But between October 11th and December 5th the roles reversed again, and it is the fully vaccinated population that have accounted for the majority of Covid-19 cases in England.

This data alone puts an end to the myth that the Covid-19 vaccine will prevent children from being infected and spreading Covid-19.

The following chart shows hospitalizations by vaccination status over a period of 16 weeks from 16 Aug 21 to 05 Dec 21.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/12/image-278.png?resize=639%2C523&ssl=1>>

Between Aug 16 and Dec 05, the unvaccinated population accounted for 11,767 Covid-19 hospitalisations. But the vaccinated population have accounted for nearly double the amount, recording 19,730 hospitalisations, with 18,406 of those being among the 2/3 dose vaccinated population. This means the vaccinated population have accounted for 63% of Covid-19 hospitalisations since August 2021.

The following chart shows deaths by vaccination status over a period of 16 weeks from 16 Aug 21 to 05 Dec 21.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/12/image-280.png?resize=639%2C523&ssl=1>>

Between 16 Aug 21 and 05 Dec 21 there were 3,070 Covid-19 deaths among the unvaccinated population in England, compared to 12,058 deaths among the vaccinated population during the same time frame. That is a 293% difference.

The following chart shows the case-fatality rate among the not-vaccinated population, and the case-fatality rate among the 2/3 dose vaccinated population between 16 Aug and 05 Dec 21.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/12/image-281.png?resize=639%2C493&ssl=1>>

The case-fatality rate is calculated by dividing the number of known deaths by the number of known cases among the population. As we can see from the above the case-fatality rate among the not-vaccinated population is just 0.2%, which is what is in line with the average case-fatality rate in 2020 before a Covid-19 injection was introduced to the masses.

However, the case-fatality rate among the fully vaccinated population is much higher, equating to 0.8%. Therefore the fully vaccinated are 4 times / 300% more likely to die if exposed to the Covid-19 virus based on official UK Government figures.

The above data was extracted from the following official UK Health Security Agency Vaccine Surveillance reports –

* COVID-19 vaccine surveillance report – Week 37 (Covers Week 33-36)

* COVID-19 vaccine surveillance report – Week 49 (Covers Week 45-48)

Reason No. 8

The thirty-second report highlighting adverse reactions to the Pfizer / BioNTech, Oxford / AstraZeneca, and Moderna Covid-19 injections that have been reported to the UK Medicine Regulator's (MHRA) Yellow Card scheme reveals that there were 1,186,844 adverse reactions reported between the 9th December 2020 up to the 1st September 2021.

MHRA revealed that they had received a total of 404

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdailyexpose.uk%2Fwp-content%2Fuploads%2F2021%2F09%2FFOI-21-907-Response-1.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e>>
reported adverse reactions to all available vaccines (excluding the Covid-19 injections)
associated with a fatal outcome between the 1st January 2001 and the 25th August 2021
– a time frame of 20 years and 8 months.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/09/image-60.png?resize=639%2C69&ssl=1>>

However, according to the MHRA Yellow Card Report (see here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fpublications%2Fcoronavirus-vaccine-summary-of-yellow-card-reporting%23annex-1-vaccine-analysis-print&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e>>
– under each analysis print section) there were 1,632 deaths reported as adverse reactions to the Covid-19 vaccines from December 9th 2020 up to September 1st 2021. This included 16 deaths due to the Moderna jab, 24 deaths where the brand of vaccine was unspecified, 1,064 deaths due to the AstraZeneca vaccine, and 524 deaths due to the Pfizer mRNA injection.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/09/image-100.png?resize=443%2C422&ssl=1>>

Reason No. 10

The risk of Myocarditis (Heart Inflammation) in Children due to the Pfizer Vaccine

Myocarditis is inflammation of the heart muscle, whilst Pericarditis is inflammation of the protective sacs surrounding the heart. Both are serious conditions due to the fact the heart muscle cannot regenerate, and both conditions have officially been added to the safety labels of the Pfizer jab and Moderna jab by the MHRA (see here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fpublications%2Fcoronavirus-vaccine-summary-of-yellow-card-reporting%23analysis-of-data&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e>>
>).

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/09/image-114.png?resize=639%2C141&ssl=1>> Source

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fpublications%2Fcoronavirus-vaccine-summary-of-yellow-card-reporting%23analysis-of-data&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e>>

Myocarditis and pericarditis happen very rarely in the general (unvaccinated) population, and it is estimated that in the UK there are about 6 new cases of myocarditis per 100,000 patients per year and about 10 new cases of pericarditis per 100,000 patients per year.

The MHRA has undertaken a thorough review of both UK and international reports of myocarditis and pericarditis following vaccination against Covid-19 due to a recent increase in reporting of these events in particular with the Pfizer/BioNTech and Moderna vaccines, with a consistent pattern of cases occurring more frequently in young males.

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fjamanetwork.com%2Fjournals%2F>
, has also found that the incidence of myocarditis among vaccinated individuals is at least
double what Health Authorities are claiming.

The new JAMA study

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fjamanetwork.com%2Fjournals%2Fjama%2Farticle%2F1352722>) showed a similar pattern to a CDC study (found [here](#))

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fvaccines%2Facip-2021-06%2F03-COVID-Shimabukuro-508.pdf&data=04%7C01%7CWSSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11>), although at higher incidence of myocarditis and pericarditis after vaccination, suggesting vaccine adverse event under-reporting.

[https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medscape.com%2Fviewarticle](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medscape.com%2Fviewarticle&cid=69875&ui=en&hs=en&sr=es&di=en&from_mail_header=true)

the average monthly number of cases of myocarditis or pericarditis during the pre-vaccine period of January 2019 through January 2021 was 16.9 compared with 27.3 during the vaccine period of February through May 2021.

Dr. George Diaz who conducted the study told Medscape that "Our study resulted in higher numbers of cases probably because we searched the EMR, and [also because] VAERS requires doctors to report suspected cases voluntarily," Diaz told Medscape

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medscape.com%2Fviewartic>
. Also, in the governments' statistics, pericarditis and myocarditis were "lumped
together".

Children have died and are dying due to the Covid-19 Vaccines

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.openvaers.com%2F covid-data%2F covid-full-data&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e>
by inputting the specific VAERS ID shows that several children have died in the US after having the Covid-19 vaccine, with many suffering cardiac arrest.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/06/image-113.png?resize=556%2C283&ssl=1>>

Reason No. 12

So it may surprise you further to know that GP's are being offered an additional payment of £10 on top of the £12.58 already offered for every injection administered to a child in the United Kingdom. All of this is documented in an official NHS document found here <[https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.england.nhs.uk%2Fcoronavirus%2Fuploads%2Fsites%2F52%2F2021%2F08%2FC1384-Vaccinating-children-and-young-people-frequently-asked-questions.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.england.nhs.uk%2Fcoronavirus%2Fuploads%2Fsites%2F52%2F2021%2F08%2FC1384-Vaccinating-children-and-young-people-frequently-asked-questions.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%2F)

<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/09/image-42.png?resize=639%2C110&ssl=1>

Coincidentally, the Bill & Melinda Gates Foundation bought shares in Pfizer

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fool.com%2Finvesting%2F2020/09/01/coronavirus-vaccine-stocks-the-bill-melinda-gate%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e215&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e215>>
back in 2002 (see here
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fool.com%2Finvesting%2F2020/09/01/coronavirus-vaccine-stocks-the-bill-melinda-gate%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e215&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e215>>
) , and back in September 2020 Bill Gates ensured the value of his shares went up by announcing to the mainstream media in a CNBC interview that he viewed the Pfizer jab as the leader in the Covid-19 vaccine race.

"The only vaccine that, if everything went perfectly, might seek the emergency use license by the end of October, would be Pfizer."

The Bill & Melinda Gates Foundation also coincidentally bought \$55 million worth of shares in BioNTech

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fool.com%2Finvesting%2F2020/09/01/coronavirus-vaccine-stocks-the-bill-melinda-gate%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e215&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e215>>
(see here
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fool.com%2Finvesting%2F2020/09/01/coronavirus-vaccine-stocks-the-bill-melinda-gate%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e215&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e215>>
) in September 2019, just before the alleged Covid-19 pandemic struck.

Can we really trust the MHRA to remain impartial when its primary funder is the Bill & Melinda Gates Foundation, who also own shares in Pfizer and BioNTech?

Reason No. 13

The Joint Committee on Vaccination & Immunization refused to recommend the Pfizer Vaccine be offered to Children aged 12-15

On the 3rd September 2021 the Joint Committee on Vaccination and Immunization (JCVI) announced

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fpublications%2Fissues-updated-advice-on-covid-19-vaccination-of-children-aged-12-to-15&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e215&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e215>>
15&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e215&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e215
(see here
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fpublications%2Fissues-updated-advice-on-covid-19-vaccination-of-children-aged-12-to-15&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e215&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e215>>
15&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e215&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cf84da1c0041b4ca5d6e008d9cbb8ef28%7C11d0e215
) they were not recommending the Pfizer Covid-19 injection be offered to all children over the age of 12.

The assessment by the Joint Committee on Vaccination and Immunization (JCVI) is that the health benefits from vaccination are marginally greater than the potential known harms. However, the margin of benefit is considered too small to support universal vaccination of healthy 12 to 15 year olds at this time.

The JCVI cited the following –

"For the vast majority of children, SARS-CoV-2 infection is asymptomatic or mildly symptomatic and will resolve without treatment. Of the very few children aged 12 to 15 years who require hospitalization, the majority have underlying health conditions."

Since 1st April 2009 the Health Protection (Vaccination) Regulations 2009 place a duty on

Subject: adding COVID-19 vaccines to school vaccination schedules

External Email

I'm writing to let you know I strongly oppose adding covid vaccines to the school schedule. Because of it's non-existent safety studies, the fact that almost no children have died from Covid, and the shot only being approved for Emergency Use Only, it should be totally up to parent discretion and choice if they want to get their children vaccinated. Various law suits have been filed around the country opposing mandatory vaccinations and more will be coming should you make such a major error in promoting the requirement of this gene therapy shot for our school age children.

Subject: Covid 19 Vaxx for children in school

External Email

Good evening, my name is James Hollmann and I have 6 children all that go to either wenatchee or eastmont school system. I am emailing you in regards to C19 vaxx being required to engage in school and school activities! All of my children love school, and as a parent, that's one of the main things you worry about! You worry about are they going to get bullied, are they going to be made fun of, are they going to embarrass themselves? Are they going to be safe? Are they going to like their teachers and is this going to be good for them? Well as stated, thankfully my children enjoy going to school! Then it comes to vaccine mandates in accordance with attending school. I am completely and utterly opposed! Family friend of ours is now paralyzed from the neck down due to the 2nd dose of the vaccine. No previous medical history, nothing and now completely paralyzed from the Vaccine. Me, my partner and all 6 of our children will never be getting the C19 vaccine! We have all had Covid and developed antibodies from our god given immune system! We go to church each Sunday and believe in our creator! Not to mention the lack of science when it comes to "Natural Immunity" and the in-ability to recognize the human immune system as a scientific way to combat the virus is astounding! With our god given immune system, we have a GREAT and I repeat GREAT chance to combat this virus like all others that have come before as well as all others that will come after! The covid 19 vaccine changes the body's genome, changes your DNA! I am writing to you to oppose this unconstitutional, immoral and unethical vaccine that we cannot put into our bodies! If you guys unfortunately pass this horrible ruling, I will have to take all 6 of our children out of school and put them into religious or private schools that do not require the vaccine in order to keep them educated! Please please please dont make my children and thousands and thousands of other children leave the schools they love because of this! Thank you

Dear Kelie Kahler (Kelie.kahler@sboh.wa.gov <mailto:Kelie.kahler@sboh.wa.gov>)

I hope this email finds you and your family well.

A few days ago, during a WA State Board of Health meeting, the advisory group spoke of whether they should recommend adding Covid vaccination to the current WA vaccine schedule for school and daycare entry. Unfortunately public comments were not allowed. The advisory group would be making a recommendation for our children without hearing from the parents.

I oppose the Covid vaccine being added to the school and daycare schedule. Children have mild to no symptoms from the virus, and are thus the safest. Covid Vaccine inserts are none existent to the public, leaving us without a knowledgeable and informed choice. Pharmacists themselves do not have access to a vaccine insert. We are told to believe and take the plunge yet so many have had horrible and evenly deadly complications from these vaccines. Please urge the advisory group to be cautious and not make recommendations for the Covid vaccine to be added to the school and daycare schedule.

Thank you for taking the time to read my opposition and concerns.

To Whom It May Concern,

Attached in PDF form is my letter to Washington State Board of Health, sent directly to WSBOH along with multiple elected and official representatives for my community. Respectfully please consider points made in these large decisions coming up for our state.

Thank you,

Rachel Buck

Secure Email.

Dear DOH and To Whom It May Concern:

I have a 16 year old daughters' bodily sovereignty I am defending with my comments. She is a straight A student, has fought to conquer the odds to stay active in her school through sports and leadership. And is on an added extracurricular board of students across the state to provide insight to the legislation as to what the students perspectives are regarding policies and proposals.

Our daughter does not want the Covid-19 vaccine. She has had Covid, and thankfully fared well throughout the illness. We are responsible citizens, quarantining over 10 plus times to be considerate of the public around us. But we stand in a legal and moral place to defend her Informed Medical Consent and right to bodily sovereignty, in all things.

I will be BCC some Representatives in my community in this email, for full disclosure.

I understand the discussion with the TAG panel is purely from a medical basis. But I would like to encourage a couple of points for considerations:

- 1) Medical involves psychological and I see this lacking in the panel, happy to be proven wrong in this though.
- 2) With only one panelist from Eastern Washington I would like to present that this is a politically skewed optic out the gate. Eastern Washington often has little voice and say, policy speaking, as to what goes on in our own state. When weighing such a massive advisory vote, one that holds much power, as a constituent of this state I would appreciate more balance on this front.

I do not say this as a personal attack on those picked for this panel. Honestly I do not assume to know your experience and expertise, or be a judge of this. I do assume each person is acting in their own best conscious.

The continued marginalization of half the landmass of this state's population is incredibly frustrating to watch over and over and over in different governing decisions. Including giving unvoted power to regulatory agencies such as the Washington State Board of Health.

An example: Seattle Public School District feels they have the right to make a vaccine mandate request for the entire state and this is then blasted via media. This one school district does not hold the place to make a request above the 295 other districts that make up the OSPI oversight.

- 3) If you do, indeed, continue to push this vaccine, while ignoring the experimental nature of its creation, onto the schools you are directly responsible for an obvious step in marginalization of a demographic with sincerely held religious beliefs.

Marginalization often hides in under the guise of "the greater good." Just look at mass incarceration. People as commodity has gone far enough, just look at the Indian Farmer's and the fight against corporate elite's attack in the last five years.

Marginalization happens in many ways.

- 4) Time will be the true measure that lets our population know if any measure is necessary and when it has to do with our children, time is what is requested. Especially looking at the risk factors

involved, complete lack of long-term studies done, and FDA decision to allow Pfizer to withhold important data in regard to their specific Covid-19 vaccine variation.

We now have evidence that the lockdown measures were not as productive as hoped. Spokane Mayor Nadine Woodward has brought this issue as well as the issue of mental health to the forefront in our community. Sadly, my own sister has been attempting a FOIA request with Spokane Regional Health District and been met with roadblocks.

Her request is the statistics involving drug overdoses and suicide rates from 2020 and 2021. As this data has not been released. So, in the name of transparency, what is this information and why is it not readily available to the public? We can count weekly Covid-19 test numbers but we cannot publicly and accurately check these stats as well? Or make them easily publicly available?

5) The hate I see in our community? Is pushed by Governor Inslee when he heavily insinuates over and over that my family, including many law-abiding citizens with not so much as a speeding ticket, are domestic terrorist. FEMA defines Terrorism as “the use of force or violence against persons or property in violation of the criminal laws of the United States for purposes of intimidation, coercion, or ransom.”

Mr. Inslee’s behavior and continued hateful rhetoric constitutes this definition much closer than mine. I have loved my community and family members boundaries incredibly intentionally throughout the pandemic. Regardless of political view or medical decisions I might add. Mr. Inslee, as the leader of Washington state, cannot in good faith claim the same.

6) If our state legislation and acting agencies decide to continue to push this line, while ignoring ALL of the scientific data, onto our children we are left with little choice but to very seriously consider removing her from the system to defend her rights as an American citizen. We as parents will know then, that the true intent is to persecute, not to act in public health.

As such, we respectfully request vaccine clinics moved OFF school property and to local community centers. This allows the families that would like to participate in the vaccination process close access for their children but respects the boundaries and the families that do not. Placing clinics on taxpayer funded property like the school ignores the mental health of our youth during a devastating time.

7) One of the most beautiful aspects of being a Constitutionalist is that my family’s community is not a specific ethnicity. It holds no line on outside optics. It does not hold people in a class, but rather works to honor each person’s life experience. It includes people from all over the world, that have fled their countries, often fleeing for their lives.

This is my culture and this I feel in my heart. This is shown in our family’s constant attempt to love those around us. To live our life by the Golden Rule. Are we perfect people? Absolutely not, nor would we ever claim to be. But have raised our daughter with these values. And we use these values to make our decision on Informed Medical Consent.

8) In conclusion, I understand it is a difficult place to be in, making these big decisions at this moment in history. But I encourage each person that reads this letter to do some research on a few topics that may seem outside the box. Read Professor Harriet Washington’s Book, Carte Blanche as well as Oneness vs. the 1% by Environmentalist Shavana Shiva and do some soul searching on the lessons

history can teach us. While we are in unprecedented times, we as a population don't need to re-write a script.

One last thing, we beg you as community members, constitutes, and people of this land. Stop searching for ways to control an uncontrollable situation. And start leading by example through bridge building, compassion, and understanding. This is what our great state truly needs. I say this in the name of equality, Love for my community regardless of beliefs, and as a citizen trying to do the same thing on a daily basis.

Sincerely,

Rachel Buck

Born and Raised Citizen of Spokane County

Subject: Covid vaccinations for students

External Email

We are adamantly opposed to requiring Covid vaccinations for school children. There is too much conflicting data regarding efficacy, safety and long-term affects to even be considering such a move at this time. The newest variant is known to be less severe and less likely to impact children. The alleged effectiveness of currently available vaccinations against all the different variants is also not well-supported by the most recent data.

Health experts acknowlege the current surge is just that - a surge that will soon subside. Rushing into such an important decision without solid data is reckless, improper and harmful to our kids. A review committee member participating in the Zoom presentation with a poster urging vaccination in their background leads many to wonder about the intent and impartiality of the group. This is a decision that requires an open, thoughtful and impartial investigation, not a rushed decision that meets an artificially imposed deadline. The other vaccinations on the "required" list are well-researched and vetted, with proven efficacy. The same standards MUST be applied to the deliberation regarding the Covid vaccination.

Sincerely,

Mike and Glennis Stamon

Dear Washington Board of Health,

As a parent, I strongly oppose of the possibility of the board including the experimental Covid-19 (mRNA) vaccines for children in the State of Washington to attend school/daycare. After being fully informed of the risks and benefits of a medical procedure, patients have the right to reject or accept that procedure. Governmental preemption of patients' or parents' decisions about accepting drugs or other medical interventions is a serious intrusion into individual liberty, autonomy, and parental decisions about child rearing. I have outlined for you information I am fully aware of in regards to the mRNA vaccines. Please review the information listed.

1. SERIOUS ADVERSE VACCINE REACTIONS ARE REAL AND ARE UNDERREPORTED As of 12/15/21, 965,843 adverse events following COVID vaccines have been reported to VAERS, including 20,244 deaths. According to a government-funded study at Harvard, less than 1% of all adverse reactions to vaccines are actually submitted to the National Vaccine Adverse Events Reports System (VAERS).

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdigital.ahrq.gov%2Fsites%2Fdefault/files/docs/publication/r18hs017045-lazarus-final-report-2011.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cb6a485b8591944fda8ab08d9cf2b36de%7C1>>

<https://www.medalerts.org/vaersdb/findfield.php?TABLE=ON&GROUP1=CAT&EVENTS=ON&VAX=COVID19>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medalerts.org%2Fvaersdb%2Ffindfield.php%3FTABLE%3DON%26GROUP1%3DCAT%26EVENTS%3DON%26VAX%3DCOVID19>

<https://www.medalerts.org/vaersdb/findfield.php?TABLE=ON&GROUP1=CAT&EVENTS=ON&VAX=COVID19>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medalerts.org%2Fvaersdb%2Ffindfield.php%3FTABLE%3DON%26GROUP1%3DCAT%26EVENTS%3DON%26VAX%3DCOVID19>

2. VACCINE MAKERS ARE IMMUNE FROM LIABILITY Vaccine manufacturers have no incentive to ensure their vaccines are as safe as possible. Established in 1986 with the National Childhood Vaccine Injury Act and reinforced by the PREP Act, vaccine makers cannot be sued even if they are shown to be grossly negligent.

<https://www.congress.gov/bill/99th-congress/house-bill/5546>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.congress.gov%2Fbill%2F99th-congress%2Fhouse-bill%2F5546&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cb6a485b8591944fda8ab08d9cf2b36de%7C>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.phe.gov%2FPreparedness%2Flegal%2Fprepact%2FPages%2Fdefault>

3. VACCINE COMPANIES HAVE LONG RAP SHEETS Vaccine makers have paid out tens of billions of dollars for crimes, including fraud and violating the False Claims Act, when they knew products would cause injuries and death. (Think Vioxx, Opioids and more.) If they knowingly put harmful products on the market when they can be sued, why should we trust them to make safe vaccines when they have no liability and rushed clinical trials?

<https://violationtracker.goodjobsfirst.org/industry/pharmaceuticals>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fviolationtracker.goodjobsfirst.org%2Findustry%2Fpharmaceuticals>

4. PREVIOUS ATTEMPTS TO MAKE SIMILAR VACCINES HAVE FAILED In one study, vaccinated infants got much sicker than the unvaccinated infants when exposed to the respiratory syncytial virus (RSV) naturally, with 80% of the vaccinated infants requiring hospitalization. Two died. In subsequent studies, vaccinated animals became very sick when they later became infected with the actual virus. Many died. This phenomenon is called Antibody Dependent Enhancement (ADE).

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nature.com%2Farticles%2Fs41579-020-00462-y%23Sec11&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cb6a485b8591944fda8ab08d9cf2b36de%7C>

<https://www.nature.com/articles/s41579-020-00462-y#Sec11>

5. COVID VACCINES HAVE NO LONG-TERM SAFETY TESTING There is no way to determine what these experimental vaccines will do to humans in the medium- to long-term. Not all vaccine injuries manifest immediately. Additionally, given that all current COVID vaccines have Emergency Use Authorization status only, people cannot be subject to mandates under federal and international law.

<https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Femergency-preparedness-and-response%2Fmcm-legal-regulatory-and-policy-framework%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cb6a485b8591944fda8ab08d9cf2b36de9>>
emergency-use-authorization

6. COVID VACCINES DO NOT STOP TRANSMISSION The clinical trial study designs for COVID vaccines did not address transmission, but merely addressed reducing symptoms, as explained in the materials they submitted to the FDA to obtain Emergency Use Authorization.

<https://www.fda.gov/media/144245/download>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F144245/download>>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F146217/download>>

7. YOUNG ADULTS HAVE UNDER .04% RISK OF DEATH FROM COVID-19 According to the CDC, COVID overall has a 99.74% survival rate. Among young people, that number is even higher. For people aged 18 to 29, the survival rate is 99.97%. Consider this low risk from COVID when deciding whether to take an experimental vaccine that causes significant side effects, including death.

<https://data.cdc.gov/NCHS/Provisional-COVID-19-Death-Counts-by-SexAge-and-S/9bhg-hcku/data>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdata.cdc.gov%2FNCHS%2FProvisional-COVID-19-Death-Counts-by-SexAge-and-S%2F9bhg-hcku%2Fdata&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cb6a485b8591944fda8ab08d9cf2b36de9>>

8. mRNA VACCINES CONTAIN PROBLEMATIC INGREDIENTS Both mRNA vaccines (Pfizer's

and Moderna's) contain polyethylene glycol (PEG), and J&J's vaccine contains polysorbate 80—structurally similar ingredients associated with hypersensitivity reactions and anaphylaxis. Although the unlicensed mRNA vaccines are the first in widespread use to feature PEG, there are a number of approved vaccines that include polysorbate 80—all of which document anaphylaxis in their package inserts.

9. THE J & J VACCINE CONTAINS ABORTED HUMAN FETAL CELL LINES The viral vector that forms the backbone of the J&J vaccine is grown in a continuous ("immortalized") human embryonic cell line (PER.C6) derived from the abortion of a healthy 18-week-old fetus, leading some Catholic leaders to describe the vaccine as "morally compromised." FDA officials have acknowledged for over two decades that such cell lines are a "major safety concern."

10. The Nuremberg Code, codified into US Federal Law, prohibits forcing or coercing anyone, under any circumstances, to participate in a medical experiment; and the Code states "the voluntary consent of the human subject is absolutely essential."

11. All of the treatments being marketed as COVID-19 vaccines are still in Phase III clinical trials until 2023 to 2024 and hence qualify as medical experiments. People taking these treatments are enrolled in clinical trials;

12. None of these treatments has been approved, but only granted emergency use authorization, hence cannot be mandated nor can informed consent be dispensed with;

13. Most vaccines are trialed for at least 5-10 years and COVID-19 vaccines have been in trials for less than one year;

14. No previously attempted coronavirus vaccines (ie. MERS, SARS-1) has been approved for market, due to antibody-dependent enhancement resulting in severe illness and deaths in animal models;

15. Numerous doctors, scientists and medical experts are issuing dire warnings about the short and long-term effects of COVID-19 vaccines, including but not limited to death, infertility, miscarriages, Bell's palsy, blood clots, cancer, inflammatory conditions, autoimmune disease, early-onset dementia, convulsions, anaphylaxis, myocarditis, and antibody dependent enhancement leading to death;

16. Children and youth are at virtually no risk of dying from COVID-19 or transmitting it to others, but deaths and injuries to children and youth have already occurred in the COVID-19 injection clinical trials;

17. There have been more deaths from COVID-19 vaccines, as reported to the Vaccine Adverse Events Reporting System (VAERS), than deaths in the last 10 years from all vaccines combined;

18. Only 1% -10% of vaccine injuries are reported to VAERS. The full extent of adverse events from the COVID vaccines is unknown as there is a significant delay in uploading reports to the VAERS database;

19. Breakthrough cases of COVID-19 infections in those who have received COVID-19 vaccines is on the rise;

20. The trials have not proven that COVID-19 vaccines prevent infection or transmission;

21. Safe and effective treatments and preventive measures exist for COVID-19;

AND

22. Students are at nearly zero % risk of contracting or transmitting this respiratory illness and are instead buffers which help others build their immune system. The overall survival rate is 99.997%.

23. Children have already been exposed to unprecedented amounts of fear, instability, shaming, psychological trauma, and segregation through the COVID-19 measures and are therefore even more suggestible than their developmental stage would usually entail;

24. It is the job of parents or legal guardians, not of principals, teachers, teacher assistants, school board executives or other adults with influence on children, to make medical decisions for them;

Schools include vaccine and COVID-19 vaccine curriculum, which is biased, prejudicial and is a form of undue influence on any minor child which excludes full disclosure of the known risks of vaccination and the emerging evidence that vaccines do not provide protection as claimed;

25. Vaccine compliance elicited from children under threat of coercion, bullying, or suspension and who are not of fully informed consent that they have the legal right to refuse vaccination, constitutes extreme bullying and coercion and could be construed as a "battery" as well as a violation of constitutionally protected rights.

26. Contrary to misinformation spread by the World Health Organization, "implied consent" is not "informed consent," and "informed consent" is mandatory by law;

27. The Mature Minor doctrine cannot override the wishes and consent of the parents outside of preventing imminent harm or death. Vaccinations do not fall under the Mature Minor doctrine.

28. The engagement of medical experimentation without informed consent further constitutes the indictable offense of crimes against humanity.

For all of the foregoing reasons, I respectfully request that Washington Board of Health give serious consideration to not approve of the COVID-19 vaccine.

Sincerely,

Christina Carrillo Dela Paz

I dont think it is necessary to require the covid vaccine for school. Science has shown children are not at a high risk unless having underlying issues or no immune systems. It should be a choice. Alot of parents will remove their children from the public school system if it is required.

Hello,

I as a mother of two am giving my informed consent notice that I OPPOSE the Covid vaccine being mandated for children in schools..

They are not the state, government, or countries Guinea pigs. They deserve better and deserve our protection..

My children will not be raised in a generation that is silent and told what to do..

Thank you
Kaitlynn Donald

You made your point perfectly clear shutting down chat and not taking questions. That's how you people win arguments right? Shut us down or talk over us. You all want to push this rushed experimental vaccine on our children to attend schooling they have a right to attend. Not a vaccine that has been around for years and years. A rushed EXPERIMENTAL vaccine. There is a HUGE difference. If you don't see that, then you are blind. You are already seeing a decline in public enrollment this year due to pushing your agenda. Want to see those numbers climb exponentially? Then keep pushing for this nasty vaccine requirement. You are all about that money for kids attending school right? You are going to lose. I don't want to be ugly here, but I am fed up with this drivel. I'm done. NOT MY CHILD!

Subject: Covid vaccine requirement for school?

External Email

Hello,

As there is statistically no concern from any children dying from this virus, there is no responsible excuse to mandate children be required to make a medical decision that looks to be, at this point, not even living up to its promise.

It's hard to believe that you'd even be thinking about this. It's obviously not for the wellbeing of our children as indicated by the absurd masking and distancing you've inflicted on them, and the abusive practices that have continued. If you took their wellbeing seriously, you be meeting about mental health and the damage you've done.

Stop it.

Hello,

I watched the first hour or so of your meeting, but found it too time consuming to get through all of your formalities, rules, procedures and then finally the "bucket" list of items that you will be basing your votes 'for' or 'against' on. You really need to streamline your meetings and not waste so much time.

First off, this is still an experimental "vaccine." Why are you even considering requiring an experimental vaccine in order for kids to attend school?! Are they guinea pigs for your board to play with?

Have you looked at all of the VAERS data showing heart inflammation and complications in young adults and children that have been "vaccinated?" Just check out how many young people are getting Myocarditis after getting injected with the Covid vaccines. How can you consider this when it's neither safe or effective?

Do you now that even the CDC is saying that the "vaccines" are not preventing the spread of the virus?

Do you know that children are the LEAST affected by the virus of ANY age group? They literally are more likely to be struck by lightning than they are of dying from Covid-19. A 99.9+% recovery rate from children in the school system age group is what the CDC says is normal. Look it up! ...And this is without any prophylactics like Quercetin, zinc, vitamin D3, and vitamin C, or the boogymen "horse paste" Nobel prize winning ivermectin or the been-around-forever hydroxychloroquine.

The fact that after all of this information that you are even discussing the potential requirement to "vaccinate" (without our take on the matter) says that you are not concerned with our children's health, but for control.

Let this be notice that the Nuremberg Code is still in effect and that those pushing for uninformed experimental testing on humans will be held to account. Those that said "we were just doing what we were told" faced punishment along side those that actively dictated what experiments were to be done. You have been warned. When the dust settles on this "plandemic" as Biden press secretary Jen Psaki so factually stated, those that pushed for illegal, inhumane experiments on our most vulnerable children will be held to account by our legal and or military justice system.

A concerned parent of a WA state school system child,

-Frank

PS: If your board does sign this, me and thousands of God-fearing parents WILL pull our children from the school system. We will not be intimidated, bullied, pressured or persuaded to inject our children with this deadly jab. See how long your school system lasts with no funding.

Subject: COVID vaccination mandate for kids question

External Email

Hello Lindsay,

I'm a father of three here in WA and I have a couple of questions.

I would like to know if you or your colleagues saw results from Pfizer medical trials of the vaccine on adolescents. I mean real trials results document, and not narratives from CDC and Pfizer websites. Pfizer is interested in selling the vaccines, so I would not trust Pfizer's narratives alone. I'm talking about a PDF with trial results.

Canadian doctors share the real numbers from that report in a video. I encourage you to watch that video before you make a decision on our children.

Please use google to search

Canadian Covid Care Alliance

The video is on the home page, just scroll down.

Pfizer medical trials on children start at 19:50.

I hope that WA DOH board would not take any decision before familiarizing with all the facts from the medical trial results.

1. Look into Absolute Risk Reduction instead of Relative Risk Reduction that Pfizer research points out.

2. The Pfizer report is focussed on preventing COVID, but they really should be focussed on how vaccination changes the risk of severe illness and death from all factors, including vaccine injury. For example, myocarditis is a very dangerous disease that has a mortality rate of 20% in 6.5 years on average, which is not an uncommon injury from the vaccine

3. There is nearly 0 chance for kids to die from COVID, and there is at least 1 to 1000 chance to get horrible permanent injury or death from the Pfizer vaccine according to Pfizer medical trials on adolescence.

If you haven't heard of anything like that please read about one girl. Her name is Maddie de Garay.

Maddie was one of the 1005 kids who got the Pfizer vaccine during the medical trials.

You can use Google to search.

It's like at least one kid from every Middle School would be dead or disabled sitting in a wheelchair. It is not just Maddie.

My colleague's daughter had a similar vaccine injury. Also in a wheelchair now.

Please do not make a decision before analyzing facts from all available sources.

Thanks,

Oleg

Please do not make having a covid vaccine mandatory for our children to attend school. This so called vaccine has not been out long enough for us to know what might happen when these children become old enough to have children themselves. There are many unknowns.....will they be able to conceive? If they do conceive will they be able to carry pregnancies to term? If they carry pregnancies to term will the babies be ok, or is it likely to turn out to be another Thalidomide type experience. Over 300,000 babies were born so deformed that most of them did not even live because Thalidomide was supposed to be SAFE. Obviously it was not.

We have been told repeatedly that this Covid vaccine is safe, but there have been more vaccine injuries from it than from any vaccine in the past. I personally have been told by nearly a dozen people that a loved one of theirs was permanently injured or died from this vaccine. It has not proven to be safe and it is using experimental techniques. Do not allow this experiment to be pushed onto our children where parents must decide between their children's safety and their education.

Sincerely,

Carla Selk

Subject: Concerned Parent Children Vaccine Mandates

External Email

Hello

I am writing this email to highlight my concerns as a parent in regards to mandatory covid vaccines in schools.

Vaccines are a personal choice. That's common sense. It is wrong to manipulate people into taking something they don't want just because a certain group of people think it's the right thing to do. Remember it's an opinion and should not be imposed on others just because you have the power to do so.

I urge you to give parents the right to choose what they think is right for their children.

As parent I must teach my children to stand up against any system trying to take their God given rights away and be willing to pay the price. This is my duty.

I hope that you consider human rights above all.

Thank you,

Serah Nganga

Subject: COVID vaccination mandate for kids question

External Email

Hello Nathaniel,

I would like to know if you or your colleagues saw results from Pfizer medical trials of the vaccine on adolescents. I mean real trials results document, and not narratives from CDC and Pfizer websites.

Canadian doctors share the real numbers from that report in a video. I encourage you to watch that video before you make a decision on our children.

Please use google to search
Canadian Covid Care Alliance

The video is on the home page, just scroll down.
Pfizer medical trials on children start at 19:50.

I hope that WA DOH board would not take any decision before familiarizing with all the facts from the medical trial results.

1. Look into Absolute Risk Reduction instead of Relative Risk Reduction that Pfizer research points out.
2. The Pfizer report is focussed on preventing COVID, but they really should be focussed on how vaccination changes the risk of severe illness and death from all factors, including vaccine injury. For example, myocarditis is a very dangerous disease that has a mortality rate of 20% in 6.5 years on average, which is not an uncommon injury from the vaccine
3. There is nearly 0 chance for kids to die from COVID, and there is at least 1 to 1000 chance to get horrible permanent injury or death from the Pfizer vaccine according to Pfizer medical trials on adolescence.

If you haven't heard of anything like that please read about one girl. Her name is Maddie de Garay.

Maddie was one of the 1005 kids who got the Pfizer vaccine during the medical trials.

You can use Google to search.

It's like at least one kid from every Middle School would be dead or disabled sitting in a wheelchair. It is not just Maddie.

My colleague's daughter had a similar vaccine injury. Also in a wheelchair now.

Pfizer is interested in selling the vaccines, so I would not trust Pfizer's narratives alone. Please do not make a decision before analyzing facts from all available sources.

Thanks,
Oleg

The Center for Disease Control has stated the Covid19 shot does not prevent the recipient from catching the virus or spreading the virus. Children are not at risk from the disease. Stop this madness now! The Covid 19 shot should be optional. What you will be putting at risk is the health of the public schools. Many parents will withdraw their children rather than subject them to ineffective and dangerous biological agent. Are you willing to see upwards of seventy percent of the school age children withdraw from the public school system?

Respects,

Brett Nunn

Washington State Board of Health;

Re: Adding COVID-19 Vaccines to the list of required childhood vaccinations.

The Technical Advisory Group held an orientation meeting on December 29th in which they began discussions of including COVID-19 in the list of Vaccine-preventable diseases per WAC 246-105-030. I appreciate the effort to build this decision upon science and sound medical evidence. When I use the word science, I mean provable, repeatable facts. Evidence that would stand in a court of law.

The first critical question in this process; Is the vaccine being administered under Emergency Use Authorization? If so, where does the liability rest for adverse effects? And if it is FDA approved, was the same historical approval process used for this vaccine as previous vaccines? Please provide the research along with the list of adverse effects.

What is the evidence of the efficacy of the vaccine, particularly for children under 18? My understanding is the age group being considered are least likely to have severe or life threatening symptoms from COVID-19.

And since the definition for 'fully vaccinated' continues to change, what benefits are you proposing over natural immunity? Please provide evidence.

Dr. Robert W. Malone, credited as the inventor of mRNA technology, has expressed concerns regarding the use of this technology in vaccines. Shouldn't his information be considered in this process?

During the meeting, a quote from John Stuart Mill was given as the "Board Critical Framework". It reads, "The only purpose for which power can be rightfully exercised over any member of a civilized community, against his (or her) will, is to prevent harm to others. His own good, either physical or moral, is not a sufficient warrant."

Please explain how this is not a blatant violation of our Constitutional right to personal liberty? The state and federal constitution both declare our inalienable right for our person. Yet the framework being used to guide this decision supports forced compliance against a person's moral or physical good. Justified by a philosophy that believes the good of the community is above the rights of the individual.

This is following the utilitarianism philosophy of John Stuart Mill. How is forcing this philosophy upon the public, different from forcing any other belief system upon the public, based upon the justification that it is for the good of everyone?

As you consider this decision, please look critically at the science. And think about any course of action as to how it conforms to, or violates the liberty of the individual, per the intention of our Constitution. There are many lawsuits currently making their way through the courts concerning the forced compliance to this vaccine. Certainly, these cases should be considered as well, since any decision to mandate COVID-19 treatments will need to withstand legal challenges.

Regards,

Steve McCoy

Subject: Covid vaccine for school age kids

External Email

To whom it may concern:

I urge you to not even think of implementing a covid "vaccine" for our children as a requirement for them to attend any state school.
If implemented, our family and THOUSANDS of other families will promptly remove our children from their specific schools.
I understand each school and district is given money per child that attends. This will have quite an effect as well to each districts' own financial issues.

There is ample evidence that school aged children have barely any risks from Covid, compared to their elder demographic counterparts.

There obviously are cases of children getting covid, but symptoms, if any, are mild and comparable to common colds.

Before this body starts trying to compare a Covid "vaccine" to other vaccines that are currently required to go to school...like the measles...or polio, or chicken pox, etc....let us actually take a look at those a little closer.

How many children who have received those actual vaccines had a breakthrough case of Polio...or a breakthrough case of Measles....or had Chicken Pox a 2nd or 3rd time?

The answer is NONE!! That's because those were actual VACCINES! Vaccines that were tested and retested for years, if not decades and had a profound outcome to saving millions of children's lives who were actually dying of those diseases.

The Covid "Vaccine" is not an actual Vaccine, but rather a shot, like the FLU.

The FLU has actually killed more kids throughout history than pretty much anything, and it's not a REQUIREMENT to get the FLU shot.

Adults, as well as children, can catch the FLU even after they have received a "FLU Shot" because there are different "strains" to the virus.

Covid has different strains as well.....So by getting a Covid "shot", you are actually not protected from getting Covid at all.

Just as the Flu shot is not required, nor should the Covid "shot".

It should be a decision that parents can make on their own, just as they have with the Flu shot.

Again, if this body decides to make this unnecessary "shot" a requirement, this state will lose thousands of students....and for what?

We all know the truth.....keep it a choice. Do not go down this road.

Sincerely,

Fed up parent with the Covid B.S.

Hello,

As there is statistically no concern from any children dying from this virus, there is no responsible excuse to mandate children be required to make a medical decision that looks to be, at this point, not even living up to its promise.

It's hard to believe that you'd even be thinking about this. It's obviously not for the wellbeing of our children as indicated by the absurd masking and distancing you've inflicted on them, and the abusive practices that have continued. If you took their wellbeing seriously, you be meeting about mental health and the damage you've done.

Stop it.

Have you considered the possibility that these vaccines are not tested in children not to mention it was never the kids getting infected or spreading the covid it was the vaccinated adults esp after covid recovered and mass vaccination creating variants, but the injuries related to vaccinated we already are aware of and the possibility of the vaccines causing damage to a persons immune system they currently have increasing their auto immune issues, new cancers and for sure return if those cancers in remission and sterilization we know nothing about is this what we want to test our children on?

Subject: Adding Covid Shots to Required Child Vaccines

External Email

It is my understanding that you are considering adding the Covid shots to the required list of childhood vaccines and I am completely taken aback. After doing clinical research for ten years and staying completely abreast of this entire situation from the onset, attending all of the FDA Zoom meetings, reading all of the protocols, the studies, paying attention to the skipped studies, watching the adverse events and serious adverse events unfold, I am absolutely shocked you would even consider this. Never in our history has a drug been allowed to remain on the market with this kind of history of adverse events. The studies have not even been completed. Have you even read the literature that patients are not given but are supposed to be given when they are injected? The FDA said during the Zoom meeting when they "approved" this injection for under 12 year olds was that they were doing it because they wanted it to be available to those who needed it. There were many on the panel who were concerned this would happen. And obviously justifiably so.

What is the risk/benefit ratio for our children? The only deaths from Covid in children have been few, and only with comorbidities. Healthy children run very little risk of serious injury or death from Covid. However, myocarditis is a real, known, ongoing issue and a real threat to our children with these shots. Why would you cause serious, potential death or possible lifelong harm and early death to a large population of our children? These children are our future. They are on this earth to lead FULL, productive lives. Not lives full of illness and death due to our mistakes. And that is exactly what is going to happen if you let this requirement go through. You will have the blood of thousands of children on your hands.

According to clinicaltrials.gov, a lot of the trials required in the Comirnaty licensure approval are not even registered as having commenced, despite being required as part of licensure approval. Comirnaty is still not made in US and people are getting BioNTech, legally distinct but interchangeable, under EUA. The deferred pediatric studies required under section 505B(a) of the Federal Food, Drug, and Cosmetic Act (FDCA) are required postmarketing studies. The status of these postmarketing studies must be reported according to 21 CFR 601.28 and section 505B(a)(4)(C) of the FDCA. Those studies were to include:

1. Deferred pediatric Study C4591001 to evaluate the safety and effectiveness of COMIRNATY in children 12 years through 15 years of age. Final Protocol Submission: October 7, 2020 Study Completion: May 31, 2023 Final Report Submission: October 31, 2023

2. Deferred pediatric Study C4591007 to evaluate the safety and effectiveness of COMIRNATY in infants and children 6 months to <12 years of age. Final Protocol Submission: February 8, 2021 Study Completion: November 30, 2023 Final Report Submission: May 31, 2024

3. Deferred pediatric Study C4591023 to evaluate the safety and effectiveness of

COMIRNATY in infants <6 months of age. Final Protocol Submission: January 31, 2022
Study Completion: July 31, 2024

Final Report Submission: October 31, 2024

Furthermore, they go on to state:

POSTMARKETING REQUIREMENTS UNDER SECTION 505(o) Section 505(o) of the Federal Food, Drug, and Cosmetic Act (FDCA) authorizes FDA to require holders of approved drug and biological product applications to conduct postmarketing studies and clinical trials for certain purposes, if FDA makes certain findings required by the statute (section 505(o)(3)(A), 21 U.S.C. 355(o)(3)(A)).

We have determined that an analysis of spontaneous postmarketing adverse events reported under section 505(k)(1) of the FDCA will not be sufficient to assess known serious risks of myocarditis and pericarditis and identify an unexpected serious risk of subclinical myocarditis

Furthermore, the pharmacovigilance system that FDA is required to maintain under section 505(k)(3) of the FDCA is not sufficient to assess these serious risks.

Therefore, based on appropriate scientific data, we have determined that you are required to conduct the following studies:

4. Study C4591009, entitled "A Non-Interventional Post-Approval Safety Study of the Pfizer-BioNTech COVID-19 mRNA Vaccine in the United States," to evaluate the occurrence of myocarditis and pericarditis following administration of COMIRNATY.

We acknowledge the timetable you submitted on August 21, 2021, which states that you will conduct this study according to the following schedule:

Final Protocol Submission: August 31, 2021

Monitoring Report Submission: October 31, 2022

Interim Report Submission: October 31, 2023

Study Completion: June 30, 2025

Final Report Submission: October 31, 2025

Again, I have no idea how they are conducting the above because the trials are not registered with the proper governmental registries and Comirnaty is not even manufactured in the US. Please bear in mind that Pfizer had been indicted before more than once for their fraudulent practices. Even California, despite starting into the requirement of mandating the shots for children, have backed away as more safety and efficacy data has come forward.

There are literally thousands upon thousands of us who know the steps that were skipped with these shots. But, in the event you need a refresher and can put greed aside, this is

the best presentation I have seen. Not only are there too many potential adverse events and potential harms present for our public with these mandates, but so many extremely important steps were skipped in the creation of these shots in the way of safety and efficacy. For people who don't do clinical research, they wouldn't know. For those of us who do, it's scary. Please choose wisely. Human lives are on the line.

Subject: COVID 19 Mandate

External Email

I strongly believe the decision to mandate this vaccine, especially while approved for emergency purposes for this age group, will hurt all of our schools. I believe strongly in medical freedom as well as the right to a robust public education earned thru our tax dollars. Regardless of if someone or I am pro or anti covid vaccine our schools stand to loss an even larger number of students if this is pushed thru. As of last reported WA schools overall enrollment is down 55k since the beginning of the pandemic and estimated to grow larger not smaller per reports. OSPI has asked for more funding to bridge this gap that has been filled with Covid dollars, which will not last. Each student is estimated to equal 18k in yearly funding. So my question is simple how many more families will pull their children out in search of homeschool, charter or private options and what will be left for the children left in our public system regardless of vaccination status. Even if only a few more % leave there will districts that will be left behind.
#stopthemandate

I have personally pulled my two children out of public school both last year and this current year. This decision will be the tipping point to going back next year or continuing with homeschool. I have also began exploring charter and private options. I am not alone I have over a dozen friends in our state that have removed their children as well. Including mine we now have over 8 new homeschool friends, and 8 friends in private or charter options. Recently I have had 5 others reach out to me to ask about homeschool to gear up in case of a mandate. I'm just one Mom who knows 16+ students that have left.

I am currently leaving my children unvaccinated for the reasons of one, they have had covid and recovered fine and two because I of the a growing risk of Myocarditis. This is vaccine that has proven to not stop the spread of this disease. Vaccinated people can still both get covid and spread covid. So in relation to a group that has less than a 1% chance of sever illness and even less of death the decision should be left to the parents. I would never tell anyone what to do with their children nor should anyone tell me what to do with mine.

Thank you for you time,

Alisha Ridgely

Subject: A State Mandate for Covid-19 vaccination will mean no children at school.

External Email

Good Afternoon,

As a concerned parent of two school age children, I strongly encourage you to reconsider any thoughts on requiring the Covid-19 vaccination for our children to attend Washington public schools. Forcing a state mandate to vaccinate our children is not appropriate and will only result in less kids attending public schools. My husband and I are not willing to risk our children's health and future with the Covid-19 vaccination. If requiring the vaccine becomes a reality our family will be joining the thousands of other parents in home schooling our children.

Sincerely,

Erin Fonville

Subject: Covid Vaccines to 5-11 year olds.

External Email

To the Board,

I understand that the State Board of Health is in the process of deciding on whether to include the new CovidVx's on the schedule of requirements for school. There are many many of us who have read numerous articles by highly respected medical and health professionals that are sounding the alarm of the detrimental effects this could have on our children, especially the 5-11 year olds.

Please consider the following:

Dr. Cody Meissner chief of pediatric infectious diseases at Tufts children's Hospital states: "healthy people under 18 have generally not suffered major covid effects, and the number of serious cases among the young has tumbled as more adults become vaccinated. ... children are generally not infecting older, vulnerable adults. Under these circumstances, the benefits of covid vaccination at this point may not outweigh the risks for children.

A study in Clinical Infectious Diseases shows that children are unlikely to be the source of COVID-19 household outbreaks and are less likely to be infected with SARS-CoV-2 by another household member, with implications for vaccine distribution.

The average hospitalization rate over the last five weeks for kids 5 to 11 was 0.8 cases per 100,000, according to COVID-NET.

Pfizer itself acknowledged that its data was limited. In fact, it did not even include data in its news release to show if the chances of children getting sick were lower.

Both the COVID-19 infection and vaccines have been linked to heart complications. Sweden suspended Moderna shot indefinitely after vaxxed patients develop crippling heart condition. Finland, Iceland and Denmark have taken similar steps. Norway is encouraging men under 30 not to get the Moderna shot, but is not mandating it.

Rate of Myocarditis/pericarditis for young males in Ontario after 2nd shot stands out above the rest.

"In the preliminary data ... there is a suspicion of an increased risk of heart inflammation, when vaccinated with Moderna," the Danish Health Authority said in a statement, according to Reuters.

Dr. Michael Kurilla from the National Institutes of Health noted there was a lack of data,

but particularly he questioned if vaccinating 5- to 11-year-olds was worthy of an application for emergency use. "I don't see the need for 'emergency use' of this vaccine across the entire age group and would have preferred a more nuanced approach,"

There is no question that overall children are at much less risk of contracting and getting seriously ill from COVID than adults.

Dr. Robert Malone, inventor of mRNA technology, has cited the risks involved in vaccinating children. 'the government is not being transparent about the risks' of the COVID-19 vaccine'

Dr. Peter McCullough, a widely published cardiologist. "There will be children lost with the vax — far more than ever happened with COVID,"

Then of course, the latest VAERS data: <https://openvaers.com/covid-data>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fopenvaers.com%2F covid-data&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C61be8e8bad0e44f0e5ac08d9ceeb0ed8%7C11d0e217>

I have many more, but that's enough.

Thank you for your consideration.

12/28/2021

To: Board of Health TAG Council members

Dear Council Members,

Please end all COVID related mandates!

I have lived and worked in Clark County 43+ years, have kids in school, have a construction business with 20+/- employees. These last few years have been bad.

Since the COVID mandates I've had over \$100,000+ loss of income because of the mandates, also paying extra for private school. We are looking to move out of the County and/or State.

These COVID mandates are 99% politically motivated. Masks, vaccines, are unproven, not effective and cause harm. Masking kids is child abuse, they can't talk, breathe, hear each other, disrupts education. There is no emergency COVID risk to kids and healthy people. Many doctors agree that masks, vaccines, are harmful, unnecessary, no emergency need.

Please allow personal medical choice and responsibility. People have the right to choose. If Council suggests mandating masks, vaccines, etc. for people and there are future bad effects, the council could be liable.

The Council should publicize facts only for our area, such as COVID death rate is less than .001%. The Council should remind people that they are ultimately personally responsible for their own health and to follow their doctor's advice re: COVID.

Please enact an ordinance prohibiting all COVID-related mandates, so we can all get back to work and live a normal life. The mandates have gone on too long and it's not getting any better.

The "clarkcountygroupp.com

<<https://gcc02.safelinks.protection.outlook.com/?url=http%3A%2F%2Fclarkcountygroupp.com%2F&data=0>
" just recently sent a petition to the Clark County Council to "Stop the Mandates" with over 11,000 signatures !!! ..So Please push for ending the Mandates locally and Statewide !!

Please confirm.

Sincerely,

PHIL HOGAN

Subject: COVID vaccination for school

External Email

To Whom It May Concern,

I am a Washington state residence, and I want it to be known that I am strongly against forcing people to be vaccinated, especially when the long term risks are unknown, and especially when it comes to our children. There is overwhelming evidence that these vaccines are not ready for the public, EVEN FROM THE COMPANIES THEMSELVES! These links report there are high risks involved with these vaccines

https://physiciansforinformedconsent.org/wp-content/uploads/2021/08/Pfizer-COVID-19-Vaccine-Risk-Statement-PDF.pdf?fbclid=IwAR307Wz1EaUdCRWLbidH-ZMC4ORUqqjBabidgOu7GfT6fDEAOzR59tRw_6U

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fphysiciansforinformedconsent.org%2Fwp-content%2Fuploads%2F2021%2F08%2FPfizer-COVID-19-Vaccine-Risk-Statement-PDF.pdf%3Ffbclid%3DIwAR307Wz1EaUdCRWLbidH-ZMC4ORUqqjBabidgOu7GfT6fDEAOzR59tRw_6U&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cef4bd09f0be45984c7808d9cf06e0ea%7C>

In addition, the group members who met to decide whether the vaccine is safe for administration to children directly stated that they won't know unless we give it to them. It honestly concerns me a great deal that WA state would jump on this bandwagon without knowing the long term effects to our children. If parents choose to get the vaccine for their children, that should be their choice, but the state should not have a say in a "vaccine" that isn't actually a vaccine, and has not effectively been tested!

The "reports" the media puts out are never backed with actual studies. This news site supports all claims with actual studies that have been performed throughout the world. These studies have not been manipulated like what our government is trying to put out to the public. I suggest WA state strongly consider and look at other sources before making a decision that will effect the lives of our children.

Hello there,

I would like to kindly ask to discourage/ reject the proposed Covid vaccine mandate for children in WA state. The risks of the vaccine far exceed the benefits. As a mother, I'm concerned for the safety of my children. Thank you!

Subject: Re: Covid vaccine requirements for K-12

External Email

I didn't mean to send this yet. I had more to say. We can see from outbreaks in the most vaccinated countries in the world (Israel, Gibraltar, Iceland, and Singapore are examples) as well as a multitude outbreaks from vaccinated only events and vaccinated only cruises that these shots do not work and almost seem to be generating illness.

The vast majority of reports on VAERS are from the Covid injections. As of December 17th, due to the Covid shots: 20,622 deaths reported, 108,572 hospitalizations, 983,756 reports. Almost 1,000,000 reports and you have the nerve to pretend these are safe in your Zoom meeting? Dispicable. Quit lying to yourselves and everyone else. You're ruining the lives of adults, families, and children. We are seeing way too many side effects and "breakthrough cases" to call either rare. Stop these ridiculous, tyrannical policies!

Mandating experimental injections is a violation of the Nuremberg code. The emergency situation isn't valid. It cannot be demonstrated under our current situation, especially not in children. It is also a violation of UNESCO-
<https://en.unesco.org/themes/ethics-science-and-technology/human-genome-and-human-rights>

This is simply a violation of common decency. The stripping away of bodily autonomy, ability to acquire money, ability to achieve an education, and freedom of movement based upon a false emergency should scream to everyone that it is evil and wrong. Particularly when children get dragged into the situation. If you're really interested in doing the right thing then you won't do this.

I am more than happy to send anyone at the BOH links to a multitude of information, including from governmental sites, from the mouths of dissenting scientists and doctors, from whistle blowers, and from scientific studies. This is too important to go on ideology, talking points, and conjecture. Please make the right choice. You have a lot of lives in your hands. History will judge you harshly if you go through with this.

Jennifer Cook

On Dec 29, 2021 3:19 PM, Jennifer Cook <jennifungus@hotmail.com> wrote:

I am writing to plead with you to NOT make the Covid "vaccine" mandatory for children to attend school. There are many reasons not to move forward with this. First of all, children ARE NOT at risk from Covid and the current panic driving variant, Omicron varies from basically no symptoms to a very mild flu. For most it seems to be like a head cold. So, should we also require vaccines for the common cold? Or allergy shots? The emergency situation is and has been grossly exaggerated, particularly for children. There is no emergency situation for children outside of the policies which are destroying their childhoods. They are absolutely at more risk from these shots than from Covid. Even if you go by the official data, you will see that the numbers do back up this statement.

Another reason not to force injections on children, is that adults can all get it if they want it and that has been the case for some time now. This is actually the same reason to force it on nobody, regardless of age. If these shots work then anyone who thinks they need them can get them and should be protected. If they don't work then nobody should get them quite frankly. To argue that children should get these shots to protect adults who already have chosen to get injected themselves is NOT scientific and is contrary to even minimal common sense. Which brings me to my next point, these shots are NOT working, clearly. First, they said 99% effective, then 95%, then it was in the 80s, then 70s... Eventually, a booster was announced as essential. Now, they are saying that a fourth shot will probably be necessary. Talk of a booster anywhere from every 9 months all the way down to every 2 months is getting tossed around. CLEARLY these shots don't work as a vaccine should. So, what sense does it make to mandate them.

