially right before the voting took place.

Please be as objective and fair as you can in the next meetings. Please discuss the risk of vaccination and discuss the role of previous infection.

I look forward to hearing the TAG include these points in the upcoming meetings.

Thank you,
Hailey de Paula
Washington Resident and Mother

Re: Technical Advisory Group to Consider COVID-19 for Inclusion in chapter 246-105 WAC
Feb 10, 2022 09:00 AM

Dear Board of Health Members,

I wish to state that the Board should NOT add Covid-19 vaccines to the childhood vaccination requirements for Washington State students. The Covid-19 vaccines have proven to be very ineffective against the Omicron variant and provide very little benefit. The Covid-19 vaccines provide no benefit in terms of reducing transmission of the disease.

Furthermore, Covid-19 has proven to have a very small adverse impact on children's health. So there is very little legitimate reason to support Covid-19 vaccination mandates for children.

The Covid-19 vaccines have been shown on VAERS to have an extremely high adverse reaction rate as compared to all other vaccines combined over the last 30 years. In particular, VAERS data shows an extremely high rate of myocarditis and pericarditis as compared to all other vaccines over the past 30 years. The long-term adverse reactions to Covid-19 vaccines is not yet known and will not be known for many years to come.

To summarize, Covid-19 vaccines are neither safe nor effective for our children. These vaccines should NOT be required by the BOH to be included in the childhood vaccination requirements for school entry.

Thank You,

Earl Roger Noar

Subject: Please vote NO on Vaccine Mandates for School Age Children

External Email

Dear WA Board of Health: Keith Grellner, Tom Pendergrass, Elisabeth L. Crawford, Temple Lentz, Patty Hayes, Fran Bessermin, Bob Lutz, Umair A. Shah,

I am writing you today as a concerned parent that is vaccinated and who has three children ages 17, 15, and 12 years of age. I know yesterday's vote does not constitute the final decision of mandating the COVID vaccination for all Washington kids to attend school and I hope that you have not already made up your minds before you consider ALL the evidence from every corner of the medical community.

We have made the decision as a family to not vaccinate our kids. This decision was based on direction of our kids pediatrician and my primary care doctor as well as the fact that our entire family has had COVID and therefore natural immunity. On top of that, we had to consider two of our kids food allergies and one of our kids autoimmune disease. While the current understanding is that the vaccine will help lessen the severity of the virus in a portion of the population, the vaccine has shown little benefit to children and the risks far outweigh any reward.

Please consider the following studies and you will agree that this decision should be up to the individual families to decide.

- The EU is currently investigating reports of menstrual disorders after mRNA COVID shots.

Myocarditis following mRNA vaccination against SARS-CoV-2, a case series

mRNA COVID-19 vaccines have emerged as a new form of vaccination that has proven to be highly safe and effective...

- Scotland: Unvaxxed were 13% of covid deaths in the last week. 87% of deaths were vaxxed. The most surprising is the rise of boosted, already 58% of deaths and growing. It is just not accurate to say that the Pfizer vaccine protects against severe cases.

- In the UK the current CoV2 Infection rate shows a much higher growth rate for the vaccinated (+29% growth) vs the unvaccinated (+24% growth).

- Israel: Incredibly high Covid Vaccination rates, mostly with mRNA vaccines. Israel is among the world's most vaccinated countries. More than 90% of the Israeli adults have been vaccinated with the Pfizer/BioNTech vaccine. Almost 80% have received a booster dose, and several hundred thousand have gotten a fourth dose. YET Israel had more coronavirus infections in the last week than in all of 2020, before, they began mass mRNA vaccinations.

- After not recognizing natural immunity, and even saying it was weak and inferior, the CDC has admitted that it offers better protection than Covid 19 vaccines.

CDC Finally Admits Superior Natural Immunity to SARS-CoV-2

After long lying that natural immunity is weak and inferior, the CDC has finally admitted it offers better prote...

- Vaccine A was made to stop Virus A. Virus A mutated to Virus B. Vaccine A does not stop Virus B. Health boards mandating mass vaccination of an ineffective vaccine will not help. I completely understand the desire to do something but please don't enact a policy that could do more harm than good.

There is honestly so many red flags that it would be negligent for this board to push mandated vaccinations on school age children. Especially for a virus that kids have a 99.995% survival rate. It just makes zero sense to mandate vaccination after considering all the facts.

Thank you in advance for keeping our kids safe and voting NO on forced Covid-19 vaccinations.

Hello,

Please DO NOT implement a vaccine mandate for kids. We will NOT comply with a vaccine for our 11 year old.

We will explore alternative forms of education if vaccines are mandated in schools.

Thank you for your consideration.

Rodger Koefod

Chattaroy, WA

My reasons include:

* FDA has ONLY approved Covid vaccines for children under Emergency Use in children 5-11 and cannot be required or mandated, under law. It must be an individual's choice. Vaccine Status Discrimination is unlawful.

* Children have near zero risk of severe Covid-19 with a recovery rate of 99.997%

* 19,000 deaths reported from Covid vaccines, more than all other vaccines combined in 30 years

* Pfizer's data shows a 5x increased risk from fatal heart attacks among the vaccinated

* US Government reports 18,461 deaths+ 875,653 adverse reactions from the shot as of 11/5/2021

* Alarming rates of Myocarditis and Pericarditis are occurring in adolescents post-injection

* While healthy children don't die from Covid, they do die from myocarditis. The younger you are, the greater the risk of cardiac inflammation per VAERS

* There have been no long term studies on humans using mRNA technology in vaccines

* Our children are not government guinea pigs!

* Vaccinations are a private choice to be decided between Doctors and Parents

* Other nations, including the UK, have banned vaccinations of children declaring the benefit does not outweigh the risk

I am listening to the February 10, 2022 meeting and the 'data' being presented. The fact the much of what is being presented by 'experts' is based on 'assumptions' 'without data' is remarkably concerning.

A veterinarian making recommendations for childhood vaccination by utilizing the mixing data of various tests and presenting is as information is quite frightening. There were numerous other examples of her 'reporting' that was very, very concerning as well.

Your response to the hispanic woman regarding miocarditis and children dying from that was beyond heartless and grotesque as though any child's unnecessary death is merely a statistic! One death or any harm from this experiment upon humanity is too much.

At what point is the isolated, purified virus (you do not have this) used to determine that a 'case' is actually covid 19 and not some spun down partical of some virus or nothing at all? Also, how many of these 'cases' are counted multiple times?

The covid 19 injections are an experiment and it appears that you will likely move forward with this recommendation to add this to the school vaccination schedule so that the pharmaceutical companies cannot be held liable for the injuries, maiming and death that they are causing. These are crimes against humanity and you will at some point be held responsible.

This has gone WAY too far. Covid is a flu that will act as such going forward. There is no need of any group to be required a flu shot, let alone our precious children. Leave them alone...hands off of our children.

This has never been an emergency, and still isn't. I will just homeschool my children, which is just fine. For those that don't have that option, how horrible of you to discriminate against kids that do not spread, are not at risk, are not a threat. Pick a new topic, but get your hands off of our childrens bodies and minds.

Subject: School vaccine mandates

External Email

Dear Board of Health,

I am a fully vaccinated physician. I have seen firsthand that the vaccines indeed lower the severity of illness among those who become infected with COVID. That said, please do not mandate the COVID vaccine as a requirement for school attendance. It's very apparent that parents are not comfortable having their young children, particularly those under age 12, vaccinated at this time. Parents whose children aren't vaccinated will very likely withdraw their children from the public school system here in Washington. I hope the state is prepared for that blow.

I have reviewed the BOH requirements for school vaccines. I know I've written you about this before and included citations, so I'll forego those and recap my previous statements. The COVID vaccine meets none of your requirements. It does not prevent transmission. Even boosted individuals are infecting others. It's similar to a flu shot, which similarly does not prevent transmission. It should be noted that flu is far more dangerous to children than COVID and that vaccine is not required to attend school.

We are uncertain about the long term effects of the COVID vaccine. This vaccine has been known to cause rare but very serious side effects in young people, such as myocarditis. I have seen enough side effects in my practice to know that I'm not comfortable with this being administered to healthy children. Young people seem to be sicker from this vaccination than from the virus itself.

We also know that COVID cannot be eradicated. It's a zoonotic virus, and has been shown to infect zoo animals, deer (30% of deer in Ohio are positive), and I read that omicron may have originated from a rodent. There was recently a COVID outbreak among 25 people at a research station in Antarctica, all of whom had tested negative and had been vaccinated/boosted prior to arrival. Cruise ships with fully vaccinated staff/passengers have had outbreaks. Therefore, mandating this vaccine for school children will not impact the trajectory of the pandemic in any way. The virus will continue to mutate and will likely evade vaccines.

Along those lines, how many shots will kids need? What will the definition of "fully vaccinated" be for our kids? All the current vaccines are against the wild type variant from early 2020. That's another reason why mandating an out-of-date vaccine for our kids is illogical.

COVID still does not cause significant morbidity and mortality among healthy children. Cases and hospitalizations have risen but those are due to kids being admitted "with COVID" versus "due to COVID." I've spoken with staff from Seattle Children's who verified this. Your guidelines state that mandated vaccines for school should prevent illnesses that cause severe disease in the affected population. Measles, mumps, pertussis, and tetanus are examples of such diseases. COVID is not.

This vaccine is clearly not accepted by the public. In King County, just 55.4% of 5-11 year olds have received a first dose. 46.5% have completed the series. 81.4% of 12-17 year olds have received a first dose while 75.7% have completed the series. In the state of Washington, 34.1% of 5-11 year olds have initiated vaccination and just 27.0% have

completed it. 58.8% of 12-15 year olds have initiated the series, 53.0% have completed it. 66.4% and 60.5% of 16-17 year olds have started and completed the vaccine series, respectively. This does not reflect a general acceptance of the vaccine among Washingtonians in my mind, and I strongly doubt that a mandate will increase these percentages by a great amount.

Mandating this vaccine will pose a significant burden on schools as students pursue exemptions, which must in turn be tracked by their schools. Schools will need to monitor which students are and are not vaccinated. Many parents view this vaccine as a burden, and I want to reiterate again, WILL withdraw their students from schools in this state. The number of students leaving our schools will dwarf the 55,000 who've already left.

We're at the point in the pandemic where vaccines have been available for high risk people for quite some time. Every person in the state must assume their own level of responsibility for their risk level and decide for themselves whether they choose to be vaccinated. If they choose not to do so, they must deal with the consequences of their decision. The vaccines, like N95 masks, protect the individual but not necessarily those around them.

Do the right thing and do NOT mandate this vaccine for our school children at this time. Revisit the issue in a few years after we've had a chance to conduct further studies and review the data.

Thank you for your consideration.

Sincerely,
Sarah Hiam

same mRNA and lipids but different inactive ingredients compared to the vaccine that has been used under EUA in individuals 12 years of age and older and that has been studied in clinical trials." Source: p. 2 <https://www.fda.gov/media/153717/download>

To the Board,
Please do not vote to require the COVID vaccine for education. This is a controversial vaccine, it did not stop kids from getting COVID, and they have minimal risk of hospitalizations. The vaccine will not be effective against newer strains. It's like requiring a flu shot. If this is voted in, you will see even more families move from this very restrictive state.

Thanks for considering common sense. Rachel Freiheit

Subject: The Immunization Schedule foe Children

External Email

To All of the BOH members thank you for taking the time to read my statement of truth. My name is Chris Calkins and I have been a Registered Nurse in Washington State for over 25 years. 20 of those years have been in service of profoundly disabled children who have been injured by vaccines or had spinal cord injuries resulting from accidents. I have been studying Vaccines and other causes of Cancer for over 5.5 years after losing my wife to Cancer 1/17/2016.

I have read the ingredient inserts for the multi dose Flue Vaccines, MMR and DTaP as well as the Master Vaccine Ingredient List. The ingredients are jaw dropping at best and poison as a rule. You can find the master list at StopTheCrime.net.

Here we go with easily verifiable facts. In 1980 1 in 10,000 live births would develop Autism. Today 1 in 37 -1 in 50 live births develop Autism. What has changed? When I graduated high school in 1985 we young people received a max of 8 Vaccinations. In 1989 there was a drastic increase in the CDC's Vaccine Schedule that has only increased over the years. I believe it was in 1986 that Congress voted in favor of not holding the Vaccine Manufacturers liable for any injuries or deaths that resulted from their Vaccines. Wow!!! Now days young people who are fully vaccinated will have received 72 shots of poison into their body's and brains by the time they graduate.

All multi dose vaccines contain Thimerisol "a neuro toxin" as a preservative. Thimerisol contains 50% Ethel Mercury which is 50 times more Neuro toxic than Methel Mercury that we ingest or breath in from the atmosphere from coal plants. When combined with Aluminium they are a thousand times more neuro toxic. The EPA states that two parts Mercury per billion is safe and 200 parts per billion is hazardous waste. There are 50,000 parts per billion of Ethel Mercury in every multi dose flue shot as well as Aluminum and Sorbate 80. Sorbate 80 opens the blood brain barrier so the Aluminum and Mercury can go right in and reek havoc on the developing fetuses brain and other organs.

The broken Allopathic medical system I work for thinks it is OK to inject this biohazard into pregnant women and their developing fetus. In reality this a crime against Humanity and this practice needs to stop or by 2032 the legitimate science shows that 1 out of every 2 girls and 80% of the boys born will develop autism or some other disabling neuro degenerative proplem.

I could go on and on, but I will give you quarter up to the experimental mRNA, gene altering, bioweapon, clot shot that has murdered over 23,000 Americans already according to the CDC's VAERS. These experimental mRNA shots have never made it through any animal trials without killing most if not all the test animals. So this time they skipped the animal trials and went straight to experimenting on human beings. How f---ing evil!!!!

So my professional recommendation is to halt this experiment immediately! Do not even think about killing our kids with this unsafe, ineffective Graphine Oxide, spike protein contaminated or spike protein producing bioweapon.

Rather than focussing on jabbing innocent children and gullable adults you all may want to focus on your liability regarding this world wide genocide attempt by Bill Gates and his other Satanic, Pedeophile, Globalist consperitors. Anyone who has pushed or promoted this bioweapon will be held liable in this life and the next. Stop what you are doing and

repent. Ask God for forgiveness and ask the citizens of Washington State for forgiveness.

Thank You for your time and consideration of this insightful message. I wish you all well in your deliberations. Take Care.

In Purpose
Christopher L. Calkins RN

I OPPOSE the use of illegal force to detain ANY family OR children. This is insane!! Have we not learned about the holocaust and internment camps? What you are trying to pass is illegal and unconstitutional! There are thousands of us trying to leave comments on this matter and we will continue. I will be on every zoom or meeting you have throughout this charade! I will comment every time because this is against Washington Constitution!!

There are studies that show this type of agenda does not reduce transmission whatsoever. I would love to hear your thoughts on the vaccinated still being able to get Covid and spread it. According to even more studies this plandemic didn't get out of hand until the experimental shots were starting to be administered.

Forced mandates opposes our rights as free Americans- it also disrupts an active healthy immune response. Many studies now conclude that the highest vaccinated areas are highest for deaths and risky health concerns. Freedom of choice should never be infringed upon.

THE PEOPLE HAVE SPOKEN AND WE THE PEOPLE SAY NO!

WE THE PEOPLE SAY NO!

Just in case you forgot, WE the PEOPLE saw the WAC 246-100-040 on the agenda you tried to hide.

I would like to express my extreme opposition to implementation of a COVID 19 vaccine requirement for schools in Washington State.

* Almost 100% of kids don't suffer from severe COVID. In fact, many have no symptoms at all. Thus, they may have already had COVID which is another excellent reason not to get the vaccine.

* The World Health Organization (WHO) has announced that young people should not take the vaccine.

* A concerning number of young people, especially those under 30, are suffering from myocarditis (heart inflammation), blood clots, low platelets and more following COVID-19 vaccination.

* The risks of COVID-19 vaccination adverse outcomes certainly outweigh the benefits to children and young adults who are considered low risk populations.

* Parental rights to make independent, informed decisions regarding their children's medical interventions, including vaccines, are being threatened.

* Some scientists have raised concerns that the safety risk of COVID-19 vaccinations have been underestimated. As of January 28th 2022, there have been 1,088,558 vaccine injuries including 23,149 deaths following COVID-19 vaccination.

* Clinical trials in children and young adults are ongoing and will not be completed for at least one year.

* Not a single published study has demonstrated that patients who have had a prior COVID-19 infection benefit from the vaccination.

Please do not require Covid-19 vaccine for school .

Sincerely,

Mari H

I oppose COVID shots for children, because:

- 1) the shots are proving to be ineffective, potentially even predisposing the recipient to COVID-19 infection;
- 2) the shots themselves are proving to have serious adverse effects, including potential death;
- 3) children are at lower risk from COVID-19 than from adverse effects from COVID shots.

I have a vaccine-injured friend whose injury, though not fatal, is life-altering. The government has left her completely on her own to try to deal with it.

Speaking with someone in your office today, she let me know that the WA State Board of Health doesn't have anything to do with assuring vaccine safety or providing people who do get injured with any form of support. You just decide about whether to mandate it.

The situation is as follows:

- 1) no functioning safety net
- 2) known potential harms from the vaccine
- 3) tiny risk of serious outcome from covid for kids
- 4) this isn't a vaccine that prevents infection or transmission
- 5) lots of disease-conferred immunity out there already and well as the opportunity to voluntarily vaccinate
- 6) therapeutics are now available
- 7) your office takes no responsibility if someone gets hurt

A WA State issued mandate was responsible for the death of Jessica Berg Wilson last fall.

<https://www.oregonlive.com/news/2021/10/seattle-woman-who-grew-up-in-portland-becomes-4th-in-us-whose-death-is-linked-to-jj-covid-19-vaccine.html>

Subject: Covid shot for children

External Email

Dear Board Members,

We have two children in Washington schools. Our children have natural immunity from the virus. We are not comfortable vaccinating them when we know their natural immunity is more effective. The current shots were not put through proper safety trials. The truth is these shots are irreversible and we do not know the long term effects the spike proteins have on our bodies. The cases of myocarditis arising in boys is alarming. The changes in women's menstrual cycles are also alarming. We are aware of the problems covid 19 can have in people but our children have not been as affected in the same way. It doesn't make sense to 'protect' them from something that really isn't a danger to them. There are so many other causes of death in children that lead deaths above covid. Suicide for example took over 2,200 lives last year. Covid took around 100 lives and we do not know if they died with covid or from covid. We are not willing to experiment with our children and will remove them from public school if this shot becomes mandated.

Thank you,
Jamie Peterson

Subject: Covid Vax requirements

External Email

Good evening,

I am writing in to have my voice be heard regarding making the covid 19 vaccine a requirement to go to school.

First off, I am against it. These mandates have been struck down as unconstitutional by the Supreme Court. Yes I understand other vaccines are required, but they all have been out there with A LOT of research behind them. Even when the Polio vaccine came out it wasn't required for 5-7 years AFTER it's discovery. Can you show me a 5-7 year study on this vaccine? The answer is no, you can't.

Public schools are already struggling with enrollment because of parents being fed up, NOT fear of covid. Requiring the experimental shot in our kids will be the straw that breaks the camels back.

My husband and I both had covid over Christmas, we both are vaccinated against covid our son is not. Our son NEVER GOT COVID with 2 parents in the house infected with it.

My sons school currently has kids who are vaccinated against covid, out with covid.

Obviously, it doesn't do its job.

Please, leave our kids alone. We can make the best decisions for our children, that's why we're the parents.

Thank you for your time,

Crystal Karl

Regarding the 2/10/2022 zoom call, why are there slides that say College of Veterinary Medicine? This doesn't give me a lot of confidence to the validity and relevance of the information provided if the presenter is a vet.

The data of the deaths of children from Covid is severely lacking. What were their comorbidities? How were they treated as in what medicines were administered? What did their autopsies reveal?

If children are the least effected in our population, why are we wasting time and money discussing a vaccine that doesn't prevent transmission and poses risks to heart health? Public health should be focused on protecting the elderly who are the most at risk. The long term side effects are not known for the vaccines. Our children's future is not worth the risk.

Subject: Oppose adding the COVID injection to the childhood vaccine schedule

External Email

Dear directors of the Washington State Board of Health,

The Washington State Board of Health's "Technical Advisory Group (TAG)" has voted to recommend updating the childhood vaccine schedule to include COVID-19 mRNA for children.

"A majority of TAG members voted that the criterion [advocating for this update] was met, but some members indicated uncertainty and noted that more evidence was needed."

Please OPPOSE this action. The coronavirus has morphed, as coronaviruses do, and the current injection no longer works.

Moreover, it is still experimental and there are no long-term studies to determine what it will do to growing bodies of children.

From Dr. Robert Malone, inventor of the mRNA genetic therapy (aka COVID vaccine):

Regarding the genetic COVID vaccines, the science is settled.

They are not working to prevent infection, replication, and spread to others, and they are not completely safe. In our daily lives, with our friends, with our families, with our co-workers we all know that this is true.

They are not completely safe, and the full nature of the risks remains unknown. In contrast, the natural immunity which healthy immune systems develop after infection and recovery from COVID-19 is long-lasting, broad, and highly protective from disease and death caused by this virus.

Now we have Omicron. These vaccines were designed for the Original Wuhan strain, a different virus. These vaccines do not prevent Omicron infection, viral replication, or spread to others, and there are data suggesting that they make the risk of infection and disease higher.

These genetic vaccines are leaky, have poor durability, and even if every man, woman, and child in the United States and Canada were vaccinated, these products cannot achieve herd immunity and stop COVID.

If there is a risk, there must be a choice.

This is the fundamental bedrock truth of modern bioethics.

All medical procedures, vaccines, and drugs have risks.

All of us have the right to understand those risks, and to decide for ourselves whether we willingly accept those risks.

To deny this is to deny human dignity.

Evil has many roots. A willingness to deny human dignity is one of the largest. In our hearts, and in our souls, we all know this is true.

Regarding our children.

Although I am a physician who is deeply committed to the Hippocratic oath, I am above all a husband, father, and grandfather. I ask that you allow me a moment to speak to you about our children, and about our fundamental responsibility to protect them.

If nothing else, we must nurture and protect our children. This is job one. It is your job. It is my job. It is not their job to protect us. And during the last two years, our society and our public health response have failed to protect them. Many things that our public health system has demanded we do to our children has directly harmed them.

Self-harm, suicide, and drug abuse in children have taken off all around the world. Anxiety, bullying, intimidation, coercion have become the norm. Measured IQ at the very young has dropped. Fundamental childhood delays are easily measured. And physical damage to children from injecting them with genetic vaccines in order to protect the elderly from a virus is occurring.

As a parent, it is ultimately your responsibility to protect your children. If they are harmed by these genetic vaccines, you are the one that will have to take care of them. And you will carry that burden for the rest of your life and theirs. On average, between one in two thousand and one in three thousand children that receive these vaccines will be hospitalized in the short term with vaccine-caused damage. Only with the passage of time will we know what long-term damage may occur. The vaccines do not protect our children from becoming infected with Omicron and do not prevent infected children from infecting others. In contrast, the pharmaceutical companies and the government are almost fully protected from any damages these products might cause to them. If your child is damaged by these vaccines, you will be left alone with both your grief and the burden of care.

These genetic vaccines can damage your children. They may damage their brain, their heart, their immune system, and their ability to have children in the future. And many of these types of damages cannot be repaired.

End of quotation.

Take this to heart. These shots only harm. Don't force them on children.

External Email

To whom it may concern,

Please do not make the CoViD vaccine a requirement for public schools in Washington state. A choice for that shot needs to be up to the parents. Further, there is not enough science to back up this requirement. It does not stop one from acquiring the virus. It does not stop one from spreading the virus. There are ZERO long term safety studies.

It would actually be more effective as a board of health to recommend vitamin D, proper nutrition, exercise & rest.

If you vote this CoViD vaccine through as a requirement, you will see a massive uprising & thousands of children will be pulled from the public school system to homeschool. Mark my words.

Thank you,
Valerie Raschko

I'm writing to you as a Washington resident, tax payer, and concerned parent.

My husband and I are very opposed to Covid vaccine. We will unenroll our children from public school and will most likely most from this state due to your decisions to keep this state in a state of emergency and mandate these vaccines.

Before I conclude, this panel of professionals will/should be held accountable for your recommendations for this vaccine for school age children ages 5-18....are you prepared to be solely responsible for the fallout of your decisions for the numerous injuries and deaths of children across this state?? Their blood will be on your hands and the hands of the governor!!

Very concerned citizens,

Wade and Shirley Pettigrew

Dear Board Members,

Dear Board of Health and TAG Members

The mRNA and DNA COVID-19 shots are unlike any other vaccines given before. The global push for their uptake and the volume of reported adverse reactions and deaths following administration are unprecedented. The hundreds of thousands of medical and scientific professionals globally standing up and speaking out against the response to COVID and to the shots is unprecedented, as is censorship on scientific debate. When this nation's top doctors and scientists are being kicked off of social media platforms and being fired from their jobs for daring to speak on their findings and science critical of current policies, it is clear something has gone terribly wrong.

- The CDC acknowledges the shots do not prevent infection or transmission and that any protection afforded fades rapidly, yet they refuse to abandon their push for increased uptake and boosters, and they refuse to promote existing early treatment protocols or acknowledge the mountain of evidence of the superior safety and effectiveness of naturally-acquired immunity. "Fully vaccinated people who get a Covid-19 breakthrough infection can transmit the virus, CDC chief says," CNN

Health<https://www.cnn.com/2021/08/05/health/us-coronavirus-thursday/index.html>

<<https://gcc02.safelinks.protection.outlook.com/?url=http%3A%2F%2Fwww.cnn.com%2F2021%2F08%2Fhealth%2Findex.html&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cc0e6cf15504442ba705b08d9edbd>

- Children and young adults are at extremely low risk of mortality from COVID-19. When one subset of the population (children) carries a high risk for injury from an antigen but low risk for injury from the disease, we must consider the mandate of such an antigen to be unethical. Bhopal, "Children & Young People Remain at a Low Risk of Covid-19

Mortality," The Lancet Children & Adolescent Health, Correspondence, Vol 5, Issue 5, E12-E13, May 1, 2021. [https://www.thelancet.com/.../PIIS2352-4642\(21.../fulltext](https://www.thelancet.com/.../PIIS2352-4642(21.../fulltext)

- Many medical professionals are speaking up and sharing their experiences of working in hospitals right now as they care for patients who are coming in with what they can associate to vaccine reactions. "More VC Nurses Blow Whistle on 'Overwhelming' Numbers of Heart Attacks, Clotting, Strokes," The Conejo Guardian, December 14, 2021. <https://conejoguardian.org/.../more-vc-nurses-blow...>

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ffacebook.com%2F1.php%3Fu%3DVC-nurses-blow-whistle-on-overwhelm%253Ffbclid%253DIwAR2PnVHRPgSXH_Bd-b30c9-87jEgB8lTeieOMaMemsTU0wejrf85Zf_NNag%26h%3DAT2006lj3Jm5EG7p-j9eNwI7IooBVcvwzLEfWGdJw_EnU9rKb6gF_ZbO1dBIA_Skafkde49Usnlq1VYkvgH8v8JAh1ezF68q4xZhSextvnr%26c%5B0%5D%3DAT1OCHie_tKcp7AmzVzFC4oLR3rWBAFxAhgpoy42bejscl_MgvEQnWMQY5KVTXe7qiH1DwYc3xK4CmYwCbwxlCsSS8ifH4nv_IRXbMPzXpc05HG6q51qZ220vvTZB0WYaiJrAUlu60-27pe2hj0r48OzS9_uB9p2X&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cc0e6cf15504442ba705b08d9edbd

- Individuals are sharing their own experiences with their health while taking the COVID shots. U.S. Senator Ron Johnson hosted a round table on November 2, 2021, to allow these individuals to tell their stories. <https://childrenshealthdefense.org/.../nov-2-sen->

ron.../

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ffacebook.com%2F.php%3Fu%32-sen-ron-johnson-cdh-covid-vaccine-injuries-federal-mandates%252F%253Ffbclid%253DIwAR1EsrSxyWGG0NRNxQ9UFTin8LYxDrEk034cqXOsL0SZz6qNniutdh7no-JALhzx4FR8n100dhqG1FZCFqcknCCdMoeDoEF7F2RtmjYuK-iF5M%26__tn__%3DR%5D-R%26c%5B0%5D%3DAT1OCHie_tKcp7AmzVzFC4oILR3rWBAFxAhgpoy42bejsi_MgvEQnWMQY5KVTXe7qiHDwYc3xK4CmYwCbwxlCsSS8ifH4nv_IRXbMPzXpc05HG6q51qZ220vvTZB0WYaiJrAUlu60-27pe2hj0r48OzS9_uB9p2X&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cc0e6cf15504442ba705b08d9e

- Most importantly, the long-term effects of the vaccine trials in children are unknown. Deaths in children are a fraction of the percentage of deaths in all other age categories. Kostoff, "Why are we vaccinating children against COVID-19?" Toxicology Reports, Vol 8, 2021, Pages 1665-1684, <https://doi.org/10.1016/j.toxrep.2021.08.010>

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ffacebook.com%2F.php%3Fu%3v1qzX0QsIUenE%26h%3DAT22aZ25pSfrWOI19TYUYIZGKjO87lwrA-7E1_83HU33d_SrhIbzbBymnUpxfzuDH35GeG62FBAAyTQBDvF33IDTkoot-F2k7g0dH0Ii8lXJUbmHKHldkdbmkWIXaC0agkNxUw%26__tn__%3DR%5D-R%26c%5B0%5D%3DAT1OCHie_tKcp7AmzVzFC4oILR3rWBAFxAhgpoy42bejsi_MgvEQnWMQY5KVTXe7qiHDwYc3xK4CmYwCbwxlCsSS8ifH4nv_IRXbMPzXpc05HG6q51qZ220vvTZB0WYaiJrAUlu60-27pe2hj0r48OzS9_uB9p2X&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cc0e6cf15504442ba705b08d9e

The COVID-19 shots DO NOT fulfill the criterion of BIOETHICS and DO NO HARM principle. It is incomprehensible that the Board would even consider such a requirement with products that cannot prevent infection or transmission.

In addition, as you have heard from public comments during the board meeting, parents of Washington are extremely protective about giving their children an unnecessary medication which doesn't protect, prevent, or cure a disease that kids have a small percentage of danger from. When listening to a TAG board's meeting yesterday, it was unclear to everyone why a small percentage of problems from covid is taken into consideration but a similar percentage of problems from vaccines is glossed over and ignored. Every child has a right to happiness and health, by mandating this you will be taken this away from them and history will not forget.

Thank you,

Julia Kulyk

Ladies and Gentlemen,

As a concerned parent, I write to say, making the covid vaccine a requirement for school, is not in the best interest of our children. There has not been enough time to see the long term affects of using mRNA technology. To even consider risking our children on something experimental is beyond my comprehension. It is a virus that has already changed multiple times, requiring 3-4 shots, that is insane. Vaccinated or unvaccinated, you can have covid, you can spread covid. It does NOT stop the spread. The risk for serious illness is small in children. It is beyond ridiculous that our state is even considering this. This is not about our children. It's about power in the wrong hands. Too much power given to the wrong people. Look at the Data. High vaccination rate does not equal lower covid cases. It's everywhere you want to look, if you are paying attention. Do not make it mandatory to attend school. Our schools have lost so much already. This will be a bigger blow to the education system. You will loose so many students.

Sincerely
Christy

To whom it may concern at the WA state board of medicine.

I listened to your zoom meetings yesterday. I am appalled at how the information shared was only to convince the few random people you had voting. What qualifies these voters to make decisions on behalf of our children. There have been so many adverse effects due to these vaccines, and this information wasn't shared! You are wanting to experiment on the most vulnerable members of our society who do not have the means to speak for themselves. If you move forward with this vax mandate for school aged children, you will cause an uprising like you have never seen before. The vax should be optional, just like the flu shot! If you move forward with this vax mandate, you will be held accountable for CRIMES AGAINST HUMANITY and you will ROT IN HELL for it! You should all be removed from your jobs for the crimes you are about to commit! I am sickened at the thought that people like you have the ability to choose what we put in our bodies! How sad for you that you WILL BE HELD ACCOUNTABLE IN THE EYES OF OUR LORD for forcing our children to be your lab rats! Not going to happen!

I am truly disappointed in YOU PEOPLE for even considering vax mandates on children. Be your own lab rat!

Thank you for your time!

attachments\EA7A7FD3084249C1_JAMA article on Myocarditis with vax.png

External Email

Hello,

I attended your meeting last week about having the COVID vaccine on the mandatory schedule for school kids. I was concerned about your disregard for the kids who got myocarditis from getting the COVID vaccine. Someone commented that myocarditis is more common than we think (paraphrasing). I would like to pass along important, new information that will, hopefully, have you reconsider having these vaccines on the mandatory schedule for school kids. JAMA came out with an article on Myocarditis cases after the vax. Attached is the title of the article for all to look up.

I am also attaching a schematic with the rates of myocarditis within 7 days of a vax compared to "expected" rates of myocarditis (per age groups). The "expected" rate is in orange vs the rate of those vaxed are in blue.

Please look over this study with a child's health in mind - not anything else! No amount of money or fame or anything else can bring back a dead child.

I am beyond angry that covid vaccines for kids are even being considered to enter school. With no studies on long-term side effects of these basically experimental vaccines, the risk to children and especially young teenage boys is far greater than covid. Besides that, children have an almost 100% chance of recovery from Covid. This is not a childhood disease! I can tell you with absolute certainty there is NO WAY my healthy teenage son is ever getting another one of these Covid vaccines.

Issaquah, Bellevue, LakeWA School Districts, OSPI, WA State Education, WSBOH and King county commissioner.

If you still have some conscience left in you, after watching that Super Bowl, you will act upon and immediately remove the mask mandates from the schools. You might think you have helped the children by masking them but have no idea how badly it has affected the children and their health. Enough of big talks and researching on this topic, it's time to act and the best action is to remove mandates. If some parents still feel they need masks they can send their kids with masks on and no one will stop them. But parents like us who strongly believe in science and have enough research to prove that masks don't work demand you to end this mandates and now.

Thanks and Regards,
Lokesh Marenayakanapalya

Hello,

I'm writing this to request that you do NOT mandate the covid shot to children, its not safe. There are NO long term studies on the safety.

How can ANYONE say the benefits outweigh the risks, when you don't even know what the true risks are?

What if your child has an adverse reaction and dies? Are any of you willing to sacrifice your OWN child for "The greater good?" If the answer is no, then how can you morally and in good conscience sacrifice someone else's child?

If you go forward with this, any child's death or disability from this shot will be a mark on your souls.

Please do not do this to our babies.

Thank you for your consideration,

Michele Elliott

Subject: Comments on 2/10/22 Webinar

External Email

These are some comments and questions to the group from this webinar.

- * Why are you considering vaccinating kids, or anyone, with a vaccine that was made for COVID 19, the original virus, not the 9th variant.
- * Case count doesn't always relate to mortality, especially in children. The current rise in the case count can lead to herd immunity. Look at Sweden.
- * We have failed as a society because we do not have an early treatment option. (Vaccine is a prevention) We just wait till the person gets really sick and must be admitted to the hospital. Early treatment works, however, does not make any money for the drug companies so it's vilified. Why can't we have both? Have an OPTION to get a vaccine, NOT a scheduled vaccine.
- * Coming off the above point, What is the Board of Health doing to promote healthier lifestyles???? It is well documented that people, children or adults, who have comorbidities do worse. Why are we not being told to eat healthier, whole foods, overall get better nutrition, get exercise, get more sleep, get help for mental health. We have missed the boat! All there is to do is mask, gel your hands and get a shot. NOT ENOUGH!!! God made our bodies to heal itself if we do the right things for our body.
- * What is the safety of the vaccination in 10 years for kids (or anyone else)? Generally, vaccines take 10-15 years for vaccinations to get to the public. There has NOT BEEN ENOUGH time to test these vaccines, AND, we want to give them to our children? As a momma bear, I don't think so!!! People, in general, kids in particular are not falling over dead in the streets. Kids, especially, have the lowest rate of morbidity and mortality for COVID. What is the benefit of a vaccine that we do NOT have long term information on?

My response is NO for both #5 and #6

Dear DOH members,

I am a concerned parent. Regarding medical expertise or first hand experience I have little to give to you other than I'm witnessing several of my vaccinated friends coincidentally experiencing heart issues, and menstruation issues post vaccination.

But, I do want to remind you of the VAERS data base, the WHO data base

(<http://vigiaccess.org/>

<<https://gcc02.safelinks.protection.outlook.com/?url=http%3A%2F%2Fvigiaccess.org%2F&data=04%7C0>), and the testimony of the whistleblower military doctor who called attention to the military data base around these vaccines. Please consider these statistics.

VAERS

"VAERS Data Confirm Myocarditis Risk After mRNA Vaccine"

<https://www.physiciansweekly.com/vaers-data-confirm-myocarditis-risk-after-mrna-vaccine>

-21,382 deaths

-36,758 permanent disabilities

"Note that the total number of deaths associated with the COVID-19 vaccines is more than double the number of deaths associated with all other vaccines combined since the year 1990."

Do you SERIOUSLY want to subject our children to this risk when healthy children have almost ZERO chance of dying from covid. PLEASE SAY NO

WHO (vigiaccess) ADR database

Covid-19 vaccine TOTAL NUMBER OF RECORDS BE RETRIEVED. 3,206,437. (Safe??? I think not)

For the skeptic, compare that number to the results for Ivermectin (the taboo drug)

Ivermectin- TOTAL NUMBER OF RECORDS RETRIEVED 6,169.

Also, consider the results for Ivermectin are from 1992 to present where the results from the Covid-19 vaccine are from the past 13 months!

See for yourself. Go to <http://vigiaccess.org/>

<<https://gcc02.safelinks.protection.outlook.com/?url=http%3A%2F%2Fvigiaccess.org%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C5f4b7987a707472c643608d9edecfee4%7C1>>
and search for covid-19 vaccine and read the results. It's astounding.

Military - Defense Medical Epidemiology Database.

Since the rollout of the vaccines:

- 300% increase in cancer diagnoses
- 300% increase in miscarriage
- 1000% increase in neurological issues
- 269% increase in myocardial infarction
- 291% increase in bells palsey
- 156% increase in congenital malformation
- 471% increase in female infertility
- 467% increase in pulmonary embolisms

Listen to this military medical doctor testify under oath at the US Senate hearing

<https://rumble.com/vt62y6-covid-19-a-second-opinion.html>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Frumble.com%2Fvt62y6-covid-19-a-second-opinion.html&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C5f4b7987a707472c643608d9edecfee4%7C1>>

Considering all the data that shows there are significant risks, I believe, and the majority of my community agrees with me, that if you mandate these experimental shots to anyone you all are responsible for every death and every injury and should be held accountable for crimes against humanity.

Thank you for your time,

Suzanne Northcutt

I strongly urge you to not require covid vaccinations as a requirement for our children to attend schools.

*

Other nations, including the UK, have banned vaccinations of children declaring the benefit does not outweigh the risk

* FDA has ONLY approved Covid vaccines for children under Emergency Use in children 5-11 and cannot be required or mandated, under law. It must be an individual's choice. Vaccine Status Discrimination is unlawful.

* Children have minuscule risk of severe Covid-19 with a recovery rate of 99.997%

* 19,000 deaths reported from Covid vaccines, more than all other vaccines combined in 30 years

* Pfizer's data shows a 5x increased risk from fatal heart attacks among the vaccinated

* US Government reports 18,461 deaths+ 875,653 adverse reactions from the shot as of 11/5/2021

* An estimated 8% of the US Population (including kids) is at risk of anaphylactic shock to Covid-19 vaccines with PEG

* Alarming rates of Myocarditis and Pericarditis are occurring in adolescents post-injection (similar to a heart attack)

* While healthy children don't die from Covid, they do die from myocarditis. The younger you are, the greater the risk of cardiac inflammation per VAERS

* There have been no long term studies on humans using mRNA technology in children

* Other nations, including the UK, have banned vaccinations of children declaring the benefit does not outweigh the risk

* Thank you

None of the data shown was focused on severity rather on transmission. In addition the data presented is not convincing to force us parents to vaccinate our kids with experimental vaccines.

I am beyond angry that covid vaccines for kids are even being considered to enter school. With no studies on long-term side effects of these basically experimental vaccines, the risk to children and especially young teenage boys is far greater than covid. Besides that, children have an almost 100% chance of recovery from Covid. This is not a childhood disease! I can tell you with absolute certainty there is NO WAY my healthy teenage son is ever getting another one of these Covid vaccines.

I would like to express my extreme opposition to implementation of a COVID 19 vaccine requirement for schools in Washington State.

* Almost 100% of kids don't suffer from severe COVID. In fact, many have no symptoms at all. Thus, they may have already had COVID which is another excellent reason not to get the vaccine.

* The World Health Organization (WHO) has announced that young people should not take the vaccine.

* A concerning number of young people, especially those under 30, are suffering from myocarditis (heart inflammation), blood clots, low platelets and more following COVID-19 vaccination.

* The risks of COVID-19 vaccination adverse outcomes certainly outweigh the benefits to children and young adults who are considered low risk populations.

* Parental rights to make independent, informed decisions regarding their children's medical interventions, including vaccines, are being threatened.

* Some scientists have raised concerns that the safety risk of COVID-19 vaccinations have been underestimated. As of January 28th 2022, there have been 1,088,558 vaccine injuries including 23,149 deaths following COVID-19 vaccination.

* Clinical trials in children and young adults are ongoing and will not be completed for at least one year.

* Not a single published study has demonstrated that patients who have had a prior COVID-19 infection benefit from the vaccination. So why recommend all kids get the shot?

Subject: Against adding COVID-19 vaccine to school vaccination requirements

External Email

To Whom It May Concern,

It has been brought to my attention that there is a meeting tomorrow to discuss adding the COVID-19 vaccine to school vaccination requirements. I am against adding the COVID-19 vaccine to school vaccination requirements and I urge you to end this discussion once and for all. My hope is you will really listen and consider what I have to say.

Since the "buzz phrase" around COVID-19 is to "trust the science". The "science this...", the "science that...", etc. Well, what about the science that has proven that our very own human immune systems are quite capable of handling this virus without a vaccine, because it has a 99% survival rate? What about the science that has proven that being vaccinated doesn't prevent you from getting or spreading COVID-19? What about the statistics that show we have a high level of positive COVID cases, while we ironically have the highest number of vaccinated people as daily more people are becoming fully vaccinated or getting their boosters? What about the science that shows the COVID-19 vaccines have more reported vaccine injuries in VAERS than any other vaccine at this stage of its existence? What about the science that shows this virus is moving from a pandemic to an endemic state like the flu? What about the recent guidance from the CDC that shortens the quarantine and isolation periods? Why would they do that? They did that because they know that this virus is not as threatening as mainstream media and politicians are making it out to be.

People should be able to make the decision for themselves, their children, and their own bodies about whether or not to get the COVID-19 vaccine, just like they decide whether or not to get a yearly flu shot. It's really that simple. I will pull my children from public education should you move forward with the COVID-19 vaccine as a school vaccine requirement. I know I am not alone in that either. There are many, many parents who feel the same. Look how public education has already suffered with the way the pandemic has been handled thus far. A decision for this will only hurt it further.

There is so much data and common sense pointing against adding this as a school vaccine requirement. As intelligent people, I implore you to not turn a blind eye to what is so blatantly obvious here. End the discussion and consider it no further.

Thank you for listening to my valid points and concerns.

Respectfully,

Michelle Katsel

Subject: Covid-19 vaccine for children

External Email

Good day,

I am a 38 year resident of Kitsap county, wife and mother of two children. I believe it should be optional for this inoculation that is being discussed currently as a covid-19 vaccine.

I have a few questions about the vaccine getting added to the vaccine schedule for children.

Since these injections are EUA, does that mean that there is no liability of manufacturers if there is an adverse reaction?

What is the history of other vaccines that are on the current vaccine schedule prior to them being officially assigned to the current schedule?

As far as trials go, what were the adverse reactions reported for what is under consideration to mandate?

What are the long term adverse reactions? What is considered long term? Myocarditis? Infertility?

Are these risks outweighing benefit?

Children have a survival of 99%, so why put this inside their bodies to stimulate risk?

What happened to optional? Like flu vaccine being optional? The variant will change consistently like flu virus, so the vaccine would change consistently like a flu shot?

The poor kids say 'oh I want the vaccine but my mommy wont let me because she is afraid.' Lets remember they are children. Innocent, impressionable children. As parents we are here to nurish and protect them from harm. Because the survival rate of children from covid is so high, why are we pushing this?

Lets end the coercion. These children just want the fiasco to end! We as their parents are using our critical thinking skills before rushing into such a new 'vaccine'. We know by choosing to be inoculated, it is irreversible. You can not undo this choice once made.

Here is a link to a testimony from a parent of a 12 year old who participated in the Pfizer COVID-19 trial. Please watch.

https://youtu.be/L2GKPYzL_JQ
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fyoutu.be%2FL2GKPYzL_JQ&data=

Please watch this link as well, it is another video with a panel of covid-19 vaccine injured people presented by senator Ron Johnson.

<https://youtu.be/6mxqC9SiRh8>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fyoutu.be%2F6mxqC9SiRh8&data=>

The following link is virology data on the injections under discussion. I reccomend visiting and reading it thoroughly.

[https://www.cell.com/cell/fulltext/S0092-8674\(22\)00076-9](https://www.cell.com/cell/fulltext/S0092-8674(22)00076-9)
<[https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cell.com%2Fcell%2Ffulltext%2FS0092-8674\(22\)00076-9&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ce6a6555dddc48d7ed9408d9edb813a4%7C11d0e2](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cell.com%2Fcell%2Ffulltext%2FS0092-8674(22)00076-9&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ce6a6555dddc48d7ed9408d9edb813a4%7C11d0e2)

Please consider this inoculation to be optional to all of those who reside in Washington state. Looking at the USA in it's entirety, 2 out of 50 states have implemented it as mandatory. This is equivalent to 4% of the USA. That is not the popular choice, obviously. Please listen to the community and what they are asking for. We are asking for freedom of choice in regards to the covid 19 inoculation.

Thank you so much for your time. I appreciate you. May God bless you and your family.

Respectfully,

Christina Thacker

Please do not make our students vaccinate against COVID-19 as a requirement for attending school. As you are considering this proposal, I urge the group to look at transmission data related to school-age children as well as data from other countries. In both cases you will find that the data shows and science worldwide supports the fact that children are not at risk from this virus and are at much greater risk from receiving a vaccine which is incomplete in terms of long-term medical studies.

We would like to see our public school systems stay strong and healthy for the good of our society. Placing vaccine mandates on students will leave these schools weakened as parents withdraw from the system to place their children in other educational settings which do not require vaccines.

Thank you for your work.

Sincerely,
Meg Krieg

My public comment for February 9th public health meeting. Thank you.-Jessie Sandstrom

Why is an experimental vaccine that is only approved under emergency use being pushed so hard on our children? Our children who are at extremely low risk of covid complications. I don't believe we will know the true side effects of these experimental vaccines for years to come. It's pretty clear that those who want the vaccine for their child have already done so. Exemptions are brought up but there would be no need if it's not required. Lastly why is natural immunity being covered up and not considered? Clumping someone into a group as antivax isn't fair. There are a ton of concerned parents that branch a wide stance. The division is becoming a gaping hole. Many parents are pretty fed up with mixed messaging and have a distrust for those running the show. I genuinely hope there is a pause especially seeing the trend in cases go down and masks are about to be optional why is this being pushed so hard at a point where we are seeing a break in the clouds.

*Informed*CHOICEWA.org

Date: January 7, 2021

To: The Washington State Board of Health Members and COVID-19 TAG

From: The Board and Members of Informed Choice WA

Dear Board of Health and TAG Members:

You are facing what may prove to be the most important decision you will ever face as a member of the board or a group, or perhaps in your life.

The mRNA and DNA COVID-19 shots are unlike any other vaccines given before. The global push for their uptake and the volume of reported adverse reactions and deaths following administration are unprecedented. The hundreds of thousands of medical and scientific professionals globally standing up and speaking out against the response to COVID and to the shots is unprecedented, as is censorship on scientific debate. When this nation's top doctors and scientists are being kicked off of social media platforms and being fired from their jobs for daring to speak on their findings and science critical of current policies, it is clear something has gone terribly wrong.

The CDC acknowledges the shots do not prevent infection or transmission and that any protection afforded fades rapidly, yet they refuse to abandon their push for increased uptake and boosters, and they refuse to promote existing early treatment protocols or acknowledge the mountain of evidence of the superior safety and effectiveness of naturally-acquired immunity. The systemic capture of federal agencies by the drug industry and globalists has never been more obvious.

Public Health in the U.S. is currently suffering from a lack of checks and balances and a dangerous dilution of critical facts. If every citizen were to watch the FDA's Vaccine and Related Biologicals Advisory Committee (VRBAC) meetings and to read the entirety of the clinical trial submissions to the FDA and the injury and death reports filed with Pfizer and VAERS, they would understand the experimental nature of the COVID shots and the known and suspected risks. They would question the clinical trial irregularities, the buried data, the lack of independent evaluation, and the high levels of conflicts of

interest. But most do not. Votes for recommendation are made by federal entities despite the lack of scientific justification and the details of the meetings are not incorporated into the language passed down to citizens. The messaging becomes, “The vaccines are safe and effective and recommended by the CDC.” This simplistic false messaging creates division at all levels of society, undermines fully informed consent, violating federal regulations and human rights declarations.

If after the past two years of witnessing the erratic federal response to COVID you still have faith in federal recommendations, we ask you to consider one clear example that reveals the federal agencies and committees do not deserve your trust. In the absence of a single co-administration safety study, the ACIP approved and the CDC actively promotes this message:

“COVID-19 vaccine and other vaccines may be administered on the same day.”

This is not science. This is not safety. This is not in the best interest of vaccine recipients. This is using Americans, especially our children who are most impacted, as unwitting test subjects. This is human experimentation without informed consent. This is criminal.

We are asking you today to honor the Precautionary Principle and First Do No Harm. We are asking you to dismantle the TAG, to halt rulemaking consideration for adding COVID shots to school requirements, and to adopt our Rulemaking Petition for a new rule that would prohibit mandating Emergency Use Authorized products and licensed products that lack completed Phase 3 trials.

Attached is our preliminary response to the “Criteria for Reviewing Antigens for Potential Inclusion in WAC 246-105-030” that supports our requests. There is far more scientific and medical information available. We hope this is just the beginning of your reviewing the critically important information you have likely been missing until now.

Sincerely,

The ICWA Board

Bernadette Pajer, Yael Kantor, Heidi Hartnell, Angela Dye

**Informed Choice Washington Presents:
A review of the COVID-19 shots
(Pfizer, Moderna, Janssen)
using the Washington State Board of Health's
"Criteria for Reviewing Antigens for Potential Inclusion in
WAC 246-105-030"**

<https://sboh.wa.gov/Portals/7/Doc/Publications/ImmunizationCriteria-Update2017-Final.pdf>

Before proceeding, it must be noted that the COVID-19 shots currently available do not meet the definition of "immunizing agent" per WAC 246.105.020(13), which states:

"Immunizing agent" means any vaccine or other immunologic drug licensed and approved by the United States Food and Drug Administration (FDA), or meeting World Health Organization (WHO) requirements, for immunization of persons against vaccine-preventable diseases.

None of the currently available COVID-19 shots are licensed and approved by the FDA for school-age children; the shots similarly do not meet WHO requirements and are only authorized by the WHO for emergency use.

WAC: <https://app.leg.wa.gov/WAC/default.aspx?cite=246-105-020>

For clarity, BOH's criteria language is shown in red, and ICWA language is shown in black.

I. Criteria on the effectiveness of the vaccine

1. A vaccine containing this antigen is recommended by the Advisory Committee on Immunization Practices and included on its Recommended Childhood & Adolescent Immunization Schedule.

The vaccine **must** be recommended by the ACIP. The ACIP reviews **licensed** vaccines. It makes recommendations for newly licensed vaccines and regularly updates its recommendations. Its process includes:

- (1) a review of the Food and Drug Administration (FDA) labeling/package inserts for each vaccine;
- (2) a thorough review of the scientific literature (both published and unpublished, when available) on the safety, efficacy, acceptability, and effectiveness of the immunizing agent, with consideration of the relevance, quality, and quantity of published and unpublished data;
- (3) an assessment of cost effectiveness;
- (4) a review of the morbidity and mortality associated with the disease in the population in general and in specific risk groups;
- (5) a review of the recommendations of other groups; and
- (6) a consideration of the feasibility of vaccine use in existing child and adult immunization programs. Feasibility issues include (but are not limited to) acceptability to the community, parents, and patients; vaccine distribution and storage; access to vaccine and vaccine administration; impact on the various health care delivery systems; population distribution effects; and social, legal, and ethical concerns. [emphasis added]

Do any of the COVID-19 shots fulfill this criterion? No.

The ACIP did NOT recommend a COVID-19 shot licensed by the FDA for use in ages 5-11 or 12-15, nor did it place such a shot on the CDC Recommended Schedule.

There is no FDA COVID-19 shot licensed for ages 5-15 and no COVID-19 shot whatsoever on any CDC Recommended Schedule for any age. CDC Immunization Schedules, <https://www.cdc.gov/vaccines/schedules/index.html>.

The CDC recommended schedule website page for ages 7-18 mentions the ACIP's EUA and BLA recommendations for COVID, but it DOES NOT include the shots on the schedule.

On May 12, 2021, the ACIP adopted the following recommendation: "The Pfizer-BioNTech COVID-19 vaccine is recommended for children 12-15 years of age in the U.S. population under the FDA's Emergency Use Authorization." *May 12, 2021 ACIP Meeting - Discussion and Vote*, CDC YouTube channel, <https://youtu.be/91FCQN1aYqk>.

On November 2, 2021, the ACIP adopted a similar recommendation for 5-11 year olds. *Nov 2, 2021 ACIP Meeting - Clinical considerations for COVID-19 vaccination & Votes*, CDC YouTube channel, <https://youtu.be/Fknv90AxSn8>.

Federal Emergency Use Authorization statutes indirectly prohibit school mandates of EUA products by requiring recipients be informed they have the option to accept or refuse the vaccine:

"The possible side effects of the vaccine are still being studied in clinical trials. . . Under the EUA, there is an option to accept or refuse receiving the vaccine."
Vaccine Information Fact Sheet for Recipients and Caregivers about the Pfizer-BioNTech COVID-19 Vaccine to Prevent Coronavirus Disease 2019

(COVID-19) for Use in Individuals 5 through 11 Years of Age, pp. 4-5,
<https://www.fda.gov/media/153717/download>.

The option to accept or refuse an EUA product is not conditioned upon written assertion of exemption. Medical, personal, or religious exemptions are not required in order to exercise the right to refuse. Under EUA law, a parent or guardian may simply decline a shot for their minor child, without providing explanation or paperwork. A state-level daycare or school requirement would introduce the need for filing of exemptions, unlawfully exceeding the parameters set forth by Congress for EUA products.

“FDA believes that the terms and conditions of an EUA issued under section 564 preempt state or local law, both legislative requirements and common-law duties, that impose different or additional requirements on the medical product for which the EUA was issued in the context of the emergency declared under section 564.” *Vaccine EUA Questions and Answers for Stakeholders*, U.S. Food & Drug Administration,
<https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/vaccine-eua-questions-and-answers-stakeholders#61b6059d67093>

Alarming, the CDC and ACIP made this recommendation even though they acknowledged that for both age groups:

Regarding potential harms after vaccination, evidence was type 4 (very low certainty) for serious adverse events and type 1 (high certainty) for reactogenicity. No data were available to assess the other GRADE benefits and harms including prevention of hospitalization due to COVID-19, prevention of multisystem inflammatory syndrome in children (MIS-C), SARS-CoV-2 seroconversion to a non-spike protein, or prevention of asymptomatic SARS-CoV-2 infection.

The Advisory Committee on Immunization Practices’ Interim Recommendation for Use of Pfizer-BioNTech COVID-19 Vaccine in Adolescents Aged 12–15 Years — United States, May 2021, CDC MMWR, May 21, 2021,
<https://www.cdc.gov/mmwr/volumes/70/wr/mm7020e1.htm> and *The Advisory Committee on Immunization Practices’ Interim Recommendation for Use of Pfizer-BioNTech COVID-19 Vaccine in Children Aged 5–11 Years — United States, November 2021*, CDC MMWR November 12, 2021,
<https://www.cdc.gov/mmwr/volumes/70/wr/mm7045e1.htm>.

Vaccines and Related Biological Products Advisory Committee (VRBPAC) member Dr. Eric Rubin stated “[Just b]ecause we give an EUA to the vaccine, doesn’t mean we have to use it. And I think we would have to think hard about how to use it given all of the concerns that have been raised.” Transcript of *FOOD AND DRUG ADMINISTRATION (FDA) Center for Biologics Evaluation and Research (CBER) 166th Vaccines and Related Biological Products Advisory Committee (VRBPAC) Meeting*, June 10, 2021, p. 242. <https://www.fda.gov/media/150815/download>.

How can the CDC claim that benefits outweigh risks when they admit they do not know the risks?

Comirnaty is the only COVID-19 product that has ostensibly received FDA licensure for any pediatric populations—namely those 16 and up; however, that licensure is limited to manufacturing and delivery. The FDA has stated that this product is merely “**ready** for approval for **use** in individuals 16 years of age and older . . .” [emphasis added]. *August 23, 2021 Approval Letter - Comirnaty*, from FDA to BioNTech, p. 4, <https://www.fda.gov/media/151710/download>. The Comirnaty vaccine is not available anywhere in the United States, and there is debate about whether the vials of Pfizer’s EUA product are now “licensed” for those 16 and up, or if those are still EUA products. The FDA states that EUA Pfizer-BioNTech COVID-19 Vaccine and the Comirnaty (COVID-19 Vaccine, mRNA) “are legally distinct with certain differences that do not impact safety or effectiveness.” There is much debate over what “legally distinct” means, especially to consumers. If “legally distinct” means that the currently available Pfizer products in the U.S. are under EUA regulations, then there is no licensed product available for 16-18 year olds. Regardless of whether the Pfizer product is licensed for 16-18 year olds, the product lacks completed Phase 3 clinical trials, and the PREP Act still shields manufacturers for liability for injuries and deaths. As far as we can tell, never in history has the FDA licensed a product without completed clinical trials, nor when all the ongoing trials have been unblinded, subverting the ability to compare outcomes.

There are ZERO co-administration safety studies; therefore, it is highly concerning that the CDC states, and the Washington State Department of Health repeats: “COVID-19 vaccine and other vaccines may be administered on the same day.” CDC, Immunization Schedule, COVID-19 Vaccination, <https://www.cdc.gov/vaccines/schedules/hcp/imz/child-adolescent.html>

Disregarding the absence of any safety studies, the Washington DOH states, “Your child can get a COVID-19 vaccine at the same time they get other vaccines. You do not need to schedule your child’s required school vaccinations or other recommended vaccines separately from COVID-19 vaccination. A COVID-19 vaccine appointment is another opportunity to get your child caught up on all of their recommended vaccines.”

Washington State Department of Health, Vaccinating Youth,
<https://www.doh.wa.gov/Emergencies/COVID19/VaccineInformation/VaccinatingYouth#VaccineTiming>

As noted in our cover letter, this is not science. This is not safety. This is not in the best interest of vaccine recipients. This is using Americans, especially our children who are most impacted, as unwitting test subjects. This is human experimentation without informed consent. This is criminal.

2. The vaccine containing this antigen is effective as measured by immunogenicity* and population-based prevention data in Washington State, as available.

*Immunogenicity means the ability of an antigen or vaccine to stimulate the body to produce an immune response. Vaccines often include antigens that stimulate an immune response to a particular disease but are not necessarily the same as the organism that would cause the disease.

In the clinical development of a vaccine, the effectiveness of the vaccine is studied using FDA-approved research protocols that evaluate whether a vaccine protects individuals from contracting the disease in population-based studies or generates an immunologic response (immunogenicity) comparable to vaccines that have been shown to be effective in preventing disease. More information about its population-based effectiveness is gained from large trials and community-based analyses after FDA approval. There may or may not be effectiveness data from Washington State, but the disease prevalence and incidence in the state should be sought and reviewed.

Do any of the COVID-19 shots fulfill this criterion? No.

Immunogenicity: While the COVID-19 shots trigger the recipient's cells to create spike proteins, which then trigger an immune response and antibodies to the self-created spike proteins, this immune response has proven incapable of preventing infection or transmission. In short, the COVID shots do not prevent recipients from "contracting the disease."

Some studies show recipients may be afforded a short window—a few weeks or months—during which their risk of infection or risk of severe disease is minimally reduced in comparison to those without natural immunity, but even this protection appears to be dropping with each new variant.

This preprint study shows that PCR-positive tests for Delta variant occurred in a higher percentage of vaccinated individuals than in unvaccinated. From this it could be concluded that, regardless of vaccination status, all individuals are able to spread COVID-19 with similar viral loads. Riemersma et al., *Shedding of Infectious SARS-CoV-2 Despite Vaccination*,

<https://www.infosperber.ch/wp-content/uploads/2021/10/210731-Wisconsin.Viral-Load.pdf>.

Dr. Rochelle Walensky states that the vaccine does not prevent infection or transmission of the Delta variant, CNN interview with Wolf Blitzer, July 27, 2021, <https://www.youtube.com/watch?v=TKFWGvvlVLI>

Another pre-print study, Acharya et al., *No Significant Difference in Viral Load Between Vaccinated and Unvaccinated, Asymptomatic and Symptomatic Groups Infected with SARS-CoV-2 Delta Variant*, “found no significant difference in cycle threshold values between vaccinated and unvaccinated, asymptomatic and symptomatic groups infected with SARS-CoV-2 Delta.” <https://www.medrxiv.org/content/10.1101/2021.09.28.21264262v1>.

The CDC reported that among the first U.S. cases of COVID-19 attributed to the Omicron variant, 79% of the 43 cases studied occurred in fully vaccinated individuals, including 14 who had received booster doses. *SARS-CoV-2 B.1.1.529 (Omicron) Variant — United States, December 1–8, 2021*, CDC MMWR, December 17, 2021, <https://www.cdc.gov/mmwr/volumes/70/wr/mm7050e1.htm>.

The criterion explicitly requires that “information about population-based effectiveness is gained from large trials,” yet the clinical trial study on which the EUA was based for 5-11 year olds included only 2,268 children total. CDC and ACIP acknowledged that the study was too small to find serious adverse reactions. (See our response above to Criterion #1.) *Evaluation of the BNT162b2 Covid-19 Vaccine in Children 5 to 11 Years of Age*, N Engl J Med 2022; 386:35-46, DOI: 10.1056/NEJMoa2116298, <https://www.nejm.org/doi/full/10.1056/NEJMoa2116298>.