Next point, these are experimental and not all information on them is available. You cannot force experimental injections and you cannot force injections without FULLY INFORMED CONSENT. We do not have all information available still on these shots. That CAN'T be denied under any stretch of the truth. Tell me? What are all the ingredients? What are the long term effects? Bet you can't answer either. Before you go off on the Pfizer FDA approval narrative, stop. Comirnaty, the FDA approved version isn't available in the US and isn't being given. The emergency use version is still being given. I'm going to go out on a limb and say this is because Pfizer has legal protection under the EUA.

Another point, the officials involved have been caught blatantly lying and contradicting themselves about safety and efficacy of the vaccine and the severity of Covid over and over again. So, we are supposed to use this as the basis of whether to give families the choice of an education for their child or bodily autonomy?

I want to express my concern regarding the discussions surrounding the possible mandatory covid shots for children. I think it is extremely irresponsible to even be discussing such a mandate when the science doesn't come close to suggesting there is any advantage to doing so.

I will welcome any reply that might sway my opinion. Please include any data that would show that vaccinated children are less likely to contract or spread Covid any unvaccinated. Also any absolute assurance that there is NO risk whatsoever if children receive this shot.

I look forward to hearing from you.

Thank you, Craig Sorenson

I wanted to weigh in on the discussion regarding C-19 vaccine requirements for school. I want to state clearly I do NOT agree with a vaccine mandate for children. There have been many issues with children and the vaccine and there is not an immediate threat to kids in regards to COVID. This should not constitute a requirement for school enrollment. Why are we even considering this. You do NOT have a valid reason to be pushing this on families. What happened to my body my choice? It only is in play when it works for your agenda?? Stop this madness!

Concerned parent,

Melinda Berg

Listen Now

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Faudioplacement.me%2F%3Futm_medium=reasons-why-children-5-to-11-should-not-have-the-covid-vaccine%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e2

On Tuesday December 22nd the UK Medicine Regulator (MHRA) gave emergency use authorisation

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fregulator-approves-use-of-pfizerbiontech-vaccine-in-5-to-11-year-olds&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e2>
for the Pfizer / BioNTech Covid-19 injection to be administered to all children between the ages of 5 and 11.

Then within minutes, the Joint Committee on Vaccination and Immunisation (JCVI) advised the UK Government to roll the jab out to all children

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fissues-new-vaccination-advice-for-children-and-young-people&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e2>
deemed to be in a clinical risk group, or who are a household contact of someone who is immunosuppressed.

Professor Wei Shen Lim, Chair of the JCVI said:

"The majority of children aged 5 to 11 are at very low risk of serious illness due to COVID-19. However, some 5 to 11 year olds have underlying health conditions that put them at higher risk, and we advise these children to be vaccinated in the first instance."

With the alleged Omicron variant about to become the dominant strain in the UK it makes very little sense to give the Pfizer injection to children due to the fact that it only targets the S protein of the virus, which is heavily mutated in Omicron.

But that is not the only reason why children as young as 5 should not be given the Covid-19 injection.

For a parent to be competent enough to make the decision to consent to their child having the Pfizer Covid-19 vaccine, they should be made aware of all the facts before they reach their decision. So we've compiled 13 factual reasons why 5 to 11-year-old children should not be given the Covid-19 vaccine...

Reason No. 1

86% of 12-15-year old Children suffered an Adverse Reaction to the Pfizer Covid-19

Vaccine in the Clinical Trial

The information is publicly available and contained within a US Food & Drug Administration (FDA) fact sheet which can be viewed here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F14441>
(see page 25, table 5 on-wards).

That fact sheet contains two tables that detail the alarming rate of side effects and damage experienced by 12 – 15- year-old children who were given at least one dose of the Pfizer mRNA injection.

The tables shows that 1,127 children were given one dose of the mRNA jab, but only 1,097 children received the second dose. This fact in itself raises questions as to why 30 children did not receive a second dose of the Pfizer jab.

Of the 1,127 children who received a first dose of the jab 86% experienced an adverse reaction

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdailyexpose.uk%2F2021%2F05%2F86-of-children-suffered-an-adverse-reaction-to-the-pfizer-covid-vaccine-in-clinical-trial%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11>
. Of the 1,097 children who received a second dose of the jab 78.9% experienced an adverse reaction.

Reason No. 2

1 in 9 Children suffered a Severe Adverse Reaction leaving them unable to perform daily activities in the Pfizer Clinical Trial

For children 12 to 15 years of age, the Pfizer Covid-19 vaccine clinical trial found the overall incidence of severe adverse events which left them unable to perform daily activities, during the two-month observation period to be 10.7%, or 1 in 9, in the vaccinated group and 1.9% in the unvaccinated group.

Consequently, children who received the vaccine had nearly six times the risk of a severe adverse event occurring in the two-month observation period compared to children who did not receive the vaccine. In addition, the incidence of Covid-19 in the unvaccinated group was 1.6%, therefore, there were almost seven times more severe adverse events observed in the vaccinated group than there were Covid-19 cases in the unvaccinated group.

This information is all freely available to see in official Food and Drug Administration (FDA) documents

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F14441>
and official Centre for Disease Control (CDC) documents
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fvaccines%2Fadvisories%2F2021-05-12%2F03-COVID-Wallace-508.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11>
.

Reason No. 3

Just 17 deaths associated with Covid-19 have occurred in Teenagers & Children since

March 2020

Official NHS data which can be viewed here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.england.nhs.uk%2Fstatistics/work-areas%2Fcovid-19-daily-deaths%2Fweekly-total->

archive%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C

(see Table 3 – COVID-19 deaths by age group and pre-existing condition of the downloadable excel document) shows that since March 2020 just 17 people under the age of 19 have died with Covid-19 who had no known pre-existing conditions in England’s hospitals, up to the 8th December 2021. The data also shows that just 60 people under the age of 19 have died with Covid-19 in the same time frame who did have other serious underlying conditions.

There are approximately 15.6 million people aged 19 and under

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.statista.com%2Fstatistics%2Fpopulation-by->

age%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cc842717aaa24e3f193c08d9cbc9f140%7C11

in the United Kingdom which means just 1 in every 260,000 children and teenagers have allegedly died with Covid-19 in 21 months who had other serious pre-existing conditions. Whilst just 1 in every 917,647 children have allegedly died with Covid-19 in 21 months, who had no know pre-existing conditions.

A scientific study titled 'Deaths in Children and Young People in England following SARS-CoV-2 infection during the first pandemic year: a national study using linked mandatory child death reporting data'

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fassets.researchsquare.com%2Ffile%2F689684%2Fv1%2F3e4e93fb-4e98-4081-9315->

16143c2bbd2b.pdf%3F%3D1625678600&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aa
(which can be found here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fassets.researchsquare.com%2Ffile%2F689684%2Fv1%2F3e4e93fb-4e98-4081-9315->

16143c2bbd2b.pdf%3Fc%3D1625678600&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aa

, conducted by Clare Smith of NHS England and Improvement and several Universities also concluded that children are at negligible risk of death, hospitalisation, or serious illness due to the alleged Covid-19 virus.

The study collated data from the National Child Mortality Database; a mandatory system that records all deaths in Children under 18 years of age in England. What the researchers found is that just 25 children under the age of 18 died of Covid-19 between March 2020 and February 2021, with 15 of the 25 having a pre-existing life-limiting condition, and 19 of the 25 having a chronic condition.

The study also found that 16 of the 25 children who sadly died had two or more comorbidities with 8 children suffering pre-existing neurological and respiratory problems, 3 children suffering pre-existing neurological and cardiology problems, and 3 children suffering respiratory and cardiology problems.

Reason No. 4

The risk of Children developing serious illness due to Covid-19 is extremely low

A study (found here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medrxiv.org%2Fcontent%2F>
) led by Professor Russell Viner of UCL Great Ormond Street Institute of Child Health, published on the medRxiv server, found that 251 young people aged under 18 in England were admitted to intensive care with Covid-19 during the first year of the pandemic (until the end of February 2021).

The results of the study found that there were 5,830 admissions associated with Covid-19 among children up to 17 years of age during the pandemic year, this represents just 1.3% of secondary care admissions among children.

The lead author of the study said: "These new studies show that the risks of severe illness or death from SARS-CoV-2 are extremely low in children and young people".

Reason No. 5

The Pfizer Covid-19 Vaccine is experimental and still in Clinical Trials

The Pfizer mRNA Covid-19 injection is in fact only temporarily authorised

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fassets.publishing.service.gov.uk%2F>
(see official MHRA document here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fassets.publishing.service.gov.uk%2F>
) for emergency use only. In October the government made changes to the Human Medicines Regulations 2012 to allow the MHRA to grant temporary authorisation of a Covid-19 vaccine without needing to wait for the EMA.

A temporary use authorisation is valid for one year only and requires the pharmaceutical companies to complete specific obligations, such as ongoing or new studies. Once comprehensive data on the product have been obtained, standard marketing authorisation can be granted. This means that the manufacturer of the vaccine cannot be held liable for any injury or death that occurs due to their vaccine, unless it was due to a quality control issue.

The reason the Pfizer mRNA Covid-19 injection has only been granted temporary authorisation is because it is still in clinical trials that are not set to conclude until May 2nd 2023. You can see the official Clinical Trial Study Tracker for the Pfizer jab on the US National Library of Medicine site here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fclinicaltrials.gov%2Fct2%2Fshow%2F>

.

This is the first time mRNA injections have ever been authorised for use in humans (see here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fec.europa.eu%2Fresearch-and-innovation%2Fen%2Fhorizon-magazine%2Ffive-things-you-need-know-about-mrna-vaccines&data=04%7C01%7CW5BOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11>
) , and the long term side effects are not known, meaning the millions of people around the world who have had the Pfizer Covid-19 injection are essentially taking part in an experiment.

Three Scientific Studies conducted by the UK Government, Oxford University, & CDC, which were published in August have found the Covid-19 Vaccines do not work

CDC Study

The CDC study (found here

Oxford University Study

The Oxford University study (found [here](#)

UK Department of Health & Social Care Study

The UK Department of Health & Social Care study (found [here](#))

<<https://qcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medrxiv.org%2Fcontent%2F>

) is an analysis of ongoing population wide SARS-CoV-2 monitoring in the UK and includes measures of viral load among the population.

The study found that viral loads among the vaccinated and unvaccinated population are virtually the same, and much higher than had been recorded prior to the Covid-19 injection roll-out. The study also found that the majority of cases among the vaccinated population were presenting with symptoms when they became positive.

The authors of the study conclude that the Pfizer and Oxford / AstraZeneca injection have lost efficacy against what they claim to be the Delta Covid-19 variant.

Reason No. 7

Public Health England Data shows the majority of Covid-19 Deaths are among the Vaccinated and suggests that the Vaccines worsen disease

Various UK Health Security Agency Vaccine Surveillance reports

[https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fassets.publishing.service.gov.uk/_week_49.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cc842717aaa24e3f193c08d9cbc9f140%](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fassets.publishing.service.gov.uk/_week_49.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cc842717aaa24e3f193c08d9cbc9f140%detail)

detail the number of Covid-19 cases by vaccination status in England. The following chart shows hospitalisations by vaccination status over a period of 16 weeks from 16 Aug 21 to 05 Dec 21.

The chart shows that between August and early September, the fully vaccinated population accounted for the majority of Covid-19 cases. However, between the middle of September and early October this switched to the not-vaccinated population accounting for the majority of cases. This is most likely due to children returning to school in September and being “encouraged” to test on a regular basis.

But between October 11th and December 5th the roles reversed again, and it is the fully vaccinated population that have accounted for the majority of Covid-19 cases in England.

This data alone puts an end to the myth that the Covid-19 vaccine will prevent children from being infected and spreading Covid-19.

The following chart shows hospitalizations by vaccination status over a period of 16 weeks from 16 Aug 21 to 05 Dec 21.

Between Aug 16 and Dec 05, the unvaccinated population accounted for 11,767 Covid-19 hospitalisations. But the vaccinated population have accounted for nearly double the amount, recording 19,730 hospitalisations, with 18,406 of those being among the 2/3 dose vaccinated population. This means the vaccinated population have accounted for 63% of Covid-19 hospitalisations since August 2021.

The following chart shows deaths by vaccination status over a period of 16 weeks from 16 Aug 21 to 05 Dec 21.

Between 16 Aug 21 and 05 Dec 21 there were 3,070 Covid-19 deaths among the unvaccinated population in England, compared to 12,058 deaths among the vaccinated population during the same time frame. That is a 293% difference.

The following chart shows the case-fatality rate among the not-vaccinated population, and the case-fatality rate among the 2/3 dose vaccinated population between 16 Aug and 05 Dec 21.

The case-fatality rate is calculated by dividing the number of known deaths by the number of known cases among the population. As we can see from the above the case-fatality rate among the not-vaccinated population is just 0.2%, which is what is in line with the average case-fatality rate in 2020 before a Covid-19 injection was introduced to the masses.

However, the case-fatality rate among the fully vaccinated population is much higher, equating to 0.8%. Therefore the fully vaccinated are 4 times / 300% more likely to die if exposed to the Covid-19 virus based on official UK Government figures.

The above data was extracted from the following official UK Health Security Agency Vaccine Surveillance reports –

* COVID-19 vaccine surveillance report – Week 37 (Covers Week 33-36)

Reason No. 8

There had been at least 1.18 million Adverse Reactions to the Covid-19 Vaccines in the UK alone up to September 1st

The thirty-second report highlighting adverse reactions to the Pfizer / BioNTech, Oxford / AstraZeneca, and Moderna Covid-19 injections that have been reported to the UK Medicine Regulator's (MHRA) Yellow Card scheme reveals that there were 1,186,844 adverse reactions reported between the 9th December 2020 up to the 1st September 2021.

The reports for each available vaccine can be found [here](#)

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fpublications%2Fcoronavirus-vaccine-adverse-reactions%2Fcoronavirus-vaccine-summary-of-yellow-card-reporting%23annex-1-vaccine-analysis-print&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e>

under the analysis print section and include adverse reactions such as blindness, seizure, stroke, paralysis, cardiac arrest and many other serious ailments. As of December 8th 2021 there have now been over 1.3 million adverse reactions including 1,852 deaths.

The Pfizer mRNA injections had left at least 107 people fully paralysed and a number of other people partly paralysed up to the 1st September 2021. However, the MHRA state that an estimated 10% of adverse reactions are actually reported to the Yellow Card scheme, meaning the true figure of adverse reactions is immensely higher.

Reason No. 9

There were more deaths in 8 months due to the Covid-19 Vaccines than there have been due to all other available Vaccines combined since the year 2001

The UK Medicine Regulator responded to a Freedom of Information (found here <https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdailyexpose.uk%2Fwp-content%2Fuploads%2F2021%2F09%2FFOI-21-907-Response-1.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e>) request demanding to know how many deaths have occurred in the past 20 years due to all vaccines, and their response revealed that there have been four times as many deaths in just eight months due to the Covid-19 injections.

The request

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdailyexpose.uk%2Fwp-content%2Fuploads%2F2021%2F09%2FFOI-21-907-Response-1.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e>>
was made via email to the Medicine and Healthcare product Regulatory Agency (MHRA)
on the 6th August 2021, and in answer to the question
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdailyexpose.uk%2Fwp-content%2Fuploads%2F2021%2F09%2FFOI-21-907-Response-1.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e>>
asked on the number of deaths due to all other vaccines in the past twenty years, the
MHRA revealed that they had received a total of 404
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdailyexpose.uk%2Fwp-content%2Fuploads%2F2021%2F09%2FFOI-21-907-Response-1.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e>>
reported adverse reactions to all available vaccines (excluding the Covid-19 injections)
associated with a fatal outcome between the 1st January 2001 and the 25th August 2021
– a time frame of 20 years and 8 months.

However, according to the MHRA Yellow Card Report (see here

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fpublications/covid-19-vaccine-adverse-reactions%2Fcoronavirus-vaccine-summary-of-yellow-card-reporting%23annex-1-vaccine-analysis-print&data=04%7C01%7CW5BOH%40SBOH.WA.GOV%7Cc842717aaa24e3f193c08d9cbc9f140%7C11d0e>

– under each analysis print section) there were 1,632 deaths reported as adverse reactions to the Covid-19 vaccines from December 9th 2020 up to September 1st 2021. This included 16 deaths due to the Moderna jab, 24 deaths where the brand of vaccine was unspecified, 1,064 deaths due to the AstraZeneca vaccine, and 524 deaths due to the Pfizer mRNA injection.

Reason No. 10

The risk of Myocarditis (Heart Inflammation) in Children due to the Pfizer Vaccine

Myocarditis is inflammation of the heart muscle, whilst Pericarditis is inflammation of the protective sacs surrounding the heart. Both are serious conditions due to the fact the heart muscle cannot regenerate, and both conditions have officially been added to the safety labels of the Pfizer jab and Moderna jab by the MHRA (see here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fpublications%2Fcoronavirus-vaccine-summary-of-yellow-card-reporting%23analysis-of-data&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e1>).

Source

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fpublications%2Fcoronavirus-vaccine-summary-of-yellow-card-reporting%23analysis-of-data&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e1>

Myocarditis and pericarditis happen very rarely in the general (unvaccinated) population, and it is estimated that in the UK there are about 6 new cases of myocarditis per 100,000 patients per year and about 10 new cases of pericarditis per 100,000 patients per year.

The MHRA has undertaken a thorough review of both UK and international reports of myocarditis and pericarditis following vaccination against Covid-19 due to a recent increase in reporting of these events in particular with the Pfizer/BioNTech and Moderna vaccines, with a consistent pattern of cases occurring more frequently in young males.

A Scientific Study published on the JAMA network

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fjamanetwork.com%2Fjournals%2Fjama%2Farticle%2F2745555>, has also found that the incidence of myocarditis among vaccinated individuals is at least double what Health Authorities are claiming.

The new JAMA study

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fjamanetwork.com%2Fjournals%2Fjama%2Farticle%2F2745555> (found here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fjamanetwork.com%2Fjournals%2Fjama%2Farticle%2F2745555>) showed a similar pattern to a CDC study (found here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fvaccines%2Fadvisories%2F2021-06%2F03-COVID-Shimabukuro-508.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e1>), although at higher incidence of myocarditis and pericarditis after vaccination, suggesting vaccine adverse event under-reporting.

The researchers calculated

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medscape.com%2Fviewarticle%2F934555> the average monthly number of cases of myocarditis or pericarditis during the pre-vaccine period of January 2019 through January 2021 was 16.9 compared with 27.3 during the vaccine period of February through May 2021.

The mean numbers of pericarditis cases during the same periods were 49.1 and 78.8.

Dr. George Diaz who conducted the study told Medscape that "Our study resulted in

higher numbers of cases probably because we searched the EMR, and [also because] VAERS requires doctors to report suspected cases voluntarily," Diaz told Medscape <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medscape.com%2Fviewartic>>. Also, in the governments' statistics, pericarditis and myocarditis were "lumped together".

Reason No. 11

Children have died and are dying due to the Covid-19 Vaccines

The US Vaccine Adverse Event Reporting System (VAERS), which can be searched here <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.openvaers.com%2F covid-data%2F covid-full-data&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e>> by inputting the specific VAERS ID shows that several children have died in the US after having the Covid-19 vaccine, with many suffering cardiac arrest.

A 16 year-old female received the Pfizer vaccine on the 19th March 2021. Nine days later the same female went into cardiac arrest at home. By the 30th March 2021 she had sadly died. Found under VAERS ID 1225942.

A 15 year-old female suffered cardiac arrest and ended up in intensive care four days after having the Moderna mRNA jab. She also sadly died. Found under VAERS ID 1187918.

Another 15 year-old female received her second dose of the Pfizer jab on the 6th June 2021. Sadly one day later she died suddenly without reason. Found under VAERS ID 1383620.

A 15 year-old male die due to an unexplained reason twenty-three days after having the Pfizer jab. Found under VAERS ID 1382906.

The above are sadly just a few examples of the deaths to have occurred among children due to the Covid-19 vaccines in the USA.

Reason No. 12

Who profits from your Child getting the Covid-19 Vaccine?

It may surprise you to know that GP's were already being incentivised to inject the adult population with the Covid-19 vaccine with a payment of £12.58 for every dose administered.

So it may surprise you further to know that GP's are being offered an additional payment of £10 on top of the £12.58 already offered for every injection administered to a child in the United Kingdom. All of this is documented in an official NHS document found here <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.england.nhs.uk%2Fcoronavirus%2Fcontent%2Fuploads%2Fsites%2F52%2F2021%2F08%2FC1384-Vaccinating-children->>

and-young-people-frequently-asked-questions.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e2

According to the last count made in 2020 there are approximately 3,154,459 children between the ages of 12 and 15 in the United Kingdom. Therefore GP's across the UK could stand to make a combined £142.45 million if every child is injected with a Covid-19 vaccine.

A Freedom of Information request (found here <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fopen-information-responses-from-the-mhra-week-commencing-17-may-2021%2Ffreedom-of-information-request-about-the-bill-and-melinda-gates-foundation-foi-21-509&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e2>>) which the MHRA responded to in May 2021 revealed that the current level of grant funding received from the Bill & Melinda Gates Foundation amounts to \$3 million and covers "a number of projects". The MHRA being the UK Medicine Regulator to have granted emergency use authorisation for the Pfizer / BioNTech mRNA vaccine to be given to children.

Coincidentally, the Bill & Melinda Gates Foundation bought shares in Pfizer <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fool.com%2Finvesting%2F2020/09/01/coronavirus-vaccine-stocks-the-bill-melinda-gate%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e2>> back in 2002 (see here <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fool.com%2Finvesting%2F2020/09/01/coronavirus-vaccine-stocks-the-bill-melinda-gate%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e2>>), and back in September 2020 Bill Gates ensured the value of his shares went up by announcing to the mainstream media in a CNBC interview that he viewed the Pfizer jab as the leader in the Covid-19 vaccine race.

"The only vaccine that, if everything went perfectly, might seek the emergency use license by the end of October, would be Pfizer."

The Bill & Melinda Gates Foundation also coincidentally bought \$55 million worth of shares in BioNTech <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fool.com%2Finvesting%2F2020/09/01/coronavirus-vaccine-stocks-the-bill-melinda-gate%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e2>> (see here <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fool.com%2Finvesting%2F2020/09/01/coronavirus-vaccine-stocks-the-bill-melinda-gate%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e2>>) in September 2019, just before the alleged Covid-19 pandemic struck.

Can we really trust the MHRA to remain impartial when its primary funder is the Bill & Melinda Gates Foundation, who also own shares in Pfizer and BioNTech?

Reason No. 13

The Joint Committee on Vaccination & Immunization refused to recommend the Pfizer Vaccine be offered to Children aged 12-15

On the 3rd September 2021 the Joint Committee on Vaccination and Immunization (JCVI) announced

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fissues-updated-advice-on-covid-19-vaccination-of-children-aged-12-to-15&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e21>
(see here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fissues-updated-advice-on-covid-19-vaccination-of-children-aged-12-to-15&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e21>
) they were not recommending the Pfizer Covid-19 injection be offered to all children over the age of 12.

The assessment by the Joint Committee on Vaccination and Immunization (JCVI) is that the health benefits from vaccination are marginally greater than the potential known harms. However, the margin of benefit is considered too small to support universal vaccination of healthy 12 to 15 year olds at this time.

The JCVI cited the following –

“For the vast majority of children, SARS-CoV-2 infection is asymptomatic or mildly symptomatic and will resolve without treatment. Of the very few children aged 12 to 15 years who require hospitalization, the majority have underlying health conditions.”

Since 1st April 2009 the Health Protection (Vaccination) Regulations 2009 place a duty on the Secretary of State for Health in England to ensure, so far as is reasonably practicable, that the recommendations of JCVI are implemented (See here

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fassets.publishing.service.gov.uk%2Fmedia%2Fgovernment%2Fassets%2Fdocuments%2Fhprv%2Fhprv_final.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e21
– page 6).

Yet in an unprecedented move, the Secretary for Health and the Government decided to bypass the JCVI and seek the advice of the four Chief Medical Officers (CMO's) of the United Kingdom.

In their letter to the Government (found here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fissues-updated-advice-on-covid-19-vaccination-of-children-and-young-people-aged-12-to-15-years-against-covid-19%2Funiversal-vaccination-of-children-and-young-people-aged-12-to-15-years-against-covid-19&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Ccf842717aaa24e3f193c08d9cbc9f140%7C11d0e21>
) , the UK CMO's stated they looked at wider public health benefits and risks of universal vaccination in this age group to determine if this shifts the risk-benefit either way. They claimed in their letter that “the most important in this age group was impact on education”.

This raises some serious questions –

1. Did Covid-19 close the schools? The answer is of course no. Schools were closed because of Government policy.

2. Should a person take a medical treatment so that they are able to partake in society or education? The answer is of course no. A person should only ever take a medical treatment for a medical reason, in the case of the Covid-19 vaccine that reason should be to prevent infection; which it does not do, or prevent illness; which it will not do as children are at such low risk of suffering serious illness due to Covid-19.

The decision by Chris Whitty and his fellow Chief Medical Officers to advise the Government that the Covid-19 vaccines should be offered to children aged 12-15 was not a decision based on science, it was instead a decision based on politics.

So there you have it, 13 factual reasons why children aged 5 to 11 should not be given the Covid-19 vaccine, and each and every one is based on the science.

Now the choice is yours, we hope you make the correct one.

Please don't make the Covid vaccine mandatory for school. What if our children already had Covid? Would they be exempt?

Please respect the choices that people are making for themselves and their family. We are already wearing masks and following the protocols set in place to slow/stop the spread.

I work at our local high school and I'm vaccinated. I am also the only one in my house/immediate family of 4, who is sick with Covid (day 6). The rest of the family is fine and tested negative as of this morning. I honestly feel like having the vaccine hasn't made a difference, especially when I can still spread Covid.

I recall Chris Reykdal saying in June that this wouldn't be mandatory.

Thank you for taking the time to read my opinion,

Teresa Drivas

I am writing in opposition to your proposal to make the Covid vaccine part of the state's child immunization schedule.

- 1) The vaccines are brand new and still under EUA....lack of adequate data.
- 2) I know of friends & have heard many very serious side effects hitting people after getting the vaccine. Everyone should have a choice in this vaccine. No mandates should be forced on this Covid vaccine.
- 3) Where there is a risk, there should be a choice.
- 4) Mandates like this will continue to destroy the foundation of our public school system....loss of funding. Families will continue to leave the state.
- 5) Children have a 99.99% survival rate...
- 6) We are 2 years in...those who wanted the shot have likely already done so.

Thank you,
Sherri Martin

Re: Adding Covid-19 vaccines to school vaccine requirements

I expect this board to do thorough research of the studies showing the adverse events suffered by children who have been given Covid-19 vaccines, and to study the risk to reward ratio. It is your duty to make a decision that will help children keep their health and not harm it with long-term consequences of this experimental mRNA therapeutic.

1. Children are not affected by the SARS-COV-2 virus in the same way that adults are. They often show no symptoms at all and their risk of dying from Covid-19 is shown to be almost zero. Fewer children died of Covid-19 last year than died from the flu. There is no scientific reason to inflict this experimental "vaccine" on children, particularly since the BOH doesn't require school children to get the flu vaccine.

2. The Covid-19 vaccine is not actually a vaccine since it doesn't actually prevent Covid-19. The CDC changed the definition of a vaccine in September 2021 from a drug that creates immunity to a drug that can reduce or prevent serious illness. Those drugs were previously known as therapeutics. Scientists have never successfully created a vaccine against a coronavirus since it continuously mutates. The good news is that as the coronavirus mutates it tends to decrease in severity of the illness caused, which is why the current omicron variant causes symptoms similar to those of a head cold.

3. Children's immune systems are at risk of being permanently harmed by this new, untested mRNA technology. The FDA was very reckless in approving the Covid-19 for children ages 5 - 11 since it has not been seriously tested on children for a scientifically acceptable length of time. Two long-term department heads at the FDA who were in charge of vaccine programs resigned in protest of the approval of this experimental therapy which was made by a separate committee that ignored their concerns.

4. Children's hearts, particularly boys' hearts, are at greater risk of myocarditis caused by the spike proteins generated by the mRNA injection. This causes health problems throughout their lives and will shorten their lives. You need to weigh the risk to benefit ratio in this decision. There is much greater risk of damaging children's health with this injection than there is risk of them being harmed by the SARS-COV-2 virus. We know this after two years of study, that thankfully this virus doesn't hurt children like it does the elderly.

5. Children's bodies are still growing, their immune systems are still changing and the presence of these spike proteins in their bodies will have many unintended consequences to their health as they go through puberty and become adults.

I believe not only that it is wrong to experiment on our children, but it's criminal child abuse if you recommend that this fake "vaccine" be given to every school child in the State of Washington. Just because our government is using the media to spread fear and propaganda throughout the scientifically uneducated population doesn't mean that you need to go along with the hysteria.

I strongly urge you to do your research and to keep this experimental mRNA therapeutic off the list of vaccinations required for children.

Please let me know if you have any questions. Please review this article:

Subject: Covid vaccines and kids

External Email

I hope and trust that the state of Washington will not add the RMN Covid vaccines to the mandatory school vaccine list.

These vaccines are still experimental and the long-term consequences they may have on individual health are still unknown.

Additionally, the Moderna vaccine was developed using fetal cell line HEK 293, and the Johnson & Johnson vaccine used fetal cell line PER.C6.

These vaccines were developed from the bodies of children murdered in the Netherlands and exploited by the above companies. (See Univ. of Nebraska Med. Center web page

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nebraskamed.com%2FCOVID%2Fasked-we-answered-do-the-covid-19-vaccines-contain-aborted-fetal-cells&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C5ca2c2a518d44b8cc63008d9cbae6647%7C11d>

So these vaccines are potentially dangerous and certainly immorally developed.

I hope the State of Washington will not also exploit the deaths of these children.

Rev. Calvin D.G. Willard, AFLC
Calvary Lutheran Church, Everett, WA.

2. **VACCINE MAKERS ARE IMMUNE FROM LIABILITY** Vaccine manufacturers have no incentive to ensure their vaccines are as safe as possible. Established in 1986 with the National Childhood Vaccine Injury Act and reinforced by the PREP Act, vaccine makers cannot be sued even if they are shown to be grossly negligent.

https://www.congress.gov/bill/99th-congress/house-bill/5546
 <https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.congress.gov%2Fbill%2F99th-congress%2Fhouse-bill%2F5546&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7C2947b9f136134bef9cae08d9cf48b050%7C...>

 . Aspx

3. **VACCINE COMPANIES HAVE LONG RAP SHEETS** Vaccine makers have paid out tens of billions of dollars for crimes, including fraud and violating the False Claims Act, when they knew products would cause injuries and death. (Think Vioxx, Opioids and more.) If they knowingly put harmful products on the market when they can be sued, why should we trust them to make safe vaccines when they have no liability and rushed clinical trials?

<https://violationtracker.goodjobsfirst.org/industry/pharmaceuticals>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fviolationtracker.goodjobsfirst.org%2Findustry%2Fpharmaceuticals>

4. **PREVIOUS ATTEMPTS TO MAKE SIMILAR VACCINES HAVE FAILED** In one study, vaccinated infants got much sicker than the unvaccinated infants when exposed to the respiratory syncytial virus (RSV) naturally, with 80% of the vaccinated infants requiring hospitalization. Two died. In subsequent studies, vaccinated animals became very sick when they later became infected with the actual virus. Many died. This phenomenon is called Antibody Dependent Enhancement (ADE).

 <https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nature.com%2Farticles%2Fs41579-020-00462-y#Sec11&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7C2947b9f136134bef9cae08d9cf48b050%7

5. COVID VACCINES HAVE NO LONG-TERM SAFETY TESTING There is no way to determine what these experimental vaccines will do to humans in the medium- to long-term. Not all vaccine injuries manifest immediately. Additionally, given that all current COVID vaccines have Emergency Use Authorization status only, people cannot be subject to mandates under federal and international law.

9. THE J & J VACCINE CONTAINS ABORTED HUMAN FETAL CELL LINES The viral vector that forms the backbone of the J&J vaccine is grown in a continuous ("immortalized") human embryonic cell line (PER.C6) derived from the abortion of a healthy 18-week-old fetus, leading some Catholic leaders to describe the vaccine as "morally compromised." FDA officials have acknowledged for over two decades that such cell lines are a "major safety concern."

10. The Nuremberg Code, codified into US Federal Law, prohibits forcing or coercing anyone, under any circumstances, to participate in a medical experiment; and the Code states "the voluntary consent of the human subject is absolutely essential."

11. All of the treatments being marketed as COVID-19 vaccines are still in Phase III clinical trials until 2023 to 2024 and hence qualify as medical experiments. People taking these treatments are enrolled in clinical trials;

12. None of these treatments has been approved, but only granted emergency use authorization, hence cannot be mandated nor can informed consent be dispensed with;

13. Most vaccines are trialed for at least 5-10 years and COVID-19 vaccines have been in trials for less than one year;

14. No previously attempted coronavirus vaccines (ie. MERS, SARS-1) has been approved for market, due to antibody-dependent enhancement resulting in severe illness and deaths in animal models;

15. Numerous doctors, scientists and medical experts are issuing dire warnings about the short and long-term effects of COVID-19 vaccines, including but not limited to death, infertility, miscarriages, Bell's palsy, blood clots, cancer, inflammatory conditions, autoimmune disease, early-onset dementia, convulsions, anaphylaxis, myocarditis, and antibody dependent enhancement leading to death;

16. Children and youth are at virtually no risk of dying from COVID-19 or transmitting it to others, but deaths and injuries to children and youth have already occurred in the COVID-19 injection clinical trials;

17. There have been more deaths from COVID-19 vaccines, as reported to the Vaccine Adverse Events Reporting System (VAERS), than deaths in the last 10 years from all vaccines combined;

18. Only 1% -10% of vaccine injuries are reported to VAERS. The full extent of adverse events from the COVID vaccines is unknown as there is a significant delay in uploading reports to the VAERS database;

19. Breakthrough cases of COVID-19 infections in those who have received COVID-19 vaccines is on the rise;

20. The trials have not proven that COVID-19 vaccines prevent infection or transmission;

21. Safe and effective treatments and preventive measures exist for COVID-19;

AND

22. Students are at nearly zero % risk of contracting or transmitting this respiratory illness and are instead buffers which help others build their immune system. The overall survival rate is 99.997%.

23. Children have already been exposed to unprecedented amounts of fear, instability, shaming, psychological trauma, and segregation through the COVID-19 measures and are therefore even more suggestible than their developmental stage would usually entail;

24. It is the job of parents or legal guardians, not of principals, teachers, teacher assistants, school board executives or other adults with influence on children, to make medical decisions for them;

Schools include vaccine and COVID-19 vaccine curriculum, which is biased, prejudicial and is a form of undue influence on any minor child which excludes full disclosure of the known risks of vaccination and the emerging evidence that vaccines do not provide protection as claimed;

25. Vaccine compliance elicited from children under threat of coercion, bullying, or suspension and who are not of fully informed consent that they have the legal right to refuse vaccination, constitutes extreme bullying and coercion and could be construed as a "battery" as well as a violation of constitutionally protected rights.

26. Contrary to misinformation spread by the World Health Organization, "implied consent" is not "informed consent," and "informed consent" is mandatory by law;

27. The Mature Minor doctrine cannot override the wishes and consent of the parents outside of preventing imminent harm or death. Vaccinations do not fall under the Mature Minor doctrine.

28. The engagement of medical experimentation without informed consent further constitutes the indictable offense of crimes against humanity.

For all of the foregoing reasons, I respectfully request that Washington Board of Health give serious consideration to not approve of the COVID-19 vaccine.

Sincerely,

Christina Carrillo Dela Paz

I implore you not to add the covid vaccine to the childhood schedule. There are just too many injuries reported already. Where there is a risk, there must be a choice. Many parents will run to the vaccine as it becomes available to them, but they should not be required in order to attend school. Children respond to covid so much differently than adults and it's clear (with the high percentage of omicron cases happening in vaccinated individuals) that vaccine are contributing to variants. Vaccinating all school children will only exacerbate this problem and actually put the elderly people in those kids' lives at more risk to variants.

And if it is added to the schedule, the philosophical exemption should absolutely be retained. Let parents be parents. If they want it, trust me, they'll line up to get it.

There is no reason minors should be forced to take this rushed vaccine in order to get a tax funded government education. The risk to children from COVID does not justify requiring such a highly controversial drug be injected into our children. It makes no sense to require this shot unless you are intentionally trying to line the big pharmacy companies' pockets. Even The WHO said this shouldn't be mandatory for minors unless they have underlying conditions. Everyone knows healthy kids are not at risk from dying from this virus. Do the right thing. Be better. Give parents. Voice and LISTEN.

BLESSINGS,
Beckie Takashima

Hello,

I was in the public audience for today's TAG meeting. I heard the questions members raised about topics they hope will be covered by the advisory committee, and they mostly involved administrative implementation and logistics. I think the following topics are of paramount importance, and I did not hear them discussed at all. I hope they will be covered thoroughly in upcoming meetings.

1. What is the risk of SARS COV2 to the target population? Discuss the statistics and risk factors.
2. If there is a risk of severe illness, are there treatments available?
3. What is the efficacy of the covid vaccines in preventing serious illness in this age group? Discuss study data.
4. Is this vaccine being proposed for this age group in order to protect a different demographic? If so, what are the ethical implications of doing this? Full discussion please. What data do you have to indicate whether this age group is a significant vector for SARS COV2 transmission? Full presentation of statistical evidence.
5. What is the safety profile of the covid vaccines? Discussion of VAERS reports please (and if VAERS is not considered reliable, what is being done to create a better adverse events reporting system?). What are the ethical implications of giving an entire population a treatment that has not been studied long-term?
6. Is the FDA approved Comirnaty product being discussed, or is the board proposing mandating one of the other products, which have not been approved?
7. What are the ethical implications of mandating a medical injection on a population when the manufacturer has complete product liability protection and faces no responsibility should people be injured?

I hope to see a complete and thorough discussion of all these points and more. I also hope that rather than "making it fun" as one of your members suggested, you will instead recognize that parents of children in Washington State are taking this issue extremely seriously and would appreciate professionalism when it comes to recommendations for our children's health care.

Sincerely,

Leslie Elliott

This is an email to communicate with wsboh that I DO NOT support the Covid 19 vaccine being added to any child's vaccination schedule or care plan if attend day care or public school. It is entirely up to the parent or guardian what should enter a child's body. I DO NOT support the addition of the Covid 19 vaccine to a child's vaccination schedule.

Subject: Covid shot requirement for school

External Email

To Board of Advisors,

I am a concerned parent, and I was listening in on the discussion about the process of making the covid shot a requirement for entry to school (Wednesday, December 29, 1:00).

I'd like to start by saying that there is no scientific evidence that supports covid as a public health crisis for children. Nearly 100% of children do not die from covid, and they do not spread covid. In general, 99.98% of ALL people do not die from covid. We live in a constitutional republic with medical privacy protections. In our country, everyone is permitted to get their covid shot if they choose. The covid shots are 100% accessible (and even free in most places). However no one should be forced to get a shot that they do not want. The function of a legitimate vaccine is not community protection, but rather, individual protection. We have lived decades upon decades amidst populations of people who quietly choose to not get vaccines (and with viruses that are far riskier). These people do not pose a community health risk, even though they choose to risk contracting viruses themselves. That is their choice and they should be free to take that risk. There are many risks out there. We can't put a helmet, seatbelt, and life vest on every single risk in life. Focusing solely on covid as THE only risk to society is a very narrow and negligent focus. Dancing behind the scenes of this hysterical covid crisis, our state leaders have done away with legitimate background checks for child care and they released criminals into the streets. Our leaders have opted to "defund the police" and they shrunk our local police and law enforcement down significantly by mandating the covid shot. Why would the same people who scream for safety from covid release criminals into the streets, defund the police, and erase effective background checks for those caring for children?

Another important fact is that the transmission of covid is not prevented by the covid shots. Studies in Israel and other places where nearly 100% of the population had the covid shot prove that transmission and hospitalization is not diminished from getting the shot. And the VAERS data alone is shocking! Have you seen how many people have died from the shots or live with irreversible adverse effects? If we "follow the science," we should be following the facts and the greatest risk variable is this covid shot itself. It is a fact that this covid shot is an experimental shot, it is not approved, and we do not know the long term risks. It is 100% wrong to force people to inject something unknown, untested, and unwanted into their bodies. I'm surprised I would even have to convince anyone of this.

I want to let you know that the meeting yesterday, where once again parents could not attend nor ask any live questions, gave me serious concerns about the trustworthiness of those working for us in the public school system. Hiding behind zoom, masks, social distancing, and fear of omicron (and the infinite upcoming variants) is not going to replace transparent in-person gatherings. For two years, our children's educational leaders in Washington state have remained in some form of hiding.

Regarding the outcome of this vote, I couldn't help but notice that these board voters have the protection of anonymity. Everything about this decision making process communicates an air of secrecy, predetermined outcomes, and non-inclusivity. Truly, as

you demonstrate that you value anonymity with your vote, on a much more personal level, no one, including students at school, should have to confess their private health status to anyone. The trajectory of the "health" police state is not hopeful when you and your personal health conditions are considered the next unacceptable condition in society. When might we start to say people with AIDS/STDS are a danger to society? Or cancer? Today it's covid, but tomorrow, who can know?

Germs are a reality and they are here to stay in this entropic world, and anyone working with children will most certainly encounter germs. The brave souls who teach children should be aware of this risk, and surely, if the risk of germ exposure is a problem for any adult, then teaching children is a career that they should definitely avoid. Fomenting fear about microscopic germs in a germ-filled world is an endless opportunity for tyrants to take control of populations of people based on infinite potentials of uncontrollable and unpredictable fears. Can we even begin to measure the trauma that has happened to our nation as a result of covid hysteria? If public schools become the germ police about covid, and if they require these experimental covid shots, then they are embarking on a journey of medical discrimination and exclusivity. After years of diversity, equity/inclusivity training, it is incredible that schools are thinking of engaging in this hypocrisy of the highest order.

Coercion with covid shots in the public schools is wrong, and I am saying no to this.

Thank you for your time and consideration.

Lauren Welch

deemed to be in a clinical risk group, or who are a household contact of someone who is immunosuppressed.

Professor Wei Shen Lim, Chair of the JCVI said:

"The majority of children aged 5 to 11 are at very low risk of serious illness due to COVID-19. However, some 5 to 11 year olds have underlying health conditions that put them at higher risk, and we advise these children to be vaccinated in the first instance."

With the alleged Omicron variant about to become the dominant strain in the UK it makes very little sense to give the Pfizer injection to children due to the fact that it only targets the S protein of the virus, which is heavily mutated in Omicron.

But that is not the only reason why children as young as 5 should not be given the Covid-19 injection.

For a parent to be competent enough to make the decision to consent to their child having the Pfizer Covid-19 vaccine, they should be made aware of all the facts before they reach their decision. So we've compiled 13 factual reasons why 5 to 11-year-old children should not be given the Covid-19 vaccine...

Reason No. 1

86% of 12-15-year old Children suffered an Adverse Reaction to the Pfizer Covid-19 Vaccine in the Clinical Trial

The information is publicly available and contained within a US Food & Drug Administration (FDA) fact sheet which can be viewed here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F14441>> (see page 25, table 5 on-wards).

That fact sheet contains two tables that detail the alarming rate of side effects and damage experienced by 12 – 15- year-old children who were given at least one dose of the Pfizer mRNA injection.

The tables shows that 1,127 children were given one dose of the mRNA jab, but only 1,097 children received the second dose. This fact in itself raises questions as to why 30 children did not receive a second dose of the Pfizer jab.

Of the 1,127 children who received a first dose of the jab 86% experienced an adverse reaction

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdailyexpose.uk%2F2021%2F05%2F86-of-children-suffered-an-adverse-reaction-to-the-pfizer-covid-vaccine-in-clinical-trial%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0>> . Of the 1,097 children who received a second dose of the jab 78.9% experienced an adverse reaction.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/05/image-190.png?resize=600%2C449&ssl=1>>

Reason No. 2

1 in 9 Children suffered a Severe Adverse Reaction leaving them unable to perform daily activities in the Pfizer Clinical Trial

For children 12 to 15 years of age, the Pfizer Covid-19 vaccine clinical trial found the overall incidence of severe adverse events which left them unable to perform daily

activities, during the two-month observation period to be 10.7%, or 1 in 9, in the vaccinated group and 1.9% in the unvaccinated group.

Consequently, children who received the vaccine had nearly six times the risk of a severe adverse event occurring in the two-month observation period compared to children who did not receive the vaccine. In addition, the incidence of Covid-19 in the unvaccinated group was 1.6%, therefore, there were almost seven times more severe adverse events observed in the vaccinated group than there were Covid-19 cases in the unvaccinated group.

This information is all freely available to see in official Food and Drug Administration (FDA) documents

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F14441>>
and official Centre for Disease Control (CDC) documents

2021-05-12%2F03-COVID-Wallace-
508.pdf&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/08/image-124.png?resize=639%2C274&ssl=1>>

Reason No. 3

Just 17 deaths associated with Covid-19 have occurred in Teenagers & Children since March 2020

Official NHS data which can be viewed here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.england.nhs.uk%2Fstatistics>>
work-areas%2F covid-19-daily-deaths%2F weekly-total-
archive%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0
(see Table 3 – COVID-19 deaths by age group and pre-existing condition of the
downloadable excel document) shows that since March 2020 just 17 people under the
age of 19 have died with Covid-19 who had no known pre-existing conditions in
England's hospitals, up to the 8th December 2021. The data also shows that just 60
people under the age of 19 have died with Covid-19 in the same time frame who did
have other serious underlying conditions.

There are approximately 15.6 million people aged 19 and under

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.statista.com%2Fstatistics%2F>>
population-by-
age%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0
in the United Kingdom which means just 1 in every 260,000 children and teenagers have
allegedly died with Covid-19 in 21 months who had other serious pre-existing conditions.
Whilst just 1 in every 917,647 children have allegedly died with Covid-19 in 21 months,
who had no know pre-existing conditions.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/12/image-277.png?resize=639%2C308&ssl=1>>

A scientific study titled 'Deaths in Children and Young People in England following SARS-CoV-2 infection during the first pandemic year: a national study using linked mandatory child death reporting data'

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fassets.researchsquare.com%2Ffile>>
689684%2Fv1%2F3e4e93fb-4e98-4081-9315-
16143c2bbd2b.pdf%3F%3D1625678600&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0
(which can be found here
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fassets.researchsquare.com%2Ffile>>

689684%2Fv1%2F3e4e93fb-4e98-4081-9315-

16143c2bbd2b.pdf%3Fc%3D1625678600&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54

), conducted by Clare Smith of NHS England and Improvement and several Universities also concluded that children are at negligible risk of death, hospitalisation, or serious illness due to the alleged Covid-19 virus.

The study collated data from the National Child Mortality Database; a mandatory system that records all deaths in Children under 18 years of age in England. What the researchers found is that just 25 children under the age of 18 died of Covid-19 between March 2020 and February 2021, with 15 of the 25 having a pre-existing life-limiting condition, and 19 of the 25 having a chronic condition.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/09/image-64.png?resize=639%2C167&ssl=1>>

The study also found that 16 of the 25 children who sadly died had two or more comorbidities with 8 children suffering pre-existing neurological and respiratory problems, 3 children suffering pre-existing neurological and cardiology problems, and 3 children suffering respiratory and cardiology problems.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/09/image-66.png?resize=639%2C284&ssl=1>>

Reason No. 4

The risk of Children developing serious illness due to Covid-19 is extremely low

A study (found here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medrxiv.org%2Fcontent%2F>

) led by Professor Russell Viner of UCL Great Ormond Street Institute of Child Health, published on the medRxiv server, found that 251 young people aged under 18 in England were admitted to intensive care with Covid-19 during the first year of the pandemic (until the end of February 2021).

The results of the study found that there were 5,830 admissions associated with Covid-19 among children up to 17 years of age during the pandemic year, this represents just 1.3% of secondary care admissions among children.

The lead author of the study said: "These new studies show that the risks of severe illness or death from SARS-CoV-2 are extremely low in children and young people".

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/09/image-111.png?resize=639%2C313&ssl=1>>

Reason No. 5

The Pfizer Covid-19 Vaccine is experimental and still in Clinical Trials

The Pfizer mRNA Covid-19 injection is in fact only temporarily authorised

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fassets.publishing.service.gov.uk%>

(see official MHRA document here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fassets.publishing.service.gov.uk%>

) for emergency use only. In October the government made changes to the Human Medicines Regulations 2012 to allow the MHRA to grant temporary authorisation of a Covid-19 vaccine without needing to wait for the EMA.

A temporary use authorisation is valid for one year only and requires the pharmaceutical companies to complete specific obligations, such as ongoing or new studies. Once

comprehensive data on the product have been obtained, standard marketing authorisation can be granted. This means that the manufacturer of the vaccine cannot be held liable for any injury or death that occurs due to their vaccine, unless it was due to a quality control issue.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/09/image-112.png?resize=512%2C384&ssl=1>>

The reason the Pfizer mRNA Covid-19 injection has only been granted temporary authorisation is because it is still in clinical trials that are not set to conclude until May 2nd 2023. You can see the official Clinical Trial Study Tracker for the Pfizer jab on the US National Library of Medicine site here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fclinicaltrials.gov%2Fct2%2Fshow0>

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/09/image-113.png?resize=512%2C333&ssl=1>>

This is the first time mRNA injections have ever been authorised for use in humans (see here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fec.europa.eu%2Fresearch-and-innovation%2Fen%2Fhorizon-magazine%2Ffive-things-you-need-know-about-mrna-vaccines&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e2>), and the long term side effects are not known, meaning the millions of people around the world who have had the Pfizer Covid-19 injection are essentially taking part in an experiment.

Reason No. 6

Three Scientific Studies conducted by the UK Government, Oxford University, & CDC, which were published in August have found the Covid-19 Vaccines do not work

New research in multiple settings shows that the alleged Delta Covid-19 variant, the now dominant variant in the UK, produces very high viral loads which are just as high in the vaccinated population compared to the unvaccinated population. Therefore, vaccinating individuals does not stop or even slow the spread of the alleged dominant Delta Covid-19 variant.

CDC Study

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fmmwr%2FvolunH.pdf&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e2>

The CDC study (found here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fmmwr%2FvolunH.pdf&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e2>) focused on 469 cases among Massachusetts residents who attended indoor and outdoor public gatherings over a two week period. The results found that 346 of the cases were among vaccinated residents with 74% of them presenting with alleged Covid-19 symptoms, and 1.2% being hospitalised. However, the remaining 123 cases were among the unvaccinated population with just 1 person being hospitalised (0.8%).

Oxford University Study

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fpapers.ssrn.com%2Fsol3%2Fpaper>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fpapers.ssrn.com%2Fsol3%2Fpaper>

All 900 hospital staff were then retested for the Covid-19 virus and 52 additional cases were identified immediately, forcing the hospital into lockdown. Over the next two weeks, 16 additional cases were identified.

UK Department of Health & Social Care Study

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medrxiv.org%2Fcontent%2F>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medrxiv.org%2Fcontent%2F>

The study found that viral loads among the vaccinated and unvaccinated population are virtually the same, and much higher than had been recorded prior to the Covid-19 injection roll-out. The study also found that the majority of cases among the vaccinated population were presenting with symptoms when they became positive.

The authors of the study conclude that the Pfizer and Oxford / AstraZeneca injection have lost efficacy against what they claim to be the Delta Covid-19 variant.

Public Health England Data shows the majority of Covid-19 Deaths are among the Vaccinated and suggests that the Vaccines worsen disease

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fassets.publishing.service.gov.uk%>

_week_49.pdf&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7Cdetail the number of Covid-19 cases by vaccination status in England. The following chart shows hospitalisations by vaccination status over a period of 16 weeks from 16 Aug 21 to 05 Dec 21.

<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/12/image-279.png?resize=639%2C523&ssl=1>

The chart shows that between August and early September, the fully vaccinated population accounted for the majority of Covid-19 cases. However, between the middle of September and early October this switched to the not-vaccinated population accounting for the majority of cases. This is most likely due to children returning to

school in September and being “encouraged” to test on a regular basis.

But between October 11th and December 5th the roles reversed again, and it is the fully vaccinated population that have accounted for the majority of Covid-19 cases in England.

This data alone puts an end to the myth that the Covid-19 vaccine will prevent children from being infected and spreading Covid-19.

The following chart shows hospitalizations by vaccination status over a period of 16 weeks from 16 Aug 21 to 05 Dec 21.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/12/image-278.png?resize=639%2C523&ssl=1>>

Between Aug 16 and Dec 05, the unvaccinated population accounted for 11,767 Covid-19 hospitalisations. But the vaccinated population have accounted for nearly double the amount, recording 19,730 hospitalisations, with 18,406 of those being among the 2/3 dose vaccinated population. This means the vaccinated population have accounted for 63% of Covid-19 hospitalisations since August 2021.

The following chart shows deaths by vaccination status over a period of 16 weeks from 16 Aug 21 to 05 Dec 21.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/12/image-280.png?resize=639%2C523&ssl=1>>

Between 16 Aug 21 and 05 Dec 21 there were 3,070 Covid-19 deaths among the unvaccinated population in England, compared to 12,058 deaths among the vaccinated population during the same time frame. That is a 293% difference.

The following chart shows the case-fatality rate among the not-vaccinated population, and the case-fatality rate among the 2/3 dose vaccinated population between 16 Aug and 05 Dec 21.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/12/image-281.png?resize=639%2C493&ssl=1>>

The case-fatality rate is calculated by dividing the number of known deaths by the number of known cases among the population. As we can see from the above the case-fatality rate among the not-vaccinated population is just 0.2%, which is what is in line with the average case-fatality rate in 2020 before a Covid-19 injection was introduced to the masses.

However, the case-fatality rate among the fully vaccinated population is much higher, equating to 0.8%. Therefore the fully vaccinated are 4 times / 300% more likely to die if exposed to the Covid-19 virus based on official UK Government figures.

The above data was extracted from the following official UK Health Security Agency Vaccine Surveillance reports –

* COVID-19 vaccine surveillance report – Week 37 (Covers Week 33-36)

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fassets.publishing.service.gov.uk/_week_37_v2.pdf&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639>

Reason No. 8

There had been at least 1.18 million Adverse Reactions to the Covid-19 Vaccines in the UK alone up to September 1st

The thirty-second report highlighting adverse reactions to the Pfizer / BioNTech, Oxford / AstraZeneca, and Moderna Covid-19 injections that have been reported to the UK Medicine Regulator's (MHRA) Yellow Card scheme reveals that there were 1,186,844 adverse reactions reported between the 9th December 2020 up to the 1st September 2021.

The reports for each available vaccine can be found here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fmedia%2Fassets%2Fgovernment%2Fcoronavirus%2Fvaccine%2Fsummary-of-yellow-card-reporting%23annex-1-vaccine-analysis-print&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e2>

under the analysis print section and include adverse reactions such as blindness, seizure, stroke, paralysis, cardiac arrest and many other serious ailments. As of December 8th 2021 there have now been over 1.3 million adverse reactions including 1,852 deaths.

The Pfizer mRNA injections had left at least 107 people fully paralysed and a number of other people partly paralysed up to the 1st September 2021. However, the MHRA state that an estimated 10% of adverse reactions are actually reported to the Yellow Card scheme, meaning the true figure of adverse reactions is immensely higher.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/09/image-98.png?resize=572%2C194&ssl=1>

Reason No. 9

There were more deaths in 8 months due to the Covid-19 Vaccines than there have been due to all other available Vaccines combined since the year 2001

The UK Medicine Regulator responded to a Freedom of Information (found here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdailyexpose.uk%2Fwp-content%2Fuploads%2F2021%2F09%2FFOI-21-907-Response-1.pdf&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e2>

) request demanding to know how many deaths have occurred in the past 20 years due to all vaccines, and their response revealed that there have been four times as many deaths in just eight months due to the Covid-19 injections.