A pre-print study suggests that vaccine effectiveness wanes to negative effectiveness, therefore increasing chances of contracting COVID, after 90 days. The authors suggest a booster would be necessary in order to attain previous levels of protection. Do parents really want their child to get a booster every 90 days? Would this be practical or manageable? Hansen et al., *Vaccine effectiveness against SARS-CoV-2 infection with the Omicron or Delta variants following a two-dose or booster BNT162b2 or mRNA-1273 vaccination series: A Danish cohort study*, <https://www.medrxiv.org/content/10.1101/2021.12.20.21267966v3#p-5>

In contrast to the inability of the COVID shots to prevent disease, natural immunity has been found to prevent infection. This superior, broad protection will serve children well throughout their lives. “[C]hildren display a characteristically robust and sustained adaptive immune response against SARS-CoV-2 with substantial cross-reactivity against other hCoVs.” Dowel, et al., *Children develop robust and sustained*

cross-reactive spike-specific immune responses to SARS-CoV-2 infection,
<https://www.nature.com/articles/s41590-021-01089-8>

In study after study, it has been shown that natural immunity far exceeds vaccine-induced immunity in length and quality. Please view the following studies here that show the superiority of natural immunity: "144 Research Studies Affirm Naturally Acquired Immunity to Covid-19: Documented, Linked and Quoted," Brownstone Institute, October 17, 2021.

<https://brownstone.org/articles/79-research-studies-affirm-naturally-acquired-immunity-to-covid-19-documented-linked-and-quoted/>

3. The vaccine containing this antigen is cost effective from a societal perspective.

This analysis should consider both the costs of the immunization (e.g. antigen, storage, administration, medical and societal costs of adverse reactions to the immunization, etc.) and the benefits of the immunization (e.g. lives saved, medical and societal benefits of preventing adverse reactions from vaccine-preventable disease, etc.). This process may include consultation with an economist as resources allow. Vaccines may be cost effective without being cost saving. In other words, the direct costs of some vaccines (e.g. antigen, storage, administration) balanced against direct savings (e.g. medical care, disability, death) may not result in net savings. Societal or indirect costs (e.g. lost productivity of care takers of ill children) will also need to be taken into consideration. These costs are much harder to quantify. Not all vaccines recommended by the ACIP are cost saving or equally effective, so some determination of the vaccine's relative cost effectiveness may need to be made for comparison purposes when applying the criteria.

Do any of the COVID-19 shots fulfill this criterion? No.

To parents and members of Informed Choice Washington, the most important consideration in this criterion is the "medical and societal costs of adverse reactions to the immunization" as well as what the criterion overlooks:

- the cost of ignoring or outright censoring lifesaving preventative and early treatment protocols, which lead to superior natural immunity;
- the cost of exposing children to genetic therapies, such as DNA and mRNA injections, in the absence of adequately sized and designed safety studies for either short or long-term outcomes;
- and the cost of interrupting a child's natural immune response to what is now an endemic virus without a complete understanding of how that interruption will impact their immunity to the virus and its mutations in the future.

Please see risk information provided under Criterion #4 below, in particular, the two graphs summarizing data from Pfizer's clinical trials that have already demonstrated that any benefits from the shots are outweighed by the injuries and death they cause. This does not account for long-term and yet unknown harms.

4. Experience to date with the vaccine containing this antigen demonstrates that it is safe and has an acceptable level of side effects

Vaccinations are not without side effects. The known risks associated with each vaccine (or antigen) must be balanced against the risks of the disease. Vaccine safety will be evaluated using research and reports from: pre-licensure, the Vaccine Adverse Event Reporting System (VAERS) and the Vaccine Safety Datalink (VSD) project, and other reliable sources.

Do any of the COVID-19 shots fulfill this criterion? No.

While Pfizer's own randomized control trial data indicated a decrease in positive cases, they also showed an increase in illnesses and deaths compared to the placebo group. There is no benefit to reducing cases if it comes at the cost of increased illness, hospitalizations, and death.

The graphic below includes Table S3, *Participants Reporting at Least 1 Adverse Event From Dose 1 to 1 Month After Dose 2 During the Blinded Follow-up Period*, on page 11 of [Pfizer's six-month supplementary appendix](#) to its study entitled [Safety and Efficacy of the BNT162b2 mRNA Covid-19 Vaccine through 6 Months](#). Vaccinees experienced worse health outcomes than did placebo recipients.

The following graphic, which includes Table S4, *Causes of Death from Dose 1 to Unblinding*, on page 12 of [Pfizer's six-month supplementary appendix](#) to its study entitled [Safety and Efficacy of the BNT162b2 mRNA Covid-19 Vaccine through 6 Months](#), illustrates the increase in deaths within six months for those who received the injections. Of particular concern are the types of death, including cardiovascular events

PFIZER'S INOCULATIONS FOR COVID-19 / MORE HARM THAN GOOD

INCREASED RISK OF DEATH

Screen capture from Pfizer 6 Month Supplementary Appendix

Reported Cause of Death*	BNT162b2 (N=15,124)	Placebo (N=15,121)
Death	15	14
Acute respiratory failure	0	1
Aortic aneurysm	0	1

Table S4 | Causes of Death from Day 1 to Unblinding Study Population, 246 Years OOI, n.
Multiple causes of death could be reported for each participant. There were no deaths among 13-15-year-old participants.

Safety and Efficacy of the BNT162b2 mRNA COVID-19 Vaccine Through 6 Months - Supplementary Appendix

	BNT162b2	Placebo
Deaths before unblinding (in Table S4 of Supplementary Appendix)	15	14
Deaths after unblinding (Prior to table, but maintained in text of 6-month report. See quote below.)	5	
Total Deaths	20	14

"After unblinding" means when the Placebo participants were given the opportunity to "cross over" and take the BNT162b2 inoculation.*

"... 3 participants in the BNT162b2 group and 2 in the original placebo group who received BNT162b2 after unblinding died."

Safety and Efficacy of the BNT162b2 mRNA COVID-19 Vaccine Through 6 Months

	BNT162b2	Placebo
Total COVID-19 Related Deaths	1	2
Deaths Related to Cardiovascular Events	9	5

*A total of 15,122 subjects originally randomized to placebo crossed over and took BNT162b2 after unblinding. Days 1 and 2 were 45 and 46, respectively, the March 15, 2021 data report.

12

One 12-year-old child, Maddie de Garay, participated in Pfizer's study. She suffered multiple and severe injuries, requiring 9 ED visits and 3 hospital stays (totaling 64 days by June 1, 2021). She is still in a wheelchair today. The New England Journal of Medicine article in which Pfizer's RCT results was reported, [Safety and Efficacy of the](#)

[BNT162b2 mRNA Covid-19 Vaccine through 6 Months](#), failed to disclose any of Maddie's adverse reactions. Pfizer disingenuously mischaracterized her injuries as "functional abdominal pain" in its *Emergency Use Authorization (EUA) Amendment for an Unapproved Product Review Memorandum*, p. 30.

<https://www.fda.gov/media/148542/download>. Senator Ron Johnson held a roundtable, in which many individuals who took the COVID-19 vaccine shared their adverse reaction experiences that required medical attention.

<https://thehighwire.com/videos/stephanie-and-maddie-de-garay-testimony/> at 5:13.

This study asks a very pertinent question: Why are we vaccinating children against COVID-19? The abstract in this study explains the following:

A novel best-case scenario cost-benefit analysis showed very conservatively that there are five times the number of deaths attributable to each inoculation vs. those attributable to COVID-19 in the most vulnerable 65+ demographic. The risk of death from COVID-19 decreases drastically as age decreases, and the longer-term effects of the inoculations on lower age groups will increase their risk-benefit ratio, perhaps substantially... (emphasis added.)

This study goes on to say that:

... it will use the term 'inoculated' rather than vaccinated, because the injected material in the present COVID-19 inoculations prevents neither viral infection nor transmission (emphasis added.)

Kostoff, Ronald, et al., "Why Are We Vaccinating Children Against Covid-19?" Toxicology Reports, Vol 8 2021, pages 1665-1684,
<https://www.sciencedirect.com/science/article/pii/S221475002100161X>

Here is a list of websites where medical professionals and/or individuals have documented their experiences with reactions from the COVID-19 vaccine:

<https://openvaers.com/covid-data/adverse-events-by-state>

<https://vaers.hhs.gov/data.html>

<https://www.c19vaxreactions.com>,

<https://www.RealNotRare.com/>

<https://www.medalert.org>

<https://www.scivisionpub.com/pdfs/us-covid19-vaccines-proven-to-cause-more-harm-than-good-based-on-pivotal-clinical-trial-data-analyzed-using-the-proper-scientific--1811.pdf>

Dr. Cody Meissner, VRBPAC member, stated: “I want to be sure that the risk of the vaccine is less than the risk of hospitalization because four [COVID hospitalizations per million in children under 18] certainly does not constitute an emergency, and there are significant questions about the safety of this vaccine. . . . [This hospitalization rate is] on the CDC website. That is not an emergency. It is a very low hospitalization rate. And the rates may change as the season changes, but we’re starting from a tiny, tiny rate. . . . [T]he rates are also falling pretty dramatically among adults and children. So as more people are immunized and become immune from infection, I think it’s very likely that we’re going to get this pandemic under pretty good control. Now the issue -- so the issue to me is safety. . . . [W]e can look at the 2,000 or 2,200 adolescents who are enrolled in the Pfizer vaccine between 12 through 15 years of age -- 2,200, so half got the vaccine, half got placebo. Nobody was hospitalized. Nobody died. And there were some who got URIs[upper respiratory infections] So 2,200 is not going to address the issue of safety. I’m worried about myocarditis. . . . [W]e don’t know what that means on a longterm basis. Will there be scarring of the myocardium? Will there be a predisposition to arrhythmias later on? Will there be an early onset of heart failure? I think that’s unlikely, but we don’t know that. And so before we start vaccinating millions of adolescents and children, it is so important to find out what the consequences are because COVID-19 disease is disappearing in adolescents and children. And I think we have to be so clear about what we’re dealing with. Let me make one more point. In 2003, there was a publication in JAMA regarding myocarditis following the Dryvax vaccine, the smallpox vaccine which is, of course, a live vaccine. But in that situation, the military -- it was given to young recruits. The rates of myocarditis in the military young men -- because it was mostly men in those days -- was 2 per 100,000. And after the Dryvax vaccine the rates were 7.8 cases of myocarditis in the 30 days afterwards. So there was a three-fold increase. And in fact, Dr. Tony Fauci wrote an editorial in that same issue of JAMA discussing these rates of myocarditis. So I am really concerned that the FDA may by not insisting on a full BLA, which to me means at least 12 months, maybe even 18 or 24 months of follow up in children and adolescents, before they are recommended to receive this vaccine. I do not feel we can justify a EUA including children under an Emergency Use Authorization. The burden of disease is so small, and the risks are just not clear. We don’t know.” June 10, 2021, VRBPAC meeting transcript, p. 62, p. 225- 228. <https://www.fda.gov/media/150815/download>

From the front lines in medical care

Many medical professionals are speaking up and sharing their experiences of working in hospitals right now as they care for patients who are coming in with what they can associate to vaccine reactions. “More VC Nurses Blow Whistle on ‘Overwhelming’ Numbers of Heart Attacks, Clotting, Strokes,” *The Conejo Guardian*, December 14, 2021. <https://conejoguardian.org/2021/12/14/more-vc-nurses-blow-whistle-on-overwhelming-numbers-of-heart-attacks-clotting-strokes/>

Individuals are sharing their own experiences with their health while taking the COVID shots. U.S. Senator Ron Johnson hosted a round table on November 2, 2021, to allow these individuals to tell their stories.

<https://childrenshealthdefense.org/defender/nov-2-sen-ron-johnson-cdh-covid-vaccine-injuries-federal-mandates/>

Colette Martin, an RN of 17 years, testified in front of the Louisiana House about the harms of vaccine reactions that she has witnessed. She also stated that more children have died from the vaccine than from covid itself. Louisiana House of Representatives Health and Welfare Committee Hearing, December 6, 2021,

https://www.house.louisiana.gov/H_Video/VideoArchivePlayer?v=house/2021/dec/1206_21_HW (begin at 6:54:00)

In the first two and a half months after EUA was granted, 1,223 deaths were reported to Pfizer. This is a huge red flag that requires deep investigation. See Table 1, Page 7, showing fatal case outcomes in Pfizer’s “5.3.6 Cumulative Analysis of Post-Authorization Adverse Event Reports of PF-07302048 (BNT162B2) Received Through 28-Feb-2021”

<https://phmpt.org/wp-content/uploads/2021/11/5.3.6-postmarketing-experience.pdf>,

While critics commonly question the veracity of VAERS data, as reported on the U.S. government’s Healthy People 2020 site, 83% of the reporters to the Vaccine Adverse Events Reports System were health care workers or pharmaceutical and government-based sources during the years 1990-2010. “The majority of VAERS reports are submitted by vaccine manufacturers (37%) and health care providers (36%). The remaining reports are obtained from state immunization programs (10%), vaccine recipients (or their parents/guardians, 7%) [sic], and other sources (10%).” Office of Disease Prevention and Health Promotion, Vaccine Adverse Reporting System, <https://www.healthypeople.gov/2020/data-source/vaccine-adverse-event-reporting-system>.

Further, 72% of a sampling of 250 of the 1,644 VAERS reports of early death received in the first three months of 2021 were filed either by health service employees or pharmaceutical employees. “We identified health service employees as the reporter in at least 67% of the reports, while pharmaceutical employees were identified as the reporter in a further 5%.” Even though the sample contained only people vaccinated early in the rollout, *i.e.*, those who were elderly or with significant health conditions, an adverse vaccine reaction could be ruled out in only 14% of the cases. Mclachlan, et al., *Analysis of COVID-19 vaccine death reports from the Vaccine Adverse Events Reporting System (VAERS) Database Interim: Results and Analysis*. 10.13140/RG.2.2.26987.26402. (2021)

“While it seems that the incidence of pericarditis during the vaccination campaign period is increased, a more comprehensive data collection on a wider scale should be done. We hope this report will raise awareness to the subject and will serve as a reminder to report events as part of the post-marketing investigations and allow for a thorough adverse events following immunization analysis.” *Transient Cardiac Injury in Adolescents Receiving the BNT162b2 mRNA COVID-19 Vaccine*, https://journals.lww.com/pidj/Fulltext/2021/10000/Transient_Cardiac_Injury_in_Adolescents_Receiving.1.aspx

II. Disease Burden Criteria

5. The vaccine containing this antigen prevents disease(s) that has significant morbidity and/or mortality in at least some sub-set of the population.

Vaccines have the potential to reduce, or in some cases even eliminate, diseases that can result in serious illness, long-term disability, or death. For example, before measles vaccine was available, nearly everyone in the United States contracted measles and an average of 450 measles-associated deaths were reported each year between 1953 and 1963. The morbidity/mortality burden of measles was not equal for all members of the population. Examples of significant morbidity measures include rates of hospitalizations, long-term disability, disease incidence, and disproportionate impact.

Do any of the COVID-19 shots fulfill this criterion? No.

First, we must emphatically state that it is unethical to use children as shields for adults.

Peter Doshi, Ph.D: “I want to address this idea of vaccinating children to protect adults. I encourage the Advisory Committee to read Dr. Lavine et al.’s editorial to explain why, “Vaccinating children is likely to be of marginal benefit in reducing the risk to others.” And even if you think a small benefit is better than nothing, let’s not forget that it’s an unproven hypothetical benefit. We need confirmatory evidence, not just assumptions. And then there’s the ethics and the law. **FDA can only indicate a product for use in a**

given population if benefits outweigh risks in that same population. So if benefits don't outweigh risks in children themselves, it can't be indicated for children, full stop. Whether vaccinating children might help adults is a moot point." Comments before the Vaccines and Related Biological Products Advisory Committee, June 10, 2021 <https://www.fda.gov/media/150815/download>, pp. 171-172. (emphasis added)

Children and young adults are at an extremely low risk of mortality from COVID-19. When one subset of the population (children) carries a high risk for injury from an antigen but low risk for injury from the disease, we must consider the mandate of such an antigen to be unethical. Bhopal, "Children & Young People Remain at a Low Risk of Covid-19 Mortality," *The Lancet Children & Adolescent Health*, Correspondence, Vol 5, Issue 5, E12-E13, May 1, 2021.

[https://www.thelancet.com/journals/lanchi/article/PIIS2352-4642\(21\)00066-3/fulltext](https://www.thelancet.com/journals/lanchi/article/PIIS2352-4642(21)00066-3/fulltext)

The *Forbes* article "The Hideous Truths of Testing Vaccines on Humans" examined the testing of hepatitis vaccines on the residents of Willowbrook, a home for severely disabled children. The author states: "In 1966, renowned medical ethicist Henry K. Beecher published an article titled, "Ethics and Clinical Research," which listed Willowbrook as an example of an unethical clinical experiment and concluded that "there is no right to risk an injury to one person for the benefit of others." *Forbes*, June 12, 2020,

<https://www.forbes.com/sites/leahrosenbaum/2020/06/12/willowbrook-scandal-hepatitis-experiments-hideous-truths-of-testing-vaccines-on-humans/>

Second, the measles example given in this criterion reveals that historically the BOH and DOH have never stepped back to consider the long term or unintended consequences of mass-vaccination campaigns. We agree that nearly everyone in the United States used to be exposed to measles, mostly in childhood when it's safest to experience, and they developed lifetime immunity. Merck's on-trial-for-fraud MMR vaccine does not confer lifetime immunity for a significant portion of the population, pushing susceptibility into the very young and into adult populations. We are nearing a time when more people in the U.S. will be susceptible to measles than before the vaccines were released. And studies show a third dose doesn't help. Was there perhaps a better way to reduce those 450 annual deaths and the cases of very severe illness, without sacrificing superior natural immunity for the vast majority (99.99%) of the population—and without exposing millions of children annually to the risks of the MMR? What about the failure of the mumps portion of the shot? More information can be found here: <https://informedchoicewa.org/measles/> To learn about the politics surrounding the loss of the personal exemption to the MMR, see this post:

<https://informedchoicewa.org/education/were-wa-lawmakers-deceived-about-measles-last-session-part-1/>

Is there perhaps a better way to protect those susceptible to severe disease and fatal COVID-19 outcomes, without sacrificing superior natural immunity for the >99.9% of the population who fully recover and develop natural immunity? Optimal nutritional support, early treatment protocols, and the benefits of natural immunity are tragically not part of public health's approach with any vaccine-targeted infection. With COVID, the neglect of these public health tools has cost many lives.

Third: as shown in our response to Criterion #1, the shots do not prevent transmission; any unethical attempt to use children as shields will fail.

As of January 6, 2022, the seven-day case rate in Washington State for ages 4-11 was 504.8 per 100,000. The seven-day hospitalization rate was 1.2 in 100,000. Compare this with the risk of myocarditis in vaccinated adolescents, which is 18.52 in 100,000 as seen in <https://pubmed.ncbi.nlm.nih.gov/34849657/>

Age Group	7-Day Case Rate	7-Day Hospitalization Rate	7-Day Testing Rate	7-Day Percent Positivity
Ages 4-10	504.8	1.2	--	--
Ages 11-13	558.1	0.7	--	--
Ages 14-19	731.8	1.8	--	--
Ages 0-11	480.7	2.3	--	--
Ages 12-19	692.4	1.5	--	--
Ages 20-34	869.9	10.7	--	--
Ages 35-49	724.5	12.0	--	--
Ages 50-64	444.2	20.0	--	--
Ages 65-79	227.3	30.9	--	--
Ages 80+	211.2	56.2	--	--

Cases, Hospitalizations, Testing and Percent Positive by Age

Graph from <https://www.doh.wa.gov/Emergencies/COVID19/DataDashboard>

Between January 4, 2020, and January 6, 2022, 573 children between the ages of 5-18 have died with COVID in the entire United States. CDC Deaths by Sex, Ages 0-18 years, <https://data.cdc.gov/NCHS/Deaths-by-Sex-Ages-0-18-years/xa4b-4pzy>

On December 31, 2021, Anthony Fauci stated, “ . . . [I]f a child goes into the hospital, they automatically get tested for COVID, and they get counted as a COVID-hospitalized individual, when in fact they may go in for a broken leg or appendicitis of something like that, so it's overcounting the number of children who are . . . hospitalized **with** COVID as opposed to **because** of COVID.” MSNBC interview, <https://twitter.com/TheEliKlein/status/1476917049435856925>

Vaccines and Related Biological Products Advisory Committee member Dr. Cody Meissner stated “[F]our per million [pediatric hospitalizations] certainly does not constitute an emergency, and there are significant questions about the safety of this product.” June 10, 2021, VRBPAC meeting transcript, p. 62.

<https://www.fda.gov/media/150815/download>

6. Vaccinating against this disease reduces the risk of person-to-person transmission, with transmission in a school or child care setting or activity being given the highest priority.

Having a large proportion of the population vaccinated with the antigen helps to stem person to person transmission of the disease (i.e., herd immunity). Even community members who are not vaccinated (such as newborns and those with chronic illnesses) are offered some protection because the high immunization rate results in the disease having less opportunity to spread within the community. Vaccinating children in school and/or child care can increase the percentage of children in these groups who are immune and thus reduce the risk of outbreaks of the disease in these groups and in the community at large. Special consideration of disease transmission in a school or child care setting or activity should be given the highest priority. For the purpose of this criterion, “activity” refers to school or child care extracurricular activities including, but not limited to, field trips, sports events, or other activities held on or off campus.

Do any of the COVID-19 shots fulfill this criterion? No.

The Pfizer, Moderna, and Janssen products do not prevent transmission, serious disease, or death.

The CDC director says that vaccines do not prevent transmission. “Fully vaccinated people who get a Covid-19 breakthrough infection can transmit the virus, CDC chief says,” *CNN Health*,

<https://www.cnn.com/2021/08/05/health/us-coronavirus-thursday/index.html>

“COVID-19 infections are increasing in Gibraltar, with 128 new infections reported on average each day. That’s 97% of the peak — the highest daily average reported on January 5. There have been 9,600 infections and 100 coronavirus-related deaths reported in the country since the pandemic began. . . Gibraltar has administered at least 108,323 doses of COVID vaccines so far. Assuming every person needs 2 doses, that’s enough to have vaccinated about 160.7% of the country’s population.” Reuters COVID-19 Tracker, accessed January 7, 2022,

<https://graphics.reuters.com/world-coronavirus-tracker-and-maps/countries-and-territories/gibraltar/>

Vaccinated people can still spread the Delta variant. Vaccination does not stop the transmission of COVID. “Testing a subset of low-Ct samples revealed infectious

SARS-CoV-2 in 15 of 17 specimens (88%) from unvaccinated individuals and 37 of 39 (95%) from vaccinated people.” Riemersma, “Shedding of Infectious SARS-CoV-2 Despite Vaccination,” <https://www.medrxiv.org/content/10.1101/2021.07.31.21261387v4>

Individuals who have been previously infected do not show a need to be vaccinated. This is consistent with Chapter 246-105-020 WAC: “fully immunized” means an immunization status where a child has proof of acquired immunity . . . ’ It is unreasonable to mandate that those with natural immunity be “boosted” with a vaccine when there is not scientific evidence that this practice is safe or effective in the long term. Boosting an individual’s levels of antibodies to the vaccine-induced spike protein—which no longer matches the dominant strain now circulating—is experimental. Also see Shrestha, “Necessity of COVID-19 vaccination in previously infected individuals,” <https://doi.org/10.1101/2021.06.01.21258176>.

Children have sustained and robust natural immunity after contracting COVID. Dowel, “Children develop robust and sustained cross-reactive spike-specific immune responses to SARS-CoV-2 infection,” *Nat Immunol* 23, 40–49 (2022). <https://doi.org/10.1038/s41590-021-01089-8>.

Long-term effects of the vaccine trials in children are unknown. Deaths in children are a fraction of the percentage of deaths in all other age categories. Kostoff, “Why are we vaccinating children against COVID-19?” *Toxicology Reports*, Vol 8, 2021, Pages 1665-1684, <https://doi.org/10.1016/j.toxrep.2021.08.010>.

Barnstable County, Massachusetts, had an outbreak amongst a population of tourists that was approximately 74% vaccinated, which indicates that vaccination does not prevent contracting or transmitting COVID. Brown, “Outbreak of SARS-CoV-2 Infections, Including COVID-19 Vaccine Breakthrough Infections, Associated with Large Public Gatherings - Barnstable County, Massachusetts, July 2021,” *MMWR Morb Mortal Wkly Rep*, 2021 Aug 6;70(31):1059-1062. <https://pubmed.ncbi.nlm.nih.gov/34351882/>.

Despite 100% vaccination rate, consistent testing, and quarantining, a research station in Antarctica still had an outbreak of COVID cases. “COVID-19 Outbreak Hits Research Station in Antarctica,” WebMD News Brief, <https://www.webmd.com/lung/news/20220103/covid-19-outbreakohitsoresearchostation-in-antarctica>

III. Implementation of the Criteria

7. The vaccine containing this antigen is acceptable to the medical community and the public.

It is possible to gauge the level of provider acceptance of a vaccine by querying state professional societies such as the Washington Academy of Family Physicians and the Washington State Chapter of the American Academy of Pediatrics. Vaccine uptake data are also available from the Department of Health to determine provider use of the vaccine. While there is generally a good correlation between the levels of physicians' and the general public's acceptance of particular vaccines, the TAG should consider additional ways of accurately gauging public acceptance of the particular vaccine. Adding an antigen to WAC 246- 105-030 related to a vaccine with poor provider or public acceptance would likely be resisted. Postponing the regulation until there is greater approval of the vaccine would assure more effective policy.

Do any of the COVID-19 shots fulfill this criterion? No.

There has never been more opposition from the medical and scientific community or the public to any type of vaccine or vaccine policy than there is to the COVID-19 products and policies.

EXAMPLES OF MEDICAL AND SCIENTIFIC OPPOSITION

- Over 15,000 members of the [International Alliance of Physicians and Medical Scientists](#) published a declaration resolving that healthy children shall not be subject to forced vaccination. They state:
 - Negligible clinical risks from SARS-CoV-2 infection exist for healthy children under eighteen.
 - Long term safety of the current COVID vaccines in children cannot be determined prior to instituting such policies. Without high-powered, reproducible, long term safety data, risks to the long-term health status of children remain too high to support use in healthy children.
 - Children risk severe, adverse events from receiving the vaccine. Permanent physical damage to the brain, heart, immune and reproductive system associated with SARS-CoV-2 spike protein-based genetic vaccines has been demonstrated in children.
 - Healthy, unvaccinated children are critical to achieving herd immunity. Natural immunity is proven to tolerate infection, benefiting community protection while there is insufficient data to assess whether COVID vaccines assist herd immunity.

Supporting Evidence:

<https://doctorsandscientistsdeclaration.org/home/supporting-evidence/#children>

- More than 500 scientists, medical doctors and health care and other professionals united as the [Canadian Covid Care Alliance](https://www.canadiancovidcarealliance.org). Their presentation *More Harm Than Good* reviews Pfizer's six-month data and reveals that Pfizer's COVID-19 inoculations cause more illness than they prevent. See the *More Harm than Good* video and PDF slides here: <https://www.canadiancovidcarealliance.org>

"It's clear that Pfizer - and the agencies overseeing their trials - failed to follow established, high quality safety and efficacy protocols right from the beginning. . . Any government that approved this medical intervention for its citizens should have ensured that the trial had used the appropriate clinical endpoints and high quality safety science. . . Any government official who possesses this evidence and continues to allow its citizens to be inoculated with a toxic agent is, at the very least, negligent."

1. The [Association of American Physicians and Surgeons](#), established in 1943, opposes COVID-19 vaccination mandates. In regards to children, AAPS states:
 - a. In the testing, only 1,518 children received the shots, and 750 received a placebo. This is far too few to see uncommon side effects, such as myocarditis/pericarditis, as Pfizer admits.
 - b. Follow-up was for two months in one group and only 2.5 weeks in another. The Pfizer application states that long-term sequelae of post-vaccination myocarditis/pericarditis in participants 5 to 12 years of age will be studied after the vaccine is authorized for children.
 - c. The children were not examined for mild, asymptomatic myocarditis, which might cause long-term damage, as by checking troponin levels or echocardiograms, or for blood clotting problems, as by checking platelet counts and D-dimers.
 - d. The only FDA-approved product, BioNTech's Comirnaty (not yet available in the U.S.) is required to do studies on myocarditis lasting 5 years.
 - e. Monthly safety report cards on the three available vaccines, which have different dosages, are supposedly required, but none have been produced or released.
 - f. The claim of 91% relative effectiveness against symptomatic COVID in children is based on 16 cases of COVID in the placebo group and three cases in the vaccinated group over the brief follow-up period. This is an absolute risk reduction of about 2%.
 - g. We do not and cannot know the long-term effects on cancer, fertility, or autoimmune diseases. "But we're never going to learn about how safe this vaccine is unless we start giving it. That's just the way it goes," stated committee member Dr. Eric Rubin, physician at Boston's Brigham and

Women's Hospital, immunology professor at the Harvard T.H. Chan School of Public Health, and current editor-in-chief of the New England Journal of Medicine. The alternative to giving a product to most of an entire generation is animal studies or restricting use to a defined group most likely to benefit, with close follow-up.

- h. The dosage for children is one-third the adult dose. Dosage in pediatrics is generally determined by weight. Not all children weigh the same, and their weight does not triple between age 11.9 and 12.0 years.
 - i. The COVID products are not shown to interrupt infection and transmission. Masking and distancing are still being recommended or required for adults. Thus, hopes for a return to normalcy once vaccinated are misplaced.
 - j. To give truly informed consent, parents need complete information about possible side effects, such as the outcome for Maddie de Garay, a 12-year-old whose public-spirited parents enrolled her in a trial. Post-shot, she experienced excruciating pain and a 2-month hospitalization, and is now in a wheelchair. Pfizer has not acknowledged a connection to the shot, nor did it fully disclose her injuries in it. The reaction may be "extremely rare," but many would decline to take even a 1-in-1 million chance of this outcome.
 - k. The government has already ordered 68 million doses, so authorization is anticipated, and likely will be followed by mandates.
 - l. Several Nordic countries have paused the use of COVID vaccines in persons under the age of 30. Persons at low risk for COVID complications are more likely to die from the shot than from COVID.
 - m. Dr. Harvey Risch, Yale epidemiologist, stated that he would home-school his children if public schools mandated this vaccine.
 - n. No one should administer a COVID shot to a child unless parents have given fully informed, completely voluntary consent, without threats or inducements.
 - o. SOURCE:
<https://aapsonline.org/aaps-statement-on-covid-shots-for-children/>
2. The [Physicians for Informed Consent](#) have compiled a Pfizer Vaccine Risk Statement for children that highlights FDA, CDC, and Pfizer clinical trial data finding:
- a. The clinical trial found there were zero cases of severe COVID-19 in children of any age who did not receive the vaccine. In contrast, the trial found that the vaccine causes severe (grade 3) and grade 4 systemic reactions in children.

- b. The clinical trial indicates that vaccine efficacy declines significantly in less than six months. Although a booster dose of the vaccine is authorized for individuals 16 years of age or older, the clinical trial states that efficacy was not evaluated for Phase 3 BNT162b2 booster group participants. Instead, vaccine efficacy was inferred based on antibody levels observed in only about 300 vaccinated subjects over a one-month time period.
- c. The clinical trial provided no evidence that the vaccine prevents asymptomatic infection or transmission of SARS-CoV-2 or COVID-19. In addition, recent studies have observed that a significant proportion of severe, critical, and fatal cases of COVID-19 occurred in vaccinated individuals.

SOURCE:

<https://physiciansforinformedconsent.org/physicians-for-informed-consent-updates-its-pfizer-covid-19-vaccine-risk-statement-analyzes-new-safety-data-for-children/>

- 3. The [World Council for Health](#), whose leadership includes Dr. Tess Lawrie (PhD, MD, Founder, Evidence-Based Medicine Consultancy LTD, Bath, United Kingdom, 10-year Senior consultant to the WHO supporting health policy recommendations for countries globally), issued a statement in December 2021:
 - a. There is now more than enough evidence to declare the novel Covid-19 vaccines unsafe for use in humans. Victim testimonies and adverse reaction reporting systems have revealed millions of adverse reactions to the experimental vaccines, including life-changing injury and death.
 - b. The inoculations are capable of causing immeasurable harm to those who received them, with children being more likely to die from the Covid-19 vaccines than from actual SARS-CoV-2 infection.
 - c. World Council for Health anticipates that unprecedented humanitarian efforts will be essential to assist the people harmed by this global vaccination experiment, due to the known and unknown harms.
 - d. The World Council for Health demands an end to this crisis and hereby declares it illegal and unlawful for anyone to participate, directly or indirectly, in this harmful experimental vaccination programme. The World Council for Health declares individuals, governments, and other corporations will be held liable for their involvement.
 - e. World Council for Health Calls for an Immediate Stop to the Covid-19 Experimental “Vaccines” DECLARATION:
<https://worldcouncilforhealth.org/campaign/covid-19-vaccine-cease-and-desist/#full>

SOURCE: <https://worldcouncilforhealth.org/news/2021/12/covid-19-vaccines/14001/>

4. Paul E Alexander MSc PhD, Howard C. Tenenbaum DDS, Dip. Perio., PhD, Dr. Parvez Dara, MD, MBA: “We must not expose our children to ‘unnecessary’ harm. We must not expose them to a substance that has not been tested on children (or plan to be) in the way it should be and for as long as necessary. We must not expose children to a vaccine that based on their risk, is absolutely not needed. Moreover, they can become infected naturally, if their immunity is needed.”
<https://www.aier.org/article/why-we-must-not-be-forced-into-vaccinating-our-children-from-covid-beware/>
5. Dr. Robert Malone (MD, Northwestern School of Medicine, MS, UC San Diego and Salk Institute Molecular Biology and Virology Laboratories, Giannini Postdoctoral Research Fellow, UC Davis, Harvard Medical School fellow -- Global Clinical Research Scholar (2016), original inventor of the mRNA vaccine platform used in the Pfizer and Moderna COVID-19 vaccines as well as the DNA vaccine platform used by Inovio): Interview in which Dr. Malone voices his grave medical and scientific concerns for the use of any of the COVID shots, especially in children:
<https://unityprojectonline.com/news/dr-robert-malone-md-on-the-joe-rogan-experience/>
6. Dr. Peter McCullough (MD, FACC, FAHA, FASN, FNKF, FNLA, FCRSA, Chief Medical Advisor, Truth for Health Foundation; President, Cardiorenal Society of America; Editor-in-Chief, Reviews in Cardiovascular Medicine; one of the most highly published medical specialists in practice today and an authoritative commentator for major media on COVID-19). Dr. McCullough has been interviewed hundreds of times and testified to numerous legislatures and to Congress. He is a tireless proponent for early treatment to save lives, and although he at first administered the EUA shots to his patients, as information began to emerge, he stayed informed and up-to-date. He no longer supports use of any of the existing COVID-19 shots. His interview by Joe Rogan is extensive and can be found here:
<https://unityprojectonline.com/news/dr-peter-a-mccullough-on-the-joe-rogan-experience/>

In an [interview in August 2021](#), Dr. McCullough reviewed his five main points of education:

- a. COVID-19 is NOT spread asymptotically
- b. Asymptomatic people should not get tested

- c. Natural immunity is robust complete and durable
- d. COVID-19, no matter what variant, is easily treatable at home
- e. Current COVID-19 vaccines are obsolete and should be considered unfit for human use. “They [the vaccines] do not cover the new variants; patients are failing on these vaccines. They’re being hospitalized and getting sick despite having had the vaccines . . .the vaccines at this point in time have amounted to record mortality and injury and should be considered unsafe and unfit for human use.”

“Dr. Peter McCullough’s 5 most important truths about COVID-19,” LifeSiteNews, August 4, 2021,
<https://www.lifesitenews.com/news/dr-peter-mcculloughs-5-most-important-truths-about-covid-19/>.

EXAMPLES OF U.S. PUBLIC OPPOSITION

Evidence that half the country refusing; people willing to lose jobs rather than comply; large organizations of professionals publishing position papers; example of LA Unified School district; Enumclaw example?

<https://www.cityofenumclaw.net/DocumentCenter/View/6670/Res-1734---Covid-19-Vaccine-Verification-Discrimination>

Less than half of parents support a requirement for middle and high school students to be vaccinated for COVID. "About One in Five Americans Remain Vaccine-Resistant," Gallup, August 6, 2021,

<https://news.gallup.com/poll/353081/one-five-americans-remain-vaccine-resistant.aspx>

Healthcare workers are willing to lose their job rather than take the COVID vaccine.

"Roughly 3,000 hospital workers lost jobs over Washington's COVID-19 vaccine mandate," KING 5 News, November 17, 2021,

<https://www.king5.com/article/news/local/washington-hospitals-lose-roughly-3000-workers-over-covid-19-vaccine-mandate/281-b0ff14de-27b6-4b0a-bcca-ed924c314ca0>

As of October 19, 2021, nearly 2,000 state workers chose to be fired rather than take the vaccine. "Nearly 1,900 Washington state workers quit or are fired over COVID vaccine mandate," *The Seattle Times*, October 19, 2021,

<https://www.seattletimes.com/seattle-news/politics/nearly-1900-washington-state-workers-quit-or-are-fired-over-covid-vaccine-mandate/>

There have also been many stories in the news describing our service members who are being discharged secondary to their declination of the shots.

8. The administrative burdens of delivery and tracking of vaccine containing this antigen are reasonable.

Many institutions and individuals are involved in implementation of the rule when the Board adds a new vaccine to WAC 246-105-030. These include: the Department of Health, the Department of Social and Health Services, the Office of Superintendent of Public Instruction (OSPI), local health jurisdictions, schools, child care, health plans, health care providers, and families. For each of these key players, there are issues that affect the feasibility of implementing an immunization recommendation. For example, introduction of a new vaccine can result in schools conducting more parental follow-up and making changes to record and information systems—this in turn can impact school staff workload. Assuring that a reasonable burden of work is present will enhance the effectiveness of the policy. The TAG includes representatives from affected parties such as OSPI, schools, and child care when assessing an antigen against this criterion.

Do any of the COVID-19 shots fulfill this criterion? No.

The burden on school nurses for tracking COVID cases and for managing all the COVID measures is already unreasonable. ICWA board member Heidi Hartnell is a teacher in Washington State and can speak to the amount of time schools already spend tracking COVID cases and close contacts. If the requirement of vaccination is added to the existing required measures, this would create an extensive amount of maintenance and updating of immunization records. She says, “With the demonstrated waning efficacy of the COVID vaccination in adults, it would seem that this would also be true with children. If children are required to be “up to date” with a booster every six months, this will be a huge burden on schools as vaccination records will constantly need to be checked and updated. Currently, a majority of the required vaccinations are completed by the time a child enters kindergarten and these forms do not require frequent updating. However, if the COVID shot and subsequent boosters were to be added, this would place a hardship on already wearied teachers and school personnel. Ultimately these shots do not prevent contracting or transmitting the virus, and so this work achieves nothing in the public health sense.”

The only thing that makes sense, given that >99.9% of children are at zero risk from COVID, is to simply enforce the “stay at home if symptomatic” rules that have served public health well for decades. We can never achieve, nor would we want to achieve, zero exposure schools. Children’s immune systems need exposure to the microbial world, including to viruses, to properly develop and protect them as adults. This is just as true for COVID, which has become endemic, so children will be encountering the virus and mutations for the rest of their lives. More than 140 studies demonstrate that natural immunity will serve them well and far longer than the shots, and it is their

parents who should make the risk-benefit decision, not the State of Washington. "144 Research Studies Affirm Naturally Acquired Immunity to Covid-19: Documented, Linked and Quoted," Brownstone Institute, October 17, 2021.

<https://brownstone.org/articles/79-research-studies-affirm-naturally-acquired-immunity-to-covid-19-documented-linked-and-quoted/>

Public health would be even better served if the BOH would acknowledge natural immunity, and support and promote early treatment protocols, so that everyone of all ages and of any vaccination status could see better outcomes.

<https://www.cdc.gov/media/releases/2021/s1227-isolation-quarantine-guidance.html> -

9. The burden of compliance for the vaccine containing this antigen is reasonable for the parent/caregiver.

Parents and caregivers are often involved in obtaining vaccines for children. This can include: transporting children to medical appointments, taking time off of work for medical appointments, maintaining the child's immunization records, etc. When a vaccine is required for child care and/or school entry it affects the health decisions that parents make on their child's behalf because parents must, at the very least, take the required vaccine into account.

Do any of the COVID-19 shots fulfill this criterion? No.

Considering the risks discussed in Criterion #4 above, the burden of compliance on parents is unacceptable.

Considering that any injury sustained by a child is borne completely by the parents because the manufacturers are shielded under the Public Readiness and Emergency Preparedness (PREP) Act, the burden of compliance is unacceptable.

<https://aspr.hhs.gov/legal/PREPact/Pages/default.aspx>

The shots are available everywhere, even grocery stores often without an appointment, so it is easy for most parents to find an opportunity to get their child a shot if they so choose, but for those parents who choose to opt out of a school vaccine requirement, the burden is out of balance.

Parents can't go to Safeway or Rite Aid for an appointment with a practitioner to get the required risk-benefit consultation and signature. They must make an appointment with a practitioner, take time off work, arrange transportation, etc. That first step is now the most burdensome. For the past several years, it has been increasingly difficult for parents to find any practitioner willing to give them the required risk-benefit consultation. Many doctors and clinics are kicking families out of their practices who do not vaccinate, or who do not fully vaccinate according to the CDC schedule. This has nothing to do with health or protection and everything to do with the financial incentives built into the

insurance and public health systems that reward high vaccination uptake. This practice is supported by the American Academy of Pediatrics, which has critical conflicts of interest associations with the pharmaceutical and medical industries. “The AAP recently issued a clinical report that stated it is an “acceptable option for pediatric care clinicians to dismiss families who refuse vaccines”

<https://www.infectiousdiseaseadvisor.com/home/topics/prevention/new-aap-policy-on-patient-dismissal-for-vaccine-refusal-may-erode-solidarity-among-pediatricians/>

The BOH’s criterion is based on the assumption that “a process exists to opt out of immunization requirements by children attending either child care or school.” If parents are unable to find a practitioner willing to provide the required risk-benefit consultation and sign an exemption form or letter stating that they have done so, then that opt-out does not exist.

And finally, a tremendous burden exists in the coercive aspect of any vaccine requirement. Parents who opt their children out of one or more vaccinations experience emotional and psychological stress because they know they face scrutiny by school staff, by health care providers, by surveillance systems, as well as cultural pressure. Children who lack one or more vaccinations are singled out at various times, excluded from school and extracurricular activities. If a vaccine is NOT on the schedule, a parent is able to choose what is best for their child without the added stress. It is an unreasonable burden to stress entire families with a requirement that should be a personal medical decision. It is incomprehensible that the Board would even consider such a requirement with products that cannot prevent infection or transmission.

BOARD CRITERIA FRAMEWORK:

The only purpose for which power can rightfully be exercised over any member of a civilized community, against his will, is to prevent harm to others. His own good, either physical or moral, is not a sufficient warrant.” Harm to others cannot be prevented by requiring children attending school to take this vaccine.

There were no opposing views made today in the TAG meeting which seems completely disingenuous. I am floored that there would be any action to include such a controversial shot in childhood vaccination requirements.

There are those who do not share the same view as those who presented today and those voices should be heard.

2. Con

It is ridiculous that we have to defend our children against being forced to be injected with a vaccine that is still under EUA and being studied through 2025! What happened to Declaration of Helsinki that requires full informed consent? Or Nuremberg Code that protects an individual against forced medical procedures? Or medical code of ethics to do no harm? Lets see the long term outcome data from these poorly studied interventions that have already harmed plenty of people to raise eyebrows, yet we are choosing to ignore any data that doesn't go along with the common narrative. Lives matter more than dollars!

Board of Health,

Since there is no danger posed to children who catch Covid-19, purporting that the mRNA shots are important for children is a lie.
Children have no need of this experimental technology.

Please reject any new measures to encourage, advertise, or promote this dangerous concept.

I am beyond angry that covid vaccines for kids are even being considered to enter school. With no studies on long-term side effects of these basically experimental vaccines, the risk to children and especially young teenage boys is far greater than covid. Besides that, children have an almost 100% chance of recovery from Covid. This is not a childhood disease! I can tell you with absolute certainty there is NO WAY my healthy teenage son is ever getting another one of these Covid vaccines.

Subject: Covid tyranny over children

External Email

Dear Board Members,

As parents and grandparents in Washington State, my husband and I are outraged at the idea that you would impose tyrannical mandatory vaccinations on our children in spite of our objects.

You surely must know that the FDA has ONLY approved Covid vaccines for children ages 5-11 under Emergency Use and that they cannot be required or mandated under law. It is an individual's—and in this case, the parents'—choice. Vaccine Status Discrimination is unlawful.

We hope you will stand against any attempt to enforce covid vaccination upon school children.

Thank you.

Subject: Vote NO!!! To require COVID vaccine for schools

External Email

I would like to express my extreme opposition to implementation of a COVID 19 vaccine requirement for schools in Washington State.

Please vote NO!

Not enough studies done for school age children for this vaccine on long term affects, you can still spread COVID regardless if your vaccinated or not, just like the flu which is not a required vaccine...should be up to the parents and the child's doctor just like the flu shot

At least 3 to 4 other countries have stopped vaccinating school age children do to, too many adverse reactions and high level of heart inflammation.

Vaccine is proving to not be effective.

Mandates are being lifted we are THE ONLY STATE THAT STILL HAS MANDATES...THEY ARE PROVING NOT TO WORK.. IF YOU ARE FOLLOWING THE SCIENCE WE ARE COMING TO AN END WITH COVID...IF YOU ARE FOLLOWING THE SCIENCE KIDS ARE AT VERY LITTLE RISK...

1. No COVID vaccine available in the United States has received FDA approval. All available vaccines, including the Pfizer-BioNTech vaccine, are being administered under an Emergency Use Authorization. The only "approved" COVID 19 vaccine is Comirnaty, and it is not available in the United States and there is no anticipated date for its availability. (This "smoke and mirrors" approach by the FDA is the subject of numerous lawsuits and a Federal Judge recently rejected Pfizer's claim that the 2 products are interchangeable: Federal Judge Rejects DOD Claim That Pfizer EUA and Comirnaty Vaccines Are 'Interchangeable' • Children's Health Defense (childrenshealthdefense.org) Since EUA products cannot be mandated per the Nuremberg Code, this alone should be enough to stop consideration of making vaccines mandatory.

2. Children are statistically at zero risk of dying from COVID. Their survival rate is in the range of 99.997-99.998% or, put another way, their risk of dying with COVID is less than 2 in every 1,000,000 children. The very few children who are listed as COVID deaths did not die OF COVID, but rather WITH COVID as anyone being admitted to a hospital nowadays is tested. I challenge the Washington State Board of Health to show medical records for even one child who has died OF COVID. Where there's no risk, there can be no benefit.

3. There are well documented risks associated with myocarditis in young males associated with these shots. Myocarditis is not a mild illness. Statistics show that 2 in 10 people with myocarditis will die within 2 years and 5 in 10 die within 5 years. Dead heart tissue does not regenerate itself.

4. The spike proteins associated with these shots have been shown to settle in female's reproductive organs, potentially affecting future fertility. In fact, there is currently a

study focusing on changes in women's menstrual periods associated with the shots.
COVID-19 Vaccines and the Menstrual Cycle | NIH COVID-19 Research

5. Natural immunity has been shown to be much more robust than any immunity imparted by the vaccine, and there has been research that has shown, after a person gets the shots, they may never be able to achieve full natural immunity in the future. Please read this for 5 studies that show children already have robust natural immunity to this virus. Hands-off, CDC and Pfizer: Children are to be considered already COVID 'vaccinated' – Opinion – America's Frontline Doctors (americasfrontlinedoctors.org
<<https://gcc02.safelinks.protection.outlook.com/?url=http%3A%2F%2Famericasfrontlinedoctors.org%2F&>
)

6. No one knows the long term risks of these vaccines. You may remember that one of the members of the FDA Advisory Committee infamously said, "We are never going to learn about how safe this vaccine is until we start giving it" Dr. Eric Ruben, Editor in Chief NEJM The studies Pfizer conducted were woefully underpowered. This is an analysis of 10 Red Flags associated with Pfizer's studies: Ten red flags in the FDA's risk-benefit analysis of Pfizer's EUA application to inject American children 5 to 11 with its mRNA product – Commentary – America's Frontline Doctors (americasfrontlinedoctors.org
<<https://gcc02.safelinks.protection.outlook.com/?url=http%3A%2F%2Famericasfrontlinedoctors.org%2F&>
)

7. You may "enjoy" reading this analysis from a person who does risk-benefit analyses for a living. It is estimated that, even if 28 million children are vaccinated against COVID, at most 45 lives might be saved. And there are potentially huge long term risks. What is the Number Needed to Vaccinate (NNTV) to prevent a single COVID-19 fatality in kids 5 to 11 based on the Pfizer EUA application? (substack.com
<<https://gcc02.safelinks.protection.outlook.com/?url=http%3A%2F%2Fsubstack.com%2F&data=04%7C01>
)

8. In Pfizer's initial study for older 12-17 year old kids, adverse side effects were hidden. You may or may not be familiar with the story of Maddie De Garay who volunteered to be part of the initial trial because she wanted to do her part. She is now in a wheelchair with a feeding tube and likely will be for the rest of her life. Her side effects were hidden and listed as "abdominal pain". Even if there's an infinitesimal chance of this happening to another child, why take the risk? Comcast Censors Vaccine Paralyzed 13-Year-Old Girl (rumble.com
<<https://gcc02.safelinks.protection.outlook.com/?url=http%3A%2F%2Frumble.com%2F&data=04%7C01>
)

9. It is impossible for someone to give informed consent when side effects from the vaccines are hidden. Perhaps before you make a decision that you'll regret, you should visit this website.
realnotrare.com
<<https://gcc02.safelinks.protection.outlook.com/?url=http%3A%2F%2Frealnotrare.com%2F&data=04%7C01>

VOTE NO!

The let the people determine what's best for them and their kids...if you approve this you are confirming you are not for the people.

Always,
Daphne Ortiz
Very concerned parent

Subject: Meeting tomorrow for COVID-19 for inclusion in Chapter 246-105 WAC

External Email

Hello everyone,

I find it really disheartening when I email the entire board I never get one response. I am totally ashamed of this state and how it operates. I would like to know why there is not accountability to the people of WA state?

I was at the last meeting you held regarding mandatory vaccinations for k-12 and they ended up not voting that day because they had so many people opposing this measure. The public made it very clear we oppose vaccinations for k-12. Why are you moving forward like this without public comment at the meeting tomorrow?

I would love a response but know it's highly unlikely at this point. Please prove me wrong.

With much appreciation,

To whom it may concern,

Under no circumstances should our state be able to mandate and force vaccines on our children!! It should be the parents choice.
We have rights in this country and in the past 2 years, they are slowly being taken away.

If the vaccine actually eradicated things, I might entertain it.. but it's not. And children aren't getting the same symptoms. Covid has a 98 % recovery rate, have you forgotten that? I'm tired of big Pharma and other entities making money off a vaccine that has more harm then good as far as I am concerned.
Once again it's my choice to decide what I put in my child's body, not some group who doesn't know me or my child.

To Whom it May Concern: I am emailing to state my concerns about the continuation of the mask mandate and the possible vaccine mandate to attend school and daycare. Other states are easing off these mandates,even Oregon! It is time to follow their lead. It is time for our children to get back to normal. Wearing masks for 8 hours a day is cruel and abnormal. Children without commodities are not at risk from from the COVID virus and masks do not work to protect you from infection. It is time to actually follow the science and focus on other more pressing matters such as crime and the increasing homeless population. We need to get back to normal in this state and stop peddling fear and divisiveness.

Thank you for your time.

Sincerely,

Kimberly Rucker

Your studies are only based on kids that went to the hospital. Most kids are not vax and do not run to get a test nor do we run to the ER since surviving this cold has very little symptoms. Bottom line is, parents are going to do what is best for their children. If you mandate this, you will lose majority of your children attending school. Im more fearful of my child getting meningitis or TB over this common cold covid. The parents need to make the decision if they want to vax their children.. it should NOT be left up to you and your chosen science projects. Science is different depending on who does the science.

I want it to be known that I do not support any usage of the COVID 19 vaccination for public or private schools regardless of what Jay Inslee, Chris Reykdall or anyone else thinks.

The vaccine doesn't work, and kids have NEVER been to be abnormally affected by this virus in the first place. Adding something like this will cause irreparable harm to the relationship between parents and students. Jay Inslee is a thug and this state board of health needs to let parents make the decision for their kids.

Stop the madness, stop with the fear,

External Email

To whom to may concern,

Do not add the COVID shot to the childhood vaccine list.

1. This product is still an EUA medical procedure. Therefore, it ought not be added.
2. This product appears to not have any effect on Omnicron. Essentially, it is an out of date flu shot.
3. Coronaviruses alway mutate. Thus the saying, "There's no cure for the common cold."
4. Most importantly, this injection has had a record number of adverse reactions reported and we have no long-term studies that show what it does to developing bodies.

There is evidence that it will do more harm than good. See Dr. Malone's statements. He's the inventor of the mRNA injection. He says it is dangerous.

Therefore, DO NOT add this experimental gene therapy to the childhood vaccine schedule.

Washington State Board of Health 2/24/22

For March 9 2022 Board Meeting.

Dear Board of Health Members,

Our understanding of nature (science) is constantly growing. Sometimes the new science shows policy is flawed and we need to adjust our policies to fit the science. We are now in an emergency need of change.

Current published peer reviewed research reports too many are ingesting, swallowing, too much fluoride, 70% with dental fluorosis a biomarker of excess fluoride.

Two Benchmark Dose Analysis published studies, Grandjean et al, 2021 (pre-print 2020), and Hirzy 2016. Both report about 0.2 ppm fluoride in urine (water is similar to urine) reduces IQ by 1 point. At water fluoridation concentrations of 0.7 ppm, 5 IQ are lost.

<https://pubmed.ncbi.nlm.nih.gov/33173917/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fpubmed.ncbi.nlm.nih.gov%2F33173917/>

and <https://fluoridealert.org/studytracker/39766/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ffluoridealert.org%2Fstudytracker/39766/>

May I repeat, the best research indicates water fluoridation is adding to the excess exposure lowering IQ by 5 or more points.

Reducing the fluoride exposure for pregnant mothers and children is a public health emergency. We must protect the developing brains of our children and their children and their grandchildren. For those of us with high IQ, a loss of 5 IQ would be hard to detect. For a child with 75 IQ, dropping to 70 IQ is a serious problem for that child, parents, schools with increased special education rates, employment problems, increased divorce, and increased crime. When the brain does not work as well as it could, a person can become very frustrated and act out their frustration. We in public health are contributing to their grief and suffering.

Food and Water Watch et al vs. EPA cited overwhelming evidence (now 74 studies, including 11 at levels in fluoridated water. See 22 below) that fluoride can significantly lower IQ's and increase ADHD rates in children. The judge has already said there is "serious evidence" of neurotoxicity and the EPA should "take a second look."

<https://fluoridealert.org/news/epa-should-reexamine-fluoridated-water-risks-judge-says/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ffluoridealert.org%2Fnews%2Fepa-should-reexamine-fluoridated-water-risks-judge-says%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C4f66d901aa9f4382232908d9f7bf20bd%7C11d0>

The National Toxicology Program draft review of fluoride indicates fluoride is a presumed developmental neurotoxin, the highest rating without RCTs.

Low-income families can't afford expensive filters or bottled water to avoid fluoridated water – they have no choice. Moreover, low-income families use more infant formula. Mixed with fluoridated water, formula has 100 times the level of fluoride in breast milk, risking lowered IQ and increased ADHD rates in bottle-fed babies.

There are many sources of fluoride and if a person wants to ingest fluoride they can make that choice.
Most developed countries do not fluoridate public water.

Our protection of the most vulnerable is an emergency for your immediate action. Our request for rule changes submitted a decade ago still stand and are supported with many more peer reviewed published studies.

Sincerely,
Bill Osmunson MPH DDS
1418 -112th Ave, Bellevue, WA 98004 bill@teachingsmiles.com

23 studies, published from 2017 to 2021. See below an incomplete list of professionals in Washington State Opposed to fluoridation.

1. 2021 – Indonesia. 100 students, age 6-12 years old. Relationship between dental fluorosis and lower IQ.

Yani SI, Seweng A, Mallongi A, Nur R, Abdullah MT, Salmah U, Sirajuddin S, Basir-Cyio M, Mahfudz, Anshary A. 2021. The influence of fluoride in drinking water on the incidence of fluorosis and intelligence of elementary school students in Palu City

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ffluoridealert.org%2Fstudytracker%2Fstudy%2F1418-112th-Ave-Bellevue-WA-98004-bill-osmunson-mph-dds-teachingsmiles-com>

. Gaceta Sanitaria 35(Supplement 2):S159-S163.

Conclusions: "...

"The intelligence of children who suffered from fluorosis is lower than the intelligence of children who do not suffer from fluorosis."

"The level of intelligence of students who live in the high-fluorine area is lower than students who live in low fluorine area."

2. 2021 Philippe Grandjean

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fonlinelibrary.wiley.com%2Faction%2Fshow%2Fdocument%2F10.1111/j.1365-2214.2021.01211.x>

6. 2021 Zhao L, Yu C, Lv J, Cui Y, Wang Y, Hou C, Yu J, Guo B, Liu H, Li L. 2021. Fluoride exposure, dopamine relative gene polymorphism and intelligence: A cross-sectional study in China

. *Ecotoxicology and Environmental Safety* 209:111826. [Epub ahead of print].

Conclusions: "Our study examined the association between excessive fluoride exposure in prenatal and childhood periods and the intelligence of school-age children. We found that prenatal excessive fluoride exposure could cause lower IQ scores, especially the decreased odds of developing excellent intelligence. Meanwhile, a negative association between fluoride exposure and children's IQ scores was observed in children without prenatal exposure."

9. 2020 Till C, Green R, Flora D, Hornung R, Martinez-Miller EA, Blazer M, Farmus L, Ayotte P, Muckle G, Lanphear B. Fluoride exposure from infant formula and child IQ in a Canadian birth cohort

Conclusions: "In summary, fluoride intake among infants younger than 6 months may exceed the tolerable upper limits if they are fed exclusively with formula reconstituted with fluoridated tap water. After adjusting for fetal exposure, we found that fluoride exposure during infancy predicts diminished non-verbal intelligence in children..."

Conclusions:" In boys, positive associations were observed between MUFcr and scores in 122 cognitive domains at the age of 4. These findings are inconsistent with those from some 123 previous studies and indicate the need for other population-based studies to confirm or overturn 124 these results at low levels of F in CDW." As an admitted outlier of studies, careful attention should be noted to the industrial air pollution differences in the communities.

<<https://qcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.sciencedirect.com%2Fscienc>

Conclusions: The study suggests low-moderate fluoride exposure is associated with alterations in childhood thyroid function that may modify the association between fluoride and intelligence. In the current work, results demonstrated clearly that, across the full range of water and urinary fluoride concentrations and using a measure to focus on children's IQ scores, higher fluoride levels were associated with lower IQ scores."

. Fluoride. Results: "Negative correlation coefficients were found for the average score for all the subjects and for the overall score, with the result being statistically significant in five out of the eight subjects and in the overall score (Tables 4 and 5). ... significant correlations undoubtedly exist between the drinking water F level and the schooling performances in all the subjects except for one, technology, which might be due to the nature of the subject."

17. 2018 . Pang H, Yu L, Lai X, Chen Q. 2018. Relation Between Intelligence and COMT Gene Polymorphism in Children Aged 8-12 in the Endemic Fluorosis Area and Non-Endemic Fluorosis Area.

<[https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ffluoridealert.org%2Fstudytracker%](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ffluoridealert.org%2Fstudytracker%2F)

Chinese Journal of Control of Endemic Diseases Study in Chinese translated into English.

Conclusions: "This study found that there was a great difference in the level of intelligence between children in the endemic fluorosis area and those in the non-endemic fluorosis area and such difference was statistically significant ($P < 0.05$). "The rate of mental retardation ($IQ < 69$) in children in the endemic fluorosis area was significantly higher than that in the non-endemic fluorosis area, and the difference was statistically significant ($P < 0.05$)."

<[https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.sciencedirect.com%2Fscienc](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.sciencedirect.com%2Fscience%2Farticle/pii/S0167636918300000)

Environment International,

Conclusions: "In conclusion, chronic exposure to excessive fluoride, even at a moderate level, was inversely associated with children's dental health and intelligence scores, especially excellent intelligence performance, with threshold and saturation effects observed in the dose-response relationships. Additionally, DF severity is positively associated with the loss of high intelligence, and may be useful for the identification of individuals with the loss of excellent intelligence."

Subject: SuperBowl and Mask Mandate

attachments\0FD570595A3047CE_image0.jpeg

External Email

☐

☐Washington Education and health leadership,

As a parent of two young daughters in the Lake Washington School District, I am asking you to take the steps necessary to eliminate the mask mandate in the state and our schools.

It as become apparent that masks do not prevent the spread of covid. 96% of states have eliminated mask mandates or have dates to do so(data below). PLEASE DO NOT END UP ON THE WRONG SIDE OF HISTORY!!

While watching the Super Bowl, which was held in a county WITH a mask mandate, I was overcome with disbelief at the hypocrisy of our system. City mayors, celebrities, people in leadership positions at education unions/county positions/state representatives, in addition to 75,000 fans completely ignored the mask mandate. Why may you ask?? Because they and WE all know that masks do not prevent the spread of covid.

My first grade daughter has NEVER had a day of school without a mask! Can you image that? Think of what kindergarten and 1st grade are all about.....while they learn reading/math/etc....much of what is taught is about interpersonal skills, interacting in groups, understand their emotions, "learning to learn", and getting along with other children. Without the ability to read facial cues, smiles, smirks, and frowns, I am worried about this generation of children.

Further, the mental health crisis in the school aged demographic has never been higher. This is an emergency....time is of the essence.

Our goal is for our children THRIVE, not survive.

Please take a look in the mirror, look at the covid data, look at the map below....and choose to support our kids.

Thanks,

Mike

Dear Members of the WA State Board of Health,

My vision has been severely affected by the mandate to wear masks (because I originally complied with the mandate), and today I was denied surgery to fix my vision problem because I refused to wear a mask. The mask is what caused my vision problem in the first place. Why would I continue to do something that injures my body?

Here is the story: In mid-March of 2021, I developed a rash on the front of my chin, which I knew was the result of wearing a mask. I thought it would go away on its own, so I did not go to a dermatologist until May. By then, the rash was much worse and had spread to my right eye. The dermatologist gave me some oral antibiotics and an ointment. My rash did not respond to either prescription. I called when the antibiotics were done (about 10 days) and explained that the rash was now worse and had spread to my left eye as well. By the time I returned to the doctor's office, the rash had spread to several splotches on my neck and torso. It was clearly a staph infection, although the PA did not verbally confirm my assumption or counter with another diagnosis. Instead, I was told to keep using the ointment they gave me, plus a second ointment for the eyes. Neither ointment did a darn thing, but a friend gave me colloidal silver, which the rash responded to with the first application. The rash started clearing up right away with the colloidal silver, but it was a severe rash and was not totally gone until early July.

The rash was on both the upper and lower lids of both eyes, all the way to the lash lines. It was in the tear ducts and in the outer corners of both eyes. Ooze and flakes from the rash could have easily gotten inside both eyes.