The request

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdailyexpose.uk%2Fwp-content%2Fuploads%2F2021%2F09%2FFOI-21-907-Response-1.pdf&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e2>

was made via email to the Medicine and Healthcare product Regulatory Agency (MHRA) on the 6th August 2021, and in answer to the question

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdailyexpose.uk%2Fwp-content%2Fuploads%2F2021%2F09%2FFOI-21-907-Response-1.pdf&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e21>>

asked on the number of deaths due to all other vaccines in the past twenty years, the MHRA revealed that they had received a total of 404

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdailyexpose.uk%2Fwp-content%2Fuploads%2F2021%2F09%2FFOI-21-907-Response-1.pdf&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e21>>

reported adverse reactions to all available vaccines (excluding the Covid-19 injections) associated with a fatal outcome between the 1st January 2001 and the 25th August 2021 – a time frame of 20 years and 8 months.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/09/image-60.png?resize=639%2C69&ssl=1>>

However, according to the MHRA Yellow Card Report (see here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fpublications%2Fcoronavirus-vaccine-summary-of-yellow-card-reporting%23annex-1-vaccine-analysis-print&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e21>>

– under each analysis print section) there were 1,632 deaths reported as adverse reactions to the Covid-19 vaccines from December 9th 2020 up to September 1st 2021. This included 16 deaths due to the Moderna jab, 24 deaths where the brand of vaccine was unspecified, 1,064 deaths due to the AstraZeneca vaccine, and 524 deaths due to the Pfizer mRNA injection.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/09/image-100.png?resize=443%2C422&ssl=1>>

Reason No. 10

The risk of Myocarditis (Heart Inflammation) in Children due to the Pfizer Vaccine

Myocarditis is inflammation of the heart muscle, whilst Pericarditis is inflammation of the protective sacs surrounding the heart. Both are serious conditions due to the fact the heart muscle cannot regenerate, and both conditions have officially been added to the safety labels of the Pfizer jab and Moderna jab by the MHRA (see here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fpublications%2Fcoronavirus-vaccine-summary-of-yellow-card-reporting%23analysis-of-data&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e21>>).

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/09/image-114.png?resize=639%2C141&ssl=1>> Source

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fpublications%2Fcoronavirus-vaccine-summary-of-yellow-card-reporting%23analysis-of-data&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e21>>

Myocarditis and pericarditis happen very rarely in the general (unvaccinated) population, and it is estimated that in the UK there are about 6 new cases of myocarditis per 100,000 patients per year and about 10 new cases of pericarditis per 100,000 patients per year.

The MHRA has undertaken a thorough review of both UK and international reports of myocarditis and pericarditis following vaccination against Covid-19 due to a recent increase in reporting of these events in particular with the Pfizer/BioNTech and Moderna vaccines, with a consistent pattern of cases occurring more frequently in young males.

A Scientific Study published on the JAMA network

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fjamanetwork.com%2Fjournals%2Fjama%2Farticle%2F937571>>, has also found that the incidence of myocarditis among vaccinated individuals is at least double what Health Authorities are claiming.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/09/image-115.png?resize=491%2C768&ssl=1>>

The new JAMA study

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fjamanetwork.com%2Fjournals%2Fjama%2Farticle%2F937571>> (found here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fjamanetwork.com%2Fjournals%2Fjama%2Farticle%2F937571>>) showed a similar pattern to a CDC study (found here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fvaccines%2Fadverse%2F2021-06%2F03-COVID-Shimabukuro-508.pdf&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e210-4b46-4881-8000-000000000000>>

), although at higher incidence of myocarditis and pericarditis after vaccination, suggesting vaccine adverse event under-reporting.

The researchers calculated

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medscape.com%2Fviewarticle%2F937571>> the average monthly number of cases of myocarditis or pericarditis during the pre-vaccine period of January 2019 through January 2021 was 16.9 compared with 27.3 during the vaccine period of February through May 2021.

The mean numbers of pericarditis cases during the same periods were 49.1 and 78.8.

Dr. George Diaz who conducted the study told Medscape that "Our study resulted in higher numbers of cases probably because we searched the EMR, and [also because] VAERS requires doctors to report suspected cases voluntarily," Diaz told Medscape

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medscape.com%2Fviewarticle%2F937571>>. Also, in the governments' statistics, pericarditis and myocarditis were "lumped together".

Reason No. 11

Children have died and are dying due to the Covid-19 Vaccines

The US Vaccine Adverse Event Reporting System (VAERS), which can be searched here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.openvaers.com%2Fsearch%2Fsearch-covid-full-data&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e210-4b46-4881-8000-000000000000>>

by inputting the specific VAERS ID shows that several children have died in the US after having the Covid-19 vaccine, with many suffering cardiac arrest.

A 16 year-old female received the Pfizer vaccine on the 19th March 2021. Nine days later the same female went into cardiac arrest at home. By the 30th March 2021 she had sadly died. Found under VAERS ID 1225942.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/06/image-107.png?resize=478%2C405&ssl=1>>

A 15 year-old female suffered cardiac arrest and ended up in intensive care four days

after having the Moderna mRNA jab. She also sadly died. Found under VAERS ID 1187918.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/06/image-109.png?resize=471%2C283&ssl=1>>

Another 15 year-old female received her second dose of the Pfizer jab on the 6th June 2021. Sadly one day later she died suddenly without reason. Found under VAERS ID 1383620.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/06/image-112.png?resize=562%2C313&ssl=1>>

A 15 year-old male die due to an unexplained reason twenty-three days after having the Pfizer jab. Found under VAERS ID 1382906.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/06/image-113.png?resize=556%2C283&ssl=1>>

The above are sadly just a few examples of the deaths to have occurred among children due to the Covid-19 vaccines in the USA.

Reason No. 12

Who profits from your Child getting the Covid-19 Vaccine?

It may surprise you to know that GP's were already being incentivised to inject the adult population with the Covid-19 vaccine with a payment of £12.58 for every dose administered.

So it may surprise you further to know that GP's are being offered an additional payment of £10 on top of the £12.58 already offered for every injection administered to a child in the United Kingdom. All of this is documented in an official NHS document found here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.england.nhs.uk%2Fcoronavirus%2Fcontent%2Fuploads%2Fsites%2F52%2F2021%2F08%2FC1384-Vaccinating-children-and-young-people-frequently-asked-questions.pdf&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C>>
.

According to the last count made in 2020 there are approximately 3,154,459 children

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.statista.com%2Fstatistics%2Fpopulation-by-age%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e211>>
between the ages of 12 and 15 in the United Kingdom. Therefore GP's across the UK could stand to make a combined £142.45 million if every child is injected with a Covid-19 vaccine.

<<https://i0.wp.com/dailyexpose.uk/wp-content/uploads/2021/09/image-42.png?resize=639%2C110&ssl=1>>

A Freedom of Information request (found here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Ftransparency%2Fof-information-responses-from-the-mhra-week-commencing-17-may-2021%2Ffreedom-of-information-request-about-the-bill-and-melinda-gates-foundation-foi-21-509&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e211>>
) which the MHRA responded to in May 2021 revealed that the current level of grant funding received from the Bill & Melinda Gates Foundation amounts to \$3 million and

covers “a number of projects”. The MHRA being the UK Medicine Regulator to have granted emergency use authorisation for the Pfizer / BioNTech mRNA vaccine to be given to children.

Coincidentally, the Bill & Melinda Gates Foundation bought shares in Pfizer

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fool.com%2Finvesting%2F2020-07-28%2Fcoronavirus-vaccine-stocks-the-bill-melinda-gate%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d3f1c1-402d-4130-a001-000000000000>
back in 2002 (see here

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fool.com%2Finvesting%2F2020/04/28/coronavirus-vaccine-stocks-the-bill-melinda-gate%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d

), and back in September 2020 Bill Gates ensured the value of his shares went up by announcing to the mainstream media in a CNBC interview that he viewed the Pfizer job as the leader in the Covid-19 vaccine race.

"The only vaccine that, if everything went perfectly, might seek the emergency use license by the end of October, would be Pfizer."

The Bill & Melinda Gates Foundation also coincidentally bought \$55 million worth of shares in BioNTech

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fool.com%2Finvesting%2F2020%2F04%2Fcoronavirus-vaccine-stocks-the-bill-melinda-gate%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d35801-4241-409c-b008-345710100000>
(see here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fool.com%2Finvesting%2F2020%2F09%2Fcoronavirus-vaccine-stocks-the-bill-melinda-gate%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d33101-4348-4681-9938-000000000000>) in September 2019, just before the alleged Covid-19 pandemic struck.

Can we really trust the MHRA to remain impartial when its primary funder is the Bill & Melinda Gates Foundation, who also own shares in Pfizer and BioNTech?

Reason No. 13

The Joint Committee on Vaccination & Immunization refused to recommend the Pfizer Vaccine be offered to Children aged 12-15

On the 3rd September 2021 the Joint Committee on Vaccination and Immunization (JCVI) announced

< <https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fissues-updated-advice-on-covid-19-vaccination-of-children-aged-12-to-15&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e217>
(see here

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fissues-updated-advice-on-covid-19-vaccination-of-children-aged-12-to-15&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e217...> they were not recommending the Pfizer Covid-19 injection be offered to all children over the age of 12.

The assessment by the Joint Committee on Vaccination and Immunization (JCVI) is that the health benefits from vaccination are marginally greater than the potential known harms. However, the margin of benefit is considered too small to support universal vaccination of healthy 12 to 15 year olds at this time.

The JCVI cited the following –

"For the vast majority of children, SARS-CoV-2 infection is asymptomatic or mildly symptomatic and will resolve without treatment. Of the very few children aged 12 to 15 years who require hospitalization, the majority have underlying health conditions."

Since 1st April 2009 the Health Protection (Vaccination) Regulations 2009 place a duty on the Secretary of State for Health in England to ensure, so far as is reasonably practicable, that the recommendations of JCVI are implemented (See here <https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fassets.publishing.gov.uk/system/uploads/attachment_data/file/67891/final.pdf&data=04%7C01%7Cwsboh%40sbh.wa.gov%7Cade5acb34ea54e4756b108d9c – page 6).

Yet in an unprecedented move, the Secretary for Health and the Government decided to bypass the JCVI and seek the advice of the four Chief Medical Officers (CMO's) of the United Kingdom.

In their letter to the Government (found here <https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.gov.uk%2Fgovernment%2Fvaccination-of-children-and-young-people-aged-12-to-15-years-against-covid-19%2Funiversal-vaccination-of-children-and-young-people-aged-12-to-15-years-against-covid-19&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cade5acb34ea54e4756b108d9cb1a6639%7C11d0e2172>), the UK CMO's stated they looked at wider public health benefits and risks of universal vaccination in this age group to determine if this shifts the risk-benefit either way. They claimed in their letter that "the most important in this age group was impact on education".

This raises some serious questions –

1. Did Covid-19 close the schools? The answer is of course no. Schools were closed because of Government policy.
2. Should a person take a medical treatment so that they are able to partake in society or education? The answer is of course no. A person should only ever take a medical treatment for a medical reason, in the case of the Covid-19 vaccine that reason should be to prevent infection; which it does not do, or prevent illness; which it will not do as children are at such low risk of suffering serious illness due to Covid-19.

The decision by Chris Whitty and his fellow Chief Medical Officers to advise the Government that the Covid-19 vaccines should be offered to children aged 12-15 was not a decision based on science, it was instead a decision based on politics.

So there you have it, 13 factual reasons why children aged 5 to 11 should not be given the Covid-19 vaccine, and each and every one is based on the science.

Now the choice is yours, we hope you make the correct one.

Subject: Adding COVID-19 Vaccine to the Requirement to Attend School

External Email

I am against adding the experimental COVID-19 vaccine to the requirements to attend school.

According to the CDC statistics, there have been zero children that have died from this virus in the state of Washington.

Evidence has shown around the country that this vaccine does not prevent the individual receiving the vaccine from getting the sick with COVID-19.

I will leave you with a quote from former VP of Pfizer, Michael Yeadon.

"For every child that dies from COVID-19, there will be a hundred that die from the vaccine."

Very Respectfully,

Jon Jackson

Subject: Covid mandate in schools

External Email

Hello,

I am writing to you today to please not mandate vaccines in schools. The "follow the science" is maddening as they don't yet know all the long-term side effects of an "emergency use drug". Most science and medical issues are debated, as you know. This isn't allowing debate. I would pull my kids and homeschool if this was a mandate. I already have 12 friends/families that left the state, and that's just me. Maybe that's what this state wants (not sure). I have never had a flu shot in at least the last 20 years. I have never had the flu during that time, never missed a day of work (you can call my employer for proof). I will leave the state of WA if the vaccine is mandated.

All my vaccinated friends are getting sick. Explain that.....well, they can't. Please think about this for most people that are healthy are just fine. All my co-workers that get Covid say they felt worse with the flu, then laugh about all the free time they get off of work (depending where they work). Stop this nonsense please!!!!

Note: if the media said "covid is over", everyone would go back to having the flu and colds. Something is fishy here and I would have to think you have these same thoughts.

Thank you for listening!

Dear Board of Health and advisory group,

I'm a resident in the Highline school district and I'm writing to let you know that I disagree with a covid vaccine requirement for school and daycare entry. As a member of the public, I do not accept the "vaccine". As a former pediatric research coordinator, I do not see that adequate efficacy and safety trials have been shown on this vulnerable population. As a parent, the risk of "vaccine" side effects outweigh the risk of contracting covid, which is not preventable by the current "vaccine". Furthermore, there is not an FDA-approved covid vaccine available. This is NOT a pediatric public health emergency.

Please allow parent choice for covid related interventions.

Thanks, Courtney

Subject: Comments on immunizations

External Email

Good morning!

I'm writing to express my support on vaccine mandates in schools. I am a constituent in the 23rd district. My younger sister is in high school and she has an autoimmune disease that suppresses her immune system. She is fully vaccinated and has been fully vaccinated as early as she could be. However with the omicron variant spreading and breakthrough cases occurring at a higher frequency, I worry that the vaccine is not enough. Every wrestling team in the county has had covid cases, and other indoor sports are making this worse. The parents who attend these sports do not wear masks even when politely asked to by school staff. There is no recourse for anyone who refuses to wear a mask because our high school staff is too afraid of violence or bereavement from these people. I do not want my sister to die when she has done the right thing since the beginning of this pandemic, all because of people who do not realize they have a huge privilege with access to this groundbreaking vaccine. Please keep our vulnerable students safe from this disease.

Thank you for your time,
Madison Downing

Subject: Children and COVID-19: State-Level Data Report

External Email

There is no need to include a covid drug that is not fully FDA approved and no long term studies to show the effects it has on our children when the data shows children recover from Covid at a 98-99% rate without severe illness or death.

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.aap.org%2Fen%2Fpages%2Fnovel-coronavirus-covid-19-infections%2Fchildren-and-covid-19-state-level-data-report%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf995fefceff24e7e96ee08d9cd704378%7C>

You may find more studies from the lancet which is the oldest and most respected peer reviewed medical journal in the world. There are studies there that state the same thing. Children are at low risk for severe illness and death! Please leave this out of the vaccination requirements. It is not a fully approved vaccine for children! This should be left to the parents to decide as the flu vaccine is!

Sincerely
Tracey Cordero

Subject: Absolutely Not on Covid 19 vaccine requirement for school children

External Email

I heard you met today to discuss making the vaccine a requirement for students k-12. This is ridiculous the Covid virus poses virtually no risk to healthy children and the vaccines do not prevent catching or transmitting the virus to others. The vaccines DO have significant side effects though and we don't even know the long term effects yet. I would 100% pull my kids from school and teach them through homeschooling methods if Washington tries to force my children to receive a risky vaccine under an EUA to attend public school in the future.

If you care about the welfare of children then you should see the side effects are significantly more dangerous to healthy kids than the virus is and under no circumstances should this be added as an immunization requirement for public tax funded schools.

Thank you

Subject: Covid vaccine requirement for school children

External Email

Dear School Board of Health,

Vaccines for school children should NOT be required. We have seen over the past year how ineffective they are stopping the spread of covid. We cannot ignore the significant amount of breakthrough cases and still say the vaccines are effective. They are not. They are essentially a treatment for the virus, not a true vaccine as they make the disease more mild instead of actually preventing it. Considering children are so incredibly resistant to severe disease from covid and we do not know the long term side effects of the vaccines, there is absolutely NO REASON they should be required to attend school.

Thank you,
Citizen concerned for the safety of our children

Cc:
Subject: COVID Vaccines should not be mandatory in schools. You are taking away our rights

External Email

Don't put our children at risk!

Quoting from 246-105-010: "The purpose of this rule is to protect children and the public against certain vaccine-preventable diseases. Under the authority of the board of health, this rule describes

the immunization requirements of children attending schools and child care centers."

The facts are the current COVID vaccines do not prevent catching the disease, and therefore are ineligible for inclusion in the list of "vaccine-preventable" diseases. The current COVID "vaccines",

as is demonstrated by the vast number of "breakthrough" cases, are not able to prevent COVID to a comparable level as actually effective vaccines for the section 030 listed diseases, but merely to be a

pre-treatment for the disease that generally reduces the severity.

Compare and contrast the number of COVID breakthrough cases (and rates) to breakthroughs for those vaccinated against the diseases listed in 246-105-030. Who has heard of breakthrough cases of chickenpox?

Diphtheria? Rubella? Measles? Mumps? Pertussis? And the rest of the list, for that matter. The simple fact is, the number of "breakthrough" cases of the -030 currently listed diseases is so small as to be negligible –

it would be major local news of an outbreak of Measles or Mumps in our local schools, yet these are all but unheard of. Yet the number of COVID cases that breakthrough the current vaccines is significant.

Therefore, as a matter of definition, COVID is not a vaccine preventable disease. Compare and contrast COVID to one of the listed diseases with an actually effective vaccine - Mumps. According to the CDC,

there were only 139 cases in 2021.

Considering that the best available evidence as of this writing indicates that on average children suffer no worse from COVID than the normal seasonal flu, and considering the unknown potential long term side effects

of the current COVID vaccines, the risk-reward profile indicates negligible benefit to the children of Washington, while imposing unquantified potential risk upon them. Compare to the current policy for seasonal flu: Flu is an equal,

if not a greater risk to children (and never mind the ability of children to spread seasonal

flu to adults) AND the seasonal flu vaccine risk profile is well known and low,

yet there is no mandate to vaccinate children for the seasonal flu. Yet, this Board is considering mandating a vaccine for a disease, COVID, that is equal or lower risk to children AND has a vaccine with an

unknown long term risk profile? That would be illogical and would indicate other non-fact based motivations for such a mandate.

I respectfully urge the board to not add COVID to the list of diseases in WAC 24-105-030.

This should be an outrage for all Wa residents. This is an experimental vaccine only studied for 1 yr and has already had countless problems and death among young people. I was listening to the meeting via phone and it was stated that the vaccine prevents covid 19.

That is an outright lie as countless people that have been fully vaccinated have come down with covid 19.

You should consider the facts and stop this evil agenda from going forward.

Respectfully

Dianne Armstrong

Dear Kelie Kahler (Kelie.kahler@sboh.wa.gov <mailto:Kelie.kahler@sboh.wa.gov>)

I hope this email finds you and your family well.

A few days ago, during a WA State Board of Health meeting, the advisory group spoke of whether they should recommend adding Covid vaccination to the current WA vaccine schedule for school and daycare entry. Unfortunately public comments were not allowed. The advisory group would be making a recommendation for our children without hearing from the parents.

I oppose the Covid vaccine being added to the school and daycare schedule. Children have mild to no symptoms from the virus, and are thus the safest. Covid Vaccine inserts are none existent to the public, leaving us without a knowledgeable and informed choice. Pharmacists themselves do not have access to a vaccine insert. We are told to believe and take the plunge yet so many have had horrible and evenly deadly complications from these vaccines. Please urge the advisory group to be cautious and not make recommendations for the Covid vaccine to be added to the school and daycare schedule.

Thank you for taking the time to read my opposition and concerns. I look forward to reading your reply.

Dear Samantha,

I am trying to find out who can provide me with the proof of the isolated pathogen for sarscov-2. I would like a copy of this document please. I cannot find it anywhere on the CDC.org website. I am very concerned that the BOH wants to push for children to get these so called vaccines when they never passed the animal studies. It killed all the animals tested so now they have been giving it to adults then children. The PCR test will be pulled starting the first of January 2022. What test will they do to confirm the diagnosis of actual covid infection from the annual flu? The PCR test have been inaccurate and causing false positives for hundreds of thousand of people. I am needing your help in understanding this crisis we are all in.

The gene therapy has already harmed and/or killed almost 900,000 people, is this not enough damage done?

Thank you for your time,

Jodi Dotson

Absolutely NO Covid-19 inoculation for children!
Robert Koch Institute report released today states that 95.58% of the #Omicron cases in Germany are fully vaccinated (28% of those had a "booster"), 4.42% are unvaccinated. 71.1% of the total population is fully vaccinated in Germany.

Its insanity to give any child this shot! They do not need it! Period!

Respectfully,
Lori Himmelman

Subject: Children's COVID Vaccine Requirement

External Email

To Washington State Board of Health,

It has come to my attention that you'll be meeting on January 12th to discuss adding the **EMERGENCY USE AUTHORIZED** Covid-19 vaccine to the list of vaccinations required to attend public school. I use the words **bolded** and **underlined** above because as of today, January 3, 2022, there is currently no FDA approved vaccine available to US Citizens. The only FDA approved Covid-19 vaccine is Comirnaty and is not available in the US:

<https://thevirginiastar.com/2021/12/23/pfizers-comirnaty-available-abroad-not-in-u-s-2/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fthevirginiastar.com%2F2021%2Fpfizers-comirnaty-available-abroad-not-in-u-s-2%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C1b627746d6b746362ea808d9cf251a86%7C11d0e2>

Like many other parents in Washington state, I am concerned about the efficacy and safety of all Covid-19 vaccines that are currently being distributed and mandated. The suspicious and dangerous lack of transparency from the pharmaceutical companies and the FDA is extremely concerning and should make any sane, rational person (especially a parent) give pause before accepting these vaccines:

<https://www.msn.com/en-us/news/us/fda-says-it-needs-until-year-2076-to-reveal-data-pertaining-to-pfizer-vaccine-approval/ar-AAQSOWp>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.msn.com%2Fen-us%2Fnews%2Fus%2Ffda-says-it-needs-until-year-2076-to-reveal-data-pertaining-to-pfizer-vaccine-approval%2Far-AAQSOWp&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C1b627746d6b746362ea808d9cf251a86%7C11d0e2>

Children's bodies develop at different rates, many of them continuing to grow even after primary education. The data is simply NOT THERE to support such a move as this. The data IS there, however, with the record number of deaths and adverse events that are being reported to VAERS:

<https://vaers.hhs.gov/data/datasets.html?>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fvaers.hhs.gov%2Fdata%2Fdataset>

With just this information, why would health officials feel the need to push for requiring this? Children are at extremely low risk of being hospitalized or dying with any variant of COV-19 thus far, two years in. Those children who are at high risk should be accommodated with at-home learning should they wish to feel safer. You do not punish the majority to accommodate the minority.

Making a move as bold as requiring this vaccine would have embarrassing results for not only the WSBOH but local school districts as well. The recent pushback from LA County alone was enough to quash any efforts to enforce this vaccine after 30,000 students threatened to not return to school after the mandate. Children in school = federal spending money. Remove those children and schools go broke, we all know this:

<https://www.politico.com/states/california/story/2021/12/24/la-schools-tried-to-mandate-vaccines-then-it-faced-the-reality-of-sending-30-000-students-home-1402804>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.politico.com%2Fstates%2Fcalifornia%2Fstory%2F2021%2F12%2F24%2Fla-schools-tried-to-mandate-vaccines-then-it-faced-the-reality-of-sending-30-000-students-home-1402804&data=04%7C01%7Cwsboh%40sbh.wa.gov%7C1b627746d6b746362ea808d9cf251a86%7C11d>

Bottom line, this move would bring a roaring response from parents who have simply had enough of our children being pushed around by outrageous school boards and health districts that cannot provide the data to back up their tyrannical rules for the past 2 years. The overwhelming majority of parents are completely aware of how unnecessary this is and that it's purely motivated by politics, not science. This can only end bad for those trying to push this on our children. It will shine a light on WA state and exactly how many parents are ready to pull their children, just like it did in LA county. Negative press will abound and it will embolden other counties and states to stand up.

By doing the right thing, listening to parents and their children and the concerns over these un-approved vaccines and NOT mandating them, it would be a move in the right direction in repairing the damage to your credibility and professionalism. I strongly encourage you to read every single comment and request that is submitted and take it into consideration.

Thank you for your time.

Subject: Comments for the Immunization Technical Advisory Group

External Email

I wrote a short email yesterday in general terms outlining why I oppose the inclusion of Covid shots in requirements, not realizing many of the details involved. Please consider that a summary of this more pointed communication.

As a parent, grandparent, private school administrator, citizen and taxpayer, I want to introduce the fact that these Covid shots are not true immunizations at all, so shouldn't be included in any serious medical decisions as such. They are experimental, highly debatable, ineffective, unsafe, dangerous shots making billions for pharmaceutical companies while many of their recipients suffer and often die. They are under EVA for adults as well as children. None of us need them, as so many of us who refuse them can testify, and the fact is that children have 99.9% survival rate, so it shouldn't even be considered. There are much more important things to deal with.

There seems to be some confusion about who is responsible for our children's education, too, in your materials. It is the God-given responsibility of the parents and guardians to educate or assign that privilege to those of us called to help them, not the state's. We are the primary stakeholders. This certainly includes whether we want our children to have a shot or not. We pay the various entities listed in your information to do their jobs, not mandate jabs. These exemptions we've seen dropped before when they get too much power. Many have already moved out of the state for that reason or have taken their children out of the public schools. This decreases revenue, which is one of your concerns. Most of our private schools will not go along with any such mandates, should you decide to impose them. We have religious as well as health reasons.

No virus has been isolated, so many doctors call Covid an infection, not a disease. There are natural means proven to effectively combat it. There is natural immunity for those who have had it. There is no more need to impose mandates for this than the flu, which has mysteriously disappeared with the hype. Or colds. Instead of dangerous shots, we need to promote good health practices and build immunity. The state is not obligated in any way to protect us, our health and our safety. We are free to protect ourselves. It has not been proven that these shots protect anyone from anything. If we had wanted the shots, we'd have had them by now. It is our choice. We have the right to keep our medical information private. Endless boosters only profit the pharmaceutical companies and those they pay to administer them.

Hopefully you are not basing your scientific decisions on Dr. Fauci and his ilk, who have been exposed for their profiting.

The best scientific data is not coming from bought-off MSM, either, with few exceptions. Study the actual facts. The state is US. We pay for plenty of things without including these abortion-tainted shots. There IS NO ACCEPTABLE side effect, especially when you discover the natural cures don't have any.

Thank you,

Margo Thompson

Subject: Covid Vaccine Requirements

External Email

To Whom It May Concern,

I am a current WA State public school teacher. I also lost a family member to "Covid pneumonia".

Though I believe adults, teens and children should have the option to get any vaccination they choose, government specifically does not have the legal right to force vaccinations. This is because it violates the Nuremberg Code, which specifically states that you must have the informed consent of person who will be vaccinated without fear or coercion. To hold a person's livelihood or education hostage unless they inject something into their bodies that they don't want, no matter how well-intentioned, is clearly coercion. Everyone who goes along with this is violating the same code that was used to determine which Nazi officers were guilty of performing unnecessary, cruel experiments on unwilling Jewish patients following WWII. Many of these officers were eventually tried and put to death for these crimes against humanity. The "I was just following orders" defense was ruled against as a valid legal argument because officers also have a duty to not follow orders they know to be wrong.

Additionally, the current studies from Pfizer show "fully vaccinated" people have only 30% protection from Omicron. Even when boosted, these studies show protection tops out at only 48%. So even best case scenario, you still have a better than 50/50 shot at getting infected with Omicron variant when exposed.

Furthermore, children are at incredibly low risk of hospitalization or death. To date, no children have yet died of Omicron. Yet, in the Pfizer trial on children, one of the 1200 young people had a terrible reaction which has left her wheelchair-bound for life and almost killed her. Her name is Maddie De Garay and she was 12. She must be tube-fed as well, indefinitely. Pfizer lied about this to the FDA, reporting that one person had a "stomach ache", in order to get their Emergency Use Authorization approved. If one child out of every 1,200 has a reaction like this, then of the current 1,051,694 WA State students, we should expect to see around 877 students dead or maimed for life. All of this to prevent a variant which has killed just one person in the entire United States (a man from Texas). Does this make any sense to you?

Worse, the more we vaccinate into the face of a new variant, the more it will continue to mutate to escape the vaccine. Omicron exists because of this. We put mutational pressure on the Alpha and Delta variants and this drove a new variant that current vaccines only slightly work against. This same scientific phenomenon can be seen with insects developing immunity to insecticide. If you spray a field with 10,000 bugs in it, you'll kill 99,900. But the 100 who live will pass on their resistance to the insecticide to their offspring and within one or two generations the insecticide no longer works at all.

Viruses mutate far faster than DNA because they are made of RNA. There is approximately one mutation every 10,000 replications with RNA. When multiplied by the billions of people who have gotten Covid, and the millions of copies of the virus inside each person, this will ostensibly give rise to variants and the ones which will survive will be those that can spread faster, infect more people, and avoid the epithelial attachment

points and avoid detection by the body's antibodies. Omicron no longer "looks like" what the body's antibodies are trained to look for when injected with the vaccines from the original strain. It's like having a picture of a bad guy up at the police station. But the picture is two years old and the bad guy who ends up knocking at the door looks totally different. This leads the body to not be able to mount as effective of an immune response compared to if the body had been allowed to fight it without ever having been injected.

Simply put, the more we vaccinate people with these two-year old vaccines, the more we are putting mutational pressure on Omicron to morph into yet another version which our current vaccines will not be able to fight at all.

To recap - forcing vaccines violates the Nuremberg Code, the current vaccines don't work, there are documented serious health risks for young people from current vaccines, while continuing to vaccinate with "leaky vaccines" will continue driving new variants.

Best Regards,
A Concerned American

To whom it may concern,

Please do not make the covid vaccine a requirement for school attendance. Covid is not a risk for our children, however the vaccines have been shown to be more of a risk to them. There is no long-term data to have any idea what this will do to them in the next 10 years or more. Please do not turn our children into guinea pigs when this virus is for the most part, not a problem for them. Thank you.

Hello,

I had the opportunity today to review the ZOOM presentation that was given to the committee members regarding COVID vaccinations for WA students. One important element that the WA State Board of Health must include in the papers for the committee members to review is, the element of "Time". There is no adequate time element to determine if there are long term health effects from the COVID Vaccine. I'm a professional Safety/Health and Environmental Scientist for over 40-years. All of the experiments I've been involved with, require the element of "Time" to determine an accurate result. Granted there are millions of people of all ages who've received the vaccination, and there are various reactions; however, we (scientists) cannot determine the long-term effect of the COVID Vaccine without introducing "Time" into the study. Unfortunately, the COVID vaccines are lacking the element of time in the studies. So, as a professional in the science field, I recommend that there be no mandate given to inject school age children with an experimental vaccine. Children already have a robust natural immune system, why take the risk of long-term health problems? Now is not the time to rush to conclusions.

Hello,

I hope this email finds you and your family well.

A few days ago, during a WA State Board of Health meeting, the advisory group spoke of whether they should recommend adding Covid vaccination to the current WA vaccine schedule for school and daycare entry. Unfortunately public comments were not allowed. The advisory group would be making a recommendation for our children without hearing from the parents.

I oppose the Covid vaccine being added to the school and daycare schedule. Children have mild to no symptoms from the virus, and are thus the safest. Covid Vaccine inserts are none existent to the public, leaving us without a knowledgeable and informed choice. Pharmacists themselves do not have access to a vaccine insert. We are told to believe and take the plunge yet so many have had horrible and evenly deadly complications from these vaccines. Please urge the advisory group to be cautious and not make recommendations for the Covid vaccine to be added to the school and daycare schedule.

Thank you for taking the time to read my opposition and concerns. I look forward to reading your reply.

Clark County Resident

Before even thinking of adding this experimental vaccine to the childhood schedule please be aware that my children and your children are at risk of injury from this vaccine than they are covid

Keep in mind that fewer children have died of covid than from influenza/flu and the majority of them had comorbidities

The vaccines are bad news. Fifteen bodies were examined (all died from 7 days to 6

months after vaccination). The coroner or the public prosecutor didn't associate the vaccine as the cause of death in any of the cases. However, further examination revealed that the vaccine was implicated in the deaths of 14 of the 15 cases. The most attacked organ was the heart (in all of the people who died), but other organs were attacked as well. The implications are potentially enormous resulting in millions of deaths. The vaccines should be immediately halted.

No need to worry. It is doubtful that anything will happen because the work wasn't published in a peer-reviewed journal so will be ignored by the scientific community. That's just the way it works.

The paper

This paper, posted on December 10, 2021, On COVID vaccines: why they cannot work, and irrefutable evidence of their causative role in deaths after vaccination

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Femail.mg1.substack.com%2F%2F03LoeslWo0Wv5F1J1Q_Kq25Wdp6UnvWdWwoM6jPUHj5AdGDghHKICGwzK2Kut-77Jn7o-OQwlSpdOoMHXIOrTSOLOc_85VJEiEIPI2_J-ko30QpOwgUViJ4yp_1tsp9ZMC-PCzFw3XbvdvRFNP01WOy3vveydUtDkbbfX4c6bbPeFN_WYKlr3aFzaWTF_NlpyXuJsoZXf_4RgJN2PGPAaIdppA2wHMDwA_jNalwgQiHwfrRouJKt5rztFG3zgUH4pBKYG3jLaLBP1BVNRWLzCKW69R97-ZKh&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C537eb732a34246f9771c08d9cbe49f52%7C11d0e217>
by Sucharit Bhakdi, MD and Arne Burkhardt, MD, has been getting some attention lately.

The authors did an autopsy in 15 patients who died (from 7 days to 6 months) after receiving the COVID vaccine and discovered that in 14 of the 15 patients there was widespread evidence of the body attacking itself, something that is never seen before. The heart was attacked in all cases.

A number of salient aspects dominated in all affected tissues of all cases:

1. inflammatory events in small blood vessels (endotheliitis), characterized by an abundance of T-lymphocytes and sequestered, dead endothelial cells within the vessel lumen;
2. the extensive perivascular accumulation of T-lymphocytes;
3. a massive lymphocytic infiltration of surrounding non-lymphatic organs or tissue with T-lymphocytes.

Lymphocytic infiltration occasionally occurred in combination with intense lymphocytic activation and follicle formation. Where these were present, they were usually accompanied by tissue destruction.

Here's the video presentation

This work independently validates the analysis of Peter Schimacher
 <https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Femail.mg1.substack.com%2Fc%2RmSIN6FFAhE4W6VPX7IrISyPMTMeByBccrnckSux-5roOtAl_Fs3JMLCzoplrPrbbKDtpbNTlgVrGexTq-CuEPcHDtOv8UAFHP6vDaj7g1bnTdgvduDog3GvoTwfbBgRjXb_iIH8yWFc46YAjp8Y7lyQra5leioD_3roX63Qyviss-R_wPFYeOE8v_iMQCuPiWvBjbGROCKfNWK9k4IBE20Xf0MIMbXxZ17hqnzBskPiYY344kf7I295iZUAf4tOCswIUjAM2B3bDtcZ3g8j9kv29fSVIPx0Ie-suH-QoFXuEKCOGT9482xqcT9TpGvCBH7D2VE5kdF3Ix9zpWUTllvqBOTkYISVUuihqfm61_w2gzJ6III14jm3ruQqNTM>
 who showed a minimum of 30% to 40% of the deaths after vaccine were caused by the vaccine.

If the autopsy findings are confirmed by other pathologists with additional samples, and if they are combined with the findings of Dr. Hoffe (>60% inoculant recipients have elevated D-dimer tests and evidence of clotting) and Dr. Cole (increase in cancers after inoculation, including twenty-fold increase in uterine cancer), we are seeing a disaster of unimaginable proportions. The conclusion (if supported by further data) is that essentially EVERY inoculant recipient suffers damage, with more damage after each shot. Given the seriousness of the types of damage (autoimmune diseases, cancer, re-emergent dormant infections, clotting/strokes, cardiac damage, etc.), these effects will translate into lifespan reduction, which should be counted as deaths from the inoculations. So, in the USA, where ~200M people have been fully inoculated, the number of deaths will not be the 10,000 or so reported in VAERS, or the 150,000+ scaled-up deaths from VAERS, but could be closer to tens of millions when the inoculation effects play out!

The question in my mind is whether it is possible to reverse these inoculation-based adverse events. Can the innate immune system be fully restored? Can the micro clotting be reversed? Can the autoimmunity be reversed? I have seen a wide spectrum of opinions on whether this is possible, none of which is overly convincing.

I realize the above sounds extreme, and maybe when more data are gathered from myriad credible sources the results and conclusions may change, but right now the above data seem to synchronize with the demonstrated underlying mechanisms of the damage. Additionally, we seem to be doubling down on inoculations, with fourth booster being proposed for Israel, and UK suggesting quarterly boosters.

Dr. Ryan Cole's reaction

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Femail.mg1.substack.com%2F%2Fdbv6bejV5uQthTac3JaBwXnmE6zx1zYx4zI3NEE_M4rloKJHRnTuHjTaqE7qTXzptHCacuWPE4JcYNINWw_7Lo4Km17iY1cYtOolbeT6oRvWs9Ah-kEjcoHH7B4NDgG9MZA7LVPEvZ80N-PcRvOs6HOH82F3Cv2sWNUssGM5KfsLjnx1ObEh_i1587kf9zjJ7u0zruKc4Jc17eSPlcEHequCFE-wFpPzBk7OFeSO-pwqa11vWqsgCyUIJjNbS8r8BbKSxqPfSqzrKGDx5igO9886IetxhXeJHmVyiU5gKwqabOq0pNg6J-kldCDghe-n4YulHK7q8Sst7DzBYjGsG5ED3XjZRDLWpiBNppNbSqdV2H9b5ucB7u_VDNNvP_JGLJ_EAAevk4B4m0vfJEbyS-lpTd8x94UsWP&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C537eb732a34246f9771c08d9cbe49f52%7C

Background of two of the scientists behind the study

Dr. Bhakdi has spent his life practicing, teaching and researching medical microbiology and infectious diseases. He chaired the Institute of Medical Microbiology and Hygiene at the Johannes Gutenberg University of Mainz, Germany, from 1990 until his retirement in 2012. He has published over 300 research articles in the fields of immunology, bacteriology, virology and parasitology, and served from 1990 to 2012 as Editor-in-Chief of Medical Microbiology and Immunology, one of the first scientific journals of this field that was founded by Robert Koch in 1887.

Dr. Arne Burkhardt is a pathologist who has taught at the Universities of Hamburg, Berne and Tübingen. He was invited for visiting professorships/study visits in Japan (Nihon University), the United States (Brookhaven National Institute), Korea, Sweden, Malaysia and Turkey. He headed the Institute of Pathology in Reutlingen

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Femail.mg1.substack.com%2F%2FqAV96xFEykZkyzd7pXXA1CKeI0VdwqQ3yiel4R4gN81OavZvYXiY3hPy1H0kmyaTo4bYewI02isW9QkDFhFLYBqMJ0x4Bk11spZ36I7wf_aXFdV3dC2eIeV49fT6iLwZowdA4bTLzmlDPG-cgUFWLqeNcbA8oqOfWyt8OA3bkfcFf7ekh6rKzL1eQC9tnZeJCKfyFAQ_6LhdT-ePebrnVowZf7hkDmB2dLqikiR_X3gbMKwZMzU03Q9FskFQxRsXQvkvobJ7IgUsxMkoasYttK-hcmuCnT9lufya_hmw&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C537eb732a34246f9771c08d9cbe49f52%7C

for 18 years. Subsequently, he worked as an independent practicing pathologist with consulting contracts with laboratories in the US. Burkhardt has published more than 150 scientific articles in German and international scientific journals as well as contributions to handbooks in German, English and Japanese. Over many years he has audited and certified institutes of pathology in Germany.

I oppose the covid vaccine to be mandated for children. This should be (parent choice) , NOT the governments! 100% My kids will not be going to school if this happens Shame on America for taking our freedom of religion and freedom of choice away!!!

Subject: COVID Vaccine Mandate- public comments

External Email

I am actually pro- vaccine. As an adult, I made the choice to get the COVID vaccine, as I also get a flu vaccine annually. I, however, 100% disagree with any type of mandate. As adults, we should make the choice for ourselves. And, most importantly, AS A PARENT, I should make the decision for my child. Given the limited preliminary testing, the type of vaccine that it is (as you know, this is very different than the other vaccines we put in ourselves) and the mild to no symptoms experienced by nearly 100% of the children, I see no need to mass vaccinate these children. There shouldn't be a mandate at all. And there definitely shouldn't be a mandate to vaccinate our children. We will not do it, and will pull our children out of school. Sadly, the emotional toll and damage done to children not in school isn't even a consideration when these types of discussions take place. Please make record of my public comments that our children will not be vaccinated, and will be pulled out of school if this mandate is imposed.

Kelie,

Good morning. I'm writing to voice my opinion that families and doctors should determine whether or not a child (anyone under 18) is vaccinated w/ the EUA Covid 19 vaccine. This vaccine has no long term studies and the disease is not threatening to healthy youth. Please let this be a decision between parents and their child's healthcare provider & not a mandatory requirement for children to attend schools.

Thank you!

Subject: Adding COVID-19 vaccines to school □vaccinationrequirements

External Email

Hi,

I listened to the WA Board of Health Technical Advisory Group (TAG) meeting today about adding COVID-19 vaccines to school □vaccinationrequirements and have some comments/questions.

I heard talk about ensuring that a requirement for the COVID-19 vaccines (here after referred to as COVID-19 injections or just "injections") is not an unreasonable burden. I didn't hear any talk about verifying if the COVID-19 injections are necessary among school age children.

The following represent some essential questions that must be sufficiently addressed by TAG before forcing children to get an experimental injection.

1. How many children have died to-date with/from COVID-19 in Washington state?
 - 1.a. Of those children who died with/from COVID-19 how many of them had other pre-existing medical conditions?
 - 1.b. For the sake of comparison how many children died from suicide and other causes?
2. Why force all children to get the COVID-19 injections when children are at low risk of dying from COVID-19?
3. Why force all children to get the COVID-19 injections when we don't know the long term (long term as in years, maybe even decades) impacts of the injections? The mRNA injections are an entirely new type of experimental injection. What are the long term impacts of mRNA injections?
4. Why not leave the choice to get a COVID-19 injection up to children and their parents, under the advisement of their personal doctors? Is it not better for medical decisions to be made on a case by case basis by those whom the decision impacts most?
5. Why force the COVID-19 injections on children when the CDC has acknowledged that the COVID-19 injections DO NOT stop transmission of COVID-19? If the injections do not stop transmission of COVID-19 then forcing a given child to get the injection will not protect other children in a school.
 - > Our vaccines are working exceptionally well, They continue to work well for Delta, with regard to severe illness and death – they prevent it. But what they can't do anymore is prevent transmission.
 - > - Rochelle Walensky, U.S. Centers for Disease Control, during a CNN interview on Thursday, Aug. 5.
6. What options are there for preventative treatment to reduce the risk of death from COVID-19? Can we promote these preventative treatments instead of experimental injections?

Sincerely,

Lucas Bonner

Subject: Comments for the immunizations technical advisory board

External Email

Hello

> I heard you the TAG met today to discuss making the vaccine a requirement for students k-12. This is ridiculous the Covid virus poses virtually no risk to healthy children and the vaccines do not prevent catching or transmitting the virus to others. The vaccines DO have significant side effects though and we don't even know the long term effects yet. I would 100% pull my kids from school and teach them through homeschooling methods if Washington tries to force my children to receive a risky vaccine under an EUA to attend public school in the future.

>

> If you care about the welfare of children then you should see the side effects are significantly more dangerous to healthy kids than the virus is and under no circumstances should this be added as an immunization requirement for public tax funded schools.

Greetings Working Group

Personal Background

I am a vaccinated (2x), healthy 68 year old male. I have lived in Washington since 1993. My education includes science (BS Physics, Pre-med, Nuclear Engineering graduate school, and IT professional coursework) and business (MBA Marketing, graduate studies in Marketing and Strategy) from 7 universities. I have written US Patents on behalf of inventors who developed anti-viral, anti-bacterial, and other immunological effects. Currently, I lead the materials science Product Development efforts of a WA state clean energy venture. I review on a daily basis the many observational studies and Randomized Control Trials from select nations concerning COVID.

These reviews have included:

- * Evidence comparing Vaccine immunity vs Natural Immunity.
- * Breakthrough infection rates by immunity class (No Vaxx, Vaxx only, Natural Immunity Only, Vaxx after recovery from infection).
- * Symptom and infection severity by Variant
- * Viral load and transmissivity by immunity class.
- * Infection rates and clinical outcomes by age group.
- * Vaccine Adverse Effects (UK Yellow Card System, US VAERS, etc.)
- * Infection and severity of symptoms serum nutrient content {Vit A, Vit D, Vit C, Vit K, Zinc, Iron}

DISCLAIMER

I am not a physician nor an academically-certified virologist nor nutritionist. My comments are not intended to make claims nor to provide advice.

COMMENTS FOR YOUR CONSIDERATION

Prudent policy decisions are always a risk-reward (or cost-benefit) trade-off. There literally is no free lunch. I suggest strongly that your deliberation consider the following facts:

- * Herd immunity occurs when nearly all community members have immunity.
- * Omicron is now outcompeting other variants. People get infected with OMICRON rather than Delta, Alpha, Beta etc.
- * Omicron will likely infect everyone.
- * Young people, unvaccinated, are most likely to be asymptomatic, and acquire natural immunity superior to vaccine immunity.
- * Young people, regardless of immunity class, will infect teachers and parents with OMICRON regardless of their immunity class.
- * Unless the policy for IM injection returns to the international best practice of aspirating the syringe after insertion, young people will be placed at a statistical risk of adverse side effects (from injection into the vascular system) that is greater than the risk of severe infection from COVID.

ADVICE:

- * Let the Omicron variant run its course, and monitor new variants for infection and severity.
- * Do NOT mandate COVID vaccines as a condition of participation in classrooms.
- * The risk TO unvaccinated and BY unvaccinated students is acceptable. The reward of vaccination is outweighed by the adverse affects, discrimination against children, and the further invasion of patient rights by government.

I am available for discussion should follow-up be desired.

Strength and Honor

Subject: Covid vaccine in schools

External Email

To Whom it may concern at Washington State Board of Health-

It is my understanding that that discussion for requiring children to be vaccinated against Covid 19 in order to attend public school is on the table. I would like to voice my opinion, which is shared by many other families in our state. I think this it would be a terrible decision to require the vaccine for children. I know many people who would pull their children out of public schools if this were the case (including myself). Some of these families would be able to give their children a wonderful homeschool environment, while others wouldn't. The divide that exists between children now would only get greater. Some children who's only safe place away from an abusive or neglectful home, would no longer have that safe place as an option. My children would be fine, but many would not be. I only see families in the Seattle area being fine with this. The rest of the state would not sit well with this decision. Do not let Seattle be the voice for the whole state. Our children have lost out on a great many "normal" things over the last year and a half.... don't force families to make a decision they were not ready to make and remove them from something that feels mostly normal. Families and communities will be divided (more that they already are). People are undecided about the vaccine for a great many reasons.... they should be allowed to have whatever feelings about it that they have. Validate our families in Washington state, they are thoughtful, caring people, who are not making this decision lightly. Do not bully them into making a decision they do not want to make. The vaccine has not kept people from being covid, nor has it stopped people from giving it to others. That alone should be food for thought. If it prevented covid and ceased transmission, this would be a different conversation.

Please consider the people of Washington state and do not make this mandatory... you will lose families, and many children will lose out on high quality educational opportunities.

I hope you all have a wonderful day and will make decisions not based in fear fed by the media.

- Mallory Brumfield

Subject: COVID vaccination mandate for kids question

External Email

Hello Christy,

I would like to know if you or your colleagues saw results from Pfizer medical trials of the vaccine on adolescents. I mean real trials results document, and not narratives from CDC and Pfizer websites.

Canadian doctors share the real numbers from that report in a video. I encourage you to watch that video before you make a decision on our children.

Please use google to search

Canadian Covid Care Alliance

The video is on the home page, just scroll down.

Pfizer medical trials on children start at 19:50.

I hope that WA DOH board would not take any decision before familiarizing with all the facts from the medical trial results.

1. Look into Absolute Risk Reduction instead of Relative Risk Reduction that Pfizer research points out.

2. The Pfizer report is focussed on preventing COVID, but they really should be focussed on how vaccination changes the risk of severe illness and death from all factors, including vaccine injury. For example, myocarditis is a very dangerous disease that has a mortality rate of 20% in 6.5 years on average, which is not an uncommon injury from the vaccine

3. There is nearly 0 chance for kids to die from COVID, and there is at least 1 to 1000 chance to get horrible permanent injury or death from the Pfizer vaccine according to Pfizer medical trials on adolescence.

If you haven't heard of anything like that please read about one girl. Her name is Maddie de Garay.

Maddie was one of the 1005 kids who got the Pfizer vaccine during the medical trials.

You can use Google to search.

It's like at least one kid from every Middle School would be dead or disabled sitting in a wheelchair. It is not just Maddie.

My colleague's daughter had a similar vaccine injury. Also in a wheelchair now.

Pfizer is interested in selling the vaccines, so I would not trust Pfizer's narratives alone.

Please do not make a decision before analyzing facts from all available sources.

Thanks,

Oleg

Subject: Covid vaccines mandate

External Email

Let me start by saying that I am not an anti- vaxxer. I believe in the science of true vaccines. But I also believe in making informed decisions when considering my child's health. And our rights to do do.

I recently read that Washington state is looking into adding the covid vaccine to the list of mandatory vaccines of youth to attend schools and day care.

You would be forcing parents to choose between work and/or public education of their children, and a vaccination into the arm of their child that has not been tested long enough in children. We do not have enough data to support lack of long term side affects and we do not know yet whether the benefits outweigh the risk.

Studies and real life data is showing that the vaccines do NOT stop the spread of the virus.

Studies and real life data show that young children do not suffer severity of illness/death like the older population.

The argument that getting EVERYONE vaccinated will stop the spread is outdated and no longer valid.

Please do not make our children suffer longer with these ridiculous decisions. Please consider all of the facts before you decide to kill more livelihoods of our Washington families and create more illness and mental anguish in our children.
Thank you for your time.

Hello Kelie Kahler,

I'm homeschooling mom but still want to contribute to the mass majority of parents opinion of absolute opposition to Children COVID Vaccination. I'm strongly against that.

Please help us keep our choice and freedom available. And may the Lord bless you to be honest and strong.

Blessings to you and your family in the new year!

I am writing in Complete opposition to your proposal to make the Covid vaccine part of the state's child immunization schedule.

- 1) This shot is brand new and still under EUA....lack of adequate data.
 - 2) I have read and personally heard of 1st hand stories of reactions to the Covid shot from adults and children under the age of 18. Life threatening heart and lung conditions! these are from an age group with a 99% survival rate!
 - 3) Where there is a risk, there should be a choice.
 - 4) Mandates like this will continue to destroy the foundation of our public school system....loss of funding. Families, including mine, will continue to leave the state.
 - 5) Children have a 99.99% survival rate...
 - 6) We are 2 years in...those who wanted the shot have likely already done so.
 - 7) There is proven treatment out there that has zero bad side affects. It makes no reasonable sense to mandate an experiment.
 - 8) It's wrong and you know it is! Do the right thing.
- Thank you,

Cori Hilderbrand

Subject: Comments regarding potential vaccine mandates for kids

External Email

I want to make it very clear that if you try to impose a covid-19 vaccine mandate on our kids, you will be met with fierce resistance. I know many parents who are willing to remove their kids from public schools completely.

It would be a terribly foolish and criminal act on your part. Criminal because children have a statistically zero percent chance of dying from Covid. The same cannot be said for the vaccines.

Rather than trying to force experimental vaccines on everyone as though vaccines were our only tool in this fight, you should be pushing for recognition of at least three classes of protection: 1) the experimental vaccines (which could prove more deadly in the long run than Covid itself), natural immunity, and prophylaxis of Ivermectin or HCQ.

A vaccine mandate for kids would be unconscionable, especially when these so-called vaccines have been proven not to work against Omicron and to have been very weak at best against Delta. Also, statistics from the UK indicate that those who are vaccinated are more likely to die from all causes than the unvaccinated. Twice as likely actually. The long list of side effects from these vaccines makes them unsuitable for anyone except those with preexisting conditions. Youth is NOT a preexisting condition.

Stand up and protect our children now, and get the idea of forced vaccinations out of your heads.

Randall

Subject: COVID Vaccination requirements

External Email

I'm writing to you today as a concerned parent in Washington State. I recently heard that the state is considering adding the requirement for school age children to obtain the COVID-19 vaccination. I strongly oppose this decision as a parent. This is an unnecessary and concerning requirement that my children and many in my community will refuse. Your choice to make this a requirement will continue to draw parents like me to alternative options for schooling causing the State to continue to lose funding.

Thank you for your time and consideration.

Subject: Agenda for the Technical Advisory Group (TAG) Meeting to Consider COVID-19 for Inclusion in chapter 246-105 WAC

External Email

I am writing to you as a concerned parent and voting member of the public.

I am not certain why you are even considering implementing COVID-19 vaccinations for our children in Washington State. The facts that were stated during the first TAG meeting do not

Seem to be mentioning that the vaccines available are a new vaccine technology and are only being

Allowed under Emergency Use Authorization under the FDA rules.

Why would you consider implementing and including these vaccines, which are actually gene therapies not vaccines, when they are not FDA approved?

Data produced from the CDC as well as VAERS shows injury and deaths due to these EUA vaccines have not been fully collected or collated. Should you not wait to deliberate this action you are taking until we all have a more clear understanding of the datasets?

Some of the CDC and reporting data we have from October 2021 shows the following:

* Deaths from COVID among children is very rare. (Out of 723,880 deaths 235 of these are kids aged 1-15)

* Kids ages 1-4 make up 0.008703 percent of COVID deaths.

* Kids ages 5-15 make up .0238 percent of all deaths.

The VAERS data shows that the EUA vaccines would do more harm to children than the COVID 19 itself is doing. (Data as of 12/17/21) US and Foreign

* Adverse vaccine reactions

Dec' 2020 to present – COVID vaccine = 19 983,758

1990 to present – All other vaccines = 864,722

1990 to present – All other vaccines = 14,271

1990 to present – All other vaccines = 9,416

Issues than all others combined and in a much shorter time period.

The question is this: Should you be implementing school and day care COVID19 vaccinations at this early stage of its use? Would this not be paramount to medical experimentation on our children?

I would like a response to my questions.

Thank you,

Matthew Lindsay

To Whom It May Concern,

If you haven't watched the Dr Malone (inventor of mRNA) episode on Joe Rogan (Spotify app), then please do so. Our children and your children need you to watch it, all of it.

Dr. Robert Malone is the inventor of the nine original mRNA vaccine patents, which were originally filed in 1989 (including both the idea of mRNA vaccines and the original proof of principle experiments) and RNA transfection. Dr. Malone, has close to 100 peer-reviewed publications which have been cited over 12,000 times. Since January 2020, Dr. Malone has been leading a large team focused on clinical research design, drug development, computer modeling and mechanisms of action of repurposed drugs for the treatment of COVID-19. Dr. Malone is the Medical Director of The Unity Project, a group of 300 organizations across the US standing against mandated COVID vaccines for children. He is also the President of the Global Covid Summit, an organization of over 16,000 doctors and scientists committed to speaking truth to power about COVID pandemic research and treatment.

We will unequivocally pull all three of our children from public schools should the non FDA approved, EUA Covid-19 vaccine be mandated for school. We are fully prepared to homeschool at a moments notice as are our children.

Daniel and Amy Reber

Hello,
I strongly oppose COVID vaccine for any human being. There have been zero safety studies. This is unethical to push a highly dangerous product on our very vulnerable children. VAERS numbers from the COVID vaccine have increased tremendously since the rollout of this vaccine. Side effects such as blood clots, paralysis and death are very common with this vaccine, how is this okay to mandate for children. Take a minute to look at this issue as a parent who does not want their kids lives to be toyed with in the name of making an extra dollar for the pharmaceutical industry.

Thank you.

Subject: Adding COVID vaccine to school requirements

I am writing to oppose the proposed action to require the COVID-19 vaccine for children to attend public school in Washington. These vaccines do NOT stop the virus as they were originally declared. They have cause death and injury to many children (and adults), they are still not FDA approved! What was FDA approved is not even being manufactured but is being "sold" as the same thing but is NOT!!

There is still research being done to the long-term effects of these "vaccines" with some early results indicating a possibility of sterilization of the children and/or other neurological issues as a result of the injection!!

It is much too early in this important research to make this requirement! If you love your children, grandchildren, nieces, nephews and their children...if you love ANY child, I urge you, do NOT make this change to the current law!! DO NOT force these unknowns on these innocent children!!!

Praying for this situation!

Subject: Covid vaccine added to vaccination requirements for WA children

External Email

Dear Board,

I have included below an analysis overview of COVID-19 genetic safety in children, by Dr. Robert W Malone MD, inventor of the mRNA vaccine platform. His credentials are impeccable, and it is only due to his criticism and whistle blowing on the mRNA vaccines that he has been censored, and had his accomplishments literally re-written by Wikipedia as well as being permanently removed from Twitter in the last few days. I cannot improve on anything he has written, so am forwarding it below.

I must comment that I have reviewed the criteria for your board to accept vaccines and add them to required list for children, and I am shocked that you would even put these up for review as they do not meet basic criteria you require. Even with our institutions failing us at many turns, this is stunning, as these are our most precious citizens that we are talking about, our children, our future.