In June, I started noticing that my vision was getting worse. Every day I felt like I had lost more vision from the day before. I figured I needed a new prescription, so decided I would make an appointment the next time I was at Costco. However, when I stopped by Costco in June, the receptionist would not make my appointment in person because of covid and said I need to call in. I thought that was stupid and decided to check later. In July I tried again and got the same response. Ditto for August, but by then I felt so blind that I called them and made an appointment for September. When I saw the doctor in mid-September, he said something might be wrong with my eyes because my vision didn't just change a little – it changed a lot, and he thought I might have an eye disease. So he referred me to a specialist. I saw the specialist in early October, and was told I had ectasia, which is deterioration of the corneas, and needed a surgery called Cross-Linking, which they only do one day per month. They said they needed pre-approval from my medical insurance and submitted it to BCBS. BCBS said they had up to 90 days to

make a decision and took every one of those 90 days, notifying the clinic in mid-January that I was approved.

Due to a cancellation, they fit me into their schedule for Feb. 1 (today). Remember, this is a procedure they only do one day per month. However, the clinic refused to let me in because I would not wear a mask.

You can see that I have been struggling for many months with a medical problem that was brought about by wearing a mask.

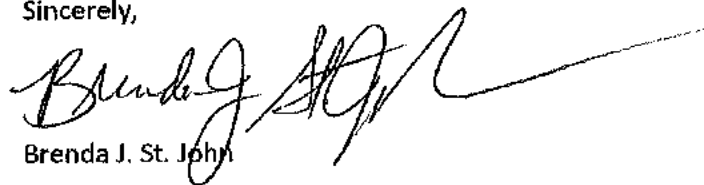

I went back to my eye doctor at Costco and told him of my situation and he is now looking for a clinic in Idaho that will take me without a mask.

I am very disappointed in all of you for this requirement you are placing on clinics and medical offices regarding the mask mandate. My eye doctor said he is starting to come across more and more articles in his professional magazines about eye problems resulting from mask-wearing.

Please stop the insanity and lift the mask mandates now! Meanwhile, my vision is still deteriorating and it is getting harder and harder to read but my eye doctor said it is not sensible to get new glasses until the corneal deterioration is halted.

THIS ALL STARTED FROM A MASK!!!

Sincerely,

A handwritten signature in black ink, appearing to read 'Brenda J. St. John', with a long, sweeping horizontal line extending to the right.

Brenda J. St. John

Hi Michelle, it's never been about science. Also, why are you parents waiting for the mandates to be lifted? You can stop complying this minute.

A mandate is a voluntary participation to government's request. So, you don't have to "volunteer" anymore. □□

Subject: Re: SuperBowl & The Big Game

When you know better. You do better.

We now know better, so please DO better.

Remove the masks, remove the mandates. It's no longer science.

Subject: Re: SuperBowl & The Big Game

Enough is enough. End all the mandates now.

Perhaps if our kids were rich and famous they wouldn't have to wear their masks to school every day like the 70k fans at the super bowl last night. The hypocrisy is deafening.

School boards and superintendents... you've typically given the answer "this isn't our call, it's the governor's call"

But when someone orders you to harm children, even just a little, you DON'T DO IT. You just say no. It's never too late to let your conscience be your guide. Free our kids from this madness.

I agree—clearly there is no need for masks, as 70k people jammed into a super

bowl stadium proved last night.

No. More. Mandates. Thx.

Greetings...

Issaquah, Bellevue, Lake WA School Districts, OSPI, WA State Education,
WSBOH, and King County Commissioner.

That sure was quite the Half Time SuperBowl Show, wasn't it? As 70k
mask-less fans adorned the stadium in CA for the 'big game', it sure brought attention to
millions sitting at home watching that we have been played. We've been played by our
State Schools and Government.

We are no longer asking. We are demanding that immediately mask
mandates be rescinded from our schools and release our children from these harmful
practices.

Thank you kindly,

Tanya Goodman

Protective and Loving Mother

from complications relating to his covid vaccination. This was the final decision handed down by the court in Paris, France. This court decision has set a precedence all the courts in the world will be able to cite and win with...

Court in France's decision to support Life Insurance Company who refuses to pay out life insurance for someone who died after taking the injection. Reasons? They say the dead person knew the risks, the risks were published and therefore the dead person committed suicide. I kid you not.

Kansas Woman Died From Allergic Reaction to Moderna COVID Vaccine, Autopsy Confirms

Jeanie Evans, 68, of Effingham, Kansas, died of "anaphylaxis due to COVID-19 vaccination," according to her autopsy report. Evans died March 24, 2021, one day after her first dose of Moderna's vaccine.

Evans, 68, of Effingham, Kansas, died March 24, 2021, one day after receiving Moderna's COVID vaccine

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fde-cdc-approval-moderna-spikevax-vaccine%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Ca607fb25770d41fb185108d9ec55763b%7C114510696.html>&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Ca607fb25770d41fb185108d9ec55763b%7C114510696.html

in Jefferson County.

According to the autopsy report

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fnews.yahoo.com%2Fkansas-woman-jeanie-evans-died-114510696.html>&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Ca607fb25770d41fb185108d9ec55763b%7C114510696.html

, obtained from the Shawnee County coroner's office through a Kansas Open Records Act request, Evans said her airway felt blocked about 15 to 20 minutes after she received her first dose on March 23, 2021.

She was taken by ground ambulance at 5:21 p.m. to Stormont-Vail hospital, where she died at 11:55 a.m. the next day.

Evans had a medical history of hypertension, environmental allergies, allergic disorders and reactive airway disease. She previously experienced an anaphylactic reaction to the drug Albuterol, the report said.

According to Mayo Clinic

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.mayoclinic.org%2Fdiseases-conditions%2Fanaphylaxis%2Fsymptoms-causes%2Fsycc-20351468>&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Ca607fb25770d41fb185108d9ec55763b%7C114510696.html

, anaphylaxis is a "severe, potentially life-threatening allergic reaction" that can occur within seconds or minutes of exposure to something you're allergic to.

The Centers for Disease Control and Prevention's (CDC) website

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fcoronavirus%2Fncov%2Fvaccines%2Fsafety%2Fadverse-events.html>&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Ca607fb25770d41fb185108d9ec55763b%7C114510696.html

states anaphylaxis after COVID vaccination is rare and occurs in approximately five people per 1 million vaccinated in the U.S.

There are now 378 autopsies in VAERS. This is good news! Perhaps we can use the cause of death information in these reports to assess whether or not the injections caused the deaths.

Contrary to classical approaches, I decided to reduce the size of my data frame by extracting only the VAERS IDs with 'Autopsy' as a reported adverse event that were filed

within 1 day which reduced the entry number to 145, and in people less than 30 years of age which reduced the entry number to 8. I really want to check the cases that appear to be outliers.

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Femail.mg1.substack.com%2F%2F_ZBkNZJIGxv7WMd2psKS8IPvqVR0qqk-d9ARfsoKtUJGR4E8Ba-5IGKkQiCvB0GcsCiUac4AmwmrRvth1-BMDSlev_Eo1YjetfMKnKSYK_CcSEW9p3zwRs5KeWHVDWoOHYA60PAN-ZkioFW_17qXB317kL9NnI99OWypxn32Lm0tFDazQLMzVPd-2tampgf583U79G1Jybf3vE57TkuGUsI3tHipAHuruCEIP0H4CdOUPdwntHzuYODWOSk6awztGBXQKY5IZ7ylxIO0N5s5pWi-Sn3XK3HTcblXkOWyx0pUGw57ubRiI4RZTvpMe6wVaMlcsZutpMchl-iZP-xw4KCJgM5hWKfJZE96SWXSraymeFZWUH7So8vu_y-HmzYFvwfRyjrI4mmZU7jTG7kXvE239TsdRQnxNEY1fwuuYDUL1P4drqtECE3E7ET6ZqPDI-MqowZoO419YWzRRhbaEjasA-taqoP06eG9o_SHHEyA&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cc6ed6f87a5a840cb4ca408d9f7

So with a measely 8 entries, let's see what the autopsies revealed, if anything. Conveniently in VAERS, there's something called a 'SYMPTOM_TEXT' column where you can find a lot of information not included in the other columns.

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Femail.mg1.substack.com%2F%2F_I-LhpJkmaAJpe-_XD0IWI1n2wcY-Im1vK8wpP82eSkWnGutzBxPhp6xQK2R0FMjjEoxQVEmmFAoGK-qVQ0sZpwyw2WU1aD_cunhblxSv30TqQaIP47BScvIYO-YDbYnUERGsjARLpz2_Se0RFogeDHxDfqYIaDUfte7lwd4e9E8TH2JfDleq9Z-9T1tzLZudodkJqv84bStT040-f92Avc0phfae1nHPac5QyvINzV8qwn4ybgoqThJx0jTIDv8JLZ47wMI5r3nnrGUdZwq6QRDd2eAYdaDUoHIfWG80rR_pS7r1bjHsYFrybLBYUfJEzBdbyBjocBd9pi6Kh1YnLKBen1SAWhv5qIfo8zWgzF9BRGBqKp7mmvhR60DmTiFe_tbf2Ox2xKU-R4jWrRBMzQegek_CtdVxhgi5nUgYbTVeciE5GwjhWN1ra4vmA-VMYIkacUgtK5q_55wb2z8PFcT6&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cc6ed6f87a5a840cb4c

I want to point out the most shocking thing about each entry (to me anyway) and a summary. Just a reminder, these entries each represent a young person who died within 24 hours of being injected with these COVID-19 products. Each one died after injection #2 is this list.

1. 1845034 (Pfizer): 15 year old male; no reported cause of death; spontaneous bronchospasm occurred - this is typically associated with mast cell degranulation in asthmatics - no history of asthma reported
2. 1160526 (Pfizer): 27 year old female; died 5 hours after 2nd shot; multicentric reticulohistiocytosis (typically only in 50+), history of hypothyroidism; labs ongoing
3. 1206323 (Janssen): 21 years old male; reported as having vomited and then died in his sleep

4. 1206330 (Moderna): 27 year old male; history of cardiomegaly
5. 1247997 (Pfizer): 26 year old male; reported as having vomited and then died in his car
6. 1365485 (Moderna): 30 years old male; absolutely no history ailment-wise; suffered 'injection site pain' and shortness of breath before dying
7. 1302844 (Moderna): 29 year old male; history of hypertension, non-insulin dependent diabetes; on hydroxyzine pamoate; suffered shortness of breath before dying
8. 1346657 (Moderna): 19 year old male; history of autism, on clonidine, vyvanse and vraylor; COVID-19 ruled out; labs ongoing; cause and manner of death undetermined

Looks like young people dying for no reason. Remember, these are simply the reports I could find and we all know that autopsies are not being done commonly due to this fear-mongering around COVID-19 autopsies. They shouldn't have that excuse now. So maybe we will see more autopsies and solidify our claim that these injections are killing people.

My assessment:

1. don't get injected with these products if you have an enlarged heart
2. don't get injected with these products if you have pre-existing health conditions
3. don't get injected with these products if you are young (<50 in my books)
4. don't get injected with these products if you are older (>50 in my books) - weaker immune systems due to senescence
5. don't get injected with these products

These products are causing harm and doing ZERO good.

If any of my lovely readers would like to check the larger lists for anything specific, please write it down in the comments. I will do my best to respond. I do get a lot of personal emails from people asking about cause of death potentials so I can search for patterns if you give me a starting point. aka - a personal story would be good. Thanks guys.

My family is experiencing first hand issues of myocarditis with my mother in law. She did not have this before receiving the COVID vaccines. It is not a mild situation that just goes away like the TAG is being told. My mother in law has had it for six months now. Heart issues started occurring a week after her booster. She is not able to travel as she can't wear any type of shoe because her legs are so swollen which doctors are saying it is because of her heart. This is horrible to know this is happening and didn't before COVID vaccines and seems this will now be permanent for her.

My mother has also experienced issues after her vaccines. She is now on pancreatic medication. Again not something she has had issues with before.

I am sure the TAG is only supplied numbers from people being treated at the hospital. If you want real facts, then research needs to go beyond just numbers and conversations need to occur with people who are experiencing after affects of the vaccine.

I would not want my daughter to experience heart issues after a vaccine, though they say is temporary, sure sounds like it could be permanent.

Hi team,

I checked the mail today and scanned all the letters. I'll forward such letters to the WSBOH inbox. This was the immunizations survey in letter form, so I'll include Sam for situational awareness.

Thanks,

Melanie Hisaw

WASHINGTON STATE BOARD OF HEALTH

Caregivers & Parents Survey: COVID-19 Vaccine as a School Requirement

Under state law (RCW 28A.210.140), the State Board of Health (Board) has the authority to create immunization requirements for child care and school entry. Since 2006, the Board has relied on multi-disciplinary technical advisory groups (TAG) to review vaccines against nine criteria to recommend to the Board whether an immunization should be added to the list of requirements. The Board recently directed its staff to work with the Department of Health to begin the process to collect the information necessary to convene a TAG to evaluate COVID-19 vaccine. The TAG will utilize the 9-criteria framework established by the Board to assess and evaluate the COVID-19 vaccine as a requirement for child care and school entry and provide a recommendation to the Board. As the preparation to convene the TAG is underway, Board and Department of Health staff would like your insight and feedback regarding the burden an additional school immunization requirement may create for parents, families, and caregivers.

We recognize that getting kids vaccinated can include transporting children to medical appointments, taking time off work for those medical appointments, maintaining the child's immunization records, etc. Vaccine requirements for child care and school entry may also impact the health decisions that parents, families, and caregivers make on their child's behalf because parents must, at the very least, take the required vaccine into account. Since parents, families, and caregivers are often involved in obtaining vaccines for children, your feedback on this topic is essential. **Knowing that adding COVID-19 vaccine as a requirement for school entry will impact families across the state, we are asking for your input on the barriers you may face to getting your kids vaccinated and how burdensome a COVID-19 vaccine requirement may be for you and your family.**

Feedback provided by survey respondents will be presented to the TAG for their consideration during review and discussion. However, the purpose of the TAG is to evaluate a vaccine against the established criteria to develop and provide a recommendation to the Board. The recommendation is then presented to the Board at one of its regularly scheduled meetings for consideration. The Board, at their discretion, may or may not approve the TAG's recommendation.

1. Organization or Community Affiliation

I am the parent of a child enrolled in public school.

RIM, HARDY
13104 139th AVE NW
GIG HARBOR, WA 98329

2. Would adding COVID-19 vaccine as a requirement for school entry make you more or less likely to get your child vaccinated?

0	1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	---	----

Not at all likely

More likely

3. How burdensome would an additional immunization requirement for school entry be for you and your family?

0	1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	---	----

Not at all burdensome

Extremely burdensome

4. What are some of the barriers you face to getting your child vaccinated against COVID-19?

This injection that they are calling a "vaccine" does not contain an antigen as has classically been the case with other vaccines and instead is touted as containing artificially created mRNA gene therapy which is intended to cause one's body to continue producing a "spike protein" which is the very poison introduced by the virus that we are trying to protect against. Secondly, it is unreasonable to insist that we inject our children with an experiment cocktail for which the manufacturer holds no liability if harm occurs. Thirdly, the manufacturer has indicated an unwillingness to divulge the contents of the injection, wanting to delay disclosure for 75 years. It is unreasonable to burden the parent/caregiver with compliance for the "vaccine" because it is experimental, without manufacturer liability, and without full disclosure of the contents and controlled double-blind peer-reviewed studies."

5. What are some of the benefits you see to vaccination? Do the possible benefits of vaccinating your child against COVID-19 reduce the impact of identified burdens of obtaining the vaccine?

There are no benefits, only contraindications. The injection causes the immune system to ignore the spike protein and therefore not attack the virus, or begin attacking the body which has been caused by the injection to produce tissues with spike protein embedded in the tissues, causing the body to attack itself. This is causing inflammation and degradation of vital organs throughout the body.

6. Do you believe adding COVID-19 vaccine as an immunization requirement for school entry is reasonable? Why or why not?

Children statistically suffer a near zero complication and death rate from contraction of the virus. It is unreasonable to burden parents/ caregivers with incurring the risk of severe harm or death to their children. This vaccine does not provide immunization (immunity) against contracting the disease that it is intended to protect

against. Stephanie Sinep, at ResearchGate.com article titled, Innate Immune Suppression by SARS-CoV-2 mRNA Vaccination. "These vaccines were not designed to provoke long term T-cell immunity. So, you cannot use them to get to herd immunity. They are leaky, as Dr. Malone says. This vaccine is causing impairment. The science could not be more clear."

Hi WA SBOH employees,

I highly recommend you all to read this doc about Nuremberg Code. And enjoy your meeting tomorrow!!!

BRITISH MEDICAL JOURNAL No 7070 Volume 313: Page 1448,
7 December 1996.

CIRP Introduction

The judgment by the war crimes tribunal at Nuremberg laid down 10 standards to which physicians must conform when carrying out experiments on human subjects in a new code that is now accepted worldwide.

This judgment established a new standard of ethical medical behavior for the post World War II human rights era. Amongst other requirements, this document enunciates the requirement of voluntary informed consent of the human subject. The principle of voluntary informed consent protects the right of the individual to control his own body.

This code also recognizes that the risk must be weighed against the expected benefit, and that unnecessary pain and suffering must be avoided.

This code recognizes that doctors should avoid actions that injure human patients.

The principles established by this code for medical practice now have been extended into general codes of medical ethics.

The Nuremberg Code (1947)

Permissible Medical Experiments

The great weight of the evidence before us to effect that certain types of medical experiments on human beings, when kept within reasonably well-defined bounds, conform to the ethics of the medical profession generally. The protagonists of the practice of human experimentation justify their views on the basis that such experiments yield results for the good of society that are unprocurable by other methods or means of study. All agree, however, that certain basic principles must be observed in order to

satisfy moral, ethical and legal concepts:

1. The voluntary consent of the human subject is absolutely essential. This means that the person involved should have legal capacity to give consent; should be so situated as to be able to exercise free power of choice, without the intervention of any element of force, fraud, deceit, duress, overreaching, or other ulterior form of constraint or coercion; and should have sufficient knowledge and comprehension of the elements of the subject matter involved as to enable him to make an understanding and enlightened decision. This latter element requires that before the acceptance of an affirmative decision by the experimental subject there should be made known to him the nature, duration, and purpose of the experiment; the method and means by which it is to be conducted; all inconveniences and hazards reasonably to be expected; and the effects upon his health or person which may possibly come from his participation in the experiment.

The duty and responsibility for ascertaining the quality of the consent rests upon each individual who initiates, directs, or engages in the experiment. It is a personal duty and responsibility which may not be delegated to another with impunity.

2. The experiment should be such as to yield fruitful results for the good of society, unprocurable by other methods or means of study, and not random and unnecessary in nature.

3. The experiment should be so designed and based on the results of animal experimentation and a knowledge of the natural history of the disease or other problem under study that the anticipated results justify the performance of the experiment.

4. The experiment should be so conducted as to avoid all unnecessary physical and mental suffering and injury.

5. No experiment should be conducted where there is an a priori reason to believe that death or disabling injury will occur; except, perhaps, in those experiments where the experimental physicians also serve as subjects.

6. The degree of risk to be taken should never exceed that determined by the humanitarian importance of the problem to be solved by the experiment.

7. Proper preparations should be made and adequate facilities provided to protect the experimental subject against even remote possibilities of injury, disability or death.

8. The experiment should be conducted only by scientifically qualified persons. The highest degree of skill and care should be required through all stages of the experiment of those who conduct or engage in the experiment.

9. During the course of the experiment the human subject should be at liberty to bring the experiment to an end if he has reached the physical or mental state where continuation of the experiment seems to him to be impossible.

10. During the course of the experiment the scientist in charge must be prepared to terminate the experiment at any stage, if he has probable cause to believe, in the exercise of the good faith, superior skill and careful judgment required of him, that a continuation of the experiment is likely to result in injury, disability, or death to the experimental subject.

MASK

I do not believe mask mandates improve health as it relates to the Corona virus. I have looked for peer reviewed research. Quality peer reviewed data & scientific research is very slow to be released due to all the steps to complete. From completing the research study & writing the manuscript describing "purpose " to pre-submission formal review & ensuring no CONFLICT OF INTEREST is involved. Anything rushed is to be scrutinized.

The public knows it takes time to authenticate & replicate research properly.

What we have today is an experiment and mandates should not be allowed for an experiment (see Nuremburg code).

I do believe masking sets back our infants & toddlers in development regarding speech, emotion and social development. This is not ethical and will become a problem in 5-15 years.

I believe reducing our humanity through enforced masking is unethical & immoral. It encourages acts of criminal behavior through anonymity. The first thing a criminal does is hide the identification of oneself.

Integrity is questioned here. Ethics & morality is also.

COVID "VACCINE"

This COVID SHOT should not be mandatory as it has NOT been proven through rigorous testing, research and efficacy data. To give this experiment to humans without full safety & long term animal testing is immoral. To attempt to force humans or TRICK humans into accepting it is simply wrong (again see Nuremburg code). Any elected official or person in an office with the "power" to enforce accepting this injection on the public is also subject to laws for unethical & immoral purposes.

Stop illegal & harmful masking & injection of an experimental substance on humans immediately.

-Kris Duncan

To Whom it May Concern,

I am asking you not to vote for School required covid vaccines - It does not fit the statutes you are using. Current vaccines listed stopped further spread, and covid vaccine has not stopped anything. Break through cases are everywhere. There is much more evidence that the masks are damaging our children. As someone who works with kids from trauma, I can tell you that there has been more trauma in the last two years due to the masks than covid itself. Please think of our children and stop this madness.

Subject: Difference between unvaccinated and vaccinated

External Email

Due to the changes in definitions being so fluid, the datasets should also include the number of shots instead of the labels of vaccinated or unvaccinated. The number of shots, regardless of when the shots are received. I realize that someone isn't counted vaccinated until 2 weeks after their shots. This is why the number of shots will produce a better dataset for analysis than using labels of vaccinated or unvaccinated. Also, if someone hasn't received any shots, they should fall under vaccine free individuals. This is to get a better dataset for the best data analysis. The only reason not to do this is to hide information and to blame a group that maybe shouldn't be blamed.

Debra Wells

On Thursday, February 17, 2022 10:06 AM, Debra Wells
<debrakwells@startmail.com> wrote:

I am fighting hard against these covid vaccines because there are indications that they cause blood clots. There are loads of cases noted in the VEARS database and other countries data related to PE, DVT and thrombosis incidences. I have a history of blood clots from a medication. I was young, healthy and had absolutely no other risk factors concerning blood clots other than the medication. I was so healthy that they didn't find the blood clots until after 2 trips to the ER and a Doctor's visit. After leaving the doctor's office, I received a call demanding that I go to the nearest hospital for a lung scan where I lit the scan up like a Christmas tree. The clots were confirmed via what they call the Gold Standard test, where they ran a camera up my vein, through my heart and into my lung. There were absolutely no indications with my vitals or physical condition, other than it felt like I had pneumonia. The result was that I had 6 clots in one lung and they didn't bother looking in the other lung. I spent a week in the hospital. This is because I was otherwise healthy and responding well to the blood thinners. Obviously, I was on medication for a little while after hospitalization. This was all caused by a medication that is considered extremely safe and is widely used (birth control pills). Blood clots are considered the silent killer, especially in younger people. This happened over 20 years ago. I have avoided all medications, vaccination or even food that I know have the potential to cause blood clots.

I had no other medical history prior to this incident with blood clots and could have ended with my death.

This is why SBOH should consider the negative effects of the vaccines. I know that it's been hard to get this information because the FDA, CDC and Government as a whole doesn't want to create vaccine hesitancy; however, this shouldn't take priority over allowing the public to make informed decisions without being forced to take something that can result in death or disability. The public must have all the information to make the best medical decisions for themselves. I would say that the withholding of information and the heavy handedness of the FDA, CDC, and all government entities as caused more vaccine hesitancy, resistance and mistrust than if they had been truthful. If this isn't the cause, then maybe the vaccine never should be authorized in the first place. Meaning, if the adverse reactions or injuries are such that the FDA, CDC and Government entities feel that it would cause vaccine hesitancy, then the approval of the vaccine shouldn't have happened until those concerns were addressed and the full information should have been given to people prior to getting the vaccine and informed consent should be received without force or coercion.

I have concerns that this vaccine will cause more injuries and death than it will save children. There are indications that this is already occurring and should be investigated. Everything I have seen so far is that children are less likely to get covid let alone die from it. As a matter of fact, more children die of accidents every year than all other causes of death to include Covid. What the Board hasn't investigated are the adverse reactions or deaths caused by the vaccines and must be considered before requiring this vaccine for school or day care, even if it takes a little bit longer. It is more important to make sure that the decisions made don't cause more harm than what they are meant to save.

I have concerns that these issues have been ignored and not addressed. There should be a meeting going over adverse reactions and injuries, not just to appease those of us with concerns but to truly look at all potential problems that could arise from vaccine injuries/adverse reactions.

Lastly, there are no safety studies concerning fertility. That should be done before mandating this to school age children.

PS. I want to address a poorly worded statement from a panelist last week. The comment stating that mothers don't know what is best for their children because they are misinformed or lack information. The lack of information is the fault of the FDA, CDC and Government entities as a whole. Parents, particularly Mothers know more about their children than school nurses, doctors or even so called experts because they know more about that child's medical history from the birth of that child to current day. Obviously, medical history is incredibly important that most people don't have. Mothers have this information. In addition to that, parents have a moral, emotional and financial responsibility for their children, where the school and so called experts don't have. As a matter of fact, no school nurse, school administrator, doctor or so called expert goes home at night and thinks about the impact of their decisions that affects families. However, Parents are left holding the bag of the bad decisions made by so called experts. As a parent, I would walk through fire, take a bullet and suffer death for my child (who is now 30). Not one of you or anyone else would. This is the heart of a mother. The concerns of mothers should never ever be brushed aside with such negligence and ignorance. The concerns of mothers should be addressed fully and honestly without derogatory comments of their concerns or as persons.

The CEO of the OneAmerica insurance company recently disclosed
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Finsurance-forums.com%2Flife-insurance%2Foneamerica-ceo-says-death-rates-among-working-age-people-up-40%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C92c1d2ba3716403b89aa08d9f24355a1%7C11d0e>>
that mortality in the 18-64 age group was 40 percent higher during the 3rd and 4th quarters of 2021 than during pre-pandemic levels. For reference, the CEO indicated that a 10 percent increase would have been a 1-in-200-year event. Furthermore, most of the deaths were not attributed to Covid.

<data:image/png;base64,iVBORw0KGgoAAAANSUhEUgAAAAEAAAABCAQAAAC1HAwCAAAAC0IEQVR42mNk

Figure 1: US weekly deaths by age group. Data
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fnchs%2Fnvss%2F>>
is from the CDC. The gold curve is data for 2021. The red curve is data for 2020. The gray curves are data for 2015-2019.

The OneAmerica insurance company serves a subset of the US population. The CDC collects mortality data
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fnchs%2Fnvss%2F>>
for the entire US population. Figure 1 illustrates the weekly US mortality from 2015-2021 by age group. Several generalizations are readily apparent. The years 2015-2019 were very similar for all age groups forming a tight band of usual expectation. The tightness of the band for 2015-2019 means that relatively small increases in mortality are very significant events. There has been nothing unusual about mortality for the Under-25 age group during the Covid period compared to recent history. The last 10 weeks of data for 2021 are incomplete due to delays in reporting death certificates. Otherwise, mortality for the Over-25 age groups have been higher than historic norms starting in about March of 2020 and continuing to the present time with one big exception for the 85+ age group.

There is a very interesting interval from Week 10 (March 7) 2021 to Week 24 (June 13) 2021. Deaths in the 85+ Age Group are LOWER than average during this interval. Total deaths for Weeks 10-24 averaged 248,536 during 2015-2019, but were 242,372 during 2021. For the 25-44 age group, total deaths for Weeks 10-24 averaged 38,955 during 2015-2019, but were 54,789 (40.6 percent higher) during 2021. Daily Covid deaths (7-day moving average)
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.worldometers.info%2Fcoronavirus%2F>>
in the US were declining from 1,689 on March 7, 2021, to 387 on June 13, 2021. This

diseases during a time period when Covid cases and deaths were declining. However, the Covid virus was not the only source of spike protein during this time period. The mRNA vaccines led to the production of spike protein by host cells and Weeks 10-24 of 2021 were immediately followed by the mass introduction of mRNA vaccines to the US public. The data is not proof, but it is certainly a red flag.

The appropriate method to assess vaccine efficacy and safety is all cause mortality. Deaths from all causes are compared between the vaccine group and a control unvaccinated group. This method has not been used. Rather, the CDC and FDA determine on a case-by-case basis whether reported adverse events can be attributed to the vaccine. If a footballer drops dead during a game, one would not be inclined to attribute the cause to a vaccine given 10 weeks earlier. However, when 5 footballers drop dead every week, one will be looking for ANY common denominator between the dead footballers. Neither the CDC nor the FDA are impartial observers of vaccine safety. Both agencies have vested interests in promoting the vaccines. When the CDC or FDA analyze events on a case-by-case basis, they are inclined to say that an event was not due to a vaccine (especially if the people at the CDC and FDA include former executives from Pfizer). However, when the entire US population has a significant number of events compared to historic basis, one must look for the common denominators in the people with the events. The existing data is not proof that the vaccines are causing deaths due to Circulatory diseases. The burden of proof, however, lies with the CDC and FDA to prove that the vaccines are not causing deaths due to spike protein. It is scientific irresponsibility to eliminate the control group via vaccine mandates and make future assessment of vaccine safety scientifically impossible.

On Thursday, February 10, 2022 9:28 AM, Debra Wells <debrakwells@startmail.com> wrote:

Please do not require or force the COVID 19 vaccines on children. More children have been negatively affected by vaccines than have been sick or died from covid. The children that have passed away had other medical issues that put them at particular risk; however, the vast majority are not at risk of covid 19. However, with the vaccines, myocarditis is more deadly to children than covid 19 and this has played out in the numbers.

We also don't know the long term effects on fertility and this vaccine should not be allowed or approved for children at any age.

Please follow biological science and not political science. It is very apparent that the majority of decision makers have been following political science and not biological science. Please do NOT harm our children with these untested vaccines. It's one thing to require the measles vaccines that have been around for decades; however, covid 19 vaccines have only been around just over a year. The numbers are not looking good for the safety of the covid 19 vaccine. The numbers from the Military are alarming. The numbers from insurance companies, that are required to review actual death rates and why so they can set premium rates, are extremely alarming. Ignoring these warning signs is gross negligence. We must protect our most vulnerable from even the most well meaning individuals/decision makers. We should not be making rash decisions that will have long standing impact that can't be reversed. We need more data on the vaccines before we force it on children.

Please vote NO on requiring Covid vaccines for children under 18.

By the end of 2021, the Paul Ehrlich Institute (PEI) had recorded around 245,000 vaccination side effects. But the actual number of these side effects is likely to be many times higher. At least that is what the results of an analysis by the health insurance company BBK ProVita suggest, as reported by Die Welt. One had become "clairaudient", when ever more occurring diagnoses suggested a vaccination side effect. Therefore, the databases of all BBK health insurance companies were searched. The data collection paints a completely different picture than the figures from the Ministry of Health.

From January to August 2021, for example, around 217,000 of just under 11 million BBK policyholders had to be treated for vaccination side effects - while the Paul Ehrlich Institute keeps only 244,576 side effect reports based on 61.4 million vaccinated. "According to our calculations, we consider 400,000 doctor visits by our insureds due to vaccination complications to date to be realistic," Andreas Schöffbeck, BKK board member, told Die Welt. "Extrapolated to the total population, this figure would be three million." Thus, the number of vaccine side effects would be more than 1,000 percent higher than the PEI reports.

Schöfbeck cites the reporting system as the main explanation for the massive discrepancy. Physicians often have to report vaccination side effects in their spare time - a time-consuming activity that then goes unpaid. "It is simply impossible to report everything."

With his analysis, Schöfbeck turned to a wide range of institutions - from the German Medical Association and the StiKo to the Paul Ehrlich Institute itself. He said the figures were a "strong alarm signal" that "absolutely must be taken into account in the further use of vaccines."

His figures could be validated by the same data analyses of other health insurance companies, he says. It is "ethically wrong not to talk about it."

Since "danger to human life cannot be ruled out," he set a deadline of 6 p.m. Tuesday to respond to his letter. As this passed, they turned to the public.

Debra Wells

On Thursday, February 24, 2022 9:25 AM, Debra Wells <debrakwells@startmail.com> wrote:

Since the last meeting it has come out that the CDC has not been releasing the data related to the covid vaccines. This will limit the validity of the data that has been presented to the SBOH and TAG groups from the presenters. A hold should be in place until the data is released so that it can be analyzed in it's entirety. Our children's safety is paramount, even from well meaning efforts that could harm them in the long run. I believe that if a pause is not enacted in relation to covid vaccines, great harm will come to our kids from the vaccines for covid.

PS. I am not an anti-vaxxer. I have received many vaccines over my life to include many that most don't receive. However, as I shared before in earlier emails, this particular vaccine is very concerning with the evidence of harm already available, even with the data withheld from the CDC.

As a side note, concerning the CDC withholding data, it hasn't gone unnoticed that if the data supported the efforts of the CDC, the data wouldn't have been withheld at all. This means that the data that is being withheld from the public and those that would be analyzing it, is likely showing that the vaccine is not working and likely causing more harm than good. So a pause needs to be in place until further information is released so that everyone can make truly informed decisions both personally and in relation to policy.

On January 19, 2022, this report was posted as an MMWR Early Release on the MMWR website (<https://www.cdc.gov/mmwr> <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fmmwr&data=04> >).
>).

By November 30, 2021, approximately 130,781 COVID-19–associated deaths, one in six of all U.S. deaths from COVID-19, had occurred in California and New York.*COVID-19 vaccination protects against infection with SARS-CoV-2 (the virus that causes COVID-19), associated severe illness, and death (1,2); among those who survive, previous SARS-CoV-2 infection also confers protection against severe outcomes in the event of reinfection (3,4). The

relative magnitude and duration of infection- and vaccine-derived protection, alone and together, can guide public health planning and epidemic forecasting. To examine the impact of primary COVID-19 vaccination and previous SARS-CoV-2 infection on COVID-19 incidence and hospitalization rates, statewide testing, surveillance, and COVID-19 immunization data from California and New York (which account for 18% of the U.S. population) were analyzed. Four cohorts of adults aged ≥18 years were considered: persons who were 1) unvaccinated with no previous laboratory-confirmed COVID-19 diagnosis, 2) vaccinated (14 days after completion of a primary COVID-19 vaccination series) with no previous COVID-19 diagnosis, 3) unvaccinated with a previous COVID-19 diagnosis, and 4) vaccinated with a previous COVID-19 diagnosis. Age-adjusted hazard rates of incident laboratory-confirmed

COVID-19 cases in both states were compared among cohorts, and in California, hospitalizations during May 30–November 20, 2021, were also compared. During the study period, COVID-19 incidence in both states was highest among unvaccinated persons without a previous COVID-19 diagnosis compared with that among the other three groups. During the week beginning May 30, 2021, compared with COVID-19 case rates among unvaccinated persons without a previous COVID-19 diagnosis, COVID-19 case rates were 19.9-fold (California) and 18.4-fold (New York) lower

among vaccinated persons without a previous diagnosis; 7.2-fold (California) and 9.9-fold lower (New York) among unvaccinated persons with a previous COVID-19 diagnosis; and 9.6-fold (California) and 8.5-fold lower (New York) among vaccinated persons with a previous COVID-19 diagnosis. During the same period, compared with hospitalization rates among unvaccinated persons without a previous COVID-19 diagnosis, hospitalization rates in California followed a similar pattern. These relationships

[tracker%2F%23cases_deathsper100klast7days&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cb3010dad](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcovid.cdc.gov%2Fcovid-data-tracker%2F%23cases_deathsper100klast7days&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cb3010dad)

changed after the SARS-CoV-2 Delta variant became predominant (i.e., accounted for >50% of sequenced isolates) in late June and July.

By the week beginning October 3, compared with COVID-19 cases rates among unvaccinated persons without a previous COVID-19

diagnosis, case rates among vaccinated persons without a previous COVID-

19 diagnosis were 6.2-fold (California) and 4.5-fold

(New York) lower; rates were substantially lower among both groups with previous COVID-19 diagnoses, including 29.0-fold

(California) and 14.7-fold lower (New York) among unvaccinated persons with a previous diagnosis, and 32.5-fold (California) and

19.8-fold lower (New York) among vaccinated persons with a previous

diagnosis of COVID-19. During the same period, compared

with hospitalization rates among unvaccinated persons without a previous COVID-19 diagnosis, hospitalization rates in California

followed a similar pattern. These results demonstrate that vaccination

protects against COVID-19 and related hospitalization, and

that surviving a previous infection protects against a reinfection and

related hospitalization. Importantly, infection-derived protection

was higher after the Delta variant became predominant, a time when vaccine-induced immunity for many persons declined because of

immune evasion and immunologic waning (2,5,6). Similar cohort

data accounting for booster doses needs to be assessed, as new variants,

including Omicron, circulate. Although the epidemiology of

COVID-19 might change with the emergence of new variants,

vaccination remains the safest strategy to prevent SARS-CoV-2

infections and associated complications; all eligible persons should

be up to date with COVID-19 vaccination. Additional recommendations for

vaccine doses might be warranted in the future as

the virus and immunity levels change.

Four cohorts of persons aged ≥ 18 years were assembled via

linkages of records from electronic laboratory reporting databases and

state-specific immunization information systems.[†]

[†] Statewide immunization databases in California are the California

Immunization

Registry, Regional Immunization Data Exchange, and San Diego

Immunization

Registry; the laboratory system is the California COVID Reporting System

(CCRS). In New York, immunization information systems include Citywide

Immunization Registry and the New York State Immunization Information

System; the laboratory system is the Electronic Clinical Laboratory

Reporting

System (ECLRS). California data were matched between the immunization

and

case registries using a probabilistic algorithm with exact match for zip code

and date of birth and fuzzy match on first name and last name. New York data were matched to the ECLRS with the use of a deterministic algorithm based on first name, last name, and date of birth. In California, person-level hospitalization data from CCRS and supplementary hospitalization reports were used to identify COVID-19-associated hospitalizations. Morbidity and Mortality Weekly Report 126 MMWR / January 28, 2022 / Vol. 71 / No. 4 US Department of Health and Human Services/Centers for Disease Control and Prevention

Persons were classified based on whether they had had a laboratory-confirmed SARS-CoV-2 infection by March 1, 2021 (i.e., previous COVID-19 diagnosis)[§]; had received at least the primary COVID-19 vaccination series[¶] by May 16, 2021; had a previous COVID-19 diagnosis and were fully vaccinated^{**}; or had neither received a previous COVID-19 diagnosis by March 1 nor received a first COVID-19 vaccine dose by the end of the analysis period. The size of the unvaccinated group without a previous diagnosis was derived by subtracting the observed groups from U.S. Census estimates.^{††} To maintain each defined cohort, persons who received a COVID-19 diagnosis during March 1–May 30, 2021, or who died before May 30, 2021, were excluded (to maintain eligibility for incident cases for all cohorts on May 30, 2021),^{§§} as were persons who received a first vaccine dose during May 30–November 20, 2021. During May 30–November 20, 2021, incident cases were defined using a positive nucleic acid amplification test (NAAT) result from the California COVID-19 Reporting System (CCRS) or a positive NAAT or antigen test result from the New York Electronic Clinical Laboratory Reporting System. In California, person-level hospitalization data from CCRS and supplementary hospitalization reports were used to identify COVID-19-associated hospitalizations. A lifetable method was used to calculate hazard rates (average daily cases during a 7-day interval or hospitalizations over a 14-day interval), hazard ratios, and 95% CIs for each cohort. Rates were age-adjusted to 2000 U.S. Census data using direct standardization.^{¶¶}

Supplementary analyses stratified case rates by timing

§ For both classification into cohorts of persons with previous COVID-19 diagnoses and for measuring incident cases, laboratory-confirmed infection was defined as the receipt of a new positive SARS-CoV-2 nucleic acid amplification test (NAAT) or antigen test (both for New York and NAAT only for California) result, but not within 90 days of a previous positive result.

¶ Fully vaccinated with the primary vaccination series is defined as receipt of a second dose of an mRNA COVID-19 vaccine (Pfizer-BioNTech or Moderna) or 1 dose of the Janssen (Johnson & Johnson) vaccine ≥ 14 days before May 30, 2021.

** Because of the timing of full vaccination, the cohort definitions, and analysis timeframe, this cohort consisted nearly exclusively of persons who had previously received a laboratory-confirmed diagnosis of COVID-19 and later

were fully vaccinated (California: 99.9%, New York: 99.7%), as opposed to

the reverse order.

†† Whereas vaccinated cohorts were directly observed in the immunization information system databases, unvaccinated persons without a previous COVID-19 diagnosis were defined using U.S. Census population estimates minus the number of persons partially or fully vaccinated by December 11, 2021, and unvaccinated persons with a previous laboratory-confirmed infection before May 30, 2021. In California, the California Department of Finance population estimates were used for 2020, and the 2018 CDC

National

Center for Health Statistics Bridged Race file for U.S. Census population estimates were used in New York, consistent with other COVID-19 surveillance reporting.

each

§§ In California, a person-level match was performed to exclude deaths in

cohort before May 30, 2021. In New York, COVID-19 deaths were removed

previous

in aggregate from the starting number of unvaccinated persons with a

COVID-19 diagnosis on May 30, 2021.

¶¶ <https://www.cdc.gov/nchs/data/statnt/statnt20.pdf>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fnchs%2Fdata%2F>

of previous diagnoses and primary series vaccine product.

SAS (version 9.4; SAS Institute) and R (version 4.0.4; The R Foundation) were used to conduct all analyses. Institutional review boards (IRBs) in both states determined this surveillance activity to be necessary for public health work, and therefore, it did not require IRB review.

Approximately three quarters of adults from California

(71.2%) and New York (72.2%) included in this analysis were vaccinated and did not have a previous COVID-19 diagnosis;

however, 18.0% of California residents and 18.4% of New

York residents were unvaccinated with no previous COVID-19

diagnosis (Table 1). In both states, 4.5% of persons were vaccinated and

had a previous COVID-19 diagnosis; 6.3% in

California and 4.9% in New York were unvaccinated with a

previous diagnosis. Among 1,108,600 incident COVID-19

cases in these cohorts (752,781 in California and 355,819 in

New York), the median intervals from vaccination or previous COVID-19

diagnosis to incident diagnosis were slightly

shorter in California (138–150 days) than in New York

(162–171 days).

Before the Delta variant became predominant in each state's

U.S. Department of Health and Human Services region

(June 26 in Region 9 [California] and July 3 in Region 2

[New York]),*** the highest incidence was among unvaccinated

persons without a previous COVID-19 diagnosis; during this

time, case rates were relatively low among the three groups

with either previous infection or vaccination and were lowest

among vaccinated persons without a previous COVID-19 diagnosis

(Supplementary Figure 1, <https://stacks.cdc.gov/view/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fstacks.cdc.gov%2Fview%2F&data=04%7C>

[cdc/113253](https://stacks.cdc.gov/view/113253)) (Supplementary Figure 2, [https://stacks.cdc.gov/view/](https://stacks.cdc.gov/view/113253)

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fstacks.cdc.gov%2F&data=04%7C>

view/cdc/113253). During the week beginning May 30, 2021, compared with COVID-19 case rates among unvaccinated persons without a previous COVID-19 diagnosis, COVID-19 case rates were 19.9-fold (California) and 18.4-fold (New York) lower among vaccinated persons without a previous diagnosis; rates were 7.2-fold (California) and 9.9-fold (New York) lower among unvaccinated persons with a previous COVID-19 diagnosis and 9.6-fold (California) and 8.5-fold (New York) lower among vaccinated persons with a previous COVID-19 diagnosis (Table 2).

As the Delta variant prevalence increased to >95% (97% in Region 9 and 98% in Region 2 on August 1), rates increased more rapidly among the vaccinated group with no previous COVID-19 diagnosis than among both the vaccinated and unvaccinated groups with a previous COVID-19 diagnosis (Supplementary

Figure 1, <https://stacks.cdc.gov/view/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fstacks.cdc.gov%2Fview%2F&data=>

* Statewide immunization databases in California are the California Immunization Registry, Regional Immunization Data Exchange, and San Diego Immunization Registry, and the laboratory system is the California COVID Reporting System; in New York, Immunization Information Systems include Citywide Immunization Registry and the New York State Immunization Information System; the laboratory system is the Electronic Clinical Laboratory Reporting System. California data were matched between the immunization and case registries using a probabilistic algorithm with exact match for zip code and date of birth and fuzzy match on first name and last name. New York data were matched to the Electronic Clinical Laboratory Reporting System with the use of a deterministic algorithm based on first name, last name, and date of birth. In California, person-level hospitalization data from the California COVID Reporting System and supplemental hospitalization reports were used to identify COVID-19-associated hospitalizations.

† For both classification into cohorts of persons with previous COVID-19 diagnoses and for measuring incident cases, laboratory-confirmed infection was defined as the receipt of a new positive SARS-CoV-2 NAAT or antigen test (both for New York and NAAT only for California) result, but not within 90 days of a previous positive result. Fully vaccinated is defined as having received a second dose of an mRNA COVID-19 vaccine (Pfizer-BioNTech or Moderna) or 1 dose of the Janssen (Johnson & Johnson) vaccine ≥ 14 days before May 30, 2021. Whereas vaccinated cohorts were directly observed in the immunization information system databases, unvaccinated persons without a previous COVID-19 diagnosis were defined using U.S. Census population estimates minus persons partially or fully vaccinated by December 11, 2021, and unvaccinated persons with a previous laboratory-confirmed infection before May 30, 2021. In California, the California Department of Finance population estimates were used for 2020, and the 2018 CDC National Center for Health Statistics Bridged Race file for census population estimates were used in New York, consistent with other COVID-19 surveillance reporting.

§ Cumulative cases per 1,000 persons.

¶ These summaries of cumulative incidence are estimated across a period of variability in the epidemic for all cohorts.

** Hospitalization data for New York are not included in this analysis.

October 3, compared with rates among unvaccinated persons without a previous COVID-19 diagnosis, rates among vaccinated persons without a previous diagnosis were 6.2-fold lower (95% CI = 6.0–6.4) in California and 4.5-fold lower (95% CI = 4.3–4.7) in New York (Table 2). Further, rates among unvaccinated persons with a previous COVID-19 diagnosis were 29-fold lower (95% CI = 25.0–33.1) than rates among unvaccinated persons without a previous COVID-19 diagnosis in California and 14.7-fold lower (95% CI = 12.6–16.9) in New York. Rates among vaccinated persons who had had COVID-19 were 32.5-fold lower (95% CI = 27.5–37.6) than rates among unvaccinated persons without a previous COVID-19 diagnosis in California and 19.8-fold lower (95% CI = 16.2–23.5) in New York. Rates among vaccinated persons without a previous COVID-19 diagnosis were consistently higher than rates among unvaccinated persons with a history of COVID-19 (3.1-fold higher [95% CI = 2.6–3.7] in California and 1.9-fold higher [95% CI = 1.5–2.3] in New York) and rates among vaccinated persons with a history of COVID-19 (3.6-fold higher [95% CI = 2.9–4.3] in California and 2.8-fold higher [95% CI = 2.1–3.4] in New York). COVID-19 hospitalization rates in California were always highest among unvaccinated persons without a previous

COVID-19 diagnosis (Table 2) (Figure). In the pre-Delta period during June 13–June 26, for example, compared with hospitalization rates among unvaccinated persons without a previous COVID-19 diagnosis, hospitalization rates were 27.7-fold lower (95% CI = 22.4–33.0) among vaccinated persons without a previous COVID-19 diagnosis, 6.0-fold lower (95% CI = 3.3–8.7) among unvaccinated persons with a previous COVID-19 diagnosis, and 7.1-fold lower (95% CI = 4.0–10.3) among vaccinated persons with a previous COVID-19 diagnosis. However, this pattern also shifted as the Delta variant became predominant. During October 3–16, compared with hospitalization rates among unvaccinated persons without a previous COVID-19 diagnosis, hospitalization rates were 19.8-fold lower (95% CI = 18.2–21.4) among vaccinated persons without a previous COVID-19 diagnosis, 55.3-fold lower (95% CI = 27.3–83.3) among unvaccinated persons with a previous COVID-19 diagnosis.

persons with a previous COVID-19 diagnosis, and 57.5-fold lower (95% CI = 29.2–85.8) among vaccinated persons with a previous COVID-19 diagnosis.

Among the two cohorts with a previous COVID-19 diagnosis, no consistent incidence gradient by time since the

previous diagnosis was observed (Supplementary Figure 3, <https://stacks.cdc.gov/view/cdc/113253>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fstacks.cdc.gov%2Fview%2Fcdc%2F113253>).

When the vaccinated cohorts were stratified by the vaccine product received, among vaccinated persons without a previous COVID-19 diagnosis, the highest incidences were observed among persons receiving the Janssen (Johnson & Johnson), followed by

Pfizer-BioNTech, then Moderna vaccines (Supplementary Figure 4, <https://stacks.cdc.gov/view/cdc/113253>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fstacks.cdc.gov%2Fview%2Fcdc%2F113253>).

No pattern by product was observed among vaccinated persons with

a previous COVID-19 diagnosis.

* Life tables estimated at 7-day intervals for cases and 14-day intervals for hospitalizations.

† Hazard ratios and 95% CIs reported in this table differ numerically from presentation of corresponding results in the text as “X-fold lower” rates (i.e., a hazard rate of 1.0 is zero-fold lower).

For example, a hazard ratio of 20.9 (95% CI = 18.9–22.9) for those “Unvaccinated–no previous COVID-19 diagnosis” versus “Vaccinated, no previous COVID-19 diagnosis” is equivalent to a

19.9-fold lower (95% CI = 17.9–21.9) rate for those “Vaccinated, no previous COVID-19 diagnosis” relative to those “Unvaccinated, no previous COVID-19 diagnosis.”

Morbidity and Mortality Weekly Report
130 MMWR / January 28, 2022 / Vol. 71 / No. 4 US Department of Health
and Human Services/Centers for Disease Control and Prevention
Summary

What is already known about this topic?

Data are limited regarding the risks for SARS-CoV-2 infection and hospitalization after COVID-19 vaccination and previous infection.

What is added by this report?

During May–November 2021, case and hospitalization rates were highest among persons who were unvaccinated without a previous diagnosis. Before Delta became the predominant variant in June, case rates were higher among persons who survived a previous infection than persons who were vaccinated alone. By early October, persons who survived a previous infection had lower case rates than persons who were vaccinated alone.

What are the implications for public health practice?

Although the epidemiology of COVID-19 might change as new variants emerge, vaccination remains the safest strategy for averting future SARS-CoV-2 infections, hospitalizations, long-term sequelae, and death. Primary vaccination, additional doses, and booster doses are recommended for all eligible persons.

Additional future recommendations for vaccine doses might be warranted as the virus and immunity levels change.

Discussion

This analysis integrated laboratory testing, hospitalization surveillance, and immunization registry data in two large states during May–November 2021, before widespread circulation of the SARS-CoV-2 Omicron variant and before most persons had received additional or booster COVID-19 vaccine doses to protect against waning immunity. Rate estimates from the analysis

describe different experiences stratified by COVID-19 vaccination status and previous COVID-19 diagnosis and during times

when different SARS-CoV-2 variants predominated. Case rates were initially lowest among vaccinated persons without a previous COVID-19 diagnosis; however, after emergence of the Delta variant and over the course of time, incidence increased sharply in this

group, but only slightly among both vaccinated and unvaccinated persons with previously diagnosed COVID-19 (6). Across the entire study period, persons with vaccine- and infection-derived immunity had much lower rates of hospitalization compared with those in unvaccinated persons. These results suggest that vaccination protects against COVID-19 and related hospitalization and

that surviving a previous infection protects against a reinfection. Importantly, infection-derived protection was greater after the highly transmissible Delta variant became predominant, coinciding with early declining of vaccine-induced immunity in many

persons (5). Similar data accounting for booster doses and as new variants, including Omicron, circulate will need to be assessed.

The understanding and epidemiology of COVID-19 has shifted substantially over time with the emergence and circulation of new SARS-CoV-2 variants, introduction of vaccines,

and changing immunity as a result. Similar to the early period of this study, two previous U.S. studies found more protection from vaccination than from previous infection during periods before Delta predominance (3,7). As was observed in the present study after July, recent international studies have also demonstrated increased protection in persons with previous infection, with or without vaccination, relative to vaccination alone^{†††}, §§§ (4). This might be due to differential stimulation of the immune response by either exposure type.^{¶¶¶} Whereas French and Israeli population-based studies noted waning protection from previous infection, this was not apparent in

the results from this or other large U.K. and U.S. studies****
(4,8). Further studies are needed to establish duration of protection from
previous infection by variant type, severity, and
symptomatology, including for the Omicron variant.

The findings in this report are subject to at least seven limitations.
First, analyses were not stratified by time since vaccine receipt, but
only by time since previous diagnosis, although earlier studies have
examined waning of vaccine-induced immunity (Supplementary
Figure 3, <https://stacks.cdc.gov/view/cdc/113253>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fstacks.cdc.gov%2Fview%2Fcdc%2F113253>
) (2). Second,

persons with undiagnosed infection are misclassified as having no
previous COVID-19 diagnosis; however, this misclassification likely
results in a conservative bias (i.e., the magnitude of difference in
rates would be even larger if misclassified persons were not included
among unvaccinated persons without a previous COVID-19 diagnosis).

California seroprevalence data during this period indicate

that the ratio of actual (presumptive) infections to diagnosed cases
among adults was 2.6 (95% CI = 2.2–2.9).†††† Further, California
only included NAAT results, whereas New York included both
NAAT and antigen test results. However, antigen testing made up
a smaller percentage of overall testing volume reported in California
(7% of cases) compared with New York (25% of cases) during the
study period. Neither state included self-tests, which are not easily
reportable to public health. State-specific hazard ratios were generally
comparable, although differences in rates among unvaccinated persons
with a previous COVID-19 diagnosis were noteworthy. Third,
potential exists for bias related to unmeasured confounding (e.g.,
behavioral or geographic differences in exposure risk) and uncertainty in
the population size of the unvaccinated group without a
previous COVID-19 diagnosis. Persons might be more or less likely
to receive testing based on previous diagnosis or vaccination status;
however, different trajectories between vaccinated persons with and
without a previous COVID-19 diagnosis, and similar findings for
cases and hospitalizations, suggest that these biases were minimal.

Fourth, this analysis did not include information on the severity of

and mortality represented by the groups with previous infections. Fifth, this analysis did not ascertain receipt of additional or booster COVID-19 vaccine doses and was conducted before many persons were eligible or had received additional or booster vaccine doses, which have been shown to confer additional protection.¶¶¶¶ Sixth, some estimates lacked precision because of sample size limitations. Finally, this analysis was conducted before the emergence of the Omicron variant, for which vaccine or infection-derived immunity might be diminished.¶¶¶¶ This study offers a surveillance data framework to help evaluate both infections in vaccinated persons and reinfections as new variants continue to emerge. Vaccination protected against COVID-19 and related hospitalization, and surviving a previous infection protected against a reinfection and related hospitalization during periods of predominantly Alpha and Delta variant transmission, before the emergence of Omicron; evidence suggests decreased protection from both vaccine- and infection-induced immunity against Omicron infections, although additional protection with widespread receipt of booster COVID-19 vaccine doses is expected. Initial infection among unvaccinated persons increases risk for serious illness, hospitalization, long-term sequelae, and death; by November 30, 2021, approximately 130,781 residents of California and New York had died from COVID-19. Thus, vaccination remains the safest and primary strategy to prevent SARS-CoV-2 infections, associated complications, and onward transmission. Primary COVID-19 vaccination, additional doses, and booster doses are recommended by CDC's Advisory Committee on Immunization Practices to ensure that all eligible persons are up to date with COVID-19 vaccination, which provides the most robust protection against initial infection, severe illness, hospitalization, longterm sequelae, and death.***** Additional recommendations for vaccine doses might be warranted in the future as the virus and immunity levels change.

<debrakwells@startmail.com> wrote:

I want to make the board aware that many people are not getting tested or going to the hospital if they get covid. There are a couple of reasons for this. One, if everyone around you has gotten tested and they have covid, there is no need to get tested yourself as it is likely that you have the same issue. This is true with the Omicron outbreak. The first week of January it seemed like Omicron exploded in the Puget Sound area and across the USA. I don't think I knew anyone that didn't have Omicron regardless of vaccination status (to include the booster). So the actual numbers of infections of Omicron are less than what is reported and many didn't go to the hospital.

I had a few days where it was difficult and probably should have gone to the hospital. However, I will not go to the hospital on my own because of the loss of a family member to covid in the hospital and the protocol that hospitals are using to treat covid patients. I have asthma and had my oxygen level go down to 90%. I sought alternative care and within a few days I was better. The hospital protocol using Remdesivir is killing people as it did with our family member. Our family is not the only family member that suffered death from Remdesivir. I know others personally that have been affected by Remdesivir poisoning. This is why you aren't seeing more in the hospital as those that I know are of the same mind. This is happening across the entire USA. Remdesivir and the current covid protocol should be stopped immediately and alternative treatments deployed. Our trust in the medical community has been broken. Our family

member is dead. That is real and tangible to entire families that are affected.

When considering vaccines and treatments, rebuilding trust with the community that you serve should also be high on the list of considerations. Forcing new vaccines and treatments on a community doesn't build trust but further diminishes it.

Unfortunately, the licensed product is not available to the public. Only the EUA product is being given to the public, which from a legal perspective is significant because if someone is injured by the EUA product, they are unable to hold the company liable for the injury. That means that people are bearing 100% of the cost of injury from these vaccines. If the product was fully licensed and the licensed product available, you would probably have less push back because the public would have someone to hold accountable for the vaccine injuries/reactions.

Also, it took 3 months for the blood clots to show up. Since there are indications that these vaccines cause blood clots, the window to be considered should be extended to at least 3 months in relation to blood clots. This would also follow with heart attacks, strokes and other related medical conditions related to blood clots.

Debra Wells

On Thursday, February 17, 2022 10:06 AM, Debra Wells <debrakwells@startmail.com> wrote:

I am fighting hard against these covid vaccines because there are indications that they cause blood clots. There are loads of cases noted in the VEARS database and other countries data related to PE, DVT and thrombosis incidences. I have a history of blood clots from a medication. I was young, healthy and had absolutely no other risk factors concerning blood clots other than the medication. I was so healthy that they didn't find the blood clots until after 2 trips to the ER and a Doctor's visit. After leaving the doctor's office, I received a call demanding that I go to the nearest hospital for a lung scan where I lit the scan up like a Christmas tree. The clots were confirmed via what they call the Gold Standard test, where they ran a camera up my vein, through my heart and into my lung. There were absolutely no indications with my vitals or physical condition, other than it felt like I had pneumonia. The result was that I had 6 clots in one lung and they didn't bother looking in the other lung. I spent a week in the hospital. This is because I was otherwise healthy and responding well to the blood thinners. Obviously, I was on medication for a little while after hospitalization. This was all caused by a medication that is considered extremely safe and is widely used (birth control pills). Blood clots are considered the silent killer, especially in younger people. This happened over 20 years ago. I have avoided all medications, vaccination or even food that I know have the potential to cause blood clots.

I had no other medical history prior to this incident with blood clots and could have ended with my death.

This is why SBOH should consider the negative effects of the vaccines. I know that it's been hard to get this information because the FDA, CDC and Government as a whole doesn't want to create vaccine hesitancy; however, this shouldn't take priority over allowing the public to make informed decisions without being forced to take something that can result in death or disability. The public must have all the information to make the best medical decisions for themselves. I would say that the withholding of information and the heavy handedness of the FDA, CDC, and all government entities as caused more vaccine hesitancy, resistance and mistrust than if they had been truthful. If this isn't the cause, then maybe the vaccine never should be authorized in the first place. Meaning, if the adverse reactions or injuries are such that

the FDA, CDC and Government entities feel that it would cause vaccine hesitancy, then the approval of the vaccine shouldn't have happened until those concerns were addressed and the full information should have been given to people prior to getting the vaccine and informed consent should be received without force or coercion.

I have concerns that this vaccine will cause more injuries and death than it will save children. There are indications that this is already occurring and should be investigated. Everything I have seen so far is that children are less likely to get covid let alone die from it. As a matter of fact, more children die of accidents every year than all other causes of death to include Covid. What the Board hasn't investigated are the adverse reactions or deaths caused by the vaccines and must be considered before requiring this vaccine for school or day care, even if it takes a little bit longer. It is more important to make sure that the decisions made don't cause more harm than what they are meant to save.

I have concerns that these issues have been ignored and not addressed. There should be a meeting going over adverse reactions and injuries, not just to appease those of us with concerns but to truly look at all potential problems that could arise from vaccine injuries/adverse reactions.

Lastly, there are no safety studies concerning fertility. That should be done before mandating this to school age children.

PS. I want to address a poorly worded statement from a panelist last week. The comment stating that mothers don't know what is best for their children because they are misinformed or lack information. The lack of information is the fault of the FDA, CDC and Government entities as a whole. Parents, particularly Mothers know more about their children than school nurses, doctors or even so called experts because they know more about that child's medical history from the birth of that child to current day. Obviously, medical history is incredibly important that most people don't have. Mothers have this information. In addition to that, parents have a moral, emotional and financial responsibility for their children, where the school and so called experts don't have. As a matter of fact, no school nurse, school administrator, doctor or so called expert goes home at night and thinks about the impact of their decisions that affects families. However, Parents are left holding the bag of the bad decisions made by so called experts. As a parent, I would walk through fire, take a bullet and suffer death for my child (who is now 30). Not one of you or anyone else would. This is the heart of a mother. The concerns of mothers should never ever be brushed aside with such negligence and ignorance. The concerns of mothers should be addressed fully and honestly without derogatory comments of their concerns or as persons.

40%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cb3010dadf66a41ae8d6508d9f7bb5646%7C11d0e
that mortality in the 18-64 age group was 40 percent higher during the 3rd and 4th
quarters of 2021 than during pre-pandemic levels. For reference, the CEO indicated that
a 10 percent increase would have been a 1-in-200-year event. Furthermore, most of the
deaths were not attributed to Covid.

<data:image/png;base64,iVBORw0KGgoAAAANSUhEUgAAAAEAAAABCAQAAAC1HAWCAAAAC0IEQVR42mNk

Figure 1: US weekly deaths by age group. Data
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fnchs%2Fnvss%
is from the CDC. The gold curve is data for 2021. The red curve is data for 2020. The
gray curves are data for 2015-2019.

what is seen in the Circulatory diseases category. Deaths attributed to Circulatory diseases include strokes, heart attacks, and heart failure (including myocarditis). The Circulatory diseases category is clearly the most important category for excess deaths during 2020 and 2021. Notably, deaths attributed to Respiratory diseases were below average during 2021 for the period of interest between Week 10 and Week 24 of 2021. Covid is a respiratory disease and leads to acute respiratory distress syndrome with hypoxemia and respiratory failure in severe cases. During the period of interest between Week 10 and Week 24 of 2021, Covid deaths were steadily declining, deaths attributed to Respiratory diseases were below average, but deaths due to Circulatory diseases were significantly above average. It is difficult to explain the data between Week 10 and Week 24 of 2021 on the basis of lung injury caused by Covid infection.

The spike protein enables entry of the virus into the host cells. The spike protein targets the angiotensin converting enzyme-2 (ACE-2) receptor. Angiotensin converting enzymes play an important role in the regulation of blood pressure. Angiotensin receptor blockers (ARB) and angiotensin converting enzyme (ACE) inhibitors are both important classes of drugs used to treat hypertension. It does not require a stretch of the imagination to suspect that the spike protein could cause elevation of blood pressure. Acute elevation in blood pressure is known to be a risk factor for stroke, acute myocardial infarction (heart attack), and congestive heart failure. Spike protein is also associated with clotting, presumably due to endothelial injury, which would also increase risk for myocardial infarction and stroke. It is not clear why spike protein from the Covid virus would explain above average deaths attributed to Circulatory diseases during a time period when Covid cases and deaths were declining. However, the Covid virus was not the only source of spike protein during this time period. The mRNA vaccines led to the production of spike protein by host cells and Weeks 10-24 of 2021 were immediately followed by the mass introduction of mRNA vaccines to the US public. The data is not proof, but it is certainly a red flag.

The appropriate method to assess vaccine efficacy and safety is all cause mortality. Deaths from all causes are compared between the vaccine group and a control unvaccinated group. This method has not been used. Rather, the CDC and FDA determine on a case-by-case basis whether reported adverse events can be attributed to the vaccine. If a footballer drops dead during a game, one would not be inclined to attribute the cause to a vaccine given 10 weeks earlier. However, when 5 footballers drop dead every week, one will be looking for ANY common denominator between the dead footballers. Neither the CDC nor the FDA are impartial observers of vaccine safety. Both agencies have vested interests in promoting the vaccines. When the CDC or FDA analyze events on a case-by-case basis, they are inclined to say that an event was not due to a vaccine (especially if the people at the CDC and FDA include former executives from Pfizer). However, when the entire US population has a significant number of events compared to historic basis, one must look for the common denominators in the people with the events. The existing data is not proof that the vaccines are causing deaths due to Circulatory diseases. The burden of proof, however, lies with the CDC and FDA to prove that the vaccines are not causing deaths due to spike protein. It is scientific irresponsibility to eliminate the control group via vaccine mandates and make future assessment of vaccine safety scientifically impossible.

The risk of Covid 19 needs to also be measured against the risk of the covid 19 vaccine to make a educated decision. The risk of covid 19 vaccine should not be looked at in a vacuum. Also, the absolute risk needs to be considered as well, not just relative risk.

Debra Wells

On Thursday, February 10, 2022 9:28 AM, Debra Wells <debrakwells@startmail.com> wrote:

Please do not require or force the COVID 19 vaccines on children. More children have been negatively affected by vaccines than have been sick or died from covid. The children that have passed away had other medical issues that put them at particular risk; however, the vast majority are not at risk of covid 19. However, with the vaccines, myocarditis is more deadly to children than covid 19 and this has played out in the numbers.

We also don't know the long term effects on fertility and this vaccine should not be allowed or approved for children at any age.

Please follow biological science and not political science. It is very apparent that the majority of decision makers have been following political science and not biological science. Please do NOT harm our children with these untested vaccines. It's one thing to require the measles vaccines that have been around for decades; however, covid 19 vaccines have only been around just over a year. The numbers are not looking good for the safety of the covid 19 vaccine. The numbers from the Military are alarming. The numbers from insurance companies, that are required to review actual death rates and why so they can set premium rates, are extremely alarming. Ignoring these warning signs is gross negligence. We must protect our most vulnerable from even the most well meaning individuals/decision makers. We should not be making rash decisions that will have long standing impact that can't be reversed. We need more data on the vaccines before we force it on children.

Please vote NO on requiring Covid vaccines for children under 18.

Subject: Why I am fighting so hard against these vaccines.

External Email

I am fighting hard against these covid vaccines because there are indications that they cause blood clots. There are loads of cases noted in the VEARS database and other countries data related to PE, DVT and thrombosis incidences. I have a history of blood clots from a medication. I was young, healthy and had absolutely no other risk factors concerning blood clots other than the medication. I was so healthy that they didn't find the blood clots until after 2 trips to the ER and a Doctor's visit. After leaving the doctor's office, I received a call demanding that I go to the nearest hospital for a lung scan where I lit the scan up like a Christmas tree. The clots were confirmed via what they call the Gold Standard test, where they ran a camera up my vein, through my heart and into my lung. There were absolutely no indications with my vitals or physical condition, other than it felt like I had pneumonia. The result was that I had 6 clots in one lung and they didn't bother looking in the other lung. I spent a week in the hospital. This is because I was otherwise healthy and responding well to the blood thinners. Obviously, I was on medication for a little while after hospitalization. This was all caused by a medication that is considered extremely safe and is widely used (birth control pills). Blood clots are considered the silent killer, especially in younger people. This happened over 20 years ago. I have avoided all medications, vaccination or even food that I know have the potential to cause blood clots.

I had no other medical history prior to this incident with blood clots and could have ended with my death.

This is why SBOH should consider the negative effects of the vaccines. I know that it's been hard to get this information because the FDA, CDC and Government as a whole doesn't want to create vaccine hesitancy; however, this shouldn't take priority over allowing the public to make informed decisions without being forced to take something that can result in death or disability. The public must have all the information to make the best medical decisions for themselves. I would say that the withholding of information and the heavy handedness of the FDA, CDC, and all government entities as caused more vaccine hesitancy, resistance and mistrust than if they had been truthful. If this isn't the cause, then maybe the vaccine never should be authorized in the first place. Meaning, if the adverse reactions or injuries are such that the FDA, CDC and Government entities feel that it would cause vaccine hesitancy, then the approval of the vaccine shouldn't have happened until those concerns were addressed and the full information should have been given to people prior to getting the vaccine and informed consent

should be received without force or coercion.

I have concerns that this vaccine will cause more injuries and death than it will save children. There are indications that this is already occurring and should be investigated. Everything I have seen so far is that children are less likely to get covid let alone die from it. As a matter of fact, more children die of accidents every year than all other causes of death to include Covid. What the Board hasn't investigated are the adverse reactions or deaths caused by the vaccines and must be considered before requiring this vaccine for school or day care, even if it takes a little bit longer. It is more important to make sure that the decisions made don't cause more harm than what they are meant to save.

I have concerns that these issues have been ignored and not addressed. There should be a meeting going over adverse reactions and injuries, not just to appease those of us with concerns but to truly look at all potential problems that could arise from vaccine injuries/adverse reactions.

Lastly, there are no safety studies concerning fertility. That should be done before mandating this to school age children.

PS. I want to address a poorly worded statement from a panelist last week. The comment stating that mothers don't know what is best for their children because they are misinformed or lack information. The lack of information is the fault of the FDA, CDC and Government entities as a whole. Parents, particularly Mothers know more about their children than school nurses, doctors or even so called experts because they know more about that child's medical history from the birth of that child to current day. Obviously, medical history is incredibly important that most people don't have. Mothers have this information. In addition to that, parents have a moral, emotional and financial responsibility for their children, where the school and so called experts don't have. As a matter of fact, no school nurse, school administrator, doctor or so called expert goes home at night and thinks about the impact of their decisions that affects families. However, Parents are left holding the bag of the bad decisions made by so called experts. As a parent, I would walk through fire, take a bullet and suffer death for my child (who is now 30). Not one of you or anyone else would. This is the heart of a mother. The concerns of mothers should never ever be brushed aside with such negligence and ignorance. The concerns of mothers should be addressed fully and honestly without derogatory comments of their concerns or as persons.

Debra Wells

On Thursday, February 17, 2022 9:09 AM, Debra Wells <debrakwells@startmail.com> wrote:

It is telling when the FDA puts a pause on the covid 19 vaccine for children until they get more data. The Washington State Board of Health should also put a pause on consideration for covid 19 vaccine for children as well until more is known about the safety of the vaccines. There are enough indicators that a pause is warranted.

that mortality in the 18-64 age group was 40 percent higher during the 3rd and 4th
quarters of 2021 than during pre-pandemic levels. For reference, the CEO indicated that
a 10 percent increase would have been a 1-in-200-year event. Furthermore, most of the
deaths were not attributed to Covid.

<data:image/png;base64,iVBORw0KGgoAAAANSUhEUgAAAAEAAAABCAQAAAC1HAwCAAAAC0IEQVR42mNk

Figure 1: US weekly deaths by age group. Data
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fncchs%2Fnvss%2Fmortality%2Fweekly%2Fdeaths%2Fby%2Fage%2Fgroup%2F>
is from the CDC. The gold curve is data for 2021. The red curve is data for 2020. The
gray curves are data for 2015-2019.

The OneAmerica insurance company serves a subset
of the US population. The CDC collects mortality data
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fncchs%2Fnvss%2Fmortality%2Fweekly%2Fdeaths%2Fby%2Fage%2Fgroup%2F>
for the entire US population. Figure 1 illustrates the weekly US mortality from 2015-2021
by age group. Several generalizations are readily apparent. The years 2015-2019 were
very similar for all age groups forming a tight band of usual expectation. The tightness of
the band for 2015-2019 means that relatively small increases in mortality are very
significant events. There has been nothing unusual about mortality for the Under-25 age
group during the Covid period compared to recent history. The last 10 weeks of data for
2021 are incomplete due to delays in reporting death certificates. Otherwise, mortality
for the Over-25 age groups have been higher than historic norms starting in about March
of 2020 and continuing to the present time with one big exception for the 85+ age
group.

There is a very interesting interval from Week 10
(March 7) 2021 to Week 24 (June 13) 2021. Deaths in the 85+ Age Group are LOWER
than average during this interval. Total deaths for Weeks 10-24 averaged 248,536 during
2015-2019, but were 242,372 during 2021. For the 25-44 age group, total deaths for
Weeks 10-24 averaged 38,955 during 2015-2019, but were 54,789 (40.6 percent higher)
during 2021. Daily Covid deaths (7-day moving average)
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.worldometers.info%2Fcoronavirus%2Fusa%2F>
in the US were declining from 1,689 on March 7, 2021, to 387 on June 13, 2021. This
time period was the decline phase of the winter outbreak that peaked around January 18,
2021, and reached a nadir around July 8, 2021 prior to the Delta surge. One cannot
plausibly attribute the above average deaths for the 25-44 age group during this time
period to Covid. What was responsible for these deaths?

<data:image/png;base64,iVBORw0KGgoAAAANSUhEUgAAAAEAAAABCAQAAAC1HAWCAAAAC0IEQVR42mNK

Figure 2: Weekly US mortality by Cause Group. Data
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fncchs%2Fnvss%2Fmortality%2Fweekly%2Fdeaths%2Fby%2Fage%2Fgroup%2F>
is from the CDC. The gold curve is data for 2021. The red curve is data for 2020. The
gray curves are data for 2015-2019.

Clearly there is a very significant above average

number of deaths across the US that cannot be attributed to Covid. As was the case for the Age Group graphs, data for the last 10 weeks are incomplete due to delays in reporting of death certificates. Deaths attributed to Malignant Neoplasms were average during the entire pandemic period. Although there was an increase in deaths from Alzheimer Disease and dementia in 2020 after the onset of the pandemic, this was less apparent during 2021. There was an increase in deaths attributed to Other select causes (which include suicides and drug overdoses), but the magnitude was much smaller than what is seen in the Circulatory diseases category. Deaths attributed to Circulatory diseases include strokes, heart attacks, and heart failure (including myocarditis). The Circulatory diseases category is clearly the most important category for excess deaths during 2020 and 2021. Notably, deaths attributed to Respiratory diseases were below average during 2021 for the period of interest between Week 10 and Week 24 of 2021. Covid is a respiratory disease and leads to acute respiratory distress syndrome with hypoxemia and respiratory failure in severe cases. During the period of interest between Week 10 and Week 24 of 2021, Covid deaths were steadily declining, deaths attributed to Respiratory diseases were below average, but deaths due to Circulatory diseases were significantly above average. It is difficult to explain the data between Week 10 and Week 24 of 2021 on the basis of lung injury caused by Covid infection.

The spike protein enables entry of the virus into the host cells. The spike protein targets the angiotensin converting enzyme-2 (ACE-2) receptor. Angiotensin converting enzymes play an important role in the regulation of blood pressure. Angiotensin receptor blockers (ARB) and angiotensin converting enzyme (ACE) inhibitors are both important classes of drugs used to treat hypertension. It does not require a stretch of the imagination to suspect that the spike protein could cause elevation of blood pressure. Acute elevation in blood pressure is known to be a risk factor for stroke, acute myocardial infarction (heart attack), and congestive heart failure. Spike protein is also associated with clotting, presumably due to endothelial injury, which would also increase risk for myocardial infarction and stroke. It is not clear why spike protein from the Covid virus would explain above average deaths attributed to Circulatory diseases during a time period when Covid cases and deaths were declining. However, the Covid virus was not the only source of spike protein during this time period. The mRNA vaccines led to the production of spike protein by host cells and Weeks 10-24 of 2021 were immediately followed by the mass introduction of mRNA vaccines to the US public. The data is not proof, but it is certainly a red flag.

The appropriate method to assess vaccine efficacy and safety is all cause mortality. Deaths from all causes are compared between the vaccine group and a control unvaccinated group. This method has not been used. Rather, the CDC and FDA determine on a case-by-case basis whether reported adverse events can be attributed to the vaccine. If a footballer drops dead during a game, one would not be inclined to attribute the cause to a vaccine given 10 weeks earlier. However, when 5 footballers drop dead every week, one will be looking for ANY common denominator between the dead footballers. Neither the CDC nor the FDA are impartial observers of vaccine safety. Both agencies have vested interests in promoting the vaccines. When the CDC or FDA analyze events on a case-by-case basis, they are inclined to say that an event was not due to a vaccine (especially if the people at the CDC and FDA include former executives from Pfizer). However, when the entire US population has a significant number of events compared to historic basis, one must look for the common denominators in the people with the events. The existing data is not proof that the vaccines are causing deaths due to Circulatory diseases. The burden of proof, however, lies with the CDC and FDA to prove that the vaccines are not causing deaths due to spike

protein. It is scientific irresponsibility to eliminate the control group via vaccine mandates and make future assessment of vaccine safety scientifically impossible.

The risk of Covid 19 needs to also be measured against the risk of the covid 19 vaccine to make a educated decision. The risk of covid 19 vaccine should not be looked at in a vacuum. Also, the absolute risk needs to be considered as well, not just relative risk.

Debra Wells

On Thursday, February 10, 2022 9:28 AM, Debra Wells <debrakwells@startmail.com> wrote:

Please do not require or force the COVID 19 vaccines on children. More children have been negatively affected by vaccines than have been sick or died from covid. The children that have passed away had other medical issues that put them at particular risk; however, the vast majority are not at risk of covid 19. However, with the vaccines, myocarditis is more deadly to children than covid 19 and this has played out in the numbers.

We also don't know the long term effects on fertility and this vaccine should not be allowed or approved for children at any age.

Please follow biological science and not political science. It is very apparent that the majority of decision makers have been following political science and not biological science. Please do NOT harm our children with these untested vaccines. It's one thing to require the measles vaccines that have been around for decades; however, covid 19 vaccines have only been around just over a year. The numbers are not looking good for the safety of the covid 19 vaccine. The numbers from the Military are alarming. The numbers from insurance companies, that are required to review actual death rates and why so they can set premium rates, are extremely alarming. Ignoring these warning signs is gross negligence. We must protect our most vulnerable from even the most well meaning individuals/decision makers. We should not be making rash decisions that will have long standing impact that can't be reversed. We need more data on the vaccines before we force it on children.

Please vote NO on requiring Covid vaccines for children under 18.

Subject: questions for the WSBOH after today's meeting

External Email

Questions for the WSBOH and affiliates to consider:

1. Does the WSBOH know the difference between relative risk factors and absolute risk factors in regard to the data reported for COVID 19 vax? It is very important to know the difference and to take a closer look at this distinction. It is a game changer. The quoted "90+%" benefits and effectiveness becomes less than 1% effective.

2. Is the WSBOH aware that there is a "revolving door" of staff between the CDC and Pfizer and other Big Pharma leadership positions?

3. Is the WSBOH aware that there is a similar "revolving door" between FDA officials and Big Pharma, Monsanto etc. ?

4. Could that warrant the WSBOH to look into independent, peer reviewed studies, which are not funded by the CDC, Pfizer, etc.?

5. Who is paying for these studies and trials? The companies who will profit from the sale of their products? Does this parallel the "fox guarding the hen house"?

6. Is the WSBOH aware that Pfizer has the worst criminal record of Big Pharma companies for bribery, deception of facts, etc.?

7. Does the WSBOH know that Pfizer refuses to divulge the total list of ingredients of their Covid shot for 55 years? Why is that? What are they hiding?

8. Is the WSBOH aware that Dr. F@ci. has a patent on the COVID virus (manmade) and on the Pfizer vax? Do you know that Dr. F. has financial interest in the Moderna vaccine as well? He has made billions of \$\$\$ as a result of him recommending it. Could that be a conflict of interest?

9. Is the WSBOH aware that a state of emergency cannot last for 2 years without Wa. legislature renewing it? (Which they have not done). This unlawful EUA has allowed the roll out of an improperly tested, experiment product on hundreds of thousands misinformed, mislead and outright deceived Americans.

10. Is the WSBOH aware that the Pfizer Biotech shot has never been approved by the FDA??? They approved cominary, a drug that is not even available in the U.S. A.

11. Is the WSBOH aware that early, effective treatment recommended by many renown doctors has been systematically suppressed from the beginning of the pandemic? It has been estimated that 500,000 lives could have been saved if this early, effective treatment was made known. Do you realize that this was not been done in order to roll out a false EUA and the big money making plan by Big Pharma and other agencies and the people who stand to profit in the millions and billions of \$\$\$.

12. Has the learned professionals consider that this above sited situation has greatly contributed to the overburden health care system, not to mention the fact that many medical personnel lost their jobs because they refused to being coerced to take a experimental product against their better judgement and informed consent?

13. Does the WSBOH see anything suspect in the fact that the Big Pharma lobbyists were successful in influencing the U.S. Congress in 1986 to pass a law that relieved the Big Pharm from ANY liability of injury or death from their vax products?

14. Is the WSBOH aware that Gov. Inslee's daughter works for the Bill Gates Foundation? One of the admitted agenda items of Mr. Gates is to reduce the population by 15%. Did you know that the mRNA ingredient was initially used in a study to control animal population? Did you know that the miscarriage rate at a local hospital is 5x what it was before the vax roll out? i.e. this vax is a noteworthy, contributing factor of ending life in the womb...during all a 3 terms and even causing some stillbirths! What other science do we really need?

15. Does it seem curious to anyone on the WSBOH that one of today's presenters has been appointed by the Govenor., who has a solid interest , financial and political, to run this agenda and coerced mandates roughshod over the people he has sworn an oath to represent?!

16. Has the WSBOH considered that your TAG team is a group people who are all aligned with the same scenario, even the same CDC charts and studies sited by the 3 presenters? Does that mean that the more the same studies are sited over and over again, that will make them more true and believable?

17. Does the WSBOH understand that they have "stacked the deck" through the choice of presenters and TAG members in favor of one point of view, that of the mainstream narrative, from government agencies meant to protect the people who are now the ones the people need protection from their propaganda, distorted information and official acts?

18. Does the WSBOH realize that they are not fooling us (well informed citizens) with your supposed "independent" presenters and tedious meetings?

19. When will the WSBOH stand up and wake up to what is really going on and has been for a very long time?

I attended some of the TAG meeting today, unfortunately I could not devote the entire day.

Is there going to be information that presented today available to the public? Including where specifically data is coming from and what criteria it must have to be used as valid.

Specifically I'm trying to understand how the vaccine fits criteria 5.

Thank you
Natalie Poulson

In plain sight they admit that mRNA Covid 19 vaccinations completely alter and suppress your immune system. We already know it impairs DNA repair. These two papers alone should support enough evidence STOP THE PROGRAM!

Subject: Covid Vaccine mandate/s

External Email

Hello,

My name is Jeanelle Parrott and I wanted to take the time to reach out to you to express my complete disdain for the mandatory policies that protect only big pharmaceutical companies with no recourse or protection for families. I have personally suffered a vaccine injury from a DPT shot taken at the age of 33. When I went to my doctor to get help, I was told that I couldn't prove that I got sick from the vaccine. That was the extent of help I got from big medicine. I suffered until I found a Chinese Medicine practitioner who gave me some herbs that cost me \$3.00 for reactions to vaccines. These herbs were to detox the body from the vaccine. Within days, I felt better. However, my experience taught me about the kind of support I can expect from mainstream medicine around my health and vaccines. Since that time, I have obtained my Master's in Chinese Medicine and I know many ways to treat the body without using abrasive drugs or injections.

We have all been a part of the worldwide pandemic, and we all have access to the data. It has been great news that the virus has mutated and it is no longer as severe. The Danish government has the best epidemiology in the entire world and they have dropped all mandates and restrictions even as cases rise. That is because they have also measured the cost that all the mandates and restrictions have had on public health. In our case, after protecting my vulnerable mother while living with her and my small child, I was then forced to remove my daughter from public school because of restrictions being set within the district. This all pointed to forced vaccinations for the children. The stress has been insurmountable for me and my 6 year old child. She has been forced out of King County establishments, faced even more isolation and all this in her young developing life. Now, as we should be celebrating the end of the pandemic, our public health institutions are still putting mandates on the table to be discussed. All of this, for a pandemic that had the lowest risk for young children. This all smells of political motivation and has nothing to do with actual public health.

What I have wanted to see from the beginning of the pandemic is for public health to take the costs of mental and emotional health seriously. These policies have stuck it to working families that are just trying to raise healthy, happy kids. I just got off the phone with my local school district and the program we were hoping to be a part of next year is also being sacrificed because of these draconian mandates. It needs to stop. You all need to stop forcing things down people's throats when the science does not support your measure, mental and emotional health does not support your measure nor do the financial and social implications for families support your measure. The only motivation I can see gained by your institutions is more power and probably a money train from big pharma. There are very few populations around the country that support these vaccine mandates. I am disappointed I came back to Washington after living in Hawaii. I was hoping for more opportunities for my young child. She has now effectively been castrated in her county of King County. We may be able to move around to other districts. But, I totally oppose a statewide mandate for children and vaccines.

You have already crippled me and my industry of massage and acupuncture. Leave my child alone.

Thank you,

Jeanelle Parrott

Subject: Criteria # 5 Comments

External Email

Dear Washington State Board of Health,

Here are three reasons that I would like you to consider when deciding whether covid-19 vaccines

fulfill criteria #5 The vaccine containing this antigen prevents disease(s) that has significant morbidity and/or mortality in at least some sub-set of the population.

#1 Children and young adults are at an extremely low risk of mortality from COVID-19.

When one subset of the population (children) carries a high risk for injury from an antigen but low risk for injury from the disease, we must consider the mandate of such an antigen to be unethical. Bhopal, "Children & Young People Remain at a Low Risk of Covid-19 Mortality," The Lancet Children & Adolescent Health, Correspondence, Vol 5, Issue 5, E12-E13, May 1, 2021.

[https://www.thelancet.com/journals/lanchi/article/PIIS2352-4642\(21\)00066-3/fulltext](https://www.thelancet.com/journals/lanchi/article/PIIS2352-4642(21)00066-3/fulltext)

<[https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.thelancet.com%2Fjournals%2FPIIS2352-4642\(21\)00066-3%2Ffulltext&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C50dd6c5b47a4443e690808d9ecd6225f%7C](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.thelancet.com%2Fjournals%2FPIIS2352-4642(21)00066-3%2Ffulltext&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C50dd6c5b47a4443e690808d9ecd6225f%7C)

#2 There are side effects (like myocarditis) that are greater than risk of covid.

As of January 6, 2022, the seven-day case rate in Washington State for ages 4-11 was 504.8 per 100,000. The seven-day hospitalization rate was 1.2 in 100,000. Compare this with the risk of myocarditis in vaccinated adolescents, which is 18.52 in 100,000 as seen in <https://pubmed.ncbi.nlm.nih.gov/34849657/>

#3 It is unethical to use children as shields for adults.

FDA can only indicate a product for use in a given population if benefits outweigh risks in that same population. So if benefits

don't outweigh risks in children themselves, it can't be indicated for children, full stop. Whether vaccinating children might help adults is a moot point." Comments before the Vaccines and Related Biological Products Advisory Committee, June 10, 2021, <https://www.fda.gov/media/150815/download>, pp. 171-172. (emphasis added)

For these three reasons, I believe the covid-19 vaccines do not meet criteria #5.

Sincerely,

Deanna Leslie

To Whom it May concern,

I would like to know if this is a vote that the community will be able to have a say? I don't see any option for public comment for this meeting like the last one. Please advise.

Thanks

Subject: End the School Mask Mandates

External Email

Dear Issaquah, Bellevue and Lake WA School Districts, OSPI, WA State Education,
WSBOH, and King County Commissioner,

It was extremely disheartening to see all the celebrities at the Super Bowl going maskless, while meanwhile, my 5 year old still has to wear a mask at school. Our children have been harmed by this seemingly never-ending mask mandate. Mental health issues, drug use and suicide rates are through the roof.

I have friends in other states whose children have been un-masked at school since 2021. The evidence hasn't shown a greater risk of harm to these kids.

I respectfully request that the mask mandate be removed from K-12 schools ASAP.

Thank you,

Laurie Friedl

Dear DOH & BOH,

I am writing with a request for your help. Would you be willing to share this job announcement with air quality specialists in your network?

Job Announcement – Air Pollution Control Officer/Executive Director

Yakima Regional Clean Air Agency

<https://www.yakimacleanair.org/notices/employment/job.html?jobid=19>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.yakimacleanair.org%2Fnotices/employment/job.html?jobid=19>>

The previous Air Pollution Control Officer for the Yakima Regional Clean Air Agency resigned last October, and the agency is searching for a replacement. I represent the Friends of Toppenish Creek, an environmental advocacy group in Yakima County. We believe that the current search is too limited in scope. We are working on recruiting a large pool of highly qualified applicants for this position.

Yakima County has serious air pollution problems, largely due to a heavy concentration of concentrated animal feeding operations (CAFO dairies) in our community. The population in the impacted area is about 80% Latino and about 25% speak little English. Yakima County has suffered high rates of morbidity and mortality from COVID 19 and there is sound research showing a correlation with poor air quality.

If you know people who could lead the YRCAA into the future and effectively address our air issues, would you please share this announcement with them?

Thank you.

Umar A Shah MD MPH
Secretary of Health
WA State Dept of Health

Dr. Shah I was unable to attending the meeting on 2/10/2022. So I wanted to write you and give my input.

According to the Lancet Study 600 children have died from the Covid vaccine. A healthy child has no Covid risk. The vaccinated children are dying unnecessarily. Most of the children reacted adversely to the Pfizer Covid vaccine. The idea of forcing the vaccine on healthy children is unethical.

The CDC found in July 2021 that fully vaccinated people who contact the infection have as much as high a viral load in their nasal passages as unvaccinated people who get infected.

In October 2021 Israel's medical authorities at Meir Medical Center in Sheba found that 23% of patients and 10% of staff were infected with Covid despite a 96% vaccination rate in the country.

Received

FEB 15 2022

Department of Health
Office of the Secretary

(1)

The CDC hides vaccine mortalities in the USA data by counting all people as unvaccinated unless their death occur more than 2 weeks after the second vaccination shot. The CDC double down on this fraud by counting vaccine deaths as Covid deaths. They do this to promote the vaccines.

Maddie d baray, a 14 year old participated in the Pfizer trial and suffered neurological injuries, including seizures and perment paralysis.

Pfizer manipulated trial data by reporting that Maddie had suffered only a stomach ache.

According to Vaccine Adverse Event Reporting System, VAERS, there have been greater than 7000 cases of myocarditis or pericarditis following vaccines. More than 5000 from Pfizer. In 2019 there were 4 cases of myocarditis in the USA. In 2020 to 2021 there were > 7000 cases. Life expectancy is 5 years in 50% of these cases.

The 476 cases of myocarditis in 12-17 year olds is 14 x the expected cases. That is 50 times greater than vaccinated males over age 65 years.

A teen or child has effectively zero risk of dying from Covid but a substantial risk of death from vaccination.

In October of 2021 Sweden, Denmark and Finland paused the Moderna vaccine for children under 18 years of age because of this.

Covid is waning, mutating all the time. The vaccine to day will not work in children a month or 3 months from now. The children are more at risk from the vaccine than the virus, which is mutating and less deadly all the time.

According to the Office of National Statistics (ONS) data showed a rise in deaths among 15 to 19 year olds in the summer of 2021. There were 9 Covid deaths of unvaccinated children but 9 times as many deaths in the 15 to 19 year olds of vaccinated teens, 81 vaccinated deaths compared to 9 unvaccinated children.

According to the (ONS) the deaths among teens in the United Kingdom increased to 47% due to the Covid vaccine,

Covid 19 vaccine is 98 ~~more~~ times more deadly than flu vaccines according to VARES Report Trial Site News August 28, 2021

Why vaccinate children? Fauci is pushing this.
Why? The Big Pharma Companies are creating Public
Health accross our nation and through out the World.

I believe they are lining their pocketbooks with
out regard for the health of our children.

By making the vaccine mandatory, the children
and their parents will be unable to sue for
damages, They will have no recourse when harm
comes to them.

Please look at the big picture, don't follow
the narrative Big Pharma and Fauci are saying.

The first rule of Medicine is "first do
no harm."

Please first do no harm. You can always
revisit this issue in 6 months or a year
and make a decision then.

Thank you Irene Randall

Hello WA State BOH members,

Nobel Prize winner for his lead in the discovery of HIV, Dr. Montagnier whose specialty is virology, was scheduled to testify against the alleged criminals guilty of crimes against humanity and genocide, is now deceased as is another scheduled witness. (Scientists have developed many methods to secretly murder individuals.) I speak and understand French and can verify that the translation in the included video is truthful and to the point.

Please also listen to the equally brilliant 4X nominated for the Nobel-Prize, Dr. Vladimir (Zev) Zelenko, MD, whose early treatment protocols for the Wuhan virus have saved hundreds of thousands of lives worldwide, thereby saving millions of lives, beginning clear back at the beginning, in early March of 2020, before the lockdowns. Here Dr. Zelenko is testifying to the Rabbinical Court of Israel: "Wake up! This is World War III ... this is genocide."

Subject: Oppose the mandates

External Email

Inslee should not be able to mandate adults to get vaccinated and especially NOT the children. Covid has less affects on children than adults and the current mandates have not changed the amount of people that have contracted covid. Other states and countries are doing away with the mandates all together. Why are we still enforcing a vaccine that has zero difference in whether we can get covid in the first place. It does not prevent the sickness like other vaccines do. Covid can still be contacted and spread through vaccinated participants. It does not work so the mandates make zero sense. The vaccine has not been tested long enough to know the possible side effects nor has it been proven to not cause other health related issues.

Get a better vaccine that kills covid and don't push it on your citizens. Then more people would consider getting it.

The children have survived 2 years of covid and are surviving. Why mandate a vaccine that doesn't stop or even slow the spread?

Our state and country deserves better. It's been 2 years we have all come into contact with covid. Vaccinated or not.

Let people decide what is right for them and their family.

To TAG:

I submitted public comment on February 9, 2022. I did not receive confirmation of my submission, therefore I have resubmitted my comment. Please confirm that BOH Technical Advisory Group has received my letter and two attachments.

As I listen to the group today via Zoom it is obvious that this meeting is little more than a dog and pony show to support what BOH has already committed to doing--the vaccination of our children with an untested, unnecessary vaccine that by definition is not a vaccine. You are focusing on the higher incidence of Omicron cases as reason for vaccination. You will be using a deadly vaccine to suppress what is essentially a mild cold.

I don't know who or what has power over you, but I hope you can sleep at night knowing that children will be dying, maybe not immediately, but this "vaccine" has no history, so certainly we will be seeing unprecedented cases of unexplained mortality in children and young adults in the coming years. These kids are human guinea pigs for the benefit of Big Pharma.

If this goes through you will all be guilty of Crimes Against Humanity.

Again, please confirm that you have received my comment to TAG.

Gayle Baker

THE NUREMBERG CODE

1. The voluntary consent of the human subject is absolutely essential.

This means that the person involved should have legal capacity to give consent; should be so situated as to be able to exercise free power of choice, without the intervention of any element of force, fraud, deceit, duress, over-reaching, or other ulterior form of constraint or coercion; and should have sufficient knowledge and comprehension of the elements of the subject matter involved, as to enable him to make an understanding and enlightened decision. This latter element requires that, before the acceptance of an affirmative decision by the experimental subject, there should be made known to him the nature, duration, and purpose of the experiment; the method and means by which it is to be conducted; all inconveniences and hazards reasonably to be expected; and the effects upon his health or person, which may possibly come from his participation in the experiment.

The duty and responsibility for ascertaining the quality of the consent rests upon each individual who initiates, directs or engages in the experiment. It is a personal duty and responsibility which may not be delegated to another with impunity.

2. The experiment should be such as to yield fruitful results for the good of society, unprocurable by other methods or means of study, and not random and unnecessary in nature.
3. The experiment should be so designed and based on the results of animal experimentation and a knowledge of the natural history of the disease or other problem under study, that the anticipated results will justify the performance of the experiment.
4. The experiment should be so conducted as to avoid all unnecessary physical and mental suffering and injury.
5. No experiment should be conducted, where there is an a priori reason to believe that death or disabling injury will occur; except, perhaps, in those experiments where the experimental physicians also serve as subjects.
6. The degree of risk to be taken should never exceed that determined by the humanitarian importance of the problem to be solved by the experiment.
7. Proper preparations should be made and adequate facilities provided to protect the experimental subject against even remote possibilities of injury, disability, or death.
8. The experiment should be conducted only by scientifically qualified persons. The highest degree of skill and care should be required through all stages of the experiment of those who conduct or engage in the experiment.
9. During the course of the experiment, the human subject should be at liberty to bring the experiment to an end, if he has reached the physical or mental state, where continuation of the experiment seemed to him to be impossible.
10. During the course of the experiment, the scientist in charge must be prepared to terminate the experiment at any stage, if he has probable cause to believe, in the exercise of the good faith, superior skill and careful judgement required of him, that a continuation of the experiment is likely to result in injury, disability, or death to the experimental subject.

Re: Washington State Board of Health
Technical Advisory Group
Comments to Public Meeting
Agenda Items # 5 & 7 – Review of Criteria 5 & 6

To Technical Advisory Group (TAG):

The experimental COVID “vaccines” do not meet Criteria numbers: 2, 4, 5, 6, & 7, of the "Criteria for Reviewing Antigens for Potential Inclusion in WAC 246-105-030" (CRAPI). Science and children’s inherent immunities do not support the implementation of COVID “vaccines” for K-12. It is beyond understanding why it is taking so long to deliberate something that is as straightforward as this. COVID “vaccines” absolutely, irrefutably, unconditionally do not meet the Criteria under discussion today, nor did they meet the Criteria under discussion at the last public TAG meeting.

But let’s focus on what is in today’s Agenda:

Criteria 2 - *“The vaccine containing this antigen is effective as measured by immunogenicity...”* **False:** The COVID "vaccine" should not be considered a vaccine because it is not effective at PREVENTING transmission of the disease, so says the Director of the CDC.¹

Criteria 4 - *“Experience to date with the vaccine containing this antigen demonstrates that it is safe and has an acceptable level of side effects.”* **False:** The COVID "vaccines" have passed the one-million mark for adverse effects. For the negative effects on just children ages 5-11, please see attached data spreadsheet “Attachment A - VAERS Report Children 5 – 11,” (an excerpt from the VAERS data report for 2021)². The report is shocking and illuminating in that many “accidents” are reported as occurring as a result of the administration of the shot, thus making the jab by untrained personnel almost as dangerous as the “vaccine”. Also in this report are the suicides; sixty-six children, ages 5-11, committed suicide in 2021, their deaths counted as COVID.

Why is TAG and BOH taking such unnecessary risks with our children when our children are not in danger of dying from the disease,³ or of experiencing much more than flu like symptoms?⁴ That’s the million-dollar question: WHY ARE YOU DOING THIS TO OUR CHILDREN?

How many members of the Technical Advisory Group adopt science based, critical thinking in your decision making? Have any of you carried out any research into alternatives to the “vaccine”? (It is estimated that 500,000 people have died in the last eighteen months because they were denied (by Fauci) preventative

¹ <https://www.msn.com/en-us/health/medical/cdc-director-covid-vaccines-cant-prevent-transmission-anymore/ar-AASDndg>

² <https://vaers.hhs.gov/data.html>

³ <https://petition-central.com/new-data-covid-was-never-more-dangerous-to-young-adults-and-children-than-seasonal-flu/>

⁴ <https://www.newsweek.com/risk-kids-covid-miniscule-do-not-let-them-mandate-vaccines-opinion-1638576>

treatments like Ivermectin and hydroxychloroquine.)⁵ How many in this Group have conducted research into the corrupt and sociopathic practices of Anthony Fauci and Bill Gates, amongst others? (Gates, Fauci and other world leaders are currently being investigated in preparation to present before a Grand Jury, in an International Court for Crimes Against Humanity.^{6 7}

Fact, every doctor, nurse, health care worker, politician, educator, and others in positions of power that promotes the COVID “vaccine” as the ONLY effective treatment against COVID is guilty of Crimes Against Humanity under the Nuremberg Code. Mandating this “vaccine” breaks not one but every one of the ten “crimes” under the Nuremberg Code (Attachment B). Current scientific studies do not support you and your position in the Technical Advisory Group will not protect you if you approve this “vaccine” for children.

On Thursday, February 10, 2022, you will be deciding the future of the children of the State of Washington—will 99.996% of them live if they get COVID or will some of them die unnecessarily from the “vaccines” adverse effects? That’s not a question asked for dramatic impact. Your recommendation to Washington State Board of Health holds weight and children’s lives are dependent upon you doing the right thing by them. And let’s be clear, to say that parents can opt out of the “vaccine” is as hollow as proclaiming the rest of us have that luxury. Two years of draconian mandates have declared otherwise.

Your recommendation to BOH should be a resounding **NO to the COVID “vaccine” K-12** mandate.

Sincerely,

Gayle Baker

Subject: Datasets

External Email

When using datasets, please provide the number of individuals with the percentages and not just percentages alone. As an example, you could get a 50% number if 2 of 4 individuals got sick with covid. However, when applying this to a larger dataset, the percentage would likely be considerably different. This is because the dataset of 4 individuals is a very limiting and skewing factor.

Debra Wells

On Thursday, February 17, 2022 10:28 AM, Debra Wells <debrakwells@startmail.com> wrote:

Due to the changes in definitions being so fluid, the datasets should also include the number of shots instead of the labels of vaccinated or unvaccinated. The number of shots, regardless of when the shots are received. I realize that someone isn't counted vaccinated until 2 weeks after their shots. This is why the number of shots will produce a better dataset for analysis than using labels of vaccinated or unvaccinated. Also, if someone hasn't received any shots, they should fall under vaccine free individuals. This is to get a better dataset for the best data analysis. The only reason not to do this is to hide information and to blame a group that maybe shouldn't be blamed.

Debra Wells

On Thursday, February 17, 2022 10:23 AM, Debra Wells
<debrakwells@startmail.com> wrote:

Data from Israel, the CMS database, GB's yellow card system and the military database should also be taken into account for a more well rounded data indicators for adverse reactions, injuries and death.

Also, 20% of myocarditis result in death in 5 years. This is not mild.

<debrakwells@startmail.com> wrote:

I am fighting hard against these covid vaccines because there are indications that they cause blood clots. There are loads of cases noted in the VEARS database and other countries data related to PE, DVT and thrombosis incidences. I have a history of blood clots from a medication. I was young, healthy and had absolutely no other risk factors concerning blood clots other than the medication. I was so healthy that they didn't find the blood clots until after 2 trips to the ER and a Doctor's visit. After leaving the doctor's office, I received a call demanding that I go to the nearest hospital for a lung scan where I lit the scan up like a Christmas tree. The clots were confirmed via what they call the Gold Standard test, where they ran a camera up my vein, through my heart and into my lung. There were absolutely no indications with my vitals or physical condition, other than it felt like I had pneumonia. The result was that I had 6 clots in one lung and they didn't bother looking in the other lung. I spent a week in the hospital. This is because I was otherwise healthy and responding well to the blood thinners. Obviously, I was on medication for a little while after hospitalization. This was all caused by a medication that is considered extremely safe and is widely used (birth control pills). Blood clots are considered the silent killer, especially in younger people. This happened over 20 years ago. I have avoided all medications, vaccination or even food that I know have the potential to cause blood clots.

I had no other medical history prior to this incident with blood clots and could have ended with my death.

This is why SBOH should consider the negative effects of the vaccines. I know that it's been hard to get this information because the FDA, CDC and Government as a whole doesn't want to create vaccine hesitancy; however, this shouldn't take priority over allowing the public to make informed decisions without being forced to

take something that can result in death or disability. The public must have all the information to make the best medical decisions for themselves. I would say that the withholding of information and the heavy handedness of the FDA, CDC, and all government entities as caused more vaccine hesitancy, resistance and mistrust than if they had been truthful. If this isn't the cause, then maybe the vaccine never should be authorized in the first place. Meaning, if the adverse reactions or injuries are such that the FDA, CDC and Government entities feel that it would cause vaccine hesitancy, then the approval of the vaccine shouldn't have happened until those concerns were addressed and the full information should have been given to people prior to getting the vaccine and informed consent should be received without force or coercion.

I have concerns that this vaccine will cause more injuries and death than it will save children. There are indications that this is already occurring and should be investigated. Everything I have seen so far is that children are less likely to get covid let alone die from it. As a matter of fact, more children die of accidents every year than all other causes of death to include Covid. What the Board hasn't investigated are the adverse reactions or deaths caused by the vaccines and must be considered before requiring this vaccine for school or day care, even if it takes a little bit longer. It is more important to make sure that the decisions made don't cause more harm than what they are meant to save.

I have concerns that these issues have been ignored and not addressed. There should be a meeting going over adverse reactions and injuries, not just to appease those of us with concerns but to truly look at all potential problems that could arise from vaccine injuries/adverse reactions.

Lastly, there are no safety studies concerning fertility. That should be done before mandating this to school age children.

PS. I want to address a poorly worded statement from a panelist last week. The comment stating that mothers don't know what is best for their children because they are misinformed or lack information. The lack of information is the fault of the FDA, CDC and Government entities as a whole. Parents, particularly Mothers know more about their children than school nurses, doctors or even so called experts because they know more about that child's medical history from the birth of that child to current day. Obviously, medical history is incredibly important that most people don't have. Mothers have this information. In addition to that, parents have a moral, emotional and financial responsibility for their children, where the school and so called experts don't have. As a matter of fact, no school nurse, school administrator, doctor or so called expert goes home at night and thinks about the impact of their decisions that affects families. However, Parents are left holding the bag of the bad decisions made by so called experts. As a parent, I would walk through fire, take a bullet and suffer death for my child (who is now 30). Not one of you or anyone else would. This is the heart of a mother. The concerns of mothers should never ever be brushed aside with such negligence and ignorance. The concerns of mothers should be addressed fully and honestly without derogatory comments of their concerns or as persons.

It is telling when the FDA puts a pause on the covid 19 vaccine for children until they get more data. The Washington State Board of Health should also put a pause on consideration for covid 19 vaccine for children as well until more is known about the safety of the vaccines. There are enough indicators that a pause is warranted.

that mortality in the 18-64 age group was 40 percent higher during the 3rd and 4th
quarters of 2021 than during pre-pandemic levels. For reference, the CEO indicated that
a 10 percent increase would have been a 1-in-200-year event. Furthermore, most of the
deaths were not attributed to Covid.

<data:image/png;base64,iVBORw0KGgoAAAANSUhEUgAAAAEAAAABCAQAAAC1HAWCAAAAC0IEQVR42mNk

number of deaths across the US that cannot be attributed to Covid. As was the case for the Age Group graphs, data for the last 10 weeks are incomplete due to delays in reporting of death certificates. Deaths attributed to Malignant Neoplasms were average during the entire pandemic period. Although there was an increase in deaths from Alzheimer Disease and dementia in 2020 after the onset of the pandemic, this was less apparent during 2021. There was an increase in deaths attributed to Other select causes (which include suicides and drug overdoses), but the magnitude was much smaller than what is seen in the Circulatory diseases category. Deaths attributed to Circulatory diseases include strokes, heart attacks, and heart failure (including myocarditis). The Circulatory diseases category is clearly the most important category for excess deaths during 2020 and 2021. Notably, deaths attributed to Respiratory diseases were below average during 2021 for the period of interest between Week 10 and Week 24 of 2021. Covid is a respiratory disease and leads to acute respiratory distress syndrome with hypoxemia and respiratory failure in severe cases. During the period of interest between Week 10 and Week 24 of 2021, Covid deaths were steadily declining, deaths attributed to Respiratory diseases were below average, but deaths due to Circulatory diseases were significantly above average. It is difficult to explain the data between Week 10 and Week 24 of 2021 on the basis of lung injury caused by Covid infection.

The spike protein enables entry of the virus into the host cells. The spike protein targets the angiotensin converting enzyme-2 (ACE-2) receptor. Angiotensin converting enzymes play an important role in the regulation of blood pressure. Angiotensin receptor blockers (ARB) and angiotensin converting enzyme (ACE) inhibitors are both important classes of drugs used to treat hypertension. It does not require a stretch of the imagination to suspect that the spike protein could cause elevation of blood pressure. Acute elevation in blood pressure is known to be a risk factor for stroke, acute myocardial infarction (heart attack), and congestive heart failure. Spike protein is also associated with clotting, presumably due to endothelial injury, which would also increase risk for myocardial infarction and stroke. It is not clear why spike protein from the Covid virus would explain above average deaths attributed to Circulatory diseases during a time period when Covid cases and deaths were declining. However, the Covid virus was not the only source of spike protein during this time period. The mRNA vaccines led to the production of spike protein by host cells and Weeks 10-24 of 2021 were immediately followed by the mass introduction of mRNA vaccines to the US public. The data is not proof, but it is certainly a red flag.

The appropriate method to assess vaccine efficacy and safety is all cause mortality. Deaths from all causes are compared between the vaccine group and a control unvaccinated group. This method has not been used. Rather, the CDC and FDA determine on a case-by-case basis whether reported adverse events can be attributed to the vaccine. If a footballer drops dead during a game, one would not be inclined to attribute the cause to a vaccine given 10 weeks earlier. However, when 5 footballers drop dead every week, one will be looking for ANY common denominator between the dead footballers. Neither the CDC nor the FDA are impartial observers of vaccine safety. Both agencies have vested interests in promoting the vaccines. When the CDC or FDA analyze events on a case-by-case basis, they are inclined to say that an event was not due to a vaccine (especially if the people at the CDC and FDA include former executives from Pfizer). However, when the entire US population has a significant number of events compared to historic basis, one must look for the common denominators in the people with the events. The existing data is not proof that the vaccines are causing deaths due to Circulatory diseases. The burden of proof, however, lies with the CDC and FDA to prove that the vaccines are not causing deaths due to spike

protein. It is scientific irresponsibility to eliminate the control group via vaccine mandates and make future assessment of vaccine safety scientifically impossible.

On Thursday, February 10, 2022 9:28 AM, Debra Wells <debrakwells@startmail.com> wrote:

Please do not require or force the COVID 19 vaccines on children. More children have been negatively affected by vaccines than have been sick or died from covid. The children that have passed away had other medical issues that put them at particular risk; however, the vast majority are not at risk of covid 19. However, with the vaccines, myocarditis is more deadly to children than covid 19 and this has played out in the numbers.

We also don't know the long term effects on fertility and this vaccine should not be allowed or approved for children at any age.

Please follow biological science and not political science. It is very apparent that the majority of decision makers have been following political science and not biological science. Please do NOT harm our children with these untested vaccines. It's one thing to require the measles vaccines that have been around for decades; however, covid 19 vaccines have only been around just over a year. The numbers are not looking good for the safety of the covid 19 vaccine. The numbers from the Military are alarming. The numbers from insurance companies, that are required to review actual death rates and why so they can set premium rates, are extremely alarming. Ignoring these warning signs is gross negligence. We must protect our most vulnerable from even the most well meaning individuals/decision makers. We should not be making rash decisions that will have long standing impact that can't be reversed. We need more data on the vaccines before we force it on children.

Please vote NO on requiring Covid vaccines for children under 18.

The presenter listed the ingredients of this vaccine, but I don't trust the companies making the vaccine. And how the vaccine manufacturers have put blank inserts into the vaccine boxes. There is no informed consent. The true data has been withheld.

Why are they trying to convince the group the vaccine is effective using data from December of 2020? When we have a whole year of data showing the vaccine is NOT effective. Showing data from the original trials is almost obsolete. When we have plenty of data from the last year showing it's not nearly as effective as originally shown.

There was absolutely no talk of myocarditis during the presentation about side effects. Blatantly ignoring the red flags.

Over 50% of people had fatigue and headaches after the vaccines. 99% of people usually only have minor cold symptoms from natural infection or no symptoms at all! Why would someone want to trade minor cold symptoms with fatigue and headaches from a vaccine? We need the right to choose our health outcomes. I'm not interested in a 50% guarantee of being run down and feeling horrible for days following an injection. I'd rather have a natural infection and take healthy care of my body to recover. Not interested in this science experiment.

They're comparing the vaccine group to the placebo group in the vaccine trials. What's the placebo? Is it an inert saline?

Looking at all the data presented. The vaccine is not safe. And the trade off is not worth it. I would never risk my child's quality of life on this vaccine. Never.

They tried convincing you that myocarditis resolves quickly without long term health conflicts. That's fantasy land. Other data shows how levels of function within the heart were still being compromised weeks after vaccination. Children's hearts still being damaged by the vaccine weeks after vaccination. He didn't share that data with you.

There's also a big push to discredit VAERS or Vsafe data collecting systems. No one is abusing these reporting systems. No doctor or provider is imputing vaccine injuries that they truly don't directly affiliate with the recent vaccination given. These Pharma profiteers like to discredit VAERS. Because it's inconvenient data for them to have to explain. So they'd rather tell you it's not credible. That's incredibly frustrating for people who were truly injured by this science experiment.

No long term safety studies. Increased prevalence of cancers in the last year across the board. Increase in miscarriages and menstrual issues reported. No evidence this vaccine does not cause reproductive issues. The data just isn't there yet. My child will never be getting this injection.

There is more recent data than what has been shown in the presentations. But even the data shown, there is no way I'd give this to my children. 69 cases of myocarditis when it's estimated only 71 hospitalization to covid have been prevented. So we are just swapping hospitalizations from covid with heart damage??? No thank you.

According to WA doh data. There are currently 10 people from ages 0-17 hospitalized in the last week with covid. In the entire state! 10 people aged 0-17 over the last week. In the entire state. And we are talking about pushing the experimental covid "vaccine" on every child attending public schools? We don't want this vaccine. Listen to people's concerns and not those with financial incentives to push this vaccine on our state.

The presenters trying to say the spike protein toxin is harmless. This is false and they show no data to prove this. Because there are major concerns over the spike protein. And where it accumulates in the body. Studies in early 2021 showed the spike proteins accumulating in the spine, organs, and cervix. The vaccine is making the body create spike protein antibodies, does it ever stop?

Let's also not ignore that there are known treatments for covid symptoms. And even children can have these treatments. An emergency use authorized vaccination can only be approved for use if there are no known treatments. Our health departments deliberately ignores treatment options to make it seem like the "vaccine" is the only way to protect ourselves from severe illness from covid.

DoD (Department of Defense) data shows an increase across the board of all health problems over the last year since the vaccine has been coerced on the entire military population. This is ignored by WADOH and other health agencies pushing this "vaccine". Cancers increase, miscarriages, HIV increased 590%, heart problems, blood circulation issues, etc. Why is this not discussed?

Everyone will wonder why in the world was WA state so cruel to their children? You can go down as a coward or someone who stood for doing the RIGHT thing. These children are Suffering! End the mask mandate now!

They cannot breathe correctly with the masks. The masks are filled with bacteria from them breathing in their own air and snot 7 hours a day. They cannot speak and they cannot learn to speak. They are not building relationships with their teachers or friends. They are depressed. Children need to see expressions and they need their expressions seen. You are literally crippling our younger generation. You can make a change and do the right thing. The masks cause far more harm than good.

Time is now. What side of history do you want to be on? How good will it make you feel explaining to your grandchildren and great-grandchildren that you let the mask mandate continue despite endless information stating how bad it is for children and their development? That you were afraid to do what is right. The rest of the world did the right thing, but you did not.

While you went to parties, gatherings, concerts, restaurants, sports games - all unmasked and unmasked with strangers; you made children, who see the same people every day, be forced to wear a mask. The least vulnerable group to Covid, yet the most vulnerable group to depression and learning disabilities all caused by the mask.

Let it be a choice now! We are begging you to do the right thing now. Stand up Washington!

Thank you,

Kimberly

Subject: Governor Inslee's Proposal that Covid-19 Injections Be Required for School Attendance in the Fall of 2022

External Email

Dear WA State Board of Health:

It is difficult for me to comprehend that there would be any question at all about the absolute barbarity of what is being proposed by our governor with regard to requiring Covid-19 injections for our children to be able to attend school in the fall. First of all, the statistics we have from the CDC at this time show that there is an extremely low probability that there is any more chance of Covid 19 taking the lives of our children than even the flu, which is very low. Secondly, the statistics from the reports to VAERS from the "vaccinations" some have already been given (representing only a small fraction of all Covid vaccination adverse event reactions that have actually taken place), show that being given this experimental drug is far more dangerous to our children than being given no "protection" at all.

As stewards of your own health and the health of the people in our state, we expect you not only to NOT ALLOW this policy of vaccination to be put forth against the wellbeing of our children, but also to ALERT the people of our state, and the parents in particular, to the dangers it portends for the future health, not only of our children, but also of the entire population of our state and nation. It is, after all, only experimental, at this stage of its development, and can hardly be seen as being beneficial in any stretch of the imagination. It does not and can not even prevent those who are vaccinated from getting what it is supposedly vaccinating us against!

Thank you for your kind attention to what I have had to say.

Respectfully submitted,

Deborah Bohl
Everett, Washington

Subject: Cost effectiveness

External Email

Cost effectiveness should also include the impact of vaccine injuries and breakthrough illnesses (that do include serious illness and death).

By the end of 2021, the Paul Ehrlich Institute (PEI) had recorded around 245,000 vaccination side effects. But the actual number of these side effects is likely to be many times higher. At least that is what the results of an analysis by the health insurance company BBK ProVita suggest, as reported by Die Welt. One had become "clairaudient", when ever more occurring diagnoses suggested a vaccination side effect. Therefore, the databases of all BBK health insurance companies were searched. The data collection paints a completely different picture than the figures from the Ministry of Health.

From January to August 2021, for example, around 217,000 of just under 11 million BBK policyholders had to be treated for vaccination side effects - while the Paul Ehrlich Institute keeps only 244,576 side effect reports based on 61.4 million vaccinated. "According to our calculations, we consider 400,000 doctor visits by our insureds due to vaccination complications to date to be realistic," Andreas Schöfbeck, BKK board member, told Die Welt. "Extrapolated to the total population, this figure would be three million." Thus, the number of vaccine side effects would be more than 1,000 percent higher than the PEI reports.

Schöfbeck cites the reporting system as the main explanation for the massive discrepancy. Physicians often have to report vaccination side effects in their spare time - a time-consuming activity that then goes unpaid. "It is simply impossible to report everything."

With his analysis, Schöfbeck turned to a wide range of institutions - from the German Medical Association and the StiKo to the Paul Ehrlich Institute itself. He said the figures were a "strong alarm signal" that "absolutely must be taken into account in the further use of vaccines."

His figures could be validated by the same data analyses of other health insurance companies, he says. It is "ethically wrong not to talk about it."

Since "danger to human life cannot be ruled out," he set a deadline of 6 p.m. Tuesday to respond to his letter. As this passed, they turned to the public.

<debrakwells@startmail.com> wrote:

Since the last meeting it has come out that the CDC has not been releasing the data related to the covid vaccines. This will limit the validity of the data that has been presented to the SBOH and TAG groups from the presenters. A hold should be in place until the data is released so that it can be analyzed in it's entirety. Our children's safety is paramount, even from well meaning efforts that could harm them in the long run. I believe that if a pause is not enacted in relation to covid vaccines, great harm will come to our kids from the vaccines for covid.

PS. I am not an anti-vaxxer. I have received many vaccines over my life to include many that most don't receive. However, as I shared before in earlier emails, this particular vaccine is very concerning with the evidence of harm already available, even with the data withheld from the CDC.

As a side note, concerning the CDC withholding data, it hasn't gone unnoticed that if the data supported the efforts of the CDC, the data wouldn't have been withheld at all. This means that the data that is being withheld from the public and those that would be analyzing it, is likely showing that the vaccine is not working and likely causing more harm than good. So a pause needs to be in place until further information is released so that everyone can make truly informed decisions both personally and in relation to policy.

On January 19, 2022, this report was posted as an MMWR Early Release on the MMWR website (<https://www.cdc.gov/mmwr>

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fmmwr&data=04>).

By November 30, 2021, approximately 130,781 COVID-19–associated deaths, one in six of all U.S. deaths from COVID-19, had occurred in California and New York.*COVID-19 vaccination protects against infection with SARS-CoV-2 (the virus that causes COVID-19), associated severe illness, and death (1,2); among those

who survive, previous SARS-CoV-2 infection also confers protection against severe outcomes in the event of reinfection (3,4). The relative magnitude and duration of infection- and vaccine-derived protection, alone and together, can guide public health planning and

epidemic forecasting. To examine the impact of primary COVID-19 vaccination and previous SARS-CoV-2 infection on COVID-19 incidence and hospitalization rates, statewide testing, surveillance, and COVID-19 immunization data from California and New York (which account for 18% of the U.S. population) were analyzed. Four cohorts of adults aged ≥ 18 years were considered: persons who were 1) unvaccinated with no previous laboratory-confirmed COVID-19 diagnosis, 2) vaccinated (14 days after completion of a primary COVID-19 vaccination series) with no previous COVID-19 diagnosis, 3) unvaccinated with a previous COVID-19 diagnosis, and 4) vaccinated with a previous COVID-19 diagnosis.

Age-adjusted hazard rates of incident laboratory-confirmed COVID-19 cases in both states were compared among cohorts, and in California, hospitalizations during May 30–November 20, 2021, were also compared. During the study period, COVID-19 incidence in both states was highest among unvaccinated persons without a previous COVID-19 diagnosis compared with that among the other three groups. During the week beginning May 30, 2021, compared with COVID-19 case rates among unvaccinated persons without a previous COVID-19 diagnosis, COVID-19 case rates were 19.9-fold (California) and 18.4-fold (New York) lower among vaccinated persons without a previous diagnosis; 7.2-fold (California) and 9.9-fold lower (New York) among unvaccinated persons with a previous COVID-19 diagnosis; and 9.6-fold (California) and 8.5-fold lower (New York) among vaccinated persons with a previous COVID-19 diagnosis. During the same period, compared with hospitalization rates among unvaccinated persons without a previous COVID-19 diagnosis, hospitalization rates in California followed a similar pattern. These relationships

tracker%2F%23cases_deathsper100klast7days&data=04%7C01%7Cwsboh%40sbh.wa.gov%7C91037e4d

changed after the SARS-CoV-2 Delta variant became predominant (i.e., accounted for >50% of sequenced isolates) in late June and July.

By the week beginning October 3, compared with COVID-19 cases rates among unvaccinated persons without a previous COVID-19 diagnosis, case rates among vaccinated persons without a previous COVID-19 diagnosis were 6.2-fold (California) and 4.5-fold (New York) lower; rates were substantially lower among both groups with previous COVID-19 diagnoses, including 29.0-fold (California) and 14.7-fold lower (New York) among unvaccinated persons with a previous diagnosis, and 32.5-fold (California) and 19.8-fold lower (New York) among vaccinated persons with a previous diagnosis of COVID-19. During the same period, compared with hospitalization rates among unvaccinated persons without a previous COVID-19 diagnosis, hospitalization rates in California followed a similar pattern. These results demonstrate that vaccination protects against COVID-19 and related hospitalization, and that surviving a previous infection protects against a reinfection and related hospitalization. Importantly, infection-derived protection was higher after the Delta variant became predominant, a time when vaccine-induced immunity for many persons declined because of immune evasion and immunologic waning (2,5,6). Similar cohort data accounting for booster doses needs to be assessed, as new variants, including Omicron, circulate. Although the epidemiology of COVID-19 might change with the emergence of new variants, vaccination remains the safest strategy to prevent SARS-CoV-2 infections and associated complications; all eligible persons should be up to date with COVID-19 vaccination. Additional recommendations for vaccine doses might be warranted in the future as the virus and immunity levels change.

Four cohorts of persons aged ≥ 18 years were assembled via linkages of records from electronic laboratory reporting databases and state-specific immunization information systems.[†]

[†] Statewide immunization databases in California are the California Immunization Registry, Regional Immunization Data Exchange, and San Diego Immunization Registry; the laboratory system is the California COVID Reporting System (CCRS). In New York, immunization information systems include Citywide Immunization Registry and the New York State Immunization Information System; the laboratory system is the Electronic Clinical Laboratory Reporting System (ECLRS). California data were matched between the immunization and case registries using a probabilistic algorithm with exact match for zip code and date of birth and fuzzy match on first name and last name. New York data were matched to the ECLRS with the use of a deterministic algorithm based on first name, last name, and date of birth. In California, person-level

hospitalization data from CCRS and supplementary hospitalization reports were used to identify COVID-19–associated hospitalizations. Morbidity and Mortality Weekly Report 126 MMWR / January 28, 2022 / Vol. 71 / No. 4 US Department of Health and Human Services/Centers for Disease Control and Prevention

laboratory-confirmed SARS-CoV-2 infection by March 1, 2021 Persons were classified based on whether they had had a (i.e., previous COVID-19 diagnosis)§; had received at least the primary COVID-19 vaccination series¶ by May 16, 2021; had a previous COVID-19 diagnosis and were fully vaccinated**;

cases for all cohorts on May 30, 2021),§§ as were persons who received a first vaccine dose during May 30–November 20, 2021. During May 30–November 20, 2021, incident cases were defined using a positive nucleic acid amplification test (NAAT) result from the California COVID-19 Reporting System (CCRS) or a positive NAAT or antigen test result from the New York Electronic Clinical Laboratory Reporting System. In California, person-level hospitalization data from CCRS and supplementary hospitalization reports were used to identify COVID-19–associated hospitalizations. A lifetable method was used to calculate hazard rates (average daily cases during a 7-day interval or hospitalizations over a 14-day interval), hazard ratios, and 95% CIs for each cohort. Rates were age-adjusted to 2000 U.S. Census data using direct standardization.¶¶ Supplementary analyses stratified case rates by timing § For both classification into cohorts of persons with previous COVID-19 diagnoses and for measuring incident cases, laboratory-confirmed infection was defined as the receipt of a new positive SARS-CoV-2 nucleic acid amplification test (NAAT) or antigen test (both for New York and NAAT only for California) result, but not within 90 days of a previous positive result.

receipt of a second ¶ Fully vaccinated with the primary vaccination series is defined as dose of an mRNA COVID-19 vaccine (Pfizer-BioNTech or Moderna) or 1 dose of the Janssen (Johnson & Johnson) vaccine ≥14 days before May 30, 2021.

and analysis ** Because of the timing of full vaccination, the cohort definitions, timeframe, this cohort consisted nearly exclusively of persons who had previously received a laboratory-confirmed diagnosis of COVID-19 and later were fully vaccinated (California: 99.9%, New York: 99.7%), as

++ Whereas vaccinated cohorts were directly observed in the information system databases, unvaccinated persons without a COVID-19 diagnosis were defined using U.S. Census population minus the number of persons partially or fully vaccinated by 2021, and unvaccinated persons with a previous laboratory-infection before May 30, 2021. In California, the California Finance population estimates were used for 2020, and the 2018 Center for Health Statistics Bridged Race file for U.S. Census estimates were used in New York, consistent with other COVID-19 surveillance reporting.