Under heading vaccine effectiveness, it is stated that the antigen in the vaccine is safe and has acceptable level of side effects. One look at the CDC VAERS data and that is proven not to be the case and this is only recent data, particularly with children there is completely inadequate data, no long term data at all. This is a rushed novel medication, not a vaccine, as it does not prevent individuals from contracting and spreading the virus. Changing the definition of vaccine to state provides protection, as opposed to provides immunity, does not make this medication on par with other required shots that do provide full immunity.

Under heading Disease Burden, it is stated that the vaccine reduces the risk of person-to-person transmission, this has not been proven with these shots and looks to be quite the opposite with Omicron as transmission among vaccinated is in the 80%.

Also, it is stated in your Board Process that you recommend a fully FDA approved immunization. The Pfizer Comirnaty shot is the FDA approved jab, and it is not in production yet, thus these current shots are still emergency use authorization only and one of your primary requirements is that it be fully FDA approved shot. You will be requiring children to take this experimental shot, with no liability to any entity, act as guinea pigs for the privilege of attending government schools. By the way, the most vaccine hesitant group is that of black and brown people, the most negatively impacted group throughout the pandemic in this country, shutting them out of education does not seem like equity to me.

In short, the risk benefit ratio for children with this medication is all downside for children, it would be criminal in my opinion and that of tens of thousands of physicians, scientists, virologists, immunologists to add these mRNA shots to mandatory list for children

The link below is a study done by a Kaiser Northwest physician that speaks to the very high rate of myocarditis and pericarditis associated with these shots, particularly for young men.

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.youtube.com%2Fwatch%3Fv=...>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.rwmalonemd.com%2Fmrna-vaccination-in->

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.rwmalonemd.com%2F&data>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.sciencedirect.com%2Fscienc>

" (Toxicology Reports, Volume 8, 2021, Pages 1665-1684).

"Thus, our extremely conservative estimate for risk-benefit ratio is about 5/1. In plain English, people in the 65+ demographic are five times as likely to die from the inoculation as from COVID-19 under the most favorable assumptions! This demographic is the most vulnerable to adverse effects from COVID-19. As the age demographics go below about 35 years old, the chances of death from COVID-19 become very small, and when they go below 18, become negligible."

The new variant of COVID-19, Omicron, has exploded onto the scene. What was already an inverted risk benefit ratio for genetic vaccination in children and adults (greater risk of death from vaccine than from COVID-19) will become even more inverted since the risks of COVID-19 are further reduced with Omicron. The Omicron variant is different in five essential ways:

*

More infectious and will soon be the dominant variant in the USA

*

Less pathogenic

*

Poorly matched to currently available vaccines

*

Natural immunity is providing good protection against Omicron

*

Disease symptoms are more similar to the common cold

The issue of COVID-19 gene therapy technology -based vaccine mandates for children is a pressing issue confronting parents, grandparents, and public health officials throughout the world. Unfortunately, the topic has become highly politicized, and active censorship by legacy media outlets has made it difficult for parents and stakeholders to obtain access to the actual data required for the full informed consent prior to acceptance of a medical procedure required by law (see for example members of the Trusted News Initiative including Thompson-Reuters

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fodysee.com%2F%40VSRF%3Ad%2F%40Safety-Research-Foundation-TNI%3Ae&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C02da94badd184be06d9f08d9cf1b155d%7C11d>).

Presented herein on this website is a large collection of information and data from both primary sources and analyses which will allow parents, grandparents, and other

stakeholders to make their own determination concerning the risks and benefits of the genetic COVID-19 vaccines for their children. This compilation of references, primary information, and analyses represents the collective work product of hundreds of physicians and medical scientists. It supports the consensus Physicians Declaration of the 16,000+ strong International Association of Physicians and Medical Scientists <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdoctorsandscientistsdeclaration.org>>, which includes the following resolution:

RESOLVED, THAT HEALTHY CHILDREN SHALL NOT BE SUBJECT TO FORCED VACCINATION

*

Negligible clinical risks from SARS-CoV-2 infection exist for healthy children under eighteen.

*

Long term safety of the current COVID vaccines in children cannot be determined prior to instituting such policies. Without high-powered, reproducible, long term safety data, risks to the long-term health status of children remain too high to support use in healthy children.

*

Children risk severe, adverse events from receiving the vaccine. Permanent physical damage to the brain, heart, immune and reproductive system associated with SARS-CoV-2 spike protein-based genetic vaccines has been demonstrated in children.

*

Healthy, unvaccinated children are critical to achieving herd immunity. Natural immunity is proven to tolerate infection, benefiting community protection while there is insufficient data to assess whether COVID-19 vaccines assist herd immunity.

This data collection and analysis has been prompted by an inquiry by the Thompson-Reuters factchecking organization which was sent to Dr. Robert Malone, MD, MS on 28 Dec 2021, and has been assembled in part to respond to that inquiry. However, by placing this information in a central location available to all on the World Wide Web rather than merely as a written response to Thompson-Reuters, we have attempted to insure that all have access to the full spectrum of information required for parents or guardians to make informed decisions concerning whether to have their children vaccinated with these experimental, unproven products.

This information is summarized and structured into multiple sections below, each with a separate tab.

On a personal note, I wish to speak to you as a parent, grandparent, physician and scientist. I stand by this statement
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.rwmalonemd.com%2Fs%2Fyou-inject-your-child.jpg&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C02da94badd184be06d9f08d9cf1b155d%7C11d0>
with a career dedicated to vaccine research and development. I'm vaccinated for COVID and I'm generally pro-vaccination. I have devoted my entire career to developing safe and effective ways to prevent and treat infectious diseases.

You can find video of this statement as well as a subsequent town hall discussion with parents, physicians, and medical caregivers at this website
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fglobalcovids Summit.org%2Fnews%2Fstream-event-physicians-alerting-parents%25C2%25A0&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C02da94badd184be06d9f08d9cf1b1>

Before you inject your child - a decision that is irreversible - I wanted to let you know the scientific facts about this genetic vaccine, which is based on the mRNA vaccine technology I created:

There are three issues parents need to understand:

The first is that a viral gene will be injected into your children's cells. This gene forces your child's body to make toxic spike proteins. These proteins often cause permanent damage in children's critical organs, including

- Their brain and nervous system
- Their heart and blood vessels, including blood clots
- Their reproductive system, and
- This vaccine can trigger fundamental changes to their immune system

The most alarming point about this is that once these damages have occurred, they are irreparable

- You can't fix the lesions within their brain

- You can't repair heart tissue scarring
- You can't repair a genetically reset immune system, and
- This vaccine can cause reproductive damage that could affect future generations of your family

The second thing you need to know about is the fact that this novel technology has not been adequately tested.

- We need at least 5 years of testing/research before we can really understand the risks
- Harms and risks from new medicines often become revealed many years later

Ask yourself if you want your own child to be part of the most radical medical experiment in human history

One final point: the reason they're giving you to vaccinate your child is a lie.

Your children represent no danger to their parents or grandparents.

It's actually the opposite. Their immunity, after getting COVID, is critical to save your family if not the world from this disease.

In summary: there is no benefit for your children or your family to be vaccinating your children against the small risks of the virus, given the known health risks of the vaccine that as a parent, you and your children may have to live with for the rest of their lives.

The risk/benefit analysis isn't even close.

As a parent and grandparent, my recommendation to you is to resist and fight to protect your children.

Regards,

Wendy Cossette

I Naomi Richmond, the parent of 2 White River students have been made aware that the State Board of Health is in the process of deciding on whether to include the new Covid Vaccine's on the schedule of requirements for school. I understand that the decision is supposed to include evaluation of efficacy, side-effects, feasibility, AND public opinion as well. I would like to share with you my public opinion on the matter. I beleive that for a virus that replaced the cold/flu in the cold/flu season and that the chances of hospitalization and death are extremely low. there should not be a vaccine. I work in the medical field and have seen that Covid has literally replaced the cold/flu depending on the variant. We have had our first 2 positive flu tests in the last 2 years. The rules are made up for counting covid deaths and hospitalizations making the numbers very skewed. It has been proven and I have seen first hand that the vaccinated are getting and transmitting Covid as well as the unvaccinated, so why is a vaccine the doesn't stop the spread being mandated. I will have you know that if it is mandated, and excemptions are not excepted, my children as well of hundreds of others will be pulled from your public school. Please consider all the facts and our loving concerns for our children. They have a God given right to an education. Thank you.

Natural immunity needs to be considered for COVID-19 and children have an infinitesimally small risk of dying from Covid19 so it should not be required. More and more other issues have come to light from the 3 vaccines, including blood clots and myocarditis and pericarditis, more info needs to be known.

The godparents to my kids had seizures for weeks after second dose, ended up in ICU after booster from crazy blood pressure event. The long term effects from the Covid vaccines are truly unknown.

Johnson and Johnson vaccine is now considered especially problematic due to causing blood clots and deaths.

Jessica Berg, Johnson and Johnson death

Vaccine deaths and severe adverse reactions

Ernesto Ramirez, 16, Pfizer death

Ernesto died of an enlarged heart five days after the jab, according to his autopsy which showed his heart was double the normal size.

As Dr. Marty Makary states:

"Dr. Marty Makary, a professor at Johns Hopkins University School of Medicine and editor in chief of MedPage Today, argues that mandating vaccines for "every living, walking American" is, as of now, not well-supported by science. Moreover Makary, author of "The Price We Pay: What Broke American Health Care—and How to Fix It," has concerns about the two-dose vaccine regimen for young people..."

..."The notion that we have to vaccinate every living, walking American – and eventually every newborn – in order to control the pandemic is based on the false assumption that the risk of dying from COVID-19 is equally distributed in the population. It's not. We have always known that it's very hard for the virus to hurt someone who is young and healthy. And that's still the case..."

..."When it comes to vaccinating healthy kids

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medpagetoday.com%2Fopin-makary%2F93029&data=04%7C01%7CNathaniel.Thai%40sboh.wa.gov%7C2c4a0c7020cf40777d3f08d9cb0bf53c%7D>

– and you could argue young people up to 25 – there is a case for vaccination but it's not strong. The COVID-19 death risk is clustered among kids with a comorbid condition, like obesity. Of the more than 330 COVID-19 deaths in kids

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.wsj.com%2Farticles%2Fcovid-19-coronavirus-vaccine-side-effects-hospitalization-kids-11626706868&data=04%7C01%7CNathaniel.Thai%40sboh.wa.gov%7C2c4a0c7020cf40777d3f08d9cb0bf53c%7D>

under age 25, there's good preliminary data suggesting that most or nearly all appear to be in kids with a pre-existing condition. For kids with concurrent medical conditions, the case for vaccination is compelling. But for healthy kids?

The risk of hospitalization from COVID-19 in kids ages 5 to 17 is 0.3 per million

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fgis.cdc.gov%2Fgrasp%2FCOVID19-weekly-report%2F2021-06-25%2Fus-fda-adds-warning-about-rare-heart-inflammation-to-pfizer-moderna-covid-vaccines&data=04%7C01%7CNathaniel.Thai%40sboh.wa.gov%7C2c4a0c7020cf40777d3f08d9cb0bf53c%7D>

for the week ending July 24, 2021, according to the Centers for Disease Control and Prevention. We also know that the risk of hospitalization after the second vaccine dose due to myocarditis

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.usnews.com%2Fnews%2Ftop-news%2Farticles%2F2021-06-25%2Fus-fda-adds-warning-about-rare-heart-inflammation-to-pfizer-moderna-covid-vaccines&data=04%7C01%7CNathaniel.Thai%40sboh.wa.gov%7C2c4a0c7020cf40777d3f08d9cb0bf53c%7D>

, or inflammation of the heart muscle, is about 50 per million in that same age group.

It may be that the standard two-dose regimen is a dose too high and is inducing a strong inflammatory response causing these complications. A single dose of the vaccine may be highly effective in kids, as reported by Tel Aviv University

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.jpost.com%2Fhealth-science%2Fisraeli-research-asks-is-one-covid-vaccine-dose-enough-for-young-teens-670956&data=04%7C01%7CNathaniel.Thai%40sboh.wa.gov%7C2c4a0c7020cf40777d3f08d9cb0bf53c%7D>

. Researchers there found that one dose was 100% effective in kids ages 12 to 15. For now, until we get better data, I recommend one dose for healthy kids who have not already had COVID-19 in the past.

I'm concerned the CDC hasn't considered whether one dose of the two-dose shots would be sufficient – and safer – for young people. The agency's Advisory Committee on Immunization Practices has vigorously recommended the two-dose vaccine regimen for all children ages 12 and up regardless of whether kids already have immunity. I take

issue with that. The data the CDC used on which to base its recommendation is incomplete at best. The agency is using the Yelp of vaccine complications as a data source: a self-reported database

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fvaers.hhs.gov%2F&data=04%7C>
of vaccine complications, which haven't been fact-checked by authorities. So the agency
may not be fully capturing the extent of vaccine complications from the second dose in
some young people.

I wish the CDC would tell us more about the deaths of Simone Scott

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fox19.com%2F2021%2F06%2Fhigh-school-graduate-remembered-kind-talented-after-mysterious-illness-takes-her-life%2F&data=04%7C01%7CNathaniel.Thai%40sboh.wa.gov%7C2c4a0c7020cf40777d3f08d9cb0bf53c%7C>
 , 19, and Jacob Clynick

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.freep.com%2Fstory%2Fnew-clynick-pfizer-covid-vaccine%2F5323095001%2F&data=04%7C01%7CNathaniel.Thai%40sboh.wa.gov%7C2c4a0c7020cf40777>, 13, both of whom died shortly after getting a second vaccine dose and developed heart inflammation. There have been 19 other deaths in youth under age 25, according to the CDC. Since the clinical trials were not powered sufficiently to detect rare events like these, I want to know more about those deathbefore making blanket recommendations.

Researching these events is important when issuing broad guidance about vaccinating healthy kids, including students, who already have an infinitesimally small risk of dying from COVID-19.”

Jennifer Schrank

WA BOH Technical Advisory Group,

Forcing Covid Vaccines on school children is unethical, immoral, against every freedom guaranteed us in the US Constitution, and against the Nuremberg Code.

There is a greater threat to children and young people from this vaccine than from Covid itself. The research indicates that children are at a greater risk from cardio-myopathy than they are from Covid which has a 99.99% survival rate.

Do NOT vote impose Covid vaccination on WA State's children

To Whom it may concern,

Experimental vaccines should never be required anywhere. This is a violation of the Nuremberg Code. Additionally, Comenaty will not be available until 2023.

There have been ZERO deaths in regards to K-12 students in the state of Washington. This is another reason not to add this to the required vaccine list.

Very Respectfully,

Jon Jackson

Subject: Don't mandate vaccines on children

External Email

To those attending the meeting today in regards to mandating pharmaceuticals to our children,

These vaccinations have not been reviewed long term, and children (and adults) have many negative side affects. The risk isn't worth it. We don't know what those consequences will be. To push this agenda against parents will is morally wrong. I've already pulled my children out of public school and if this is mandated we will get an exemption and if we can't get an exemption we will move to another state. A different state that values parents and children's rights more than Washington. Not all vaccines are safe, not all children have the same reaction, and some kids are genetically predisposed to sensitivities and medicine that can alter them in ways you don't understand and you don't care to understand. Please respect a parents right and a child's right, none of my children need this pharmaceutical, it's not a vaccine, it's a drug. We all have natural immunity in my family.

Please look beyond yourself, read with an open mind and respect for a mothers intuition.

External Email

To Whom It May Concern:

I am asking that the Covid-19 vaccination not be included in the WAC 246-105.

It is extremely unsettling to know that this meeting is not open to comment by the public, and that it is being held without notification so that the public at large can add input.

The vaccination is still in its infancy and there is not enough information to determine that it is safe for adults, let alone children. I realize there is information out there that says otherwise; however, if the vaccination were effective it would prevent the virus, as a vaccination is designed to do. The fact that someone can get vaccinated and still get Covid-19 is reason enough not to have subject our children to this experiment.

Thank you for listening.

10.

Are you testifying on a specific proposal under consideration by the board?

1. Yes

The proposal to require the Covid vaccination(experimental drug) for every student within this state.

11.

Are you Pro or Con on the proposal?

2. Con

In October of 2021 I removed my children from the Washington State School system because I could see the writing on the wall that this state would require an experimental drug to be tested & used on our children. A drug that has not been proven safe over a long period of time. There is literally no evidence. None. None at all that prove this experimental drug is safe on the use of any human being long term. I say I could see the writing on the wall because Gavin Newsom had just announced an illegal mandate for all students in the state of California and true to form Washington usually follows. While we are still residents in the State of Washington my children literally attend a private school across state line. The trust we once had as parents for the state to maintain the best, quality education for our children is all but destroyed. We have ZERO trust in the Government officials to include the state education board of Washington. This lack of trust goes far deeper than the experimental drug shot. The name of Covid has revealed much more insidious plans from dark governmental powers That would assault, abuse, & violate our children through programs and policy. If I had more time today I would to discuss those two. The mini months that I have fought at the local level within our school district has been both discouraging and sobering. When October arrived I knew I literally needed to save my children from the Washington state public school system both physically from a experimental drug injection and mentally from indoctrination of evil, twisted, perverse curriculum. Thankfully there are far more of us than there are of you. I know you don't see it that way now but you will. Those of us who can see this for what it is are fighting on the winning side and we know how it all ends. Stop this sickening madness now.

Subject: Leave our kids ALONE

External Email

This is regarding the zoom meeting that is being held today, not allowing any public comment. There are thousands and thousands of us parents out there that in no way intend to inject our children with the COVID-19 vaccine.

If you implement the "rule" That our children must receive the COVID-19 vaccine in order to go to daycare's or schools, I can tell you now you will be losing thousands and thousands of kids from the public school system, and therefore the public school system will drown and have no money coming in.

LEAVE OUR CHILDREN ALONE.

Think of your own children, your own grandchildren in the world that they are living in.

Let's give them some peace and normalcy, this is absolutely ridiculous.

If anyone chooses to vaccinate themselves or their children, that is, by all means, their own God-given right. If anyone chooses not to vaccinate themselves or their children that is, by all means, their own God-given right.

Do not let your "authority" get to your head. Use common sense. Thank you.

Regarding vaccine mandate for children 5 and older:

The Covid-19 "Vaccine" is still operating under EUA from the CDC. There is no approved vaccine for use AVAILABLE in the USA. This means that the Nuremberg code applies; as well as federal and state statutes regarding experimental medications. THEY MAY NOT LEGALLY be required. Anyone doing so becomes personally liable for any harm caused.

The justification for this entire pandemic is based on a faulty PCR test. The CDC last July acknowledged this fault; but for some reason chose to leave this test in use though this month. This means that the numbers used to justify all of these extreme violation of personal human rights have been based on a test that has been KNOWN to be faulty. Further, cases are not deaths. MANY of these cases were asymptomatic. As this test was known to be faulty, it is KNOWN many of these people, in fact, did not have any upper respiratory illness, at all.

Dr. Kary Mullis--the inventor of the PCR--personally stated the test should NEVER be used diagnostically.

The VAERS system has had more reports of injury caused by this SINGLE vaccine than all other vaccines combined, since the VAERS system started. Children given this are experiencing cardiomyopathy at an alarming rate. THERE ARE NO LONG TERM STUDIES as to the effects of this vaccine.

Children had the LOWEST rate of Covid. They had the HIGHEST rate of survival if they did acquire Covid. Per VAERS, more children have ALREADY died due to the vaccine than ever did to Covid.

DO YOUR JOBS. Stand for the Constitution and rights of our citizens, especially those too young to speak for themselves. REQUIRING THIS EXPERIMENTAL GENE THERAPY FOR ANYONE is CRIMINAL.

It is the oath of all health care to do no harm! This mandate for children WILL do harm!
Stop now!

Sincerely,
Mary Sizer

External Email

I am writing to express my lack of support for these requirements. I am not anti vaccine. My wife and I have had the COVID vaccine and my child gets her regular immunizations.

However, I am against giving this vaccine to children. Children are at an extremely low risk from COVID. Indeed, most have no symptoms. The vaccine can protect the staff (although there have been many breakthrough infections), so infecting others and spreading/mutations are not reasons to vaccinate kids.

Not enough is known about the long term affects of this vaccine and there have been severe side effects. For children, the risk is not worth the benefit.

If the state mandates this we will pull our child from public schools.

Thank you.

External Email

WAC 246-105-030 specifically lists 11 "vaccine-preventable" diseases. I understand this to mean that the vaccines for these diseases have proven to prevent the disease in the vaccinated. There is a growing number of breakthrough cases (i.e. cases of covid in fully vaccinated people), including 86 cruise ships undergoing investigation by the CDC for covid outbreaks despite the extremely high vaccination rates on board (see news article below). Given that these statistics prove that the covid vaccines do not prevent the disease in the vaccinated, SARS-Cov2 does not fit the criteria for a "vaccine-preventable disease." How can you add COVID 19 to Chapter 246-105 when it does not fit the criteria?

Subject: Against adding COVID-19 vaccine to school vaccination requirements

External Email

To Whom It May Concern,

It has been brought to my attention that there is a meeting today to discuss adding the COVID-19 vaccine to school vaccination requirements. It bothers me immensely that today's discussion was not made widely known and that there will be no public comment time. This is shady and unacceptable.

I am against adding the COVID-19 vaccine to school vaccination requirements and I urge you to consider ending this discussion being against it as well. My hope is you will really listen and consider what I have to say.

Since the "buzz phrase" around COVID-19 is to "trust the science". The "science this...", the "science that...", etc. Well, what about the science that has proven that our very own human immune systems are quite capable of handling this virus without a vaccine, because it has a 99% survival rate? What about the science that has proven that being vaccinated doesn't prevent you from getting or spreading COVID-19? What about the statistics that show we have a high level of positive COVID cases, while we ironically have the highest number of vaccinated people as daily more people are becoming fully vaccinated or getting their boosters? What about the science that shows the COVID-19 vaccines have more reported vaccine injuries in VAERS than any other vaccine at this stage of its existence? What about the science that shows this virus is moving from a pandemic to an endemic state like the flu? What about the recent guidance from the CDC that shortens the quarantine and isolation periods? Why would they do that? They did that because they know that this virus is not as threatening as mainstream media and politicians are making it out to be.

People should be able to make the decision for themselves, their children, and their own bodies about whether or not to get the COVID-19 vaccine, just like they decide whether or not to get a yearly flu shot. It's really that simple. I will pull my children from public education should you move forward with the COVID-19 vaccine as a school vaccine requirement. I know I am not alone in that either. There are many, many parents who feel the same. Look how public education has already suffered with the way the pandemic has been handled thus far. A decision for this will only hurt it further.

There is so much data and common sense pointing against adding this as a school vaccine requirement. As intelligent people, I implore you to not turn a blind eye to what is so blatantly obvious here.

Thank you for listening to my valid points and concerns.

Respectfully,

Michelle Katsel

These shots have not been properly tested and we as parents should have the final say! If we don't want our kids to have it then we should be able to at least fill out an exemption form. I pulled my child from public schools just for this reason. I saw the hand writing on the wall. If this shot works, why are you so afraid of those of us who are not vaxed? It works right? Forcing people to get something injected into their body they don't want there is not any different that the sexual abuse I suffered. It was something I did NOT want in my body and it was forced. Not any different. Without long term testing on the side effects (heart problems, blood clots, sudden death to name a few that HAVE happened) these things should not be forced! Everyone is entitled to choose. Freedom of choice! My body my choice remember. We are the parents, we created our children and we should decide what is best for our kids. Not the State! This is NOT Russia, China, North Korea or Nazi Germany. We decide, not the state.

This will be considered a crime against humanity if you approve it, and you will be held to account for your actions.

Medical studies show children have little to no risk from Covid. The "vaccines" are not legally categorized as such, but experimental drugs. They have roughly 2 months of efficacy, and can also support reinfection.

There are currently numerous meds available to treat covid.

Follow the science, not the politics.

Subject: Covid Vaccination Requirement

External Email

Hello,

I am writing to let you know that I absolutely am opposed to covid vaccination requirements for schools. Everyone I know who has gotten covid this December has been vaccinated for it. This vaccine is not eliminating covid cases at all and therefore the motive for a requirement for an ineffective injection is extremely questionable.

The measles vaccine actually eradicates measles. The covid vaccines do not. Covid mutates like every flu, and the boosters will only be guesses. There are risks that come with any vaccination that should not be imposed arbitrarily on people when the rate of effectiveness is so low.

Please do not push more families out of this state and out of our schools.

Subject: Meeting to consider COVID-19 for inclusion in chapter 246-105 WAC

External Email

Dear Members of the WA BOH Technical Advisory Group,

Since you are meeting today to explore adding COVID-19 vaccines to school requirements, please allow me, as a parent of a student, to voice my concerns.

Requiring a medical intervention for healthy children to attend school needs to be grounded in proven scientific reasons that this requirement will carry no risk for the healthy child and will have a definite positive outcome for the community that otherwise cannot not be achieved. Available data shows that neither is the case for COVID-19 vaccines. I urge you to not recommend a requirement of this vaccine to attend school.

1. The vaccine does not prevent infection or transmission. It protects from severe illness, hospitalization and death. These risks are extremely low for healthy children and young adults. The 5-17 age group has had a total of 3201 hospitalizations in 2020 and 2021. Some underlying conditions that account for over 65% of these cases: 15.7% Asthma, 35.8% obesity, 14.1% neurological disease.

https://gis.cdc.gov/grasp/covidnet/covid19_5.html

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fgis.cdc.gov%2Fgrasp%2Fcovidnet>

2. Vaccine efficacy starts waining after a few months after the second shot. Conclusion of a New England Journal of Medicine article based on data from Israel: These findings indicate that immunity against the delta variant of SARS-CoV-2 waned in all age groups a few months after receipt of the second dose of vaccine.

<https://www.nejm.org/doi/full/10.1056/NEJMoa2114228>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nejm.org%2Fdoi%2Ffull%2F>

This means if vaccination is required at the time of enrollment, efficacy has already waned by the beginning of the school year.

Cornell University decided to close its doors after over 900 fully vaccinated students tested positive. <https://www.cnn.com/2021/12/14/us/cornell-university-covid-cases/index.html>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cnn.com%2F2021%2F12%2F>

[university-covid-cases%2Findex.html&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C2adb12ba85364d30666d08d9cafb3c](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cnn.com%2F2021%2F12%2F)

3. The Pfizer BioNTech vaccine has not received FDA approval for 5-11 year olds group and is still in phase 3 of the trial for all age groups. A requirement of a medical intervention for healthy children with EUA vaccines is immoral.

4. Many children already had and have recovered from COVID and now have natural immunity, at health status which is completely ignored by the state of Washington.

5. Based on point 1 alone, a decision for or against COVID-19 vaccination of children needs to be made by no other than a child's parent/guardian and doctor based on the individual health status of the child.

6. Based on point 1 and 2, vaccination of children will not prevent infection and transmission in schools. Please explain to parents why you consider making a vaccine a requirement? If the goal of preventing transmission and infection can't be reached with this vaccine, what other reasons do you have for considering a vaccine requirement?

7. Increased risk of Myocarditis and Pericarditis in young males. In the 5-11yrs age group, 8 cases have already been confirmed. <https://www.reuters.com/world/us/eight-heart-inflammation-cases-seen-among-young-kids-who-got-covid-19-shot-us-2021-12-16/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.reuters.com%2Fworld%2Fus%2Fus%2Fnews%2Fhealth%2F8-heart-inflammation-cases-seen-among-young-kids-who-got-covid-19-shot-us-2021-12-16%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C2adb12ba85364d30666d08d9cafb3cef%7C11d0e2>

8. As my state Board of Health I expect you to provide guidance to the citizens of Washington about how to improve and maintain their health. As such I am asking you, why are there no recommendations that ALL Washingtonians take Vitamin D supplementation when Vitamin D status is linked to higher risk of hospitalization and death from a COVID infection? This is just one small change - inexpensive and without known side effects - that we can make that can produce positive impact in protecting from hospitalization and death.

Findings: Fifty-four studies (49 as fully-printed and 5 as pre-print publications) were included for a total of 1,403,715 individuals. The association between vitamin D status and SARS-CoV2 infection, COVID-19 related hospitalization, COVID-19 related ICU admission, and COVID-19 related mortality was reported in 17, 9, 27, and 35 studies, respectively. Severe deficiency, deficiency and insufficiency of vitamin D were all associated with ICU admission.

<https://www.frontiersin.org/articles/10.3389/fpubh.2021.736665/full>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.frontiersin.org%2Farticles%2F10.3389.fpubh.2021.736665.full&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C2adb12ba85364d30666d08d9cafb3cef%7C11d0e2>

Thank you for reading and considering the concerns of parents and citizens of Washington.

I urge you to please be strong and make the only moral decision that exists: no requirement. Every parent/guardian needs to be allowed to make this decision for their child with their health care provider based on the individual health status of the child.

Sincerely,

Stephanie Benna

To whom it may concern, There is absolutely no evidence to support the vaccination of children for ` Covid 19. In addition, the risks far outweigh any possible benefits. In addition, Covid 19 vaccines do not prevent the spread of the virus so there is absolutely no grounding for this. I as well as thousands of other citizens will encourage people to homeschool their children rather than risk side effects like Myocarditis and heart attacks in children. This is nonsense and is unconstitutional and unethical.

Subject: adding covid-19 vaccine to list of required immunizations for school

External Email

Please do not add this vaccine to be required. Children do not get as sick and seldom die. The vaccine is only effective for a short time so does not provide lifelong protection so it is not necessary. There is no need to require it when there is no solid evidence that it is necessary. It takes away from the freedom of parents to oversee the health of their own children.

Subject: No COVID-19 vaccines for our children!

External Email

To whom it may concern,

Please consider my petition to not add the COVID-19 "vaccine" to our school vaccination requirements. Healthy children and young adults are not at high risk of suffering complications from COVID-19 disease or transmitting it to others, whereas there is a very high risk of serious side effects or death reported from the shots. The long term effects on our children's health is yet unknown. There have been no outbreaks of COVID-19 in our schools, but occasionally single individual students testing positive for the virus with no severe outcomes.

Our children have suffered enough through the pandemic and we will not allow for them now to be subject to a risky medical treatment. These vaccines should remain optional for families who choose to take them, not a requirement to attend school.

Thank you,

Monika Oberholtzer

WSBOH Members

Vaccination of a child should be a parental choice. Use of an experimental treatment(covid "vaccines") that does NOT prevent you from getting a virus should not become a requirement for children to attend school.
Natural immunity is vital. My kids have all been had covid with minimal symptoms.
If this becomes a requirement to attend public schools,
You will see families removing their children from the public school.
And see a further drop in attendance in public school systems. Look at the data, look at countries forcing this vaccine, they are seeing high rates
Of the virus in spite of the vaccine.
It doesn't prevent the virus.

Sincerely,
Christy Keneally

Subject: Comments for the Immunizations Technical Advisory Board

External Email

I am writing with regards to Washington state BOH Technical Advisory Group exploration of adding COVID-19 vaccines to the school requirements.

It is unethical and abhorrent that the BOH has taken this first step. The evidence is mounting that the C19 vaccines pose a reverse benefit/risk ration for children. The risks massively outweigh the benefits of these experimental gene therapy treatments, especially in children. VAERS has an alarming number of adverse reactions/injuries and even deaths reports that CANNOT be ignored, ESPECIALLY when it has been known for over 3 decades that VAERS captures less than 1% of all vaccine injuries.

The International Alliance of Physicians and Medical Scientists has declared that children should be excluded from vaccine mandates: "Consensus is clear among MDs and medical PhDs: following 20 months of exhaustive research, millions of patients treated, hundreds of clinical trials performed and scientific data shared worldwide, they conclude that healthy children and the COVID-recovered should be excluded from restrictions and vaccine mandates."

I urge all board's members to ask themselves this simple, fundamental moral question: would you require your child or grand-child to take an experimental, novel and untested gene therapy, whose long term risks are completely unknown and which have gravely concerning safety signals emerging, and which might injure or even kill them IN ORDER FOR YOU TO HAVE AN UNPROVEN probability of less severe symptoms to a disease that is proven to pose 0 risk to children? What happened to humanity where we are willing to sacrifice the children in order to maintain an illusory sense of safety for the old and sick?

I also urge you to remember that all members of the board will be on record for their votes and how they will affect policy in Washington State!

TAG to look into requiring children to receive Covid shots to attend school

11.

Are you Pro or Con on the proposal?

2. Con

There is NO FDA approved Covid-19 vaccine available in the USA as of this date. The vaccine is only issued an Emergency Use Authorization. Therefore, ALL individuals who are part of any group that decides to require this vaccine can & will be held PERSONALLY responsible for crimes against humanity as per the Nuremberg code. Additionally, it is against the Constitution and Bill of Rights to force any citizen to receive any injection they do not want. PERIOD. The DOH has NO authority to require any vaccination that is not FDA approved, to require vaccines with extremely harmful VAERS data for a disease with almost no affect on children.

Subject: COVID-19 Vaccinations

External Email

Please do not add the requirement for a covid-19 vaccination to the already long laundry list of vaccinations for kids. It's proven SCIENTIFICALLY and MEDICALLY that kids are NOT at high risk of covid. This would be very misguided at best and almost criminal at worst. More and more evidence is coming out of what this mRNA solution is doing to kids, myocarditis, DEATH. Is that what you are wishing onto our kids who have already lost two years of school, are suffering mentally because of school closures, isolation and the constant fear mongering from the government and media? How about the suicide rate among kids skyrocketing because of all of this kind of stuff? Is that what your department/advisory board pushes? The death and illness of our children?

I am respectfully requesting that you DO NOT make this mandatory until full clinical trials have been completed.

Injury and death are far more common from the mRNA jab in children than from getting and recovering from covid. See VAERS.

It would be far better to allow children get covid, recover, and have natural immunity that lasts most of their lifetimes. It also makes for herd immunity.

If this is untested injection is mandated, the Washington school board and voting members of the group approving the mandate should be financially and morally responsible for problems caused.

Covid has a near 100% survival rate in children and 98+% in adults. Check the stats of peer-reviewed science.

Stop going by what media is required to report. Media likes to say "science says" but have you ever noticed they are unable to give you any real scientific proof backing their claims? They have none.

Do your own research folks. Make decisions that benefit children, not \$\$\$ for you and your budgets for a nice, moral change.

Just making sure you all saw this info, especially about the meeting today-

IMPORTANT NOTICE and CALL TO ACTION about VACCINATION MANDATES

The State Board of Health (BOH) is having 2 meetings very soon to consider 2 requirements for Covid vaccination for school children:

1) Adding covid-19 to the list of required childhood vaccinations

Zoom meeting tomorrow Wednesday 12/29/2021 from 1:00 to 2:30pm. Here is the link to register to attend. I will attend and speak up if they allow comment.

https://us02web.zoom.us/webinar/register/WN_TEfcoeisQBqjZDJH4gsPlw

Here is a link to WAC 246-105 below concerning: IMMUNIZATION OF CHILD CARE AND SCHOOL CHILDREN AGAINST CERTAIN VACCINE-PREVENTABLE DISEASES

<https://apps.leg.wa.gov/wac/default.aspx?cite=246-105>

2) Potential vaccine mandates for students

The WA State Board of Health will be meeting on Wednesday, January 12, 2022 regarding potential vaccine mandates for students. From now until Friday, January 7 at Noon, they are accepting public comment via this link - <https://sboh.wa.gov/Meetings/ProvidePublicComments>

I will be commenting and I encourage you to join me. As many of you as possible.

To whom this concerns,

I speak on behalf of just about every parent I know. We absolutely do not agree with mandating covid vaccines to attend public school. Many parents will pull their child out of school if this is mandated. There is no question that these vaccines do not stop the spread of covid. We also know young people are not at risk of severe disease. We also know of the increased risk of myocarditis/pericarditis in young people who've been vaccinated. Additionally, many kids have natural immunity which is much more effective than the vaccines.

I hope you do the right thing, and listen to the majority of parents in Washington State who are asking for no mandated covid vaccines.

To Whom It May Concern,

Stop all vaccine (JAB OF POISONS) mandates for children of all ages and adults. Stop all illegal planned destruction of lockdowns, testing and masking immediately!

I have personally seen deaths, strokes, transmissions, neurological conditions, myocarditis, GI issues, break out lesions all over the body, inside the mouth and nose, miscarriages, AND more! I have talked with people (too many to count) who have been infected with the virus after the jabs! I have studied hundreds of hours of doctors, lab specialists, nurses and hospital personnel who prove this kill shot was planned and part of the depopulation agenda of the cabal. It is clear that Fauci, Gates, Soros, Pharma, the bloodlines, CCP, blue state leaders, foreign and domestic enemies are in our country to kill, control and take over the America.

The Constitution and Bill of Rights are the law of the land! Not politicians! Stop all illegal mandates and remove everyone in positions of leading who do not uphold and defend the Constitution for WA State and the United States of America!

This is not a I hope you do read this- the only response is We The People are speaking - STOP it now! Blood is on your hands for the lives lost and disabled from this agenda.

In God We Trust

Subject: No mandatory school vaccinations, please

External Email

Dear Board of Health members,

I urge you to reject any covid vaccination mandate for school age children.

There are numerous reasons why school-age child vaccinations do not make sense, the chief reason being is that the mortality rate of children to covid is miniscule!

The mental and emotional toll that covid restrictions have had on our children are far more damaging than the virus!

Additionally, our Sumner Bonney Lake School district has lost over 300 enrolled students, relating to millions in lost revenue. Parents in my neighborhood are already considering school alternatives. For many, a vaccination mandate for their kids, would force their decision to leave the school district.

Please, allow parents to make their children's own health decisions.

Thank you,
Shawnta Mulligan

What would be the ethical and moral argument for adding a EUA vaccine with unknown longterm effects on rapidly developing children?

With our understanding of the vaccines inability to prevent infection and transmission and the knowledge that children are the least at risk population with mortality rates similar to influenza, what would be the ethical argument for adding this to vaccine schedule?

What other vaccines on the current schedule are designed for rapidly mutating coronaviruses?

Is the flu shot on the vaccine schedule and if so what has been it's effectiveness in highly vaccinated schools for preventing child death?

As a nurse practitioner with a school age child I will be listening very closely to what is being discussed today

Thank you,

Shelby DePas

Covid-19 is not preventing people from getting the Virus. The vaccines are significantly less effective than the manufacturers promised. Pfizer wants to hide its vaccine information for 75 years? Why? This is not a Pandemic, this is a bad cold. Stop the insanity of vaccinating children with an unknown vaccine. VAERS data shows 20,000+ deaths. Why are the vaccines still being pushed by Politicians. There is not conclusive evidence that this vaccine works.

Subject: Vaccination for students

External Email

Good Morning,

It has recently come to my attention that your board is entertaining the idea of requiring vaccination from COVID-19 for students in our schools in Wa.

I would like to know the data and information you are using to drive this decision. This virus is shown to be overwhelmingly beatable and far less contagious than originally feared.

A large amount of citizens in this state have more concern of side effects of vaccination than they have for the virus itself.

I would like to believe the state board of health would place the health and safety of its citizens over political agenda.

The time for fear is over. It is time to wake up and start living life again.

Sincerely,

A concerned parent

Dear TAG

Given current scientific understanding, it would be unconscionable to include covid vaccines on normal childhood schedules.

The UK study released just a few days ago shows that risk from myocarditis is far higher post-vaccine than post-infection for males under the age of 40.

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medrxiv.org%2Fcontent%2F>

In fact, there is substantial evidence that the such post-vaccine myocarditis is highest in males of school age. Given that risks from the natural infection are extremely low in this age group, it is puzzling to see why mandating this would even be considered.

It would be truly reckless to require any vaccine for children that has not been properly and cautiously vetted through standard channels, with years of thoughtful and conscientious testing. People can wish that rushed vaccines would work fine, but that will not make it true.

Please do not require these on the childhood schedule.

Sincerely,
Douglas Collins

Members of the Board of Advisory Technical Advisory Group,
We are completely against adding COVID-19 to school vaccination requirements.

The risk to children of COVID or Delta or Omicron is extremely small. Therefore, they do not need to be vaccinated.

Further, please review the increasing reports of adverse reactions to children from the vaccine. There are serious heart inflammation problems, partial paralysis and even death.

Please note this report from VAERS:

"The vaccine is already proven to be dangerous. On November 12th, the CDC released the latest figures

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fde-cdc-covid-vaccine-data-injuries-5-year-olds%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Ce8bb5097933141b71f9c08d9cb08d85c%7C11d0>

from the VAERS (Vaccine Adverse Event Reporting System). To date, children ages 12 to 17 have suffered 22,782 total adverse events, including 1,400 rated as serious, and 29 reported deaths. Among the deaths: a 17-year-old girl from Washington, a 12-year-old girl from South Carolina, a 13-year-old girl from Maryland, and a 17-year-old girl from Texas. 59 cases of life-threatening anaphylaxis were reported in this age group – with 96% attributed to Pfizer's vaccine. 552 cases of myocarditis and pericarditis (heart inflammation) were reported, with all but 10 linked to Pfizer, and 131 cases of blood clotting disorders, with 100% linked to Pfizer."

There is no logical reason to vaccinate children, period. Please stop this ill-considered action you have planned.

Thank you,
The Crosby Family
Leavenworth, WA

Why in the world would this state, our country and DOHs be advising giving these experimental vaccines to children. It remains in emergency authorization now with no long term proof of its effects. Good God! Fully vaccine people are getting Covid-19 virus. A cruise ship of fully vaccinated guests are over taken by this virus. A military ship fully vaccinated- the same thing. STOP and take a breather, look and read what scientists on the other side of this have researched. We don't know what the long term affects are on our human race. What are the scientific facts and VAERS showing regarding how children are affected.

PLEASE RECONSIDER WHAT YOU ARE PROPOSING.

Hello!

I understand you are having a TAG today regarding requiring vaccinations for Covid-19 for schools in Washington State.

As a father of four students that attend school in this state, I'd like to offer the following thoughts:

- * Vaccinations are available for people ages 5 and up, and are generally available in this state
- * The State has a very high vaccination rate already, exceeding 60% for all age groups that are eligible and have had at least one vaccination shot (apologies if my numbers aren't perfect, finding solid state data can be difficult unfortunately)
- * School administration, teachers, and other employees have been able to receive vaccinations for nearly a year, as they were deemed essential and received a place in line early in 2021
- * Recently, the severity of cases has been dropping- all 4 of my children spent the Christmas break recovering from Covid, and it was similar to a mild to average cold. They have all recovered and are finishing 10 day isolation requirements (now only 5 days required)
- * Nationwide, 1.1 children per 100k are hospitalized for Covid, compared to a normal year where Flu alone hospitalizes 3-5/100k children- Covid is not as severe, even today, with kids
- * Recently, the vaccine has been shown to neither stop nor delay virus transmission- vaccinated people get sick and transmit, sometimes asymptotically potentially due to the vaccine assisting them

Based on these facts and the science- people can get shots if they want them, those who are vaccinated do not stop transmission of the virus, children are generally not affected severely from JUST Covid infection, forcing parents to provide these shots to their children just so they can attend school is not necessary at this point in the pandemic. Many kids in this state have attended school now for 1.5 years and we know that we can manage the situation with Covid and have them attend school, without mandated/WAC required vaccinations.

Please consider this as you discuss this matter.

Thank you,

John O'Gata

I am absolutely opposed to mandated COVID vaccinations for students in public schools. Almost every parent I know also feels the same. These vaccinations don't stop transmission. They put young people at increased risk of heart issues and who knows what else long term. There is overwhelming data that young people are not at risk of severe disease/ death from COVID. Many kids already have natural immunity which is better than any vaccine. If this is mandated, all three of my children will be pulled from public school. I am not alone in this— there will be many, many more that do the same. No mandate!

Hello,

I, as a mother of 5 children in WA schools, urge you not to add the covid 19 vaccines to the school vaccination list. Forcing children to put an unapproved, experimental drug into their little bodies when there is no know long term side effects of this drug is very upsetting as a parent. Having to choose between an education and possibly ruining their health is not a decision I take like lightly. I do know the answer for my self, my children and many, many other families though, we will be home schooling.

Please don't do this to our children. The chances of them getting or even spreading covid is so small.

Think of the long term effects this will and could have on the children.

Hi, I'm emailing to explain that I would not like there to be a Covid-19 Vax mandate for our kids. With it not being safe (pericarditis, neuro issues), nor needed with kids having almost no issues, its just not needed! This would be a huge blow to you as well, because many more parents are going to continue to withdraw their kids if this gets implemented.

Not needed, please don't make our kids be a guinea pig.

WSBOH Members

Vaccination of a child should be a parental choice. Use of an experimental treatment(covid "vaccines") that does NOT prevent you from getting a virus should not become a requirement for children to attend school.
Natural immunity is vital. My kids have all been had covid with minimal symptoms.
If this becomes a requirement to attend public schools,
You will see families removing their children from the public school.
And see a further drop in attendance in public school systems. Look at the data, look at countries forcing this vaccine, they are seeing high rates
Of the virus in spite of the vaccine.
It doesn't prevent the virus. It doesn't prevent the spread of the virus or having the virus.

Sincerely,
Christy Keneally

Dear WA SBOH members,

I am writing as a concerned Washington parent in opposition to adding any covid 19 vaccine requirements to the childhood schedule. Simply put, this vaccine is brand new to the market with absolutely zero long term data on whether or not it is even necessary let alone may harmful in the long term for children. In no way should we be holding children's education hostage for not participating in a post-market experiment. As a parent, and I know I'm not alone in this, there is nothing that would promote me to subject my child to the unknown outcomes of injecting a brand new technology. Parents are not willing or ready to accept this product.

Children are leaving the schools in droves as the frustration with mandates, online schooling failures, and the declining mental health of our children as we continually isolate them are piling on to parents. For many more this will be a breaking point to pulling their children from school. Please do not add any more pressures onto already struggling school districts.

This addition is by no means in the best interest of children and is draconian in nature.

Thank you for your time,

Jill Collier

□Hello

I would like to remain anonymous but I am curious what scientific studies are you showing that has any evidence that children should be vaccinated? Have you considered that 30% of boys that get this vaccination are more likely of getting heart conditions then getting even sick with COVID.

What about the young girls, girls who are too young to know if they will ever want to be a mother. There are zero studies confirming this vaccination doesn't effect birthing mothers or woman who want to have children. This study is not going to be complete until the end of 2022.

Let's also talk about pro choice. Since when do we force our young students to do something like this to their body. But yet we let woman who have sex with a man without birth control to kill an unborn child. Why does a woman get to chose then but not now. The hypocrisy is just embarrassing. This state is supposed to be educating the young but the poor decisions and thought put into our schools and criminal actions you are wanting to impose are questionably evil.

I see what you're doing in schools, as I am an educator and I am worried for our future because of what people and organizations like our state government is doing.

Here are some actual studies that need to be read. Please do some actual research of your own not just watching what CNN or any news media outlet is telling you.

Why are you trying to mandate more vaccines for our kids to attend school? This Kirsch model

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.skirsch.com%2F covid%2FVa>>
estimates that 600 children have already died from COVID vaccines as of September 2021! A recent Lancet study shows that a healthy child has ZERO risk for COVID, suggesting that most of the vaccinated kids are dying unnecessarily from a shot they didn't need to begin with! Some 86% of children suffered an adverse reaction to the Pfizer COVID vaccine in clinical trial, and one in nine children suffered a serious reaction grave enough to leave them unable to perform daily activities.

How can you justify forcing a healthy child to take a vaccine that is dead certain to injure many and kill some while bestowing no benefits?!

How can you consider this ethical? To put a child at risk for the pretext that it might shield an adult? Show me any adult who thinks this is okay, and I'll show you a monster!

Hello,

Please consider the following. Focusing attention and using resources to consider adding Covid19 vaccines as a school attendance requirement, is illogical considering that the CDC has indicated that only children with underlying medical conditions are at risk for severe illness and not healthy children. The link below, under the section titled Additional Information on Children and Teens, lists the chronic disease and health conditions that would put children at risk.

<https://www.cdc.gov/coronavirus/2019-ncov/need-extra-precautions/people-with-medical-conditions.html#children-underlying-conditions>

If we truly follow the science, then we can see that not all children should have this made a requirement.

Why not focus time and resources on educating and encouraging healthy choices and lifestyles for the public, and especially those at high risk?

Thank you,

In opposition to mandatory Covid "vaccines" for children I urge you to follow the science. This is not yet an approved drug and is still in it's experimental stages. Less than two years in it is unconscionable to even consider mandating that children be a part of this experiment.

Remember the DES drug that decades later is still affecting children of mothers who used it?

It is now known that the Covid vaccine neither keeps people from being infected or from transmitting the illness. Children are known to have lesser symptoms if they do become I'll with Covid.

There are more and more therapeutics being developed and ones that are already available known to work. Focus on the availability of these.

Don't risk the health of our children by mandating an unproven outcome.

Thank you for your time.

To Whom It May Concern,

I am absolutely against adding the COVID-19 vaccine to the list of required vaccinations for school attendance. Primarily because this is an experimental vaccine, without any long-term trial data to use to guide this decision. Vaccines (as is true for any medication) have never been a one-size-fits-all solution.

Thank you for your thorough and thoughtful review of this matter.

The science and studies do not show that children are at high risk for Covid and it should not be required for children to attend school. The seasonal flu has shown to be much more dangerous and is optional for families. The Covid vaccine which is still under emergency use only should NOT be required for children. The risks of the adverse effects of the vaccine are much higher than Covid itself. I will pull my kids from state funded education if this passes. The ramifications of thousands of families pulling their children are endless. There is no need for this to be a requirement for children to go to school.

Research shows children are the least effected by this virus! With the survival rate being higher than 99.999% mandating this "vaccine" is ridiculous, and an extreme over step! More children die from toys yearly than from covid! My child has had covid had barely any symptoms, a runny nose and was fine within a matter of day.

Follow the science is what we have been told to do and the research shows having the vaccine doesn't prevent the spread of covid or getting covid. Please leave our children ALONE! If the shot is mandated I will be pulling my student out of public school and know many parents who will be doing the same.

To whom it may concern,

Requiring an experimental vaccine for a virus that is mutating is not good public health. Especially when healthy children are highly unlikely to die from or transmit the virus.

The risk of this vaccine, which does not stop the transmission of the virus, out weighs any supposed benefit to the child. And could lead to severe reactions.

Please vote no on requiring this vaccine

Dear Sir/Madam,

I am shocked to learn that the Washington State Department of Health is considering to include Covid-19 in the administrative code requirements for school age daycare and schools, as well as to other public schools.

This covid-19 is at the most an experimental vaccine for emergency use, without any tests on the impacts of long term health, not to mention the existing side effects as we have learned. I, my family and most of my friends are strongly against your proposal. I am sure that you have school-age children/grand-children in your own family, and this harmful plan will surely to have impacts to your own kids.

Here I have collected a few reference articles for your information, regarding the 384 athletes with cardiac arrests and 224 of them have died after taking the Covid-19 vaccine shots as to the time of my writing, the VAERS summary data with extensive list of damages including >20,000 deaths from the Covid-19 vaccines, and the CNN report of >900 cases in the Cornell university from all vaccinated students showing this vaccine is unable to stop the spread of Covid-19 virus.

To whom it may concern:

I understand that TAG is meeting to discuss adding the Covid 19 vaccine to the schedule of vaccines required for school age children.

I am the mother of a 10 year old son and this is extremely alarming to me that there is even a remote consideration of requiring children at extremely low risk of serious illness, be required to participate in what amounts to an experimental therapy. There is currently a greater risk of serious adverse reaction to the mRNA shot than Covid infection for children.

"FDA admits safety unknown. Children are being used as test subjects, with their parents acquiescing under fraudulent marketing pressure. Public Health messaging does not match the reality of the current knowledge base. At the October 26 VRBPAC meeting, FDA Advisor Dr. Eric Rubin admitted: ". . .but we're never going to learn about how safe this vaccine is unless we start giving it." Source: @6:52:33
https://youtu.be/laaL0_xKmmA" Informed Choice of Washington

I understand that this is just the first step in the process, but there should be no further discussion until the safety and efficacy of the vaccine has been determined.

Should the BoH or any other state agency, decide that this is required for the children of Washington State to attend public school, not only will the children in my family be unenrolled, I will do everything in my power to advocate for school choice so all parents have the ability to unenroll their children and protect them.

Please reconsider any effort to require the vaccination for children to attend public school.

Sincerely,

Heather Grayson

Subject: Covid Vaccine for Schools Discussion

External Email

To whom it may concern,

I, and many other parents, are completely against this. I will not make my child take an experimental drug, which is in stage 3 testing as of now. The Covid shots have not proven to stop the spread, or prevent catching Covid. Children have done exceptionally well with Covid. The CDC has shown extremely low numbers of serious issues and/or deaths related to children contracting Covid. Unless a child has serious co-morbidities...that decision still needs to be left with the parents. They are the legal guardians. Doctors need to be consulted prior to taking any medical treatments (especially irreversible treatments). A medical professional who actually knows your medical history and can help you make the right decision for YOU (or your child)...not some school board full of people who are not medical professionals and who are NOT being consulted for your direct care. This is not your decision, nor your place. You will see a dramatic drop in enrollment...and rightfully so.

I am completely against forced vaccination to attend school, work or any business. You are contemplating mandating a vaccine that has not been fda approved and has killed more people than the virus it's supposed to protect them from. If you are seriously having a meeting about whether to do this, maybe we need to remove you from any form of authority.

The action of mandating a vaccine to the least impacted age group is unconscionable!

You are going to CRIPPLE the already failing public schools. So many parents are already ready to Home School their kids this will send them over the top.

THINK about who you are helping..... Your own egos or the kids. You cannot say you have the kids in mind when you talk of mandating vaccines for a virus that is becoming more like the flu everyday and impacts kids 0-19 the least, if at all! Follow the data!

Please end this conversation NOW.

See letter emailed to board/TAG on December 28, 2021. Copied and pasted below:
December 28, 2021 Washington State Board of Health – Technical Advisory Group PO
Box 47990 Olympia, WA 98507-7990 wsboh@sboh.wa.gov Dear Technical Advisory
Group Members: I am strongly opposed to adding Covid-19 to the list of state required
immunizations for school entry. Here are my reasons why: • The Covid-19 vaccine
received emergency use authorization only for the 5 to 11-year-old age group. • Due to
the nature of an emergency use authorization for this drug, minimal time was available
to test the drug's efficacy. • Until the FDA can approve the vaccine for children ages 5-11
through its customary approval procedures, the vaccine should NOT be a requirement for
students to attend school. • This also applies for students ages 12 and older • Without
careful protocols and customary well researched FDA procedures, requiring a Covid-19
immunization for school entry could be catastrophic and tragic for school age children.
There is not an immanent need for making this emergency use vaccine mandatory for
school children. Here are the reasons why: • Children have not had significant issues with
Covid-19. • Typically, children's symptoms are mild, and they recover quickly. • There is
no significant mortality (less than 1 %) among children. • For the past two years, parents
and schools have successfully navigated Covid-19 without mandatory immunization. •
The established protocols within schools keep students with fevers, runny noses, etc. at
home. • In addition, social distancing and increased cleaning procedures have proven
successful. • The CDC concludes asymptomatic cases are unlikely to contribute
substantially to the spread of Covid. Those who are not sick cannot make others sick. •
Many things other than Covid pose a far greater risk to the health of children. • Omicron,
the most recent Covid strain, has been found to be far less severe, with symptoms like
the common cold, • An increase in natural immunity amongst all age groups, particularly

in younger populations may prove an effective way to protect us all. As you review criteria regarding vaccine effectiveness, safety, and an acceptable level of side effects, please consider the following issues:

- Daily we learn the vaccines are less and less effective, diminishing after only months.
- New Covid strains present new challenges for the vaccines' efficacy.
- Hundreds of thousands of fully vaccinated individuals continue to contract Covid-19.
- Safety should be a huge concern for you as decision makers.
- Parents too have huge concerns regarding the vaccine's safety.
- There are many unknowns in vaccinating children for Covid-19.
- The emergency use trial was too small and the long term effects on this age group unknown.
- Information on Covid -19 vaccine impacts has been skewed and censored.
- Previous vaccines have adhered to a very high threshold of safety. Had the threshold of safety remained high for these current emergency use vaccines, the reported adverse reactions would have resulted in the Covid-19 vaccine being discontinued months ago.
- The Swine Flu vaccine was withdrawn after 25 deaths were reported.
- Because of the many side effects with this vaccination and with so much information still not known, it would be unwise to require vaccination for students to attend school.
- The FDA recognizes myocarditis is a concern, particularly for young men.
- There are questions regarding the vaccine's impact on fertility, hypertension, and many other health issues.
- Research shows the risk to children contracting Covid-19 is far less than the risk of receiving the immunization.

As you consider Disease Burden in your review, please address the following facts:

- Covid-19 among school aged children, does not have significant morbidity. The chance of death is less than one percent.
- Because of the many break-through cases amongst the vaccinated, vaccination is not a key factor in reducing person to person transmission.
- Remember protocols around health monitoring, extra cleaning and distancing at schools have proven effective in reducing transmission.