§§ In California, a person-level match was performed to exclude cohort before May 30, 2021. In New York, COVID-19 deaths were in aggregate from the starting number of unvaccinated persons with COVID-19 diagnosis on May 30, 2021.

¶¶ <https://www.cdc.gov/nchs/data/statnt/statnt20.pdf>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fnchs%2Fdata%2F>

of previous diagnoses and primary series vaccine product. SAS (version 9.4; SAS Institute) and R (version 4.0.4; The R Foundation) were used to conduct all analyses. Institutional review boards (IRBs) in both states determined this surveillance activity to be necessary for public health work, and therefore, it did not require IRB review.

vaccinated and had a previous COVID-19 diagnosis; 6.3% in California and 4.9% in New York were unvaccinated with a previous diagnosis. Among 1,108,600 incident COVID-19 cases in these cohorts (752,781 in California and 355,819 in New York), the median intervals from vaccination or previous diagnosis (Table 1). In both states, 4.5% of persons were

COVID-19 diagnosis to incident diagnosis were slightly shorter in California (138–150 days) than in New York (162–171 days).

Before the Delta variant became predominant in each state's U.S. Department of Health and Human Services region (June 26 in Region 9 [California] and July 3 in Region 2 [New York]),*** the highest incidence was among unvaccinated persons without a previous COVID-19 diagnosis; during this time, case rates were relatively low among the three groups with either previous infection or vaccination and were lowest among vaccinated persons without a previous COVID-19 diagnosis

(Supplementary Figure 1, <https://stacks.cdc.gov/view/<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fstacks.cdc.gov%2Fview%2F&data=>

cdc/113253) (Supplementary Figure 2, <https://stacks.cdc.gov/<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fstacks.cdc.gov%2F&data=04%7C>

view/cdc/113253). During the week beginning May 30, 2021, compared with COVID-19 case rates among unvaccinated persons without a previous COVID-19 diagnosis, COVID-19 case rates were 19.9-fold (California) and 18.4-fold (New York) lower among vaccinated persons without a previous diagnosis; rates were 7.2-fold (California) and 9.9-fold (New York) lower among unvaccinated persons with a previous COVID-19 diagnosis and 9.6-fold (California) and 8.5-fold (New York) lower among vaccinated persons with a previous COVID-19 diagnosis (Table 2).

As the Delta variant prevalence increased to >95% (97% in Region 9 and 98% in Region 2 on August 1), rates increased more rapidly among the vaccinated group with no previous COVID-19 diagnosis than among both the vaccinated and unvaccinated groups with a previous COVID-19 diagnosis

* Statewide immunization databases in California are the California Immunization Registry, Regional Immunization Data Exchange, and San Diego Immunization Registry, and the laboratory system is the California COVID Reporting System; in New York, Immunization Information Systems include Citywide Immunization Registry and the New York State Immunization Information System; the laboratory system is the Electronic Clinical Laboratory Reporting System. California data were matched between the immunization and case registries using a probabilistic algorithm with exact match for zip code and date of birth and fuzzy match on first name and last name. New York data were matched to the Electronic Clinical Laboratory Reporting System with the use of a deterministic algorithm based on first name, last name, and date of birth. In California, person-level hospitalization data from the California COVID Reporting System and supplemental hospitalization reports were used to identify COVID-19-associated hospitalizations.

† For both classification into cohorts of persons with previous COVID-19 diagnoses and for measuring incident cases, laboratory-confirmed infection was defined as the receipt of a new positive SARS-CoV-2 NAAT or antigen test (both for New York and NAAT only for California) result, but not within 90 days of a previous positive result. Fully vaccinated is defined as having received a second dose of an mRNA COVID-19 vaccine (Pfizer-BioNTech or Moderna) or 1 dose of the Janssen (Johnson & Johnson) vaccine ≥ 14 days before May 30, 2021. Whereas vaccinated cohorts were directly observed in the immunization information system databases, unvaccinated persons without a previous COVID-19 diagnosis were defined using U.S. Census population estimates minus persons partially or fully vaccinated by December 11, 2021, and unvaccinated persons with a previous laboratory-confirmed infection before May 30, 2021. In California, the California Department of Finance population estimates were used for 2020, and the 2018 CDC National Center for Health Statistics Bridged Race file for census population estimates were used in New York, consistent with other COVID-19 surveillance reporting.

§ Cumulative cases per 1,000 persons.

¶ These summaries of cumulative incidence are estimated across a period of variability in the epidemic for all cohorts.

** Hospitalization data for New York are not included in this analysis.

October 3, compared with rates among unvaccinated persons without a previous COVID-19 diagnosis, rates among vaccinated persons without a previous diagnosis were 6.2-fold lower (95% CI = 6.0–6.4) in California and 4.5-fold lower (95% CI = 4.3–4.7) in New York (Table 2). Further, rates among unvaccinated persons with a previous COVID-19 diagnosis were 29-fold lower (95% CI = 25.0–33.1) than rates among unvaccinated persons without a previous COVID-19 diagnosis in California and 14.7-fold lower (95% CI = 12.6–16.9) in New York. Rates among vaccinated persons who had had COVID-19 were 32.5-fold lower (95% CI = 27.5–37.6) than rates among unvaccinated persons without a previous COVID-19 diagnosis in California and 19.8-fold lower (95% CI = 16.2–23.5) in New York. Rates among vaccinated persons without a previous COVID-19 diagnosis were consistently higher than rates among unvaccinated persons with

a history of COVID-19 (3.1-fold higher [95% CI = 2.6–3.7] in California and 1.9-fold higher [95% CI = 1.5–2.3] in New York) and rates among vaccinated persons with a history of COVID-19 (3.6-fold higher [95% CI = 2.9–4.3] in California and 2.8-fold higher [95% CI = 2.1–3.4] in New York). COVID-19 hospitalization rates in California were always highest among unvaccinated persons without a previous COVID-19 diagnosis (Table 2) (Figure). In the pre-Delta period during June 13–June 26, for example, compared with hospitalization rates among unvaccinated persons without a previous COVID-19 diagnosis, hospitalization rates were 27.7-fold lower (95% CI = 22.4–33.0) among vaccinated persons without a previous COVID-19 diagnosis, 6.0-fold lower (95% CI = 3.3–8.7) among unvaccinated persons with a previous COVID-19 diagnosis, and 7.1-fold lower (95% CI = 4.0–10.3) among vaccinated persons with a previous COVID-19 diagnosis. However, this pattern also shifted as the Delta variant became predominant. During October 3–16, compared with hospitalization rates among unvaccinated persons without a previous COVID-19 diagnosis, hospitalization rates were 19.8-fold lower (95% CI = 18.2–21.4) among vaccinated persons without a previous COVID-19 diagnosis, 55.3-fold lower (95% CI = 27.3–83.3) among unvaccinated persons with a previous COVID-19 diagnosis.

* Life tables estimated at 7-day intervals for cases and 14-day intervals for hospitalizations.

† Hazard ratios and 95% CIs reported in this table differ numerically from presentation of corresponding results in the text as “X-fold lower” rates (i.e., a hazard rate of 1.0 is zero-fold lower).

For example, a hazard ratio of 20.9 (95% CI = 18.9–22.9) for those “Unvaccinated–no previous COVID-19 diagnosis” versus “Vaccinated, no previous COVID-19 diagnosis” is equivalent to a 19.9-fold lower (95% CI = 17.9–21.9) rate for those “Vaccinated, no previous COVID-19 diagnosis” relative to those “Unvaccinated, no previous COVID-19 diagnosis.”

Morbidity and Mortality Weekly Report
130 MMWR / January 28, 2022 / Vol. 71 / No. 4 US Department of Health and Human Services/Centers for Disease Control and Prevention

Summary

What is already known about this topic?

Data are limited regarding the risks for SARS-CoV-2 infection and hospitalization after COVID-19 vaccination and previous infection.

What is added by this report?

During May–November 2021, case and hospitalization rates were highest among persons who were unvaccinated without a previous diagnosis. Before Delta became the predominant variant in June, case rates were higher among persons who survived a previous infection than persons who were vaccinated alone. By early October, persons who survived a previous infection had lower case rates than persons who were vaccinated alone.

What are the implications for public health practice?

Although the epidemiology of COVID-19 might change as new variants emerge, vaccination remains the safest strategy for averting future SARS-CoV-2 infections, hospitalizations, long-term sequelae, and death. Primary vaccination, additional doses, and booster doses are recommended for all eligible persons.

Additional future recommendations for vaccine doses might be warranted as the virus and immunity levels change.

Discussion

This analysis integrated laboratory testing, hospitalization surveillance, and immunization registry data in two large states during May–November 2021, before widespread circulation of the SARS-CoV-2 Omicron variant and before most persons had received additional or booster COVID-19 vaccine doses to protect against waning immunity. Rate estimates from the analysis describe different experiences stratified by COVID-19 vaccination status and previous COVID-19 diagnosis and during times when different SARS-CoV-2 variants predominated. Case rates were initially lowest among vaccinated persons without a previous COVID-19 diagnosis; however, after emergence of the Delta variant and over the course of time, incidence increased sharply in this group, but only slightly among both vaccinated and unvaccinated persons with previously diagnosed COVID-19 (6). Across the entire study period, persons with vaccine- and infection-derived immunity had much lower rates of hospitalization compared with those in unvaccinated persons. These results suggest that vaccination protects against COVID-19 and related hospitalization and that surviving a previous infection protects against a reinfection. Importantly, infection-derived protection was greater after the highly transmissible Delta variant became predominant, coinciding with early declining of vaccine-induced immunity in many persons (5). Similar data accounting for booster doses and as new variants, including Omicron, circulate will need to be assessed. The understanding and epidemiology of COVID-19 has shifted substantially over time with the emergence and circulation of new SARS-CoV-2 variants, introduction of vaccines, and changing immunity as a result. Similar to the early period of this study, two previous U.S. studies found more protection from vaccination than from previous infection during periods before Delta predominance (3,7). As was observed in the

present study after July, recent international studies have also demonstrated increased protection in persons with previous infection, with or without vaccination, relative to vaccination alone⁺⁺⁺, §§§ (4). This might be due to differential stimulation of the immune response by either exposure type.¶¶¶¶ Whereas French and Israeli population-based studies noted waning protection from previous infection, this was not apparent in the results from this or other large U.K. and U.S. studies**** (4,8). Further studies are needed to establish duration of protection from previous infection by variant type, severity, and symptomatology, including for the Omicron variant.

The findings in this report are subject to at least seven limitations. First, analyses were not stratified by time since vaccine receipt, but only by time since previous diagnosis, although earlier studies have examined waning of vaccine-induced immunity (Supplementary Figure 3, <https://stacks.cdc.gov/view/cdc/113253>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fstacks.cdc.gov%2Fview%2Fcdc%2F113253>) (2). Second,

persons with undiagnosed infection are misclassified as having no previous COVID-19 diagnosis; however, this misclassification likely results in a conservative bias (i.e., the magnitude of difference in rates would be even larger if misclassified persons were not included

among unvaccinated persons without a previous COVID-19 diagnosis). California seroprevalence data during this period indicate that the ratio of actual (presumptive) infections to diagnosed cases among adults was 2.6 (95% CI = 2.2–2.9).⁺⁺⁺⁺ Further, California only included NAAT results, whereas New York included both NAAT and antigen test results. However, antigen testing made up a smaller percentage of overall testing volume reported in California

(7% of cases) compared with New York (25% of cases) during the study period. Neither state included self-tests, which are not easily reportable to public health. State-specific hazard ratios were

generally

comparable, although differences in rates among unvaccinated persons with a previous COVID-19 diagnosis were noteworthy. Third, potential exists for bias related to unmeasured confounding (e.g., behavioral or geographic differences in exposure risk) and uncertainty in the population size of the unvaccinated group without a previous COVID-19 diagnosis. Persons might be more or less likely to receive testing based on previous diagnosis or vaccination status;

however, different trajectories between vaccinated persons with and

without a previous COVID-19 diagnosis, and similar findings for cases and hospitalizations, suggest that these biases were minimal. Fourth, this analysis did not include information on the severity of
⁺⁺⁺

Morbidity and Mortality Weekly Report

US Department of Health and Human Services/Centers for Disease Control and Prevention MMWR / January 28, 2022 / Vol. 71 / No. 4 131

initial infection and does not account for the full range of morbidity and mortality represented by the groups with previous infections. Fifth, this analysis did not ascertain receipt of additional or booster COVID-19 vaccine doses and was conducted before many persons were eligible or had received additional or booster vaccine doses, which have been shown to confer additional protection.¶¶¶¶ Sixth, some estimates lacked precision because of sample size limitations. Finally, this analysis was conducted before the emergence of the Omicron variant, for which vaccine or infection-derived immunity might be diminished.¶¶¶¶ This study offers a surveillance data framework to help evaluate both infections in vaccinated persons and reinfections as new variants continue to emerge. Vaccination protected against COVID-19 and related hospitalization, and surviving a previous infection protected against a reinfection and related hospitalization during periods of predominantly Alpha and Delta variant transmission, before the emergence of Omicron; evidence suggests decreased protection from both vaccine- and infection-induced immunity against Omicron infections, although additional protection with widespread receipt of booster COVID-19 vaccine doses is expected. Initial infection among unvaccinated persons increases risk for serious illness, hospitalization, long-term sequelae, and death; by November 30, 2021, approximately 130,781 residents of California and New York had died from COVID-19. Thus, vaccination remains the safest and primary strategy to prevent SARS-CoV-2 infections, associated complications, and onward transmission. Primary COVID-19 vaccination, additional doses, and booster doses are recommended by CDC's Advisory Committee on Immunization Practices to ensure that all eligible persons are up to date with COVID-19 vaccination, which provides the most robust protection against initial infection, severe illness, hospitalization, longterm sequelae, and death.***** Additional recommendations for

vaccine doses might be warranted in the future as the virus and immunity levels change.

<debrakwells@startmail.com> wrote:

I want to make the board aware that many people are not getting tested or going to the hospital if they get covid. There are a couple of reasons for this. One, if everyone around you has gotten tested and they have covid, there is no need to get tested yourself as it is likely that you have the same issue. This is true with the Omicron outbreak. The first week of January it seemed like Omicron exploded in the Puget Sound area and across the USA. I don't think I knew anyone that didn't have Omicron regardless of vaccination status (to include the booster). So the actual numbers of infections of Omicron are less than what is reported and many didn't go to the hospital.

I had a few days where it was difficult and probably should have gone to the hospital. However, I will not go to the hospital on my own because of the loss of a family member to covid in the hospital and the protocol that hospitals are using to treat covid patients. I have asthma and had my oxygen level go down to 90%. I sought alternative care and within a few days I was better. The hospital protocol using Remdesivir is killing people as it did with our family member. Our family is not the only family member that suffered death from Remdesivir. I know others personally that have been affected by Remdesivir poisoning. This is why you aren't seeing more in the hospital as those that I know are of the same mind. This is happening across the entire USA. Remdesivir and the current covid protocol should be stopped immediately and alternative treatments deployed. Our trust in the medical community has been broken. Our family member is dead. That is real and tangible to entire families that are affected.

When considering vaccines and treatments, rebuilding trust with the community that you serve should also be high on the list of considerations. Forcing new vaccines and treatments on a community doesn't build trust but further diminishes it.

EUA products should not be required or forced on children under 18 years old. Our kids are not lab rats for experiments.

Debra Wells

On Thursday, February 17, 2022 1:05 PM, Debra Wells <debrakwells@startmail.com> wrote:

Unfortunately, the licensed product is not available to the public. Only the EUA product is being given to the public, which from a legal perspective is significant because if someone is injured by the EUA product, they are unable to hold the company liable for the injury. That means that people are bearing 100% of the cost of injury from these vaccines. If the product was fully licensed and the licensed product available, you would probably have less push back because the public would have someone to hold accountable for the vaccine injuries/reactions.

Also, it took 3 months for the blood clots to show up. Since there are indications that these vaccines cause blood clots, the window to be considered should be extended to at least 3 months in relation to blood clots. This would also follow with heart attacks, strokes and other related medical conditions related to blood clots.

Debra Wells

On Thursday, February 17, 2022 10:06 AM, Debra Wells <debrakwells@startmail.com> wrote:

I am fighting hard against these covid vaccines because there are indications that they cause blood clots. There are loads of cases noted in the VEARS database and other countries data related to PE, DVT and thrombosis incidences. I have a history of blood clots from a medication. I was young, healthy and had absolutely no other risk factors concerning blood clots other than the medication. I was so healthy that they didn't find the blood clots until after 2 trips to the ER and a Doctor's visit. After leaving the doctor's office, I received a call demanding that I go to the nearest hospital for a lung scan where I lit the scan up like a Christmas tree. The clots were confirmed via what they call the Gold Standard test, where they ran a camera up my vein, through my heart and into my lung. There were absolutely no indications with my vitals or physical condition, other than it felt like I had pneumonia. The result was that I had 6 clots in one lung and they didn't bother looking in the other lung. I spent a week in the hospital. This is because I was otherwise healthy and responding well to the blood thinners. Obviously, I was on medication for a little while after hospitalization. This was all caused by a medication that is considered extremely safe and is widely used (birth control pills). Blood clots are considered the silent killer, especially in younger people. This happened over 20 years ago. I have avoided all medications, vaccination or even food that I know have the potential to cause blood clots.

I had no other medical history prior to this incident with blood clots and could have ended with my death.

This is why SBOH should consider the negative effects of the vaccines. I know that it's been hard to get this information because the FDA, CDC and Government as a whole doesn't want to create vaccine hesitancy; however, this shouldn't take priority over allowing the public to make informed decisions without being forced to take something that can result in death or disability. The public must have all the information to make the best medical decisions for themselves. I would say that the withholding of information and the heavy handedness of the FDA, CDC, and all government entities as caused more vaccine hesitancy, resistance and mistrust than if they had been truthful. If this isn't the cause, then maybe the vaccine never should be authorized in the first place. Meaning, if the adverse reactions or injuries are such that the FDA, CDC and Government entities feel that it would cause vaccine hesitancy, then the approval of the vaccine shouldn't have happened until those concerns were addressed and the full information should have been given to people prior to getting the vaccine and informed consent should be received without force or coercion.

I have concerns that this vaccine will cause more injuries and death than it will save children. There are indications that this is already occurring and should be investigated. Everything I have seen so far is that children are less likely to get covid let alone die from it. As a matter of fact, more children die of accidents every year than all other causes of death to include Covid. What the Board hasn't investigated are the adverse reactions or deaths caused by the vaccines and must be considered before requiring this vaccine for school or day care, even if it takes a little bit longer. It is more important to make sure that the decisions made don't cause more harm than what they are meant to save.

I have concerns that these issues have been ignored and not addressed. There should be a meeting going over adverse reactions and injuries, not just to appease those of us with concerns but to truly look at all potential problems that could arise from vaccine injuries/adverse reactions.

Lastly, there are no safety studies concerning fertility. That should be done before mandating this to school age children.

PS. I want to address a poorly worded statement from a panelist last week. The comment stating that mothers don't know what is best for their children because they are misinformed or lack information. The lack of information is the fault of the FDA, CDC and Government entities as a whole. Parents, particularly Mothers know more about their children than school nurses, doctors or even so called experts because they know more about that child's medical history from the birth of that child to current day. Obviously, medical history is incredibly important that most people don't have. Mothers have this information. In addition to that, parents have a moral, emotional and financial responsibility for their children, where the school and so called experts don't have. As a matter of fact, no school nurse, school administrator, doctor or so called expert goes home at night and thinks about the impact of their decisions that affects families. However, Parents are left holding the bag of the bad decisions made by so called experts. As a parent, I would walk through fire, take a bullet and suffer death for my child (who is now 30). Not one of you or anyone else would. This is the heart of a mother. The concerns of mothers should never ever be brushed aside with such negligence and ignorance. The concerns of mothers should be addressed fully and honestly without derogatory comments of their concerns or as persons.

that mortality in the 18-64 age group was 40 percent higher during the 3rd and 4th
quarters of 2021 than during pre-pandemic levels. For reference, the CEO indicated that
a 10 percent increase would have been a 1-in-200-year event. Furthermore, most of the
deaths were not attributed to Covid.

<data:image/png;base64,iVBORw0KGgoAAAANSUhEUgAAAAEAAAABCAQAAAC1HAWCAAAAC0IEQVR42mNK

Figure 1: US weekly deaths by age group. Data is from the CDC. The gold curve is data for 2021. The red curve is data for 2020. The gray curves are data for 2015-2019.

The OneAmerica insurance company serves a subset of the US population. The CDC collects mortality data for the entire US population. Figure 1 illustrates the weekly US mortality from 2015-2021 by age group. Several generalizations are readily apparent. The years 2015-2019 were very similar for all age groups forming a tight band of usual expectation. The tightness of the band for 2015-2019 means that relatively small increases in mortality are very significant events. There has been nothing unusual about mortality for the Under-25 age group during the Covid period compared to recent history. The last 10 weeks of data for 2021 are incomplete due to delays in reporting death certificates. Otherwise, mortality for the Over-25 age groups have been higher than historic norms starting in about March of 2020 and continuing to the present time with one big exception for the 85+ age group.

There is a very interesting interval from Week 10 (March 7) 2021 to Week 24 (June 13) 2021. Deaths in the 85+ Age Group are LOWER than average during this interval. Total deaths for Weeks 10-24 averaged 248,536 during 2015-2019, but were 242,372 during 2021. For the 25-44 age group, total deaths for Weeks 10-24 averaged 38,955 during 2015-2019, but were 54,789 (40.6 percent higher) during 2021. Daily Covid deaths (7-day moving average) in the US were declining from 1,689 on March 7, 2021, to 387 on June 13, 2021. This time period was the decline phase of the winter outbreak that peaked around January 18, 2021, and reached a nadir around July 8, 2021 prior to the Delta surge. One cannot plausibly attribute the above average deaths for the 25-44 age group during this time period to Covid. What was responsible for these deaths?

<data:image/png;base64,iVBORw0KGgoAAAANSUhEUgAAAAEAAAABCAQAAAC1HAWCAAAAC0IEQVR42mNK

Figure 2: Weekly US mortality by Cause Group. Data is from the CDC. The gold curve is data for 2021. The red curve is data for 2020. The gray curves are data for 2015-2019.

Clearly there is a very significant above average number of deaths across the US that cannot be attributed to Covid. As was the case for the Age Group graphs, data for the last 10 weeks are incomplete due to delays in reporting of death certificates. Deaths attributed to Malignant Neoplasms were average during the entire pandemic period. Although there was an increase in deaths from Alzheimer Disease and dementia in 2020 after the onset of the pandemic, this was less apparent during 2021. There was an increase in deaths attributed to Other select causes (which include suicides and drug overdoses), but the magnitude was much smaller than what is seen in the Circulatory diseases category. Deaths attributed to Circulatory diseases include strokes, heart attacks, and heart failure (including myocarditis). The Circulatory diseases category is clearly the most important category for excess deaths during 2020 and 2021. Notably, deaths attributed to Respiratory diseases were below average during 2021 for the period of interest between Week 10 and Week 24 of 2021. Covid is a respiratory disease and leads to acute respiratory distress syndrome with hypoxemia and respiratory failure in severe cases. During the period of interest between Week 10 and Week 24 of 2021, Covid deaths were steadily declining, deaths attributed to Respiratory diseases were below average, but deaths due to Circulatory diseases were significantly above average. It is difficult to explain the data between Week 10 and Week 24 of 2021 on the basis of lung injury caused by Covid infection.

The spike protein enables entry of the virus into the host cells. The spike protein targets the angiotensin converting enzyme-2 (ACE-2) receptor. Angiotensin converting enzymes play an important role in the regulation of blood pressure. Angiotensin receptor blockers (ARB) and angiotensin converting enzyme (ACE) inhibitors are both important classes of drugs used to treat hypertension. It does not require a stretch of the imagination to suspect that the spike protein could cause elevation of blood pressure. Acute elevation in blood pressure is known to be a risk factor for stroke, acute myocardial infarction (heart attack), and congestive heart failure. Spike protein is also associated with clotting, presumably due to endothelial injury, which would also increase risk for myocardial infarction and stroke. It is not clear why spike protein from the Covid virus would explain above average deaths attributed to Circulatory diseases during a time period when Covid cases and deaths were declining. However, the Covid virus was not the only source of spike protein during this time period. The mRNA vaccines led to the production of spike protein by host cells and Weeks 10-24 of 2021 were immediately followed by the mass introduction of mRNA vaccines to the US public. The data is not proof, but it is certainly a red flag.

The appropriate method to assess vaccine efficacy and safety is all cause mortality. Deaths from all causes are compared between the vaccine group and a control unvaccinated group. This method has not been used. Rather, the CDC and FDA determine on a case-by-case basis whether reported adverse events can be attributed to the vaccine. If a footballer drops dead during a game, one would not be

inclined to attribute the cause to a vaccine given 10 weeks earlier. However, when 5 footballers drop dead every week, one will be looking for ANY common denominator between the dead footballers. Neither the CDC nor the FDA are impartial observers of vaccine safety. Both agencies have vested interests in promoting the vaccines. When the CDC or FDA analyze events on a case-by-case basis, they are inclined to say that an event was not due to a vaccine (especially if the people at the CDC and FDA include former executives from Pfizer). However, when the entire US population has a significant number of events compared to historic basis, one must look for the common denominators in the people with the events. The existing data is not proof that the vaccines are causing deaths due to Circulatory diseases. The burden of proof, however, lies with the CDC and FDA to prove that the vaccines are not causing deaths due to spike protein. It is scientific irresponsibility to eliminate the control group via vaccine mandates and make future assessment of vaccine safety scientifically impossible.

The risk of Covid 19 needs to also be measured against the risk of the covid 19 vaccine to make a educated decision. The risk of covid 19 vaccine should not be looked at in a vacuum. Also, the absolute risk needs to be considered as well, not just relative risk.

Debra Wells

On Thursday, February 10, 2022 9:28 AM, Debra Wells <debrakwells@startmail.com> wrote:

Please do not require or force the COVID 19 vaccines on children. More children have been negatively affected by vaccines than have been sick or died from covid. The children that have passed away had other medical issues that put them at particular risk; however, the vast majority are not at risk of covid 19. However, with the vaccines, myocarditis is more deadly to children than covid 19 and this has played out in the numbers.

We also don't know the long term effects on fertility and this vaccine should not be allowed or approved for children at any age.

Please follow biological science and not political science. It is very apparent that the majority of decision makers have been following political science and not biological science. Please do NOT harm our children with these untested vaccines. It's one thing to require the measles vaccines that have been around for decades; however, covid 19 vaccines have only been around just over a year. The numbers are not looking good for the safety of the covid 19 vaccine. The numbers from the Military are alarming. The numbers from insurance companies, that are required to review actual death rates and why so they can set premium rates, are extremely alarming. Ignoring these warning signs is gross negligence. We must protect our most vulnerable from even the most well meaning individuals/decision makers. We should not be making rash decisions that will have long standing impact that can't be reversed. We need more data on the vaccines before we force it on children.

Please vote NO on requiring Covid vaccines for children under 18.

I think that all of this is extremely premature, considering this shot has not been tested the way it should have been. Why is there such a rush, when we know that immunity happens as time goes on, it does not require a shot to get there. Family members that got it are sick more, longer and there was no benefit to it. Why push this so, unless there's more monies to be received. That would be extremely harmful, to let persons make decisions based on how much \$ they will receive, if they're in favor. Take \$ out of the equation and slow down and let folks make their decisions.

Issaquah, Bellevue, Lake WA School Districts, OSPI, WA State Education, WSB OH,
and King County Commissioner.

That sure was quite the Half Time SuperBowl Show, wasn't it? As 70k mask-less fans adorned the stadium in CA for the 'big game', it sure brought attention to millions sitting at home watching that we have been played. We've been played by our State Schools and Government.

We are no longer asking. We are demanding that immediately mask mandates be rescinded from our schools and release our children from these harmful practices.

Thank you kindly,

Tanya Goodman

Protective and Loving Mother

The ineffective COVID-19 vaccination DOES NOT need to be a required immunization for anyone PERIOD.

Vaccine injuries have exploded since its introduction.

It has done nothing to stop the virus.

Forcing such is a direct violation of civil liberties.

Twisting, distorting and warping data can be hidden behind the guise of "science". But hiding data? And claiming they need more funding because you can't report some numbers? Well, you decide.

I've outlined the flaws right from the start - April 2020.

1. Viral presence is not “disease”, and therefore PCR+ cannot equal “COVID-19”
2. The cycle threshold used is too high to avoid a significant risk of false positive diagnoses.
3. Absent negative controls, false-positive results are assured. There should be a negative human genome control per sample to create a null curve, and the delta-delta-Ct method should be used to make the call for a given patient.

I sent my manuscript to four different public health journals. Not one of them would dare even put it out for review, so I sent it directly to CDC Director Rochelle Walensky. She did not reply.

In publishing the Ealy et al. analysis

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Femail.mg1.substack.com%2Fc%2Cv6VZJxluy6l7MMHZSjL0xvWBqVoZyRj_jR7UKTf-IQpkseoMa_2M8g0fi9JrznI7i68X_1TiOo3k0VgSX1z3U5_kdSvTgGhO2OoN5tSa9rX8nc597g5_eGc3qgwutYOYnLg0S9S94qJ2rGIjV7f1fnQ21bsXbfA7oYXQ46RwLkvywvTENC3qMlfk0QNasa2UnuKJUMvVwuMh9mJK056QKT6XpgLw5ivOmCs2n7A-mtlz0&data=04%7C01%7Cwsboh%40sbob.wa.gov%7C766a4a05362d475df9d108d9f70bd9d4%7C11d0e2...>, IPAK brought the negative attention of so-called “Fact Check” opinion blog websites (‘narrative minders’, I’m told) like Politifact. Even USA Today got into it. But to date,

nothing IPAK has published has been found to be false, in spite of claims and misrepresentations by legacy media outlets and “fact-checkers”. To my knowledge, contrary to their own policies, following discovery after discovery that we were correct, none of these blog websites have corrected their articles - which at this point should include retraction and apologies for disparaging our reputation. (Not that I care, but a lot of people would like to see that).

Of course, the fact that we were correct to publish the study was buried in an article on MSN.com entitled "Higher estrogen levels linked to lower COVID death risk; antacid shows promise addressing symptoms"

>https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Femail.mg1.substack.com%2Fc%2F%2FXJfplWGO65B4xk_uZ8rWDDHCig5whkQMhTdbIXnAxtEIQIxvBtZijXWIJAf5Zj8l-zM5qlw0Md3UnesY7sslmHMBfJB3TswajYP4alh7EwuZ2aDo2fkjVYSwEDRJ-IV0xAHFyy3nHqn1U_FnsPM_aY6h19OUHgR5Y_AbK5a0EHkxhdzdk1w0SBcwprqXOIzeOqbPhBYbmSF08S17H-qApZ6QLhfK-ke4reIIBITAJEG1akl99z9DetSvTx-Pkj_tqqfcSVbXfHsGsIe_Est7w21o2MNaKmtdMAAdd6bHqtloUNVF57DEzyueoav7Iajxkl--vejiT5TwVVMrFTKpWLvPFy4al4fwSbrwmCmh0YmdMBJH_0e0sxlaUhFV3NpLjkQ9cPLRDn0zPxufWtzhcTFtnYu. Citing Rueters, the MSN.com article actually includes an article within the article, with two unadorned subheadings:

"U.S. may have overestimated COVID-19 hospitalizations

U.S. statistics likely overestimate how many patients have been hospitalized for COVID-19, according to a new study.

At 60 hospitals near Boston, Pittsburgh and Chicago, researchers manually reviewed the charts of a random sample of 1,123 patients with confirmed coronavirus infections hospitalized between March 2020 and August 2021. Roughly 1-in-4 patients "actually were admitted for a different problem and should not have been included" in data analytics calculations of the severity of COVID-19, said Dr. Shawn Murphy of Massachusetts General Hospital in Boston. Patients were more likely to have been admitted specifically for COVID-19 when local infection rates were high, his team reported on Tuesday on medRxiv ahead of peer review. When infection rates were low last summer, up to half the patients were hospitalized for other reasons, with SARS-CoV-2 infection found coincidentally on mandatory testing. The researchers were able to identify indicators in patients' charts that admissions were actually due to COVID-19, such as whether doctors ordered lab tests related to inflammation.

'This study highlights an important weakness in COVID-19 reporting, which might have implications on intensive care utilization, cost analysis, resource planning, and research,' said Jeffrey Klann, also of Mass General. Adding the identified indicators to data analytics software 'could help mitigate these problems.'"

The study shows about 25% over-reporting - matching what we found, what Dr. Scott Jenkins showed me in our workshop interview (I saw his audit data), and what two counties in California have found.

We have in our possession an email from HHS acknowledging that any RT-PCR test result with a cycle threshold >35 is "basically useless". This information is part of an pending grand jury investigation.

If CDC had published hospitalization rates broken down by age, race and other variables, the efficacy of the vaccine would come up as a surprise. We've seen negative efficacy in data from Israel and from Barnstable County. So CDC does not want to share it so the public cannot learn about the negative efficacy occurring, driving cases in the vaccinated.

Just publishing the Ct thresholds used for each test kit - and giving patients their PCR Ct

numbers for their specific test - will help mitigate these problems, and cost nothing. The fallacy of using RT-PCR without a negative control to determine the curve expected when no virus is present would be even more apparent, and this would force a major policy change: the use of within-kit negative controls.

So, we were right to call them out on over-reporting. So, on to the point of today's Popular Rationalism article:

CDC Caught Withholding Critical Data by Legacy Media Organizations

Now, in February, 2022, CDC has been called out for withholding critical information on case rates and hospitalization rates in children, as well as booster shots in people under 50. Using the ultimate excuse "sorry, we lost the keys to the internet", CDC actually had the gall to report that they were not sufficiently able to track all those numbers.

Now, remember, COVID-19 is rare. It's even rarer in kids. And booster shots in teens must be fewer than the number of teens who have received one, or two shots.

Oh, and CDC did not bring forward the data from the handful of municipalities that reported wastewater data. Too many numbers there, too?

They have the data, they just have not bothered to add it to their existing reporting systems.

So, CDC is lying.

But the thing is, CDC is not satisfied with one lie. No, on these issues, they are not DONE lying.

The SECOND excuse given was that they were afraid that the data might be used to fuel vaccine skepticism.

Which tells us they analyzed the data, and could have reported it, but decided to leave it out.

So CDC is lying AGAIN, and in nature of their lies, we know the truth.

You can read about the data omissions with all the juicy lies-filled quotes in the links provided below.

The point here is that CDC believes its job - reporting health statistics - is OPTIONAL, that they can cherry-pick what the public gets to see. Which is no surprise to anyone who has bothered to pay attention.

The surprise is that the Legacy Media Outlets (LMOs) are actually reporting on it. They try to put a pro-public health police state spin on the situation.

But, as usual, they missed the big picture: CDC has been lying about cases by using RT-PCR tests the way they are using them from the beginning. They've had help from the FDA who, in spite of protests from myself and Dr. Sin Hang Lee, went ahead with non-quantitative RT-PCR diagnoses.

And CDC and FDA's understanding of the efficacy of the vaccines has been 100% dependent on RT-PCR.

So, what is the actual efficacy - by age group - including people who have had 1 shot, 2 shots, and 3 shots, broken down by age, race, gender, etc.?

"We don't know"... only and exclusively because CDC does not want us to know.

But we know.

And everyone will know more when we complete the IRB-approved NAATEC study

I want to tell you about my daughter's day today. After wearing a mask from 7:30 am to 3 pm, with a short break for lunch, she will go straight from classes to get tested for Covid then to play rehearsal, where she will have to continue to wear her mask. She will have to leave a bit early to catch a bus to go cheer at a basketball game, but cannot eat dinner because of the danger of not wearing a mask on the bus. (A cloth mask that the health department, as stated, says does not work.) She will continue to wear the mask for the entire game.

So from 7:30 am to 8 pm, she is forced to wear a mask that does not help with the spread of the virus. A virus we know she does not have because she is not sick and is tested constantly. I will drive her home from the game so she can finally breathe. And she will probably miss some morning classes tomorrow due to the headache she will no doubt have, based on past experience.

Please take a stand for our children!

Subject: Re: SuperBowl & The Big Game

Greetings,

As the Kettle Falls example proves, school districts do not have to and should not be enforcing the mask mandates because they are useless and harmful to our children.

First, the District's mask mandate is purely for show – even the CDC has now acknowledged that cloth masks are effectively useless. The District's policy permits cloth masks and thus compliance is purely decorative – the policy does not provide any meaningful protections.

Second, the mask requirement stunts the students' educational development. For all of human history up until Spring 2020, there was universal recognition that facial cues provide a distinct and important aspect of human communication. Part of your mission is to help our children develop strong communication skills and you are stunting that learning by requiring them to hide their faces and those important communicative cues under these useless masks.

Third, the mask requirement is causing affirmative harm to students. Children are becoming dependent on masks and experience anxiety when confronted with large groups of maskless persons. When covid ends, our children will have to interact with the maskless. By causing our children to become dependent on masks, you are straddling them with anxieties that they will have to overcome to interact in the maskless world. School is supposed to help prepare our children to face the world, not make them afraid to face that world

If parents are concerned, they can protect their children by sending them to school in top-quality, properly fitted N-95 masks. But the time has come to allow parents to make that decision for their own children and stop mandating a flawed one-size-fits-all policy.

Especially when that one-size-fits-all policy is useless, debilitating, and harmful; a policy that only serves to make some people who do not keep up with the science feel better without providing any meaningful benefit to our children. Please follow Kettle Falls' lead and stop enforcement of the mask mandates.

Ramsey Ramerman, parent of a LWSD student

On Tue, Feb 15, 2022 at 7:50 AM Tyler Litzenberger <TLitz@vectorrecorp.com
<mailto:TLitz@vectorrecorp.com> > wrote:

We were told by a LWSD Board Member that the Board has no authority in decision making regarding masking. Apparently that's proven to be untrue. We've lost trust in our elected "leaders". This masking exercise has never been about Covid, it's entirely about control, and using children as pawns to force control is as bad as it gets from politicians. Kettle Falls showed Washingtonian parents leadership yesterday and we're very proud of them for doing so.

In the numerous parent teacher conferences my wife and I have had since Covid, we've learned teachers are over it. They're seeing the drop in educational value. They're frustrated at masking. They're frustrated at mandates and hearing complaints daily from parents, and many of them are turning on their Unions. Our parent groups are fully behind the teachers, support the teachers and encourage the teachers to turn against their unions. Withdraw from their unions, whatever it takes.

Masking needs to end immediately. And trading the clot shot for masking is a non-starter.

The evidence that children have a 99.98% survival rate against the November 2019 variant of Covid is a risk we're all willing to take as a society; considering we all know that Omicron is a) far less concerning and b) numbers of deaths are nearly zero across all age groups.

Where did Washington's share of the \$130B in Covid Relief Funds go? Those funds were explicitly sent to the States for air filtration in schools. What was completed in the LWSD, Bellevue and Issaquah districts? It's pretty embarrassing that after spending all that money on air filtration, you folks are still requiring children with a 100% survival rate to wear a cloth over their nose and mouth. Absolutely awful.

The real questions are, why should we listen to you about anything else going forward? Why should we trust you?

End the mandates immediately. They never should have been passed in the first place.

Issaquah, Bellevue, LakeWA School Districts, OSPI, WA State Education, WSBOH and King county commissioner.

If you still have some conscience left in you, after watching that Super Bowl, you will act upon and immediately remove the mask mandates from the schools. You might think you have helped the children by masking them but have no idea how badly it has affected the children and their health. Enough of big talks and researching on this topic, it's time to act and the best action is to remove mandates. If some parents still feel they need masks they can send their kids with masks on and no one will stop them. But parents like us who strongly believe in science and have enough research to prove that masks don't work demand you to end this mandates and now.

Thanks and Regards,

Lokesh Marenayakanapalya

Qualified enough to speak on behalf of my daughter and all the kids/parents that are suffering due to these mandates.

Greetings...

Issaquah, Bellevue, Lake WA School Districts, OSPI, WA State Education,
WSBOH, and King County Commissioner.

That sure was quite the Half Time SuperBowl Show, wasn't it? As 70k
mask-less fans adorned the stadium in CA for the 'big game', it sure brought attention to
millions sitting at home watching that we have been played. We've been played by our
State Schools and Government.

We are no longer asking. We are demanding that immediately mask
mandates be rescinded from our schools and release our children from these harmful
practices.

Thank you kindly,

Tanya Goodman

There have been reports that VEARS isn't allowing reports or is timing out at 30 minutes. Basically, discouraging reporting. Also, VEARS only represents 1 to 10 percent of events. So, considering the low reporting percentage must be taken into account.

Debra Wells

On Thursday, February 17, 2022 10:06 AM, Debra Wells <debrakwells@startmail.com> wrote:

I am fighting hard against these covid vaccines because there are indications that they cause blood clots. There are loads of cases noted in the VEARS database and other countries data related to PE, DVT and thrombosis incidences. I have a history of blood clots from a medication. I was young, healthy and had absolutely no other risk factors concerning blood clots other than the medication. I was so healthy that they didn't find the blood clots until after 2 trips to the ER and a Doctor's visit. After leaving the doctor's office, I received a call demanding that I go to the nearest hospital for a lung scan where I lit the scan up like a Christmas tree. The clots were confirmed via what they call the Gold Standard test, where they ran a camera up my vein, through my heart and into my lung. There were absolutely no indications with my vitals or physical condition, other than it felt like I had pneumonia. The result was that I had 6 clots in one lung and they didn't bother looking in the other lung. I spent a week in the hospital. This is because I was otherwise healthy and responding well to the blood thinners. Obviously, I was on medication for a little while after hospitalization. This was all caused by a medication that is considered extremely safe and is widely used (birth control pills). Blood clots are considered the silent killer, especially in younger people. This happened over 20 years ago. I have avoided all medications, vaccination or even food that I know have the potential to cause blood clots.

I had no other medical history prior to this incident with blood clots and could have ended with my death.

This is why SBOH should consider the negative effects of the vaccines. I know that it's been hard to get this information because the FDA, CDC and Government as a whole doesn't want to create vaccine hesitancy; however, this shouldn't take priority over allowing the public to make informed decisions without being forced to take something that can result in death or disability. The public must have all the information to make the best medical decisions for themselves. I would say that the withholding of information and the heavy handedness of the FDA, CDC, and all government entities as caused more vaccine hesitancy, resistance and mistrust than if they had been truthful. If this isn't the cause, then maybe the vaccine never should be authorized in the first place. Meaning, if the adverse reactions or injuries are such that the FDA, CDC and Government entities feel that it would cause vaccine hesitancy, then the approval of the vaccine shouldn't have happened until those concerns were addressed and the full information should have been given to people prior to getting the vaccine and informed consent should be received without force or coercion.

I have concerns that this vaccine will cause more injuries and death than it will save children. There are indications that this is already occurring and should be investigated. Everything I have seen so far is that children are less likely to get covid let alone die from it. As a matter of fact, more children die of accidents every year than all other causes of death to include Covid. What the Board hasn't investigated are the adverse reactions or deaths cause by the vaccines and must be considered before requiring this vaccine for school or day care, even if it takes a little bit longer. It is more important to make sure that the decisions made don't cause more harm than what they are meant to save.

I have concerns that these issues have been ignored and not addressed. There should be a meeting going over adverse reactions and injuries, not just to appease those of us with concerns but to truly look at all potential problems that could arise from vaccine injuries/adverse reactions.

Lastly, there are no safety studies concerning fertility. That should be done before mandating this to school age children.

PS. I want to address a poorly worded statement from a panelist last week. The comment stating that mothers don't know what is best for their children because they are misinformed or lack information. The lack of information is the fault of the FDA, CDC and Government entities as a whole. Parents, particularly Mothers know more about their children than school nurses, doctors or even so called experts because they know more about that child's medical history from the birth of that child to current day. Obviously, medical history is incredibly important that most people don't have. Mothers have this information. In addition to that, parents have a moral, emotional and financial responsibility for their children, where the school and so called experts don't have. As a matter of fact, no school nurse, school administrator, doctor or so called expert goes home at night and thinks about the impact of their decisions that affects families. However, Parents are left holding the bag of the bad decisions made by so called experts. As a parent, I would walk through fire, take a bullet and suffer death for my child (who is now 30). Not one of you or anyone else would. This is the heart of a mother. The concerns of mothers should never ever be brushed aside with such negligence and ignorance. The concerns of mothers should be addressed fully and honestly without derogatory comments of their concerns or as persons.

It is telling when the FDA puts a pause on the covid 19 vaccine for children until they get more data. The Washington State Board of Health should also put a pause on consideration for covid 19 vaccine for children as well until more is known about the safety of the vaccines. There are enough indicators that a pause is warranted.

that mortality in the 18-64 age group was 40 percent higher during the 3rd and 4th
quarters of 2021 than during pre-pandemic levels. For reference, the CEO indicated that
a 10 percent increase would have been a 1-in-200-year event. Furthermore, most of the
deaths were not attributed to Covid.

<data:image/png;base64,iVBORw0KGgoAAAANSUhEUgAAAAEAAAABCAQAAAC1HAwCAAAAC0IEQVR42mNK

Figure 1: US weekly deaths by age group. Data
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fnchs%2Fnvss%
is from the CDC. The gold curve is data for 2021. The red curve is data for 2020. The
gray curves are data for 2015-2019.

diseases include strokes, heart attacks, and heart failure (including myocarditis). The Circulatory diseases category is clearly the most important category for excess deaths during 2020 and 2021. Notably, deaths attributed to Respiratory diseases were below average during 2021 for the period of interest between Week 10 and Week 24 of 2021. Covid is a respiratory disease and leads to acute respiratory distress syndrome with hypoxemia and respiratory failure in severe cases. During the period of interest between Week 10 and Week 24 of 2021, Covid deaths were steadily declining, deaths attributed to Respiratory diseases were below average, but deaths due to Circulatory diseases were significantly above average. It is difficult to explain the data between Week 10 and Week 24 of 2021 on the basis of lung injury caused by Covid infection.

The spike protein enables entry of the virus into the host cells. The spike protein targets the angiotensin converting enzyme-2 (ACE-2) receptor. Angiotensin converting enzymes play an important role in the regulation of blood pressure. Angiotensin receptor blockers (ARB) and angiotensin converting enzyme (ACE) inhibitors are both important classes of drugs used to treat hypertension. It does not require a stretch of the imagination to suspect that the spike protein could cause elevation of blood pressure. Acute elevation in blood pressure is known to be a risk factor for stroke, acute myocardial infarction (heart attack), and congestive heart failure. Spike protein is also associated with clotting, presumably due to endothelial injury, which would also increase risk for myocardial infarction and stroke. It is not clear why spike protein from the Covid virus would explain above average deaths attributed to Circulatory diseases during a time period when Covid cases and deaths were declining. However, the Covid virus was not the only source of spike protein during this time period. The mRNA vaccines led to the production of spike protein by host cells and Weeks 10-24 of 2021 were immediately followed by the mass introduction of mRNA vaccines to the US public. The data is not proof, but it is certainly a red flag.

The appropriate method to assess vaccine efficacy and safety is all cause mortality. Deaths from all causes are compared between the vaccine group and a control unvaccinated group. This method has not been used. Rather, the CDC and FDA determine on a case-by-case basis whether reported adverse events can be attributed to the vaccine. If a footballer drops dead during a game, one would not be inclined to attribute the cause to a vaccine given 10 weeks earlier. However, when 5 footballers drop dead every week, one will be looking for ANY common denominator between the dead footballers. Neither the CDC nor the FDA are impartial observers of vaccine safety. Both agencies have vested interests in promoting the vaccines. When the CDC or FDA analyze events on a case-by-case basis, they are inclined to say that an event was not due to a vaccine (especially if the people at the CDC and FDA include former executives from Pfizer). However, when the entire US population has a significant number of events compared to historic basis, one must look for the common denominators in the people with the events. The existing data is not proof that the vaccines are causing deaths due to Circulatory diseases. The burden of proof, however, lies with the CDC and FDA to prove that the vaccines are not causing deaths due to spike protein. It is scientific irresponsibility to eliminate the control group via vaccine mandates and make future assessment of vaccine safety scientifically impossible.

The risk of Covid 19 needs to also be measured against the risk of the covid 19 vaccine to make a educated decision. The risk of covid 19 vaccine should not be looked at in a vacuum. Also, the absolute risk needs to be considered as well, not just relative risk.

Debra Wells

On Thursday, February 10, 2022 9:28 AM, Debra Wells <debrakwells@startmail.com> wrote:

Please do not require or force the COVID 19 vaccines on children. More children have been negatively affected by vaccines than have been sick or died from covid. The children that have passed away had other medical issues that put them at particular risk; however, the vast majority are not at risk of covid 19. However, with the vaccines, myocarditis is more deadly to children than covid 19 and this has played out in the numbers.

We also don't know the long term effects on fertility and this vaccine should not be allowed or approved for children at any age.

Please follow biological science and not political science. It is very apparent that the majority of decision makers have been following political science and not biological science. Please do NOT harm our children with these untested vaccines. It's one thing to require the measles vaccines that have been around for decades; however, covid 19 vaccines have only been around just over a year. The numbers are not looking good for the safety of the covid 19 vaccine. The numbers from the Military are alarming. The numbers from insurance companies, that are required to review actual death rates and why so they can set premium rates, are extremely alarming. Ignoring these warning signs is gross negligence. We must protect our most vulnerable from even the most well meaning individuals/decision makers. We should not be making rash decisions that will have long standing impact that can't be reversed. We need more data on the vaccines before we force it on children.

Please vote NO on requiring Covid vaccines for children under 18.

To the board members and members voting on items for the February 17, 2022 meeting, I am here as a mother and representing the many other mothers in Washington.

You previously held a similar meeting where over 30,000 people sent emails or attended the zoom meeting. You heard our voices. We do NOT accept you making health decisions over us or our children. This past meeting (Feb 10th) you disabled comments which I find to be a blatant disregard of our voices. You don't seem to understand that WE do not want you making decisions about OUR bodies and/or OUR children's!

We have provided you with studies and other sources of data that show your agency is out of line and your decisions are political.

You are in non compliance with

WAC 110-30-0030 Section 1 items d-f

What is child abuse or neglect?

Child abuse or neglect means the injury, sexual abuse, or sexual exploitation of a child by any person under circumstances which indicate that the child's health, welfare, or safety is harmed, or the negligent treatment or maltreatment of a child by a person responsible for or providing care to the child. An abused child is one who has been subjected to child abuse or neglect as defined in this section.

(1) Physical abuse means the nonaccidental infliction of physical injury or physical mistreatment on a child that harms the child's health, welfare, or safety. It may include, but is not limited to, such actions as:

(a) Throwing, kicking, burning, or cutting a child;

(b) Striking a child with a closed fist;

(c) Shaking a child under age three;

(d) Interfering with a child's breathing;

(e) Threatening a child with a deadly weapon; or

(f) Doing any other act that is likely to cause and that does cause bodily harm greater than transient pain or minor temporary marks or that is injurious to the child's health, welfare or safety.

How dare you tell us to step aside and let the experts do their work?

The "experts" you want us to listen to are the ones (UW Drs and such) that are having their pockets lined with Gates' money and all the others that are pushing this agenda! It's not "follow the science, it's follow the money!"

We have seen your "science". I find it interesting that if we look directly at each hospital's Covid situation as far as ICU, general or death, your reports deviate quite a bit from theirs. It seems vaccinated are higher numbers than unvaccinated. Also, why are you including data from a year ago, when the virus has changed from delta to omicron as of December of 2021. Omicron is much less deadly so your statistics do not show current and real statistics for the variance we are dealing with.

Here's another example:

In plain sight they admit that mRNA Covid 19 vaccinations completely alter and suppress your immune system. We already know it impairs DNA repair. These two papers alone should support enough evidence STOP THE PROGRAM!

<https://www.ncbi.nlm.nih.gov/labs/pmc/articles/PMC8546144/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.ncbi.nlm.nih.gov%2Flabs%2F34696485/>

<https://pubmed.ncbi.nlm.nih.gov/34696485/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fpubmed.ncbi.nlm.nih.gov%2F34696485/>

We also now know that both vaccinated and unvaccinated spread and get Covid, at possibly a higher rate for the vaccinated. Have you done your due diligence and

researched this number in this state?

And why are we relying on PCR Covid tests to build data, when FDA no longer find them reliable?

Since your last public meeting, the world has changed. Millions of people are demonstrating against vaccine mandates and mask mandates all around the world.

Convoy started in Canada and just today; Ontario declared removal of vaccine passports, and masks from children publicly and in school effective immediately.

Oregon is removing their mask mandate 3/31 or sooner.

California is planning to remove their mask mandates.

UK has removed their mandates.

Sweden has removed their mandates

These countries are currently planning or are in the midst of freedom convoys. Remember eyes are on you, and the world will know that you went against freedom of choice and they will know you forced children out of the school system. Because we will not comply.

While you are so concerned about the vaccine, you have forgotten about increased child and young adult suicide due to isolation, no school or on line schooling, mask cover, 6 feet distance to your friends, and loss of social life. You are not concerned about the mental health of Washington state citizens. Those who have lost their jobs in careers they were previously looked at as hero's. Some have 20+ years in the industry. Some are still paying off their school loan from a career that is now long gone.

You have not looked at the health of those businesses that had to close temporarily or completely during the lockdown. You are forcing business owners to implement vaccine passports, while they are losing thousands of dollars monthly in revenue due to lost business. Divorces and mental health issues are over the roof. You do not care about health, it has been proven. Instead you take advice from a governor who had placed himself in permanent emergency power, CDC and FDA, two organizations that are highly financially involved with Pfizer and Moderna. Did you notice the same people sitting on both boards?

Over and over, in federal courts and supreme court it has been ruled that mandating vaccines is unconstitutional.

Here are some facts. I doubt you will read the links but you have been informed. This is

my notice.

You are trying to mandate a drug that is not FDA approved to children. This is illegal:

Sweden's health department recommends children under 12 should not take the vaccine.

You giving yourself the "supreme right" to vote over the safety of our children is despicable. You are overstepping your authority by suggesting any medical advice for children that you have not medically evaluated as their physician, and so do the school boards and schools who enforce this requirement.

You MUST consider every student's medical needs. We the parents will make decisions relating to our children's health within our own families and with our own medical providers.

And for Masks:

Lots of studies on mask Effectiveness:

While most other states in this country have removed restrictions and mandates and their children's lives have gone back to normal, Washington state children are being raised in fear, and being forced to comply with government and health official's over reach.

Have you seen all the thousands of vaccine injuries and deaths to athletes around the world? You are public figures, the world will hold you accountable. It takes only 1 proven vaccine death to charge you for murder, just like what happened in UK and what ultimately caused the restrictions to be removed in UK.

Start working on the real issues of mental health issues caused by this government's overreach and agencies like yours who support them.

I OPPOSE the use of illegal force to detain ANY family OR children. This is insane!! Have we not learned about the holocaust and internment camps? What you are trying to pass is illegal.

There are studies that show this type of agenda does not reduce transmission whatsoever. I would love to hear your thoughts on the vaccinated still being able to get Covid and spread it. According to even more studies this plandemic didn't get out of hand until the experimental shots were starting to be administered. I've talked to many Nurses currently working and all have said the same thing!

Forced mandates oppose our rights as free Americans- it also disrupts an active healthy immune response. Many studies now conclude that the highest vaccinated areas are highest for deaths and risky health concerns. Freedom of choice should never be infringed upon.

THE PEOPLE HAVE SPOKEN AND WE THE PEOPLE SAY NO!

WE THE PEOPLE SAY NO!

Just in case you forgot, WE the PEOPLE saw the WAC 246-100-040 on the agenda you tried to hide.

Respectfully,

R Berry

Please read the attached letter. It is still relevant to Thursday's meeting.

*Informed*CHOICEWA.org

Date: January 7, 2021

To: The Washington State Board of Health Members and COVID-19 TAG

From: The Board and Members of Informed Choice WA

Dear Board of Health and TAG Members:

You are facing what may prove to be the most important decision you will ever face as a member of the board or a group, or perhaps in your life.

The mRNA and DNA COVID-19 shots are unlike any other vaccines given before. The global push for their uptake and the volume of reported adverse reactions and deaths following administration are unprecedented. The hundreds of thousands of medical and scientific professionals globally standing up and speaking out against the response to COVID and to the shots is unprecedented, as is censorship on scientific debate. When this nation's top doctors and scientists are being kicked off of social media platforms and being fired from their jobs for daring to speak on their findings and science critical of current policies, it is clear something has gone terribly wrong.

The CDC acknowledges the shots do not prevent infection or transmission and that any protection afforded fades rapidly, yet they refuse to abandon their push for increased uptake and boosters, and they refuse to promote existing early treatment protocols or acknowledge the mountain of evidence of the superior safety and effectiveness of naturally-acquired immunity. The systemic capture of federal agencies by the drug industry and globalists has never been more obvious.

Public Health in the U.S. is currently suffering from a lack of checks and balances and a dangerous dilution of critical facts. If every citizen were to watch the FDA's Vaccine and Related Biologicals Advisory Committee (VRBAC) meetings and to read the entirety of the clinical trial submissions to the FDA and the injury and death reports filed with Pfizer and VAERS, they would understand the experimental nature of the COVID shots and the known and suspected risks. They would question the clinical trial irregularities, the buried data, the lack of independent evaluation, and the high levels of conflicts of

interest. But most do not. Votes for recommendation are made by federal entities despite the lack of scientific justification and the details of the meetings are not incorporated into the language passed down to citizens. The messaging becomes, “The vaccines are safe and effective and recommended by the CDC.” This simplistic false messaging creates division at all levels of society, undermines fully informed consent, violating federal regulations and human rights declarations.

If after the past two years of witnessing the erratic federal response to COVID you still have faith in federal recommendations, we ask you to consider one clear example that reveals the federal agencies and committees do not deserve your trust. In the absence of a single co-administration safety study, the ACIP approved and the CDC actively promotes this message:

“COVID-19 vaccine and other vaccines may be administered on the same day.”

This is not science. This is not safety. This is not in the best interest of vaccine recipients. This is using Americans, especially our children who are most impacted, as unwitting test subjects. This is human experimentation without informed consent. This is criminal.

We are asking you today to honor the Precautionary Principle and First Do No Harm. We are asking you to dismantle the TAG, to halt rulemaking consideration for adding COVID shots to school requirements, and to adopt our Rulemaking Petition for a new rule that would prohibit mandating Emergency Use Authorized products and licensed products that lack completed Phase 3 trials.

Attached is our preliminary response to the “Criteria for Reviewing Antigens for Potential Inclusion in WAC 246-105-030” that supports our requests. There is far more scientific and medical information available. We hope this is just the beginning of your reviewing the critically important information you have likely been missing until now.

Sincerely,

The ICWA Board

Bernadette Pajer, Yael Kantor, Heidi Hartnell, Angela Dye

**Informed Choice Washington Presents:
A review of the COVID-19 shots
(Pfizer, Moderna, Janssen)
using the Washington State Board of Health's
"Criteria for Reviewing Antigens for Potential Inclusion in
WAC 246-105-030"**

<https://sboh.wa.gov/Portals/7/Doc/Publications/ImmunizationCriteria-Update2017-Final.pdf>

Before proceeding, it must be noted that the COVID-19 shots currently available do not meet the definition of "immunizing agent" per WAC 246.105.020(13), which states:

"Immunizing agent" means any vaccine or other immunologic drug licensed and approved by the United States Food and Drug Administration (FDA), or meeting World Health Organization (WHO) requirements, for immunization of persons against vaccine-preventable diseases.

None of the currently available COVID-19 shots are licensed and approved by the FDA for school-age children; the shots similarly do not meet WHO requirements and are only authorized by the WHO for emergency use.

WAC: <https://app.leg.wa.gov/WAC/default.aspx?cite=246-105-020>

For clarity, BOH's criteria language is shown in red, and ICWA language is shown in black.

I. Criteria on the effectiveness of the vaccine

1. A vaccine containing this antigen is recommended by the Advisory Committee on Immunization Practices and included on its Recommended Childhood & Adolescent Immunization Schedule.

The vaccine **must** be recommended by the ACIP. The ACIP reviews **licensed** vaccines. It makes recommendations for newly licensed vaccines and regularly updates its recommendations. Its process includes:

- (1) a review of the Food and Drug Administration (FDA) labeling/package inserts for each vaccine;
- (2) a thorough review of the scientific literature (both published and unpublished, when available) on the safety, efficacy, acceptability, and effectiveness of the immunizing agent, with consideration of the relevance, quality, and quantity of published and unpublished data;
- (3) an assessment of cost effectiveness;
- (4) a review of the morbidity and mortality associated with the disease in the population in general and in specific risk groups;
- (5) a review of the recommendations of other groups; and
- (6) a consideration of the feasibility of vaccine use in existing child and adult immunization programs. Feasibility issues include (but are not limited to) acceptability to the community, parents, and patients; vaccine distribution and storage; access to vaccine and vaccine administration; impact on the various health care delivery systems; population distribution effects; and social, legal, and ethical concerns. [emphasis added]

Do any of the COVID-19 shots fulfill this criterion? No.

The ACIP did NOT recommend a COVID-19 shot licensed by the FDA for use in ages 5-11 or 12-15, nor did it place such a shot on the CDC Recommended Schedule.

There is no FDA COVID-19 shot licensed for ages 5-15 and no COVID-19 shot whatsoever on any CDC Recommended Schedule for any age. CDC Immunization Schedules, <https://www.cdc.gov/vaccines/schedules/index.html>.

The CDC recommended schedule website page for ages 7-18 mentions the ACIP's EUA and BLA recommendations for COVID, but it DOES NOT include the shots on the schedule.

On May 12, 2021, the ACIP adopted the following recommendation: "The Pfizer-BioNTech COVID-19 vaccine is recommended for children 12-15 years of age in the U.S. population under the FDA's Emergency Use Authorization." *May 12, 2021 ACIP Meeting - Discussion and Vote*, CDC YouTube channel, <https://youtu.be/91FCQN1aYqk>.

On November 2, 2021, the ACIP adopted a similar recommendation for 5-11 year olds. *Nov 2, 2021 ACIP Meeting - Clinical considerations for COVID-19 vaccination & Votes*, CDC YouTube channel, <https://youtu.be/Fknv90AxSn8>.

Federal Emergency Use Authorization statutes indirectly prohibit school mandates of EUA products by requiring recipients be informed they have the option to accept or refuse the vaccine:

"The possible side effects of the vaccine are still being studied in clinical trials. . . Under the EUA, there is an option to accept or refuse receiving the vaccine."
Vaccine Information Fact Sheet for Recipients and Caregivers about the Pfizer-BioNTech COVID-19 Vaccine to Prevent Coronavirus Disease 2019

(COVID-19) for Use in Individuals 5 through 11 Years of Age, pp. 4-5,
<https://www.fda.gov/media/153717/download>.

The option to accept or refuse an EUA product is not conditioned upon written assertion of exemption. Medical, personal, or religious exemptions are not required in order to exercise the right to refuse. Under EUA law, a parent or guardian may simply decline a shot for their minor child, without providing explanation or paperwork. A state-level daycare or school requirement would introduce the need for filing of exemptions, unlawfully exceeding the parameters set forth by Congress for EUA products.

“FDA believes that the terms and conditions of an EUA issued under section 564 preempt state or local law, both legislative requirements and common-law duties, that impose different or additional requirements on the medical product for which the EUA was issued in the context of the emergency declared under section 564.” *Vaccine EUA Questions and Answers for Stakeholders*, U.S. Food & Drug Administration,
<https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/vaccine-eua-questions-and-answers-stakeholders#61b6059d67093>

Alarming, the CDC and ACIP made this recommendation even though they acknowledged that for both age groups:

Regarding potential harms after vaccination, evidence was type 4 (very low certainty) for serious adverse events and type 1 (high certainty) for reactogenicity. No data were available to assess the other GRADE benefits and harms including prevention of hospitalization due to COVID-19, prevention of multisystem inflammatory syndrome in children (MIS-C), SARS-CoV-2 seroconversion to a non-spike protein, or prevention of asymptomatic SARS-CoV-2 infection.

The Advisory Committee on Immunization Practices’ Interim Recommendation for Use of Pfizer-BioNTech COVID-19 Vaccine in Adolescents Aged 12–15 Years — United States, May 2021, CDC MMWR, May 21, 2021,
<https://www.cdc.gov/mmwr/volumes/70/wr/mm7020e1.htm> and *The Advisory Committee on Immunization Practices’ Interim Recommendation for Use of Pfizer-BioNTech COVID-19 Vaccine in Children Aged 5–11 Years — United States, November 2021*, CDC MMWR November 12, 2021,
<https://www.cdc.gov/mmwr/volumes/70/wr/mm7045e1.htm>.

Vaccines and Related Biological Products Advisory Committee (VRBPAC) member Dr. Eric Rubin stated “[Just b]ecause we give an EUA to the vaccine, doesn’t mean we have to use it. And I think we would have to think hard about how to use it given all of the concerns that have been raised.” Transcript of *FOOD AND DRUG ADMINISTRATION (FDA) Center for Biologics Evaluation and Research (CBER) 166th Vaccines and Related Biological Products Advisory Committee (VRBPAC) Meeting*, June 10, 2021, p. 242. <https://www.fda.gov/media/150815/download>.

How can the CDC claim that benefits outweigh risks when they admit they do not know the risks?

Comirnaty is the only COVID-19 product that has ostensibly received FDA licensure for any pediatric populations—namely those 16 and up; however, that licensure is limited to manufacturing and delivery. The FDA has stated that this product is merely “**ready** for approval for **use** in individuals 16 years of age and older . . .” [emphasis added]. *August 23, 2021 Approval Letter - Comirnaty*, from FDA to BioNTech, p. 4, <https://www.fda.gov/media/151710/download>. The Comirnaty vaccine is not available anywhere in the United States, and there is debate about whether the vials of Pfizer’s EUA product are now “licensed” for those 16 and up, or if those are still EUA products. The FDA states that EUA Pfizer-BioNTech COVID-19 Vaccine and the Comirnaty (COVID-19 Vaccine, mRNA) “are legally distinct with certain differences that do not impact safety or effectiveness.” There is much debate over what “legally distinct” means, especially to consumers. If “legally distinct” means that the currently available Pfizer products in the U.S. are under EUA regulations, then there is no licensed product available for 16-18 year olds. Regardless of whether the Pfizer product is licensed for 16-18 year olds, the product lacks completed Phase 3 clinical trials, and the PREP Act still shields manufacturers for liability for injuries and deaths. As far as we can tell, never in history has the FDA licensed a product without completed clinical trials, nor when all the ongoing trials have been unblinded, subverting the ability to compare outcomes.

There are ZERO co-administration safety studies; therefore, it is highly concerning that the CDC states, and the Washington State Department of Health repeats: “COVID-19 vaccine and other vaccines may be administered on the same day.” CDC, Immunization Schedule, COVID-19 Vaccination, <https://www.cdc.gov/vaccines/schedules/hcp/imz/child-adolescent.html>

Disregarding the absence of any safety studies, the Washington DOH states, “Your child can get a COVID-19 vaccine at the same time they get other vaccines. You do not need to schedule your child’s required school vaccinations or other recommended vaccines separately from COVID-19 vaccination. A COVID-19 vaccine appointment is another opportunity to get your child caught up on all of their recommended vaccines.”

Washington State Department of Health, Vaccinating Youth,
<https://www.doh.wa.gov/Emergencies/COVID19/VaccineInformation/VaccinatingYouth#VaccineTiming>

As noted in our cover letter, this is not science. This is not safety. This is not in the best interest of vaccine recipients. This is using Americans, especially our children who are most impacted, as unwitting test subjects. This is human experimentation without informed consent. This is criminal.

2. The vaccine containing this antigen is effective as measured by immunogenicity* and population-based prevention data in Washington State, as available.

*Immunogenicity means the ability of an antigen or vaccine to stimulate the body to produce an immune response. Vaccines often include antigens that stimulate an immune response to a particular disease but are not necessarily the same as the organism that would cause the disease.

In the clinical development of a vaccine, the effectiveness of the vaccine is studied using FDA-approved research protocols that evaluate whether a vaccine protects individuals from contracting the disease in population-based studies or generates an immunologic response (immunogenicity) comparable to vaccines that have been shown to be effective in preventing disease. More information about its population-based effectiveness is gained from large trials and community-based analyses after FDA approval. There may or may not be effectiveness data from Washington State, but the disease prevalence and incidence in the state should be sought and reviewed.

Do any of the COVID-19 shots fulfill this criterion? No.

Immunogenicity: While the COVID-19 shots trigger the recipient's cells to create spike proteins, which then trigger an immune response and antibodies to the self-created spike proteins, this immune response has proven incapable of preventing infection or transmission. In short, the COVID shots do not prevent recipients from "contracting the disease."

Some studies show recipients may be afforded a short window—a few weeks or months—during which their risk of infection or risk of severe disease is minimally reduced in comparison to those without natural immunity, but even this protection appears to be dropping with each new variant.

This preprint study shows that PCR-positive tests for Delta variant occurred in a higher percentage of vaccinated individuals than in unvaccinated. From this it could be concluded that, regardless of vaccination status, all individuals are able to spread COVID-19 with similar viral loads. Riemersma et al., *Shedding of Infectious SARS-CoV-2 Despite Vaccination*,

<https://www.infosperber.ch/wp-content/uploads/2021/10/210731-Wisconsin.Viral-Load.pdf>.

Dr. Rochelle Walensky states that the vaccine does not prevent infection or transmission of the Delta variant, CNN interview with Wolf Blitzer, July 27, 2021, <https://www.youtube.com/watch?v=TKFWGvvlVLI>

Another pre-print study, Acharya et al., *No Significant Difference in Viral Load Between Vaccinated and Unvaccinated, Asymptomatic and Symptomatic Groups Infected with SARS-CoV-2 Delta Variant*, “found no significant difference in cycle threshold values between vaccinated and unvaccinated, asymptomatic and symptomatic groups infected with SARS-CoV-2 Delta.” <https://www.medrxiv.org/content/10.1101/2021.09.28.21264262v1>.

The CDC reported that among the first U.S. cases of COVID-19 attributed to the Omicron variant, 79% of the 43 cases studied occurred in fully vaccinated individuals, including 14 who had received booster doses. *SARS-CoV-2 B.1.1.529 (Omicron) Variant — United States, December 1–8, 2021*, CDC MMWR, December 17, 2021, <https://www.cdc.gov/mmwr/volumes/70/wr/mm7050e1.htm>.

The criterion explicitly requires that “information about population-based effectiveness is gained from large trials,” yet the clinical trial study on which the EUA was based for 5-11 year olds included only 2,268 children total. CDC and ACIP acknowledged that the study was too small to find serious adverse reactions. (See our response above to Criterion #1.) *Evaluation of the BNT162b2 Covid-19 Vaccine in Children 5 to 11 Years of Age*, N Engl J Med 2022; 386:35-46, DOI: 10.1056/NEJMoa2116298, <https://www.nejm.org/doi/full/10.1056/NEJMoa2116298>.

A pre-print study suggests that vaccine effectiveness wanes to negative effectiveness, therefore increasing chances of contracting COVID, after 90 days. The authors suggest a booster would be necessary in order to attain previous levels of protection. Do parents really want their child to get a booster every 90 days? Would this be practical or manageable? Hansen et al., *Vaccine effectiveness against SARS-CoV-2 infection with the Omicron or Delta variants following a two-dose or booster BNT162b2 or mRNA-1273 vaccination series: A Danish cohort study*, <https://www.medrxiv.org/content/10.1101/2021.12.20.21267966v3#p-5>

In contrast to the inability of the COVID shots to prevent disease, natural immunity has been found to prevent infection. This superior, broad protection will serve children well throughout their lives. “[C]hildren display a characteristically robust and sustained adaptive immune response against SARS-CoV-2 with substantial cross-reactivity against other hCoVs.” Dowel, et al., *Children develop robust and sustained*

cross-reactive spike-specific immune responses to SARS-CoV-2 infection,
<https://www.nature.com/articles/s41590-021-01089-8>

In study after study, it has been shown that natural immunity far exceeds vaccine-induced immunity in length and quality. Please view the following studies here that show the superiority of natural immunity: "144 Research Studies Affirm Naturally Acquired Immunity to Covid-19: Documented, Linked and Quoted," Brownstone Institute, October 17, 2021.

<https://brownstone.org/articles/79-research-studies-affirm-naturally-acquired-immunity-to-covid-19-documented-linked-and-quoted/>

3. The vaccine containing this antigen is cost effective from a societal perspective.

This analysis should consider both the costs of the immunization (e.g. antigen, storage, administration, medical and societal costs of adverse reactions to the immunization, etc.) and the benefits of the immunization (e.g. lives saved, medical and societal benefits of preventing adverse reactions from vaccine-preventable disease, etc.). This process may include consultation with an economist as resources allow. Vaccines may be cost effective without being cost saving. In other words, the direct costs of some vaccines (e.g. antigen, storage, administration) balanced against direct savings (e.g. medical care, disability, death) may not result in net savings. Societal or indirect costs (e.g. lost productivity of care takers of ill children) will also need to be taken into consideration. These costs are much harder to quantify. Not all vaccines recommended by the ACIP are cost saving or equally effective, so some determination of the vaccine's relative cost effectiveness may need to be made for comparison purposes when applying the criteria.

Do any of the COVID-19 shots fulfill this criterion? No.

To parents and members of Informed Choice Washington, the most important consideration in this criterion is the "medical and societal costs of adverse reactions to the immunization" as well as what the criterion overlooks:

- the cost of ignoring or outright censoring lifesaving preventative and early treatment protocols, which lead to superior natural immunity;
- the cost of exposing children to genetic therapies, such as DNA and mRNA injections, in the absence of adequately sized and designed safety studies for either short or long-term outcomes;
- and the cost of interrupting a child's natural immune response to what is now an endemic virus without a complete understanding of how that interruption will impact their immunity to the virus and its mutations in the future.

Please see risk information provided under Criterion #4 below, in particular, the two graphs summarizing data from Pfizer's clinical trials that have already demonstrated that any benefits from the shots are outweighed by the injuries and death they cause. This does not account for long-term and yet unknown harms.

4. Experience to date with the vaccine containing this antigen demonstrates that it is safe and has an acceptable level of side effects

Vaccinations are not without side effects. The known risks associated with each vaccine (or antigen) must be balanced against the risks of the disease. Vaccine safety will be evaluated using research and reports from: pre-licensure, the Vaccine Adverse Event Reporting System (VAERS) and the Vaccine Safety Datalink (VSD) project, and other reliable sources.

Do any of the COVID-19 shots fulfill this criterion? No.

While Pfizer's own randomized control trial data indicated a decrease in positive cases, they also showed an increase in illnesses and deaths compared to the placebo group. There is no benefit to reducing cases if it comes at the cost of increased illness, hospitalizations, and death.

The graphic below includes Table S3, *Participants Reporting at Least 1 Adverse Event From Dose 1 to 1 Month After Dose 2 During the Blinded Follow-up Period*, on page 11 of [Pfizer's six-month supplementary appendix](#) to its study entitled [Safety and Efficacy of the BNT162b2 mRNA Covid-19 Vaccine through 6 Months](#). Vaccinees experienced worse health outcomes than did placebo recipients.

The following graphic, which includes Table S4, *Causes of Death from Dose 1 to Unblinding*, on page 12 of [Pfizer's six-month supplementary appendix](#) to its study entitled [Safety and Efficacy of the BNT162b2 mRNA Covid-19 Vaccine through 6 Months](#), illustrates the increase in deaths within six months for those who received the injections. Of particular concern are the types of death, including cardiovascular events

PFIZER'S INOCULATIONS FOR COVID-19 / MORE HARM THAN GOOD

INCREASED RISK OF DEATH

^aAs of April 19, 2022, subjects originally randomized to placebo... [https://www.fda.gov/media/148888/table-s4-causes-of-death-from-day-1-to-unblinding-study-population-24-years-old-n](#)

One 12-year-old child, Maddie de Garay, participated in Pfizer's study. She suffered multiple and severe injuries, requiring 9 ED visits and 3 hospital stays (totaling 64 days by June 1, 2021). She is still in a wheelchair today. The New England Journal of Medicine article in which Pfizer's RCT results was reported, [Safety and Efficacy of the](#)

[BNT162b2 mRNA Covid-19 Vaccine through 6 Months](#), failed to disclose any of Maddie's adverse reactions. Pfizer disingenuously mischaracterized her injuries as "functional abdominal pain" in its *Emergency Use Authorization (EUA) Amendment for an Unapproved Product Review Memorandum*, p. 30.

<https://www.fda.gov/media/148542/download>. Senator Ron Johnson held a roundtable, in which many individuals who took the COVID-19 vaccine shared their adverse reaction experiences that required medical attention.

<https://thehighwire.com/videos/stephanie-and-maddie-de-garay-testimony/> at 5:13.

This study asks a very pertinent question: Why are we vaccinating children against COVID-19? The abstract in this study explains the following:

A novel best-case scenario cost-benefit analysis showed very conservatively that there are five times the number of deaths attributable to each inoculation vs. those attributable to COVID-19 in the most vulnerable 65+ demographic. The risk of death from COVID-19 decreases drastically as age decreases, and the longer-term effects of the inoculations on lower age groups will increase their risk-benefit ratio, perhaps substantially... (emphasis added.)

This study goes on to say that:

... it will use the term 'inoculated' rather than vaccinated, because the injected material in the present COVID-19 inoculations prevents neither viral infection nor transmission (emphasis added.)

Kostoff, Ronald, et al., "Why Are We Vaccinating Children Against Covid-19?" Toxicology Reports, Vol 8 2021, pages 1665-1684,
<https://www.sciencedirect.com/science/article/pii/S221475002100161X>

Here is a list of websites where medical professionals and/or individuals have documented their experiences with reactions from the COVID-19 vaccine:

<https://openvaers.com/covid-data/adverse-events-by-state>

<https://vaers.hhs.gov/data.html>

<https://www.c19vaxreactions.com>,

<https://www.RealNotRare.com/>

<https://www.medalert.org>

<https://www.scivisionpub.com/pdfs/us-covid19-vaccines-proven-to-cause-more-harm-than-good-based-on-pivotal-clinical-trial-data-analyzed-using-the-proper-scientific--1811.pdf>

Dr. Cody Meissner, VRBPAC member, stated: “I want to be sure that the risk of the vaccine is less than the risk of hospitalization because four [COVID hospitalizations per million in children under 18] certainly does not constitute an emergency, and there are significant questions about the safety of this vaccine. . . . [This hospitalization rate is] on the CDC website. That is not an emergency. It is a very low hospitalization rate. And the rates may change as the season changes, but we’re starting from a tiny, tiny rate. . . . [T]he rates are also falling pretty dramatically among adults and children. So as more people are immunized and become immune from infection, I think it’s very likely that we’re going to get this pandemic under pretty good control. Now the issue -- so the issue to me is safety. . . . [W]e can look at the 2,000 or 2,200 adolescents who are enrolled in the Pfizer vaccine between 12 through 15 years of age -- 2,200, so half got the vaccine, half got placebo. Nobody was hospitalized. Nobody died. And there were some who got URIs[upper respiratory infections] So 2,200 is not going to address the issue of safety. I’m worried about myocarditis. . . . [W]e don’t know what that means on a longterm basis. Will there be scarring of the myocardium? Will there be a predisposition to arrhythmias later on? Will there be an early onset of heart failure? I think that’s unlikely, but we don’t know that. And so before we start vaccinating millions of adolescents and children, it is so important to find out what the consequences are because COVID-19 disease is disappearing in adolescents and children. And I think we have to be so clear about what we’re dealing with. Let me make one more point. In 2003, there was a publication in JAMA regarding myocarditis following the Dryvax vaccine, the smallpox vaccine which is, of course, a live vaccine. But in that situation, the military -- it was given to young recruits. The rates of myocarditis in the military young men -- because it was mostly men in those days -- was 2 per 100,000. And after the Dryvax vaccine the rates were 7.8 cases of myocarditis in the 30 days afterwards. So there was a three-fold increase. And in fact, Dr. Tony Fauci wrote an editorial in that same issue of JAMA discussing these rates of myocarditis. So I am really concerned that the FDA may by not insisting on a full BLA, which to me means at least 12 months, maybe even 18 or 24 months of follow up in children and adolescents, before they are recommended to receive this vaccine. I do not feel we can justify a EUA including children under an Emergency Use Authorization. The burden of disease is so small, and the risks are just not clear. We don’t know.” June 10, 2021, VRBPAC meeting transcript, p. 62, p. 225- 228. <https://www.fda.gov/media/150815/download>

From the front lines in medical care

Many medical professionals are speaking up and sharing their experiences of working in hospitals right now as they care for patients who are coming in with what they can associate to vaccine reactions. “More VC Nurses Blow Whistle on ‘Overwhelming’ Numbers of Heart Attacks, Clotting, Strokes,” *The Conejo Guardian*, December 14, 2021. <https://conejoguardian.org/2021/12/14/more-vc-nurses-blow-whistle-on-overwhelming-numbers-of-heart-attacks-clotting-strokes/>

Individuals are sharing their own experiences with their health while taking the COVID shots. U.S. Senator Ron Johnson hosted a round table on November 2, 2021, to allow these individuals to tell their stories.

<https://childrenshealthdefense.org/defender/nov-2-sen-ron-johnson-cdh-covid-vaccine-injuries-federal-mandates/>

Colette Martin, an RN of 17 years, testified in front of the Louisiana House about the harms of vaccine reactions that she has witnessed. She also stated that more children have died from the vaccine than from covid itself. Louisiana House of Representatives Health and Welfare Committee Hearing, December 6, 2021,

https://www.house.louisiana.gov/H_Video/VideoArchivePlayer?v=house/2021/dec/1206_21_HW (begin at 6:54:00)

In the first two and a half months after EUA was granted, 1,223 deaths were reported to Pfizer. This is a huge red flag that requires deep investigation. See Table 1, Page 7, showing fatal case outcomes in Pfizer’s “5.3.6 Cumulative Analysis of Post-Authorization Adverse Event Reports of PF-07302048 (BNT162B2) Received Through 28-Feb-2021”

<https://phmpt.org/wp-content/uploads/2021/11/5.3.6-postmarketing-experience.pdf>,

While critics commonly question the veracity of VAERS data, as reported on the U.S. government’s Healthy People 2020 site, 83% of the reporters to the Vaccine Adverse Events Reports System were health care workers or pharmaceutical and government-based sources during the years 1990-2010. “The majority of VAERS reports are submitted by vaccine manufacturers (37%) and health care providers (36%). The remaining reports are obtained from state immunization programs (10%), vaccine recipients (or their parents/guardians, 7%) [sic], and other sources (10%).” Office of Disease Prevention and Health Promotion, Vaccine Adverse Reporting System, <https://www.healthypeople.gov/2020/data-source/vaccine-adverse-event-reporting-system>.

Further, 72% of a sampling of 250 of the 1,644 VAERS reports of early death received in the first three months of 2021 were filed either by health service employees or pharmaceutical employees. “We identified health service employees as the reporter in at least 67% of the reports, while pharmaceutical employees were identified as the reporter in a further 5%.” Even though the sample contained only people vaccinated early in the rollout, *i.e.*, those who were elderly or with significant health conditions, an adverse vaccine reaction could be ruled out in only 14% of the cases. Mclachlan, et al., *Analysis of COVID-19 vaccine death reports from the Vaccine Adverse Events Reporting System (VAERS) Database Interim: Results and Analysis*. 10.13140/RG.2.2.26987.26402. (2021)

“While it seems that the incidence of pericarditis during the vaccination campaign period is increased, a more comprehensive data collection on a wider scale should be done. We hope this report will raise awareness to the subject and will serve as a reminder to report events as part of the post-marketing investigations and allow for a thorough adverse events following immunization analysis.” *Transient Cardiac Injury in Adolescents Receiving the BNT162b2 mRNA COVID-19 Vaccine*, https://journals.lww.com/pidj/Fulltext/2021/10000/Transient_Cardiac_Injury_in_Adolescents_Receiving.1.aspx

II. Disease Burden Criteria

5. The vaccine containing this antigen prevents disease(s) that has significant morbidity and/or mortality in at least some sub-set of the population.

Vaccines have the potential to reduce, or in some cases even eliminate, diseases that can result in serious illness, long-term disability, or death. For example, before measles vaccine was available, nearly everyone in the United States contracted measles and an average of 450 measles-associated deaths were reported each year between 1953 and 1963. The morbidity/mortality burden of measles was not equal for all members of the population. Examples of significant morbidity measures include rates of hospitalizations, long-term disability, disease incidence, and disproportionate impact.

Do any of the COVID-19 shots fulfill this criterion? No.

First, we must emphatically state that it is unethical to use children as shields for adults.

Peter Doshi, Ph.D: “I want to address this idea of vaccinating children to protect adults. I encourage the Advisory Committee to read Dr. Lavine et al.’s editorial to explain why, “Vaccinating children is likely to be of marginal benefit in reducing the risk to others.” And even if you think a small benefit is better than nothing, let’s not forget that it’s an unproven hypothetical benefit. We need confirmatory evidence, not just assumptions. And then there’s the ethics and the law. **FDA can only indicate a product for use in a**

given population if benefits outweigh risks in that same population. So if benefits don't outweigh risks in children themselves, it can't be indicated for children, full stop. Whether vaccinating children might help adults is a moot point." Comments before the Vaccines and Related Biological Products Advisory Committee, June 10, 2021 <https://www.fda.gov/media/150815/download>, pp. 171-172. (emphasis added)

Children and young adults are at an extremely low risk of mortality from COVID-19. When one subset of the population (children) carries a high risk for injury from an antigen but low risk for injury from the disease, we must consider the mandate of such an antigen to be unethical. Bhopal, "Children & Young People Remain at a Low Risk of Covid-19 Mortality," *The Lancet Children & Adolescent Health*, Correspondence, Vol 5, Issue 5, E12-E13, May 1, 2021.

[https://www.thelancet.com/journals/lanchi/article/PIIS2352-4642\(21\)00066-3/fulltext](https://www.thelancet.com/journals/lanchi/article/PIIS2352-4642(21)00066-3/fulltext)

The *Forbes* article "The Hideous Truths of Testing Vaccines on Humans" examined the testing of hepatitis vaccines on the residents of Willowbrook, a home for severely disabled children. The author states: "In 1966, renowned medical ethicist Henry K. Beecher published an article titled, "Ethics and Clinical Research," which listed Willowbrook as an example of an unethical clinical experiment and concluded that "there is no right to risk an injury to one person for the benefit of others." *Forbes*, June 12, 2020,

<https://www.forbes.com/sites/leahrosenbaum/2020/06/12/willowbrook-scandal-hepatitis-experiments-hideous-truths-of-testing-vaccines-on-humans/>

Second, the measles example given in this criterion reveals that historically the BOH and DOH have never stepped back to consider the long term or unintended consequences of mass-vaccination campaigns. We agree that nearly everyone in the United States used to be exposed to measles, mostly in childhood when it's safest to experience, and they developed lifetime immunity. Merck's on-trial-for-fraud MMR vaccine does not confer lifetime immunity for a significant portion of the population, pushing susceptibility into the very young and into adult populations. We are nearing a time when more people in the U.S. will be susceptible to measles than before the vaccines were released. And studies show a third dose doesn't help. Was there perhaps a better way to reduce those 450 annual deaths and the cases of very severe illness, without sacrificing superior natural immunity for the vast majority (99.99%) of the population—and without exposing millions of children annually to the risks of the MMR? What about the failure of the mumps portion of the shot? More information can be found here: <https://informedchoicewa.org/measles/> To learn about the politics surrounding the loss of the personal exemption to the MMR, see this post:

<https://informedchoicewa.org/education/were-wa-lawmakers-deceived-about-measles-last-session-part-1/>

Is there perhaps a better way to protect those susceptible to severe disease and fatal COVID-19 outcomes, without sacrificing superior natural immunity for the >99.9% of the population who fully recover and develop natural immunity? Optimal nutritional support, early treatment protocols, and the benefits of natural immunity are tragically not part of public health's approach with any vaccine-targeted infection. With COVID, the neglect of these public health tools has cost many lives.

Third: as shown in our response to Criterion #1, the shots do not prevent transmission; any unethical attempt to use children as shields will fail.

As of January 6, 2022, the seven-day case rate in Washington State for ages 4-11 was 504.8 per 100,000. The seven-day hospitalization rate was 1.2 in 100,000. Compare this with the risk of myocarditis in vaccinated adolescents, which is 18.52 in 100,000 as seen in <https://pubmed.ncbi.nlm.nih.gov/34849657/>

Age Group	7-Day Case Rate	7-Day Hospitalization Rate	7-Day Testing Rate	7-Day Percent Positivity
Ages 4-10	504.8	1.2	--	--
Ages 11-13	558.1	0.7	--	--
Ages 14-19	731.8	1.8	--	--
Ages 0-11	480.7	2.3	--	--
Ages 12-19	692.4	1.5	--	--
Ages 20-34	869.9	10.7	--	--
Ages 35-49	724.5	12.0	--	--
Ages 50-64	444.2	20.0	--	--

Ages 80+	211.2	56.2	--	--

Cases, Hospitalizations, Testing and Percent Positive by Age

Graph from <https://www.doh.wa.gov/Emergencies/COVID19/DataDashboard>

Between January 4, 2020, and January 6, 2022, 573 children between the ages of 5-18 have died with COVID in the entire United States. CDC Deaths by Sex, Ages 0-18 years, <https://data.cdc.gov/NCHS/Deaths-by-Sex-Ages-0-18-years/xa4b-4pzy>

On December 31, 2021, Anthony Fauci stated, “ . . . [I]f a child goes into the hospital, they automatically get tested for COVID, and they get counted as a COVID-hospitalized individual, when in fact they may go in for a broken leg or appendicitis of something like that, so it's overcounting the number of children who are . . . hospitalized **with** COVID as opposed to **because** of COVID.” MSNBC interview, <https://twitter.com/TheEliKlein/status/1476917049435856925>

Vaccines and Related Biological Products Advisory Committee member Dr. Cody Meissner stated “[F]our per million [pediatric hospitalizations] certainly does not constitute an emergency, and there are significant questions about the safety of this product.” June 10, 2021, VRBPAC meeting transcript, p. 62.

<https://www.fda.gov/media/150815/download>

6. Vaccinating against this disease reduces the risk of person-to-person transmission, with transmission in a school or child care setting or activity being given the highest priority.

Having a large proportion of the population vaccinated with the antigen helps to stem person to person transmission of the disease (i.e., herd immunity). Even community members who are not vaccinated (such as newborns and those with chronic illnesses) are offered some protection because the high immunization rate results in the disease having less opportunity to spread within the community. Vaccinating children in school and/or child care can increase the percentage of children in these groups who are immune and thus reduce the risk of outbreaks of the disease in these groups and in the community at large. Special consideration of disease transmission in a school or child care setting or activity should be given the highest priority. For the purpose of this criterion, “activity” refers to school or child care extracurricular activities including, but not limited to, field trips, sports events, or other activities held on or off campus.

Do any of the COVID-19 shots fulfill this criterion? No.

The Pfizer, Moderna, and Janssen products do not prevent transmission, serious disease, or death.

The CDC director says that vaccines do not prevent transmission. “Fully vaccinated people who get a Covid-19 breakthrough infection can transmit the virus, CDC chief says,” *CNN Health*,

<https://www.cnn.com/2021/08/05/health/us-coronavirus-thursday/index.html>

“COVID-19 infections are increasing in Gibraltar, with 128 new infections reported on average each day. That’s 97% of the peak — the highest daily average reported on January 5. There have been 9,600 infections and 100 coronavirus-related deaths reported in the country since the pandemic began. . . Gibraltar has administered at least 108,323 doses of COVID vaccines so far. Assuming every person needs 2 doses, that’s enough to have vaccinated about 160.7% of the country’s population.” Reuters COVID-19 Tracker, accessed January 7, 2022,

<https://graphics.reuters.com/world-coronavirus-tracker-and-maps/countries-and-territories/gibraltar/>

Vaccinated people can still spread the Delta variant. Vaccination does not stop the transmission of COVID. “Testing a subset of low-Ct samples revealed infectious

SARS-CoV-2 in 15 of 17 specimens (88%) from unvaccinated individuals and 37 of 39 (95%) from vaccinated people.” Riemersma, “Shedding of Infectious SARS-CoV-2 Despite Vaccination,” <https://www.medrxiv.org/content/10.1101/2021.07.31.21261387v4>

Individuals who have been previously infected do not show a need to be vaccinated. This is consistent with Chapter 246-105-020 WAC: “fully immunized” means an immunization status where a child has proof of acquired immunity . . . ’ It is unreasonable to mandate that those with natural immunity be “boosted” with a vaccine when there is not scientific evidence that this practice is safe or effective in the long term. Boosting an individual’s levels of antibodies to the vaccine-induced spike protein—which no longer matches the dominant strain now circulating—is experimental. Also see Shrestha, “Necessity of COVID-19 vaccination in previously infected individuals,” <https://doi.org/10.1101/2021.06.01.21258176>.

Children have sustained and robust natural immunity after contracting COVID. Dowel, “Children develop robust and sustained cross-reactive spike-specific immune responses to SARS-CoV-2 infection,” *Nat Immunol* 23, 40–49 (2022). <https://doi.org/10.1038/s41590-021-01089-8>.

Long-term effects of the vaccine trials in children are unknown. Deaths in children are a fraction of the percentage of deaths in all other age categories. Kostoff, “Why are we vaccinating children against COVID-19?” *Toxicology Reports*, Vol 8, 2021, Pages 1665-1684, <https://doi.org/10.1016/j.toxrep.2021.08.010>.

Barnstable County, Massachusetts, had an outbreak amongst a population of tourists that was approximately 74% vaccinated, which indicates that vaccination does not prevent contracting or transmitting COVID. Brown, “Outbreak of SARS-CoV-2 Infections, Including COVID-19 Vaccine Breakthrough Infections, Associated with Large Public Gatherings - Barnstable County, Massachusetts, July 2021,” *MMWR Morb Mortal Wkly Rep*, 2021 Aug 6;70(31):1059-1062. <https://pubmed.ncbi.nlm.nih.gov/34351882/>.

Despite 100% vaccination rate, consistent testing, and quarantining, a research station in Antarctica still had an outbreak of COVID cases. “COVID-19 Outbreak Hits Research Station in Antarctica,” WebMD News Brief, <https://www.webmd.com/lung/news/20220103/covid-19-outbreakohitsoresearchostation-in-antarctica>

III. Implementation of the Criteria

7. The vaccine containing this antigen is acceptable to the medical community and the public.

It is possible to gauge the level of provider acceptance of a vaccine by querying state professional societies such as the Washington Academy of Family Physicians and the Washington State Chapter of the American Academy of Pediatrics. Vaccine uptake data are also available from the Department of Health to determine provider use of the vaccine. While there is generally a good correlation between the levels of physicians' and the general public's acceptance of particular vaccines, the TAG should consider additional ways of accurately gauging public acceptance of the particular vaccine. Adding an antigen to WAC 246- 105-030 related to a vaccine with poor provider or public acceptance would likely be resisted. Postponing the regulation until there is greater approval of the vaccine would assure more effective policy.

Do any of the COVID-19 shots fulfill this criterion? No.

There has never been more opposition from the medical and scientific community or the public to any type of vaccine or vaccine policy than there is to the COVID-19 products and policies.

EXAMPLES OF MEDICAL AND SCIENTIFIC OPPOSITION

- Over 15,000 members of the [International Alliance of Physicians and Medical Scientists](#) published a declaration resolving that healthy children shall not be subject to forced vaccination. They state:
 - Negligible clinical risks from SARS-CoV-2 infection exist for healthy children under eighteen.
 - Long term safety of the current COVID vaccines in children cannot be determined prior to instituting such policies. Without high-powered, reproducible, long term safety data, risks to the long-term health status of children remain too high to support use in healthy children.
 - Children risk severe, adverse events from receiving the vaccine. Permanent physical damage to the brain, heart, immune and reproductive system associated with SARS-CoV-2 spike protein-based genetic vaccines has been demonstrated in children.
 - Healthy, unvaccinated children are critical to achieving herd immunity. Natural immunity is proven to tolerate infection, benefiting community protection while there is insufficient data to assess whether COVID vaccines assist herd immunity.

Supporting Evidence:

<https://doctorsandscientistsdeclaration.org/home/supporting-evidence/#children>

- More than 500 scientists, medical doctors and health care and other professionals united as the [Canadian Covid Care Alliance](https://www.canadiancovidcarealliance.org). Their presentation *More Harm Than Good* reviews Pfizer's six-month data and reveals that Pfizer's COVID-19 inoculations cause more illness than they prevent. See the *More Harm than Good* video and PDF slides here: <https://www.canadiancovidcarealliance.org>

"It's clear that Pfizer - and the agencies overseeing their trials - failed to follow established, high quality safety and efficacy protocols right from the beginning. . . Any government that approved this medical intervention for its citizens should have ensured that the trial had used the appropriate clinical endpoints and high quality safety science. . . Any government official who possesses this evidence and continues to allow its citizens to be inoculated with a toxic agent is, at the very least, negligent."

1. The [Association of American Physicians and Surgeons](#), established in 1943, opposes COVID-19 vaccination mandates. In regards to children, AAPS states:
 - a. In the testing, only 1,518 children received the shots, and 750 received a placebo. This is far too few to see uncommon side effects, such as myocarditis/pericarditis, as Pfizer admits.
 - b. Follow-up was for two months in one group and only 2.5 weeks in another. The Pfizer application states that long-term sequelae of post-vaccination myocarditis/pericarditis in participants 5 to 12 years of age will be studied after the vaccine is authorized for children.
 - c. The children were not examined for mild, asymptomatic myocarditis, which might cause long-term damage, as by checking troponin levels or echocardiograms, or for blood clotting problems, as by checking platelet counts and D-dimers.
 - d. The only FDA-approved product, BioNTech's Comirnaty (not yet available in the U.S.) is required to do studies on myocarditis lasting 5 years.
 - e. Monthly safety report cards on the three available vaccines, which have different dosages, are supposedly required, but none have been produced or released.
 - f. The claim of 91% relative effectiveness against symptomatic COVID in children is based on 16 cases of COVID in the placebo group and three cases in the vaccinated group over the brief follow-up period. This is an absolute risk reduction of about 2%.
 - g. We do not and cannot know the long-term effects on cancer, fertility, or autoimmune diseases. "But we're never going to learn about how safe this vaccine is unless we start giving it. That's just the way it goes," stated committee member Dr. Eric Rubin, physician at Boston's Brigham and

Women's Hospital, immunology professor at the Harvard T.H. Chan School of Public Health, and current editor-in-chief of the New England Journal of Medicine. The alternative to giving a product to most of an entire generation is animal studies or restricting use to a defined group most likely to benefit, with close follow-up.

- h. The dosage for children is one-third the adult dose. Dosage in pediatrics is generally determined by weight. Not all children weigh the same, and their weight does not triple between age 11.9 and 12.0 years.
 - i. The COVID products are not shown to interrupt infection and transmission. Masking and distancing are still being recommended or required for adults. Thus, hopes for a return to normalcy once vaccinated are misplaced.
 - j. To give truly informed consent, parents need complete information about possible side effects, such as the outcome for Maddie de Garay, a 12-year-old whose public-spirited parents enrolled her in a trial. Post-shot, she experienced excruciating pain and a 2-month hospitalization, and is now in a wheelchair. Pfizer has not acknowledged a connection to the shot, nor did it fully disclose her injuries in it. The reaction may be "extremely rare," but many would decline to take even a 1-in-1 million chance of this outcome.
 - k. The government has already ordered 68 million doses, so authorization is anticipated, and likely will be followed by mandates.
 - l. Several Nordic countries have paused the use of COVID vaccines in persons under the age of 30. Persons at low risk for COVID complications are more likely to die from the shot than from COVID.
 - m. Dr. Harvey Risch, Yale epidemiologist, stated that he would home-school his children if public schools mandated this vaccine.
 - n. No one should administer a COVID shot to a child unless parents have given fully informed, completely voluntary consent, without threats or inducements.
 - o. SOURCE:
<https://aapsonline.org/aaps-statement-on-covid-shots-for-children/>
2. The [Physicians for Informed Consent](#) have compiled a Pfizer Vaccine Risk Statement for children that highlights FDA, CDC, and Pfizer clinical trial data finding:
- a. The clinical trial found there were zero cases of severe COVID-19 in children of any age who did not receive the vaccine. In contrast, the trial found that the vaccine causes severe (grade 3) and grade 4 systemic reactions in children.

- b. The clinical trial indicates that vaccine efficacy declines significantly in less than six months. Although a booster dose of the vaccine is authorized for individuals 16 years of age or older, the clinical trial states that efficacy was not evaluated for Phase 3 BNT162b2 booster group participants. Instead, vaccine efficacy was inferred based on antibody levels observed in only about 300 vaccinated subjects over a one-month time period.
- c. The clinical trial provided no evidence that the vaccine prevents asymptomatic infection or transmission of SARS-CoV-2 or COVID-19. In addition, recent studies have observed that a significant proportion of severe, critical, and fatal cases of COVID-19 occurred in vaccinated individuals.

SOURCE:

<https://physiciansforinformedconsent.org/physicians-for-informed-consent-updates-its-pfizer-covid-19-vaccine-risk-statement-analyzes-new-safety-data-for-children/>

- 3. The [World Council for Health](#), whose leadership includes Dr. Tess Lawrie (PhD, MD, Founder, Evidence-Based Medicine Consultancy LTD, Bath, United Kingdom, 10-year Senior consultant to the WHO supporting health policy recommendations for countries globally), issued a statement in December 2021:
 - a. There is now more than enough evidence to declare the novel Covid-19 vaccines unsafe for use in humans. Victim testimonies and adverse reaction reporting systems have revealed millions of adverse reactions to the experimental vaccines, including life-changing injury and death.
 - b. The inoculations are capable of causing immeasurable harm to those who received them, with children being more likely to die from the Covid-19 vaccines than from actual SARS-CoV-2 infection.
 - c. World Council for Health anticipates that unprecedented humanitarian efforts will be essential to assist the people harmed by this global vaccination experiment, due to the known and unknown harms.
 - d. The World Council for Health demands an end to this crisis and hereby declares it illegal and unlawful for anyone to participate, directly or indirectly, in this harmful experimental vaccination programme. The World Council for Health declares individuals, governments, and other corporations will be held liable for their involvement.
 - e. World Council for Health Calls for an Immediate Stop to the Covid-19 Experimental “Vaccines” DECLARATION:
<https://worldcouncilforhealth.org/campaign/covid-19-vaccine-cease-and-desist/#full>

SOURCE: <https://worldcouncilforhealth.org/news/2021/12/covid-19-vaccines/14001/>

4. Paul E Alexander MSc PhD, Howard C. Tenenbaum DDS, Dip. Perio., PhD, Dr. Parvez Dara, MD, MBA: “We must not expose our children to ‘unnecessary’ harm. We must not expose them to a substance that has not been tested on children (or plan to be) in the way it should be and for as long as necessary. We must not expose children to a vaccine that based on their risk, is absolutely not needed. Moreover, they can become infected naturally, if their immunity is needed.”
<https://www.aier.org/article/why-we-must-not-be-forced-into-vaccinating-our-children-from-covid-beware/>
5. Dr. Robert Malone (MD, Northwestern School of Medicine, MS, UC San Diego and Salk Institute Molecular Biology and Virology Laboratories, Giannini Postdoctoral Research Fellow, UC Davis, Harvard Medical School fellow -- Global Clinical Research Scholar (2016), original inventor of the mRNA vaccine platform used in the Pfizer and Moderna COVID-19 vaccines as well as the DNA vaccine platform used by Inovio): Interview in which Dr. Malone voices his grave medical and scientific concerns for the use of any of the COVID shots, especially in children:
<https://unityprojectonline.com/news/dr-robert-malone-md-on-the-joe-rogan-experience/>
6. Dr. Peter McCullough (MD, FACC, FAHA, FASN, FNKF, FNLA, FCRSA, Chief Medical Advisor, Truth for Health Foundation; President, Cardiorenal Society of America; Editor-in-Chief, Reviews in Cardiovascular Medicine; one of the most highly published medical specialists in practice today and an authoritative commentator for major media on COVID-19). Dr. McCullough has been interviewed hundreds of times and testified to numerous legislatures and to Congress. He is a tireless proponent for early treatment to save lives, and although he at first administered the EUA shots to his patients, as information began to emerge, he stayed informed and up-to-date. He no longer supports use of any of the existing COVID-19 shots. His interview by Joe Rogan is extensive and can be found here:
<https://unityprojectonline.com/news/dr-peter-a-mccullough-on-the-joe-rogan-experience/>

In an [interview in August 2021](#), Dr. McCullough reviewed his five main points of education:

- a. COVID-19 is NOT spread asymptotically
- b. Asymptomatic people should not get tested

- c. Natural immunity is robust complete and durable
- d. COVID-19, no matter what variant, is easily treatable at home
- e. Current COVID-19 vaccines are obsolete and should be considered unfit for human use. “They [the vaccines] do not cover the new variants; patients are failing on these vaccines. They’re being hospitalized and getting sick despite having had the vaccines . . .the vaccines at this point in time have amounted to record mortality and injury and should be considered unsafe and unfit for human use.”

“Dr. Peter McCullough’s 5 most important truths about COVID-19,” LifeSiteNews, August 4, 2021,
<https://www.lifesitenews.com/news/dr-peter-mcculloughs-5-most-important-truths-about-covid-19/>.

EXAMPLES OF U.S. PUBLIC OPPOSITION

Evidence that half the country refusing; people willing to lose jobs rather than comply; large organizations of professionals publishing position papers; example of LA Unified School district; Enumclaw example?

<https://www.cityofenumclaw.net/DocumentCenter/View/6670/Res-1734---Covid-19-Vaccine-Verification-Discrimination>

Less than half of parents support a requirement for middle and high school students to be vaccinated for COVID. "About One in Five Americans Remain Vaccine-Resistant," Gallup, August 6, 2021,

<https://news.gallup.com/poll/353081/one-five-americans-remain-vaccine-resistant.aspx>

Healthcare workers are willing to lose their job rather than take the COVID vaccine.

"Roughly 3,000 hospital workers lost jobs over Washington's COVID-19 vaccine mandate," KING 5 News, November 17, 2021,

<https://www.king5.com/article/news/local/washington-hospitals-lose-roughly-3000-workers-over-covid-19-vaccine-mandate/281-b0ff14de-27b6-4b0a-bcca-ed924c314ca0>

As of October 19, 2021, nearly 2,000 state workers chose to be fired rather than take the vaccine. "Nearly 1,900 Washington state workers quit or are fired over COVID vaccine mandate," *The Seattle Times*, October 19, 2021,

<https://www.seattletimes.com/seattle-news/politics/nearly-1900-washington-state-workers-quit-or-are-fired-over-covid-vaccine-mandate/>

There have also been many stories in the news describing our service members who are being discharged secondary to their declination of the shots.

8. The administrative burdens of delivery and tracking of vaccine containing this antigen are reasonable.

Many institutions and individuals are involved in implementation of the rule when the Board adds a new vaccine to WAC 246-105-030. These include: the Department of Health, the Department of Social and Health Services, the Office of Superintendent of Public Instruction (OSPI), local health jurisdictions, schools, child care, health plans, health care providers, and families. For each of these key players, there are issues that affect the feasibility of implementing an immunization recommendation. For example, introduction of a new vaccine can result in schools conducting more parental follow-up and making changes to record and information systems—this in turn can impact school staff workload. Assuring that a reasonable burden of work is present will enhance the effectiveness of the policy. The TAG includes representatives from affected parties such as OSPI, schools, and child care when assessing an antigen against this criterion.

Do any of the COVID-19 shots fulfill this criterion? No.

The burden on school nurses for tracking COVID cases and for managing all the COVID measures is already unreasonable. ICWA board member Heidi Hartnell is a teacher in Washington State and can speak to the amount of time schools already spend tracking COVID cases and close contacts. If the requirement of vaccination is added to the existing required measures, this would create an extensive amount of maintenance and updating of immunization records. She says, “With the demonstrated waning efficacy of the COVID vaccination in adults, it would seem that this would also be true with children. If children are required to be “up to date” with a booster every six months, this will be a huge burden on schools as vaccination records will constantly need to be checked and updated. Currently, a majority of the required vaccinations are completed by the time a child enters kindergarten and these forms do not require frequent updating. However, if the COVID shot and subsequent boosters were to be added, this would place a hardship on already wearied teachers and school personnel. Ultimately these shots do not prevent contracting or transmitting the virus, and so this work achieves nothing in the public health sense.”

The only thing that makes sense, given that >99.9% of children are at zero risk from COVID, is to simply enforce the “stay at home if symptomatic” rules that have served public health well for decades. We can never achieve, nor would we want to achieve, zero exposure schools. Children’s immune systems need exposure to the microbial world, including to viruses, to properly develop and protect them as adults. This is just as true for COVID, which has become endemic, so children will be encountering the virus and mutations for the rest of their lives. More than 140 studies demonstrate that natural immunity will serve them well and far longer than the shots, and it is their

parents who should make the risk-benefit decision, not the State of Washington. "144 Research Studies Affirm Naturally Acquired Immunity to Covid-19: Documented, Linked and Quoted," Brownstone Institute, October 17, 2021.

<https://brownstone.org/articles/79-research-studies-affirm-naturally-acquired-immunity-to-covid-19-documented-linked-and-quoted/>

Public health would be even better served if the BOH would acknowledge natural immunity, and support and promote early treatment protocols, so that everyone of all ages and of any vaccination status could see better outcomes.

<https://www.cdc.gov/media/releases/2021/s1227-isolation-quarantine-guidance.html> -

9. The burden of compliance for the vaccine containing this antigen is reasonable for the parent/caregiver.

Parents and caregivers are often involved in obtaining vaccines for children. This can include: transporting children to medical appointments, taking time off of work for medical appointments, maintaining the child's immunization records, etc. When a vaccine is required for child care and/or school entry it affects the health decisions that parents make on their child's behalf because parents must, at the very least, take the required vaccine into account.

Do any of the COVID-19 shots fulfill this criterion? No.

Considering the risks discussed in Criterion #4 above, the burden of compliance on parents is unacceptable.

Considering that any injury sustained by a child is borne completely by the parents because the manufacturers are shielded under the Public Readiness and Emergency Preparedness (PREP) Act, the burden of compliance is unacceptable.

<https://aspr.hhs.gov/legal/PREPact/Pages/default.aspx>

The shots are available everywhere, even grocery stores often without an appointment, so it is easy for most parents to find an opportunity to get their child a shot if they so choose, but for those parents who choose to opt out of a school vaccine requirement, the burden is out of balance.

Parents can't go to Safeway or Rite Aid for an appointment with a practitioner to get the required risk-benefit consultation and signature. They must make an appointment with a practitioner, take time off work, arrange transportation, etc. That first step is now the most burdensome. For the past several years, it has been increasingly difficult for parents to find any practitioner willing to give them the required risk-benefit consultation. Many doctors and clinics are kicking families out of their practices who do not vaccinate, or who do not fully vaccinate according to the CDC schedule. This has nothing to do with health or protection and everything to do with the financial incentives built into the

insurance and public health systems that reward high vaccination uptake. This practice is supported by the American Academy of Pediatrics, which has critical conflicts of interest associations with the pharmaceutical and medical industries. “The AAP recently issued a clinical report that stated it is an “acceptable option for pediatric care clinicians to dismiss families who refuse vaccines”

<https://www.infectiousdiseaseadvisor.com/home/topics/prevention/new-aap-policy-on-patient-dismissal-for-vaccine-refusal-may-erode-solidarity-among-pediatricians/>

The BOH’s criterion is based on the assumption that “a process exists to opt out of immunization requirements by children attending either child care or school.” If parents are unable to find a practitioner willing to provide the required risk-benefit consultation and sign an exemption form or letter stating that they have done so, then that opt-out does not exist.

And finally, a tremendous burden exists in the coercive aspect of any vaccine requirement. Parents who opt their children out of one or more vaccinations experience emotional and psychological stress because they know they face scrutiny by school staff, by health care providers, by surveillance systems, as well as cultural pressure. Children who lack one or more vaccinations are singled out at various times, excluded from school and extracurricular activities. If a vaccine is NOT on the schedule, a parent is able to choose what is best for their child without the added stress. It is an unreasonable burden to stress entire families with a requirement that should be a personal medical decision. It is incomprehensible that the Board would even consider such a requirement with products that cannot prevent infection or transmission.

BOARD CRITERIA FRAMEWORK:

The only purpose for which power can rightfully be exercised over any member of a civilized community, against his will, is to prevent harm to others. His own good, either physical or moral, is not a sufficient warrant.” Harm to others cannot be prevented by requiring children attending school to take this vaccine.

Subject: Re: SuperBowl & The Big Game

Enough is enough. End all the mandates now.

Perhaps if our kids were rich and famous they wouldn't have to wear their masks to school every day like the 70k fans at the super bowl last night. The hypocrisy is deafening.

I agree—clearly there is no need for masks, as 70k people jammed into a super bowl stadium proved last night.

No. More. Mandates. Thx.

Greetings...

Issaquah, Bellevue, Lake WA School Districts, OSPI, WA State Education,
WSBOH, and King County Commissioner.

That sure was quite the Half Time SuperBowl Show, wasn't it? As 70k
mask-less fans adorned the stadium in CA for the 'big game', it sure brought attention to
millions sitting at home watching that we have been played. We've been played by our
State Schools and Government.

We are no longer asking. We are demanding that immediately mask
mandates be rescinded from our schools and release our children from these harmful
practices.

Thank you kindly,

Tanya Goodman

Protective and Loving Mother

I am against this Covid Shot which is "NOT" a vaccine. It is unnecessary for children to get this shot. Have you not watched/listened to the Dr Ardis, Dr Mercola or Dr. Tennpenny's videos and research?

You are deciding on a SHOT (NOT a vaccine because there were no trial studies; we, the people are the trial studies) that is for the flu which is NOT harmful or a health threat to kids.

Frieda

Subject: Data from Israel, the CMS database, GB's yellow card system and the military database

External Email

Data from Israel, the CMS database, GB's yellow card system and the military database should also be taken into account for a more well rounded data indicators for adverse reactions, injuries and death.

Also, 20% of myocarditis result in death in 5 years. This is not mild.

There have been reports that VEARS isn't allowing reports or is timing out at 30 minutes. Basically, discouraging reporting. Also, VEARS only represents 1 to 10 percent of events. So, considering the low reporting percentage must be taken into account.

Debra Wells

On Thursday, February 17, 2022 10:06 AM, Debra Wells

<debrakwells@startmail.com> wrote:

I am fighting hard against these covid vaccines because there are indications that they cause blood clots. There are loads of cases noted in the VEARS database and other countries data related to PE, DVT and thrombosis incidences. I have a history of blood clots from a medication. I was young, healthy and had absolutely no other risk factors concerning blood clots other than the medication. I was so healthy that they didn't find the blood clots until after 2 trips to the ER and a Doctor's visit. After leaving the doctor's office, I received a call demanding that I go to the nearest hospital for a lung scan where I lit the scan up like a Christmas tree. The clots were confirmed via what they call the Gold Standard test, where they ran a camera up my vein, through my heart and into my lung. There were absolutely no indications with my vitals or physical condition, other than it felt like I had pneumonia. The result was that I had 6 clots in one lung and they didn't bother looking in the other lung. I spent a week in the hospital. This is because I was otherwise healthy and responding well to the blood thinners. Obviously, I was on medication for a little while after hospitalization. This was all caused by a medication that is considered extremely safe and is widely used (birth control pills). Blood clots are considered the silent killer, especially in younger people. This happened over 20 years ago. I have avoided all medications, vaccination or even food that I know have the potential to cause blood clots.

I had no other medical history prior to this incident with blood clots and could have ended with my death.

This is why SBOH should consider the negative effects of the vaccines. I know that it's been hard to get this information because the FDA, CDC and Government as a whole doesn't want to create vaccine hesitancy; however, this shouldn't take priority over allowing the public to make informed decisions without being forced to take something that can result in death or disability. The public must have all the information to make the best medical decisions for themselves. I would say that the withholding of information and the heavy handedness of the FDA, CDC, and all government entities as caused more vaccine hesitancy, resistance and mistrust than if they had been truthful. If this isn't the cause, then maybe the vaccine never should be authorized in the first place. Meaning, if the adverse reactions or injuries are such that the FDA, CDC and Government entities feel that it would cause vaccine hesitancy, then the approval of the vaccine shouldn't have happened until those concerns were addressed and the full information

should have been given to people prior to getting the vaccine and informed consent should be received without force or coercion.

I have concerns that this vaccine will cause more injuries and death than it will save children. There are indications that this is already occurring and should be investigated. Everything I have seen so far is that children are less likely to get covid let alone die from it. As a matter of fact, more children die of accidents every year than all other causes of death to include Covid. What the Board hasn't investigated are the adverse reactions or deaths cause by the vaccines and must be considered before requiring this vaccine for school or day care, even if it takes a little bit longer. It is more important to make sure that the decisions made don't cause more harm than what they are meant to save.

I have concerns that these issues have been ignored and not addressed. There should be a meeting going over adverse reactions and injuries, not just to appease those of us with concerns but to truly look at all potential problems that could arise from vaccine injuries/adverse reactions.

Lastly, there are no safety studies concerning fertility. That should be done before mandating this to school age children.

PS. I want to address a poorly worded statement from a panelist last week. The comment stating that mothers don't know what is best for their children because they are misinformed or lack information. The lack of information is the fault of the FDA, CDC and Government entities as a whole. Parents, particularly Mothers know more about their children than school nurses, doctors or even so called experts because they know more about that child's medical history from the birth of that child to current day. Obviously, medical history is incredibly important that most people don't have. Mothers have this information. In addition to that, parents have a moral, emotional and financial responsibility for their children, where the school and so called experts don't have. As a matter of fact, no school nurse, school administrator, doctor or so called expert goes home at night and thinks about the impact of their decisions that affects families. However, Parents are left holding the bag of the bad decisions made by so called experts. As a parent, I would walk through fire, take a bullet and suffer death for my child (who is now 30). Not one of you or anyone else would. This is the heart of a mother. The concerns of mothers should never ever be brushed aside with such negligence and ignorance. The concerns of mothers should be addressed fully and honestly without derogatory comments of their concerns or as persons.

Debra Wells

On Thursday, February 17, 2022 9:09 AM, Debra Wells
<debrakwells@startmail.com> wrote:

It is telling when the FDA puts a pause on the covid 19 vaccine for children until they get more data. The Washington State Board of Health should also put a pause on consideration for covid 19 vaccine for children as well until more is known about the safety of the vaccines. There are enough indicators that a pause is warranted.

The CEO of the OneAmerica insurance company
recently disclosed
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Finsurance-
forums.com%2Flife-insurance%2Foneamerica-ceo-says-death-rates-among-working-
age-people-up-
40%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C013c153800f44ca39c9008d9f242a57f%7C11d0e2
that mortality in the 18-64 age group was 40 percent higher during the 3rd and 4th
quarters of 2021 than during pre-pandemic levels. For reference, the CEO indicated that
a 10 percent increase would have been a 1-in-200-year event. Furthermore, most of the
deaths were not attributed to Covid.

<data:image/png;base64,iVBORw0KGgoAAAANSUhEUgAAAAEAAAABCAQAAAC1HAWCAAAAC0IEQVR42mNK

Figure 1: US weekly deaths by age group. Data
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fnchs%2Fnvss%
is from the CDC. The gold curve is data for 2021. The red curve is data for 2020. The
gray curves are data for 2015-2019.

The OneAmerica insurance company serves a subset of the US population. The CDC collects mortality data <https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fncchs%2Fnvss%2Fmortality%2Fweekly%2Fus%2F2015-2021%2Fby%2Fage%2Fgroup%2F> for the entire US population. Figure 1 illustrates the weekly US mortality from 2015-2021 by age group. Several generalizations are readily apparent. The years 2015-2019 were very similar for all age groups forming a tight band of usual expectation. The tightness of the band for 2015-2019 means that relatively small increases in mortality are very significant events. There has been nothing unusual about mortality for the Under-25 age group during the Covid period compared to recent history. The last 10 weeks of data for 2021 are incomplete due to delays in reporting death certificates. Otherwise, mortality for the Over-25 age groups have been higher than historic norms starting in about March of 2020 and continuing to the present time with one big exception for the 85+ age group.

There is a very interesting interval from Week 10 (March 7) 2021 to Week 24 (June 13) 2021. Deaths in the 85+ Age Group are LOWER than average during this interval. Total deaths for Weeks 10-24 averaged 248,536 during 2015-2019, but were 242,372 during 2021. For the 25-44 age group, total deaths for Weeks 10-24 averaged 38,955 during 2015-2019, but were 54,789 (40.6 percent higher) during 2021. Daily Covid deaths (7-day moving average) <https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.worldometers.info%2Fcoronavirus%2Fusa%2F> in the US were declining from 1,689 on March 7, 2021, to 387 on June 13, 2021. This time period was the decline phase of the winter outbreak that peaked around January 18, 2021, and reached a nadir around July 8, 2021 prior to the Delta surge. One cannot plausibly attribute the above average deaths for the 25-44 age group during this time period to Covid. What was responsible for these deaths?

<data:image/png;base64,iVBORw0KGgoAAAANSUhEUgAAAAEAAAABCAQAAAC1HAWCAAAAC0IEQVR42mNK>

Figure 2: Weekly US mortality by Cause Group. Data <https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fncchs%2Fnvss%2Fmortality%2Fweekly%2Fus%2F2015-2021%2Fby%2Fage%2Fgroup%2F> is from the CDC. The gold curve is data for 2021. The red curve is data for 2020. The gray curves are data for 2015-2019.

Clearly there is a very significant above average number of deaths across the US that cannot be attributed to Covid. As was the case for the Age Group graphs, data for the last 10 weeks are incomplete due to delays in reporting of death certificates. Deaths attributed to Malignant Neoplasms were average during the entire pandemic period. Although there was an increase in deaths from Alzheimer Disease and dementia in 2020 after the onset of the pandemic, this was less apparent during 2021. There was an increase in deaths attributed to Other select causes (which include suicides and drug overdoses), but the magnitude was much smaller than what is seen in the Circulatory diseases category. Deaths attributed to Circulatory

diseases include strokes, heart attacks, and heart failure (including myocarditis). The Circulatory diseases category is clearly the most important category for excess deaths during 2020 and 2021. Notably, deaths attributed to Respiratory diseases were below average during 2021 for the period of interest between Week 10 and Week 24 of 2021. Covid is a respiratory disease and leads to acute respiratory distress syndrome with hypoxemia and respiratory failure in severe cases. During the period of interest between Week 10 and Week 24 of 2021, Covid deaths were steadily declining, deaths attributed to Respiratory diseases were below average, but deaths due to Circulatory diseases were significantly above average. It is difficult to explain the data between Week 10 and Week 24 of 2021 on the basis of lung injury caused by Covid infection.

The spike protein enables entry of the virus into the host cells. The spike protein targets the angiotensin converting enzyme-2 (ACE-2) receptor. Angiotensin converting enzymes play an important role in the regulation of blood pressure. Angiotensin receptor blockers (ARB) and angiotensin converting enzyme (ACE) inhibitors are both important classes of drugs used to treat hypertension. It does not require a stretch of the imagination to suspect that the spike protein could cause elevation of blood pressure. Acute elevation in blood pressure is known to be a risk factor for stroke, acute myocardial infarction (heart attack), and congestive heart failure. Spike protein is also associated with clotting, presumably due to endothelial injury, which would also increase risk for myocardial infarction and stroke. It is not clear why spike protein from the Covid virus would explain above average deaths attributed to Circulatory diseases during a time period when Covid cases and deaths were declining. However, the Covid virus was not the only source of spike protein during this time period. The mRNA vaccines led to the production of spike protein by host cells and Weeks 10-24 of 2021 were immediately followed by the mass introduction of mRNA vaccines to the US public. The data is not proof, but it is certainly a red flag.

The appropriate method to assess vaccine efficacy and safety is all cause mortality. Deaths from all causes are compared between the vaccine group and a control unvaccinated group. This method has not been used. Rather, the CDC and FDA determine on a case-by-case basis whether reported adverse events can be attributed to the vaccine. If a footballer drops dead during a game, one would not be inclined to attribute the cause to a vaccine given 10 weeks earlier. However, when 5 footballers drop dead every week, one will be looking for ANY common denominator between the dead footballers. Neither the CDC nor the FDA are impartial observers of vaccine safety. Both agencies have vested interests in promoting the vaccines. When the CDC or FDA analyze events on a case-by-case basis, they are inclined to say that an event was not due to a vaccine (especially if the people at the CDC and FDA include former executives from Pfizer). However, when the entire US population has a significant number of events compared to historic basis, one must look for the common denominators in the people with the events. The existing data is not proof that the vaccines are causing deaths due to Circulatory diseases. The burden of proof, however, lies with the CDC and FDA to prove that the vaccines are not causing deaths due to spike protein. It is scientific irresponsibility to eliminate the control group via vaccine mandates and make future assessment of vaccine safety scientifically impossible.