As you consider Implementation, please address these facts:

- The Covid-19 vaccine is unacceptable to some in the medical community and the public. These people deserve your consideration.
- Mandating possibly harmful vaccinations for school age children will place a huge burden on parents.
- Parents will be forced to make very difficult and heartbreaking decisions about the health and education of their children.
- Just as adults have been forced out of their jobs for making a personal health decision regarding the vaccine, requiring a Covid-19 vaccination will force kids out of school.
- Consider the myriad and devastating impacts of over a year of online schooling on students.
- Suicide is already the 2nd leading cause of death in those ages 10-18. Base your decision on what is best for children. This must be against forcing parents and students to succumb to the unknown long-term impacts of the current Covid-19 vaccine. Education is a great equalizer and a right for all children. A decision to require a Covid-19 immunization for school entry will be catastrophic, inhumane, and unethical. Base your decision on what is best for our future – our children.

Subject: Possible Covid "vaccine" for school aged children

External Email

To whom it may concern:

I urge you to not even think of implementing a covid "vaccine" for our children as a requirement for them to attend any state school.
If implemented, our family and THOUSANDS of other families will promptly remove our children from their specific schools.
I understand each school and district is given money per child that attends. This will have quite an effect as well to each districts' own financial issues.

There is ample evidence that school aged children have barely any risks from Covid, compared to their elder demographic counterparts.

There obviously are cases of children getting covid, but symptoms, if any, are mild and comparable to common colds.

Before this body starts trying to compare a Covid "vaccine" to other vaccines that are currently required to go to school...like the measles...or polio, or chicken pox, etc....let us actually take a look at those a little closer.

How many children who have received those actual vaccines had a breakthrough case of Polio...or a breakthrough case of Measles....or had Chicken Pox a 2nd or 3rd time?

The answer is NONE!! That's because those were actual VACCINES! Vaccines that were tested and retested for years, if not decades and had a profound outcome to saving millions of children's lives who were actually dying of those diseases.

The Covid "Vaccine" is not an actual Vaccine, but rather a shot, like the FLU.

The FLU has actually killed more kids throughout history than pretty much anything, and it's not a REQUIREMENT to get the FLU shot.

Adults, as well as children, can catch the FLU even after they have received a "FLU Shot" because there are different "strains" to the virus.

Covid has different strains as well.....So by getting a Covid "shot", you are actually not protected from getting Covid at all.

Just as the Flu shot is not required, nor should the Covid "shot".

It should be a decision that parents can make on their own, just as they have with the Flu shot.

Again, if this body decides to make this unnecessary "shot" a requirement, this state will lose thousands of students....and for what?

We all know the truth.....keep it a choice. Do not go down this road.

Sincerely,

Fed up parent with the Covid B.S.

The currently available vaccines have NOT been approved by the FDA, except under emergency use. The younger age group has a 99% plus survival rate for all known strains of COVID. There is credible evidence that the vaccines can be dangerous to all age groups. The dangers of giving vaccines to children far outweigh any possible protection these vaccines could confer upon the children. As well, these forced vaccinations violate constitutional rights without due process of law. For these reasons, I am completely opposed to any forced mandates for vaccines, and especially for children.

Subject: NO COVID 19 VACCINE MANDATES FOR SCHOOL AGE KIDS

External Email

To whom it may concern,

I am a concerned parent worried I may have to pull my children from the public school if the state decides to take away our freedoms by mandating a Covid 19 vaccine for school age kids. Please do not force parents to take risks with their children's health in order to protect old and fat people. We know that these vaccinations do not protect against transmission and contraction of Covid 19. We also know that if you are under 40 years old you stand a higher chance of having an adverse effect due to the Covid 19 vaccine, then actually getting Covid 19 itself.

Please let families access their own risk. Covid 19 is not dangerous for kids. Before the WA state Dept of Health removed the metric saying who was dying in Washington based on age, it was very clear that if you are old, then take care. However, if you are under 19 you have nothing to worry about.

Freedom of choice. My body, my choice! NO vaccine mandates for school age kids!

Megan Schorr

Subject: Child Experimental mRNA Gene Therapy Mandate

External Email

I understand that there is a consideration for moving forward with a public school experimental mRNA gene therapy mandate. Do not move forward with this mandate. The children do not medically need this shot, in fact the vaccine has been proven more deadly than covid itself for children. These shots are not stopping infections.

There is a realistic chance for legal trails coming up similar to Nuremberg.

Subject: C-19 vaccine

External Email

Washington State BOH Members,

I cannot believe that the thought of adding C-19, an emergency use authorization shot for adults, is even being considered as a mandatory shot for children. This is an outrage. These shots have had very bad side effects for the adults that have taken them. Children are now and have always been in a low-risk group for this very treatable virus. I personally had covid and with a course of ivermectin got over it in a very timely manner.

The complete disregard for the treatments for this virus in order to push an experimental shot on the world, while those pushing it are making millions of dollars, is horrendous.

You must not add this dangerous drug to the list for children.

Do your own research and stop just being a mouthpiece for Bill Gates via Jay Inslee.

Subject: Covid 19 Vaccine for children

External Email

I am opposed to mandating Covid vaccines for children of all ages. Children are not at high risk for death of serious disease. Yet children are at risk for adverse effects from the vaccine. There is plenty of evidence of adverse reactions for children that are already documented. There are enough problems with myocarditis you add it to the warning label. There are plenty of adverse neurological problems and fertility problems too. These things need to be worked out. And if the Covid Vaccine is mandated will children be continually required to get the latest booster. We are still waiting for the conclusion of test results from the original Covid vaccines.

Thank you,

To Whom it may concern,

Thank you for your leadership during the difficult past two years. I think we can all agree that we are tired of covid-19, that we want it to go away, and we want our children and teens to return to normal living, freedom from ineffective, outdated, overly restrictive covid-19 policies that are more damaging to children than effective at transmission.

The thing that many do not agree on is the best route forward. With that said, I am particularly concerned about the COVID-19 shot clinics at schools. According to VAERS, severe adverse reactions and death rates are alarming for those who receive COVID shots. I am also concerned about the possibility of COVID-19 vaccination mandates. My teens are healthy. They have natural immunity after having COVID during the summer months. They are in a low risk age group. I believe, based on the vast amounts of research I have done over the past several months, that the COVID-19 shots are far riskier to my teens than the covid virus.

I urge you, as our leaders, to leave medical information-seeking and medical treatments up to parents. I believe that the lives of our blessed children should not be put at risk with this experimental shot. Any communications related to covid-19 needs to be well-informed and fair, with emphasis to the community that both unvaccinated and vaccinated people can be infected by and infect others, and that the same rules, rights, and treatment apply to everyone regardless of vaccination status. As compassionate

human beings we must stop pointing the finger of blame at the unvaccinated, and we must stop violating the rights of the individual. We must immediately stop all forms of exclusion and separation between people. As epidemiologist Gunter Kampf states "Social cohesion should not be jeopardized because of an erroneous and narrow view of the epidemiological situation."

As a mother and mental health counselor, I cannot support this experimental mRNA injection for children because I have grave concerns over the known risks, the known harms, and the unproven safety and efficacy. In keeping with the number one rule of medicine, we have a duty to "First, do no harm."

After much research, I conclude, without a doubt, that the Pfizer and Moderna mRNA vaccines have an unacceptably high risk and no benefit. The Johnson and Johnson shot also has a large number of adverse reactions and therefore not acceptable. There is no credible risk-benefit analysis that justifies these Covid-19 shots being publicly available, much less required. To prevent unnecessary childhood death and disability, we must immediately cease promoting, advertising, requiring, or mandating covid-19 shots for teens and kids.

We must protect our children from being experimented on. The evidence is growing and we will look back in history on this as a tragedy. The only question is, how many children must die or be disabled before we cease this tragic experiment?

Please do not mislead parents by promoting mRNA vaccines as safe or effective for children. The truth is that these injections are not FDA approved. They are authorized only under Emergency Use Authorization, for experimental use in humans.

It is reckless and irresponsible to carry out this mass experiment on children. I am appalled at the irresponsibility of the FDA advisor, Dr. Eric Ruben, who admitted at the 10/26 FDA meeting that we don't know if the vaccines are safe, "We're never going to know how safe the vaccine is unless we start giving it, that's just the way it goes."

There are no adequate long-term safety studies of mRNA covid vaccines because the placebo group was "unblinded" and allowed to get the vaccine.

The Pfizer mRNA vaccine causes catastrophic side effects, particularly myocarditis and pericarditis in youth. The CDC's own analysis of "Myopericarditis following COVID-19 vaccination: Updates from the Vaccine Adverse Event Reporting System (VAERS)"

<https://www.cdc.gov/vaccines/acip/meetings/downloads/slides-2021-08-30/03-COVID-Su-508.pdf>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fvaccines%2Facip%2Fmeetings%2Fdownloads%2Fslides-2021-08-30%2F03-COVID-Su-508.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cdcca6ac4458b4684a78e08d9cb03ae0d%7C1>

showed astonishing increases in the youngest age brackets. Five European countries have halted the Moderna vaccines in youth under 30 due to concerns over cardiac adverse effects

<https://www.lifesitenews.com/news/iceland-the-fifth-european-country-to-halt-moderna-covid-vaccine/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.lifesitenews.com%2Fnews%2Ficeland-the-fifth-european-country-to-halt-moderna-covid-vaccine%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cdcca6ac4458b4684a78e08d9cb03ae0d%7C1>

And the CDC investigation of rates of adverse cardiac effects from both Pfizer and

Moderna vaccines in youth is ongoing

<https://www.cdc.gov/vaccines/covid-19/clinical-considerations/myocarditis.html>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fvaccines%2Fcov19%2Fclinical-considerations%2Fmyocarditis.html&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cdcca6ac4458b4684a78e08d9cb03ae0d%7C11d0e6393&context=1>>

Healthy adolescents aged 12-17 who have been given covid vaccines have experienced blood clots, myocarditis, neurologic symptoms and extreme fatigue.

Regarding safety and efficacy, please consider the statement of abstention on the 10/26/2021 FDA advisory meeting by Dr. Michael Kurilla, with full text in the references below. I am alarmed that so many scientists and doctors voiced serious concerns at this meeting over the known risks and unknown long-term effects of these experimental injections, yet the vaccines for children were authorized (not approved) for experimental use anyway.

Our children are meant to live out their fullest potential and we have a duty to protect them from the short and long-term risks of injury from a vaccine for an illness for which they have a 99.99% chance of complete recovery. It is a travesty and fear-mongering to discuss "keeping children safe" from covid-19. If we truly want to embrace safety for our children, we will focus on real childhood safety issues such as the accidents, motor vehicle accidents, cancer, mental health, and suicide.

According to CDC data there have only been a few hundred deaths in the 62 million population of the United States, and the vast majority of these children had underlying morbidities. <https://data.cdc.gov/NCHS/Provisional-COVID-19-Deaths-Focus-on-Ages-0-18-Yea/nr4s-juj3>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdata.cdc.gov%2FNCHS%2FProvisional-COVID-19-Deaths-Focus-on-Ages-0-18-Yea%2Fnr4s-juj3&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cdcca6ac4458b4684a78e08d9cb03ae0d%7C11d0e6393&context=1>>

Therefore, children have a greater than 99.9% chance of surviving a covid-19 illness without harm. Why risk any harm in children when they are at extremely low risk of morbidity or mortality from covid-19 infection? In the vast majority of cases, children have mild or asymptomatic infection, due their immune systems being very different from adults. The infection fatality rate for children with covid-19 illness is calculated at 0.0027%, (<https://www.medrxiv.org/content/10.1101/2021.07.08.21260210v1.full-text>) <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medrxiv.org%2Fcontent%2F10.1101%2F2021.07.08.21260210v1.full-text&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cdcca6ac4458b4684a78e08d9cb03ae0d%7C11d0e6393&context=1>>) There is no covid emergency for children, except for the emergency of fear being pushed by Big Pharma and your school by promoting harmful and unnecessary vaccination.

Covid-19 illness is treatable and almost always mild in healthy children. You can learn more about early, at-home treatment protocols here*[Pediatric perspectives on covid-19 illness, treatment, and vaccine decisions](#)

We know so much more in 2021 than we did in 2020 about effective covid-19 policies. Centers for Disease Control Director Rochelle Walensky told CNN on 8/16/2021 that, "Fully vaccinated people who get a COVID-19 breakthrough infection can spread the virus to others even if they are not symptomatic... Our vaccines are working exceptionally well. They continue to work well with delta with regard to severe illness and death, but what they can't do anymore is prevent transmission."

Why are we giving risky vaccines to children (who are at no serious risk from covid-19 illness) that do not stop transmission in order to stop transmission? Think about it. How would you explain that to a child? Now that we know that mRNA vaccines do not prevent transmission, the societal reason for sacrificing our children's health completely collapses. Even if asymptomatic transmission rarely occurred, a society that knowingly harms all children in order to protect a minority elderly and frail adults has completely lost its moral compass.

Both vaccinated and unvaccinated persons transmit virus, and vaccination may be causing increased spread of more virulent strains of SARS-CoV2, as described here

<https://brownstone.org/articles/this-is-not-a-pandemic-of-the-unvaccinated/>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fbrownstone.org%2Farticles%2Fthis-is-not-a-pandemic-of-the-unvaccinated%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cdcca6ac4458b4684a78e08d9cb03a>

The vaccine does not stop infection, transmission, hospitalization, nor death. A recent study from the Harvard Center for Population and Development Studies states it plainly: "Increases in COVID-19 are unrelated to level of vaccination across 68 countries and 2,947 counties in the United States." Researchers found that, "countries with higher percentage of the population fully vaccinated have higher COVID-19 cases per 1 million people. Notably, Israel with over 60% of their population fully vaccinated had the highest COVID-19 cases per 1 million people in the last 7 days."

https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8481107/pdf/10654_2021_Article_808.pdf

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.ncbi.nlm.nih.gov%2Fpmc%2Farticles%2FPMC8481107/pdf/10654_2021_Article_808.pdf

I urge you to include natural immunity, which many children already have, in any covid-19 communications by (school or org name) to parents. Parents deserve to know that T-cell testing for existing immunity is a valid option, and that natural immunity is durable, long-lasting against current and future variants. The vaccine is not effective against new variants, which is a major failure. When the evidence shows that naturally acquired immunity is equal to or superior than vaccines, we should not mandate vaccines for anyone, especially for children. Instead, we must respect the right of parents to make decisions for ourselves and our children.

<https://brownstone.org/articles/79-research-studies-affirm-naturally-acquired-immunity-to-covid-19-documented-linked-and-quoted/>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fbrownstone.org%2Farticles%2F79-research-studies-affirm-naturally-acquired-immunity-to-covid-19-documented-linked-and-quoted%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cdcca6ac4458b4684a78e08d9cb03ae0d%7>

In closing, stick to your mission, cease any promotion of these injections

I hope that the decision of whether or not to give a child the Experimental Use Authorization covid-19 shot is up to parents, not school districts.

I urge you to protect our children and immediately cease any current or future plans for vaccine requirements, endorsements, or vaccination clinics at schools as completely unethical and unsafe for our children. There are too many unanswered questions to allow the experimental mRNA injections to continue.

Knowingly harming our children constitutes child abuse and is reportable to Child Protective Services, as eloquently described by this California teacher

After two years of covid-19 research, we now know that:

*Children are at negligible risk from covid-19 and many children already have durable, sterilizing, natural immunity

*The mRNA vaccine may actually hamper children's innate immunity

*These injections are non-sterilizing, do not prevent transmission, and are estimated to have 4-6 months of waning immunity, paving the way for cumulative risk with twice-yearly boosters for life

*This is an unauthorized, experimental, irreversible medical therapy with unknown long-term safety data for cancer and reproductive harm.

*Covid-19 illness in children is treatable and for adults is treatable with early, at home, safe, effective multi-drug treatment protocols

*Natural immunity from prior SARS-CoV infection is sterilizing, long-lasting, and superior to waning and non-sterilizing vaccine immunity.

*Many Nordic countries have hit the brakes on mRNA injections in youth

Please also consider this information about the risks of harm to children that substantiate the facts above:

I am troubled that any risk-benefit analysis using VAERS data is incomplete because Dr. John Su at the CDC neglected to include the VAERS URF (under reporting factor) in his myopericarditis adverse effects following covid-19 vaccination reports, and it seems that the actual incidence is much higher than even the unacceptably high current reports

<https://www.cdc.gov/vaccines/acip/meetings/downloads/slides-2021-08-30/03-COVID-Su-508.pdf>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fvaccines%2F03-COVID-Su-508.pdf&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7Cdcca6ac4458b4684a78e08d9cb03ae0d%7C1>>

One researcher states, "Using the VAERS database and independent rates of anaphylaxis events from a Mass General study, we computed a 41X under-reporting factor for serious adverse events in VAERS, leading to an estimate of over 150,000 excess deaths caused by the vaccine." <https://www.skirsch.com/covid/Deaths.pdf>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.skirsch.com%2Fcovid%2FDeaths.pdf>>

How many kids have to die before we stop this experiment?

I am deeply troubled by the 14 deaths of teens in the July 16, 2021 CDC Vaccine report and the still- pending incomplete investigations into causal relationships between covid-19 vaccines and deaths. Also, this report describes 663 needing medical care, and 56 hospitalizations after vaccination in the Pfizer study. How many deaths and hospitalizations will occur when millions of children are experimented on?

<https://www.cdc.gov/mmwr/volumes/70/wr/mm7031e1.htm>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fmmwr%2Fvolumes%2F70%2Fwr%2Fmm7031e1.htm>>
How can we approve vaccines for 5-11 year olds when we have incomplete safety data for teens?

On request to NCATS Information Officer <ncatsinfo@mail.nih.gov>
<<mailto:ncatsinfo@mail.nih.gov>> >

The following was emailed as the complete text of the Please find below the written statement from Dr. Kurilla at the 10/26/2021 FDA Advisory meeting on covid-19 vaccines for ages 5-11: Statement on Abstention

The October 26, 2021, VRBPAC meeting concerned the Emergency Use Authorization (EUA) for Pfizer's mRNA vaccine for children ages 5 through 11 years old, which utilizes the same primary vaccination as the FDA-approved vaccine for adults and the EUA version for the 12 – 17 age group. The basis for my abstention was the specific wording of the question to be voted on and the following considerations:

- The longest follow-up for a subset of the trial subjects was only 3 months (immunogenicity and efficacy was assessed at 2 months post 2nd dose).
- Children already demonstrate asymptomatic COVID infections about 50% of the time (and this increases with younger ages). Since the trial endpoint only evaluated symptomatic disease, it likely overestimated overall 'infection' prevention.
- About 20% of subjects in the trial had evidence (serologic or +PCR test) of past infection, and none of these in either the vaccine or placebo arms experienced reinfection.

- CDC presented data to suggest at least 40% of children ages 5 through 11 years have experienced a prior COVID infection.
- Real world evidence involving adults suggest the 3-week dosing interval is suboptimal in terms of durability and is likely to be similar in children, leading to waning immunity within 4 – 6 months.
- Because the Pfizer vaccine offers protection against serious disease even after antibody titers have waned, there is some other basis for immunity, but at the lower dose in children, there is no expectation that those same immune processes will behave similarly to the higher adult dose.

While there are clearly high-risk groups within the 5 – 11 age group for which this vaccine would significantly reduce serious disease, I do not expect protection from infection to last more than a few months and this may negatively impact public perception of vaccines.

Taken together, I don't see the need for 'emergency use' of this vaccine across the entire age group and would have preferred a more nuanced approach.

Michael Kurilla, M.D., Ph.D., is an expert on infectious diseases and pathology. He has been a member of the Vaccines and Related Biological Products Advisory Committee since August 2018. He currently serves as Director, Division of Clinical Innovation, at NIH's National Center for Advancing Translational Sciences.

The Covid-19 "Vaccine" is still operating under EUA from the CDC. There is no approved vaccine for use AVAILABLE in the USA. This means that the Nuremberg code applies; as well as federal and state statutes regarding experimental medications. THEY MAY NOT LEGALLY be required. Anyone doing so becomes personally liable for any harm caused.

The justification for this entire pandemic is based on a faulty PCR test. The CDC last July acknowledged this fault; but for some reason chose to leave this test in use though this month. This means that the numbers used to justify all of these extreme violation of personal human rights have been based on a test that has been KNOWN to be faulty. Further, cases are not deaths. MANY of these cases were asymptomatic. As this test was known to be faulty, it is KNOWN many of these people, in fact, did not have any upper respiratory illness, at all.

Dr. Kary Mullis--the inventor of the PCR--personally stated the test should NEVER be used diagnostically.

The VAERS system has had more reports of injury caused by this SINGLE vaccine than all other vaccines combined, since the VAERS system started. Children given this are experiencing cardiomyopathy at an alarming rate. THERE ARE NO LONG TERM STUDIES as to the effects of this vaccine.

Children had the LOWEST rate of Covid. They had the HIGHEST rate of survival if they did acquire Covid. Per VAERS, more children have ALREADY died due to the vaccine than ever did to Covid.

DO YOUR JOBS. Stand for the Constitution and rights of our citizens, especially those too young to speak for themselves. REQUIRING THIS EXPERIMENTAL GENE THERAPY FOR ANYONE is CRIMINAL.

The following survey response is submitted:

1.

State Board of Health Meeting Date:

12/29/2021

2.

Agenda Item or Issue:

Vax for kids

3.

Your Name:

Samantha Zistatsis

4.

Do you have a professional title?

2. No

5.

Are you representing an organization?

2. No

6.

Address:

14229 246th pl se

7.

Email:

Sammyz24@comcast.net

8.

Phone Number (Include Area Code):

4253912335

9.

Do you have any special expertise relevant to this topic?

2. No

10.

Are you testifying on a specific proposal under consideration by the board?

1. Yes

Mandatory C19 vaccination for kids

11.

Are you Pro or Con on the proposal?

2. Con

All testing not done, kids at a very low risk of issues with Sars Cov2, but the vaccinations have an extremely high number of adverse events including death. People in my sphere have died within days of the shot. Another went blind in one eye within 24 hours. Don't sacrifice our kids. Wait to consider this until all safety studies have been completed.

Just making sure you all saw this info, especially about the meeting today-

IMPORTANT NOTICE and CALL TO ACTION about VACCINATION MANDATES

The State Board of Health (BOH) is having 2 meetings very soon to consider 2 requirements for Covid vaccination for school children:

1) Adding covid-19 to the list of required childhood vaccinations

Zoom meeting tomorrow Wednesday 12/29/2021 from 1:00 to 2:30pm. Here is the link to register to attend. I will attend and speak up if they allow comment.

https://us02web.zoom.us/webinar/register/WN_TEfcoeisQBqjZDJH4gsPlw

Here is a link to WAC 246-105 below concerning: IMMUNIZATION OF CHILD CARE AND SCHOOL CHILDREN AGAINST CERTAIN VACCINE-PREVENTABLE DISEASES

<https://apps.leg.wa.gov/wac/default.aspx?cite=246-105>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fapps.leg.wa.gov%2Fwac%2Fdefault.aspx?cite=246-105&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7C50e09d119a864cae2ea908d9cb072728%7C11d0>>

2) Potential vaccine mandates for students

The WA State Board of Health will be meeting on Wednesday, January 12, 2022 regarding potential vaccine mandates for students. From now until Friday, January 7 at Noon, they are accepting public comment via this link -

<https://sboh.wa.gov/Meetings/ProvidePublicComments>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fsboh.wa.gov%2FMeetings%2FPro>

I will be commenting and I encourage you to join me. As many of you as possible.

To whom this my concern,
I am emailing regards to the COVID-19 vaccination requirements and I strongly disagree with any sort of requirements for this still unapproved vaccination that has shown to cause myocarditis and other health concerns and older people and young. myself already know many people that now have issues after receiving this vaccination and I know two people that have died within five days of this vaccination. Also the vaccine companies non-liability for injuries I do hope that you guys consider not making this mandatory for us to be part of the public school system. These mandates that are happening in the United States are unconstitutional and break the Nuremberg code please please do not go through with these mandates for our kids. The outcome will be Catastrophic to the mental health of our kids and physical health. if these mandates go through you will see many parents pulling their kids out even more so than the mask mandates I guarantee you that.

Thank you,
Shannon Nickel

Hello,
I wish to express my frustration with the covid vaccine requirements that are being rolled out. We still do not have clear DATA on these mRNA devices, and according to Fauci, we won't have clear data for years to come.

How then can you expect parents to be ok with adding a vaccine requirement for children...?

I beg you not to do this, and I speak as a man with 5 kids in the public schools system.

Thanks for reading,

JB

NO covid vaccines required for school enrollment! Parents only have the right to what they want to put into their children! This is America, freedom, not government rule. This proposal sounds like Nazi Germany. Parents of America will not stand for it. Schools will lose funding because parents will pull their kids out.
NO ON REQUIRED COVID VACCINES!

Hello,

Let me start out by saying I am not anti-vax. As I once had a goal of becoming a nurse, I have a vaccine or two that the general population does not have.

As a parent of a high schooler, I am about to listen in on your meeting concerning requiring students to take the Covid vaccine for school admission, I'd like to share some information I just found on the CDC website. Here in Benton county the CDC shows that in the last seven days we've have 216 Cases with 12 new hospitalizations and no deaths. Looking at the 7-Day Percent Change data you can see the cases went up 66.15% from the week prior, but New Hospitalizations went down 20%. This shows the newer cases are not as serious and are requiring fewer hospitalizations. This new variant could be helping to create herd immunity, which science has shown for a hundred years, is an excellent way to overcome a pandemic or epidemic. https://covid.cdc.gov/covid-data-tracker/#county-view?list_select_state=Washington&data-type=Risk&list_select_county=53005

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcdc.gov%2Fdata-tracker%2F%23county-view%3Flist_select_state%3DWashington%26data-type%3DRisk%26list_select_county%3D53005&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C76a34a4a

A Harvard article points out there are issues with young boys, especially, with heart inflammation cases: "As of July 12, 2021, 1,047 reports of myocarditis (inflammation of the heart muscle) and pericarditis (inflammation of the outer lining of the heart) had been reported in people under age 30, particularly in male teens and young adults, after vaccination..." This must be taken into consideration when a blanket rule is being considered.

<https://www.health.harvard.edu/diseases-and-conditions/coronavirus-outbreak-and-kids>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.health.harvard.edu%2Fdiseases-and-conditions%2Fcoronavirus-outbreak-and-kids&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C76a34a4a338246bb149508d9cb0c0186%7C11d0e21>

And now we know from several countries' studies that the current dominant Covid variant, Omicron, is more viral, but much less deadly. And even the vaccinated are being infected with Omicron. The study Striking Antibody Evasion Manifested by the Omicron Variant of SARS-CoV-2 states "Even serum from persons vaccinated and boosted with mRNA-based 36 vaccines exhibited substantially diminished neutralizing activity against B.1.1.529."

<https://www.biorxiv.org/content/10.1101/2021.12.14.472719v1.full.pdf>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.biorxiv.org%2Fcontent%2F1>

In fact, my brother-in-law, who has had both shots and a buster, this week is quarantined after testing positive for Covid. Thankfully, his symptoms are mild as has been reported by most people.

Prevalent Omicron Symptoms: <https://www.nbcnews.com/health/health-news/omicron-symptoms-covid-what-to-know-rcna9469>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nbcnews.com%2Fhealth%2Fnews%2Fomicron-symptoms-covid-what-to-know-rcna9469&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C76a34a4a338246bb149508d9cb0c0186%7C11c>

If our current Covid vaccines were not still experimental, I would have no reservations. But I do feel, considering where we are in this Covid story, that children should not be forced to take a vaccine that has not cleared all normal trials for full authorization. One option would be to take into account natural immunity acquired by those who have been infected.

Thank you,

Bryan McGlothin

Subject: Survey Response: Testify Online *

The following survey response is submitted:

1.

State Board of Health Meeting Date:

12/29/2021

2.

Agenda Item or Issue:

C19 vaccine

3.

Your Name:

Tony Wauchope

4.

Do you have a professional title?

1. Yes

Sargeant

5.

Are you representing an organization?

2. No

6.

Address:

Puyallup Wa

7.

Email:

Tonywauchope@rocketmail.com

8.

Phone Number (Include Area Code):

2532021478

9.

Do you have any special expertise relevant to this topic?

2. No

10.

Are you testifying on a specific proposal under consideration by the board?

2. No

11.

Are you Pro or Con on the proposal?

2. Con

What you are discussing is an illegal act in this country. Forcing a non FDA approved medical treatment on anyone is a violation of our human rights. The leadership in this country have lost all common sense!

Hello, I was wondering if you have seen the latest VAERS information on the COVID vaccines? They are certainly not safe or effective. Please read these articles:

<https://childrenshealthdefense.org/defender/physicians-scientists-kids-should-not-get-covid-vaccine/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fdefender/physicians-scientists-kids-should-not-get-covid-vaccine%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cb38885a4717042d2c7a908d9cb070568%7C11d0e211-4243-4352-8000-000000000000>>

Dear members,

My children have both had and recovered from Covid 19. We will not be vaccinating them as we do not believe it is necessary given they have natural immunity. If this shot is added to the school schedule without the option for an exemption our children will no longer attend public school. At some point one must consider natural immunity. Not to mention that the shot does not PREVENT or stop transmission of this virus. Please consider this during your conversation today. I also know my extended family will be removing their children from public school as well if this happens.

Thank you for your time and consideration.

Best,
Jen Pitts

Subject: questions for the BOH TAG committee and statement

External Email

My name is Sarah, I am a mother of children who are in these school districts you are voting to consider covid-19 vaccination requirements for. I also work in the healthcare field. As you know, the issues against voting for these mandatory Covid-19 vaccinations are a personal choice, medical freedom, lack of evidence and clinical data, increasing VAERS adverse reactions, and reports of myocarditis and pericarditis. I call into question the need for these vaccinations in children between the ages of 0-19. This is the lowest and least likely age group to develop mortality related to the Covid-Sars-2. For the last year and a half, the DOH's Covid Data Dashboard has shown that out of all positive covid cases the 0-19 age group made up 18% of all positive Covid cases in Washington State. Out of this 18% of positive Covid cases, 2% of these have resulted in hospitalizations. Out of these 2% hospitalized, 0% of these resulted in death in Washington State between the ages of (0-19). Emphasis on these being percentages provided by the DOH. There is currently a lack of peer-reviewed studies, adequate clinical data, and testing to make a definitive judgment on whether the risks from the Covid-19 vaccinations outweigh the benefit in children aged 0-19.

According to Dr. Paul Offit and the College of Physicians of Philadelphia,

"In the United States vaccine development and testing follow a standard set of steps requiring a minimum of 10-15 years clinical trials before releasing to the public. The first is the Exploratory Stage involving basic laboratory research and often lasts 2-4 years. Next, the pre-clinical stage often lasts 1-2 years and usually involves researchers in the private industry using tissue or cell cultures and animal testing to assess the safety of the vaccine. Next is the IND application in which a sponsor submits all its testing, lab reports, and study to the FDA for clinical protocol approval. Once the IND application has been approved, the vaccine is subject to three phases of testing. Phase I between 20-80 subjects If tested on children they gradually step down the age of the test subjects. They monitor carefully for adverse effect and determine the extent of the immune response. Then comes phase 2 involving hundreds of participants and phase three involving thousands. Certain rare side effects might not surface in the smaller groups of subjects tested in earlier phases. For example, suppose that an adverse event related to a candidate vaccine might occur in 1 of every 10,000 people. To detect a significant difference for a low-frequency event, the trial would have to include 60,000 subjects, half of them in the control, or no vaccine, group. Finally, after a successful phase 3 trial the vaccine developer can apply for a biologics license application to the FDA. Even if this is approved there is post-licensure monitoring of vaccines and many times a phase 4 trial as well as VAERS reporting."

These vaccines have had less than a year of clinical trials. I call into question the monitoring of adverse effects and the lack of sufficient clinical data supporting the safety and effectiveness of these vaccines. I have personally known children under the age of 17 who have died of developed myocarditis from the vaccine. One was Ernesto Ramirez Jr. a 16-year-old male who died after cardiac arrest during a basketball game with his friends. He was a healthy 16-year-old boy with no previous cardiac complications or significant medical history. After a thorough investigation, a cardiac physician released autopsy results explaining the boy's heart was enlarged after the administration of the Covid vaccination. The father, Ernesto Ramirez, would be willing to give you his testimony.

On September 17th, 2021, less than three months ago, the Vaccine advisers to the FDA voted against recommending the agency approve Covid-19 booster doses for children. Dr. Michael Kurilla, an infectious disease specialist at the National Center for Advancing Translational Sciences, said he suspected Pfizer went too far in extrapolating data on older people to a younger population...saying it's unclear that everyone needs to be boosted, other than a subset of the population that clearly would be at high risk for serious disease," also saying, "It is not clear to me that the data we are seeing now is applicable to the general population." Dr. Philip Krause, deputy director of the FDA's Office of Vaccines Research and Review, noted that Pfizer was using data that had not been reviewed by experts. "One of the issues in this is that much of the data that's been presented and being discussed today is not peer-reviewed and has not been reviewed by FDA," Krause said. Kurilla noted that Pfizer's studies relied heavily on measurements of antibodies, without looking at other important aspects of immune response. "It's a little disappointing that there's been very little reporting of the cellular immune responses and an entire focus on the neutralizing antisera," Kurilla said. Immunologists point out that long-lasting protection comes from immune cells called B-cells and T-cells, and Pfizer only presented data on antibody response. "We're being asked to approve this as a three-dose vaccine for people 16 years of age and older, without any clear evidence the third dose for a younger person, when compared to an elderly person, is of value," Offit said. "If it's not of value, then the risks may outweigh the benefits. And we know the 16-29-year-old is at higher risk of myocarditis," he added. "We are lacking data, including strong data on vaccine doses that have been given," said Dr. Hayley Ganz, a professor of pediatrics at Stanford University Medical Center. "We're being asked to approve this as a three-dose vaccine for people 16 years of age and older, without any clear evidence the third dose for a younger person, when compared to an elderly person, is of value," Offit said. "If it's not of value, then the risks may outweigh the benefits. And we know the 16-29-year-old is at higher risk of myocarditis," he added. "I don't think we would feel comfortable giving it to a 16-year-old for all the reasons that everyone raised," said Dr. Eric Rubin, chair of the Department of Immunology and Infectious Diseases at the Harvard T.H. Chan School of Public Health. The FDA's Dr. Doran Fink told the meeting the agency was not sure, either. "We really don't have enough data yet to know what the risk of myocarditis or pericarditis would be following a booster dose," he said. The CDC.gov website warns against myocarditis and pericarditis. "CDC and its partners are actively monitoring reports of myocarditis and pericarditis after COVID-19 vaccination. Active monitoring includes reviewing data and medical records and evaluating the relationship to COVID-19 vaccination.... Seek medical care if you or your child have symptoms of these conditions after COVID-19 vaccination."

Another issue is that the FDA, CDC, WHO, DOH, Fauci, and Biden Administration (as well as any governing agency) cannot say with certainty that these vaccinations protect anyone against the variants we are now seeing. (Omicron and Delta.)

Finally, (because I am running out of time to submit this before the TAG meeting) I say this to you. Medical decisions should be between the individual receiving the medication or vaccine and their parents (if a minor). Especially when these Covid-19 vaccinations are considered experimental vaccination (at best) with less than a year of clinical studies and data available to the public. It is not anyone's responsibility to force individuals to put anything into their bodies using coercion, retaliation, or ultimatums. I am asking you not to take away the personal freedoms of others in a time where many Americans are having their rights stripped away based on ad populum fallacies and a lack of adequate evidence. Return these freedoms back to the parents and make school a place where children feel safe to attend. They do not have to worry about being poked with an endless number of boosters that we already force on them for diseases that have been eradicated for decades. Individuals have the right to choose not to be a part of medical experiments and this is what the Covid-19 vaccinations are. Children have the lowest risk or mortality related to this virus. They are already forced to have lab tests, social distance, wear masks, contact tracing devices (in some schools), among other rules that

seem endless. Let us return to normal and quit allowing fear to control us. The school systems are already seeing a decline in student enrollment. If this passes, this number will continue to decline.

Sincerely,

Sarah G.

Dear Sirs and Madams,
Thank you for allowing comments on your actions.
Please hold off on requiring children to have the COVID shot. There are still too many unknowns. Children are the least likely to have complications with this virus. That is known. But long-term outcomes are unknowns. Please do not require something that may severely complicate their future health statuses.
Thank you,
Martha Derr

To Whom It May Concern:

I am writing as a family physician educated at our own University of Washington School of Medicine and residency trained at one of the UW's network programs, and as an educator of family medicine resident physicians, to respectfully and adamantly express my expert medical opinion that COVID-19 vaccinations NOT be mandated for our children to attend school in Washington State.

I do not have adequate time today to include evidence-based citations for this informed perspective, but I am more than happy to include these and discuss further if requested. In extreme brevity, the rationale for advising against the implementation of mandated COVID-19 vaccinations for school attendance include:

- insufficient evidence that currently available vaccines significantly reduce transmission, especially in this population
- insufficient evidence that currently available vaccines significantly reduce risk of clinically significant infection in this population
- in addition to the limitations above, there is known waning of what efficacy these products do have for this population over time, and for predominant and increasing variants
- known risk of significant complications from available vaccines, which has caused some advanced nations to halt the use of some products in the pediatric population, and though complication rates may be low, the exposure (vaccination) is guaranteed in this case, in contrast to complication risks associated with potential COVID-19 infection
- rigorous evaluation of comprehensive product safety in this age group to include long-term data, which should be required especially in the setting of questionable benefit to the population in question as noted above, has not yet been completed

To put it mildly, this suggests significant, clear ethical concerns in mandating COVID-19 vaccination in this population with currently available products - which I respectfully, adamantly advise against for reasons included above at minimum.

Thank you so much for your time, consideration, and public service (a profound responsibility) -

Anna Maria Pletz, MD

I am 10000% AGAINST a vaccine mandate for children!!! I cant believe this is even being considered since this virus is not effecting children enough for it to even be an issue (adults is another story, not that ANYONE should be forced to get a vaccine against their will). PLEASE listen to all of us parents. We are the ones who should have ALL the say on what happens with OUR (not your) children!!

Comment re: Immunization criteria for childcare and School Entry, meeting - January 12, 2022

To Whom it may concern,

How did we even get here? Even considering Covid-19 immunizations for School Entry is insanity.

Very few children are becoming seriously ill, and we all know the 3 shots are not working already - hence those having been "inoculated" and still getting and spreading it. Who knows what the side effects will be, there have been many so far, just in my family. Look at your data. This is not something you will subject MY children to.

My kids, as well as most, have already contracted Covid. We all know this, the evidence is clear with all of the classrooms closing down all the time. Most kids are asymptomatic and have received positive results at the school. It is no more than a mild cold for the majority, most didn't even know they had it. Shouldn't the positive case numbers at the schools and absences confirm, the majority of children have gotten it? It was even admitted recently (by Fauci himself) the data about children is inflated - they just happened to have Covid while being treated for something else.

We all want this to go away, but the vaccine is clearly NOT working with the daily changing recommendations and information. You do not have enough information and research to make a decision on this important issue. I know you want to get on with this, so you can go on those winter vacations you mentioned at your last meeting. There is too much at risk with our children. This is an individual family decision, not yours. If it really worked, had no major side effects (including DEATH) and was the "end-all" - this would be a very different conversation, and you would have my support.

Also re: masking - stop it! It is clearly not helping and is negatively impacting thousands of children's mental health. How many more children do you first want to commit suicide by suppressing their lives? Look at the numbers. My children cannot learn without seeing their teachers faces, they are incredibly behind. They cannot meet new friends with their smiles covered and standing apart on the "dots". Bloody noses on a weekly basis in our household, kids coming home with dirty and bloody masks, yuck. They likely spread more germs and are of no benefit. A sad story of a boy in my son's class who was panicking and hyperventilating and still could not remove the mask. Also, recesses are being called "mask breaks" which will be taken away if they are not good or complete assignments. Four miles to the east of me, children may breathe freely in Idaho and all of the educators I know can confirm Covid has been no problem for children (again look at the numbers of those being severely ill).

Most teachers are done with this nonsense, as so am I. I was patient and didn't say anything for over a year and a half and kept our family mostly confined to our home. We all got Covid (Delta), weren't seriously ill and didn't spread to anyone - now let us get on with our lives.

I will be praying that you will make the right decision and then you can go and enjoy

your winter vacations.

Thank you,

Katie Kosanke

To whom it may concern,

Your scheduled meeting to discuss mandatory Covid vaccinations for school age children causes me great concern. I wonder how it can be legal to require injection of a non-FDA approved medical product into my child's body in order to allow her or him to have a public education. Being in the Mead school district, we pay a large amount of school taxes and we do so gladly, knowing our children can enjoy a wonderful public education. It is the basic right of a child to receive public education and requiring a non-FDA approved product to do so seems counterproductive. I will not have my teenage son vaccinated since there has been real concern of potentially deadly pericarditis in young vaccinated males (even the CDC now includes this on their informational page). For someone with formal medical education and training, such as myself, it is difficult to follow the logic here. Since vaccinated and non-vaccinated individuals appear to both spread the virus, how are we protecting "public safety" by requiring vaccinations? Additionally, the majority of people becoming seriously ill are the elderly or immunocompromised, definitely not our younger population. Those afraid and at higher risk should get the vaccination rather than forcing it upon the young population who has a fairly small risk. How can we protect a woman's right to abort her fetus because "it's her body, her choice", but in the same token force a vaccination into the body of a school aged child? My husband and I both received the COVID vaccine, but we are opposed to having our children vaccinated. Vaccinations should be determined on an individual level and need, not forced or coerced in order to enjoy a basic right. If public offices were to allow people to make their own choices and think for themselves, many adults opposed to the vaccination would be likely to get it. Forcing it upon people offends the American way of life and sense of freedom from government interference into our daily lives and makes many people want to choose the opposite.

Thank you for reading this,
Dr. Miriam D. Dreewes

To whom it may concern,
I have heard that a vote is coming up on Jan 12 about requiring children ages 12-17 to be vaccinated in order to attend WA public schools. My family is opposed to the vaccine on the grounds that our children are more likely to be hospitalized for side effects than from Covid. If it is required, we will pull our children out of public school and/or move out of Washington state.
Thank you,
mindi bennett

Since children are at little risk from COVID, and at higher risk of vaccine injury, please do not require these for children. There have already been numerous reports via VAers of death and injuries of children and by requiring this, you will be putting children at risk.

Sincerely

Suzanne McDaniel

I will never inject an experimental poison into my children because the school system requires it. More children are having adverse effects or death from these awful vaccines than any child actually contracting Covid -19. Science has proven that the Covid Vaccines do not stop the spread of Covid nor do masks. As far as I am concerned each school district is participating in child abuse on a daily basis.

Requiring me to put my child at risk by getting a vaccine that offers perceived safety rather than actual immunity- is reason enough for me to pull my child from the public school system, and that is what I will do if this becomes a requirement.

Do what is right and protect our children. No vaccine or mask mandates. STOP the abuse.

I do not agree with any requirements for children to be injected with experimental vaccines with zero long term data for a virus with zero long term data and whose origins were intentionally obscured during vaccine development. At a time when reports of adverse reactions to these specific vaccines are being suppressed it is unconscionable to require parents to submit their children to tyrannical vaccine mandates to occupy public spaces, such as school and daycares. These vaccines have been proven not to work to prevent transmission nor contraction of Covid. These vaccines are not without risk, up to and including death. So long as there is a concerted effort by this state to under report & cover up adverse reactions & in the absence of long term data, there can be no INFORMED CONSENT. Absolutely no Covid vaccine or immunization requirements for children.

Thank you for your time (though I've lost all faith in unelected bureaucrats as well as elected representation in this God forsaken state.)

Subject: Public Comment - School Mandates

External Email

My response to your covid advisory group - how dare you! Do you NOT look at the VAERS statistic data? Do you NOT recognize the number of people around you with sudden heart problems? Or do you just think it's coincidental timing? Do you not understand that this ridiculous thing referred to as a vaccine is causing what is now being referred to as VAIDS? Do your research before you mindfully make it your life purpose to murder our school children. I am absolutely disgusted with government entities making it their business with our healthcare. Stand up and use your backbone because one thing is for sure - you mandate that death jab for school kids and my child will NOT be experiencing her Senior Year of high school. As long as she is under 18 - my rules. You can kiss her covid \$\$\$\$\$\$ from her school district because she will not be forced in this human experiment you like to call a vaccine. I prefer to call it a death shot - titer test will show those spike proteins accumulating in your veins; you might want to make an appt to verify with your doctor, if you have taken part in this experimental suicide.

I am done with this political warfare. You are not mandating an Emergency Use Authorization "vaccine" on my child. And just to be clear - mandates are NOT law. Do you plan on being held financially liable for any adverse reactions and/or death from this bureaucratic death shot? Because as it currently stands, no one else is being held liable against this death shot.

When vaccine data is being pushed out by 75 years to be released by the FDA (Pfizer) - do you not scratch your head and ask WHY? Did it ever occur to you why any medical research data would take 75 years to be made public, if all is well?

Common Sense is no longer common.

Sincerely,
Danielle Gilb
Spokane, WA.

PS - take your death shot and shove it ☐☐☐☐

Unreal

We are even having a conversation about giving kids Vaccinations from COVID which all studies show doesn't prevent the spread of this flu like virus. My kids have had this deadly flu twice now and both times had to take a test to even know they had it. The long-term effects of the 3 major vaccines (if you can call them vaccines as you still get COVID) has yet to be determined. I have experience 2 employees under 28 that have had heart attacks within hours of the first shot. That's enough for me to be concerned about the vaccines knowing what the actual COVID virus caused zero effects on my children at all.

This is a public health choice matter and a line in the sand for my family.

Unreal that this is even up for discussion. All you have to do is look across the board to Idaho to see your draconian mandates are not making it worse or better. People will get sick; the virus will become less deadly and life will go on.

All I can say for sure is this is a line in the sand. You have hurt my business, my life, my social interactions and push us to live half our life out of state. You will not be hurting my children with your one size fits all policies. A vote yes will be a vote for my family to leave the state and my 37 year old business generating 25M a year in tax revenue along with hundreds of local jobs. I will insure this is a new story as well.

Please do what is right for our children

I 100% oppose a vaccine mandate for children to attend school. There is absolutely no reason to require a vaccine that is not FDA approved for a virus that has a 99.9% survival rate in children. You will see a mass withdrawal from public school if this goes into effect. I am a school nurse and over the course of the pandemic have seen ZERO spread of the virus in the schools. Children are at more risk of having vaccine injuries including myocarditis than they do of complications from contracting covid. I oppose this and hope that you will consider the views of others besides those of you pushing a sick agenda.

Subject: PUBLIC COMMENT: Proposed required COVID vaccines in school children

External Email

I am writing to comment on the proposal to require vaccination in children against COVID-19 in order to attend public school. I believe that this is a misguided attempt to prevent COVID in a population that is at statistically zero risk of death from COVID and at minimal risk of passing on COVID to adults, yet is also at high risk of adverse events from receiving the COVID vaccines, including debilitating myocarditis and even death.

The clinical trials supporting the use of the COVID vaccines in children and adolescents were woefully inadequate and so limited in size and duration that they could not possibly have detected any long term adverse effects. Indeed, they were not designed to do so, but were only designed to look at the development of humoral immunity.

Please see the following presentation and accompanying PDF by the Canadian COVID Care Alliance for a detailed critique of the limitations of the Pfizer vaccine trials, an analysis of Pfizer's own published data that shows that the Pfizer vaccine actually results in more harm than good:

Evidence from the CDC's own Vaccine Adverse Event Reporting System (VAERS) shows that thousands of patients have suffered serious adverse events, permanent injury, and death due to the COVID vaccines. In the vast majority of the over 20,000 reported

deaths, the preceding symptoms began with 48 hours of the injection. The CDC and vaccine manufacturers themselves admit that the COVID vaccines are associated with an increased risk of myocarditis in adolescent males. It is known that myocarditis is not a mild illness but often results in hospitalization, scarring of the heart, and progressive heart failure leading eventually to death within a few years that can only be avoided by heart transplantation.

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdoctorsandscientistsdeclaration.org%2Fhome%2Fsupporting-evidence%2F%23children&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C84a244339834449e7a5608d9cbb93655%7C11d0e>

Requiring vaccination for children will subject an entire generation to unnecessary risks and likely result in an increase in debilitating chronic disease and death. To assume that we know the full risks of these vaccines is scientific arrogance.

To the WSBOH on the topic of the Covid-19 vaccines and making them mandatory for children attending school:

I have pulled my two school-age children from my local school over the mask mandate as I have poured over study after study, listened to doctors and Healthcare providers (some in person I have spoken candidly with) that paper and cloth masks do not work to prevent Covid-19 from spreading and are therefore worthless I refuse to put my kids through that for the "appearance" of safety. There are more risks for my kids to wear these masks than there is any benefit. I say all of that to say, the same is true with these "vaccines" (that if we go by science are not true vaccines, but rather therapeutics). There is little to no benefit to my children getting these shots and there have been numerous documented cases where the shots caused more harm than good. I am not going to risk my children's health by giving them something that is not a benefit so they can falsely make an adult feel "safe". Dr. Fauci himself has said that children are not at significant risk with Covid-19, and from everything I have found the only children to die from/with Covid-19 were children with significant health issues that a common cold could have lead to death. My husband and I had Covid-19 back in July 2021 that we caught from a vaccinated person. None of my four children got even a sniffle during that time. I have since talked to numerous families where their children did show symptoms but they were mild compared to most colds. Influenza is far more dangerous for children and a flu shot is not required, why is that?

If you insist on not following science in this and mandate a potentially dangerous shot for my children I will not be sending them back to public school again.

I implore you to ignore those who would sacrifice our children's health and go with actual science here. These shots are not beneficial and potentially harmful. The decision to have your child given them should be fully the parent's decision. As it should be with any of this.

Hello,

I am writing regarding the upcoming meeting to discuss the requirement of the Covid-19 Vaccination for children to go to public school here in Washington State. I am vehemently opposed to this vaccination. First, it is still in Emergency Use Authorization status. The FDA-approved Pfizer vaccine is not available here in the USA and won't be for some time. This drug has not been tested long enough to require children to get this shot. Second, this is a virus that has not affected our children any more than the flu, less even. I am currently using an online public school at this time due to the mask mandate as I will not mask my children. We are now seeing reports of what many of us have known for quite some time now, that masks don't work, especially the cloth kind that most of the children and adults wear. What we are seeing is a decline in learning due to the mask mandate as it has been very detrimental to our children. I am not anti-vax as my children have all the required vaccinations at this time. I am against a drug that is only in use for emergency, one that has not been tested appropriately and for a virus that, at this time with the omicron variant, is nothing more than the flu and even those with the vaccine is getting it.

If you require vaccine mandates for children to return to public school, I will be pulling my children completely out of the public school system (even the online public school) and putting them in a homeschool program.

Please think carefully about making this Covid-19 vaccination a requirement for my children to return to public school.

V/R

Greetings.

I am commenting on the possibility of making COVID injections mandatory for children to enter schools and daycare entry. I am vehemently opposed to this edict for multiple reasons. First, COVID 19 is not a deadly virus, especially in children. The survival rate of children with C-19 is very near 100%. Second, none of the injections used in the U.S. for C-19 have been approved for use by the FDA. They are all in Emergency Use Authorization only. Only the product Comerity has been approved by the FDA and it is unavailable at this time. It is illegal to force vaccinate under a EUA. Third, according to the VAERS website there are currently around 1 million reported cases of adverse affects (including deaths) due to the current C-19 injections. Reportedly, the VAERS reporting system only captures 10% or less of adverse affects. This is the United States of America where parents have the freedom to make informed medical decisions for their children. Stop mandating that our children take this dangerous injection that obviously has zero affect on the virus and only serves to injure people.

We have witnessed first hand the hype & medical mal practices going on within this \$ making vaccine/testing. We have also witnessed the devastating consequences of not being vaccinated & the harm it can cause. We are vaccinated (parents) & we are not against vaccines in general.

Although, we are against mandating a vaccine with no historical evidence of long term adverse health effects in Children.

Whole heartedly we choose NOT to vaccinate our young children until further evaluation. There is simply not enough historical research in these vaccinations to do so. If we are mandated to vaccinate our children for Covid-19 in order to go to public school in this state you can count on us not supporting any further school district funding.

Sincerely,

Parent of Colbert Elementary & Mountainside Middle School

PLEASE do not mandate that children should be vaccinated! Not only are children at extremely low risk for Covid but HEALTHCARE should be kept private. It's a personal choice that should be left to the family, not a public mandate.

To the Washington State Board of Health,

First and foremost I hope that you realize the decision you will be making is not to be taken lightly, I hope and pray you really look into everything presented as well as do your own research as well if something doesn't sit well with you. These are our children and next generation who will be effected by this and if you do your research you will find that this virus is nothing to kids, literally only a slight threat if the child is immune compromised already, but normal healthy children do not have any risk from this virus, nor do they spread it to the adults, or elderly giving risk to anyone else! By letting them get it and get over it, it's giving their bodies a chance to fight this for the rest of their life by giving them a good immune system to it giving our future a chance at being able to handle this like a common cold instead of a pandemic...

The so called Covid-19 "vaccines" (which are not a vaccine) on the other hand, have a high rate of injury and a lot of these injuries are life long problems that will plague them for life! As well as the efficiency of the vaccine is garbage! Why take the risk? Why mandate something that isn't a one size fits all and they haven't had time to gather good data. Are you willing to force something that you have no idea the problems it'll cause? Can you sleep at night if a child gets this vaccine because you decided to require it and it kills them, or even worse causes them life long debilitating problems the rest of their life? I know for a fact that it can cause infertility, it can cause heart problems, neurological problems, and has increased the rate of cancer already, but anyone that testifies or speaks about this is silenced. When did it become a bad thing to wait and do trial after trial before just injecting it into people and now our kids!? This makes no sense and I will not give my kids something that can harm them, even if it's to keep them being able to attend school. Let's be real, this isn't about science, with science we've always been able to ask questions, we've always been able to see the pros and cons and make an informed decision, and with this everyone asking questions is belittled, treated awful, and cancelled or silenced....We've already all had covid and survived, still have antibodies and are doing just fine and no one will take that into consideration.... There's something wrong with that don't you think? I will not bat an eye to remove my kids from any and all activities, programs or schools that will enforce this mandate or possible "law/requirement" to attend. It is our job to parent and make the best decision for our family and kids based on what we feel is right, due to our own circumstances, or findings. I personally know so many people that have died from the "Covid-19 vaccine", or have been injured that there is no way I would ever give my kids this "vaccine". I am not against vaccines (my kids are fully vaccinated) but this is different and if you truly look at real data, talk to real doctors (heck why don't you Google Dr. Malone, the creator of MRNA) and see what he has to say about it, or Dr. Ryan Cole who is right across state lines in Idaho who is seeing first hand the issues with this "vaccine" and if you can still tell me without hesitation that this is 100% safe for my kids with absolutely no possible side effects ever from it, then fine, give me your information and research and I'll go over it and make a decision on whether or not I was misinformed and if I find I was then I'll gladly add this to the list of vaccines and keep them in school, but if there is any possibility of them having a problem from something you deem necessary for a virus that isn't a threat to them, there is absolutely no way I will give it to my children no matter the consequences....

Also, I was apart of the first meeting and I wanted to say how I noticed that you made it

clear to make sure and say you wanted a broad range of opinions, but yet the people on your board you chose are all from the west side of the state, no one from Eastern Washington, there are no elected school board officials in this group and I feel like there is no evidence of opposing views at all by who the board is made up of. Why was there no attempt to solicit the voices of different school district communities? Just thoughts I had pop up from the first meeting that we weren't able to speak or comment on.....

Thank you for your time, even though I highly doubt this will be read.

Sincerely,
Heather

Three of my four children have graduated from Mead School District. My youngest child is an 8th grader this year. We've already pursued private Christian education over mask mandates. If the Covid vaccine were a requirement for Washington Public School and a religious exemption was not offered, my daughter would be removed from public school, no exceptions. The vaccine had not been fully approved, as the drug company's still have immunity from anyone lawsuits. As long as they are not willing to take legal responsibility, I am not willing to inject it in my child's body.

To Whom it May Concern:

I have served 30 years in the public sector believe the taxpayer is the ultimate decision maker, or should be.

The actions considered by SBOH regarding the Covid-19 vaccination as a requirement for school children should be deeply investigated prior to any action. This is the hill in which many Washingtonians will stand. Personal freedom is outlined in the constitution and is held at high regard for most Americans.

Facts:

* The FDA has requested and been granted a 55 year timeline to release FOIA information about the vaccines. (what are they hiding, why can't we know what is in the vaccines and the damage they cause?)

<https://www.reuters.com/legal/government/wait-what-fda-wants-55-years-process-foia-request-over-vaccine-data-2021-11-18/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.reuters.com%2Flegal%2Fgovernment%2Fwait-what-fda-wants-55-years-process-foia-request-over-vaccine-data-2021-11-18%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C410b790847444540249708d9cf9d3fd7%7C11d0e>>

* There have been 790,000 adverse reactions to the vaccine in the USA alone which were reported to the VAERS system. However, a recent poll amongst medical care providers indicate that a large percentage have not contributed to the reports as they were unaware of the mechanism to do so. This is higher than any other vaccine that has been tracked. Why are we pushing a vaccine which does not prevent the spread, does not contain the disease and harms more people than any vaccination in history?

<https://wonder.cdc.gov/controller/datarequest/D8;jsessionid=D7BE3C2429BED36F63AF1F758052>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwonder.cdc.gov%2Fcontroller%2Fdatarequest%2FD8;jsessionid=D7BE3C2429BED36F63AF1F758052>>

* 65% of America identify as Christians. The Christian religion follows the tenants of the ten commandments, one of which is "Thou Shall Not Kill". ALL THREE available vaccines utilized the fetal stem cells of dead children in the production and testing of the vaccines. Forcing Christians to obtain a vaccine in such a manner would violate the religious rights of millions in the state.

[https://en.wikipedia.org/wiki/Religion_in_the_United_States#:~:text=The%20United%20States%20has%](https://en.wikipedia.org/wiki/Religion_in_the_United_States#:~:text=The%20United%20States%20has%20a%20diverse%20religious%20landscape,with%20Protestantism%20being%20the%20largest%20denomination.)

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fen.wikipedia.org%2Fwiki%2FRelig>

<https://www.nebraskamed.com/COVID/you-asked-we-answered-do-the-covid-19-vaccines-contain-aborted-fetal-cells>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nebraskamed.com%2FCOVID-19-vaccines-contain-aborted-fetal-cells&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C410b790847444540249708d9cf9d3fd7%7C11d0e21>

In conclusion, the requirement of children to receive the vaccine in question to attend a public school, funded by the taxpayer, would be a political and religious overreach and force myself and thousands of others to remove our children from the public system and to launch civil/criminal remedies against the state and the individuals involved in such a decision. The protection of Qualified Immunity, does not pertain to civil rights violations.

It is my understanding that a meeting has been arranged for January 12th for your body to discuss implementing mandatory vaccines for kids to participate in school, sports, etc. and I wanted to state that I do not in any way support such efforts. The reasons I do not support requiring kids to receive the Covid-19 vaccine are as follows:

1. According to the CDC and WHO data, children 18 and under have negligible risk from severe illness or death from Covid-19
2. The Covid vaccine is still under Emergency Use Authorization and short and long term effects have not been sufficiently studied and analyzed
3. It is abundantly clear that the Covid-19 vaccines do not prevent the spread or infection of Covid rendering them utterly useless to a cohort who already has negligible risks from the virus
4. There are already evident risks of adverse effects--especially in young males--for myocarditis (and other risks) as documented in various studies and data from VAERS

Thank you for your consideration,
Kara Whelan

Many progressive first world countries recognize natural immunity post infection. For example, other countries like Italy and England allow previous infection as an option on their covid passes. My children have had covid and recovered and possess antibodies that according to science, are more effective at preventing a secondary infection than any vaccine currently available. The vaccines are still EUA only and there is no long term data available yet. The data that is available shows that my son is at zero risk of death from covid, and at elevated risk from the vaccine (1 in 2,700 for Myocydartis alone). I firmly intend on pulling my children from public school if the covid vaccine becomes mandated for their public education.

To the Members of the Board of Health,

Hello, I am a mother of three sons who are publicly educated and a healthcare worker to name a few of the titles I have. I am writing to you today to express my disapproval of another mandate, very specifically on our growing precious children to attend public school. Our state has implemented so many divisive tactics and many of us are tired of it. Even my friends that are in a different corner than I are standing to put an end to the division. We are in a state where face to face communication is demoralized and children are not learning what they should do to the many policy distractions of this virus and lack of parent involvement to assist in schools. There are many states in our union that have not mandated vaccines or masks on the public or the children and they are doing just fine. Recently, I have read that we have had an increase in deaths nationally since the year prior with a population that has over 200million vaccinated. Here are a couple of links I hope you have time to review before January 12th:

<https://mail.google.com/mail/u/0/#inbox/FMfcgzGmtFJRpgSTckFVssCjtgCgRbbX>
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fmail.google.com%2Fmail%2Fu%2F0%2F#inbox/FMfcgzGmtFJRpgSTckFVssCjtgCgRbbX>

https://www.theepochtimes.com/is-natural-immunity-more-effective-than-the-covid-shot_4188524.html?utm_source=News&utm_campaign=health-2022-01-03-2&utm_medium=email
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.theepochtimes.com%2Fis-natural-immunity-more-effective-than-the-covid-shot_4188524.html%3Futm_source%3DNews%26utm_campaign%3Dhealth-2022-01-03-2%26utm_medium%3Demail&data=04%7C01%7Cwsboh%40sbh.wa.gov%7Cb0805628e5364867523c08

https://www.theepochtimes.com/mkt_morningbrief/dr-peter-mccullough-vaccine-mandates-should-be-repealed_4167066.html?utm_source=Morningbrief&utm_medium=email&utm_campaign=mb-2022-01-02&mktids=0aa5f3e6190e6be99f5caf363c66b119&est=LRpX5amnOoFCzaoVzgOKSsN2wROZkOhTr%2BHHF

In addition, our neighboring state of Idaho and many others in our union have not only given its citizens the option for vaccines and masks but also the local authority to make these decisions. I am urging our Board of Health in Washington to do the same. Please keep vaccines and masks out of schools.

Sincerely,

Jennifer Killman

Dear Board

I am writing concerning about making Covid shot a requirement for attending schools. I feel this is wrong due to our own Washington state department of health website states you have a 1.2% change of death if you get Covid. Now we see that people with the vax and booster are still getting COVID-19. This would only divide our state even more if this is considered. 1000's of kids are not vax for what is required now and Still go to our school with no issues.

Thanks Marty Huff

Just like any medicine is proven truly safe and reliable over time, the COVID-19 vaccine is no different. The risk to children getting this virus and becoming very ill is very minimal and not worth the risk of the possible long-term affects of this new vaccine. We do not approve of the governor telling us what to do to our bodies. He should not have the authority to mandate such a requirement. That is our private decision. Children becoming very ill from this virus is a very minimal risk and is not worth the risk of this new vaccine. I will not under any circumstance be getting the vaccine for my children.

Thank you for your time and consideration,
Shersten Rudolph

I request the WSBOH members to vote NO on a mandate for children to be required to receive the Covid-19 vaccine to attend child care or school. Children are at extremely LOW RISK for Covid. In fact, twice as many children have died from pneumonia since March 2020 than have died of Covid 19.

The COVID vaccine is for EAU ONLY!!!! It is not properly tested.

It violates our personal liberties promised in the Constitution to mandate injecting our children with an unapproved vaccine that WILL have adverse negative effects on our bodies, that have not even been determined yet!!!

Protect our children. NO vaccine mandate.

Respectfully,
Marie Gage

Dear Board

My name is Willow McKinney and I live in Eastern Washington. I currently have one child left in public school. I also have a college student. I am against mandatory vaccines. All other core vaccines you can have an exemption from why is this any different. I do not believe the science is behind this vaccine. It is not working like other vaccines..meaning if you are vaccinated you should not have to worry if others are not vaccinated..since this is not the case I believe this vaccine doesn't work properly. I am also concerned with the side effects for children adolescent age. I wonder why there is not more antibody testing being done most of our children have already had covid will no ill effects. With any other virus the best immunity comes from actually acquiring the virus and letting your immune system fight it off.

Please make this about the science and not about the money.

Thank you for your time.

Willow

Hello,

I am writing in response to Covid-19 being a required vaccination for children to attend school or childcare. Children are not at risk for Covid-19 and these "vaccines" are not yet FDA approved, only EUA and has not been properly tested. Twice as many children have died since March 2020 of pneumonia than Covid. I and so many others feel strongly about this and that it should not be added to the list of immunizations.

Thank you,
Tina Soderlund

To whom it may concern,

Children should not be forced to take covid-19 shots. I strongly object to this experimental inoculation and the health implications it may cause. A child's own healthy immune system is the best defense.

I am a band and orchestra specialist teaching 275 students twice weekly. I have only had one student contract Covid-19 this school year and it was mild. Natural immunity is best for children and families in the long run.

Washington needs better health and nutrition education to make their own informed choices. No one should be forced into experimental inoculation. I say NO to Covid-19 shots requirements. People should be able to make a choice about their own health safety.

I strongly oppose the mandating of COVID vaccinations for school-age children. I believe this is a parental/guardian's decision and should be left in their hands. The State needs to respect a parent or guardian's right to choose what they believe is right for their child.

Respectfully submitted,
Tim Carter

Subject: Public Comment re: vaccine requirement

External Email

Good morning,

I would like to submit this comment for consideration during the next meeting. My comment is regarding the Covid vaccine requirement being discussed for schools and daycare. Due to our sincerely held religious beliefs, my children are unable to receive this (and other) vaccinations. This has never been an issue for us in the past and my children have been allowed to attend school and daycare. To deny my child access to their constitutional right of an education based on their freedom to exercise our religion (also a constitutional right) is discriminatory and unethical. I have 15 years background in healthcare and am thankful that those who believe in and partake in vaccines are protected by them. To prosecute and punish a child for their faith in order to protect a person who is already protected goes against everything this country was founded upon.

I implore you to consider the ramifications of implementing a system like this. Dual income families (like ours) would have to remove one member from the workforce resulting in a massive loss of employees, loss of state revenue, loss of funding for schools and loss of residents due to families moving out of state to avoid become homeless. As a member of this community, the numbers of citizens effected by this are far greater than you realize.

Thank you for your consideration.

The Jones Family

Re: Vaccine mandate

My son is non verbal and could not communicate if he is experiencing side effects of the vaccine which occur in nearly 100% of people at varying significance up to including death. The death rate for COVID-19 is less than 2% (and less than the flu, currently not mandated). The math says it is disproportionately unethical to put my son through the vaccine. Additionally, COVID-19 is now known to be less severe than previously thought and i would not be a good mother if i injected my son with chemicals because the political left wants thier way. DONT POLITICIZE SCHOOL. IT IS IMMORAL, UNETHICAL, AND DOES NOTHING BUT FURTHER DIVISIVE RHETORIC.

I feel as his mother the risk of him getting the vaccine far outweighs any benefit, and Washington State should not deny my son his basic human right to an education over an unnecessary and irresponsible vaccine that is proving many times over to be ineffective and unnecessary.

To whomever it may concern,
The thought of requiring this drug in order for a child to participate in a basic, fundamental right such as education is reprehensible. I am utterly disgusted that this would even be considered in light of recent facts that it does not prevent an individual from getting Covid, nor does it stop the spread of Covid. The benefit of this drug does not outweigh the potential risks. This is in itself a reason not to give a drug. Whomever is considering forcing Children to take this drug needs to actually take a step back and look at the risks that this drug subjects children to, especially teenage boys and the risk of heart problems, and not limited to that particular problem, and compare it to the benefits. Again, it does not prevent contracting the illness, nor does it stop the spread. I am utterly disgusted with this Josef Mengeleian idea to subject our children to this drug, the consequence being they cannot participate in school, a tax payer funded institution. This is not American. We will NOT comply and put our children at risk.

L Woods.

Subject: Proposal of adding requirement of covid vaccine for public schools

Dear Department of Health:

Already over 500,000 students have dropped out of the public school system because of covid protocols which is drastically effecting the budgets of the public school system. The Department of Health, in my opinion, has over and over made decisions NOT based on the total welfare of children considering their overall development, mental health, and ability to face diversity in the future. Despite the science that children are not adversely effected by covid, some of the decision makers have been moving in the direction of forced vaccinations. This, despite the fact that most of Washington is vaccinated and the vaccinated are getting and spreading this virus!!

The first thing that needs to happen is for the governor to declare "the emergency" over and return to a representative form of government instead of a king based one man rule. This is contrary to our constitution.

Secondly, people testing positive for covid need to have a treatment option available of anti viral medication, instead of sending them home to get worse and then be admitted to the hospital. If you get the flu, the doctor prescribes an antiviral, the protocol is not to get worse and then be treated. In addition, this disease has clearly been more of a risk to the obese and inactive people. As the Department of Health, it seems a campaign of healthy eating, exercise, and teaching on a healthy immune

system is in order.

Now the CDC is stating what has been obvious. Cloth masks are ineffective and according to some studies, have loads of germs such as streptococcus, staph, and other. Viruses enter through the eyes and never has a shield been mandated. Cloth masks have also severely hampered the hard of hearing who need to see lips to communicate.

Another reason I see a vax policy for schools to be ridiculous is that there is no limit to the amount of boosters. How many are going to be required? One a year? Two a year? Three a year? That is not a vaccine! It should be called a treatment! And this for what? A miniscule chance that my child could be harmed? What about messing up their natural immune system for life?

What will be the ramifications of medical harm? Who is going to hold liability?

Sincerely,
Gary and Leslie Fanning
BOX 38, Royal City, Wa. 99357

Please don't consider such a bad policy!! Our elected representatives should be making these decisions!

We oppose any vaccination mandate and mask requirements by our school district. We are not anti-vaccination in general, but I had an adverse reaction to the Moderna vaccine and not taking a chance with our son to have the same. The decision to vaccinate against this illness is outside of the scope of our public education system. We would feel differently if COVID was deadly to the masses like Ebola or disabling like Polio. It is not, especially with children so the decision to vaccinate should remain a personal decision and not a mandate.

Thank you

Dear WA Board of Health,

The issue of mandating the experimental COVID vaccination of children is irresponsible practice and a health risk to children. I strongly object to any persons being coerced, mandated or forced to take any experimental medication, whether it is labeled a vaccine, drug, therapeutic, modality, agent, etc. Scientific recommendations as to who should be considered for the experimental COVID-19 vaccines, currently in investigational stages only, are contained within the WHITE PAPER. Federal law, per the FDA, prohibits any persons from being coerced to take the experimental COVID-19 vaccine. You can read the Pfizer and Moderna fact sheets published by the FDA that states the vaccine is "unapproved", is suggested for those over the ages of 18 years old, and is issued under "emergency use".

In addition, the Brownstone Institute has compiled 140 research studies finding that COVID immunity from prior infection "is equal to or more robust and superior to existing vaccine," yet the federal government is heavily invested in the narrative that natural immunity is unreliable and the vaccines are the only true protection against COVID. Studies have found that vaccine-induced COVID protection wanes around six months (or potentially sooner). In October 2021, the FDA announced it was expanding emergency-use authorization for booster shots six months after the Pfizer and Moderna vaccines, and two months after the Johnson & Johnson vaccine. By contrast, a recent Yale study projected that natural immunity would last three times longer at 17 months.

SAFETY CONCERNS in using the experimental COVID-19 vaccination–

1. Children are NOT at risk: An experimental vaccine is not safer than a low IFR. (Infection Fatality Ratio or IFR). The IFR for COVID-19 varies dramatically by age, from a low of 0.003% for Americans under age 19 to as high as 5.4% for those 70 years of age and above. That is an 1800x risk difference based upon age! It is quite clear that young people are at a statistically insignificant risk of death from COVID-19. Nearly 80% of all coronavirus-related deaths in the US through November 28, 2020 have occurred in adults 65 years of age and older and only 6% of the deaths had COVID-19 as the only cause mentioned. On average, there were 2.6 additional conditions or causes per death. Meaning, if anyone should get a vaccine, it is those who are older and/or have significant health risks!
2. Brand new experimental technology – mRNA factors. Almost no normal person, MUCH LESS A CHILD, would volunteer to be the first to receive an experimental drug unless they were very sick and there were no alternatives. With COVID-19 the vast majority of people do not get very sick, and there are many alternative treatments
3. Failure of previous coronavirus vaccinations- scientist have tried for decades but still have not successfully created one
4. No independent animal studies – NONE!! Historically, if there were no animal studies, and any deaths and/or complications from a vaccinee, the vaccine was pulled from market. AND.. it certainly was not pushed on to CHILDREN!!
5. There ARE known complications with the experimental vaccines –

6&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cf9e2dd89415646b22b5d08d9cfa50635%7C11d0e21726

6. There are unknown complications with the experimental vaccines – we do not know the effects long term, or on the elderly or young, or those who are pregnant or want to be pregnant.

7. Pharmaceutical immunity to liability – This should say something in itself! It must be pointed out that this is an experimental vaccine!!! Having an experimental status has important legal implications. These agents are being distributed under an EUA (emergency use authorization) which determines how future harm to patients will be compensated. Currently, no one is taking responsibility. The FDA has listed the experimental COVID-19 vaccines as “investigative”

8. There is no proof the experimental vaccinations stop the transmission of the virus. The research is clear, they do not know and have no evidence these vaccines prevent transmissions.

9. Unknown Mortality or Hospital Admission Benefit - Currently the pharmaceutical companies believe that their first COVID-19 vaccines are 95% effective. Pharmaceutical companies typically believe their vaccinations are more effective than they actually are. For example, CDC data show that the influenza vaccine was 38% effective in 2017-18, 20% in 2018-19, and 39% in 2019-20 even though its efficacy was expected to be much higher when it was first introduced in 1938. Even if the COVID-19 experimental vaccine is really 95% effective in the real world, the survival rate of those contracting the disease is already so much higher than that. If you are less than 70 years old you have a 99.5% chance of survival, if you are less than 50 years old you have a 99.98% chance of survival, and if you are less than 20 years old, you have a 99.997% chance of survival. Notably, the vaccine trials had too few positive cases to assess with statistical significance any benefit in secondary outcomes such as decreased mortality or hospitalization.

For God has not given us the spirit of fear; but of power, and of love, and of a sound mind.

Dear WSBOH Members,

As a mother of 3 young children, I would like to express my opposition to requiring the Covid vaccine for school/daycare at this time.

I received the vaccine myself as an informed, consenting adult, but have many concerns about administering an EUA vaccine to my children who are incapable of making that decision for themselves and their future selves. Chief among my concerns are that Covid is still a very low risk for children's health and the vaccine will not prevent spread, as we are currently witnessing.

Thank you for your time and I encourage you to NOT require Covid vaccination for school/daycare until further data is available.

Sincerely,
Gina Kiske

Hello,

I am writing to you to oppose covid 19 vaccine mandates for children in order to go to school.

The science shows that the virus is mild in children, little more than a cold. Without the vaccine, the kids will develop herd immunity in a very short time, and then the virus will be no factor at all.

There are also indications that the so-called vaccines are actually more dangerous than getting the virus. Increased cases of heart problems are being reported. This should not happen.

Furthermore, the available vaccines are not the FDA approved Comirnaty vaccine. Comirnaty is not yet available. Therefore, all that is available is the EUA only approved vaccines. Experimental vaccines should not be given to children. Making it mandatory in order to attend school creates a coercion situation, which is a violation of human rights, as well as the Nuremberg Code. There will be in due time consequences to government officials who have forced experimental drugs on people via coercion.

Sincerely,
Scott D Taylor

In regards to the discussion regarding a mandatory Covid vaccine, I will begin by stating our kids have already received theirs and are nearing the time frame of getting boosted, which they will. Clearly, I'm in favor of the vaccine.

That being said, I still believe there needs to be some sort of exemption requirement for children, specifically for valid science-based medical reasons. Our state has always allowed for exemptions and have given the parents the right to determine the medical course of action for their children. I don't believe those rights should be superceded by the government. Though I believe getting the vaccine is the wisest course of action, the divide a requirement such as this would cause, especially on the eastern side of the state, bears far greater consequences. Legislating morality is a slippery slope. I feel like enough time has passed that those who are going to get the vaccine have already done so, and the rest are going to be belligerent. Our state needs some peace, and that never comes by forcing others to bend their will.

My comment is to address the potential for the BOH to consider COVID shots for children and a prerequisite for attending public school. This is absurd, and not necessary.

The risks associated with these shots are fairly substantial in children, more so than the virus itself. ANY person who receives the vaccines should be done so with COMPLETE knowledge and consent with their family physician as deemed necessary by their own personal health history. Government, including those that entities that dictate school policies, should have zero authority over the sovereignty of ones body, or to override the wishes of parents to these minor children .

It has become quite clear over the past two years, that COVID is a virus that has been politicized, predominately by the Democrat party to sway public policy. Schools included. PUT THE BEST INTEREST OF CHILDREN FIRST AND VOTE NO!

Sincerely,

DENISE THORESON

Health Board of Washington State,

We are at a crossroads with our world as we know it. There is so much contradicting information out there and we are already so divided. Please stop the forced care of covid. Nothing we've done so far has changed the spread of covid and that includes vaccinations. Can we please protect our children by letting parents continue to have the choice in how to handle the care of their children. I can't believe that I am even having to plead that in our "free" nation.

Children are not at risk for Covid-19 and that these "vaccines" are not yet FDA approved, only EUA and has not been properly tested. Twice as many children have died since March 2020 of pneumonia than Covid.

Where there is a risk there should always be a choice. We all have every tool we need to make the best decisions for our lives. Please don't put the blood of these children on your hands.

Thank you for your time and consideration,
Sarah Hansen

To whom it may concern,

I am emailing in today to oppose that Covid-19 vaccine be added to kids school immunization list. This vaccine is still experimental and has not been tested on animals or even enough children. There has been numerous horrible life altering and even death in these vaccines with children. The FDA lied when saying that this vaccine was fully approved as that one is not even available in the United States. This has been nothing but fear spreading lies since the beginning. Natural immunity is the only thing that will keep kids safe. Most children do not even get serious complications from this virus. If this vaccine were to get added I do request that EVERY entity and school respect all THREE exemptions to families. Vaccines are a personal health choice. Please think about ALL kids when making this decision. There has not been enough time or legal testing of this shot. It is not even a true vaccine to be honest. You will loose over half of all children in publics schools if you add this. Most of us have already left the public government school system because they have lost all respect for parents and children's health freedoms. I hope you consider what you are doing if you do not say NO. There is NO reason to push for this right now. Re-evaluate this before next school year. I pray that you stop letting the fear take your mind.

Thank You

Hello,

I'm a concerned, well educated parent that is very much opposed to covid shots being placed on the immunization schedule for children. Children have almost zero risk for severe covid. The vaccine risks are substantially higher than the virus itself. The data does not lie. Vaccination does not prevent infection or transmission. Why should we risk the side effects of the vaccine for our children when there is almost zero benefit for themselves or others. I am so vehemently opposed to this vaccine that if it becomes a requirement for school we will be pulling our children out of the system and homeschooling from now on. We will also NEVER support public school levies, etc going forward if this goes through.

Thank you for your time,
Meghan Carpenito

Hello,
I absolutely OPPOSE this. First of all, the parents NOT the government makes decisions for their child. Secondly, not every child can take vaccinations. Thirdly, the MRNA component is new to vaccinations. Meaning, we are essentially lab rats for long-term effects with this. The vaccination companies are NOT held liable for any effects caused by this and they have withheld information from the public until 70+ years from now about anything related to it. This is a SEVERE overreach of government...and incredibly Anti-American, for I alone, have my God given rights, especially WHAT I CHOOSE to go into my or my children's bodies. If it's all for health...than what next? Are you going to tackle a bigger issue with obesity? Mandatory gyms and diet checks? WAY more people in this country die from obesity, which by the way is a huge contributor to COVID-19 deaths. I firmly and loudly DO NOT CONSENT TO THIS INSANITY.

All three of my children and my husband and I are fully vaccinated and we're almost boosted. My husband and I are already boosted. And my children are headed that direction. However, I will stand with my church and fight that our Constitution of the United States of America be withheld. To force our citizens who do not want a vaccine, to be forced to receive a vaccine violates our highest court. Be real. Our forefathers would highly disagree with this administrations over reach into the private rights of our citizens. We have a senior at Mead but we will leave if necessary but we will not go quietly.

To Whom It May Concern,

I am a teacher and parent of a high school student. I am writing to express my concern about mandating students to be vaccinated for Covid-19. Our entire family had Covid-19 and recovered. I am disappointed that there has been no discussion about people with natural immunity. There should be an accommodation that reflects the many studies that clearly show natural immunity is as good or better than the Covid-19 vaccines. In the beginning of the pandemic, we were told that vaccinated individuals wouldn't be able to get or give Covid. Now many fully vaccinated people are getting infections and we are being asked to get more vaccine. This vaccine is very new and the long term effects are unknown. Our children are the most likely to have a mild infection should they contract Covid. Given these facts, it seems irresponsible to require parents to vaccinate and booster their children. Parents should be free to choose what they feel is reasonable to protect their child. Our schools already require social distancing, masks and frequent hand washing. These protocols have been shown to be effective. I taught during the time when students went completely remote. It was challenging for teachers, parents and students. Many students fell behind. It is not an ideal learning environment. If a vaccine mandate is approved, we would choose to keep our child home to finish the year remotely. This would be an agonizing choice, but we feel our child's health is too important to gamble with. We know many other parents who feel the same way. I implore the board to focus on the medical science and not public hysteria or political pressures. Please help keep our children in school where they learn best. No vaccine mandate for students.

Respectfully,
The Johnson Family

To whom it may concern:

I am writing in regards to the Covid vaccine and a potential of making it mandatory for our school children. I strongly oppose making this mandatory for kids and I would pull my kids from public school should this happen. My coworkers in healthcare despite having the Covid vaccines and even boosters are still getting Covid. I understood that people have died and can die due to acquiring Covid although I know there are so many more that have had Covid than the numbers that are recorded. There was beliefs that the vaccine could prevent you from getting Covid or transmitting covid. These have both been proven wrong. It would be doubtful it would even be approved with numbers of breakthrough cases and proven transmission of covid from the vaccinated. This happened to my own family when my childcare got fully vaccinated and 3 weeks later got covid, was sicker with covid than when I had it early on. She then passed it onto my young elementary age child, which he only had a mild congestion that you could only hear in his voice for one evening otherwise no other symptoms. This was his second round of covid, almost a year after the first. I, unvaccinated, not the others in my family came up positive or had any symptoms.

This is an over reach of medical freedom of something that is being proven wrong despite the media trying to maintain a narrative of the covid vaccines work. Their narrative is falling apart in personal lives. Everyone knows of someone who had had breakthrough covid, horrendous side effects from the vaccine, etc...

Please shut this down immediately, it is not effective, nor is it necessary. If a parent wants this for their child they have a right to make this decision just as a parent who does not want this for their child has a right for their child to not get any covid vaccine. Thank you,
Becky Hewlett

Please allow shot to be tested before mandating. The shot is not working. My daughter got terrible Covid after shot. Coworkers did, too. Please allow people our constitutional freedoms. Why is their not representation on board from central and Eastern Washington? Dr. Wei Lin, is an internal medicine doctor. Please think about inviting him. It is not okay for a decision In Washington to have a closed-minded group.

Requiring an mRNA injection that DOES NOT PREVENT DISEASE was never the intent of the legislature in it's delegation of authority to the State Board of Health to approve a schedule of immunizations for "vaccine preventable diseases". As you are all aware, this vaccine does not prevent one from getting the virus, or spreading it, even with follow up boosters.

Children are not at high risk of death from Covid-19. The latest variant comes to the majority of them as cold symptoms or nothing at all, and that INCLUDES children who's parents made the choice to vaccinate.

Requiring me to put my child at risk by getting a vaccine that offers perceived safety rather than actual immunity- is reason enough for me to pull my child from the public school system, and that is what I will do if this becomes a requirement.

To whom it may concern,

It is imperative to the parents and children of WA state public schools that you do not make the Covid vaccinations required for school enrollment. There are far too many differing opinions to force this vaccination on every child. There needs to be vaccine exemption, and parental choice, as there have been with other vaccines. Covid poses almost zero threat to school age children themselves, as well as there being no proof that children pose a threat to others by not getting the vaccine. I fear that by requiring the vaccine, which has unknown risks to youth, will do 2 things: 1) cause unnecessary harm and heart complications to many children, and 2) put many families in a hard situation where they will then have to choose to unenroll their kids in order to maintain medical freedom. That is not a situation many families can opt for and they should not be backed into that corner unnecessarily.

Please allow choice in school for vaccines, and for masks for that matter. Our children NEED their faces shown.

Thank you for listening,
Susie Holladay

Greetings – I am writing you to STRONGLY consider holding off on the vaccine mandate with young children. My husband and I both have had our shots. I even got mine while I was pregnant as we see the value it brings. However, there is not enough data on the side effects with young children under 12, that I ask that you wait until there is! Forcing a vaccine out of fear is foolish and unnecessary. I am a mother of a 6 year old boy and I am not comfortable with the myocarditis side affect that is getting reported in adolescent boys. Myocarditis has happened with other members of my family, and we are not willing to risk my sons long-term health when there is not enough data on this specific side effect in boys. While reports are coming in that boys are recovering, there has not been enough time or data on the long term implications of this for us to feel comfortable with it yet. I will not risk his health over his lifetime.

Here is that discussion on the CDC's website

<https://www.cdc.gov/mmwr/volumes/70/wr/mm705152a1.htm>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.cdc.gov%2Fmmwr%2Fvolumes%2F70%2Fwr%2Fmm705152a1.htm>>

Right now, while inconvenient, we are managing in elementary schools just fine. The school is proactive in their measures to keep kids safe and in schools. Masks and social distancing is working.

My son loves his school and his teacher. He was in a private school (10 kiddos) last year for kindergarten where he was not thriving. He developed an anxiety disorder/nervous tic from his teacher, and was getting bullied by a student (while the school did nothing to help). We ended up pulling him out of that school before the year was up for his mental health and well being. This year, we are in the public school district and he LOVES his teacher and the school!! He started out behind given how last year went, but he has QUICKLY caught up with the help, structure and support of the schools administration. The staff at Brentwood Elementary loves on him and has created a very safe environment, even amongst all the covid protocols. It's working the way it is. PLEASE do not force us into a situation where we have to change his schools again because we are out of options.

I know I am one of many parents that have an opinion on this. But please hear my plea as a mom not to force this!

Thanks,

Stephanie

The Covid-19 "Vaccine" is still operating under EUA from the CDC. There is no approved vaccine for use AVAILABLE in the USA. This means that the Nuremberg code applies; as well as federal and state statutes regarding experimental medications. THEY MAY NOT LEGALLY be required. Anyone doing so becomes personally liable for any harm caused.

The justification for this entire pandemic is based on a faulty PCR test. The CDC last July acknowledged this fault; but for some reason chose to leave this test in use though this month. This means that the numbers used to justify all of these extreme violation of personal human rights have been based on a test that has been KNOWN to be faulty. Further, cases are not deaths. MANY of these cases were asymptomatic. As this test was known to be faulty, it is KNOWN many of these people, in fact, did not have any upper respiratory illness, at all.

Dr. Kary Mullis--the inventor of the PCR--personally stated the test should NEVER be used diagnostically.

The VAERS system has had more reports of injury caused by this SINGLE vaccine than all other vaccines combined, since the VAERS system started. Children given this are experiencing cardiomyopathy at an alarming rate. THERE ARE NO LONG TERM STUDIES as to the effects of this vaccine.

Children had the LOWEST rate of Covid. They had the HIGHEST rate of survival if they did acquire Covid. Per VAERS, more children have ALREADY died due to the vaccine than ever did to Covid.

DO YOUR JOBS. Stand for the Constitution and rights of our citizens, especially those too young to speak for themselves. REQUIRING THIS EXPERIMENTAL GENE THERAPY FOR ANYONE is CRIMINAL.

WA State Board of Health,

This letter is to express my concerns over COVID-19 vaccine mandates for students in Washington State. This letter is intended for public comment for the meeting on January 12, 2022 discussing vaccine mandates.

I have two elementary aged children that attend public school in Eastern Washington. It is not appropriate to mandate the COVID 19 vaccine for children for a disease that is not dangerous to them. The vaccine itself has very little long term data on the effects of children and is still under emergency use.

We have had COVID-19 infections in our household, we quarantined appropriately from those outside our household. During this time our children did not exhibit any symptoms/signs of the disease. In speaking with numerous parents of school aged children this scenario proved to be true for them as well.

My husband and I are also fully vaccinated against COVID-19 however our two healthy daughters will not be receiving this vaccine until long term data can prove it is safe or needed against disease.

If the COVID 19 vaccine is mandated to attend public school I will be forced to remove my children from public instruction and find an alternate method/school to educate them. This is the hill I die on.

Additionally, virtual school is not a viable option. My children suffered greatly during the 2020-2021 school year in numerous ways.

Dear WSBOH members,

Please do not make Covid vaccination a requirement for children to attend school. Unlike all the other vaccines required for children, covid is not a deadly childhood disease. The data is clear that covid is not a threat to children. My children were barely affected when they had covid and they now have natural immunity. The vaccine has not had the benefit of long term testing for children to know if there are any adverse long term effects. Also, as is clear from surging cases across the globe, the vaccine won't prevent them from getting covid, so what's the point?

Sincerely,
Dawn Larson

I'm writing to you because the idea that you would mandate COVID vaccinations for entry to public education is unethical, immoral and down right dangerous.

First, the past two years of data indicates that COVID is not a threat for children, nor does it typically cause hospitalization or death in healthy children. Children are 6 times more likely to die from drowning than from COVID.

Next, the vaccines have no long term data on side effects. 6 months to a year is not long term data. Many parents will weigh the risks of diseases versus vaccination and make a decision that is best for their family. You have no right to deter that.

Finally, if the past few weeks have shown anything, it's that this "vaccine" is nothing more than a prophylactic, limiting severe illness and death in those at highest risk. It does not stop transmission, thus it's essentially a flu vaccine which you've never mandated probably for the same reasons I just mentioned, IT DOESN'T STOP DISEASE TRANSMISSION.

I implore you to pull your heads out of the big pharma cloud and look around. You know that mandating this vaccine will do to parents across this state. It's removing our right to choose what is best for our kids. That is my decision, based on the FACTS present to me.

Parents will remove their children from the system and find other solutions. We will not stand down.

I wish to comment on the proposal to force any form of the failing covid "vaccination" on school children in Washington State.

You seek to inflict destruction and medical damage on children for which you have zero authority.

Have you forgotten your duty to serve the people of Washington?

We the people say "no" to your plans.

There is no medical evidence that children need this vaccine. So few children are affected by "covid" which has a 99% recovery rate.

However, if you review the VAERS (vaccine adverse events reporting system) data run by the CDC, you will see serious harm to children from this poisonous death shot.

I call upon the power of the one true living God, Christ Jesus, to cause all your evil plans fall into ruin.

I pray you turn from your wickedness, return to a servant heart, and vote wisely!

C. Cooper

It has been brought to my attention that The Washington board of health is having a meeting to decide whether we should have a mandate for children To get the covid 19 vaccine. I myself being a parent And knowing that children are at extremely low risk for exposure to covid 19 and getting it and knowing that the vaccines are on an emergency use authority or EUA by the FDA. With all this information at my hands I Amy hands I am against this mandate 100% do not agree with it. If we are not mandating a flu vaccine for children and people to go to work and go to school then we should not be doing that with a covid vaccine that is on EUA ONLY BY THE FDA.

To whom it may concern,

I appreciate this opportunity to write and let my voice be heard about something I hold very true and serious with my family. I have two kids in the Mead school district and a third that will hopefully be attending. My family has already had and overcome Covid 19 Virus. For my kids it was very very minor. All three had one afternoon where they didn't feel good and the next day they all were symptomless and feeling good. It was a little bit more work for us parents to fight it off but we came through and are doing good. No hospitals, no urgent care needed. Just prayer and vitamins. We as a family stand firm in our natural immune systems gifted by God and will continue to stay with God and vitamins. I cannot and will not take something for myself NOR give something to my kids that has not had years of clinical trials and testing to prove it is safe with no side effects. It is proven children have over a 99% survival rate. It makes no sense to give our children something man made that has side effects when our kids have such strong immune systems. My wife and I will not give our kids this "vaccine." We will file for religious exemption and even pull our kids out of public school if needed.

Thank you for taking your time to read our concerns. I would like to remind you God sees all and knows all. He will not let attacks on His children go without His judgment. May we all seek truth and discernment for the days ahead. I am praying for you all.

To Whom It May Concern,

I am very concerned about requiring the Covid-19 shots for children and adding this "vaccine" to the required vaccinations for school aged children. This "vaccine" is absolutely too new to be required for children. There are absolutely NO long term studies done on these vaccines and they are still only approved under EUA. This alone makes it so you cannot and should not require or mandate these "vaccines" for children or adults. Further, children do not have a high risk of dying from COVID-19. They just don't! So why would you push an untested vaccine, that has known side effects of causing heart problems on children who have a very small chance of actually dying from the illness?? This is not right. If parents want to make an informed decision and get their child vaccinated for covid-19 then that is one thing, but it is not right for you to require or mandate that children have this vaccine. I hope that you will look at all the studies that are being done, adverse reactions that are happening because of the vaccine, and realize that it is not your place to require or mandate this vaccine for anyone but especially for children.

Thank you for your time and honest consideration!

A concerned mother of 4 daughters,

Our children are to be protected from harm by us on every way possible. The government has or SHOULD HAVE NO RIGHT to dictate how we should protect our children.

Any true medical professional knows that one treatment for every person NEVER works. You can provide information on medical treatments and that information is used for individuals to make informed decisions.

In this instance you are recommending a medical treatment that has yet to be proven effective. It has yet to be proven safe and you want to give it to children... what kind of stupid are you? BEFORE you make any sort of recommendation on chemicals to inject into children, let's look at the history of ANY other vaccine. YEARS, it took years to create and TEST to make sure these were relatively safe, and that still does not mean that they are safe for everyone. If even half of the statements about reactions or side effects are true regarding the Covid 19 vaccines, they should have stopped giving them! FOR PUBLIC HEALTH AND SAFETY!!

Currently, you are asking everyone to vaccinate for their safety and others. WRONG, vaccination only protects the recipient and only the recipient! With this vaccine, it DOES NOT stop you from getting it. It DOES NOT stop you from spreading it. So please tell me the reason to get it... it is not to stop the spread. The statistics for children is virtually less than 1%. Since when do we do things for the minority?..public health is to protect the majority and clearly there is NO need.

QUIT, making health care political! Forcing people to do things out of fear and dictators is not right, nor is it in anyone's best interest.

Viruses are not easily containable or stopped. Masks DO NOT WORK! Vaccines Don't work, if they did we would have eradicated the flu years ago. All you do is create more variants.

DO NOT FORCE THIS VACCINE ON OUR CHILDREN OR SOCIETY!

Please consider the facts. 1 in every 100 people who have contracted Covid have had what's to be considered a bad illness. 2 in every 100 people who have gotten at least one vaccine for Covid have had what's to be considered an adverse effect. Math doesn't lie. Our children deserve better than what this proposal has in store for them. What happened to America. All religion, all races the melting pot of opportunity. Asking or mandating someone to do anything that's not a Ten Commandment type subject is un-American and un-human. We should be able to make our own choices in our lives and our children's life until they are considered to be adults. There's no reason for any child to have this vaccination. It will do more harm than good. Hopefully this finds you well. Peace and understanding always win. Not threats and propaganda. History can teach us many things. As long as we are looking.

I would advise each and every public servant (that's you all) to read the constitution of USA, then read the constitution of Washington. - short reads, you will be paid by the people while you read, consider it fundamental research.... Really, I'm fine with paying you to read the things you have sworn an oath to.

Let that sink in, you have sworn an oath to something you probably haven't even read. Really let that sink in....

If your decisions don't reflect the oaths you have sworn, - that Genie cannot be put back in the bottle.

I believe if this ship doesn't right soon we all will have a full on mutiny on our hands here in Washington that none of us want to deal with.

Please choose wisely.

External Email

To whom it may concern ,

Good morning , I would like to write you today with my public comment with a deep concern about the COVID-19 government school mandate for WA state that you , the BOH is discussing January 2022 .
I will vote to reject the mandate.

School needs to be accessible to children regardless if they have had the COVID shot. The shot is not necessary because children are at an extremely low risk for COVID and the vaccines are STILL only in their EUA.

The shot is the equivalent of an annual flu shot ; which should be still our right to choose.

It goes against us the parents rights to choose the best options for medical care for our family . I implore you to look at this as an American who believes in freedoms of choice.

Kind Regards

I'm completely appalled that our school system is even considering mandating a Covid 19 vaccine!!! Children specifically have over a 99% survival rate from contracting Covid, yet the vaccine itself is causing myocarditis, seizures, and paralysis.

Requiring a vaccine that DOES NOT PREVENT DISEASE but is causing life threatening side effects is completely reckless. As you are all aware, this vaccine does not prevent one from getting the virus, or spreading it, even with follow up boosters.

So with that being said I will not allow my child to be apart of any experiment or trial and will not be putting his life at risk to attend school. If the board so feels that mandating an unnecessary vaccine for children to attend school then my child will be pulled from public learning.

Good morning,

I request the WSBOH members to vote NO on a mandate for children to be required to receive the Covid-19 vaccine to attend child care or school. Children are at extremely LOW RISK for Covid. In fact, twice as many children have died from pneumonia since March 2020 than have died of Covid 19.

The COVID vaccine is for EAU ONLY!!!! It is not properly tested.

It violates our personal liberties promised in the Constitution to mandate injecting our children with an unapproved vaccine that WILL have adverse negative effects on our bodies, that have not even been determined yet!!!

Protect our children. NO vaccine mandate.

Hello,

My daughter attends Evergreen elementary school. Both of my children have been through untold hardships through the course of this pandemic. The sad truth is that none of their hardships have anything to do with Covid itself. They both were infected at the end of 2020 and recovered in about half a day. Since then, everything in their world has been uncertain.

Statistically speaking, the average healthy child has no reason to worry about Covid. In fact, the risk of negative side effects from Covid is greater than the risk of receiving the vaccine. For this reason, my children will not be receiving the vaccine, regardless of mandates. My wife and I are vaccinated; we are not against the vaccine. However, we will not support mandatory vaccinations that hold higher chances of negatively impacting children than the disease itself.

My input regarding making vaccines mandatory can be summed up in the words provided within Your own link, which I will include below. This is a decision for parents to make with their doctors.

Please feel free to contact me with any questions or concerns.

"It's important for families to discuss their children's immunization status with their health care providers to ensure children are protected against transmissible diseases like COVID-19."

In regards to Public Health and the experimental "Covid-19 vaccine" "mandated" for anyone, but especially children.

Please tell me what percentage of children die from Covid?
Why would a child need to participate in a medical experiments and "vaccinated" for something that their survival rate is near 100%?
Sounds a bit nefarious.

The Government just admitted in a court case last week in Florida that there is NO FDA approval for any of the "covid-19 vaccines." Also it seems that the CDC has already stated that people who get the inoculation still can get and transmit covid.

So, it would seem there is no reason whatsoever to force, threaten, or coerce anyone to take the experimental "Covid-19 vaccinations."

Stop the charade.

Yours Truly,

Emily M. Hansen,
Wrongfully fired elementary music teacher
I blame you

Our kids don't need this covid shot! Adults don't even need it with a less than 1% mortality rate. Pushing this shot and lying about the risks are crimes against humanity and you will all be held accountable eventually. It's absolutely disgusting hearing the FDA stating the shot must be given to children in order to find out if its dangerous, what the hell is wrong with you people? How much are you being paid to sell out your fellow Americans & chikdren??

We will not allow you to experiment on our children! Stop being cowards and tell the truth! Do NOT allow this deadly experimenting to go on any longer!

We know the government is not to be trusted, and neither are you beauracratic agencies. You have lied and brutalized us too many times already, and I've attached just 1 reminder-

I currently work with a national law firm that specializes in vaccine lawsuits. Unauthorized, non-FDA approved experimental vaccines that are released into use promising miracle cures like stabilizing diabetes, managing Crones, and a thousand other ailments. Vaccines that have not gone through the proper 5-year human testing to prove they are safe. And before they are pulled from the market they cause a death, a 7-year old to need an organ transplant, and life-altering, permanent injuries.

The COVID vaccine is for EAU ONLY!!!! It is not properly tested.

It violates our personal liberties promised in the Constitution to mandate injecting our children with an unapproved vaccine that WILL have adverse negative effects on our bodies, that have not even been determined yet!!!

Protect our children. NO vaccine mandate.

Please do not approve mandatory Covid vaccinations for children.
First, the vaccination has proven to not prevent the disease.
Second, the vast majority of children do not get anything other than minor symptoms.
Third, there are no Long term studies on how this vaccine will affect children.
Fourth, the enrollment in public schools will drop significantly. Many parents will not subject their children to this vaccine.

Respectfully, Ivan Huld

I strongly disagree with any attempt to force any form of vaccination on school age children.. Including college age students.

Not only is it a violation of civil rights, the current COVID-19 vaccinations are all emergency use authorization. Any FDA approved vaccine for COVID-19 does not even exist within the borders of the United States. You are forcing people to take a vaccine that is still emergency use authorization. This is a bait and switch on the part of Pfizer and many other drug companies. People think they are getting the FDA approved vaccine when they walk down to Walgreens but they are not. This is not a conspiracy theory. Refer to this or if you don't believe me go down to your local Rite Aid or Walgreens and ask to see the insert for the vaccine. It does not exist it is not the FDA approved vaccine.

To whom it may concern-

Mandating experimental medical practices on U.S. citizens is unlawful, unconstitutional and breaks the Nuremberg Code. Mandates are not law. Laws can only be created by congress. No president, governor or health department official can create a law.

This so called "vaccine" is not anything like the true and tested vaccines of the past that have been used to protect us from harmful diseases. This "shot" is MRNA therapy NOT a vaccine. This alters the very DNA and immune system of humans. It has been experimented on animals which have died.

To force anyone to take this experimental shot for ANY reason is abhorrent. To experiment on children is absolute child abuse.

Please do not go down this path...
Freedom over force-

10.

Are you testifying on a specific proposal under consideration by the board?

1. Yes

Adding Covid "vaccination" to childhood/school vaccines list

11.

Are you Pro or Con on the proposal?

2. Con

This is ridiculous. The flu shot is not mandated nor should it be. The same way the Covid "vaccine" should NOT be mandated. This "pandemic" has a high survival rate especially in non compromised children. It is insane to propose to give Children an experimental "vaccine" with zero years of evidence base practice to go along with it. Our children are not lab rats. The amount of children who will be withheld from school settings by the parents who refuse this jab is detrimental to the districts and sad for the children. As a parent who outright refuses this and has spoken with other parents in making a decision for our children I know I do not stand alone. If the " vaccines" are working and being accepted at a high rate why is this still spreading? Masks work too right? As all the student and staff have been wearing them and it continues to spread. It's time to let this run it's course and be done with it. It is not time to bully people into getting this "miracle vaccine" and all 72 boosters that go along with it. If this was a true pandemic we would be able to count numerous neighbors down the block whom are dying left and right. Instead we are being social media fear influenced into thinking its worse than it is. The omicron is the newest scare tactic. A mild "flu like" version. The flu hasn't existed for nearly 2 years now, wonder why?? I respectfully ask you do not force parents into choosing between their child's children education in public schools over this jab. Religiously it does not sit well with our family along with many others. I pray if this is to come to be a mandated childhood immunization that medical, religious and philosophical exemptions are also taken into consideration. Thank you.

"Rushed science is poor science." The rush of these vaccines is by-in-large proven of limited benefit to our children especially in light of the effects the virus has on them. I cannot in good conscious, as being stewards of my child's health, participate in rushed science for the very temporary and limited benefit of a vaccine in which no long term data exists. Furthermore, as it is becoming clearer, Covid-19 is mutating in to a much less virulent illness, rendering whatever benefit may be obtained from a vaccine (especially for children) even less beneficial.

In light of this, if there are any vaccine mandated requirements for my children to participate in their local public school, OR if they are relegated to masks/testing/distancing because they are not, we will no longer have our children enrolled and will have our educational needs met elsewhere.

We have been patient, compliant, willing to work with the limitations this virus has caused and the mandates ordered down from the state and local level, but will not participate in the forced vaccination or segregation of our children if the SBOH decides to not listen to the people of Washington and respect our autonomy.

Subject: Say No To COVID School Requirements

External Email

To Whom It May Concern,

It would be fair to say mandating such a vaccine, that is not even FDA approved in children, should not be at the governments discretion. What we the parents, whose tax dollars help fund the school systems, choose to inject our children with is our decision. If you actually look at the data, it has been proven time and time again that not only do masks not work, but neither do the vaccines. How is something "proven" to be so safe and effective, yet the number of cases continue to skyrocket in your heavily vaccinated areas? How is it Seattle/King county has seen an increase in number of cases yet again, but you have to show proof of vaccination to even do anything? This is complete overreach by departments that quite frankly at this point don't have the publics best interest in mind. It is about money and always has been. As the State Board of Health, why are you not advocating for healthier lifestyle choices to include but not limited to proper diet, exercise, and vitamin consumption? Did you know that according to an article published by the National Library of Medicine that people with a vitamin D deficiency (>30 ng/ml) were twice as likely to contract COVID-19? Surely you know, especially in places like the good Pacific Northwest where vitamin D is scarce due to the lack of sunshine throughout the year. One would think that you would be letting people know of something so readily available and inexpensive to help mitigate contracting such a illness. Do not even consider making this part of the school requirement regime until ALL the data and trials have been released. But wait, they're trying to hide that for the next 50 years. Why would that be if this vaccine is so safe and effective? Why are the vaccine manufactures inserts in the boxes containing the vaccine vials blank? The Supreme Court has shot down this current administration's mandates left and right, and to think parents are not going to fight for their children would be foolish of you.

Subject: Reject Covid Vaccine Requirement for School Aged Kids

External Email

To All Whom This Concerns:

I am writing to urge you to reject the notion of requiring school aged kids to have the Covid vaccine. Please consider the facts below.

* Long term safety of the current COVID vaccines in children cannot be determined prior to instituting such policies. Without high-powered, reproducible, long term safety data, risks to the long-term health status of children remain too high to support use in healthy children.

* Children risk severe, adverse events from receiving the vaccine. Permanent physical damage to the brain, heart, immune and reproductive system associated with SARS-CoV-2 spike protein-based genetic vaccines has been demonstrated in children.

* Healthy, unvaccinated children are critical to achieving herd immunity. Natural immunity is proven to tolerate infection, benefiting community protection while there is insufficient data to assess whether Covid vaccines assist herd immunity.

Please remember that children are not a one size fits all, or even most. We do not require children to receive a flu vaccine to attend school, why would we require a Covid vaccine. The Covid virus has a 99% survival rate in children, the vaccine is not necessary and if required is an overstep of power.

Thank you for your time.

Shay Foster

External Email

Dear members of this committee,
I am writing you today to demand that you do not vote, agree too or pass a new requirement that may kill our children, potentially leave them without the opportunity to have their own children in the future and that we do not have all of the true data on and couldn't possibly within such a short period of time.
The experiential Covid-19 vaccines are just that, an experiment. We do not have any long-term data on them and all of their information will not be available for many years to come. It doesn't take a virologist or doctor of any sort to know that these shots are completely unnecessary for children and in fact, likely harmful for anyone under the age of 30.
Have you not visited and researched the government backed VAERS website for adverse reporting of these shots?
Thousands of reactions, thousands of deaths and yet the bureaucrats of this country are still peddling them off like they are the greatest invention of our world.
Do the right thing and say no to implementing a requirement for our children to be shot by an experimental, non-approved, low researched gene therapy.
This is not a request. This is a demand.

Respectfully,
Robyn Miller

Absolutely no mandatory vaccine mandate!!

It is unconstitutional! Goes against a lot of peoples religious beliefs and it hasent been proven safe or effective!! Vaccinated people are catching and spreading it just as much of not more than unvaccinated people! I STRONGLY oppose this and if you make it mandatory I will more than likely pull my child from mead school district, vote against any future funding for mean school district and remove my wife from the PTO. A vaccine that is not trusted or proven should be up to the parent or guardian to decide for there own child!!!! Once again I strongly oppose!!!!

Do not do this!!!!

I listen to science and I watched a 3 hour news interview of Dr.Malone who is a esteemed doctor and Scientist and am watching this man be deccredited with lies by media outlets such as the Atlantic. I believe his qualifications as a renowned virologist who patented MRNA tech. He is very credible and the facts when vetted the facts of what he has accomplished. He does not recommend a vaccine for children until it is throughly studied. I absolutely agree and therefore will be advocating against his mandatory vaccine for children who are our future. I also do not believe the criteria has been met to move forward. I am also dismayed that Eastern WA has not been represented. If you haven't listened to it, you should. He is very credible and anyone who tries to move this man should not be sitting in a decision making capacity. <https://fml.lol/joe-rogan-podcast-episode/>

I am proposing a vote of no is determined by the board to make the Covid Shot be mandatory for children to attend day cares or school. There is a 99.9% survival rate and that will soon be 100% as the virus weakens. Children are not being effected by this virus and their health should not be sacrificed for the older population. There is no where near enough data to know the long term effects on all children. Please take the lack of data as an absolute no for requiring children to get this shot.

COVID 19 shots being required for children for attending school

11.

Are you Pro or Con on the proposal?

2. Con

I have 4 grandchildren, 3 school age. The COVID Shots have not been tested and are only EUA which means cannot be coerced or mandated (required) Peer review studies on safety have not been completed. Children cannot provide legal consent as the dangers have not been fully studied. Too many cases of young myocarditis already and fertility issues and neurological issues are possible. Violates the Nuremberg code and could make schools liable for injuries due to it being EUA only. Risk of vaccine FAR OUTWEIGHS danger of contracting COVID. Your board needs to do more research as this will cause more damage than good if implemented.

I am writing to ask you not to mandate covid-19 vaccines as school requirements.

I am in medicine, any time we give a medication we weight the risks and benefits. Covid -19 is 99.9% survival able in children 18 and under. We currently do NOT know the long term side effects. We do, however, know that there is a concerning amount cardiac problems, particularly in young men.

It is completely unreasonable to impose this on children. Science is being ignored and politicized. This is dangerous and ignorant.

This will be the last straw. We will leave WA if you impose this dangerous, ignorant, immoral, unethical mandate on children.

This is in fact, NOT a sterilizing vaccine. How many chances do we take with childrens health. This is NOT FDA approved completely yet. Do Not mandate this in WA State.

My opinion is to not to mandate the covid vaccine. If it stopped people from getting covid and transmitting covid I Amy think other wise but at this point we need to keep with the 'I hate to say it ' PPE and social distancing which is what is proving to be the most effective.

Sincerely,
Heidi Kerr

To whom it may concern,

I am writing to you as a concerned mother of school-aged children. I want to be clear that I am writing to express my opinion against the idea of possibly adding a covid vaccine requirement for school. White River School District has done an amazing job at collecting data on our students in regards to their rate of infection and transmitting of covid to their classmates, teammates, and adult staff. The evidence is clear- our children are not the risk/liability when it comes to this virus. To mandate this vaccine for school attendance is absurd. First of all, it is still in experimental stages and it has been proven highly ineffective with nasty side effects and unknown long term consequences. So many vaccinated are still contracting the virus and spreading it. My biggest point of contention though has to do with natural immunity. So many studies prove that natural immunity is more effective than a manufactured vaccine could ever be YET, it is not even looked at as a counter to a vaccine. For all the other required school vaccines, blood titers were an option to prove immunity in lieu of getting unnecessary vaccines. Why is this not an option for covid??? Also, you don't mandate flu vaccines for our school children. How could you possibly mandate a vaccine requirement for this virus? It is constantly changing with new variants, constant changes with how many of which vaccines are needed to reach some level of immunity (which I again, is no where near the protection offered from natural immunity). Do you realize how many families are willing to pull their kids out of school over this possible mandate? Does that not say something to you...Vaccines are available for those that want it, please don't try to force it on our kids.

Sincerely,
Janell Doyle

As far as vaccinating my children that is ENTIRELY up to me as a parent. AT NO POINT will I EVER allow anyone that "Mandate" or try and force me to vaccinate my child/children. How dare any person in any sort of government try and tell people, force people or "mandate" what we do to ourselves or our children. The mandate is bogus and absolutely ridiculous for any one person to try and dictate what people are doing. Let's not forget we have rights as people of this country and state. We need to remember our rights and freedoms and fight for them, for ourselves and our children.

Subject: Student requirement for Covid Shot - please say NO

External Email

Hello -

I am a public school teacher and am asking you not to implement a requirement for students to have the Covid shots before attending school.

I have personal and professional reasons:

Personal reasons - myself, and members of my immediate family have had health repercussions to the shots that have been ongoing for months. Some of these repercussions have put my family members in the emergency room, and caused many additional doctor visits. People that we know of who did not initially have a reaction have started having reactions 8 months later, that have put them in the emergency room. Many of these reactions involve heart symptoms.

My professional reasons:

1. None of the shots have actually been fully approved by the FDA. The shot that has been approved for children has been approved as an "emergency authorized use." Requiring all children to have something that is not fully approved is reckless, especially considering that we do not know the true long term effects of these shots.
2. Children have had heart problems with this emergency use shot already.
- 3.

There are medicines available or shortly available for those who test positive, AND there are other vaccines in the works that are working to tackle the variants, not just the original.

4. In my particular school, yes, there have been cases of Covid. However, with most students not having the shot, the number of cases is minimal - perhaps 20 at most for the entire year so far. That's a high estimate; the real number is most likely closer to 12. The precautions we are taking are working, and the need is not there at this time.

The students are the future leaders of our state. We need to make sure we act in wisdom, and not rush into something. Please wait to require a vaccine until we have an actual fully approved vaccine from the FDA, and preferably one that can cover multiple variants.