The risk of Covid 19 needs to also be measured against the risk of the covid 19 vaccine to make a educated decision. The risk of covid 19 vaccine should not be looked at in a vacuum. Also, the absolute risk needs to be considered as well, not just relative risk.

Debra Wells

On Thursday, February 10, 2022 9:28 AM, Debra Wells <debrakwells@startmail.com> wrote:

Please do not require or force the COVID 19 vaccines on children. More children have been negatively affected by vaccines than have been sick or died from covid. The children that have passed away had other medical issues that put them at particular risk; however, the vast majority are not at risk of covid 19. However, with the vaccines, myocarditis is more deadly to children than covid 19 and this has played out in the numbers.

We also don't know the long term effects on fertility and this vaccine should not be allowed or approved for children at any age.

Please follow biological science and not political science. It is very apparent that the majority of decision makers have been following political science and not biological science. Please do NOT harm our children with these untested vaccines. It's one thing to require the measles vaccines that have been around for decades; however, covid 19 vaccines have only been around just over a year. The numbers are not looking good for the safety of the covid 19 vaccine. The numbers from the Military are alarming. The numbers from insurance companies, that are required to review actual death rates and why so they can set premium rates, are extremely alarming. Ignoring these warning signs is gross negligence. We must protect our most vulnerable from even the most well meaning individuals/decision makers. We should not be making rash decisions that will have long standing impact that can't be reversed. We need more data on the vaccines before we force it on children.

Please vote NO on requiring Covid vaccines for children under 18.

I work in a small department in a retail store. Two of my co-workers have had all their covid shots. Both of them have tested positive twice for covid and have also spread covid to others in our department.

Also, both of those coworkers spread illness to those who were not vaccinated within 5 days of their own vaccinations. One of the coworkers was very aware that 4 of us were sickened within 5 days of their vaccine.

I also have a nephew who is 19 years old. The day after his vaccine he became paralyzed. His doctor confirmed that he contracted covid from his vaccine. He had trouble breathing and now has inner ear damage and other issues. He is about 9 months out from his vaccine and is still disabled.

I also met a young mother of 4 who had covid and was convinced by doctors she needed to get her vaccines. After her first one, she became extremely ill. The Safeway pharmacy convinced her to get her second shot.

After her second shot she began vomiting and feeling dizzy. She went back to the Safeway pharmacy and reported what happened and the declined to report this incident to Vaaers.

She now has been diagnosed with MS and heart failure, she has lost over 80 pounds since her vaccines. She was wearing a heart monitor when I met her. I also know of a massage therapist who experienced an adverse event after both her vaccines and had to pull over and call someone to drive her home.

And what about all these athletes who had dropped dead on the field after their vaccines? What about the doctors and nurses who have died from the vaccines?

In my opinion these vaccines are not safe! If I personally know three or more people who have been injured or have died from the vaccine wouldn't that be a red flag to you people?

I guess I just am a normal human with limited medical information but lots of common sense. When I see what is going on and my brain says, "STOP!" not so fast! We need much more research and trials before we inject these dangerous substances into our babies!

Please forward to Vice Chair Pendergrass

1) The meeting is planned around the "Effectiveness" Criteria.
Why isn't Criteria # 3 included on the agenda?

2) During the 02/10/2022 meeting "prevention" was discussed not as preventing disease, but as reducing the risk of serious illness or death. Criteria #2 is that "this antigen is effective based prevention data in Washington State"
Will this meeting discuss prevention correctly?

3) Criteria 4 There should be a lot of discussion regarding the heart problems experienced by young men after receiving the Pfizer shot, as well as significant time spent fairly discussing VAERS information.

Subject: Re: Development of Rules and Regulations for State Covid Vaccinations for School Age Children

External Email

Dear Sirs:

I write to oppose your attempts to railroad an emergency authorized vaccine which is not a vaccine with a clinical trial that failed!

Dr. Kronman quoted an observational study done in Israel. Your data is moot. Why would any country vaccinate children when the risk of death and hospitalization from COVID is so low in children.

Also, your attempt to discount VAERS is appalling. It is a well-known fact that VAERS is under-reported, thus, your downplay of its importance is unacceptable. I also suggest that your group needs to view all data, not just "your" side. You all need to view the data as presented here to get a well rounded perspective:

https://m.theepochtimes.com/global-covid-summiot-boise_428503.html?utm?source=ai&utm_medium=sea
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fm.theepochtimes.com%2Fglobal-covid-summiot-boise_428503.html%3Futm%3Fsource%3Dai%26utm_medium%3Dsea&data=04%7C01%7Cwsboh%40sb>

Additionally, the discussion of myocarditis, was again one-sided. It was mentioned that myocarditis occurs with many viruses, however, you ignore the occurrence of myocarditis in the vaccinated as it compared to the unvaccinated. Also, you downplay the effects of myocarditis when you of all people should know effects of myocarditis can be a life long problem. I believe the idea that the symptoms are short term is unconscionable to say. For one, given that this is an untried emergency vaccine, one cannot claim short term symptoms.

The speaker also stated that the Vaccine Safety Database is the most reliable? It is the "slowest". If that is so, why is there such a rush to make this vaccine on the schedule so quickly.

Therefore, benefits do NOT outweigh the risk. Children are the least likely to be hospitalized and death rate is very low. Check our own state and county dashboard data.

And finally, I ask you to disclose the amount of money your speakers have received from Pharma. And if their salary comes from pharma, then they have a conflict of interest.

Hello,

I am writing to ask that Washington State, the State BOH, the Seattle Archdiocese, and all area schools work to DROP the mask mandate in schools. As you undoubtedly know, the CDC's Morbid and Mortality Weekly Report (dated Feb 11, 2022) recently noted NO STATISTICALLY SIGNIFICANT DIFFERENCE in COVID-19 transmission for indoor mask use. Given this new data, we are asking that the mask mandates requiring students to wear masks indoors be dropped immediately! I have copied the image for your review and will also insert the link for your confirmation.

https://www.cdc.gov/mmwr/volumes/71/wr/mm7106e1.htm?s_cid=mm7106e1_w&fbclid=IwAR0PHyamvig

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fmmwr%2Fvolumes/71/wr/mm7106e1.htm?s_cid=mm7106e1_w&fbclid=IwAR0PHyamvig

If we are following the science, this clearly indicates that Cloth mask use is NOT effective, not Statistically Significant, in reducing transmission. Not only this but the CDC website makes it VERY clear that the only way masks work to prevent the spread is to 1) wear the proper mask (N95/KN95) mask 2) ensure proper tight fit 3) put on and remove the mask properly. Medical personnel are given very specific training /monitored practice on these correct processes and to expect that young elementary and middle school aged children are going to wear/put on/remove their masks properly is (no offense) ignorant. Not only that, our children are putting on and removing their masks multiple times a day, thus putting them at even more risk of illness. We know COVID 19 is primarily spread through aerosol transmission but other illnesses are spread through contact and having the children touch their masks at multiple times during the day is actually increasing their risk of transmission of other illnesses that prevent them from attending school and puts them at risk of the traumatic COVID testing process, and requires them to miss school pending those results. Cumulatively, this is a horrible standard on our children with the hope that wearing a mask will protect them from a highly survival illness and the mask wearing routine offers NO STATISTICAL SIGNIFICANCE anyway. Washington State and our schools can and should do better for our families and children! An additional resource is:

https://www.cdc.gov/mmwr/volumes/71/wr/mm7106e1.htm?s_cid=mm7106e1_w&fbclid=IwAR0PHyamvig

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fmmwr%2Fvolumes/71/wr/mm7106e1.htm?s_cid=mm7106e1_w&fbclid=IwAR0PHyamvig

We see across the US, few schools currently requiring masks to be worn, and while transmission is occurring, this study confirms that mask wearing is not preventing the transmission. There is profound impact on our children's mental health by requiring them

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.ncbi.nlm.nih.gov%2Fpmc%2FPMC7598570/>) done years ago, 1975, and the impact on creating a healthy parent/child attachment. While the study population was parent/child, certainly attachment for children and peers is undoubtedly similar. A study from the National Institute of Health by Green, Staff, Bromely, et al noted, The ability to read faces is also a much-needed skill within our society because it helps people gauge emotions of others and regulate their behavior and interactions accordingly. Under normal circumstances, humans have a coordinated package of communication cues, which include facial expressions, hand gestures, body language, words, pitch, tone, and face colour such as blushing. The communication cues act together to convey message and intent (Ong, 2020

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.ncbi.nlm.nih.gov%2Fpmc%2FPMC7598570/>) (website: <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7598570/>)

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.ncbi.nlm.nih.gov%2Fpmc%2FPMC7598570/>). This research concluded that , The difficulty in determining what facial expression a person is exhibiting behind a mask may present challenges for infants and young children as they depend on their parents' facial expressions, coupled with tone and/or voice to regulate their reactions toward others." I have heard some teachers note that the 2022-2023 kindergarten class has considerable behavior problems but it is highly likely that these children are unable to relate and connect to their peers and teachers as they are not as emotionally connected and have insufficient life experience to assume the reactions of their peers by NOT being able to see their facial expressions (website: The implications of face masks for babies and families during the COVID-19 pandemic: A discussion paper

Still Face Experiment: Dr. Edward Tronick

Additionally, I am also requesting that you no longer require the contact tracing components to be managed by the schools. The State is receiving the majority of the COVID funding and they should be managing the contract tracing themselves and not adding this stressful and complicated task to school administrators (who are already overworked). Additionally this practice assumes that student illness is occurring at school at not at home via parent work settings or other public area transmission.

Very Kindly,
Kara Michael
Concerned Parent and Community member in Washington State

Subject: Our children Our future

As parents we are simply done.

We are done with the "rules for thee, but not for me" attitude on full display at the Super Bowl. The people making the rules are not following the rules. Why? My guess is they know the rules are not about preventing illness.

We are done watching our children languish and suffer because adults are unwilling to take responsibility for their own health. Two years into this, we now have the tools for everyone to protect themselves in whatever way they deem necessary. It doesn't matter what anyone else does.

We are done watching our children be used as a bargaining chip. Your job is to PROTECT our children who are our future. Instead you MONETIZE them for school funding. The WEA is shamelessly using them to push for a raise.

Masks need to be removed immediately.

And further, requiring the Covid vaccine to attend school is absurd. You can skew statistics to make any point you want as we saw in the recent TAG meeting. You can pretend to directly compare it to other vaccines on the schedule when a simple search will tell you that you are comparing apples to oranges. And you can fool a lot of people with this intentional manipulation. What you can't do is skew the long term data because there is NONE. There are cleverly carefully curated graphs to show what the vaccine "likely" does. But there is no information telling us its long term affects on ANY body, let alone a young growing body. Because the information doesn't exist. We already know efficacy with regards to Covid declines fairly quickly. What we don't know is how these vaccines impact every part of our beautifully complex bodies. So what's the plan?

How do you want to be remembered? Please put the children first.

Quit the political charades and end the mask mandates immediately. If Kettle Falls district can do it, you most certainly can as well. Put your big boy/girl pants on and END THE MASK REQUIREMENT NOW. You have awoken an angry group of moms/dads that will NOT back down until this is lifted. Save face and do it TODAY.

Please read!

MASK

I do not believe mask mandates improve health as it relates to the Corona virus. I have looked for peer reviewed research. Quality peer reviewed data & scientific research is very slow to be released due to all the steps to complete. From completing the research study & writing the manuscript describing "purpose " to pre-submission formal review & ensuring no CONFLICT OF INTEREST is involved. Anything rushed is to be scrutinized.

The public knows it takes time to authenticate & replicate research properly.

What we have today is an experiment and mandates should not be allowed for an experiment (see Nuremburg code).

I do believe masking sets back our infants & toddlers in development regarding speech, emotion and social development. This is not ethical and will become a problem in 5-15 years.

I believe reducing our humanity through enforced masking is unethical & immoral. It encourages acts of criminal behavior through anonymity. The first thing a criminal does is hide the identification of oneself.

Integrity is questioned here. Ethics & morality is also.

COVID "VACCINE"

This COVID SHOT should not be mandatory as it has NOT been proven through rigorous testing, research and efficacy data. To give this experiment to humans without full safety & long term animal testing is immoral. To attempt to force humans or TRICK humans into accepting it is simply wrong (again see Nuremburg code). Any elected official or person in an office with the "power" to enforce accepting this injection on the public is also subject to laws for unethical & immoral purposes.

Stop illegal & harmful masking & injection of an experimental substance on humans immediately.

To Whom it May Concern,
I am asking you not to vote for School required covid vaccines - It does not fit the statutes you are using. Current vaccines listed stopped further spread, and covid vaccine has not stopped anything. Break through cases are everywhere. There is much more evidence that the masks are damaging our children. As someone who works with kids from trauma, I can tell you that there has been more trauma in the last two years due to the masks than covid itself. Please think of our children and stop this madness.

6th National
Student Safety and Security
Conference & Workshop
Conference: April 20-21 • Workshop: April 22 • Orlando, FL

February 22, 2022

Please deliver to:
Superintendent
School Resource Officer
School Safety Coordinator

Dear Colleague:

Re.: Invitation to the 6th National Student Safety and Security Conference, Orlando, FL

When you and your team participate in the NSSSC, you leave with knowledge and ideas you can put to work immediately. The NSSSC 2022 includes keynotes, sessions and an all-day workshop to help with your most pressing issues, and meet your planning deadlines, engaging staff, students, parents and community.

NSSSC will also include an important hands-on feature -- real-world simulations of community response to school shootings and related tragedies. Role-playing topics include response, recovery, prevention and preparedness.

Highlights:

- We present a clear overview of prevention, preparedness, response and recovery.
- Enough listening. The rest is hands-on experience.

Objectives:

- **Learn How to Plan:** Make everyone a stakeholder.
- **Protect Your School:** Spell out roles and responsibilities.
- **Know your Resources:** Test them against your toughest scenarios.
- **Know-How to Respond:** Recognize problems earlier. Make the right decisions faster.
- **Plan to Continue:** Keep the learning process alive.

For an updated agenda and speakers, please visit www.insssc.com.

The tabletop exercises, skillfully moderated by risk communicators, will encourage extended audience participation and explore effective methods of communication, coordination and collaboration at the local level.

We look forward to seeing you and sharing your views at this important event. Meanwhile, if you have any questions registering for the conference, we invite you to email info@insssc.com or call 703-466-0011.

Educationally,

Marina Bravo
Program Manager

Parents have been advocating for our kids for well over a year. As parents, we saw the damage being done to our children, the masks and quarantining were harming them. There was no amount of shaming that was going to get us to be quiet and stop trying to protect our children. We have pleaded with the school boards, we have shared facts, we have explained what laws were being violated in the place of "guidelines." We still live in America, we still have rights, there will still be consequences for violating those rights. It's time to get on the RIGHT SIDE OF HISTORY. The damage has been to these children but there is no excuse now for continuing these draconian measures. It is time to come together to heal what you have done. Now that we are a year + behind most of the states opening up fully and mask optional no one can honestly say horrible things will happen. Look at the data from states fully open. This is no longer a debate about science. It's a debate over power. You all know this. STOP IT! END THE MANDATES and STAND UP FOR THESE KIDS FOR GOD SAKE! Get your head out of your paycheck. These kids are our future.

Queries to: ricoh@doh.wa.gov

To Governor Inslee and the Department of Health

01/28/2022

I am writing regarding the following proposed policies you are trying to install based on the January 12, 2022 agenda.

- Allowing local health officers to use law enforcement (WAC 246-100-070) to force an emergency order to involuntarily detain a person or group of persons (families) to be isolated in a quarantine facility (WAC 246-100-045) following refusal to voluntarily comply with requests for medical examination, testing, treatment, counseling, and vaccination (WAC 246-100-040). These specifics come from WAC 246-100.
- Including the Covid-19 injections as part of school immunization requirements using WAC 246-105.

Although I wrote this letter for Washington State Board of Health, I am actually writing to you individually. You the living, thinking, feeling, human who's job is to serve the citizens of Washington State.

I am writing to you, Jay Inslee

I am writing to you, Umair A, Shah

I am writing to you, Jessica Todorovich

I am writing to you, Tamara Fife

I am writing to you, Kristin Peterson

I am writing to you, Les Becker

I am writing to you, Lacy Fehrenbach

I am writing to you, David Bayne

I am writing to you, Elizabeth Perez

I am writing to you, Tao Sheng Kwan-Gett

I am writing to you, Nathan Weed

I am asking that you listen in your capacity as a board member, paid public servant, and fellow human being, neighbor, and friend.

For nearly a year, you have been gradually conditioned to view the unvaccinated as enemies. You have been subjected to a relentless propaganda campaign designed to divide you from us; to dehumanize us; to paint us as science-deniers, conspiracy nuts, spreaders of disease, and threats to society.

Regardless of what the propagandists have told you, we are not your enemies. We are your neighbors; we are your colleagues; we are your friends; we are your family members; your grandparents; your parents; your siblings; your children.

We are human beings just like you. We love, we live, we think, we feel.

We have merely made a different choice for our bodies than you may have. And contrary to what the propagandists and the Governor tell you, that choice poses no threat to you or our shared community.

New stories documenting COVID outbreaks in fully vaccinated groups keep emerging, including cruise ships such as the MS Europa, MS Europa 2, Mein Schiff 6, and Aidanova.

While reporting on a third Royal Caribbean cruise ship outbreak, this *Miami Herald* article notes:

“The CDC reported there were 5,013 confirmed COVID-19 cases on cruise ships between Dec. 15 and 29, compared to just 162 cases in the two weeks prior, Nov. 30 to Dec. 14.

“According to the CDC’s database for COVID-19 on cruise ships as of Wednesday, all 92 cruise ships currently sailing in U.S. waters had people on board infected by COVID-19.”

After Puerto Rico health insurer Multi Health lost a court case that struck down their mandate and restored employees’ rights to decide about what would be injected into their bodies, the company instituted segregation: one building housed fully vaccinated employees, while the second building housed unvaccinated employees.

Guess which building experienced a COVID outbreak—and which one didn’t? It’s the opposite of what the media tells you. In this perfect real-world case control study, the building with the fully vaccinated employees suffered an outbreak, while the unvaccinated remained protected by their natural immunity, which has been proven superior to vaccination by 145 research studies to date.

And then consider this scenario at an Antarctica station: “100% vaxxed. 100% remote and quarantined. Still, covid outbreak in 2/3rds.”

I know what you’re thinking, “Okay, but what about the hospitals being overwhelmed by the unvaccinated?”

Well, big surprise, you've been deceived about that, too.

At a regional New York hospital serving a community with an under 50% percent vaccination rate, 90% of the individuals admitted to the hospital were documented to have received this vaccine.

The latest UK and Israel data reveal that vaccinated individuals comprise the majority of all hospitalizations and deaths in the over-50 group, a pattern that is becoming increasingly common.

If the vaccine does not prevent people from spreading or contracting COVID; being hospitalized; or dying from COVID, what possible justification can you provide for involuntarily detaining individuals and families in quarantine facilities?

And that's only part of the story. The other part of the story the one you are hiding Mr. Inslee, is the CDC's vaccine surveillance system has just surpassed a historic 1 million adverse event reports (1,016,999 as of 12/31/21) for the COVID vaccines, including 21,382 deaths 5,252 of which occurred within the first forty-eight hours following injection.

Contemplate that for a moment—nearly a quarter of reported deaths occurred within the first two days after vaccination.

Using Pfizer's own six-month data demonstrates that the COVID-19 vaccinations cause significantly more harm than good. Indeed, Pfizer's data shows the absolute risk reduction from its vaccine was only 0.84 percent, whereas there was a 300-percent increase in risk for adverse events.

Let me repeat that. Our government (you Mr. Inslee) our workplaces, our organizations, are demanding that its citizens accept a 300-percent increased risk of adverse events including death in exchange for less than a 1% risk reduction of contracting COVID.

Does that risk-benefit ratio sound reasonable to you? Pfizer, Moderna, and Johnson & Johnson, and you Mr. Ensley are gambling with our lives at zero-percent risk of liability thanks to their FDA-issued emergency use authorizations. None of you will be off the hook for this. This is a big mistake you will take to your grave.

Given the skyrocketing risk for death and injuries after injection with these products, how can you justify threatening to remove people from their homes and concentrate them in camps for refusal to voluntarily comply with requests for medical examination, testing, treatment, counseling, and vaccination?

But that's not all you're proposing. You're also wanting to include the Covid-19 injections as part of school immunization requirements using WAC 246-105.

And children are dying after vaccination possibly as many as 800 so far. As of December 21, 2021, seventy-one dead children under 18 have been logged in VAERS.

More children die from the COVID vaccine than COVID itself. We are potentially sacrificing our children for fear of maybe dying, getting sick of a virus, a virus with a 99% survival rate.

What you will find, if you remove the blinders Big Media, Big Tech, and Mr. Inslee have placed over your eyes to shield you from the gruesome reality unfolding outside the telescreen, is that the science (the *actual* science, as opposed to the pharmaceutical-funded Science™) proves the COVID vaccines are **neither safe nor effective**. I am not an antivaxxer, just a thinking human being that doesn't want an injection of an unapproved substance. An unknown that is not a sterilizing vaccine for a virus with a 99.95% survival rate. As a scientist, I'd be happy to point you in the direction of what used to be "real science".

There are no FDA-approved vaccines being administered in the United States? That's right, we were hoodwinked by Big Pharma, yet again. The Pfizer product the FDA approved on August 23, 2021, is Comirnaty, which is unavailable in the United States, where the unapproved version is still being injected so Big Pharma can enjoy the blanket protection guaranteed by their emergency use authorizations. You should be ashamed of yourself Mr. Ensley.

If you pass these proposals, you will be remembered for your complicit cowardice and you will **not** be excused from accepting responsibility for your actions. It's your choice.

Sincerely,

Marilyn Olson

I am a registered voter in the 21st legislative district. AGAINST this proposal and AGAINST "UNelected" appointees making public health decisions. When the VAERS report is finally investigated properly and published state governments will be held accountable for required Covid19 injections. They are not a vaccine they are a spike protein that provokes a limited immune response (Dr. Robert Malones own definition) STOP using failed democratic policies in Washington State. Debbie Lindell

Dear Board of Health Members~

I beg of you: Please allow for a minimum of a few more years data collection/unbiased, scientific clinical trials before potentially adding the Covid 19 shot to the vaccination schedule for our K-12 students. Covid 19 is rapidly decreasing in both spread & severity. Our children are at almost zero risk for serious injury due to this virus right now. We owe it to future generations to be extremely cautious before needlessly forcing DNA technology into their impressionable bodies. Thank you in advance for doing what is right for our children, & pausing before exerting your authority toward a potentially dangerous mandate with as yet unknown repercussions.

With Gratitude,
Wendy Middleton
(Parent of 3 in the Snoqualmie Valley Unified School District)

Good Morning!

Kettle Falls, WA removes mask mandate for their school children. The real risk? 'Defying Inslee and risk losing federal funding.'

We know why you are hesitant about removing masks from our children's faces. It looks like the news is starting to pick up on this as well. <https://www.kxly.com/kettle-falls-school-district-defies-gov-inslees-mandate-makes-masks-optional-for-students-and-staff/>

Warmly,

Subject: Our children Our future

As parents we are simply done.

We are done with the "rules for thee, but not for me" attitude on full display at the Super Bowl. The people making the rules are not following the rules. Why? My guess is they know the rules are not about preventing illness.

We are done watching our children languish and suffer because adults are unwilling to take responsibility for their own health. Two years into this, we now have the tools for everyone to protect themselves in whatever way they deem necessary. It doesn't matter what anyone else does.

We are done watching our children be used as a bargaining chip. Your job is to PROTECT our children who are our future. Instead you MONETIZE them for school funding. The WEA is shamelessly using them to push for a raise.

Masks need to be removed immediately.

And further, requiring the Covid vaccine to attend school is absurd. You can skew statistics to make any point you want as we saw in the recent TAG meeting. You can pretend to directly compare it to other vaccines on the schedule when a simple search will tell you that you are comparing apples to oranges. And you can fool a lot of people

with this intentional manipulation. What you can't do is skew the long term data because there is NONE. There are cleverly carefully curated graphs to show what the vaccine "likely" does. But there is no information telling us its long term affects on ANY body, let alone a young growing body. Because the information doesn't exist. We already know efficacy with regards to Covid declines fairly quickly. What we don't know is how these vaccines impact every part of our beautifully complex bodies. So what's the plan?

How do you want to be remembered? Please put the children first.

Patricia Curran

Subject: A hold should be in place with the recent revelations from the CDC and the limitation of data released

External Email

Since the last meeting it has come out that the CDC has not been releasing the data related to the covid vaccines. This will limit the validity of the data that has been presented to the SBOH and TAG groups from the presenters. A hold should be in place until the data is released so that it can be analyzed in it's entirety. Our children's safety is paramount, even from well meaning efforts that could harm them in the long run. I believe that if a pause is not enacted in relation to covid vaccines, great harm will come to our kids from the vaccines for covid.

PS. I am not an anti-vaxxer. I have received many vaccines over my life to include many that most don't receive. However, as I shared before in earlier emails, this particular vaccine is very concerning with the evidence of harm already available, even with the data withheld from the CDC.

As a side note, concerning the CDC withholding data, it hasn't gone unnoticed that if the data supported the efforts of the CDC, the data wouldn't have been withheld at all. This means that the data that is being withheld from the public and those that would be analyzing it, is likely showing that the vaccine is not working and likely causing more harm than good. So a pause needs to be in place until further information is released so that everyone can make truly informed decisions both personally and in relation to policy.

Seema Jain, MD1; Eli S. Rosenberg, PhD2,3

On January 19, 2022, this report was posted as an MMWR Early Release on the MMWR website (<https://www.cdc.gov/mmwr>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fmmwr&data=04>).

By November 30, 2021, approximately 130,781 COVID-19–associated deaths, one in six of all U.S. deaths from COVID-19, had occurred in California and New York.*COVID-19 vaccination protects against infection with SARS-CoV-2 (the virus that causes COVID-19), associated severe illness, and death (1,2); among those who survive, previous SARS-CoV-2 infection also confers protection against severe outcomes in the event of reinfection (3,4). The

relative magnitude and duration of infection- and vaccine-derived protection, alone and together, can guide public health planning and epidemic forecasting. To examine the impact of primary COVID-19 vaccination and previous SARS-CoV-2 infection on COVID-19 incidence and hospitalization rates, statewide testing, surveillance, and COVID-19 immunization data from California and New York (which account for 18% of the U.S. population) were analyzed. Four cohorts of adults aged ≥18 years were considered: persons who were 1) unvaccinated with no previous laboratory-confirmed COVID-19 diagnosis, 2) vaccinated (14 days after completion of a primary COVID-19 vaccination series) with no previous COVID-19 diagnosis, 3) unvaccinated with a previous COVID-19 diagnosis, and 4) vaccinated with a previous COVID-19 diagnosis. Age-adjusted hazard rates of incident laboratory-confirmed

COVID-19 cases in both states were compared among cohorts, and in California, hospitalizations during May 30–November 20, 2021, were also compared. During the study period, COVID-19 incidence in both states was highest among unvaccinated persons without a previous COVID-19 diagnosis compared with that among the other three groups. During the week beginning May 30,

2021, compared with COVID-19 case rates among unvaccinated persons without a previous COVID-19 diagnosis, COVID-19 case rates were 19.9-fold (California) and 18.4-fold (New York) lower among vaccinated persons without a previous diagnosis; 7.2-fold (California) and 9.9-fold lower (New York) among unvaccinated persons with a previous COVID-19 diagnosis; and 9.6-fold (California) and 8.5-fold lower (New York) among vaccinated persons with a previous COVID-19 diagnosis. During the same period, compared with hospitalization rates among unvaccinated persons without a previous COVID-19 diagnosis, hospitalization rates in California followed a similar pattern. These relationships

* https://covid.cdc.gov/covid-data-tracker/#cases_deathsper100klast7days

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcovid.cdc.gov%2Fcovid-data-tracker%2F%23cases_deathsper100klast7days&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cd91a91fd

changed after the SARS-CoV-2 Delta variant became predominant (i.e., accounted for >50% of sequenced isolates) in late June and July. By the week beginning October 3, compared with COVID-19 cases rates among unvaccinated persons without a previous COVID-19 diagnosis, case rates among vaccinated persons without a previous COVID-19 diagnosis were 6.2-fold (California) and 4.5-fold (New York) lower; rates were substantially lower among both groups with previous COVID-19 diagnoses, including 29.0-fold (California) and 14.7-fold lower (New York) among unvaccinated persons with a previous diagnosis, and 32.5-fold (California) and 19.8-fold lower (New York) among vaccinated persons with a previous diagnosis of COVID-19. During the same period, compared with hospitalization rates among unvaccinated persons without a previous COVID-19 diagnosis, hospitalization rates in California followed a similar pattern. These results demonstrate that vaccination protects against COVID-19 and related hospitalization, and that surviving a previous infection protects against a reinfection and related hospitalization. Importantly, infection-derived protection was higher after the Delta variant became predominant, a time when vaccine-induced immunity for many persons declined because of immune evasion and immunologic waning (2,5,6). Similar cohort data accounting for booster doses needs to be assessed, as new variants, including Omicron, circulate. Although the epidemiology of COVID-19 might change with the emergence of new variants, vaccination remains the safest strategy to prevent SARS-CoV-2 infections and associated complications; all eligible persons should be up to date with COVID-19 vaccination. Additional recommendations for vaccine doses might be warranted in the future as the virus and immunity levels change. Four cohorts of persons aged ≥ 18 years were assembled via linkages of records from electronic laboratory reporting databases and state-specific immunization information systems.[†]

[†] Statewide immunization databases in California are the California Immunization Registry, Regional Immunization Data Exchange, and San Diego Immunization Registry; the laboratory system is the California COVID Reporting System (CCRS). In New York, immunization information systems include Citywide Immunization Registry and the New York State Immunization Information System; the laboratory system is the Electronic Clinical Laboratory Reporting System (ECLRS). California data were matched between the immunization and case registries using a probabilistic algorithm with exact match for zip code and date of birth and fuzzy match on first name and last name. New York data were matched to the ECLRS with the use of a deterministic algorithm based on first

name, last name, and date of birth. In California, person-level hospitalization data from CCRS and supplementary hospitalization reports were used to identify COVID-19-associated hospitalizations.

Morbidity and Mortality Weekly Report

126 MMWR / January 28, 2022 / Vol. 71 / No. 4 US Department of Health and Human Services/Centers for Disease Control and Prevention

Persons were classified based on whether they had had a laboratory-confirmed SARS-CoV-2 infection by March 1, 2021

(i.e., previous COVID-19 diagnosis)[§]; had received at least the primary COVID-19 vaccination series[¶] by May 16, 2021; had a previous COVID-19 diagnosis and were fully vaccinated^{**};

or had neither received a previous COVID-19 diagnosis by March 1 nor received a first COVID-19 vaccine dose by the end of the analysis period. The size of the unvaccinated group without a previous diagnosis was derived by subtracting the observed groups from U.S. Census estimates.^{††} To maintain each defined cohort, persons who received a COVID-19 diagnosis during March 1–May 30, 2021, or who died before May 30, 2021, were excluded (to maintain eligibility for incident cases for all

cohorts on May 30, 2021),^{§§} as were persons who received a first vaccine dose during May 30–November 20, 2021. During May 30–November 20, 2021, incident cases were defined using a positive nucleic acid amplification test (NAAT) result from the California COVID-19 Reporting System (CCRS) or a positive NAAT or antigen test result from the New York Electronic Clinical Laboratory Reporting System. In California, person-level hospitalization data from CCRS and supplementary hospitalization reports were used to identify COVID-19-associated hospitalizations. A lifetable method was used to calculate hazard rates (average daily cases during a 7-day interval or hospitalizations over a 14-day interval), hazard ratios, and 95% CIs for each cohort. Rates were

age-adjusted to 2000 U.S. Census data using direct standardization.^{¶¶}

Supplementary analyses stratified case rates by timing

§ For both classification into cohorts of persons with previous COVID-19 diagnoses and for measuring incident cases, laboratory-confirmed infection was defined as the receipt of a new positive SARS-CoV-2 nucleic acid amplification test (NAAT) or antigen test (both for New York and NAAT only for California) result, but not within 90 days of a previous positive result.

¶ Fully vaccinated with the primary vaccination series is defined as receipt of a second

dose of an mRNA COVID-19 vaccine (Pfizer-BioNTech or Moderna) or 1 dose of the Janssen (Johnson & Johnson) vaccine ≥ 14 days before May 30, 2021.

** Because of the timing of full vaccination, the cohort definitions, and analysis timeframe, this cohort consisted nearly exclusively of persons who had previously received a laboratory-confirmed diagnosis of COVID-19 and later were fully vaccinated (California: 99.9%, New York: 99.7%), as opposed to the reverse order.

†† Whereas vaccinated cohorts were directly observed in the immunization information system databases, unvaccinated persons without a previous COVID-19 diagnosis were defined using U.S. Census population estimates minus the number of persons partially or fully vaccinated by December 11, 2021, and unvaccinated persons with a previous laboratory-confirmed infection before May 30, 2021. In California, the California Department of Finance population estimates were used for 2020, and the 2018 CDC National Center for Health Statistics Bridged Race file for U.S. Census population estimates were used in New York, consistent with other COVID-19 surveillance reporting.

§§ In California, a person-level match was performed to exclude deaths in each cohort before May 30, 2021. In New York, COVID-19 deaths were removed in aggregate from the starting number of unvaccinated persons with a previous COVID-19 diagnosis on May 30, 2021.

¶¶ <https://www.cdc.gov/nchs/data/statnt/statnt20.pdf>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fnchs%2Fdata%2F>

of previous diagnoses and primary series vaccine product. SAS (version 9.4; SAS Institute) and R (version 4.0.4; The R Foundation) were used to conduct all analyses. Institutional review boards (IRBs) in both states determined this surveillance activity to be necessary for public health work, and therefore, it did not require IRB review.

Approximately three quarters of adults from California (71.2%) and New York (72.2%) included in this analysis were vaccinated and did not have a previous COVID-19 diagnosis; however, 18.0% of California residents and 18.4% of New York residents were unvaccinated with no previous COVID-19 diagnosis (Table 1). In both states, 4.5% of persons were vaccinated and had a previous COVID-19 diagnosis; 6.3% in California and 4.9% in New York were unvaccinated with a previous diagnosis. Among 1,108,600 incident COVID-19 cases in these cohorts (752,781 in California and 355,819 in New York), the median intervals from vaccination or previous COVID-19 diagnosis to incident diagnosis were slightly shorter in California (138–150 days) than in New York (162–171 days).

Before the Delta variant became predominant in each state's U.S. Department of Health and Human Services region (June 26 in Region 9 [California] and July 3 in Region 2 [New York]),*** the highest incidence was among unvaccinated persons without a previous COVID-19 diagnosis; during this time, case rates were relatively low among the three groups with either previous infection or vaccination and were lowest among vaccinated persons without a previous COVID-19 diagnosis (Supplementary Figure 1, <https://stacks.cdc.gov/view/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fstacks.cdc.gov%2Fview%2F&data=04%7C>

[cdc/113253](https://stacks.cdc.gov/view/cdc/113253)) (Supplementary Figure 2, <https://stacks.cdc.gov/view/cdc/113253>)

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fstacks.cdc.gov%2F&data=04%7C>

[view/cdc/113253](https://stacks.cdc.gov/view/cdc/113253)). During the week beginning May 30, 2021, compared with COVID-19 case rates among unvaccinated persons without a previous COVID-19 diagnosis, COVID-19 case rates were 19.9-fold (California) and 18.4-fold (New York) lower among vaccinated persons without a previous diagnosis; rates were 7.2-fold (California) and 9.9-fold (New York) lower among unvaccinated persons with a previous COVID-19 diagnosis and 9.6-fold (California) and 8.5-fold (New York) lower among vaccinated persons with a previous COVID-19 diagnosis (Table 2).

As the Delta variant prevalence increased to >95% (97% in Region 9 and 98% in Region 2 on August 1), rates increased more rapidly among the vaccinated group with no previous COVID-19 diagnosis than among both the vaccinated and unvaccinated groups with a previous COVID-19 diagnosis (Supplementary Figure 1, <https://stacks.cdc.gov/view/>

Abbreviations: NA = not applicable; NAAT = nucleic acid amplification test.

* Statewide immunization databases in California are the California Immunization Registry, Regional Immunization Data Exchange, and San Diego Immunization Registry, and the laboratory system is the California COVID Reporting System; in New York, Immunization Information Systems include Citywide Immunization Registry and the New York State Immunization Information System; the laboratory system is the Electronic Clinical Laboratory Reporting System. California data were matched between the immunization and case registries using a probabilistic algorithm with exact match for zip code and date of birth and fuzzy match on first name and last name. New York data were matched to the Electronic Clinical Laboratory Reporting System with the use of a deterministic algorithm based on first name, last name, and date of birth. In California, person-level hospitalization data from the California COVID Reporting System and supplemental hospitalization reports were used to identify COVID-19-associated hospitalizations.

† For both classification into cohorts of persons with previous COVID-19 diagnoses and for measuring incident cases, laboratory-confirmed infection was defined as the receipt of a new positive SARS-CoV-2 NAAT or antigen test (both for New York and NAAT only for California) result, but not within 90 days of a previous positive result. Fully vaccinated is defined as having received a second dose of an mRNA COVID-19 vaccine (Pfizer-BioNTech or Moderna) or 1 dose of the Janssen

(Johnson & Johnson) vaccine ≥ 14 days before May 30, 2021. Whereas vaccinated cohorts were directly observed in the immunization information system databases, unvaccinated persons without a previous COVID-19 diagnosis were defined using U.S. Census population estimates minus persons partially or fully vaccinated by December 11, 2021, and unvaccinated persons with a previous laboratory-confirmed infection before May 30, 2021. In California, the California Department of Finance population estimates were used for 2020, and the 2018 CDC National Center for Health Statistics Bridged Race file for census population estimates were used in New York, consistent with other COVID-19 surveillance reporting.

§ Cumulative cases per 1,000 persons.

¶ These summaries of cumulative incidence are estimated across a period of variability in the epidemic for all cohorts.

** Hospitalization data for New York are not included in this analysis.

October 3, compared with rates among unvaccinated persons without a previous COVID-19 diagnosis, rates among vaccinated persons without a previous diagnosis were 6.2-fold lower (95% CI = 6.0–6.4) in California and 4.5-fold lower (95% CI = 4.3–4.7) in New York (Table 2). Further, rates among unvaccinated persons with a previous COVID-19 diagnosis were 29-fold lower (95% CI = 25.0–33.1) than rates among unvaccinated persons without a previous COVID-19 diagnosis in California and 14.7-fold lower (95% CI = 12.6–16.9) in New York. Rates among vaccinated persons who had had COVID-19 were 32.5-fold lower (95% CI = 27.5–37.6) than rates among unvaccinated persons without a previous COVID-19 diagnosis in California and 19.8-fold lower (95% CI = 16.2–23.5) in New York. Rates among vaccinated persons without a previous COVID-19 diagnosis were consistently higher than rates among unvaccinated persons with a history of COVID-19 (3.1-fold higher [95% CI = 2.6–3.7] in California and 1.9-fold higher [95% CI = 1.5–2.3] in New York) and rates among vaccinated persons with a history of COVID-19 (3.6-fold higher [95% CI = 2.9–4.3] in California and 2.8-fold higher [95% CI = 2.1–3.4] in New York). COVID-19 hospitalization rates in California were always highest among unvaccinated persons without a previous COVID-19 diagnosis (Table 2) (Figure). In the pre-Delta period during June 13–June 26, for example, compared with hospitalization rates among unvaccinated persons without a previous COVID-19 diagnosis, hospitalization rates were 27.7-fold lower (95% CI = 22.4–33.0) among vaccinated persons without a previous COVID-19 diagnosis, 6.0-fold lower (95% CI = 3.3–8.7) among unvaccinated persons with a previous COVID-19 diagnosis, and 7.1-fold lower (95% CI = 4.0–10.3) among vaccinated persons with a previous COVID-19 diagnosis. However, this pattern also shifted as the Delta variant became predominant. During October 3–16, compared with hospitalization rates among unvaccinated persons without a previous COVID-19 diagnosis, hospitalization rates were 19.8-fold lower (95% CI = 18.2–21.4) among vaccinated persons without a previous COVID-19 diagnosis, 55.3-fold lower (95% CI = 27.3–83.3) among unvaccinated

persons with a previous COVID-19 diagnosis, and 57.5-fold lower (95% CI = 29.2–85.8) among vaccinated persons with a previous COVID-19 diagnosis.

Among the two cohorts with a previous COVID-19 diagnosis, no consistent incidence gradient by time since the

previous diagnosis was observed (Supplementary Figure 3,

<https://stacks.cdc.gov/view/cdc/113253>

<[https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fstacks.cdc.gov%2Fview%2Fcdc%](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fstacks.cdc.gov%2Fview%2Fcdc%2F113253)

). When the vaccinated cohorts were stratified by the vaccine product received,

among vaccinated persons without a previous COVID-19

diagnosis, the highest incidences were observed among persons receiving the

Janssen (Johnson & Johnson), followed by

Pfizer-BioNTech, then Moderna vaccines (Supplementary

Figure 4, <https://stacks.cdc.gov/view/cdc/113253>

<[https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fstacks.cdc.gov%2Fview%2Fcdc%](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fstacks.cdc.gov%2Fview%2Fcdc%2F113253)

). No pattern by product was observed among vaccinated persons with

a previous COVID-19 diagnosis.

* Life tables estimated at 7-day intervals for cases and 14-day intervals for hospitalizations.

† Hazard ratios and 95% CIs reported in this table differ numerically from presentation of corresponding results in the text as “X-fold lower” rates (i.e., a hazard rate of 1.0 is zero-fold lower).

For example, a hazard ratio of 20.9 (95% CI = 18.9–22.9) for those “Unvaccinated–no previous COVID-19 diagnosis” versus “Vaccinated, no previous COVID-19 diagnosis” is equivalent to a 19.9-fold lower (95% CI = 17.9–21.9) rate for those “Vaccinated, no previous COVID-19 diagnosis” relative to those “Unvaccinated, no previous COVID-19 diagnosis.”

Data are limited regarding the risks for SARS-CoV-2 infection and hospitalization after COVID-19 vaccination and previous infection. What is added by this report?

This analysis integrated laboratory testing, hospitalization

surveillance, and immunization registry data in two large states during May–November 2021, before widespread circulation of the SARS-CoV-2 Omicron variant and before most persons had received additional or booster COVID-19 vaccine doses to protect against waning immunity. Rate estimates from the analysis describe different experiences stratified by COVID-19 vaccination status and previous COVID-19 diagnosis and during times when different SARS-CoV-2 variants predominated. Case rates were initially lowest among vaccinated persons without a previous COVID-19 diagnosis; however, after emergence of the Delta variant and over the course of time, incidence increased sharply in this group, but only slightly among both vaccinated and unvaccinated persons with previously diagnosed COVID-19 (6). Across the entire study period, persons with vaccine- and infection-derived immunity had much lower rates of hospitalization compared with those in unvaccinated persons. These results suggest that vaccination protects against COVID-19 and related hospitalization and that surviving a previous infection protects against a reinfection. Importantly, infection-derived protection was greater after the highly transmissible Delta variant became predominant, coinciding with early declining of vaccine-induced immunity in many persons (5). Similar data accounting for booster doses and as new variants, including Omicron, circulate will need to be assessed. The understanding and epidemiology of COVID-19 has shifted substantially over time with the emergence and circulation of new SARS-CoV-2 variants, introduction of vaccines, and changing immunity as a result. Similar to the early period of this study, two previous U.S. studies found more protection from vaccination than from previous infection during periods before Delta predominance (3,7). As was observed in the present study after July, recent international studies have also demonstrated increased protection in persons with previous infection, with or without vaccination, relative to vaccination alone^{†††}, §§§ (4). This might be due to differential stimulation of the immune response by either exposure type.^{¶¶¶} Whereas French and Israeli population-based studies noted waning protection from previous infection, this was not apparent in the results from this or other large U.K. and U.S. studies^{****} (4,8). Further studies are needed to establish duration of protection from previous infection by variant type, severity, and symptomatology, including for the Omicron variant. The findings in this report are subject to at least seven limitations. First, analyses were not stratified by time since vaccine receipt, but only by time since previous diagnosis, although earlier studies have examined waning of vaccine-induced immunity (Supplementary Figure 3, <https://stacks.cdc.gov/view/cdc/113253> <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fstacks.cdc.gov%2Fview%2Fcdc%2F113253>>). Second, persons with undiagnosed infection are misclassified as having no previous COVID-19 diagnosis; however, this misclassification likely results in a conservative bias (i.e., the magnitude of difference in rates would be even larger if misclassified persons were not included among unvaccinated persons without a previous COVID-19 diagnosis). California seroprevalence data during this period indicate that the ratio of actual (presumptive) infections to diagnosed cases among adults was 2.6 (95% CI = 2.2–2.9).^{††††} Further, California only included NAAT results, whereas New York included both NAAT and antigen test results. However, antigen testing made up

a smaller percentage of overall testing volume reported in California (7% of cases) compared with New York (25% of cases) during the study period. Neither state included self-tests, which are not easily reportable to public health. State-specific hazard ratios were generally comparable, although differences in rates among unvaccinated persons with a previous COVID-19 diagnosis were noteworthy. Third, potential exists for bias related to unmeasured confounding (e.g., behavioral or geographic differences in exposure risk) and uncertainty in the population size of the unvaccinated group without a previous COVID-19 diagnosis. Persons might be more or less likely to receive testing based on previous diagnosis or vaccination status; however, different trajectories between vaccinated persons with and without a previous COVID-19 diagnosis, and similar findings for cases and hospitalizations, suggest that these biases were minimal.

Fourth, this analysis did not include information on the severity of

Morbidity and Mortality Weekly Report

US Department of Health and Human Services/Centers for Disease Control and Prevention MMWR / January 28, 2022 / Vol. 71 / No. 4 131

initial infection and does not account for the full range of morbidity and mortality represented by the groups with previous infections.

Fifth, this analysis did not ascertain receipt of additional or booster COVID-19 vaccine doses and was conducted before many persons were eligible or had received additional or booster vaccine doses, which have been shown to confer additional protection.¶¶¶¶ Sixth, some estimates lacked precision because of sample size limitations.

Finally, this analysis was conducted before the emergence of the Omicron variant, for which vaccine or infection-derived immunity might be diminished.¶¶¶¶ This study offers a surveillance data

framework to help evaluate both infections in vaccinated persons and reinfections as new variants continue to emerge.

Vaccination protected against COVID-19 and related hospitalization, and surviving a previous infection protected against a

reinfection and related hospitalization during periods of predominantly Alpha and Delta variant transmission, before the emergence

of Omicron; evidence suggests decreased protection from both vaccine- and infection-induced immunity against Omicron infections, although additional protection with widespread receipt of

booster COVID-19 vaccine doses is expected. Initial infection among unvaccinated persons increases risk for serious illness, hospitalization, long-term sequelae, and death; by November 30,

2021, approximately 130,781 residents of California and New York had died from COVID-19. Thus, vaccination remains the safest and primary strategy to prevent SARS-CoV-2 infections, associated complications, and onward transmission. Primary COVID-19 vaccination, additional doses, and booster doses are recommended by CDC's Advisory Committee on Immunization Practices to ensure that all eligible persons are up to date with COVID-19 vaccination, which provides the most robust protection against initial infection, severe illness, hospitalization, longterm sequelae, and death.***** Additional recommendations for

vaccine doses might be warranted in the future as the virus and immunity levels change.

Acknowledgments

Dana Jaffe, California Department of Public Health; Rebecca Hoen, Meng Wu, New York State Department of Health; Citywide Immunization Registry Program, New York City Department of Health and Mental Hygiene.

I want to make the board aware that many people are not getting tested or going to the hospital if they get covid. There are a couple of reasons for this. One, if everyone around you has gotten tested and they have covid, there is no need to get tested yourself as it is likely that you have the same issue. This is true with the Omicron outbreak. The first week of January it seemed like Omicron exploded in the Puget Sound area and across the USA. I don't think I knew anyone that didn't have Omicron regardless of vaccination status (to include the booster). So the actual numbers of infections of Omicron are less than what is reported and many didn't go to the hospital.

I had a few days where it was difficult and probably should have gone to the hospital. However, I will not go to the hospital on my own because of the loss of a family member to covid in the hospital and the protocol that hospitals are using to treat covid patients. I have asthma and had my oxygen level go down to 90%. I sought alternative care and within a few days I was better. The hospital protocol using Remdesivir is killing people as it did with our family member. Our family is not the only family member that suffered death from Remdesivir. I know others personally that have been affected by Remdesivir poisoning. This is why you aren't seeing more in the hospital as those that I know are of the same mind. This is happening across the entire USA. Remdesivir and the current covid protocol should be stopped immediately and alternative treatments deployed. Our trust in the medical community has been broken. Our family member is dead. That is real and tangible to entire families that are affected.

When considering vaccines and treatments, rebuilding trust with the community that you serve should also be high on the list of considerations. Forcing new vaccines and treatments on a community doesn't build trust but further diminishes it.

Unfortunately, the licensed product is not available to the public. Only the EUA product is being given to the public, which from a legal perspective is significant because if someone is injured by the EUA product, they are unable to hold the company liable for the injury. That means that people are bearing 100% of the cost of injury from these vaccines. If the product was fully licensed and the licensed product available, you would probably have less push back because the public would have someone to hold accountable for the vaccine injuries/reactions.

Also, it took 3 months for the blood clots to show up. Since there are indications that these vaccines cause blood clots, the window to be considered should be extended to at least 3 months in relation to blood clots. This would also follow with heart attacks, strokes and other related medical conditions related to blood clots.

Debra Wells

On Thursday, February 17, 2022 10:06 AM, Debra Wells <debrakwells@startmail.com> wrote:

I am fighting hard against these covid vaccines because there are indications that they cause blood clots. There are loads of cases noted in the VEARS database and other countries data related to PE, DVT and thrombosis incidences. I have a history of blood clots from a medication. I was young, healthy and had absolutely no other risk factors concerning blood clots other than the medication. I was so healthy that they didn't find the blood clots until after 2 trips to the ER and a Doctor's visit. After leaving the doctor's office, I received a call demanding that I go to the nearest hospital for a lung scan where I lit the scan up like a Christmas tree. The clots were confirmed via what they call the Gold Standard test, where they ran a camera up my vein, through my heart and into my lung. There were absolutely no indications with my vitals or physical condition, other than it felt like I had pneumonia. The result was that I had 6 clots in one lung and they didn't bother looking in the other lung. I spent a week in the hospital. This is because I was otherwise healthy and responding well to the blood thinners. Obviously, I was on medication for a little while after hospitalization. This was all caused by a medication that is considered extremely safe and is widely used (birth control pills). Blood clots are considered the silent killer, especially in younger people. This happened over 20 years ago. I have avoided all medications, vaccination or even food that I know have the potential to cause blood clots.

I had no other medical history prior to this incident with blood clots and could have ended with my death.

This is why SBOH should consider the negative effects of the vaccines. I know that it's been hard to get this information because the FDA, CDC and Government as a whole doesn't want to create vaccine hesitancy; however, this shouldn't take priority over allowing the public to make informed decisions without being forced to take something that can result in death or disability. The public must have all the information to make the best medical decisions for themselves. I would say that the withholding of information and the heavy handedness of the FDA, CDC, and all government entities as caused more vaccine hesitancy, resistance and mistrust than if they had been truthful. If this isn't the cause, then maybe the vaccine never should be authorized in the first place. Meaning, if the adverse reactions or injuries are such that the FDA, CDC and Government entities feel that it would cause vaccine hesitancy, then the approval of the vaccine shouldn't have happened until those concerns were addressed and the full information should have been given to people prior to getting the vaccine and informed consent should be received without force or coercion.

I have concerns that this vaccine will cause more injuries and death than it will save children. There are indications that this is already occurring and should be investigated. Everything I have seen so far is that children are less likely to get covid let alone die from it. As a matter of fact, more children die of accidents every year than all other causes of death to include Covid. What the Board hasn't investigated are the adverse reactions or deaths caused by the vaccines and must be considered before requiring this vaccine for school or day care, even if it takes a little bit longer. It is more important to make sure that the decisions made don't cause more harm than what they are meant to save.

I have concerns that these issues have been ignored and not addressed. There should be a meeting going over adverse reactions and injuries, not just to appease those of us with concerns but to truly look at all potential problems that could arise from vaccine injuries/adverse reactions.

Lastly, there are no safety studies concerning fertility. That should be done before mandating this to school age children.

PS. I want to address a poorly worded statement from a panelist last week. The comment stating that mothers don't know what is best for their children because they are misinformed or lack information. The lack of information is the fault of the FDA, CDC and Government entities as a whole. Parents, particularly Mothers know more about their children than school nurses, doctors or even so called experts because they know more about that child's medical history from the birth of that child to current day. Obviously, medical history is incredibly important that most people don't have. Mothers have this information. In addition to that, parents have a moral, emotional and financial responsibility for their children, where the school and so called experts don't have. As a matter of fact, no school nurse, school administrator, doctor or so called expert goes home at night and thinks about the impact of their decisions that affects families. However, Parents are left holding the bag of the bad decisions made by so called experts. As a parent, I would walk through fire, take a bullet and suffer death for my child (who is now 30). Not one of you or anyone else would. This is the heart of a mother. The concerns of mothers should never ever be brushed aside with such negligence and ignorance. The concerns of mothers should be addressed fully and honestly without derogatory comments of their concerns or as persons.

<data:image/png;base64,iVBORw0KGgoAAAANSUhEUqAAAEAAAABCAQAAAC1HAwCAAAAC0IEQVR42mNk

Clearly there is a very significant above average number of deaths across the US that cannot be attributed to Covid. As was the case for the Age Group graphs, data for the last 10 weeks are incomplete due to delays in reporting of death certificates. Deaths attributed to Malignant Neoplasms were average during the entire pandemic period. Although there was an increase in deaths from Alzheimer Disease and dementia in 2020 after the onset of the pandemic, this was less apparent during 2021. There was an increase in deaths attributed to Other select causes (which include suicides and drug overdoses), but the magnitude was much smaller than what is seen in the Circulatory diseases category. Deaths attributed to Circulatory diseases include strokes, heart attacks, and heart failure (including myocarditis). The Circulatory diseases category is clearly the most important category for excess deaths during 2020 and 2021. Notably, deaths attributed to Respiratory diseases were below average during 2021 for the period of interest between Week 10 and Week 24 of 2021. Covid is a respiratory disease and leads to acute respiratory distress syndrome with hypoxemia and respiratory failure in severe cases. During the period of interest between Week 10 and Week 24 of 2021, Covid deaths were steadily declining, deaths attributed to Respiratory diseases were below average, but deaths due to Circulatory diseases were significantly above average. It is difficult to explain the data between Week 10 and Week 24 of 2021 on the basis of lung injury caused by Covid infection.

The spike protein enables entry of the virus into the host cells. The spike protein targets the angiotensin converting enzyme-2 (ACE-2) receptor. Angiotensin converting enzymes play an important role in the regulation of blood pressure. Angiotensin receptor blockers (ARB) and angiotensin converting enzyme (ACE) inhibitors are both important classes of drugs used to treat hypertension. It does not require a stretch of the imagination to suspect that the spike protein could cause elevation of blood pressure. Acute elevation in blood pressure is known to be a risk factor for stroke, acute myocardial infarction (heart attack), and congestive heart failure. Spike protein is also associated with clotting, presumably due to endothelial injury, which would also increase risk for myocardial infarction and stroke. It is not clear why spike protein from the Covid virus would explain above average deaths attributed to Circulatory

diseases during a time period when Covid cases and deaths were declining. However, the Covid virus was not the only source of spike protein during this time period. The mRNA vaccines led to the production of spike protein by host cells and Weeks 10-24 of 2021 were immediately followed by the mass introduction of mRNA vaccines to the US public. The data is not proof, but it is certainly a red flag.

The appropriate method to assess vaccine efficacy and safety is all cause mortality. Deaths from all causes are compared between the vaccine group and a control unvaccinated group. This method has not been used. Rather, the CDC and FDA determine on a case-by-case basis whether reported adverse events can be attributed to the vaccine. If a footballer drops dead during a game, one would not be inclined to attribute the cause to a vaccine given 10 weeks earlier. However, when 5 footballers drop dead every week, one will be looking for ANY common denominator between the dead footballers. Neither the CDC nor the FDA are impartial observers of vaccine safety. Both agencies have vested interests in promoting the vaccines. When the CDC or FDA analyze events on a case-by-case basis, they are inclined to say that an event was not due to a vaccine (especially if the people at the CDC and FDA include former executives from Pfizer). However, when the entire US population has a significant number of events compared to historic basis, one must look for the common denominators in the people with the events. The existing data is not proof that the vaccines are causing deaths due to Circulatory diseases. The burden of proof, however, lies with the CDC and FDA to prove that the vaccines are not causing deaths due to spike protein. It is scientific irresponsibility to eliminate the control group via vaccine mandates and make future assessment of vaccine safety scientifically impossible.

On Thursday, February 10, 2022 9:28 AM, Debra Wells <debrakwells@startmail.com> wrote:

Please do not require or force the COVID 19 vaccines on children. More children have been negatively affected by vaccines than have been sick or died from covid. The children that have passed away had other medical issues that put them at particular risk; however, the vast majority are not at risk of covid 19. However, with the vaccines, myocarditis is more deadly to children than covid 19 and this has played out in the numbers.

We also don't know the long term effects on fertility and this vaccine should not be allowed or approved for children at any age.

Please follow biological science and not political science. It is very apparent that the majority of decision makers have been following political science and not biological science. Please do NOT harm our children with these untested vaccines. It's one thing to require the measles vaccines that have been around for decades; however, covid 19 vaccines have only been around just over a year. The numbers are not looking good for the safety of the covid 19 vaccine. The numbers from the Military are alarming. The numbers from insurance companies, that are required to review actual death rates and why so they can set premium rates, are extremely alarming. Ignoring these warning signs is gross negligence. We must protect our most vulnerable from even the most well meaning individuals/decision makers. We should not be making rash decisions that will have long standing impact that can't be reversed. We need more data on the vaccines before we force it on children.

Please vote NO on requiring Covid vaccines for children under 18.

Subject: Re: SuperBowl & The Big Game

When you know better. You do better.

We now know better, so please DO better.

Remove the masks, remove the mandates. It's no longer science.

Subject: Re: SuperBowl & The Big Game

Enough is enough. End all the mandates now.

Perhaps if our kids were rich and famous they wouldn't have to wear their masks to school every day like the 70k fans at the super bowl last night. The hypocrisy is

deafening.

School boards and superintendents... you've typically given the answer "this isn't our call, it's the governor's call"

But when someone orders you to harm children, even just a little, you DON'T DO IT. You just say no. It's never too late to let your conscience be your guide. Free our kids from this madness.

I agree—clearly there is no need for masks, as 70k people jammed into a super bowl stadium proved last night.

No. More. Mandates. Thx.

Greetings...

Issaquah, Bellevue, Lake WA School Districts, OSPI, WA State Education,
WSBOH, and King County Commissioner.

That sure was quite the Half Time SuperBowl Show, wasn't it? As 70k
mask-less fans adorned the stadium in CA for the 'big game', it sure brought attention to
millions sitting at home watching that we have been played. We've been played by our
State Schools and Government.

We are no longer asking. We are demanding that immediately mask
mandates be rescinded from our schools and release our children from these harmful
practices.

Thank you kindly,

Tanya Goodman

Protective and Loving Mother

To the Washington BOH:

Certain parties are pushing mRNA vaccine injections for toddlers. No child in our acquaintance was ever sick with Covid, even when their parents contracted it. And since the mRNA vax does NOT stop transmission and NO child to our knowledge has ever had symptoms that endangers them, then there is NO reason to give them mRNA vaccinations.

This only proves that someone is NOT being completely honest through this entire pandemic narrative.

We are confident the WA BOH has more integrity than to allow this outrage to happen. Thank goodness they do. Please know the friends and associates of the citizens of WA appreciate the better wisdom of the BOH in stopping this mandate. Thank you.

Pfizer, FDA Ask Court to Further Delay Release of COVID Vaccine Safety Data

Days prior to today's scheduled release of documents related to the Pfizer COVID vaccine, the pharmaceutical company asked a federal court to let it intervene before any information is released. The U.S. Food and Drug Administration said it agreed with the drugmaker's request.

Michael Nevradakis, Ph.D.

FDA supports Pfizer's motion, requests extension

In a response
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.documentcloud.org%2Fdocuments/fda-responds-to-pfizers-motion&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C076a55c06f50451a8d5c08d9f69dfc34%7C11d0e2>
to Pfizer's motion, the FDA said it welcomed Pfizer's "help," claiming that this is "due to the unprecedented speed with which the Court has ordered [the] FDA to process the records at issue."

In addition to supporting Pfizer's motion, the FDA also requested an extension from the court that would further delay the scheduled release of the documents.

Aaron Siri of the Siri & Glimstad law firm, who is representing PHMPT in its lawsuit against the FDA, explained
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Faaronsiri.substack.com%2Fposts/asks-the-court-to-delay-first&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C076a55c06f50451a8d5c08d9f69dfc34%7C11d0e217>
:

"The FDA now insists it must delay its first 55,000-page production until May 1, 2022 – four months after the Court entered its order.

"However, the FDA's own papers seeking this delay make plain it can produce at a rate of 55,000 pages per month in February and March."

The FDA claimed Pfizer is entitled to intervene in the case and the process of redacting the documents in question, due to the "Trade Secrets Act
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.americanbar.org%2Fgroups/property%2Fpractice%2F2016%2Fpresident-obama-signs-defend-trade-secrets-act%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C076a55c06f50451a8d5c08d9f69dfc34%7C11d0e2>
," signed into law by President Obama in 2016, stating
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.thegatewaypundit.com%2F2022/cover-pfizer-interferes-just-days-massive-foia-vaccine-data-drop-fda-claims-vaccine-manufacturer-must-help-review-redact-documents-public->

release%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C076a55c06f50451a8d5c08d9f69dfc34%7C11d0e2172
:

"FDA anticipates that coordination with Pfizer to obtain the company's views as to which portions of the records are subject to Exemption 4, the Trade Secrets Act, 18 U.S.C. § 1905, or other statutory protections will be a necessary component of the agency's endeavors to meet the extraordinary exigencies of this case."

However, according to The Gateway Pundit
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.thegatewaypundit.com%2F2021/01/25/cover-pfizer-interferes-just-days-massive-foia-vaccine-data-drop-fda-claims-vaccine-manufacturer-must-help-review-redact-documents-public-release%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C076a55c06f50451a8d5c08d9f69dfc34%7C11d0e2172>>
, the Trade Secrets Act is being misinterpreted by the FDA and Pfizer:

"[T]he protections provided under that law allow for an owner of a trade secret to sue in federal court when its trade secrets have been misappropriated and does not even imply that a company could intervene in a public records request through the FOIA."