Thank you for your time and consideration,

Sincerely,

Sharon Olsen
Issaquah WA

The misinformation about Covid and the push for vaccine mandates for a vaccine that doesn't work are a major concern to my family. Children are not particularly susceptible to getting Covid and the risk of serious health problems or death from Covid are minimal. Most people would be better off focusing on their overall health rather than relying on a vaccine that doesn't work. I'm not anti vax. My 2 daughters have the longtime required vaccinations. Those vaccines actually prevent them from getting the corresponding illness. Those vaccines have also been used for decades. If the school requires/mandates the vaccine for students I will find an alternative to public school or go so far as to move to a place that leaves medical choices to the individual.

This vaccine is not safe, most of us already know that, except the unwoke. If you want to wager your jobs and schools on mandating this unconstitutional death shot, go ahead and see how quickly the schools lose their kids. I already pulled one kid, I will pull my highschooler just as fast. No schools in washington??? Great idea folks ☐☐☐☐☐☐☐☐☐☐. sheep! Lets all be stupid, great idea.

Children should not be required to be Covid vaccinated to attend school or anything else. These injections currently have no long-term data on side effects. At this point the vaccine injury risk outweighs the risks children run of actually contracting Covid. It is well verified that children with no health issues that would make Covid an issue for them are at a miniscule risk of adverse events from contracting Covid. Also, since the inoculations don't prevent one from spreading the virus, it should be an individual's choice on whether or not to risk getting the vaccine. I am a very healthy woman who was coerced into getting the vaccine in order to keep my job as a community college instructor. My doctor was not recommending it. I am now suffering from myocarditis due to the mRNA vaccine. I would have been better off without it and so will the overwhelming majority of children.

Our children should not be used as experimental subjects. If the vaccine worked it would be preventing the spread of COVID, but instead the vaccinated and boosted are spreading it most rapidly in counties with the strictest mandates. Now is not the time to push an experimental vaccine on our children. You will have blood on your hands if you choose to force this.

Hello, I'm writing to you today in order to express my deep concern for our children.

Forcing a vaccine mandate on children is wrong. I encourage you to listen to Dr. Robert Malone and Dr. Peter McCullough, two very reputable doctors, who are preaching truth about covid, the risks, and treatment options in the midst of the government fear propaganda madness.

Washington state is chasing away good tax paying citizens due to the policies here. This will add even more to the list of reasons our family will leave the state.

Please know that my family, and many others we know, do not support a vaccine mandate in our children, or adults for that matter. We have a right to privacy regarding medical status and we should have a right to decide what goes into our body, and our children's bodies. Another thing to think about...if a vaccine mandate comes into law, our tax dollars should not go to support the school system which my children will not be able to participate in. This is discrimination and it's disgusting and we are fed up!

Wake up, Washington!!!!

Respectfully,

Shauna Myron

It is clear that the vaccine does not keep one from getting or spreading Covid-19. The mandates from other businesses around the state have not stopped the spread. For example, the city of Seattle has had a greater case count now that everyone is mandated to be vaccinated, than prior to them firing all of the unvaccinated employees. This will not keep our children more safe as a result. The amount of adverse reactions and deaths are far higher in children, than if they were to actually get Covid. They have a 7xs higher chance of death from the vaccine than if they were to get Covid. The numbers are clearly stated on the vaers website, and even from Anthony fauci himself. This is clearly a political agenda, and is not looking out for the best interest of our children. The public school district has already lost thousands of students due to the horrible way that they have handled Covid, and they should be prepared to loose even more if this is implemented. Imagine the financial strain that would cause for the state, doesn't it all come down to money in the end? This is an abomination on our children.

Please become informed on the VAERS reporting that has shown adverse reactions to the vaccine. Children are not statistically at risk from Covid. Rate of serious reaction is lower than the traditional flu. If you seek to require vaccines to attend school I will be joining with other parents to file a lawsuit against that state.

Regards,

Geoffrey Bennett

To require COVID-19 vaccinations for K-12 students in order to participate in in-school attendance.

11.

Are you Pro or Con on the proposal?

2. Con

In my opinion, children are not at risk of significant illness or a significant vector for spreading the disease. Mandating a vaccine will not serve to significantly protect them or reduce disease. On the contrary, I feel mandating a vaccine will prevent many children from attending in person. Virtual education options are inferior and mandating even a few children is sacrificing their education.

I oppose mandating the Covid-19 vaccine for children entering early childhood care, preschool through high school. I do not feel that we need to be vaccinating healthy children in order to spare those who are immune compromised or elderly adults from getting Covid-19. I do feel however that these people should be vaccinated and remain vaccinated in order to get mild cases if they do get Covid. The World Health Organization does NOT recommend children be vaccinated. In fact, the contrary. If you read their website the recommendation for who should be vaccinated it's adults aged 18 and up. Here is the link to view: <https://www.who.int/emergencies/diseases/novel-coronavirus-2019/covid-19-vaccines/advice> We have an FDA advisory panel that is also aware of the rates of pericarditis and myocarditis due to the Covid-19 vaccine and has called for further studies on this to be done now through the year 2024. Myocarditis and pericarditis are affecting the worlds population of people to include children of growing age and at rates of approximately 1 in 2700 for ages 15-17 and 1 in 1900 for ages 18-24. These are the rates that the CDC is not making readily available for the US population to see but are being seen throughout the UK and in the most recent Kaiser Permanente study done here in the US. Research shows that children who are not immune compromised may suffer more side effects from the Covid-19 vaccine than are at risk of suffering side effects from getting sick with Covid and gaining natural immunity. The JCVI and Public Health England have chosen NOT to vaccinate children under the age of 18 unless they are immune compromised or residing with someone who is due to the risks of and negative side effects of this mRNA vaccination. This should be saying something to us here in the U.S. but unfortunately our countries politics in regards to this vaccine over rule the science behind it and our children suffer the consequences.

Subject: School Vaccine Mandates...

External Email

Greetings,

I realize that you are likely receiving a great deal of communications from parents offering input regarding potential school Covid vaccine mandates in Washington state. I am the parent of a 7th and 8th grader in Puyallup, and would like to add to whatever input has already been submitted.

Put plainly: I hope that you will not mandate Covid vaccines as a condition for school attendance.

My primary concerns are 1). unlike previous vaccines, we have yet to spend years gathering data on the affects of this vaccine on children -- particularly those who have already acquired the antibodies by way of infection. And 2). we do have the data to suggest that this vaccine is non-sterilizing. If children will likely become infected either way, what is the benefit of introducing any risk (even a small one) by way of vaccine?

(As a sidenote, I would strongly advocate administering antibody tests to all students and teachers. The data gathered in our local communities would be invaluable in understanding the current scope of Covid spread).

I would be happy to provide links to data upon request. Many thanks for your consideration.

Regards,

Brandon Ghorley

Hello,

Thank you for considering my concerns with the idea of exploring a school vaccine mandate.

Forcing any sort of substance on a child can be dangerous and life threatening. Whether it's a peanut, a drug or an experimental injection. Each substance can have a different and sometimes a detrimental effect on certain children. The authority to determine what is good or necessary for a child is ultimately the parents responsibility. The child's personal doctor may be qualified to make such recommendations, but not the state, the school system or anyone in between.

Implementing a school vaccine mandate is a huge violation and oversteps a majority boundary of authority that belongs solely to the parent or legal guardian of the child. This mandate is unacceptable and should be thrown out immediately.

Thank you,
Garrett Aguillard

To Whom it may concern,

I am writing to express my deep concern for the wellbeing of our children as it relates to the concept of mandating Covid-19 vaccines. Children are at an extremely low risk for any serious illness from this virus, and the vaccines have not been in use long enough to know all of the risks. Even so, VAERS data show that the risks well outweigh any benefit from this vaccine for young children. To require this vaccine for children would be irresponsible and detrimental to their wellbeing.

10.

Are you testifying on a specific proposal under consideration by the board?

1. Yes

Deciding to include the C-19 vaccine as a requirement for school attendance

11.

Are you Pro or Con on the proposal?

2. Con

As a parent, I think it prudent to wait for much more research before requiring a shot. I'm supportive of long tested vaccines for children, my own children are fully vaccinated and enrolled in public school. Adding this requirement while these shots are still experimental is "the hill" for me. I would pull my children from public school before I would have them get a shot for which we have so little long term research.

1. Yes

Required vaccination for students/childcare, specifically COVID vaccination.

11.

Are you Pro or Con on the proposal?

2. Con

There is a lack of long term research on the effects of this new mRNA technology on children. With their cells rapidly dividing for growth, my concern is there is a large risk if something were to go wrong. Children have been mostly low risk thus far, so the risk of severe COVID is low but the risk is unknown for vaccination without long term research. Also, our family has a history of autoimmune diseases and thyroid disease. I know with at least Moderna people with these issues were excluded from original testing pools.

As a retired educator (7+ years) and a former Environmental Health Specialist (15+ years), I find that requiring anything concerning Covid-19 for students to be a waste of time, money, and resources. The vaccines are not doing what they were intended to do. Masks are counter-productive for students. We need to get back to "normal" teaching of the basics: reading, writing, mathematics, science, history and electives. It is fine to check a student's temperature when there is concern. Keep educating students to learn and reason, not the latest fad or political nonsense.

Thank you,
Randy B Grove

10.

Are you testifying on a specific proposal under consideration by the board?

1. Yes

Mandatory covid 19 vaccinations for school age children

11.

Are you Pro or Con on the proposal?

2. Con

This vaccine is manufactured in a new way that has no long term studies on effects. Also this vaccine is not similar to any other vaccine that is available. There also seem to be a number of short term negative reactions in a larger number of kids, especially 12-17 males. This virus has a 99.99% survival rate in people under 40. You should also be accepting natural immunity as an alternative, this is an acceptable test for many other vaccines, until now. School age kids whose parents want to vaccinate them have already done so, and now you trying to force this on a population that in most school age children is no more severe than a bad cold. There is a large amount of literature out there to dissuade mandating this vaccine, at this stage.

1. Yes

Making Covid vaccination a requirement for school entry

11.

Are you Pro or Con on the proposal?

2. Con

I strongly oppose requiring covid vaccination for any child under any circumstances. 1) The risk of covid morbidity and mortality is extremely low for children in general, the vaccine has no significant measurable benefit to the average child who is not immune compromised. 2) The gene therapy vaccine is still under emergency use authorization and does not have large, long term studies to prove long term safety, nor would be able to prove long term safety for several years. 3) The argument to vaccinate children for "public health" to protect others is void; covid has escaped vaccine induced antibodies as it continues to mutate. 4) The rates of adverse events to those who have already had covid and then go on to receive the vaccine are 3-4 fold higher, than for those who have not have covid 19; do you have an effective way to screen for prior disease to prevent these unnecessary adverse events from occurring? 5) Adverse reactions such as blood clots, myocarditis, sudden cardiac death, neurological inflammation, autoimmunity among many others are occurring and should not be taken lightly, we know VAERS which is a voluntary reporting system, is very seriously underreported, how can you be remotely confident in the rates of adverse events. Lastly, as Public Health Officials, you have the duty and you will be held accountable to uphold the Hippocratic Oath and "First Do No Harm". Please oppose mandatory covid vaccinations for children which are experimental, unnecessary for most and potentially very harmful.

In regards to the school's schedule of shots...

There are still so many unknowns about this strain of covid, and not to mention the scare tactics and political involvement.

The vaccine is untested and to give several boosters of this experimental concoction to our children, our future, is reckless.

I do believe we as a population need to create our natural immunities and that is the best way to protect our weaker populis.

The bat is out of its cage and as Americans, whose founding fathers lived in tyranny and wrote the constitution so we have a voice, we have the freedom of choice and we must not lose our freedoms.

2. Con

I am against requiring student COVID vaccinations. I am Isaac's mother. I do not want any politician or school district to tell me what to do to my child's body. It is my right to make decisions regarding my son's health. The job of the school is to educate my son, not to manage him medically. That is between me as a parent and our doctor. The job of the government is to protect my rights as a parent - to have the freedom to choose what is best for my son. Where will this stop? We must retain our rights for the freedom to choose what we we feel is best for our children. Only we, as parents, know what that is - nobody else.

Early on the CDC found that the virus was not fatal to our younger population. If a student were to contract Covid they will develop their own anti bodies which are better in the fight against virus. CDC does not have enough historical data on the long term effects of this vaccine. Many people are concerned about this as it relates to their children. They should not be forced by our government to put something in their childs body if they are not comfortable with it. This is coming from someone who is vaccinated, I am older and carefully weighed my options and made the decision for myself. Our government should not be mandating this it is categorically wrong. And a government overreach.

Data shows that children and young adults 0-19 are not at risk of dying or of detrimental hospitalization from COVID. In Spokane county where my children attend school, there are 83,000 children who fall under the 0-19 age range and in a year of collected data, 4 children have been recorded as having died *with* COVID (Spokane County doesn't differentiate between dying *with* COVID versus dying "due to" COVID - covid.srhd.org/topics/spokane-county-case-data). That is statically zero. Spokane County doesn't release any other info concerning associated co-morbidities or BMI numbers for the deaths which could have been contributing factors. I will not risk my children's lives with an experimental and largely untested (especially long term) "vaccine" and have it added to a requirement for them to attend school. Many traditional vaccines, such as MMR, have decades of data to back up their effectiveness and minimal risk to its recipients. The various mRNA therapies offered by Moderna, Pfizer and J&J are based on a medical technology only 4 years old and these specific formulations have been in existence only 18 months. That is insufficient time to test the safety, especially long term, to our most vulnerable part of the population. With a documented increase in heart conditions in young male adults due to the Moderna and Pfizer "vaccines" and blood clotting issues in young women with the Janssen (J&J) "vaccine", it is irresponsible of WA state to require a medicine that has a high potential of harming the patient, more-so than the malady it's supposed to protect against. There should not be a school attendance requirement for the COVID "vaccine".

The covid vaccines are not needed for our healthy children in schools. The kids have amazing immune systems which god gave them. My family refuses to take any of the covid vaccines. As a respiratory therapist in the pediatric setting I have personally seen that the kids are not being affected by the virus. The kids do not need this vaccine. In fact they don't need the mask either. Let these kids be kids. They need to encounter normal everyday germs to continue to build their immune systems. The mask don't stop covid from spreading. The airborne particles of covid are too small that the mask can't stop it. Quit mandating things that aren't helpful. The vaccines are only hurting people and their immune systems. My family WILL NOT COMPLY to this BS!

I am appalled that a vaccination mandate would be considered that can cause more harm than good. I want to PROTECT the CHILDREN. It is so obvious that not all of the nine criteria can be met by any of the new "vaccines." For instance, criteria #4 - does the vaccine do harm? Yes, the VAERS report lists over 19,000 deaths from the vaccines as well as hundreds of thousands of adverse events. And most importantly, criteria #5 - does it prevent disease? NO, it is now known that Covid19 occurs in people who have been fully vaccinated, and even those who have had boosters.

Covid Vaccine to be mandated to children.

11.

Are you Pro or Con on the proposal?

2. Con

Children are at a significantly low risk of contacting Covid and absolutely 0 HEALTHY children have died from Covid that didn't already have co-morbidities. This "vaccine" is also still only a EUA (Emergency Use Authorization) vaccine, therefore making it illegal to force anyone to take it. This has nothing to do with public health and everything to do with money. You are putting our children's lives at risk to line your pockets with gold, and you will be accountable to God when the time comes. Please do not mandate this in schools and do what is right! You will all be at the judgement seat of God one day and will have to account for this wickedness!

My husband and I come to you in complete opposition of a Covid-19 vaccine mandate on school and children. As tax payers our children have the right to a public education. We should not be in fear of losing that over a medical decision that we are not confident is safe for our children. This is a family decision and parents deserve the right to chose if we will submit our children to an experiment or not. We, along with many other concerned Parents across this State have grave concerns about adding the Covid-19 Vaccine to the list of required vaccinations amongst children of any age. Requiring an mRNA injection that does not stop the spread or prevent infection is not the intent of the legislature in it's delegation of authority to the State Board of Health to approve a schedule of immunizations for vaccine preventable diseases. This vaccine is neither effective in stopping the spread or preventing illness and should not be added to the list of required vaccines. Children are not at high risk of death from Covid-19., they have a 99% chance of survival. They are also not causing community spread. The latest variant presents as cold symptoms or nothing at all. People who have been vaccinated are getting it in higher numbers than those with natural immunity. Children, males in particular, are at a far greater risk of an adverse reaction to the vaccine than serious complications from covid. It is not right or constitutional to threaten to withhold an education from a child if the parents do not comply to your opinion of what is best for our children. There is enough data and research to indicate these vaccines are unnecessary and unsafe for children. We will not allow our children to be a science experiment to make adults feel safe. Our children will NOT receive the experimental vaccine under any circumstances. We will go to the ends of the earth to protect them. This deserves to be a family choice, they are our children, not yours. We will immediately pull our children from the public school system.

Are you Pro or Con on the proposal?

2. Con

The vaccine does not prevent you from getting covid. Why are we going to inject our children with experimental drugs that is proven not to keep them from getting covid. There is no long term data to show how this will affect them down the road. This is not a measles or mumps vaccination that has been around for decades that has shown to work and we know the long term affects. Let the kids build their immunity naturally.

Through research and basic medical understanding, we are not sure about how this vaccine may impact our children. I am in favor of vaccines that have been proven, and tested for years. We have not tested nor validated the results of this vaccine against children or pregnant women. Much is yet unknown about the COVID virus as well as the vaccine. Additionally, forcing people, families or individuals to adhere to choice based medical practices, is a violation of the freedoms of the citizens of this great nation.

I, along with many other concerned Parents across this State have I grave concerns about adding the Covid-19 Vaccine to the list of required vaccinations amongst children of any age.

Requiring an mRNA injection that DOES NOT PREVENT DISEASE was never the intent of the legislature in it's delegation of authority to the State Board of Health to approve a schedule of immunizations for "vaccine preventable diseases". As you are all aware, this vaccine does not prevent one from getting the virus, or spreading it, even with follow up boosters.

There is also a major difference between experimental "emergency" vaccinations with no one taking responsibility for vaccine related injuries and the long standing vaccines that have withstood appropriate and legal measures of safety and legal responsibility.

Children are not at high risk of death from Covid-19. The latest variant comes to the majority of them as cold symptoms or nothing at all, and that INCLUDES children who's parents made the choice to vaccinate.

Requiring me to put my child at risk by getting a vaccine that offers perceived safety rather than actual immunity- is reason enough for me to pull my child from the public school system, and that is what I will do if this becomes a requirement.

External Email

Dear Ms. Kahler,

Why is this meeting not being recorded?

Why is the public not allowed to comment or ask questions?

Why is this critically important meeting being held with almost no notice during the week between Christmas and New Year, when most people are busy with family and would more likely miss this?

Why is there no opposing argument (representing a majority view of your constituency) regarding this INCREDIBLY personal, sensitive issue?

Why is natural immunity not being considered for this issue (where research has demonstrated for decades, and in the past 22 months of SARS-CO-V2, that natural immunity is robust and long-lasting)?

Why are we considering mandating an experimental gene therapy, a dreadfully LEAKY vaccine (definitely counter to science), when the FDA "approved" version (Comirnaty) is not yet available? How can you (attempt) to force the experimental version on the public (OUR CHILDREN), in what is proving to be an unconstitutional bait-and-switch?

Best,

Sophia Wilson

Tax money is specifically set aside to educate children living in Washington. If the state determines they will discriminate against children who are not vaccinated, the money originally allocated to these children should be released in the form of educational vouchers granted to them for the use at private schools who are willing to educate all children regardless of vaccination status. Children are entitled to K-12 education, if the state will not meet this obligation plenty of private institutions are happy to fill in but the state must carry the bill. I am disappointed that Washington State Public Schools are so willing to ban thousands of children from the education they are entitled to.

Sincerely,
Heidi Farley

Children should not have to get the vaccine. No one should be told what to do to their body. We should all have the choice to choose. Children are not high risk and the vaccine is still under Emergency Use. We need to keep the ability to choose for ourselves and our families well being.

1. Yes

Adding EUA Covid-19 Vaccines to the required schedule of vaccinations for children to enter public schools.

11.

Are you Pro or Con on the proposal?

2. Con

How can we require children to take a vaccination that hasnt gone through testing in its entirety and poses a greater risk with side effects than getting actual covid? Will the WA state board of health be accepting liability for any vaccine injuries due to mandating a EUA vaccine that has not properly and completely studied the short and long term risks to children with this specific vaccination. What about children who have a genetic pre disposition to developing autoimmune disorders from one or more of their parents? Those individuals may be at an increased risk of awakening an autoimmune disorder through vaccination with an mRNA vaccine. While there is no evidence currently that this is possible, there also is no evidence that it isnt, and that gives parents reason for pause and concern. Leave medical decisions in the hands of parents who know their childrens whole medical history and have their best interest at heart.

If you force vaccines on our kids, it's very simple.....we will move our businesses out of Washington, it's that simple. How's inslee going to keep giving free money to the homeless when all the actual workers leave the state? Can we make it mandatory that teachers aren't fat anymore?....because that is a greater threat as an example to our children that it's okay to be obese.

COVID 19 has not posed any significant risk to children. The vaccine is still under an emergency authorization and has not yet had enough time to prove out of there will be long term side effect's. This devision should not be made until much more information and research is completed.

I don't believe forcing vaccination for covid makes sense for some of the individuals best able to cope with the virus. The covid19 vaccines also do not guarantee the individual will not contract the virus so adding it as a requirement will limit access to education, strain families and still provide no guarantees that the disease will not spread through schools.

I believe kids should not be required to enter school on the matter of vaccination status. Vaccines are not FDA approved at the moment only EUA approved. Even being EUA approved their has not been a lot of proper testing for my liking.

1. Yes

To better qualify the recommendation that Covid vaccine be required for ALL school aged children(5-16). All vaccines recommended for admissions currently are FDA approved. The vaccine exemption can be applied for children in school with options for admission and not subject to "mandatory" use with current FDA approved vaccines. The Covid vaccine is still under EAU (Emergency Use Authorization) and not FDA approved yet for school aged children 5- 16 but is recommended in the interim. The CDC and ACIP only recommends providing vaccine to SOME immunocompromised children- not all children. Recommending a vaccine under EAU to be mandatory is creating unrest in parents and children. The optional vaccination status is allowed for all proven and established FDA vaccines, this should also be applied to Covid or other vaccines that are optional, like Influenza, and should remain optional until proven necessary approved by CDC, ACIP or FDA. This movement to mandate is not following historical approval process or regulation that use actual time and patient volume data to support decision. I believe this is premature in action at this time.

11.

Are you Pro or Con on the proposal?

2. Con

Against mandatory Covid vaccine for school aged(5-16) children under EAU. I am pro vaccine in general and I am vaccinated, however with a child I believe the decision should be allowed for the parent and child to opt out knowing risks and benefits of vaccine and risk of disease. All vaccines are subject to unknown long term side affects in the initial implementation period(usually 5-7 years). Until time has elapsed and long term data in children is obtained and FDA approval is given, it should be left to the parent to decide.

Hello, I'm writing to you today in order to express my deep concern for our children.

Forcing a vaccine mandate on children is wrong. I encourage you to listen to Dr. Robert Malone and Dr. Peter McCullough, two very reputable doctors, who are preaching truth about covid, the risks, and treatment options in the midst of the government fear propaganda madness.

Washington state is chasing away good tax paying citizens due to the policies here. This will add even more to the list of reasons our family will leave the state.

Please know that my family, and many others we know, do not support a vaccine mandate in our children, or adults for that matter. We have a right to privacy regarding medical status and we should have a right to decide what goes into our body, and our children's bodies. Another thing to think about...if a vaccine mandate comes into law, our tax dollars should not go to support the school system which my children will not be able to participate in. This is discrimination and it's disgusting and we are fed up!

Wake up, Washington!!!!

Respectfully,
Shauna Myron

Are you Pro or Con on the proposal?

2. Con

In theory, requiring immunization for serious infections is a noble effort, however, I must object to requiring the Covid-19 vaccine for students. First and foremost, it does not stop transmission, it only lessens the severity of the symptoms. There is also serious concern about the side effects of the vaccines which include blood clots and heart issues. Since children are at low risk of catching or even spreading Covid-19, this requirement seems unnecessary and will cause many families who oppose it a lot of needless grief. Please, do not add the Covid-19 vaccine as a requirement for students.

Children are not at risk of covid-19. These "vaccines" are not FDA approved, only EUA and have not been properly tested. Covid shots should absolutely NOT be a requirement for children.

Requiring Covid vaccine for kids

11.

Are you Pro or Con on the proposal?

2. Con

My kids have natural immunity and have had covid already. I will not be getting them vaccinated for this reason as they have natural immunity. This should be taken into consideration and antibody test should be a replacement for the vaccine. Think about all the other vaccines that are not required with natural immunity. This is so wrong. It should not be up to school districts to make medical decisions for my children! You are not doctors or scientists. We have no idea of long term effects of this vaccine and won't for a long time.

1. Yes

Adding Covid vaccine to the WAC required school immunizations

11.

Are you Pro or Con on the proposal?

2. Con

Don't gamble with long or short term side effects on our children by giving them a "vaccine" that has been proven thousands of times over that it is not in fact a vaccine at all. It "may" reduce symptoms for some but our children are at an extremely low risk for experiencing hospitalization or death from covid. I continue to be disappointed by conversations on a vaccine requirement as a sweeping measure that give no consideration for natural antibodies or other measures to reduce spread of covid.

2. Con

Without all the research out and clear transparency from all the vaccine companies I don't feel that informed decisions are being made on a vaccine that has been around for a short period of time. It does not prevent against Covid. Children have the lowest risk of dying from Covid. We have yet to understand the long term effects. By vaccinating our youth without a full understanding we can be sentencing our children to permanent irreversible effects we do not fully understand yet. It's not worth the risk. This should be a parental choice not a government choice especially since the vaccine does not stop the spread of the virus.

11.

Are you Pro or Con on the proposal?

2. Con

I am opposed to requiring covid-19 vaccination for children in childcare or school facilities. The science is clear that children are not at great risk from covid-19, in fact, seasonal influenza poses a much more significant risk to children than covid-19. In addition, all covid-19 vaccinations are still in EUA status, which will be expiring in the near future.

11.

Are you Pro or Con on the proposal?

2. Con

I am against mandatory immunization of a vaccine that is currently still an experimental vaccination, and only is being distributed because of an emergency status.. however the research has not been provided sufficiently to warrant the COVID vaccination as a safe and viable source for protection against any level of a COVID, and yet it is being PUSHED throughout our society and now to our children. This is an outrage.. and irresponsible practices for health organizations.

I strongly oppose the vaccine mandate for children to enter school or daycare. Children have almost no risk of dying or becoming very ill of Covid. This vaccine is NOT FDA approved, it is NOT been proven safe or effective for children. There is no long term data on the safety and efficacy of this vaccine for children. Will the state be held liable for any damages or death caused by adverse effects of this vaccine? This is a parent's decision, NOT the decision of the state health department!

From: Josie Bent

Subject: Vaccine requirements

External Email

I am writing as a parent to ask that covid vaccinations NOT be made a requirement for schools. Vaccines that have not been approved by the FDA and have not had long term studies should never be made a requirement for students to have to attend school and be educated. I believe making covid vaccinations and testing required would be a violation of human rights and is unethical. Please consider exemptions for those who may have religious, health, and personal reasons for not participating. Please be advised that if these are made required and mandatory, my children will be removed from public education.

Thank you,

Josie

To whom it may concern,

Why on earth would you even consider enforcing a vaccine that does nothing to control the spread of a virus? The statistics below speak for themselves.

Using data directly from the CDC, pretending it is not inflated.

COVID statistics under the age of 18

<https://covid.cdc.gov/covid-data-tracker/#demographics>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcovid.cdc.gov%2Fcovid-data-tracker%2F%23demographics&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C20df779cb31c4b9d879808>>

Today 12-14-21 in the United States of America

Population - 73,478,500

Total cases - 7,825,545

Total deaths - 0

<https://covid.cdc.gov/covid-data-tracker/#demographics>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcovid.cdc.gov%2Fcovid-data-tracker%2F%23demographics&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C20df779cb31c4b9d879808>>

% chance of contracting COVID - 000.106

% chance of death if contracted - 000.000

% chance of death all population - 000.000

Food for thought

"It's still unclear exactly how many people will need to be vaccinated in order to achieve herd immunity to COVID-19, but experts estimate that it will take at least 70% of the population"

<https://www.houstonmethodist.org/blog/articles/2020/dec/herd-immunity-how-many-people-need-to-get-the-covid-19-vaccine/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.houstonmethodist.org%2Fblog/articles/2020/dec/herd-immunity-how-many-people-need-to-get-the-covid-19-vaccine%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C20df779cb31c4b9d879808d9cb05b57b%7C11d0e2>

As of today 12-14-21 76.6% of the population of the United States is vaccinated, so why is it still being pushed so hard?

Subject: Comments for the Immunizations Technical Advisory Group

External Email

Good Afternoon,

I'm sending this email in response to the meeting today discussing adding covid-19 vaccines to the list of required immunizations for students. I want to inform you that these vaccines do not prevent transmission of coronavirus, as a vaccine is intended to do. Children have been the least affected with any serious illness of covid-19. In fact many don't even know they are infected, they find out by testing. These vaccines have not undergone the process of testing and research to prove they are safe long term. There is no way to know their safety in human children, it is impossible to know this information at this point. Mandating this vaccine will cause havock among families that do not want to make the choice of experimenting on their children or forfeiting their right to a public education. I am ready to pull my children out of public school if this is approved, and I know many others as well. The current research is showing covid vaccinated individuals are contracting COVID-19 at the same rate as those who have not received this vaccine. There is no logical reasoning to make this vaccine mandatory to attend school. I want to thank you for your time and I hope this message reaches you in good conscience.

Hello,

I am emailing because I am greatly concerned about the fact that the addition of the covid 19 vax is even being talked about for school children.

#1 the vaccine doesn't work! My own young adult son was fully vaccinated and still got covid! # 2 children rarely get covid and when they do symptoms are mild #3 I have heard way too many personal stories from people who have had adverse reactions and DEATHS we shouldn't risk our children!

Our children deserve better care they should not be subjected to experimental therapies with no proven track record.

As you probably surmise from the subject line of this message, I am writing to express my concern about today's BOH meeting to discuss adding a vaccine requirement to attend school.

In the face of all the evidence that for people under 40yrs old these shots put them at more risk of health issues than natural infection. With the emergence of Omicron as a common cold-like infection for virtually everyone, this is the time when we need to be discussing the timeline of peeling away restrictions, mandates, and all of the things that we've been harming our kids with over these last two years, NOT adding more useless and potentially harmful mandates.

The idea that parents are having to worry about making a decision whether to pull their child out of school or inject their child with a vaccine that might harm them is abhorrent. The very idea of mandating a vaccine for children that has no long-term data on possible negative effects (for any age group) is amoral on the face of it. This isn't about being "anti-vax" - the latest weapon word. This is a simple risk/benefit calculation. Every other required vaccine for kids underwent a much longer approval process, and then a further 6-16 years (depending on the vaccine) of use in the general population, before they were ever considered as a requirement to enter public schools.

I think that now is the time to publicly speak up against this single-minded approach to dealing with the pandemic. It doesn't matter if you are pro-covid vaccines. I personally think that they are a marvel of technology and I am glad that they are available for those who stand to benefit from them. However, our state government and public health officials seem to have lost the script. . I worry that they will set back trust in all vaccines for a generation if too many kids are being harmed by these new shots. Trust in our public health agencies is already at an all-time low. Proceeding in this manner may have terrible consequences if our fellow citizens turn their backs on sound advice for future health problems.

Please, I am asking you to back away from this idea.

I also encourage you to read this post by Dr. Vinay Prasad. He has been a voice of moderation and reason throughout the pandemic and he is deeply concerned that we may be rushing into something that we might regret.

<https://vinayprasadmph.substack.com/p/uk-now-reports-myocarditis-stratified>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fvinayprasadmph.substack.com/p/uk-now-reports-myocarditis-stratified&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C1af89c478f25410517d708d9cb2f63a8%7C11d0>>

If you have 30 minutes of extra time then you might also listen to this interview between Zuckerberg and Fauci from way back near the beginning of the pandemic. If you do, then pay particularly close attention to what Fauci says regarding the process by which the vaccine safety profiles need to be established. Then ask yourself if the science changed, or whether something else happened.

<https://m.facebook.com/zuck/videos/live-with-dr-anthony-fauci-the-uss-top-infectious-disease-expert-to-learn-about-/10111683294466031/>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fm.facebook.com%2Fzuck%2Fvideo%2F10111683294466031%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C1af89c478f25410517d708>

I am hopeful that the madness and hysteria of the last two years is beginning to fall apart and that we might begin to work towards a healthier situation for our kids. They have been harmed enough by our pandemic policies. I just hope that Washington State isn't the last place to get the memo. Much of the country seems to have figured it out already and I am astonished that Washington State still seems stuck in some weird fearful version of 2020. Good grief, even South Africa seems far ahead of us in their policy-making decisions. They've dropped contact tracing, testing asymptomatic people, quarantines, etc.

There are so many more important things that we need to do for our kids, and this mandate is a huge problem that gets in the way. I am very worried that my boys may not get to finish their education in our schools. They already have naturally acquired immunity (as I suspect the majority of the students do by now) and it would be irresponsible for me to allow them to get a shot that might put them in harm's way so that irrational adults somehow feel "safer".

No sane society uses children as shields to protect adults.

Thank you for your time.

I find it very hard to believe that a Board of Health that allows corporations to poison the food supply with toxic and addictive chemicals, leading to a 184% increase in obesity between 1990 and 2018 and a series of health-related problems, suddenly cares about the public's health in the form of mandating vaccinations that don't even have a one-year history. By the Washington State Department of Health's own admission, Heart Disease, not Covid-19, is the leading cause of death in the United States, yet despite knowing this information for a very long time, I have seen no emergency measures being rushed through to prevent the conditions that lead to heart disease.

Also, it is known that Covid-19 vaccinations, like other vaccinations, can lead to myocarditis in children and younger adults. Is the Board of Health ready to compensate any damages for any individual that suffers from myocarditis after getting vaccinated, including deaths, after imposing a mandate?

3. VACCINE COMPANIES HAVE LONG RAP SHEETS Vaccine makers have paid out tens of billions of dollars for crimes, including fraud and violating the False Claims Act, when they knew products would cause injuries and death. (Think Vioxx, Opioids and more.) If they knowingly put harmful products on the market when they can be sued, why should we trust them to make safe vaccines when they have no liability and rushed clinical trials?

<https://violationtracker.goodjobsfirst.org/industry/pharmaceuticals>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fviolationtracker.goodjobsfirst.org%2F>

4. PREVIOUS ATTEMPTS TO MAKE SIMILAR VACCINES HAVE FAILED In one study, vaccinated infants got much sicker than the unvaccinated infants when exposed to the respiratory syncytial virus (RSV) naturally, with 80% of the vaccinated infants requiring hospitalization. Two died. In subsequent studies, vaccinated animals became very sick when they later became infected with the actual virus. Many died. This phenomenon is called Antibody Dependent Enhancement (ADE).

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nature.com%2Farticles%2Fs41579-020-00462-y%23Sec11&data=04%7C01%7Cnathaniel.thai%40sboh.wa.gov%7Cf64a8f005bd1441d6de708d9cbff764c>

5. COVID VACCINES HAVE NO LONG-TERM SAFETY TESTING There is no way to determine what these experimental vaccines will do to humans in the medium- to long-term. Not all vaccine injuries manifest immediately. Additionally, given that all current COVID vaccines have Emergency Use Authorization status only, people cannot be subject to mandates under federal and international law.

11. All of the treatments being marketed as COVID-19 vaccines are still in Phase III clinical trials until 2023 to 2024 and hence qualify as medical experiments. People taking these treatments are enrolled in clinical trials;

12. None of these treatments has been approved, but only granted emergency use authorization, hence cannot be mandated nor can informed consent be dispensed with;
13. Most vaccines are trialed for at least 5-10 years and COVID-19 vaccines have been in trials for less than one year;
14. No previously attempted coronavirus vaccines (ie. MERS, SARS-1) has been approved for market, due to antibody-dependent enhancement resulting in severe illness and deaths in animal models;
15. Numerous doctors, scientists and medical experts are issuing dire warnings about the short and long-term effects of COVID-19 vaccines, including but not limited to death, infertility, miscarriages, Bell's palsy, blood clots, cancer, inflammatory conditions, autoimmune disease, early-onset dementia, convulsions, anaphylaxis, myocarditis, and antibody dependent enhancement leading to death;
16. Children and youth are at virtually no risk of dying from COVID-19 or transmitting it to others, but deaths and injuries to children and youth have already occurred in the COVID-19 injection clinical trials;
17. There have been more deaths from COVID-19 vaccines, as reported to the Vaccine Adverse Events Reporting System (VAERS), than deaths in the last 10 years from all vaccines combined;
18. Only 1% -10% of vaccine injuries are reported to VAERS. The full extent of adverse events from the COVID vaccines is unknown as there is a significant delay in uploading reports to the VAERS database;
19. Breakthrough cases of COVID-19 infections in those who have received COVID-19 vaccines is on the rise;
20. The trials have not proven that COVID-19 vaccines prevent infection or transmission;
21. Safe and effective treatments and preventive measures exist for COVID-19;

AND

22. Students are at nearly zero % risk of contracting or transmitting this respiratory illness and are instead buffers which help others build their immune system. The overall survival rate is 99.997%.

23. Children have already been exposed to unprecedented amounts of fear, instability, shaming, psychological trauma, and segregation through the COVID-19 measures and are therefore even more suggestible than their developmental stage would usually entail;

24. It is the job of parents or legal guardians, not of principals, teachers, teacher assistants, school board executives or other adults with influence on children, to make medical decisions for them;

Schools include vaccine and COVID-19 vaccine curriculum, which is biased, prejudicial and is a form of undue influence on any minor child which excludes full disclosure of the known risks of vaccination and the emerging evidence that vaccines do not provide protection as claimed;

25. Vaccine compliance elicited from children under threat of coercion, bullying, or suspension and who are not of fully informed consent that they have the legal right to refuse vaccination, constitutes extreme bullying and coercion and could be construed as a "battery" as well as a violation of constitutionally protected rights.

26. Contrary to misinformation spread by the World Health Organization, "implied consent" is not "informed consent," and "informed consent" is mandatory by law;

27. The Mature Minor doctrine cannot override the wishes and consent of the parents outside of preventing imminent harm or death. Vaccinations do not fall under the Mature Minor doctrine.

28. The engagement of medical experimentation without informed consent further constitutes the indictable offense of crimes against humanity.

For all of the foregoing reasons, I respectfully request that Washington Board of Health give serious consideration to not approve of the COVID-19 vaccine.

Sincerely,

Christina Carrillo Dela Paz

Good morning,

I have been notified the State Board of Health is considering mandating the COVID-19 vaccine as a requirement to attend public school. It is my understanding the board is required to take public opinion into considered as a part of their decision-making process. I am writing to you today to urge the board to consider the actual science regarding the COVID-19 vaccine and make a level headed decision regarding the mandate. The risk of hospitalization and death for children with COVID-19 is less than 1%. This low risk does not warrant mandating the vaccine as a requirement to attend public school. Much like the flu, another virus with low risk of hospitalization and death for children, the COVID vaccine does not prevent contracting or spreading COVID. Based on that information alone, mandating the vaccine is ridiculous.

For reference, I am not anti-vaccine. My family has been vaccinated as required bro attend public school. However, we have never vaccinated for the flu for the exact reasons I mentioned above. Individuals that are not in a medical risk category, whom live lifestyles to promote health, and who would prefer natural immunity, should never be forced to inject chemicals into their body.

There is no valid or scientific reason to mandate vaccines for attendance to public schools. The only reason would be because a political agenda is being forced on the board. As a parent it is my job to make decisions regarding my children's health and medical care. This is not your job.

Thank you for your time.

Respectfully,
Tierre Reilly

Hi, I am writing this email to ask you to please consider leaving options for parents who choose to not vaccinate their kids to attend school. I had all my kids get all the necessary vaccines to attend school. I even talked to my children's doctor, I really don't feel comfortable giving the Covid vaccine to my kids not knowing the long term effects. Even my doctor could not confirm any long term effects that might happen. If Covid-19 vaccines will be required to attend school, I will be taking my kids out of school and homeschool. It really breaks my heart knowing this, because I know all kids want to go to school and socialize with other kids. It's been a hard year for everyone... I can already imagine the separation and bullying in school if the accent is placed on who is vaccinated and who is not. After all this time of pandemic, I am asking for you to be kind and open minded to those who are not comfortable, at least not comfortable yet, to vaccinate their kids. Thank you for understanding.

Dear Board:

It was just on October 29th that the Covid-19 vaccine, by a single manufacturer, received emergency use authorization only for the 5–11-year-old age group. The trials for this drug were minimal at best including approximately 3,000 children and lasting only two months. There is no FDA approved vaccine for children ages 5-11 and it could be argued that the “approved” vaccine for those 12 and older is not specifically approved either. Establishing a TAG at this time seems very unnecessary. Requiring a Covid-19 immunization for school entry would be catastrophic and tragic for school age children. Children have not had significant issues with Covid-19. Typically their symptoms are mild, and they recover quickly. There is no significant mortality among these age groups. In fact, mortality is less than one percent. For the past two years, parents and schools have navigated Covid-19 and have been successful without a mandatory immunization. There are established protocols within schools to keep students with fevers, runny noses, etc. at home. These actions along with social distancing and cleaning procedures have proven successful. The CDC has concluded that asymptomatic cases are unlikely to contribute substantially to the spread of Covid. Those who are not sick cannot make others sick. There are many other things that pose a far greater risk to the health of children.

Part of the criteria you use in the review process is vaccine effectiveness, safety and an acceptable level of side effects.

- We continue to hear daily about the ineffectiveness of these vaccines, with efficacy diminishing after only months. Those who have had Covid-19 vaccinations are coming down with Covid-19, 100's of thousands of individuals.
- Safety is and should be a huge concern for you as decision makers as well as for parents. There are so many unknowns in vaccinating children for Covid-19. The trial was too small and the outcomes and effects on this age group very unknown. Information on Covid -19 vaccine impacts has been skewed and censored. Prior vaccines adhered to a very high threshold of safety, one that would have resulted in the Covid-19 vaccine being discontinued months ago if followed. The Swine Flu vaccine was withdrawn after 25 deaths were reported.
- There are many side effects with this vaccination and a lot of information still not known. The FDA has stated that myocarditis is a concern, particularly for young men. There are questions regarding its impact on fertility, hypertension and many other health issues. Research shows the risk to children is far less in having Covid-19 vs. receiving the immunization.

Disease Burden is another criterion used in your review.

- Covid-19, particularly among school aged children, does not have significant morbidity. The chance of death is less than one percent.
- Because of the many break-through cases amongst the vaccinated, vaccination is not a key factor in reducing person to person transmission. As stated earlier, protocols around health monitoring, extra cleaning and distancing have proven effective in reducing transmission.

Implementation is also considered.

- The Covid-19 vaccine is acceptable to some in the medical community and the public, but definitely not to all.
- Mandating this for school age children will place a huge burden on parents as it will

force them to have to make very difficult decisions about the health of their children and an education for those children. Just as adults have been forced out of their jobs for making a personal decision regarding taking the vaccine, requiring a Covid-19 vaccination for children at school will force kids out of school. Consider the devastating impacts of a year plus of on-line school on students. Suicide is already the 2nd leading cause of death in those ages 10-18. If your decision is based on what is best for children, it will be against any forced requirement for the Covid-19 vaccine.

Education is a great equalizer and a right for all children. A decision to require a Covid-19 immunization for school entry will be catastrophic and, in my opinion, both inhumane and unethical. I implore you to not include the Covid-19 vaccine among those required for school attendance.

DO NOT REQUIRE A COVID-19 VACCINATION FOR STUDENTS! IF YOU DO, YOU WILL BE DIRECTLY RESPONSIBLE FOR ANY INJURY OR DEATH CAUSED BY THIS VACCINE – AND THERE HAS ALREADY BEEN OVER A MILLION OF THOSE!!

The action of mandating a vaccine to the least impacted age group is unconscionable!

You are going to CRIPPLE the already failing public schools. So many parents are already ready to Home School their kids and this will send them over the top.

THINK about who you are helping..... Your own egos or the kids. You cannot say you have the kids in mind when you talk of mandating vaccines for a virus that is becoming more like the flu every day and impacts kids 0-19 the least, if at all! Follow the data!

Please end this conversation NOW.

Hello Kelie.

With a sincere heart, I am joining the rest of the parents who are protesting against the Covid-19 vaccine mandate. There is definitely not enough evidence to back up whether or not it is safe. Covid has definitely affected many of us, my family included. But with over a 99% survival rate and it not affecting children, it is a power hungry move to mandate it for our children. Please help stop this! Let's start creating peace at once rather than continuing this battle with parents who want the best for their children. Let US THE PEOPLE choose what is best for our children as you are all fighting to let us choose while the children are still in the mother's womb. Why does it change when it comes to our children going to school. STOP THIS PLEASE!

To whom It May concern,

I am emailing you today to ask you to NOT mandate covid-19 vaccines for our children to be able to attend public schools in Washington state. Even though it has been approved by the fda, it has not gone through all of the rigorous testing that many of our past vaccines have been held to, and our children should not be forced to get a vaccine that hasn't been properly tested, in order to attend public school. My children's safety is my number one, and I will not be getting them vaccinated with something so new and uncertain. Please do the right thing and NOT mandate that these kids be vaccinated in order to attend school.

Thank you,
April Harzynski

please do not make covid vaccines for kids mandatory for k-12. our family would have to pull our kids out and homeschool. adults working in schools can receive the vaccine and keep themselves safe, but due to the novel nature of the vaccines, zero long term studies indicating it's safety vs potential risks in the long term (after 10-20 years), and overall low risk of serious complications as a child coming down with covid, it does not make sense to make kids have to be vaccinated. thank you,

Subject: Comments for the Immunizations Technical Advisory Group

External Email

To the Technical Advisory Group:

Thank you for providing the opportunity for public comments and inquiries regarding adding the Covid 19 vaccine to the regular schedule of vaccines for school aged children.

I was surprised to hear that this was being considered and hope that there will be a broad outreach effort to all the parents of WA to inform them of this development. Feedback from across the state is critical given the implications to the welfare of our children.

I have questions in several areas that I would like addressed by the TAG.

Safety

1. Has the DOH ever added a vaccine to the schedule that has been in use for under 6 months with no long term data?
2. Were any children harmed during the studies of these vaccines? Who is providing that data to TAG?
3. Who is tasked with investigating the record number of injuries and deaths reported in the VAERS system and factoring that into TAG work?
4. How do we justify mandating a novel vaccine with known increased risk of myocarditis, especially in young boys?

Risk for kids

1. Given the low risk of severe COVID 19 outcomes for kids (less than annual influenza), how does WA state DOH justify adding this novel vaccine to the schedule?

<https://data.cdc.gov/NCHS/Provisional-COVID-19-Deaths-by-Sex-and-Age/9bhg-hcku>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdata.cdc.gov%2FNCHS%2FProvisi>
COVID-19-Deaths-by-Sex-and-Age%2F9bhg-
hcku&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cbf8aef857e2843a3a82608d9cb2429cc%7C11d0e217

Effectiveness

1. Data now shows that current vaccines wane in efficacy to a great degree within 6 months. These vaccines do not seem to actually function like traditional vaccines that impart long time immunity and controlled transmission. Why are we considering mandating vaccines that are non-sterilizing?
2. Do we expect the definition of "fully vaccinated" will be routinely assessed to include additional boosters? How is this logical and appropriate with no long term studies, including no studies on mixing vaccines? Are boosters of older version vaccines even appropriate given new variants that evade older versions of vaccines?

Liability

1. Are there actually any approved and licensed Comirnaty Vaccines available in WA state? If not, then how can we mandate the EUA BioNtech vaccines which are legally distinct?

2. Who is liable for injuries from mandated vaccines? If injuries are caused by EUA vaccines instead of Comirnaty then who is liable? The school system? The medical providers of the vaccines? Parents of injured children?

This is a beginning list of questions that I would like addressed as you move forward with your investigation.

I have become more concerned in recent weeks as I have encountered these questions from other parents in my community. I am fully vaccinated. My two older children are also. When my youngest became eligible in recent weeks, I took pause and began investigating more. I'm looking for answers and am no longer convinced that all the information that is necessary to ensure the health and safety of my children is being considered.

I believe that we are rushing ahead with policies that will potentially have long lasting harms on our children, just as earlier policies (lockdowns, school closures, etc) wreaked havoc on their wellbeing. Now we are facing the unintended consequences of another epidemic of unprecedented mental health issues. What other unintended consequences are we setting our kids up for due to rushed policies? That's what I want to find out before creating more harm. I hope that you will, too.

Thank you for your attention to these concerns and your work on this important subject.

Please let me know that you received this email and provide a response.

Best regards,

Kristi Zimmer

Samantha,

Why are we pushing the covid vaccine on our children when the survival rate is nearly 100%? It makes no sense and is very Unconstitutional.

Dear Sirs and Mesdames,

It has been brought to my attention that there is a plan to require vaccinations against Covid 19 in order for children to attend school. If one reads the news, cruise ships with 95% vaccinated passengers and crew have had outbreaks of Covid, as has a Navy ship with an even higher percentage of vaccinated crew. In the past month I know so many people who have contracted Covid—vaccinated and unvaccinated, none with any serious ill effects. The vaccine has not had enough testing, and seems to do little good except to enrich a few pharmaceutical companies. Please allow parents to be able to make the choice for their children, and not impose a drug on children that has had no long term studies as to its effects for an illness with even fewer issues for the young.

Best Regards,

Hi,

Please do not make it a requirement to have the Covid vaccine for our kids to go to school.

I am not anti-vaccine but there is still too little known about long term side effects to require this of our younger generation.

Yes, I've read the mRNA has been studied in labs for years, but there has been no mass clinical trial and study done like the Covid vaccine.

I urge you to wait until more long term data can be collected before making this a requirement.

The state will lose massive revenue from students being pulled from state schools over this and many parents will leave the state or homeschool if you make this a requirement.

Thank you,
Jessica DeVries

Hello,

I watched the zoom this early afternoon regarding the vaccines for children in the state of Washington. I am a parent of two and feel my comments and concerns should come to thought when this decision is made. Amongst many other parents that have students attending schools in the state of Washington.

I do not agree with making this a mandate in order to attend schools. Both my kids are up-to-date with all their vaccines. I am not against vaccines I'm all for them but I'm for those that they have had time and research. These have not been out long enough to truly know the long-term effects. And I will not give my child something without the full scale of testing and years behind it.

There are children dealing with all sorts of side effects due to these vaccines. I will not subject my children to that. Also there are tons of reports a fully vaccinated adults/teenagers along with their boosters still transmitting covid and also getting it themselves. So therefore there's no purpose to making our children take something that doesn't stop the spread.

I would have a different opinion if it actually proved to stop the spread. Give this vaccine the normal amount of time behind testing which is typically 5 to 10 years before this becomes a topic of discussion.

Should this become a mandate I will pull my children from the public school system and homeschool them if I must. Please don't rob my children of a school life. They have already given up so much with the original lock down as well as the separation at school and the masks. It's already so hard and different for them.

Their lives matter too much to me to give them a vaccine that they don't know 100% what it will do to them.

Thank you

Delillah Sterling

There is ZERO reason to require a vaccine for kids to go to school. Theres no data that shows that this needs to happen. We as parents are fully aware of the truth. This attempt is a massive over reach on the states part. The state needs to stand down and let parents make the choice. We have options. I will remove my children from punlic schools in a heart beat. I will be sharing this information to all parents I know in this state. Stand down.

Requiring covid vaccination among public school students will cause inequity, esp. since minorities are less likely to receive vaccination due to past minority history of mistrust in government entities (ie. Japanese internment camps, mistreatment of Native Americans by the govt.).

Plus vaccinating children is not supported by the scientific evidence, as children recover much quicker and have less complications with covid than with adults.

Covid vaccines are still Emergency use authorized, and people have a right to refuse without having their jobs, school opportunities, and grocery shopping denied. More research needs to happen regarding significant side effects of cardiac inflammation and permanent damage occurring in kids and teens boys. Research as to why serious injuries are occurring to some but not others needs to be explored and understood.

To whom it may concern,

I am writing to strongly urge you to not enforce vaccine requirements for children attending public school. If this was to go into effect you will see an even larger number of parents withdrawing their children from school. I will be one of them. I will not have this forced on my child. I am not against vaccinations however I will not have my child be a test subject to a vaccination when they are in a very low risk group.

Please see the following.

"The information is publicly available and contained within an FDA fact sheet which can be viewed here

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F14441>
(see page 25, table 5 on-wards).

That fact sheet contains two tables that detail the alarming rate of side effects and damage experienced by 12 – 15- year-old children who were given at least one dose of the Pfizer mRNA "vaccine".

The tables shows that 1,127 children were given one dose of the mRNA jab, but only 1,097 children received the second dose. This fact in itself raises questions as to why 30 children did not receive a second dose of the Pfizer jab, and we doubt the answer is pretty.

Of the 1,127 children who received a first dose of the jab a shocking 86% experienced an adverse reaction. Of the 1,097 children who received a second dose of the jab a shocking 78.9% experienced an adverse reaction."-The Daily Expose May 2021

Thank you for your time.

Sincerely,

Jamie Southworth

Hello,

I am the parent of three children attending Washington state public schools. I am NOT in favor of adding COVID-19 vaccines to school requirements.

1. Phase 3 clinical trials are not yet completed.
2. We know that healthy children are at very low risk of complications from COVID-19.
3. There have not been enough studies done to determine both the short-term and long term effects on female reproductive health. I have three daughters and I was vaccinated before the EUA approval of children 16 and younger. I had blood clot and menstrual complications that warranted follow up medical care, incurring time off work, over \$3,000 in medical bills. I am now a participant in a follow up study regarding women's health and the COVID-19 vaccine conducted by Kate Clancy and Katie Lee with the University of Illinois which is currently under the IRB approval process.

Thank you for taking time to hear my concerns — I urge you to prohibit the addition of the COVID-19 vaccine or any other EUA products as school requirement.

I will not vaccinate my kids against Covid. If this is going to be required for them to attend school, I will pull my kids out of school! This vaccine is not the same as other vaccines we have given children, this vaccine does not prevent the virus from occurring. I am not giving my children vaccines that don't prevent them from a virus or disease. This is our right and should not be mandated!

I am very much against giving kids the vaccine as the evidence shows kids are hardly ever affected by Covid. I know an 18 year old that was perfectly fine and then died of a blood clot after getting the vaccine. If that was my son or grandson and he died I would be pretty ticked since they don't really need it. I am against being forced to take this for myself or my kids.

Subject: Vaccine Discussion

External Email

Regarding today's meeting to start discussing mandating the vaccine for children to attend school, I would like to express my very strong opinion that this is not right. First, the vaccine is still under emergency use authorization. How can we require this for children? Second, no one is liable if my children are harmed from the vaccine and the manufacturers aren't required to tell me what's in the vaccine. Furthermore, children are not dying from Covid at a rate that would ever require this be more than each families personal decision. Mainstream media is twisting information and being funded by those who control what is said. It is time for those with influence to stand up for what's right, not for what is profitable! As both a public educator and a parent of students in public school, I will leave my position and pull my children from public education if the Covid vaccine becomes a requirement. My children will not be part of this experiment. Thank you for your time, and praying for our decision makers!

Greetings.

I am completely and unapologetically opposed to requiring the COVID vaccine for admission to public-funded schools. I have far less issues with the current vaccine schedule, but adding the COVID vax to this list would be premature and irresponsible. There is simply not enough data to understand the effects of this vaccination— from the real benefits to the real consequences. Our children are not lab rats, and this cannot be forced onto them.

Grown adults are actively losing their careers over the decision to not undergo this vaccination, and the State would dare force this onto children?

Do not recommend that the COVID vaccination be added to the schedule.

Sobering numbers as this troubled year draws to a close:

505,013,980 coronavirus shots injected in the U.S. and territories[1]
983,756 reports of injury to VAERS
20,622 reports of death
34,615 reports of permanent disability
3,365 reports of miscarriage
following coronavirus vaccinations.

And yet,
All-cause mortality is higher in 2021 than in 2020.
COVID-19 deaths are higher in 2021 than in 2020.
New coronavirus cases in the U.S. just reached a record high.

The data is the data and by every objective measure the coronavirus vaccine campaign has failed.

Thank you to everyone who shares OpenVAERS with others. This information is getting through to policy makers and the wider public. We appreciate your encouragement and moral support for this work.

Hello,

I am a mother, veteran, military spouse, firefighters wife, and mental health professional.

I can speak for all the people in my family, workplace, social group and church that a forced vaccination of this kind, placed upon innocent children and their parents, will change our voting habits substantially. We DO NOT approve, nor do we fail to recognize the political and financial nature of the vaccine hype. Science will verify the vaccine mandates, shaming, snitching and creating second class citizens (regardless how extreme their views may be) has done little in stopping the spread and done alot in dividing this country.

Please govern accordingly.

I am a parent of three children. I work in the school. If you mandate children to be given the covid -19 shot (I won't even call it a vaccine, considering it does NOT prevent anything), I will pull my children and home school them. I therefore will have to quit my job in the already short staffed education system.

I would not even blink twice at doing this!!!