PHMPT, in its Jan. 25 brief
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.documentcloud.org%2Fdocuments/172172-phmpt-responds-to-pfizers-motion&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C076a55c06f50451a8d5c08d9f69dfc34%7C11d0e2172>>
, also rejected
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.thegatewaypundit.com%2F2021/01/25/cover-pfizer-interferes-just-days-massive-foia-vaccine-data-drop-fda-claims-vaccine-manufacturer-must-help-review-redact-documents-public-release%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C076a55c06f50451a8d5c08d9f69dfc34%7C11d0e2172>>
the FDA's continued claim that it cannot adhere to the disclosure schedule Pittman ordered on Jan. 6, arguing "the FDA has more than sufficient resources to expeditiously produce the requested documents."

Siri, on his blog
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ffaaronsiri.substack.com%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C076a55c06f50451a8d5c08d9f69dfc34%7C11d0e2172>>
, also questioned this aspect of FDA's argument, writing
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ffaaronsiri.substack.com%2Fp%2Fasks-the-court-to-delay-first&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C076a55c06f50451a8d5c08d9f69dfc34%7C11d0e2172>>
:

"The FDA ... attests that over the coming weeks, it will have 28.5 full-time people reviewing the documents. Working 7.5 hours per day for 20 business days per month, 28.5 people reviewing 50 pages per hour can review a total of approximately 213,750 pages per month.

"The FDA affirms it has already 'allocated the equivalent of nearly 11 full-time staff to this project' and that 'a review speed of 50 documents per hour was within the normal range for document review in a complex matter' in private practice; and here the 50 document per hour rate would be faster since there is only a need to review for personally identifying information ('PII') for most pages. Hence, if the FDA's 11 full-time reviewers work only 7.5 hours per day and review 50 pages (not documents) per hour, the FDA could review over 88,000 pages per month in February and March. That is more than sufficient to produce the 55,000 pages per month currently ordered for these two months."

Instead of complying with this court's "reasoned order," Siri Wrote, the FDA claims these 11 reviewers can only review a total of 10,000 pages per month.

What the FDA does not say, and what basic math shows, according to Siri, is that a rate of 10,000 pages a month for 11 full-time reviewers amounts to only 5 pages per hour.

Siri also questioned the FDA's commitment to transparency and hinted at a cover-up, stating

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Faaronsiri.substack.com%2Fp%2Fasks-the-court-to-delay-first&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C076a55c06f50451a8d5c08d9f69dfc34%7C11d0e2172>>
:

"The Court is, other than Congress, the only check on the FDA. In a free country, transparency is paramount, and the FDA has chosen to thwart transparency and the requirements of FOIA by anemically understaffing the office it maintains to respond to FOIA requests.

"It is also incredible for the FDA to claim that compliance here would harm its health policy objectives. Even if the FDA really does need to spend \$4 to \$5 million which ... is an absurd overestimate, that is an inconsequential amount of its overall \$3.41 billion discretionary budget.

"It is understandable that the FDA does not want independent scientists to review the documents it relied upon to license Pfizer's vaccine given that it is not as effective as the FDA originally claimed, does not prevent transmission, does not prevent against certain emerging variants, can cause serious heart inflammation in younger individuals, and has numerous other undisputed safety issues."

Siri said the FDA's "potential embarrassment" over its decision to license the Pfizer vaccine must take a back seat to the transparency demanded by FOIA and "the urgent need and interests of the American people to review that licensure data."

Subject: Please Hear Me Out

External Email

Good afternoon,

I am one of MANY concerned parents who do not approve of the decisions being made to add the covid shot as a requirement for school aged children to attend school. I watched your virtual meeting yesterday between the Technical Advisory Group (TAG) and the WA State Board of Health (SBOH). Your "data" presented was not sufficient to even make an educated decision on Criteria #5 or #6 (or any of the 9 criteria for that matter), many of you even said so yourself. Please understand that your vote, your unanimous recommendation to the Department of Health, affects ALL of us parents.

For those of us parents who do not want our children being forced to take this experimental shot, please hear us out. If the tables were turned, and the government was trying to pass a law or new code/requirement that would force YOU to either do something to your child that you wholeheartedly did not approve of or pull them from school and uproot your whole life and everything you've worked for to move somewhere else to stand up for what you believe in, how would that make you feel? I have lived in Washington my entire life, so have my parents and my grandparents did too. Everything I know, love and have worked so hard for, is here. All of you with TAG and SBOH and many other agencies/organizations of government are jeopardizing every aspect of my life with your decisions. The public no longer has a voice, we are being ignored and censored left and right. PLEASE. Hear me. I am begging you. I will not allow my children to be injected with an experimental shot. My kids and myself are otherwise fully vaccinated and get our flu shots. I am NOT anti-vaccine. I am simply a very concerned mama bear who wants to protect my cubs. Imagine for a moment if the most important people in your life were being forced to do something they did not want with every fiber of their being and ask yourself how you would feel. My heart is SO heavy. Tears are flowing as I write this. Please understand that the choices you are making affect people who may not have the same opinions, views, beliefs as you do. Are you really ok with harming others just because they think differently than you do?

Since when is it a crime to protect your own child?! I have been called so many awful, ugly names, because I will not make my toddler wear a face covering in public. How is this ok? I don't call people names because they choose to wear a mask or get a shot. I truly respect everyone and the decisions they make for their children. We are all trying to do what is best for ourselves and our loved ones. Why can't that be respected? Why are you trying to rip that CHOICE away from me? What would it take for you to understand how I am feeling? Would it make a difference if I sat in front of you crying while holding my children? This is not fair. Surely you can see that. The vaccine is too new for me to trust it. We don't know long term effects. There is no way that we could! Covid has only been around for a few years and the vaccines even less time. Can you imagine if you voted yes for this to be implemented and years down the road we saw all kinds of defects and illnesses and deaths associated with these vaccines and boosters?? The blood would be on your hands. PLEASE, PLEASE, PLEASE. Let the PARENTS make the choices for their own children. Let ME decide if MY child needs this shot. I promise you I am far from alone on this. I know SO many people who feel this way. Our livelihood rests in your hands. Please speak up for us. Please understand that even though we may have different views, different beliefs, different opinions, that I still care about you. I would still save your life if given the chance. Love thy neighbor, right? I grew up in a household

with one parent who was typically Democrat and the other typically Republican. They loved each other all the more, while cancelling one another's votes. Let's get back to standing together, respecting one another, helping each other and being neighborly. I would never want to force YOU to do something you didn't want to do. Please show some respect, and don't force me to either. United we stand, Divided we fall. Help us END the division by allowing us all to make CHOICES for ourselves. What is right for you, may not be right for me.

Much love and respect,
A Concerned Mama Bear

Subject: 246-105WAC & WSOBH recommendations

External Email

Questions for the WSOBH and affiliates to consider:

1. Does the WSOBH know the difference between relative risk factors and absolute risk factors in regard to the data reported for COVID 19 vax? It is very important to know the difference and to take a closer look at this distinction. It is a game changer. The quoted "90+%" benefits and effectiveness becomes less than 1% effective.

2. Is the WSOBH aware that there is a "revolving door" of staff between the CDC and Pfizer and other Big Pharma leadership positions?

3. Is the WSOBH aware that there is a similar "revolving door" between FDA officials and Big Pharma, Monsanto etc. ?

4. Could that warrant the WSOBH to look into independent, peer reviewed studies, which are not funded by the CDC, Pfizer, etc.?

5. Who is paying for these studies and trials? The companies who will profit from the sale of their products? Does this parallel the "fox guarding the hen house"?

6. Is the WSOBH aware that Pfizer has the worst criminal record of Big Pharma companies for bribery, deception of facts, etc.?

7. Does the WSOBH know that Pfizer refuses to divulge the total list of ingredients of their Covid shot for 55 years? Why is that? What are they hiding?

8. Is the WSOBH aware that Dr. F@ci. has a patent on the COVID virus (manmade) and on the Pfizer vax? Do you know that Dr. F. has financial interest in the Moderna vaccine as well? He has made billions of \$\$\$ as a result of him recommending it. Could that be a conflict of interest?

9. Is the WSBOH aware that a state of emergency cannot last for 2 years without Wa. legislature renewing it? (Which they have not done). This unlawful EUA has allowed the roll out of an improperly tested, experiment product on hundreds of thousands misinformed, mislead and outright deceived Americans.

10. Is the WSBOH aware that the Pfizer Biotech shot has never been approved by the FDA??? They approved cominary, a drug that is not even available in the U.S. A.

11. Is the WSBOH aware that early, effective treatment recommended by many renown doctors has been systematically suppressed from the beginning of the pandemic? It has been estimated that 500,000 lives could have been saved if this early, effective treatment was made known. Do you realize that this was not been done in order to roll out a false EUA and the big money making plan by Big Pharma and other agencies and the people who stand to profit in the millions and billions of \$\$\$.

12. Has the learned professionals consider that this above sited situation has greatly contributed to the overburden health care system, not to mention the fact that many medical personnel lost their jobs because they refused to being coerced to take an experimental product against their better judgement and informed consent?

13. Does the WSBOH see anything suspect in the fact that the Big Pharma lobbyists were successful in influencing the U.S. Congress in 1986 to pass a law that relieved the Big Pharm from ANY liability of injury or death from their vax products?

14. Is the WSBOH aware that Gov. Inslee's daughter works for the Bill Gates Foundation? One of the admitted agenda items of Mr. Gates is to reduce the population by 15%. Did you know that the mRNA ingredient was initially used in a study to control animal population? Did you know that the miscarriage rate at a local hospital is 5x what it was before the vax roll out? i.e. this vax is a noteworthy, contributing factor of ending life in the womb...during all a 3 terms and even causing some stillbirths! What other science do we really need?

15. Does it seem curious to anyone on the WSBOH that one of today's presenters has been appointed by the Governor., who has a solid interest , financial and political, to run this agenda and coerced mandates roughshod over the people he has sworn an oath to represent?!

16. Has the WSBOH considered that your TAG team is a group people who are all aligned with the same scenario, even the same CDC charts and studies sited by the 3 presenters? Does that mean that the more the same studies are sited over and over again, that will make them more true and believable?

17. Does the WSBOH understand that they have “stacked the deck” through the choice of presenters and TAG members in favor of one point of view, that of the mainstream narrative, from government agencies meant to protect the people who are now the ones the people need protection from their propaganda, distorted information and official acts?

18. Does the WSBOH realize that they are not fooling us (well informed citizens) with your supposed “independent” presenters and tedious meetings?

19. When will the WSBOH stand up and wake up to what is really going on and has been for a very long time?

Dear WA STATE BOARD and HEALTH members and WA Representatives on the Health Board,

It is YOUR responsibility to fully understand everything about this new experimental 'vaccine'. In Germany there is a GRAND JURY proceeding to do just that. Experts in the field of vaccines are giving testimony about these experimental products. PLEASE,, PLEASE, PLEASE do not just listen to U.S. governmental health experts. There are proven 'conflict of interests' with the manufacturers. (Can skip to 50 min. for the most powerful testimony)

Thank you, Mary Abramson, retired school R.N.

No matter that he was 89, I find it strange that Dr. Montagnier has died so close to his possible testimony was to be given to the International Court: he is not the only person who was to testify who has suddenly died with no explanation of the cause of death. Also, you must be aware that the key individuals who are allegedly guilty of "crimes against humanity" and the murder of 100's of thousands worldwide are being currently investigated by The Grand Jury of Public Opinion, and if those individuals are as evil as they are alleged to be along with being incredibly wealthy, at this moment in time, they have the power to snuff out the lives of honest individuals who threaten them.

attachments\331C42403E044FD2_SB 5587 Part I Osmunson.pdf

External Email

Dear Washington State Board of Health Members and Staff,

Please add this to the March 2022 Board meeting. Health Impact Review

The Washington State Board of Health's intent is to help improve the health of the public, especially children, our future. However, the Board is currently relying on historical evidence regarding fluoride exposure. Science is not stagnant and takes a great deal of time to follow each item of health as the research is published. Board members have chosen to take on that task and the public is counting on you to do the impossible because you have a great impact on laws and rules at the state and local levels. Especially health mandates.

I promoted fluoridation of public water for about 25 years out of dental and public health school. However, over the last 20 years the science has become robust that mandating additional fluoride for everyone is harming the unborn, infants, and children most. The Board must personally review the current science; set up a committee of pharmacists, toxicologists, biochemists, and other specialties to review the current science on fluoride exposure; or give your staff the time to carefully review the primary research, not just other people's opinions.

Being equitable with errors and harm is not an improvement or beneficial to all. In fact, lower the IQ of someone with 150 IQ points and they wouldn't suspect the difference. Lower 5 IQ points on someone with 75 IQ points and their life skills and success in school, work, and relationships would suffer. Harming the developing brain is a lifetime of grief. . . think lead.

Think like the FDA. Does the science demonstrate efficacy, at what dosage and is it safe at that dosage. Without FDA approval, the Board of Health has the responsibility to make that determination.

The Board was asked by the Legislature to do a Health Impact review for HB 1684, fluoridation. They were given 10 days. On developmental neurotoxicity, just one of the several streams of evidence, the National Toxicology Program has taken over 4 years and although not finished the draft finds fluoride to be a developmental neurotoxin.

The HIR references do not provide empirical evidence to support the safety, effectiveness nor dosage of fluoride exposure. Fluoride ingestion has not gone through the FDA approval process, NDA.

Sometimes the most important streams of evidence are absent. Both Federal and State laws require Food and Drug Approval for any substance used with the intent to prevent disease.

Here is my brief evaluation of the Health Impact Review.

HIR SHB 1684

Review of Annotated References.

1. NIH Office of Dietary Supplements. Fails to follow the FD&C Act, the FDA, or RCW 69.50.101(p) definition of Drug.

Fluoride is listed in the US Pharmacopoeia as a drug. The FDA has determined fluoride is a Drug 21 USC 321 (g)(1)(B). The Washington State Board of Pharmacy determined fluoride is a legend Drug (June 4, 2009). Confirmed by correspondence from EPA Water Law Office, 2013. Fluoride is not essential for any body function and is not a nutrient. The absence of fluoride does not cause any disease. Dental Caries is not caused by the absence of fluoride. My nutrition profession would like to be helpful and promote fluoride, but they do not regulate drugs.

"Drug" means (1) a controlled substance recognized as a drug in the official United States pharmacopoeia/national formulary or the official homeopathic pharmacopoeia of the United States, or any supplement to them; (2) controlled substances intended for use in the diagnosis, cure, mitigation, treatment, or prevention of disease in individuals or animals; (3) controlled substances (other than food) intended to affect the structure or any function of the body of individuals or animals; and (4) controlled substances intended for use as a component of any article specified in (1), (2), or (3) of this subsection. The term does not include devices or their components, parts, or accessories.

Fluoride is exempt from poison laws when regulated under drug laws. If a person considers fluoride to be regulated as a nutrient, then Washington State Code defines fluoride as a poison and regulated under poison laws. The intent is not to poison people, so drug laws apply. The Board of Pharmacy correctly designated fluoride to be a legend drug so those fluoridating are not held to poison laws. Just because fluoride is to be regulated as a drug does not mean it is safer or more approved by drug regulatory agencies.

2, SDWA The EPA's review of the SDWA is not complete. This reference has little or no value because the EPA does not approve the efficacy for the prevention of diseases in man at any dosage of fluoride.

The SDWA prohibits the addition of anything for the treatment of humans. The SDWA treats water, not humans. In contrast, the FDA treats humans. The FDA correctly states the FDA does not regulate public water and the EPA says the FDA regulates substances used with the intent to prevent disease. Each agency claims they are not responsible and each blames the other leaving the least informed voter to review the empirical evidence. In Washington State, the Board of Health has jurisdiction of the support and promotion of fluoride added to public water.

3. National Primary Drinking Water Regulations EPA document is about treating water, not humans. EPA responded to my FOI that the SDWA prohibits EPA from adding anything to water for the treatment of humans. Fluoride does not treat water, does not

make it safer or cleaner. Fluoride is listed by the EPA as a contaminant. The Board of Health promotes the "contamination" of public water.

4. CWF CDC. "It is not CDC's task to determine what levels of fluoride in water are safe." The CDC does not determine the safety or efficacy of fluoride. For safety and efficacy and dosage, the CDC relies on the FDA. Think COVID Vaccination, FDA approval was required.

5. Healthy People 2030: Promotes policy but does not evaluate the policy based on current empirical evidence. Relies on other organizations to determine the safety, dosage and efficacy.

6. US Surgeon General promotes policy but does not approve drugs. Relies on other organizations and members were cherry picked for their position on fluoridation rather than balanced.

7. US HHS CDC. Indeed, oral health is part of overall health and needs to be improved. CDC does not evaluate the evidence of dosage, safety or efficacy. Jurisdiction for approval is with the FDA.

8. WSBH WAC 246-290-460 promotes fluoridation but does not evaluate the empirical evidence, nor take into account items listed in #1 above.

9. WSDH ODW "Is my drinking water fluoridated? See #1 above.

10. WSL Chapter 70A.125 RCW Penalties and Compliance does not cover fluoridation or the safety or efficacy of fluoridation.

11. WAS 246-290-100 pertains to requirements for water system plans, not empirical evidence on safety or efficacy.

12. IOWA Law. Not applicable for safety or efficacy or dosage.

13. Missouri Law. Not applicable for safety or efficacy or dosage.

14. Tennessee Law. Not applicable for safety or efficacy or dosage.

15. New York Law Not applicable for safety or efficacy or dosage.

16. WSDH document Not applicable for safety or efficacy or dosage.

17. WSDH Planning Guidebook. Not applicable for safety or efficacy or dosage.

18. Duncan Fiscal Note HB 1684 Not applicable for safety or efficacy or dosage.

19, Kliff history of fluoride wars . Not applicable for safety or efficacy or dosage.

Thank you for your careful consideration.

Sincerely,
Bill Osmunson DDS MPH

VOTE “NO” SB-5587 and Water Fluoridation

Part I

Bill Osmunson DDS MPH

American Environmental Health Studies Project, Board Chair

10300 181st Ave SE Issaquah, WA 98027 Residence; 1418 112th Ave NE Bellevue WA 98004 Office

SB-5587 will increase health disparities is a public health danger and very expensive, especially for the poor, schools, business, parents and harm appears to be multigenerational.

Comments are presented below in summary form, followed by a more detailed review of some serious errors with SB-5587. Part II provides more scientific support to vote “NO.” Finally, the need for notifications to water users regarding the potential for fluoride overexposure and risks is presented.

Summary: See also [Fifty](#) reasons SB-5587 will harm the public.

The lack of individual freedom of choice, excess exposure, serious risks and lack of FDA approval, lack of inclusion of current research, lack of scientific oversight on a moving target, and increasing social inequities (and more) make SB 5587 seriously harmful to public health. Hundreds of published research studies reporting fluoride’s danger have been published since the 2006 NRC report¹ for the EPA on fluoride in water. The 12 members were unanimous the Maximum Contaminant Level Goal as set by the EPA is not protective. Writing a law for a moving target is problematic.

Yes indeed, the EPA classifies fluoride as a **contaminant** and SB-5587 pushes water purveyors to contaminate their water. The legislature should not promote the contamination of water. The risks raised in the [2006 NRC](#) report included risks to [teeth](#),² [musculoskeletal](#), [reproductive](#), [neurotoxic](#) and neurobehavioral, [endocrine](#), [GI](#), [renal](#), [hepatic](#), [immune](#), [genotoxicity](#), and [carcinogenicity](#). Those links are for thousands of published studies reporting harm from ingested fluoride. Each one of those links provide ample evidence to stop fluoridation rather than further overdosing the public. Many studies since 2006 have supported the NRC 2006 analysis of risks from fluoride and few have failed to support the concerns.

Of urgent concern is fluoride’s effect on the developing brain. See [23 human studies](#) published from just 2017 through 2021 reporting harm to the developing brain. Fluoride is presumed to be a developmental neurotoxin, more toxic than lead, lowering IQ. Lower IQ is known to increase special education in schools, increase drop outs, increase incarceration rates, increase crime, increase divorce, increase job loss and harms the low IQ the most. SB-5587 increases human suffering and significant monetary costs to society. The falsely alleged estimates of dental caries prevention pale in comparison to harming the brain. Money spent on fluoridation should be spent on health education.

Other laws can be more effective in reducing dental caries such as using fluoridation money to fund health clinics and taxing the cause of dental caries to pay for individual health education. Other sources of fluoride ingestion are cheaper and readily available for those who want to ingest fluoride. Mandated medications for everyone is has ethical and pharmacological risks. One dose does not fit everyone any better than one size shoe fits everyone.

¹ Fluoride in drinking Water a Scientific Review <https://www.nap.edu/catalog/11571/fluoride-in-drinking-water-a-scientific-review-of-epas-standards>

² All 12 members of the NRC committee agreed the MCLG should prevent dental fluorosis. See page 23

Grandjean et al,³ 2021 [“A Benchmark Dose Analysis for Maternal Pregnancy Urine-Fluoride and IQ in Children”](#) reporting 1 IQ loss at 0.2 mg/L mothers urine fluoride concentration must be carefully reviewed by the legislature and Washington Board and Department of Health. Note, urine fluoride and water fluoride concentrations are similar. At fluoridation concentrations of 0.7 ppm in public water (ppm is the same as mg/L), 5 IQ points are lost. Some loose more and some less, the mean loss is slightly more than lead. The highly respected international authors of this study have hundreds of published studies, many in the area of toxins on the developing brain. Their expertise has been accepted by research publications, courts and universities.

A careful scientific review inclusive of all stakeholders (including vulnerable members of the public) rather than blind trust in historic flawed policies and laws, needs to be a top priority. The status quo is harming the public.

SB - 5587 is NOT supported by a careful review of current science. Topical fluoride has benefit, swallowing does not. Studies supporting fluoridation are mostly historic and have serious flaws. Water fluoridation as promoted by HB 1684 will cause harm in many ways, which constitutes negligence⁴ on the part of those promoting this bill, advocating for it, and voting for it. Some harms are outlined below in the remainder of the summary, and are described in further detail with citations following the summary.

SB - 5587 will most seriously harm the unborn, infants, children, those with lower IQ and fails to warn pregnant mothers and caregivers of known risks. Fluoridation has similar if not greater risk to the brain than lead.

SB - 5587 is built on historical research, policies, assumptions, marketing and trust rather than current science. Science is dynamic and growing. Laws are slow to respond to quality science. Many studies have been published and more than 50 streams of evidence must be considered which have significant impact on SB - 5587. A careful review of the science takes a great deal of time.

SB - 5587 fails to provide individual recommended fluoride dosages for benefits and risks. Although water systems regulate the concentration of fluoride in water, they do not regulate the amount of water each person drinks. Therefore, individual dosage is unregulated and of most concern to the unborn and infants.

SB - 5587 fails to notify water purveyors that the Washington State Board of Pharmacy determined that the ingestion of fluoride with intent to prevent dental caries makes fluoride a **prescription drug**. The US Food and Drug Administration has determined that fluoride for ingestion is an **unapproved drug** and the evidence for its efficacy is incomplete. Pharmacopeias list fluoride as a drug. If not regulated as a drug, fluoride fits within the definition of poison per RCW 69.38.010 (i.e., a substance that, when introduced into the human body in quantities of sixty grains or less, causes violent sickness or death). Note: 60 grains is 3,888 mg, and fluoride can cause death at 5 mg/kg body weight, or around 250-500 mg for an adult, less for a child. Fluoride is a poison under this RCW definition, however, it is exempt from poison laws in

³ Phillippe Grandjean is Professor at the T.H Chan Harvard School of Public Health and University of Southern Denmark. Howard Hu and Morteza Bashash are at the Department of Preventive Medicine, Keck School of Medicine USC. Christine Till and Rivka Green and David Flora, Faculty of Health, York University, Martha Tellez-Rojo, Mexico, Peter Song Department of Biostatistics, School of Public Health, University of Michigan, Bruce Lanphear Faculty of Health Sciences, Simon Fraser University, British Columbia,, Esben Budtz-Jorgensen Department of Biostatistics, University of Copenhagen, Denmark.

⁴ Negligence is defined as the failure to use the degree of care appropriate to the circumstances, resulting in an unintended injury to another.

Washington State when regulated as an approved legend drug or exempted by law.⁵ Fluoride has not gone through the FDA approval process for ingestion with the intent to prevent dental caries, has no approved label, and no NDA number. Topical fluoride in fluoridated toothpaste has FDA approval.

The World Health Organization's Technical Report Series 846, *"Dental and Public Health administrators should be aware of the total fluoride exposure in the population before introducing any additional fluoride program for caries prevention."* Many in Washington State are ingesting too much fluoride even without fluoridated water.

WHO's 1992 recommendation, *"Estimation of the amount of fluoride ingested from all environmental and dietary sources is important so that rational and scientifically sound decisions can be made when guidelines for the use of fluorides are reviewed periodically and modified."*

With many serious streams of evidence needing to be considered, and Federal reviews of just one of those streams of evidence has taken decades, the WSBOH will not be able to provide a complete literature review and reasoned studied advice in such a short time. A cut and paste of historical policy and unscientific marketing opinions is inadequate and will result in harm to the public. As stated earlier, an unscientific review would constitute willful negligence on the part of the legislators promoting this bill and those voting for it.

Fluoride's mechanism of action is topical, not via ingestion. Fluoride works by interacting topically after teeth erupt. The evidence for its effectiveness when applied to erupted teeth is well supported. Fluoride incorporation into developing teeth is very minor and does not contribute to caries prevention. Fluoride is not a nutrient nor essential for any bodily function. A very small amount of ingested fluoride makes its way to saliva to provide some topical fluoride after tooth eruption, but this amount is 50 to 100 fold less than what is obtained from fluoride that is present in food and beverages. Enamel and dentin demonstrate significant transport hindrance. The effective pore radii of the transport pathways in the enamel are approximately 0.7-0.9 nm.

Many are ingesting too much fluoride and are overexposed. The two charts below, [Neurath et al, \(2019\)](#) compare dental fluorosis rates as reported by the National Health and Nutrition Survey, in the 1999-2004 and 2011 to 2012 survey periods. Moderate and severe dental fluorosis has significantly increased in the roughly 10 years between these two surveys.

⁵ A legend drug is a drug approved by the U.S. Food and Drug Administration that can be dispensed to the public only with a prescription from a medical doctor or other licensed practitioner.

[Dong et al \(2021\)](#) looked at the NHANES 2015-2016 sR and reported an increase in dental fluorosis to 70% of children and adolescents. [\(NIDCR\) Oral Health in America](#) is a sobering admission Oral Health in the United States needs to improve but even more fluoride is not the answer.

SB - 5587 puts more emphasis and money on a failed public health policy rather than taking a fresh look at alternatives to better address oral health. Using a toxic chemical, a legend drug with an uncontrolled dose, to try to prevent dental caries, not only fails because it can't prevent caries but the policy is flawed because the policy fails to help those children develop good oral health habits which prevent other diseases such as periodontal disease, oral cancer, and good overall health.

Studies typically cited to support water fluoridation are of low quality, need to be carefully evaluated and understood, and need to be considered with all of the more recent streams of evidence. Studies concluding fluoridation is effective, have problems, which include but are not limited to: not one study corrects for unknown confounding factors which is most important, not one prospective randomized controlled trial (RCT),⁶ socioeconomic status usually not controlled, inadequate size, difficulty in diagnosing decay, delay in tooth eruption not controlled, diet (Vitamin D, calcium, strontium, sugar, fresh and frozen year round vegetables and fruit consumption) not controlled, total exposure of fluoride not determined, oral hygiene not determined, not evaluating life time benefit, estimating or assuming subject actually drinks the water, dental treatment expenses not considered, mother's fluoride exposure not measured, breast feeding and infant formula excluded, fraud, gross errors, and bias not corrected, and genetics not considered. The FDA is correct, the evidence for efficacy is incomplete.

Note the "Fluoride Rich Zone figure to the right. When the tooth is sectioned like slices of bread and the fluoride concentration measured in each slice, the fluoride concentration in each slice is similar regardless of fluoride intake except on the outside layer from topical fluoride. Fluoride does not migrate through the tooth as we were taught in dental school.

No agency accepts jurisdiction for determine the safety, dosage, label and benefit of fluoridation. In a letter from the Washington State Department of Health (WSDH) I was informed the WSDH "*will rely on known national entities like the CDC and EPA to assess the science*" on fluoridation.

⁶ A prospective study is an epidemiologic study in which the groups of individuals (cohorts) are selected on the bases of factors that are to be examined for possible effects on some outcome. For example, the effect of exposure to a specific risk factor on the eventual development of a particular disease can be studied. The cohorts are then followed over a period of time to determine the incidence rates of the outcomes being studied as they relate to the original factors in question. Also called a cohort study. Examples include concurrent cohort studies and randomized controlled trials.

The Washington State Legislature relies on the WSDH who rely on agencies not responsible for determining the safety, efficacy, dosage and label of the fluoride drug. Neither the CDC nor the EPA⁷ are charged by Congress to regulate the addition of fluoride in water with the intent to prevent disease. The EPA is prohibited from adding anything to water for the treatment of humans, EPA treats water. EPA relies on the FDA. The FDA does not regulate public water systems. When the CDC warned care givers to avoid using fluoridated water to make infant formula, the WSDH disagreed and protected policy rather than infants.

Jurisdiction of fluoride is like a hot potato tossed to “someone else” and no one has jurisdiction. HB1684 should be amended to designate an agency(s) to have jurisdiction. Congress has charged the FDA with jurisdiction and the Washington legislature should do the same. Once fluoride is FDA approved, the dispensing of fluoride in water needs to have WSDH jurisdiction.

I. REVIEW of SOME of SB - 5587 Errors

Sec. 1 (1) claims fluoride is a proven mechanism for reducing health disparities affecting people of all stages of life.

Consistent and undisputed evidence demonstrates there are disparities in health and oral health. However, fluoridation has not and does not close those disparities (e.g., see [\(NIDCR\) Oral Health in America](#)). The science is robust, **SB - 5587** will make disparities worse by causing harm to many.

A Cochrane analysis (2015) of fluoridation research lacked a single RCT, reported studies to be mostly historic, mostly of naturally occurring fluoride with high mineral content, before much toothpaste was used, no life-time benefit, no benefit for social disparities, but studies available did find relative benefit from tooth decay. We will show how those studies of benefit have serious flaws.

Studies reporting increases in dental caries in low socioeconomic cohorts are low quality with many flaws (see [Neurath et al \(2017\)](#))

Sec 1 (2) “The legislature further finds . . . fluoridated water promotes community oral health. . . .”

Fluoridation does not promote health or reduce disparities. The graph by [Osmunson](#) below is from data of the National Survey of Children’s Health, US HHS, 2005. Note the 50 states of the USA and reported “good to excellent teeth.” About 80% of the wealthy have good teeth and about 52% of the poor report “good to excellent teeth.” However, fluoridation has no common cause. Oral health and health equities would be better with fluoridation money spent on improving income and health education rather than imposing a highly toxic chemical with serious side effects.

⁷ Safe Drinking Water Act Section 1412 (b)(II)

Sec 1(3) “The legislature further finds . . . bridge social inequities” See comments on Sec. 1(1). No quality research demonstrates fluoridation bridges social inequities. The harm from **SB - 5587** will increase social inequities.

Sec 1(5) “The legislature further finds . . . fluoridation is cost-effective. . . ” Claims of benefit rely on assumption of benefit and estimates the cost savings based on that flawed assumption.

[Ko \(2015\)](#) estimates a savings of “\$3 per person per year for best-case scenario, but this savings is eliminated by the estimated cost of treating dental fluorosis.”

[Maupome \(2007\)](#) compared cost of dental treatment for children in health maintenance organization (HMO) members in fluoridated Vancouver, WA ((\$186/year) with unfluoridated in Portland, OR (\$180/year) and found enough savings to pay for equipment repairs, but not for the costs of installing the equipment, introducing the chemicals, or the costs of treating dental fluorosis. About 2% difference is within the differences in diagnosis and treatment skills of the dentists.

Estimates usually do NOT include the cost of: 1) other chemicals added (e.g., pH balancing chemicals to reduce damage to water system infrastructure) because hydrofluorosilicic acid (HFSA) is used, 2) fluoride testing, 3) record keeping and reporting, 4) extra hazmat precautions and training, 5) fluoride equipment maintenance, upgrades & replacement, 6) fluoridation promotion such as HB 1684, 7) added liability insurance and legal fees, 8) holding fluoridation plebiscites, 9) HFSA spills and fluoridation overfeeds, 10) avoiding fluoride in families sensitive to fluoride, 11) treating objectionable fluorosis, or 12) treating other fluoride-related health problems.

Frequently proponents suggest they are only adjusting the natural fluoride concentration in the water. If the natural concentration of arsenic, lead, or other toxins were “adjusted” higher, we would also object. “Natural” fluoride is generally found in the form of calcium fluoride, a less toxic form of fluoride than the industrial waste product HFSA. In addition, the bioavailability of added fluoride chemicals like HFSA varies depending on the hardness of the receiving water. Washington State for the most part has

relatively soft water, and thus the bioavailability and potential intake of fluoride into body tissues is greater than locations where the water is harder. Generic policies regarding target concentrations of fluoride fail to account for these types of important factors determining exposure.

Sec 1 (6) “The legislature further finds. . . fluoridation. . . is essential . . .”

Fluoride is not an essential nutrient, mineral, contaminant or drug regardless of the term used. Dental caries are **not** due to inadequate fluoride ingestion. For example, scurvy is the result of inadequate vitamin C, dental caries are not the result of inadequate fluoride ingestion. The concept of “essential” is a marketing term without any physiologic or measured evidence.

British Columbia has lower dental caries rates without fluoridation than Washington State. Oregon with about 19% fluoridated has slightly lower caries than Washington with about 44% of the population fluoridated. Some areas of Europe have lower caries rates and no fluoridation. Fluoride is more toxic than lead and fits within poison laws unless regulated as a drug and is a legend drug based on RCW.

Two studies published using WHO data graphically demonstrate dental caries decline regardless of fluoridation. Fluoridation is not essential for good oral health.

Chen et al, BMJ 5 October

Neurath: Fluoride Research 2006

Colquhoun 1997 ISFR published the following graph illustrating the decline of dental caries prior to fluoridation. No studies on fluoridation address the factors causing a dramatic reduction in dental caries **prior** to fluoridation. As can be seen above, other countries continued the decline regardless of fluoridation status. The FDA is correct when finding the evidence for benefit from fluoride ingestion is incomplete.⁸ The recent PPTOX keynote speaker, former director of the US NTP and OHAT confirmed ingested fluoride would not reduce dental caries.⁹

In contrast, to Colquhoun above, the CDC presents Figure 1 of support for fluoridation. At first glance it appears an increase in fluoridation reduces dental caries. However, the CDC cherry picked the years. Indeed, caries declined and the percentage of the population fluoridated increased but the two events are unrelated.

CDC would have us believe huge caries reduction resulted from an implausible 17% increase in those fluoridated. The fluoride was not targeted to high risk individuals.

⁸Published in Drug Digest 1975

⁹ Prenatal Programming Toxicity Conference, January 2022, Del Linda Birnbaum retired from National Toxicology Program and Office of Health Assessment and Translation881717

The legislature has failed to provide current scientific support for the marketing claim that fluoridation is essential. Most dental caries decline took place prior to fluoridation. No one knows what factors were most significant in causing the decline, and no studies have corrected for those highly significant unknown factors.

Consider these countries response to fluoridation:

Austria	REJECTED: "toxic fluorides" NOT added
Belgium	REJECTED: encourages self-determination – those who want fluoride should get it themselves.
Finland	STOPPED: "...do not favor or recommend fluoridation of drinking water. There are better ways of providing the fluoride our teeth need." A recent study of Finnish data found "...no indication of an increasing trend ...of caries."
Germany	STOPPED: A recent study of German data found no evidence of an increasing trend of caries.
Denmark	REJECTED: "...toxic fluorides have never been added to the public water supplies in Denmark."
Norway	REJECTED: "...drinking water should not be fluoridated"
Sweden	BANNED: "not allowed". No safety data available!
Netherlands	REJECTED: ". . . at present the addition of chemicals to drinking water is prohibited by law in the Netherlands. This law came into effect because it was widely perceived that drinking water should not be used as a vehicle for pharmaceuticals. Furthermore, fluoridation of drinking water would conflict with the freedom to choose for natural drinking water. This principle of freedom of choice is considered as an important basic principle in the Netherlands." SOURCE : 2007 – RIVM report 270091004/2007 for the Dutch Ministry of Health, Welfare and Sports.
Hungary	STOPPED: for technical reasons in the '60s. However, despite technological advances, remains unfluoridated.
Japan	REJECTED: "...may cause health problems...." The 0.8 -1.5 mg regulated level is for calcium-fluoride, not the hazardous waste by-product which is added with artificial fluoridation.
Israel	SUSPENDED mandatory fluoridation until the issue is reexamined from all aspects.: June 21, 2006 "The labor, welfare and health Knesset committee"
China	BANNED: "not allowed" China sells their fluoride toxic waste to the USA for us to drink in fluoridated water.
France	REDUCED: Was 50% purchased fluoridated salt, decreasing to 30%.

US organizations opposed to fluoridation include the International Academy of Oral Medicine and Toxicology, International Academy of Biological Dentistry and Medicine, and the American Academy of Integrative Medicine.

Numerous USA organizations support fluoridation, but those are endorsements, not science, and those organizations do not accept jurisdiction or liability for fluoridation.

The graph below is data from Iida showing with increased fluoride concentration in water, dental fluorosis increases and dental caries (red line) has very slight decrease between 0.3 and 1.2 mg/L. If effective, fluoridation has no public health benefit.

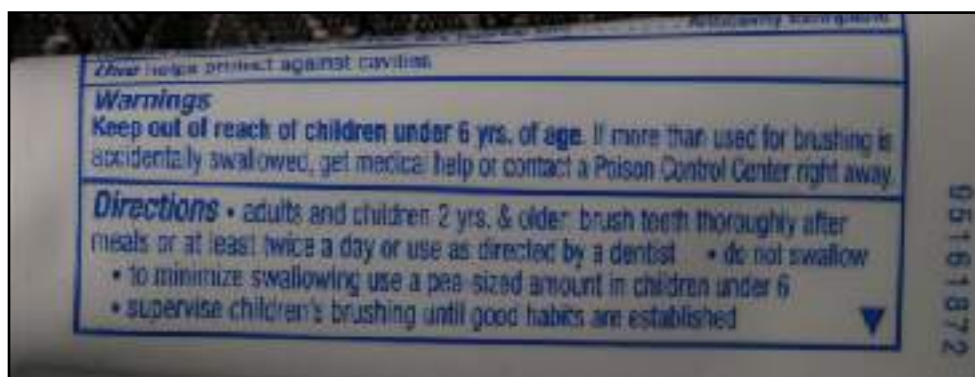

The American Dental Association provides the picture of this poor child seriously harmed with Early Childhood Caries in its promotion of water fluoridation.

Fluoridation did not help that child. Fluoridation does not help just bottom teeth. This child has baby bottle caries, going to bed with a bottle of juice and sucking on it while sleeping. The tongue protected the bottom teeth to some extent but not the top. The damage is tragic, and health education could have helped, not fluoridation. Forcing water fluoridation of 100% of Washington State or the world will not help children like this, but health education can.

Fluoridated toothpaste is FDA approved. Note that the label states, "Drug Facts" because fluoride is a drug when marketed with the intent to prevent dental caries and is a drug because it is listed in the Pharmacopeias. The warnings on the label are especially intended to protect infants and children. The picture below shows a large pea size of toothpaste, which contains twice as much fluoride (about 0.5 mg)

than the amount of fluoride recommended by the FDA in drinking water (about 0.25 mg per large glass of water). In other words, each large glass of fluoridated water contains about a quarter milligram of fluoride, which in the form of toothpaste, the FDA warns not to swallow.

FDA 1975 warned manufacturers of fluoridated supplements the evidence for efficacy was incomplete and maintains that position today.¹⁰ The FDA sent a warning to the company DS Waters of America that their fluoridated Nursery Water product is misbranded and illegal to be sold for children under the age of two. Fluoride ingestion has never gone through the FDA approval process, and fluoride is determined by both the FDA 21 USC 321 (g)(1)(B) and Washington State Board of Pharmacy to be a legend drug.

In 2013, Steve Neugeboren, Associate General Counsel of the EPA's Water Law Office [responded](#) to the question of who had jurisdiction over the fluoride added to water supplies as follows: "*The FDA, remains responsible for regulating the addition of drugs to the water supply for health care purposes.*"

In 2001, the FDA testified fluoride is a drug. In 2012 FDA Donald Dobbs Consumer Safety Officer Division of Drug Information responded, "... FDA has no authority to regulate fluoride compounds used to fluoridate public drinking water. . . is regulated by the US EPA" SDWA.

¹⁰ Drug Digest 1975

EPA and FDA each assign jurisdiction for regulating chemicals used in water fluoridation to the other agency, and thus neither are taking responsibility for determining the safety and/or efficacy of the practice.

The EPA testified to Congress in 2001, "The EPA has no "empirical scientific data on the effects of fluosilicic acid or sodium silicofluoride on health and behavior."

The FDA warned manufacturers of fluoride supplements, ". . .there is no substantial evidence of drug effectiveness as prescribed, recommended or suggested in its labeling. . . marketing is in violation of the new drug provisions of the Federal Food, Drug, and Cosmetic Act; they have, therefore, requested that marketing of these products be discontinued." FDA Letter to 35 Companies (DRUG THERAPY 1975).

EPA scientists have expressed their concern through their union, "In summary, **we hold that fluoridation is an unreasonable risk**. That is, the toxicity of fluoride is so great and the purported benefits associated with it are so small - if there are any at all – **that requiring every man, woman and child in America to ingest it borders on criminal behavior on the part of governments.**" **Dr. J. William Hirzy, Senior Vice-President, Headquarters Union, US Environmental Protection Agency, March 26, 2001.**

Sec. 2 of SB - 5587 attempts to pressure water purveyors to fluoridate their water and fails to explain the other sources of fluoride available to people, such as tea, toothpaste, and supplements. Giving people freedom of choice for treatment of a non-lethal and non-contagious disease (dental caries) is the ethical approach. Forced treatment without informed consent is not ethical.

The fluoride chemicals added to water are not pharmaceutical grade but have contaminants. Currently, a shortage of fluoride chemicals in the USA is forcing some suppliers to purchase fluoride from other countries (including China) and the contaminants in these sources are not monitored or known.

Sec. 4. SB-5587 appears to make discontinuing fluoridation difficult, in effect strong arming water systems with the assumption that the legislature knows best, and the assumption that fluoride ingestion has benefit without risk. Science is dynamic and our understanding evolves. One size or dosage does not fit everyone. Variations in ages, genders, and the existence of other health problems make mass medication using an unapproved drug dangerous and illegal.

Sec. 5. SB-5587 calls for implementing assessments, but the assumption built into the bill is that fluoridation will reduce inequities. Connecticut, Detroit and Boston have fluoridated for over 60 years and report a crisis of dental caries. Kentucky (2003), fluoridated for 50 years, was awarded 100% fluoridated by the American Dental Association and yet ranked as the #1 highest state in number of edentulous residents (individuals without teeth). Fluoridation has not helped Kentucky. Giving a highly toxic substance to everyone without consent is not ethical or effective.

II. SB-5587 MUST INCLUDE A PROVISION FOR NOTIFICATION OF WATER USERS REGARDING THE RISKS AND POTENTIAL FOR OVEREXPOSURE FROM FLUORIDE AND FLUORIDATION.

1. **Dental fluorosis** is an undisputed and known risk of fluoridation and brushed off by some as only cosmetic. Cosmetic harm is harm for some people. Damage to a person's face resulting in a scar is both harm and cosmetic. Dental fluorosis is a biomarker of excess fluoride exposure, and thus an indicator of potential harm to other tissues in the body. Fluoride promoters' assumption that the only risk of fluoride is to teeth, and the presumption that it is safe for all the other cells and functions of the body is seriously flawed. I sometimes treat dental fluorosis. Lifetime treatment for teeth damaged by fluorosis can cost over \$100,000 per person.

Below is an electron microscope look at dental fluorosis.

Topical fluoride makes the tooth harder and more difficult to diagnose the caries, resulting in a bombed-out tooth when the caries are finally diagnosed.

Below are photographs taken before and after treatment of dental fluorosis, at a cost about \$1,000 per tooth, with an average treatment lifespan of 15 years (i.e., requiring future re-treatment). (Photo Courtesy of Dr. Markus)

Caregivers should be notified and clearly instructed not to give fluoridated water or fluoride supplements to their children, and to teach their children to spit out toothpaste before swallowing.

A 2009 review paper covering 17 studies found that *“Infant formula consumption was associated with a higher prevalence of enamel fluorosis in the permanent dentition”* Hujoel et al, JADA:2009,140:849.

The [CDC](#) states that “*Dental fluorosis only occurs when younger children consume too much fluoride, . . . when teeth are developing under the gums.*” And this is the same time during which fluoride is the most dangerous to the developing brain.

2. Development neurotoxicity from fluoride is a serious risk.

At a minimum, **SB-5587** needs to require that water purveyors providing warnings regarding the adverse effects of excess fluoride exposure and the risks to vulnerable subpopulations.

For over four years the National Toxicology Program has been reviewing fluoride’s effect on the developing brain, developmental neurotoxicity. A [draft review](#) is available and is reported to be finalized later this Spring. However, the draft report does not include the most recent studies. In just a few months, the research has become more exact and specific reporting harm with ever lower fluoride concentrations.

Here are links to:

[23 human studies](#) published since 2017 on the association of fluoride exposure and reduced IQ.

[125 human studies](#) published on cognitive function and IQ score.

In 2021, Grandjean et al published [“A Benchmark Dose Analysis for Maternal Pregnancy Urine-Fluoride and IQ in Children”](#). This is the second fluoride benchmark study published that finds fluoride causing lower IQ and using measured data of urine-fluoride concentrations. The authors conclude, “*Thus, the joint data show a BMCL in terms of the adjusted U-F concentrations in the pregnant women of approximately 0.2 mg/L. These results can be used to guide decisions on preventing excess fluoride exposure in pregnant women.*”

Note that urine fluoride concentrations are similar to water fluoride concentrations, which make the measures used in these modern studies particularly valuable. Based on this study and others, water fluoridation at 0.2 ppm (mg/L) would cause loss of 1 IQ point. Fluoridation target concentration is at 0.7 ppm, and is reported to cause a loss of 5 IQ points. See Fig 1 below from Grandjean et al (2021)

Note Fig 1 below from Grandjean shows about a 5 IQ point loss with urinary (and water) fluoride concentration of 0.7 ppm.

Mothers consuming fluoridated water are lowering their child's IQ. Scientists are starting to evaluate the effect of toxins on sperm development, where it appears that fluoride may lower sperm count, and the effects may be carried on for 2 to 4 generations. ([2022 PPTOX Conference](#)).

SB-5587 must require water purveyors that fluoridate to warn mothers to not drink fluoridated water and caregivers to not use fluoridated water for making infant formula.

The significance of 5 IQ point loss is illustrated in the two bell curves below. The low IQ have a disproportionate harmful effect. Our special education classes have a 57% increase. The number of gifted have a 60% reduction. How can we tell if an average child should have been gifted. “Frying” our children’s brains has a serious impact on all of us.

In 2006, the EPA was advised by the National Research Council to do a Dose Response Analysis and Relative Source Contribution Analysis. Their report was published in 2010, and it showed that at least a third of children under seven years of age would exceed what was then considered as a safe dose of fluoride.

EPA’s Figure 8-1 (reproduced below) graphically illustrates those most at risk. Note that infants are not included, even though these are an even greater at risk population. The percentage above the black line are ingesting above “safe” dosage levels. The black line is demonstrating redefining the “safe” daily dosage up by 33%, but even with that change, children will still not be protected. In addition, this figure only addresses water intake for 90% of the public, and does not address the 10% drinking the most water and infants are ignored.

The graph below ranks the 50 USA states and the reported “mental retardation” in 6 to 17 year olds per 10,000 population of their state. Although there are many factors affecting what is reported as “mental retardation,” fluoride does appear to have a common cause.

In 2016, the EPA was taken to court to defend a claim that their Maximum Contaminant Level for fluoride is not safe and allows for harm to the developing brain. The case is under the Toxic Substances Control Act in the Federal Court in San Francisco (Case Number: Civ. No. 17-CV-02162-EMC). EPA hired experts because the EPA claimed they don't have anyone capable of determining the toxicity of fluoride. The EPA is not capable of protecting the public from the risks of fluoride and the WSDH and WSBH rely on the EPA to determine the toxicity of the fluoride contaminant. The judge has scheduled the next hearing in the case for June 7, 2022.

Although the focus of fluoride researchers in the last few years has been on developmental neurotoxicity, other health risks from excess fluoride exposure to teeth, musculoskeletal, reproductive, neurotoxic and neurobehavioral, endocrine, GI, renal, hepatic, immune, genotoxic, and carcinogenicity must also be reviewed. Consider a search on www.pubmed.gov for terms such as “fluoride cancer” “fluoride thyroid” and “fluoride _____” filling in the blank with each of the risks as listed by the NRC 2006 review of fluoridation for the EPA.

Thank you for your careful consideration of HB 1684's serious flaws and vote NO.

The following survey response is submitted:

1.

State Board of Health Meeting Date:

2/17

2.

Agenda Item or Issue:

Covid vax for schoolchildren

3.

Your Name:

Andrea Sehmel

4.

Do you have a professional title?

1. Yes

R.N.

5.

Are you representing an organization?

2. No

6.

Address:

2010 South Bay Rd NE Olympia Wa 98506

7.

Email:

andresehmel@comcast.net

8.

Phone Number (Include Area Code):

3609990695

9.

Do you have any special expertise relevant to this topic?

1. Yes

Care of acutely and chronically ill patients x 36 years Mother of two young men with perfectly good hearts... until now

10.

Are you testifying on a specific proposal under consideration by the board?

1. Yes

Covid vax of schoolchildren

11.

Are you Pro or Con on the proposal?

2. Con

This vaccine is largely experimental and has incurred over a MILLION serious adverse events. It is neither ready for the populace nor necessary, given the survivability of the current variants

Subject: Kettle Falls, WA removes mask mandate - Federal Funding at Risk

Good Morning!

Kettle Falls, WA removes mask mandate for their school children. The real risk? 'Defying Inslee and risk losing federal funding.'

We know why you are hesitant about removing masks from our children's faces. It looks like the news is starting to pick up on this as well. <https://www.kxly.com/kettle-falls-school-district-defies-gov-inslees-mandate-makes-masks-optional-for-students-and-staff/>

Warmly,

Angela,

Angela Pifer, Ms, Functional Medicine Nutritionist, LCN, CN

Subject: Our children Our future

As parents we are simply done.

We are done with the "rules for thee, but not for me" attitude on full display at the Super Bowl. The people making the rules are not following the rules. Why? My guess is they know the rules are not about preventing illness.

We are done watching our children languish and suffer because adults are unwilling to take responsibility for their own health. Two years into this, we now have the tools for

everyone to protect themselves in whatever way they deem necessary. It doesn't matter what anyone else does.

We are done watching our children be used as a bargaining chip. Your job is to PROTECT our children who are our future. Instead you MONETIZE them for school funding. The WEA is shamelessly using them to push for a raise.

Masks need to be removed immediately.

And further, requiring the Covid vaccine to attend school is absurd. You can skew statistics to make any point you want as we saw in the recent TAG meeting. You can pretend to directly compare it to other vaccines on the schedule when a simple search will tell you that you are comparing apples to oranges. And you can fool a lot of people with this intentional manipulation. What you can't do is skew the long term data because there is NONE. There are cleverly carefully curated graphs to show what the vaccine "likely" does. But there is no information telling us its long term affects on ANY body, let alone a young growing body. Because the information doesn't exist. We already know efficacy with regards to Covid declines fairly quickly. What we don't know is how these vaccines impact every part of our beautifully complex bodies. So what's the plan?

How do you want to be remembered? Please put the children first.

To: Washington State Board of Health Technical Advisory Group regarding inclusion of COVID-19 vaccines on required list for school students.

I submit the following text and attached data card and it's indicated files as public comment to the above project. This is sent via registered mail, receipt requested.

These files are audio recordings of portions of the event below which occurred and was presented live via the internet on January 24th, 2022. I suggest you listen to these files in the following order, file C then file B then file A, and refer to the detail chronology reference below which shows the topic discussed at particular times for each file – this chronology will be handy should you wish to refer back to particular discussion points. Note: name spellings are approximate.

Finally, in view of this information, I ask that you reject the proposed action, then share this material with the entire State Board of Health and every County Board Of Health.

Former Pfizer VP discusses vaccine problems

I present the following for review by the Washington State SBOH TAG group assigned to evaluate inclusion of COVID 19 vaccination on the list of required vaccines for school students in this state.

This document with link is included on the enclosed SD data card.

**Wayne Espy
2319 Gale Place
Everett, WA 98203
Cell 206-276-2743**

VAERS analysis of COVID vaccines by lot show EXPONENTIAL variability of event counts compared to flu vaccine history.

Primary discussion of this starts at 40 minutes into the video linked below. Particularly see discussion and graphs starting at the 45 minute to one hour time-period.

Couple this with indications that medical facilities are increasingly directing personnel to not report incidents to VAERS, which would reduce counts for more recent batches.

Presenter is Dr.Mike Yeadon, former vice-president of respiratory research for Pfizer.

P.O. Box 47890
Olympia, WA 98504-7890

SENT VIA EMAIL TO AVOID DELIVERY DELAY
ORIGINAL BY US MAIL, RETURN RECEIPT REQUESTED

Dear Mr. Grellner:

This letter serves as your formal invitation to attend a One Washington sponsored educational seminar entitled "Covid-19 Vaccines: A Second Opinion" featuring two guest presenters, Dr Robert Malone, and Dr. Ryan Cole.

As you likely know, Dr. Malone is an internationally recognized scientist/physician, and the original inventor of the core mRNA vaccine technology platform, as well as multiple non-viral DNA and RNA/mRNA platform delivery technologies. Dr Cole is a board certified Anatomic and Clinical pathologist with a subspecialty training and 20 years' experience in dermatopathology with particular interest in molecular diagnostics.

Drs. Malone and Cole will join us in-person Monday, February 21th at 4:00 pm to discuss the efficacy and safety of mRNA vaccines, including the emerging data regarding the potential health impacts of these Covid shots on school-age children. The event will be held at Harborview Fellowship Church located at 4819 Hunt Street NW, in Gig Harbor.

We note that the Board of Health is conducting a study regarding the safety of the Covid shots for school-age children. Accordingly, we would understand that you and the Health Board members would be well served to hear and consider the perspectives of Dr. Malone and Cole. Therefore, we provide you with this VIP invitation - and have reserved seats for each of you on a priority basis for February 21st.

As a practical matter, because Drs. Malone and Cole will be appearing in person, we are aware that this seminar will be of great interest to more people than we will be able to accommodate. Therefore, we ask you to please RSVP no later than the end of the day on Friday, February 11th. After that, seats will be made available to members of the interested public.

We acknowledge your role to provide leadership to protect citizen health in Washington State and your expressed commitment to ensure the safety of every child who attends our State's public schools.

Very truly yours,

A handwritten signature in blue ink that reads "Larry Godt".

Larry Godt
Co-President

A handwritten signature in blue ink that reads "Thomas Jonez".

I urge you to consider information being sent to you regarding the concerns revolving around this vaccine. There are major red flags that our government agencies are blatantly ignoring. We need to listen and give voice to the thousands of people who have already been harmed by this vaccine. And not justify away these deaths and harmed humans. Major red flags which need more of a platform for discussion. Many sides of this discussion are being left out of the conversation. It's unfair and ultimately more people will be harmed by this one sided discussion. Open discussion. Every voice needs to be heard.

Our nation's regulatory agencies have been captured by industry. The policy making being recommended based off these agency data is no longer valid. CDC. FDA. EPA. These regulatory agencies have been captured and no longer have the lives of living things as their top priority. There are many issues, and this is one of them.

Our top down indoctrination also isn't serving us any longer. Universities and science departments everywhere in this country are controlled by industry money. Experts in their field who know what happened during the pandemic was wrong, but wouldn't or couldn't speak out because special interest influencing what science was allowed to be published or even granted. We simply cannot trust the biased science being used by the CDC, FDA, etc, to shape pandemic recommendations or suggestions of masks, vaccines, or testing. **THEY ARE NOT TRUST WORTHY!** They work for industry and cannot be trusted. Please follow your gut on these issues and question those who have financial conflicts or benefit somehow by mandates being put into place. We do not need pharmaceutical mandates! Do not recommend pharmaceutical mandates! Thank you.

Any unproven long term effects of use by any vaccine is dangerous. Factually it is proven that this vaccine allows vaccinated individuals to pass on the illness. Why is most of the world ending Covid protocols and you feel necessary to increase protocols

Washington State Board of Health,

We The People do NOT Consent to adding Covid-19 vaccines into Chapter 246-105 WAC due to the following reasons:

- 1) We The People do not consent to experimental drugs.
- 2) The Gene altering technology has not had enough long term studies for adverse reactions, and or long term side effects.
- 3) According to the new scientific data coming out, the vaccines have been more harmful to the people rather than helpful.

In conclusion, until the covid-19 vaccines have been PROVEN and documented to be safe and effective, I do NOT consent to the revision of WAC 246-105.

Re: Development of Rules and Regulations for State Covid Vaccinations for School Age Children

Dear Sirs;

I write to oppose your attempts to railroad an emergency authorized vaccine which is not a vaccine with a clinical trial that failed!

Dr. Kronman quoted an observational study done in Israel. Your data is moot. Why would any country vaccinate children when the risk of death and hospitalization from COVID is so low in children.

Also, your attempt to discount VAERS is appalling. It is a well-known fact that VAERS is under-reported, thus, your downplay of its importance is unacceptable. I also suggest that your group needs to view all data, not just "your" side. You all need to view the data as presented here to get a well rounded perspective:

https://m.theepochtimes.com/global-covid-summiot-boise_428503.html?utm_source=ai&utm_medium=sea
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fm.theepochtimes.com%2Fglobal-covid-summiot->

Additionally, the discussion of myocarditis, was again one-sided. It was mentioned that myocarditis occurs with many viruses, however, you ignore the occurrence of myocarditis in the vaccinated as it compared to the unvaccinated. Also, you downplay the effects of myocarditis when you of all people should know effects of myocarditis can be a life long problem. I believe the idea that the symptoms are short term is unconscionable to say. For one, given that this is an untried emergency vaccine, one cannot claim short term symptoms.

Therefore, benefits do NOT outweigh the risk. Children are the least likely to be hospitalized and death rate is very low. Check our own state and county dashboard data.

from complications relating to his covid vaccination. This was the final decision handed down by the court in Paris, France. This court decision has set a precedence all the courts in the world will be able to cite and win with...

Court in France's decision to support Life Insurance Company who refuses to pay out life insurance for someone who died after taking the injection. Reasons? They say the dead person knew the risks, the risks were published and therefore the dead person committed suicide. I kid you not.

Details here:

To Whom It May Concern,

We've had enough of these useless mandates. Our children, THEIR futures- are suffering. This is not and was NEVER about "safety."

We demand an immediate recall of masking in all public schools. Enough is enough.

As a parent, I am fuming. My kindergartener was so excited for his virtual parent teacher conference so he could finally see his teacher without a muzzle on her face. It sickens me that this is what he looks forward to these days.

Have a heart. Do what's right. REMOVE THE MASKS FROM OUR CHILDREN'S FACES!

Sincerely,
An angry and exhausted LWSD mother of 2.

Hello,

Just wanted to weigh in that I watched the zoom conference and repeatedly heard you saw there was not enough evidence to mandate this vaccine. And yet an unanimous vote was casted in favor. This is no longer about the science because it is very clear that the science does not support the need of this vaccine in school age children. Would each of you willing to be held personally responsible if something happens?

Please please support the data. Our children are not at risk of covid. Let this be a parents choice.

At this point it's abundantly clear to anyone with a lick of common sense that you are enforcing suffocating and psychologically damaging masks on our children for your own selfish political and financial gain, not to mention pushing the dangerous, unproven shots on them. Our children are not test subjects for you to control and experiment on. We know that the only "science" behind your reprehensible actions is political science. We are not stupid.

The time window for you to start doing the right thing has closed. We demand that you STOP forcing masks and pushing shots on our kids NOW.

Don't worry about your wallets, worry about how history is going to remember your actions.

Sincerely - Disgusted parent.

Greetings!
Please know:

1. We are the majority. How much ever media may propagate otherwise or portray parents as right wingers. We believe in protecting our kids.
2. We have the Constitution on our side: ARTICLE I DECLARATION OF RIGHTS SECTION 1 POLITICAL POWER. All political power is inherent in the people, and governments derive their just powers from the consent of the governed, and are established to protect and maintain individual rights.
3. We have the science on our side: In last 2 years, science has proven neither mask nor EUA vaccines work to protect against SARS COVID19 virus. Kids have natural immunity against this virus and have 0.0% mortality rate and 3.1 & 3.9, 7-Day hospitalization rate in age groups 5-11, 12-17 years (Source DOH). PCR test do not differentiate between influenza and covid and tend to give higher % of false positive. And, vaccine related injuries in children can be found in VAERS database. A Harvard study found VAERS reports only 1% of all injuries. All data points can be provided on request, in the meanwhile please find time to watch Senator Ron Johnson's - COVID A Second Opinion table talk. <https://rumble.com/vt62y6-covid-19-a-second-opinion.html> <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Frumble.com%2Fvt62y6-covid-19-a-second-opinion.html&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cb625736bccccf44ac475e08d9f0b18a40%7C1>>

Greetings...

Issaquah, Bellevue, Lake WA School Districts, OSPI, WA State Education, WSBOH, and King County Commissioner.

You're behind the (global) ball with your cherry-picked science and Covid-19 decision making, namely around mask mandates. In recent news...

* Kettle Falls School District (Washington State) moves to make masks

optional effective immediately.

* Washington State and Hawaii remain the only states requiring mask mandates for school aged children. In more recent news, D.C., Oregon, California, New Mexico, Illinois, Connecticut and New Jersey have drawn a line in the sand to protect our children.

* Entire countries have revoked all Covid-19 restrictions including Sweden, Norway, Denmark, Switzerland – to name a few.

Single handedly you've lost the confidence of parents across Washington State in standing up for the health and safety of our children. We understand now, more than ever, your motivation to play into political theatre than truly following the science. We understand our children's health and safety is not your top priority when, again, using cherry-picked science to make critical decision.

Rest assured, what you have done is created mama and papa bear WARRIORS! We've never been more involved in our school districts, in our education system(s), our board of health and more. We're well-educated leaders, we're organized and we will see this change in Washington State – just like in Kettle Falls. What's more is we're teaching our children. They're going to be the next generation of patriots with a keen understanding of our God-given rights, Common Law, the U.S. Constitution and our Washington State Constitution.

Please, stand with us and remove mask mandates effective today.

Peacefully and respectfully,

Melissa

LWSD parent of 2, currently visiting another state where their BOH is on the right side of history