You are overreaching and really need to think twice before enacting this into law. Many parents are not comfortable giving their children this shot, even after taking it themselves. Many people are hesitant to getting the third shot. The numbers are WAY DOWN. You force parents to do this and watch an uproar of epic proportions, not to mention the decline in public schools enrollment.

Dear TAG,

In your upcoming deliberations towards mandating vaccines for children attending schools in Washington, I am urging you to recommend a pro-choice solution. Leave it to the people to decide whether their children take the vaccine or not. Doing so will have many benefits:

- If the evidence out there is so persuasive and harbors no doubt whatsoever, then a majority of children will be vaccinated and you will have achieved your goals.
- If on the other hand problems will develop, your conscience is clear. I would not want to be the one responsible for causing harm to a child.
- You will be the voice of reason and balance, much needed in these times. You will have chosen to treat people as individuals capable of making good decisions. You will demonstrate your full grasp of John Stuart Mill's essay you quoted in the meeting.

I probably need not remind you that your decisions can change the lives of millions of people. One size does not fit all. Minority opinions matter. Wield wisdom, not force.

Sincerely,
Serban Tatu

To: Board of Health

I'm a parent of a Tumwater High School student. I am AGAINST making the COVID vaccinations a requirement for school next year.

I have been following Dr Robert Malone's advice. Please read....

Dr. Robert Malone, who helped create some of the mRNA technology used in the COVID-19 vaccine, cautioned adolescents about being vaccinated as many public and private universities are mandating vaccines for the next school year and reports have emerged linking the vaccine to mild heart inflammation.

"[O]ne of my concerns are that the government is not being transparent with us about what those risks are. And so, I am of the opinion that people have the right to decide whether to accept vaccines or not, especially since these are experimental vaccines," Malone said.

"This is a fundamental right having to do with clinical research ethics," he continued. "And so, my concern is that I know that there are risks. But we don't have access to the data and the data haven't been captured rigorously enough so that we can accurately assess those risks. And therefore ... we don't really have the information that we need to make a reasonable decision."

If you are following the science then I think you'd heed the advice of this man who helped create some of the mRNA technology. Let's give this some time before requiring it.

Thank you,

Kendra Maraman

Subject: Vaccine policy on Washington State children

External Email

Dear Sir and Madam,

Washington State government has recently begun pushing the vaccine policy on our children, and it seems that it is with or without parents' permission! The question is, "ARE YOU GOING TO LET THAT HAPPEN?" It's not yet a mandate, but based on the way that other campaigns have gone, it's just a matter of time before they attempt to make it mandatory for everyone.

I've noticed a disturbing pattern has emerged during these challenging times. It seems that "politicians" have completely absolved themselves of their duties and responsibilities to the people that have elected them. They are totally relying on so called "health experts" to make their decisions.

Our system of government was not designed to be governed by unelected bureaucrats, who are more often concerned with lining their pockets than their concern for society. It looks like "oliticians" have turned a blind eye to the conflicts of interest over financial motives that involve many of these so called "medical experts."

I'd like to remind everyone that during WW2, many doctors who were "so-called experts" were involved in the systematic extermination of the Jews. They were also involved in gruesome medical experiments, which included forced injections of experimental and often lethal drugs. DOES THIS RING A BELL WITH ANYONE? We seem to have forgotten that highly-educated people who are not guided by a clear conscience or moral compass have become some of the most evil and prolific murderers in history.

Now I hope that you, the board, will think about these things. I pray it will help in making the correct decisions on what is best for Washington State children, whom you have sworn to PROTECT?"

Hello,

Our kids will be pulled out of public school if the covid vaccine becomes a requirement or they are discriminated against for not having it.

1- The risk of severe illness or death to children is still very low, considerably lower than influenza. There is a higher risk of adverse reactions to the vaccine. It is not our children's responsibility to protect the vulnerable at their own risk. Any vulnerable teachers and staff are welcome to vaccinate themselves to mitigate their own risk.

2- Vaccinated are still becoming infected and are spreading it the same as unvaccinated, posing the same risk to the vulnerable. Again, the vulnerable all have access to the vaccine to mitigate their own risk as they see fit.

3- While adverse reactions to the vaccine may be fairly low in the short term, they do happen. there are literally zero long-term studies in humans to know if there will be any impacts to health down the road. History is full of products once deemed to be safe by the FDA that are now banned. Let's see how this looks in 5 to ten years.

Thank you,
Julie Hafen

Subject: Zoom question for Childhood vaccines

External Email

Hello,
There have been numerous reports about children having adverse reactions and deaths.
Many of us are concerned about this.

<https://medalerts.org/vaersdb/findfield.php?TABLE=ON&GROUP1=AGE&EVENTS=ON&PERPAGE=100000&V>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fmedalerts.org%2Fvaersdb%2Ffindfield.php%3FTABLE%3DON%26GROUP1%3DAGE%26EVENTS%3DON%26PERPAGE%3D100000%26V>>

You say you are going to weigh your decisions on science. Please please do your research! There are many top scientists including the inventors of the "vaccine" who have circled back and refuted both the effectiveness and the safety of the vaccine.

My understanding is that children with no underlying conditions have basically zero chance of a serious problem with COVID 19. You would be taking a big risk by putting this non approved, experimental shot in their arms

In addition to Dr. Robert Malone (the inventor of the vaccine), here is a list of top scientists and Dr's that you should add to your research as you make this very pivotal decision:
Professor Peter McCullough

Professor Harvey Risch

Professor Sunetra Gupta

Professor Tess Lawrie

Professor Tom Borody

Professor Paul Marik

Emeritus Professor Robert Clancy

Professor Hector Carvallo

Professor Geert van Bossche

Professor Dolores Cahill

Professor Eli Schwartz

Dr Brian Tyson

Dr George Fareed

Dr Zev Zelenko

Dr Ben Marble

Dr Pierre Kory

Dr Robin Armstrong

Dr Joe Veron

Dr Kulvinder Kaur

Dr Robert Malone

Dr Michael Yeadon

Indian Council of Medical Research

Dr Veron Coleman

Dr Marcus de Brun

Dr Damien Wojcik

Dr Richard Fleming

Dr Ryan Cole

Dr Jackie Stone

Dr Sabine Hazan

Dr Luc Montagnier (Nobel Laureate)

Dr Roger Hodgkinson

and countless others

Thank you!

Subject: Vaccine schedule + Covid

External Email

The thought that you are even gathering to discuss the mere possibility of adding this to the vaccine schedule is absolutely astonishing to me.

This vaccine (not a vaccine) is still causing more injuries, more VAERS reporting and more deaths than any vaccine / biologic in history.

This was rushed to be released based on an EUA and admittedly has not been adequately tested.

The data shows three things clearly....

1. The variant has mutated so many times that it's now far less virulent at this point.
2. The vaccine is completely useless against omicron; it doesn't stop transmission nor decrease severity. In fact, comparisons vaxxed vs unvaxxed show less cases and less hospitalizations by percentage in the unvaxxed - most likely due to ADE occurring in the vaxxed according to scientists who study the issue transparently.
3. The incidence of notable disease or of poor outcomes in school aged kids is absolutely minimal.

Considering the three bullet points above, all supported by data, it would be absolutely irresponsible to push this vax / biologic into the school vaccine schedule.

Do the right thing here and use data to inform you, not pharmaceutical propaganda.

Hey,

Kids don't need vaccine for COVID19. To say that it will help stop the virus is a lie by politicians and "journalists" seeking secondary gain. To say that if we all get the vaccine the epidemic will end is a lie. To say that if we all don't get vaccinated that we are murderers killing grandma IS A LIE!

The only ones benefiting from the vaccine are high risk populations and of course, the pharmaceutical companies who are happy to bribe and manipulate policymakers to make this grossly ineffective vaccine mandatory for everyone including those with prior infections and vastly superior natural immunity.

I implore you to wake up to the truth, think for yourself, or stop taking bribes or whatever other secondary gain motivates you to perpetuate this lie.

God bless,

Gabe Saez

Dear Board Members:

My wife and I are unalterably opposed to including the experimental COVID-19 vaccines as a requirement for school-age children to attend school.

This decision should not be mandated by a State requirement – rather it should be left up to each family to decide what is best for each child in agreement with the child's parents and family medical advisors.

Best personal regards,

Tom and Faye

Hello,

I am writing in opposition to your proposal to make the Covid vaccine part of the state's child immunization schedule.

As the vaccine has only been in circulation and trial for 2 years, I don't feel comfortable making it a requirement for children. The data collected on children who have contracted Covid show a 99.9% survival rate, this data point in itself makes me question why this vaccine would need to be required for children.

Additionally, as a mother of two children, if this vaccine is added to the required list of immunizations for children, I will not be sending my children to our local school district. This in turn will prevent our district from collecting their \$25,000 per year for my two children.

As a mother, I am the primary stakeholder in my children's education, health, and future.

Thank you,

To Whom it may concern,
My name is Melina Kaul and I reside in Renton. I have one child in elementary school, two in high school, and one in college. I adamantly oppose the Covid -19 vaccine be required to attend school. Our family has natural immunity because we have already had Covid. We believe Natural Immunity should be taken into consideration when requiring an experimental vaccine be put into our children's bodies. We are considering leaving the state where the vaccine will not be required to attend school.

Thank you and God bless,
Melina Kaul

WA BOH Technical Advisory Group:

I urge you to not make the COVID-19 vaccine shot mandatory for school aged children. COVID is NOT a pediatric disease, the flu is more severe in kids than COVID and the flu vaccine is not mandatory in school aged children so why should the COVID vaccine?

This should be a personal and family decision, not one that is mandated by the government. With all due respect, you don't know what is best for my family nor do you know my family history so to make a blanket mandate that is a one size fits all is not appropriate in this situation. Let the decision fall on each individual family and what they are comfortable with. The benefits of the vaccine in children does not outweigh the risks should they become sick with COVID, in fact, the risk of the vaccine outweighs the disease itself in children. For those children who have other health issues, comorbidities, etc should absolutely have access - healthy children should NOT be forced to take this risky vaccine if their legal guardian does not deem it appropriate.

Please, stop meddling in personal choice.

Thank you.

Sending in email as a concerned parent of an elementary child. Please do not make the Covid vaccine mandatory. For many reasons. I know so many that will withdraw their kids. Let's see what happens with adults. Let's also not forget natural immunity. We will constantly be vaccinating our kids every six months and for every new variant. Please consider parent input! The schools will suffer mass withdrawal.
Thank you!

I just want you to know that I disagree on making covid vax being mandatory in school age children vax requirements.

I have children who don't have medical conditions and having this being added to the already mandatory vax is going to add more issues.. especially with the unknowns on what this will and won't do...

And I'm vaxxed so I understand the importance of it but I fear what Unk side affects this will have on my growing children

parental views are a must and should be taken into consideration! I know too many thalidomide issues from my life and do not trust or do anything without investigating!

Thank you for your consideration in not adding this to the already long list of children vax!

1/1/2022

To those deciding the fate of our children,

I can only imagine you're already aware of the physical and moral and implications of what you're considering for our children. I sincerely believe we are at this juncture, because you've already willfully chosen your position; choosing comfort and greed over what is right and true. You've already chosen to disregard mountains of evidence and scientific data that contradicts your chosen position. This is our last appeal to encourage you to do what's right. It is a simple matter of choosing right or wrong, truth or fiction. Choose wisely.

There is no peer reviewed scientific evidence that supports this decision to mandate vaccinations an any age bracket, but especially with our children. The vaccine doesn't provide protection or immunity, nor stop the spread. More importantly... there is no long term safety testing on children or humans in general. When you consider the implications that there's obvious calculated risk, then choice and informed consent are imperative. The Nuremberg Code outlines this in detail.

https://media.tghn.org/medialibrary/2011/04/BMJ_No_7070_Volume_313_The_Nuremberg_Code.pdf

<[https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fmedia.tghn.org%2Fmedialibrary%](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fmedia.tghn.org%2Fmedialibrary%2Fmedia.tghn.org/medialibrary/2011/04/BMJ_No_7070_Volume_313_The_Nuremberg_Code.pdf)

With the knowledge and scientific evidence we've garnered in the last two years, the world can plainly see this isn't about safety or science. This is about power, corruption and greed. Choose wisely what side of history you want to be on. I (WE) do not consent.

I'll leave a few selected quotes by virologists, physicians and scientists, for your contemplation.

"First we saw the common, immediate side effects (headaches, localized pain, fatigue, fever etc.) which, in general, do not last long. Then we saw, a few months later, numerous cardiovascular problems such as myocarditis in young people. Now we are seeing cases of prion disease such as Creutzfeld-Jakob disease, which is a fatal degenerative brain disorder. [...] We cannot prove a direct link between the vaccine and the disease but we have a duty to examine the hypothesis that there is a linkage because the only common factor between these cases is the vaccine. [...] We expected something like this might happen but not so quickly. Barely a year has elapsed since the first vaccinations and we are already seeing severe neurological side effects. [...] We are moving towards a catastrophe. If we do not take precautions now, our entire civilization is at stake."

by Luc Montagnier (Virologist & Nobel Prize in Physiology or Medicine)

*

"The virus kills fewer healthy individuals and children than other respiratory pathogens such as the flu, such as the pneumonia bacteria, and so forth. [...] All these [mRNA] vaccines can't work and will never work because the antibodies are on the wrong side of the wall, and they are never secreted out to where they need to be used. [...] If you are vaccinated, you are not protected against anything. [...] Stop believing all these crooks and criminals who are lying to you. Vaccination has zero benefits. First, no vaccination gives you any protection against infection. Second of all, this virus is less dangerous than the seasonal flu. So don't believe all those lies."

by Sucharit Bhakdi (Microbiologist)

*

"The vast majority of medical doctors have very poor knowledge of immunology (let alone vaccinology), which isn't a part of their curriculum. This is, of course, problematic as they are the critical point of care and advice to patients. It is striking how specialization in one or another medical subdiscipline leads some specialized doctors to have tunnel vision in that they fail to explore cross-disciplinary aspects, even when it comes to solving health challenges, they are not familiar with and are inherently complex and multifaceted.

It is, indeed, mind blowing and highly worrisome that - although sailing uncharted waters - some pediatricians are not afraid of blindly criticizing knowledgeable experts and posting their poorly informed viewpoints on the internet, not realizing that the narrative they support in favor of C- 19 vaccination of children implies a formidable individual and public health risk. As extensively documented on my website (<https://www.voiceforscienceandsolidarity.org/>), I've repeatedly debunked 'immunologically naïve' comments made by a number of such 'know-it-all' doctors. A majority lack the multidisciplinary background required to put the pieces of this complex puzzle together. I've, therefore, written an article that should help people to navigate through the heavily polluted opinion landscape while doing their own research: <https://www.voiceforscienceandsolidarity.org/scientific-blog/some-guidance-to-separating-the-wheat-from-the-chaff>. I can only recommend these 'know-it-all' doctors to first gain some better understanding of some fundamental principles in immunology and read some scientific peer-reviewed publications referred to on our website before trying to cross the boundaries of their knowledge."

by Gert Vanden Bossche (Virologist)

*

"Those responsible for [the corona fraud scandal] must be criminally prosecuted for crimes against humanity and sued for civil damages ... On a political level, everything must be done to make sure that no one will ever again be in a position of such power as to be able to defraud humanity or to attempt to manipulate us with their corrupt agendas.

[...]

The only way to end this is by the people rising up and telling the authorities that this is the end of the line.

It is not the courts of law. The courts of law, maybe we can use them to clean things up. But I am afraid that they are not even good for that. Because they are so infiltrated by the other side that we're going to have to setup a whole new judicial system."

To whom it may concern:

It is abhorrent that WA policy makers would even consider mandating Covid vaccines for school children. This is a disease they are NOT at risk from, and many children have already contracted it naturally. Is this a way to use up the leftover vaccines because too many parents made the smart choice not to risk their child's health with a vaccine that provides no benefit to their child?

Every vaccinated child, teen, and young adult I know has already contracted Covid after being vaccinated, and been sick for a week or more. The vaccinated children spread it to the unvaccinated children. Or I should say: children spread a virus to other children, just like what happens every cold/flu season. How does mandating help? It does nothing but put children at risk for vaccine injury, which increases once they have had Covid.

The mandates do not protect children from contracting the disease, nor do they do not stop the transmission. What they do is help people wake up to the absurd policies put in place by officials that have ZERO to do with public health.

Below is an email from a colleague regarding the research around Covid vaccines and children. I urge you to make the right decision and allow parents to choose what is best for their child (even if that choice comes from faulty guidance and misleading information).....

<<http://250ok.chriskresser.com/ea/HQWz3xVCAD/?e=%5BUNIQUE%5D>>

Hi, Everyone,

As promised, I am following up on the email I sent a couple of weeks ago examining the risks and benefits of vaccinating healthy children and young adults against Covid-19.

Today, I'd like to focus on the 5- to 11-year-old age group. In particular, I'd like to answer the question, "Is there any scientific basis for a vaccine mandate for 5- to 11-year-olds?"

This is a critical question because as we speak, school districts across the U.S. (and the world) are beginning to require Covid vaccines for kids as a condition for attending school. Excluding children from in-person education is a dramatic and unprecedented step to take, so the bar for evidence to support a decision with such far-reaching consequences should be very high.

In this email, I will argue that not only has this high bar not been met, but there is also no evidence whatsoever to support a vaccine mandate for 5- to 11-year-old kids, and such a mandate is both unscientific and immoral.

Specifically, I will show that:

1. Covid was already a very mild illness for healthy children, and the Omicron variant looks to be even milder.
2. Kids 5 to 11 years old have never been significant spreaders of SARS-CoV-2 (to

other children or adults).

3. Covid infection in kids produces far more robust and long-lasting immunity than the vaccines.
4. More than half of kids in the U.S. (and likely other industrialized countries) have already had Covid-19, and vaccinating kids with natural immunity doesn't provide additional protection.
5. There is no direct evidence that vaccines reduce severe illness, hospitalization, or death in 5- to 11-year-old kids. This is even more true with Omicron.
6. The Covid vaccines do not prevent transmission of the virus (especially with the Omicron variant).
7. There is already concerning evidence of harm from the vaccines in 5- to 11-year-old kids—and the long-term effects are unknown.
8. The mandates will cause serious and lasting harm to unvaccinated children.

This will be a long email. I considered splitting it into parts, but I wanted to present the entire case in one place so you can more easily refer back to it and share it with others.

So, grab a cup of tea, and get comfortable!

[Author's note: the question of whether Covid vaccine mandates make sense for any age group is also worthy of critique, but I want to dedicate this email to 5- to 11-year-old children for reasons that will become clear shortly.]

#1: Covid was already a very mild illness for healthy children, and Omicron looks to be even milder

We've known since the beginning of the pandemic that the vast majority of Covid-19 cases in healthy children 5 to 11 years old are extremely mild.

According to the Centers for Disease Control and Prevention (CDC)

</https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%

, there have been just 216 deaths in this age group since the start of the pandemic. This
represents only 0.03% of the total Covid-19 deaths, despite the fact that 5- to 11-year-
old kids comprise almost 9% of the population.

<<https://lh6.googleusercontent.com/l->

9KkeDnomcRKGaHtuC5oeRI5cU3Ly1UnXSZVWsmiGAeBLQTDHENBqRIvIEwXYVwZ46XYTx_UGVinwSBD9k0E

With 28,384,878 kids in this age group, that's a mortality rate of 0.0008%. Put another way, at worst, a child 5 to 11 years old has a 1 in 131,411 chance of dying from Covid-19.

But even this very low number is likely to be a significant overestimate for healthy children for two reasons.

The first is that Covid deaths have almost certainly been over-counted in the U.S. and

other industrialized countries because of how they are classified. For example, say a child with a pre-existing leukemia diagnosis is admitted to the hospital for issues related to their disease. The child tests positive for SARS-CoV-2 upon admission, does not develop any signs or symptoms of Covid-19 infection, but later dies due to complications of leukemia. This will be classified as a Covid-19 death—even though, in this case, Covid-19 likely had nothing to do with the child’s passing.

The overestimate of hospitalizations and deaths due to this method of classification is not small. A recent analysis out of the U.K.

https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2F3d3MvKJmdWW8WDB334RXk6MN8Tk8QZR4nK1W6pR7N84tM2LvW7xYnDX34pK5cW85s-mR3PxtWzW4c3mLG7SSBh9W45qDyf4XjK9sW3qvKx_83DIR6W8610Yt3YtvTSW8yVxyV19B8JdW4FF5Bs2PR7qX517W6h75H0906prNVgj3V33cDf2W3gVwn82N0D5jW3KSXCm32h2H9W8zpzPf836IMPW8pZmX75Kb1x1mp4RW61mkgr1KBrZ8W1tQFR56hn6v-W4yYjVQ52wwtHM2synHqfp3WW2S3YBT83w3J-W5gpS1X7lfrTYW1yjKsJ5RW67gW1pJb950wvyhW51thh_8KyB--W2Z_N0V5rIZyTN4MvvcFTvyCDW7Yjkd1V7ckj37sh1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C13d8
found that a full two-thirds of patients with Covid-19 in the hospital only tested positive AFTER being admitted for another condition.

The second reason is that the majority of hospitalizations and deaths in 5- to 11-year-olds occur in children with pre-existing health conditions. A study by the CDC back in September 2020

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%WJV7CgFPJW8gLpzZ5TKHvLMYTH4fxpWWMW3djV078vGWS-W3dgBMW86X2d-W14vIYI7Xz6HJW4Fp_gQ6gT5jzW1456gl1jSyTWw4TrfT81LBI26N5w9hDXGS71_W34CjVj3ygYd0VLgggtq13r-FRW3yYYzh7F0S8YW4VgRh87rL2w_W34k-9s4_Ts2FW5plJHg6V-zcFW8K5hJI1kw_2fW8mZ_dx36nLRvW5wWp7R2zMNJ7W99W3ft6fvVF5W5nrc331bndPDW1FXns27CRWKgVY

found that, among 121 childhood deaths related to Covid-19, 75% had an underlying health condition. Another study by the CDC

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%WJV7CgJRIW25MjDj4FWHJ2T-JPt9lnKxwW8rmg_V8FNFDpW19ZR-H5DpF9ZW3nBmqT2Qs8jWW5X140_906f8xW8D5DRb68nsw5W1qNYTV8qnLcxN9hXKqJdDgTxW6Vznf17pCOcP87pcN58lqRJ7VGPXW4vfzr0254qxgW2HRmhC20XFmqW6sHtpW6PdBB5W4GNN2y1Zmzf_W3Gyr-v4JJtCBW7SXmLs2xjGzCW67DhZ270mFrWW7L6CDF5dwTkZV9JDtC7xSQFpW4YH16V6dDpHdW1Bcxwx2XB8Nq93fX-

BXW1hdlbn2rIYr3W8sqK8t6WynPHW63wzRR7YYIx3W2Lhb3F4Fn1Wb35kD1&data=04%7C01%7Cwsboh%4 found that 53% of kids hospitalized for Covid-19 had at least one pre-existing condition, the most common being obesity (45%), asthma (14%), and neurological conditions (13%). Yet another large, international review of 14 studies

covering almost 20,000 children found that kids with pre-existing conditions were over
25 times more likely to experience severe symptoms from Covid-19 infection than
healthy kids.

The point here is not that kids with pre-existing conditions don't deserve our consideration. Of course they do! The question I am trying to answer in this email is whether the vaccines should be mandated for all 5- to 11-year-old children, including healthy ones. And to do that properly, we have to know what the risk is for healthy children specifically.

Unfortunately, the CDC does not routinely distinguish between healthy kids and kids with pre-existing conditions in their reporting of Covid-19 hospitalizations and deaths. But some other industrialized countries do.

- * A rate of hospitalization of 8.5 per 100,000 (~1 in 11,750)
- * A rate of ICU admission of 2 per 100,000 (1 in 50,000)
- * A rate of death of ZERO (there was not a single death in this age group)

Omicron appears to be milder than previous variants

And all of the early data we have so far suggest that Omicron is far milder than all previous variants.

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FQqW2NLDJP10D06vW6GBK_X29XmC7W3F1tvn487sQdW2Fhynd5hf3hPW1NHvNK1FhLqNW7GVP3Y7MzdByk7w4LkN7j8mLMW3hprXd6-ZdkBW3mMzqw29Q4bpW6Yq55M8FGxPCW8F6Kr_3RnZTgW4X64t91vnL0RW6_X5Yg3MYcRyW8WZkqF88yl1

, there have been 27,132 Omicron cases so far, but there have been only 35 Omicron-related hospitalizations. This is a hospitalization rate of 0.13%—which is approximately 8-fold lower than the estimated hospitalization rate for Delta (~1%).

There's more to say about Omicron, and I'll be writing a separate email about that soon. For now, it's enough to say that if the current trends hold, we should expect the risk of hospitalization and death from Covid-19 in healthy children—which is already incredibly low—to be lower still in the future.

- * Covid-19 was already an extremely mild illness for healthy kids 5 to 11 years old
- * Hospitalizations and deaths have been over-counted
- * Omicron appears to be far milder than previous variants

... we get a current risk of serious outcomes like ICU admission or death in healthy 5- to 11-year-old kids that is minuscule.

#2 Kids have never been significant spreaders of SARS-CoV-2 (to other children or adults)

Some advocates of vaccine mandates have argued that, while Covid-19 is a mild illness in kids, we should vaccinate them anyway in order to protect those at the highest risk, like the elderly and individuals with pre-existing conditions.

In order for this argument to be valid, two things would need to be true:

1. We'd need evidence of significant child-to-adult and child-to-child transmission of Covid-19.
2. We'd need evidence that the vaccines prevent, or at least significantly reduce, the transmission of SARS-CoV-2.

In fact, neither of those is the case.

Studies have now shown that kids under 10 years old rarely transmit Covid-19

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FWJV7CgK2wN298pHjpZ20KW4yCy3tJ0f91W21NQf16z4yy1W2jkJY046VjMLW7YkHDb30dFVDVCyfC92QWYrgmQ0W3HwLVy3LwPNxVxNd-X8V7_sjVIDQ-Z3DCBH8W4FGvdQ519r6PW4Q0Ztp22xYz3W1-1MNm2Cn4J3W3MMqmd3HmPq1VysBFx2FKkvNvFZ3rC606s9pW5dMXHr1ZLb6_W7pgjHM76Rp8GVyrgXt2W

, and all kids/adolescents up to 20 years old are only 43% as susceptible to the disease
and 63% as likely to infect others

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FWJV7CgQXvW8FG56z1X21k6N5klvpG_TYIW51V66H428s5fN6SPHzXM-9YbW1ZcmVV48v9RPW5qH0B41NqF67W7X7d0W8GzHF2W58P9xX3yG45TW3yWxfJ3TvxpvW6Xg2mW8mwrsDLW6c3BT67Dbn3fW1j6y284BrRNDN93xm2T-qzZkW5MP1zz343LjkW2G1MHG2KbfFPW7K6YYs8mLxMFVwGc4m2dVqCzW91JjNv2ZFzY_W7hZfzY2pz3YGN5JjDGpGIImMN8Rt60Rf7rTPW31Wtxy4BJf4QW2MqTht3pb4SKW7jSIWx2ytwbLW5Rj20L2XsDyV31cS1&data=04

than adults.

I will address the question of whether the vaccines prevent or reduce transmission in detail below, in section #5. The short answer is: they don't.

Given that neither of these things is true, the argument that we should vaccinate kids to protect the vulnerable has no scientific basis.

#3: Covid infection in kids produces far more robust and long-lasting immunity than the vaccines

Another argument I've heard to justify a massive vaccination campaign for 5- to 11-year-old kids is that the vaccines provide more robust immunity than a natural infection and that because of this, the vaccines will "end the pandemic."

Numerous studies have now shown that this is not the case, and, in fact, the opposite is true: kids who have a Covid-19 infection go on to develop much stronger, more lasting, and broader immunity against future SARS-CoV-2.

A new, peer-reviewed study published in Nature Immunology on December 22

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FWJV7CgYW4W1DF5Ms5BJ9Y5W2532-W5SGd0pW7DPwCB6Ory1xMmBxBVXwf6sW4Ns2Ym3XmnWyN8Fq2PBsyTJ0W6w_2sk7Wv0xfW98 Js71tmLn

8SS9W2Xc_8B4HGfZN1Cs_BMhj_BmN6C93zvxl8psW7_tnGp3F3TlhN3GJ4qwG4bfNW9jbqRm8mKWSVW7cf79-G8-
gzjtW4_xdbF205ydvN3RqPPpS1wxYW8IVQg53htDq3W5tRx0b5B7zPqW4FZrmj5Dg4chW8Hc8LF4Jyksz31rJ1
found that both the innate (initial antibody response) and adaptive (later T-cell response)
immune reaction to SARS-CoV-2 is much stronger in children than in adults.

In other words, kids who get Covid-19 mount a more effective and robust immune response to the disease than adults do. What's more, this immune response lasted throughout the entire length of the study period—which was nearly one year—and it appeared to protect them against multiple SARS-CoV-2 variants.

The authors speculate that increased immunity to coronaviruses that cause the common cold, and are cross-reactive with SARS-CoV-2, may be part of the reason that children are more protected from Covid-19 than adults.

From the study:

“In conclusion, we showed that children display a characteristically robust and sustained adaptive immune response against SARS-CoV-2 with substantial cross-reactivity against other hCoVs [human coronaviruses].”

Given how remarkably low the risk of serious illness is in 5- to 11-year-old kids, and given how strong and long-lasting their immune response is to natural infection, wouldn't it make more sense to simply allow healthy kids in this age group to get Covid-19—especially now that the Omicron variant is becoming dominant—rather than expose them to vaccines with uncertain benefits and concerning side effects (more on both of these points below)?

#4: More than half of kids in the U.S. (and likely other industrialized countries) have already had Covid-19

At the end of May of this year, the CDC estimated
https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2F%2Fwjjv7cg-dgw5wn9g06bpRtKW91GSgb5BQgnKW99xHGt4_NTHpw7x_IGG2gcY_dW2srV5-35m0GBW6DYyIf2nq7xfW43z4M67PDRFGW58stT58cR076W47wfCy2YCQy9W8BFXxY7VfhnXVRg17r9lZ0NmVlk26M9-MdW82h-Bx8X1qdfN29dX39XBng-W1-XX8D5G9X5BW5_SDd05bQ59xW44wXYc4wd5FqW1QchGf7K2n9rW19DjpF2WLVNKW8hp27m1gDHZRN4ZKM-_b3F7vkWW5nhRIB4cgFwZVsKJ9q2FYJP5W4rs8gS55T_-7Vb0FdT2XW3nT3kVg1&data=04%7C01%7Cwsboh%40sbob.wa.gov%7C13d8631b04d24f80f08608d9cb1a
that 36% of all children had been infected with SARS-CoV-2. That estimate was made 16 months into the pandemic. If we adjust that estimate for the current time frame (22 months), we get 49.8% or roughly half of U.S. children.

However, the CDC estimate was performed before the emergence of the Delta and Omicron variants, both of which are significantly more transmissible than prior variants. Therefore, it is highly likely that the rate at which kids were getting infected between May 2021 and now is significantly higher than during the first 16 months of the pandemic. This means that more than half of U.S. children have natural immunity against Covid-19.

The Nature Immunology paper I just mentioned above clearly indicates that natural immunity to Covid-19 is especially robust in children.

We also have other evidence that natural immunity is stronger than vaccine-induced immunity. For example, previous research out of Israel

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%>

suggested that those who had recovered from Covid-19 infection were 13 times less likely to be reinfected than those who'd been vaccinated but had not yet had Covid-19.

And so far, there is little convincing evidence that vaccinating someone who has already been infected offers any benefit.

For example, a study published in June 2021 by Cleveland Clinic
https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2Fw7v7CgQpdW7fS8F27Mjg83W6M-blR42HFRFVG1szy3Zg-PLVjxLks3MnS-cV2LGm83V2nxmW57GdFs2yDcc3W3nHjr39d3PqTW4mSvDn6cGGQfN2TNx-ChVVK4W6vLVf8132ZwSW1FKdJZ6n95c8W7bmbJx2wFVv8W7Q4-1Z7GSSyXW5wNwpJ7Kc4P_W7kNWkp8H5MJ-W5hD7472jxTsGW3_PsXT5zhD77W2IDF3D53QBQTW2RhHPP1j2c5zW7JpNz633zwcQW81Qsgx5zprkPVX9xNI
of almost 53,000 people found that vaccinating people with natural immunity (i.e., those who had already been infected with SARS-CoV-2) did not confer additional protection. Most importantly, there was not a single case of reinfection among the 1,359 previously infected, unvaccinated subjects in the study.

The fact that most kids have already had Covid-19 and thus already have immunity to it, and that vaccinating people who've already been infected doesn't strengthen their protection against the virus, casts even further doubt on a universal vaccine campaign for 5- to 11-year-olds.

#5: There is no direct evidence that vaccines reduce severe illness, hospitalization, or death in 5- to 11-year-old kids

When I have a chance to talk to parents about the Covid vaccines for kids, I'll often ask them what they've heard about the effectiveness of the vaccines in kids 5 to 11 years old.

Most will respond by saying that they've read that the vaccines are "over 90% effective" for kids in this age group.

They're often quite surprised—even shocked—to learn that, in fact, we know very little about the potential benefits of these vaccines in kids 5 to 11 years old.

Why? Because severe illness in kids is so rare that there wasn't a SINGLE case of severe Covid-19 or a SINGLE death from Covid-19 in the 2,268 kids that Pfizer studied to obtain their Emergency Use Authorization (EUA)

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2Fh1QsJQ8W5BXSfF8ZbBCHW4RbKjV6B2dqjW4FjqyS4mMnqpW6jFnBb1b0vdCW3CyNtk5_jMm2W6d5ggv14FR25WjW7Qt9KP7RYhjwW6tHKRd7ZgzyPW95jKHX6qP0WPW5_p-W22pJtz5W4GgxN_5nFjdnW2ky_Pq3wwYvSW9h4BPN8Mz0s_39f61&data=04%7C01%7Cwsboh%40sbob.w...
by the CDC.

Because there were no significant adverse outcomes from Covid-19 in the trial, Pfizer had to estimate the potential benefit by looking at the antibody response generated by the vaccine in the kids' blood.

There are several problems with this. First, antibodies are a poor predictor of clinical response to Covid-19

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2F8fN9grqDKxtGGQW5HTz8_6lxs5nW17xhMJ94y3DGW3MGkYj6X-N-XW8l3DsY6VysmFVRdl7M2wxg66W2NgXqQ97KkgvW1l46Cc9cfvN6W2Wx_3X3gvpYTW49NwmW1wJfbjW1dkPB71fvmW3klgwV96TcHRW1QVfK03rqBsqW4QPdSh8ZYY31W28-VvG7cXL5dW29-ypD4mjKfXW5hFhHB1M3jyYN9jpDgBS0hB8W2lcm5W1qkfFqW8fCyPn48rDWpW8h1lkn46Fg6XW2NrPXH6nfHkx1RB6T7VyRW0f6sTZG_W1Vzy6Z57-cQGw176Hvs1m-5WkW2spy4V8CnZP_N3SNkgPNF9M3W2NTY9d4P6QZYW7sdX5g78fDG0W33pkMb8B9WHHW39cSgV2QMkb3

. Second, since there were no cases of severe Covid-19 in kids in this study, Pfizer had no idea what antibody level would be protective against severe infection.

This means that any claims you've seen that the Pfizer vaccine is 90% effective are misleading because this only refers to an antibody response in the blood from the vaccine and not actual protection against severe illness, hospitalization, or death.

Yes, the massive campaign to vaccinate 5- to 11-year-old kids is based on a small study of 2,268 kids in which the vaccines did not prevent a single case of severe Covid-19 or a single death and demonstrated only an elevated antibody response in those that received the vaccine.

As hard as that is to believe, that's where we are.

#6: The Covid vaccines do not prevent transmission of the virus (especially with the Omicron variant)

Even before the emergence of the Omicron variant, we already knew that the Covid vaccines do not significantly reduce transmission of the virus. Unlike the measles or polio vaccines, they do not provide "sterilizing immunity"—that is, they don't keep people from getting the virus or spreading it to others.

CDC Director Rochelle Walensky disclosed this back in August 2021 in an interview with Wolf Blitzer on CNN

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2F7qV6pPb9lW4thPD75tyW99W3RVPfn103Gb3W6h_1p170443QW48l7tn99HB2cW28Gfk818lFHGW31DczF2ZyyZ23_8Cm0VB_LV93PFyDZW5Kt3Vv30rPrTW90gFIW1gb6ZzW5QWGqB1LvzmKw43_Bml77N-LWW6dj1fy5HD7fPW7JXM-f4d92k2W7bRFvB1Pw0SXW2SQ5l47Y1082W1ZMr1b4NlrtPW751YMv5VsgstW3lmNNG3wDYsDW3phSkh8xF6-PBzpW8LhY8z6Xl6MfW6NSpPF53H2RKW8sZJ289cmhH_W2wRywX1YzM-XW1xlpfG4CRkDzW692GDC8F1VYvN6kpYKvlqrfqN2vBm-1yMqyKW1nwdBs2FvCY83ds41&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C13d8631b04d24f80f08608

. She said:

"They [the vaccines] continue to work well with 'Delta' with regard to severe illness and death, but what they can't do anymore is prevent transmission." [Emphasis added]

But in countries where Omicron has become the dominant variant, we have even less reason to believe that the vaccines do anything at all to reduce transmission.

According to Denmark's Covid-19 report from December 24

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FJ7W3xDVF95gqjdXW29Bq3h3qrpn1W8Tg1NL3DGyZwW2dLmqQ1hggbGN9941Gvw5t9RW7_4nfj8GcFFvW1PVtD3RR8MHFDHW7QCMwS3FN07qW6lhvbk2hN51lW2qMdrh5K4JRQW3gyNZz7y1k4MN25NP_VNsm6SW46F

(mentioned earlier in this email), 92% of confirmed Omicron cases occurred in people who had received either 1, 2, or 3 doses of a Covid vaccine:

<https://lh3.googleusercontent.com/T2PN9u2tJkEV-1b4-lbTt3Zu7nxtbSyJgBaPY2qapmESv62S6As9TQBpep2ZGxcvg4x7beyGkaibH_j2p2uK3gu8u_TnPviWuU1cT-

"Among those who received an AstraZeneca primary course, vaccine effectiveness was around 60% 2 to 4 weeks after either a Pfizer or Moderna booster, then dropped to 35% with a Pfizer booster and 45% with a Moderna booster by 10 weeks after the booster. Among those who received a Pfizer primary course, vaccine effectiveness was around 70% after a Pfizer booster, dropping to 45% after 10-plus weeks and stayed around 70 to 75% after a Moderna booster up to 9 weeks after booster."

Frankly, these are remarkable data that raise questions about the effectiveness of the current vaccines against Omicron for people of all ages, not just 5- to 11-year-old kids.

It's clear that we are not in the same situation today that we were in when the vaccines were initially developed. Omicron is very different from Alpha, which was the dominant strain when the vaccines were released. And as these studies clearly show, these vaccines aren't as effective against Omicron as they were against earlier variants.

At best:

- * Two shots of Pfizer provide just over 50% effectiveness for about a month; that drops close to zero just after the second month and goes deeply negative before the third month.

- * Two shots of Moderna provide just under 50% effectiveness for about two months; that drops to zero in the third month, and into negative territory shortly after that

- * A booster provides an additional 2.5 months of partial protection (below 45% for all but people who received two shots of Pfizer plus a Moderna booster).

If we were starting out with the current vaccines today, with Omicron, that's the level of protection they would provide. We'd have to start giving boosters just 2-3 months after the initial shots and then give a booster every 2-3 months after that. Does that make sense, given how mild Omicron is for healthy kids (and most adults)?

It's worth noting that most of these data regarding Omicron infections and vaccination status are from adults, not children, because the vaccines have only recently been offered to 5- to 11-year-old kids. But there is no reason to believe that vaccines will be more effective against Omicron in children than they are in adults (and, in fact, there are reasons to believe they would be less effective, as I've described earlier in this email).

#7: ☐☐ This is already concerning evidence of harm from the vaccines in 5- to 11-year-old kids—and the long-term effects are unknown

Despite the incredibly low risk that Covid-19 poses to healthy children, the fact that over 50% of kids have already had Covid, and that natural immunity is robust and durable, some still might argue that vaccinating children makes sense.

After all, if we can save even one life with the vaccines, shouldn't we do that?

Certainly, if we knew without a doubt that 1) vaccinating every 5- to 11-year-old child would prevent even a small number of severe illnesses and deaths, and 2) the vaccines were 100% safe and would not cause any adverse events, then this would be a strong argument.

However, we still don't know that vaccinating children this age actually reduces severe illnesses or deaths. All we know is that the vaccines induce an antibody response.

And we already know that the vaccines are not 100% safe and are producing a significant number of adverse events in children 5 to 11 years old. This should not be surprising. All

medical interventions have potential side effects and risks, and the Covid vaccines are no exception.

The CDC's own data show harm for the vaccines—despite Director Walensky's denial

According to the CDC's data, as of December 9, 2021, there have been 3,233 reports of adverse events in kids 5 to 11 years old from the Covid-19 vaccines, including 14 reports of myocarditis (8 of which have already met the CDC criteria for a vaccine-induced myocarditis case).

<https://lh3.googleusercontent.com/1BsulH6gyu_FwVy3CnpyEngRhZPkluo0hxtb7PFpv0DCZB4q7P1krdDhviEBFzYIgvYkc7LFfd2yF8DV5>

Yet, strangely, Director Walensky went on ABC News

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2F6M6ttzDr7h74W7yYBW81n0WvvW4-G-8s8gSB0QVFNJb93QBpVrW66g6854t4SjGW7D_DC73v45KdW4HSdvl8qPQpmW4m4FGP39jwQ5W6wnNV63Y0xkW3MmgWV3Qy_scW1wRv5m2brPI7W2fP6101_mgBzW2qwbdx1hyStPW6g28K929r8DmW467Fpv6THKf6QWW8fNI841H5P-vVKY_3b2GnJZm37YJ1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C13d8631b04d24f80f08608d9cb1a>
the following day, December 10, and said that there have been no cases of myocarditis seen in kids. How is this possible? Was she not aware of the data her own agency issued just the day before? Or was she lying? Either way, it's incredibly disturbing.

<https://lh5.googleusercontent.com/A9dSMSs5swMuXdMulqgzB1fVdhZDtImTEsJjdeWcCWjb_WkcyJ0hvxNY>

It's worth pointing out that myocarditis is only one of several possible side effects that have been observed with the Covid-19 vaccines

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FWJV7CgHWZW5SRvdn69J2GxW4gMYL-8YFV6hW2j79Cq852d6GW74drw15dcsZrW2YNNLJ25qP8wW96yJrT7BKD7PW1TXT3x7NyzMbW4SrfV-225dd-W98pMcK80VcKCW47N0V26fWN_xW6KKb_L3GBIGYN71nZsnLRWXYVxCBhN9h5z2fW7ZZ8kt5Xnl9yW6BWb0wh4W4zv4mQ7SX92ZW7Vgj7Q3WtcSvW8SjHy95KLpYmW80Q7_I5dzXQpW4rD-sS2JnDJQW2tR7jz8tchpPW8vbkM54RbRFqW3014K25nDsJ62801&data=04%7C01%7Cwsboh%40sboh.wa.gov>
, which include arthritis, autoimmunity, acute liver and kidney injury, thyroiditis, and more.

It's also important to know that the Vaccine Adverse Event Reporting System (VAERS) is imperfect, and adverse effects are often underreported. For example, a 2001 study

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FWJV7CgJLRMTg_gwNVvQ-W64qFvq2W0nKGVm1DRk2ZJbZ4N5Tm0hH_bLhRW2bPNkY93D12QW3hy8Nm78kwdsN74zgK35pj4rW7hVQ7kN9c7q9GdYkxpW7Q0BzQ3F-LYHW1cdz1Y1HJRjIW8kpMkc7ftdD3W259FID2mKQzxN1Csk8gG4I0hW875KpY8qV5JSW451Kst40GFY5W54Gv>
found that less than half of cases of rotavirus vaccine-associated intussusception (severe intestinal disorder) were successfully reported to VAERS. And a 2020 study
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FsdckNMMN89HbMQQ-F70VCZQn33Ckyh6W8DLR7b6QdFCgW6b0ttV4vsMp5W2T75IL1RJGn1W8Pm6Vq7v7xMKW3Z6VdQ6gCwTJW-Xd85P1T2nN8R-2yd1lLcN6K673pVlxgRW8qgnVg5-n1nQW90Hlvh1QZfw7W24W0705FYpPN39bp1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C13d8631b0>>
found that the reporting sensitivity for anaphylaxis (severe allergic reaction) and Guillain-Barré syndrome (severe nerve disorder)—both of which have been seen with the Covid-19 vaccines—ranged from 12%–76%.

There are at least 2 reasons to believe that underreporting of side effects for the Covid-19 vaccines is at least as prevalent as the studies above suggest—and probably more:

- * Many doctors and nurses are afraid to report side effects of the vaccines because of the current polarized political climate.
- * The vaccine program for 5- to 11-year-olds began only recently, and there's often a lag time between receiving the vaccines, side effects, and reporting of those side effects.

Nevertheless, let's be generous and assume that the underreporting of side effects from the Covid-19 vaccines in VAERS is only 0.5, or one-half. This would mean 6,466 adverse events reported from 7,141,428 doses of the vaccine in 5- to 11-year-olds, or a risk of a vaccine-related adverse event of 1 in 1,104.

This compares with (according to the German study I mentioned above) a risk of hospitalization of 1 in 11,750, a risk of ICU admission of 1 in 50,000, and a risk of death of zero from Covid-19 in a sample of 400,000 kids.

To make it as clear as possible: these data suggest that, for healthy kids 5 to 11 years old, there is a much higher risk of an adverse event from the vaccine than there is of preventing a hospitalization, ICU admission, or death from Covid-19.

You might argue, “Well, if those adverse events from the vaccine are mild, what does it matter?” That’s a reasonable question to ask. However, many of the side effects reported to VAERS are in the moderate-to-severe range. Most people won’t bother with the time or hassle required to file a VAERS report if they simply had a sore arm for a couple of days.

OpenVAERS

https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FWJV7CgPp6N6cSKBsJV2wjW1TCWrR55qHqzW6yNZ5t4s3QVLW3znRBj4XB7R1W9dm-VK3HzrpKW3lvfTb79H2jyW1kt87f2RHw3GVS7I246h6b_cW2FcK8q8b3D5-N1pv09Dlpp6LN8ylBctm4XNW7pQYsC2675KHw32yQSg6s0t2gW2G1By4705xrWW92MWJX3gM2bxMmdvVtl3Xn3W6jhP1P1n57V7W5PYdbX6spckvW8F45hW4skv9kxW85FYx842TP6ww7N1DMs1jpXbGN7GsWJG5PF3yW

has been diligently reporting on the raw VAERS data throughout the pandemic. According to their website, there have been 983,756 Covid vaccine-related reports submitted to VAERS as of December 17, 2021 across all ages. Within the 5- to 11-year-old age group, these include:

- * 2 deaths
- * 90 hospitalizations
- * 331 urgent care visits
- * 772 doctor's visits
- * 2 cases of Bell's Palsy
- * 3 cases of anaphylaxis

These are clearly not mild side effects, and together with the CDC's data on myocarditis risks, there is enough evidence to warrant concern about both the short- and long-term effects of these vaccines—especially since they are being given to healthy children with their entire lives ahead of them.

In addition to the known risks above, there are also the unknown risks. While mRNA vaccines have been studied for many years, they are new, experimental therapies in humans with no long-term safety data. We simply don't know the long-term risks of these vaccines.

So far, we've focused on the risks and benefits for 5- to 11-year-olds receiving the Covid vaccines.

An unvaccinated child will be punished by withholding in-person education and contact with their peers and teachers. This is a far higher risk than a healthy child faces from contracting Covid-19.

documented a wide range of harms experienced by children during lockdown (which would be similarly experienced by kids excluded from in-person education because of their vaccination status):

- The list goes on and on. But even studies like this one, which can take months to research and publish, are not documenting the full effects. Public health departments, school counselors, and mental health professionals around the world are reporting deeply disturbing patterns.

, and drug use has increased considerably:

<<https://lh3.googleusercontent.com/LsosXdLh6xvb4WCQwLzSOj2NCunM3hPA7klxEZvXaDVkTffYdn1XLOb7H>>

This is a terrifying and horrific statistic that should be sounding the alarms on the impact of keeping kids away from school and isolating them from their peers and other important people in their lives.

We've also seen disturbing examples of unvaccinated children being shamed and forced to justify their status in front of the class—a disgusting and scientifically baseless (as you now know) tactic designed to force them into compliance:

<<https://lh4.googleusercontent.com/YOnNPNxeMVypaWGZKvJfFo0XxP8XZxZHOiB7bD8TGAPQVdxbxy3Ax4acuXNYIHfMdSY5XCq050xP6niqGdAKFjYN-Pr3CLmkFVGgfHI0PCCMWiA930TEB8c1I48OD8>>

Is this the world that we want to live in, where parents are forced to decide between giving their children an unnecessary, ineffective, untested, and unsafe vaccine with both known and unknown adverse effects, so the kids can continue to participate in a normal, healthy life, or not give their kids the vaccine and remove them from many if not most of their typical activities, including attending school in person, eating out at a restaurant, or playing on a sports team?

We do not have to take this path.

Other countries have chosen not to. For example, the U.K.'s expert body the Joint Committee on Vaccination and Immunisation (JCVI) has decided not to vaccinate healthy 5- to 11-year-old children

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%jPnJ2s6xDXW8hf6p66lk3QWV4S6qv1GqSWZW7gMD-C7hswVzW5CPxt18ybHjZW10lkCs5RfM5DW8SJvZb7WfhVSW4rdqYj3RISCGW8H-8Nb57YCXcW3_PRL15GjrgLW6s5mBM24s889MRPflgd8LZ6W29-m2m5GRj75W65w-qL1sc72gW5C6FNf9kzY9QN211-Z5br6t0W6wlkWC99d1mNV8l2yX8w4xXwW6LnVIV8cpWBXW2T_YPM6FYwHXW4vZj4r3H-ymgW81hVln56b2N4W864RHn4nkh8HW7N0s_T45BT-3W718M3h1qGNwBW74kS_05lz4WYW8K5P9d6GP89jVrLNfS5pQt4KW5HH3R27FnwMQ36391&data=04%7C> (though they did approve vaccination for kids in this age group with underlying health conditions).

Even if we decided to make the vaccines available for healthy kids in this age group—which I don't think is an evidence-based decision, for the reasons I've laid out above—there's absolutely no basis for making them mandatory.

- * They do not prevent transmission, especially with Omicron.
- * There is no direct evidence that they reduce the risk of hospitalization or death.
- * The risk of serious illness in healthy kids is extremely low (and likely even lower with Omicron).
- * Over half of kids have already had Covid-19 and have robust and lasting immunity. There is no evidence that vaccinating kids with natural immunity provides additional protection.
- * There is already evidence of harm from the vaccines.

As parents and caregivers, we have a moral and ethical obligation to safeguard the health and well-being of our children. Mandating the Covid vaccines for 5- to 11-year-olds not only fails to achieve this goal, but it works directly against it in numerous ways.

I believe that once the facts I've outlined in this article become more widely known,

mandating the Covid vaccines for kids will be viewed as one of the most egregious and unconscionable failures of public health in the history of humanity.

That is why I wrote this email. I want those of you who are parents to truly have informed consent—which is the process by which a healthcare provider educates a patient about the risks, benefits, and alternatives of a given procedure or intervention.

It should be the job of our public health authorities to provide this informed consent regarding the vaccines for 5- to 11-year-olds (and other age groups, as well).

Unfortunately, our agencies and authorities are no longer fulfilling their vital role. (As a side note, this shouldn't surprise my long-time readers. I've been writing about the regulatory capture of public health agencies in other contexts for many years. See [here](#)

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FWJV7CgJ-DW4pWYvS5RJp0cW3DKfsl2d0CzwW7IYhL31HhmdHW8NJ27s5Gq7p6W5_-1xm7kX0kVDqRMDyhKZbw5tHTyc6XPz_TW5w5DMw6Yf8F_W5-_0Kj2rmyZ3VqqY-l4slwSnW6rcJMS8hc8R5W7L08Gc2GhVwGN5cKPZMv1h0zW3QCJg85yVsCnW2Q1XH81_cPcxW5D4YVG6Hq0-MLJM2hMkW2HK5wq5MIklHW2hnDLQ2THXKNW9gjTTZ19zRHnW6yT1kh7Tjk8hW74nRLM4sSW2vW87s6YG3

> <https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FCY6RYbNXVR6V1s1kkTkBW7T210F2IJcg1W5c0z_h66YJfVW8khXzh601G9hW20_nSW8YJ2-bW6kCzNc4sJc5KW3NK_gn3ldh9DW5VK0rC4NV_FSW3Sf1Zp640xSkVfpNrI7ng6hqW6-bJcs72yFv9W1IXrXD1rVclLW5xCbtD4sF_WBW7kxnrx7ILRvzW81TF-02YVPtYVkT21n27qQXGW6zNk8D8HJXjn3pHR1&data=04%7C01%7Cwsboh%40sbob.wa.gov%7C13d8631b
for examples.)

I know that many of you as parents are finding yourselves in extremely difficult situations, where you feel pressured into giving your children a vaccine that you don't believe is necessary, just so your kids can continue to participate in normal life.

It's up to us, as informed citizens, to fight back against these unscientific and immoral mandates, and protect the health and well-being of our children.

There is no duty that is more sacred.

In health,
Chris

☐ Department of health

☐

I disagreed to mandate/ require covid-19 vaccination for children to attend schools and daycares. Please do not include COVID-19 vaccine to the required vaccination list.

These vaccine don't work for variants. It only worked for original strain. It will not stop anything. Therefore there is no meaning to have vaccines that don't work. Especially new vaccines without long term safety data.

There are so many unknowns about this new therapies.

There are no safe mid and long term data available. Introducing new vaccines developed in hast with new technologies used as vaccination before to the human has so many unknown. Especially young teenagers and children whose body is still developing. We all know this vaccines can cause heart problems to young people to children. So many athletes are dying from heart attacks this year. It is not mild nor rare when caused by this vaccines. Even though you survive from Myocarditis and pericarditis, your heart is damaged for life and have to fear when your heart fails and when you need heart transplant. Certain percentage of People who survived this condition can die within a few years.

These vaccines skipped animal safety studies. New drug without solid and long term safety research always have risks of causing cancers, autoimmune diseases, birth defects and infertility in the future.

I know people who developed cancer shortly after the vaccination.

Please learn from history.

Do you know Thalidomide? It was rapidly approved drug and caused serious birth effect. There is no accurate data to give proper informed consent from COVID-19 vaccination at this time.

We are talking about lives and health of our children, Our future. We should always be extremely careful to introduce children food, education, and especially medical procedure.

Young healthy children hardly suffer covid-19 and risk of mandating children to inject new vaccines that skip animal safety trials could lead to devastating consequences in the near future. Public won't forget your hasty decisions when we find out the consequences.

You might not feel any side effect now but in a year or longer or after several booster shots, you might feel different.

Please review all the data, article and videos I attached here.

☐ thank you for your effort.

☐

Mandating a covid shot for children to attend school is unnecessary. Covid-19 is not a childhood disease and they are at more risk of damage/death from this shot than if they actually contract C-19. Data has proven that if children died from C-19 they had underlying conditions/comorbidities. They are not spreaders of C-19 and their cells are molecularly immature in terms of facilitating virus replication.

Dear TAG,

I'm expressing my concern in the discussion of the C19 vaccine mandate in school occurring.

I just wanted to point out the vaccines are under Emergency Use Authorization and no one is liable for adverse events, unless you would declare yourself as liable.

In the FDA meeting when approving 5-11 years old, there was no real safety data presented. The meeting was concluded to get more data by vaccinating more youths. But data from other countries suggests the risk for myocarditis under 40 years old is higher when vaccinated than the risk from Covid itself.

Also, the emerging Omicron variant is suggested to be more infectious to vaccinated people than unvaccinated, and clearly shows the failures in the vaccine design and mass vaccination.

Please do not mandate this type of vaccine at school. If you would, you would face lawsuits and see more families getting out of WA state.

I am writing this email with regards to children and vaccines. Yes my wife and I are vaccinated. Yes my children have received all their normal vaccines up to date. When it comes to the Covid vaccines this is a vaccine that has not had the 40+ years of studies and oversight that the others have. This is a vaccine that has shown it can have an effect on young boys and their heart. Why would I want to give a vaccine to my son that is in great health and has a better chance of dying in a car crash than Covid? Covid is statistically not a danger to my children. When it comes to my daughter why would I give her a vaccine when she already had Covid, has the antibodies and many stats around the world show natural immunity is much better than the vaccine? Even the WHO says under 18 unless there are underlying conditions should NOT get vaccinated. There is no need for it!!! Let's not force something into the bodies of children that is not tested. When a doctor from the NIH says "the only way we will know side effects of children is to get it in the arms of children", that is scary. We are supposed to allow our children to be experiments? We are to allow our children to be Guinea pigs? That's just wrong!!!! I hope you have taken the time to read this.

Sincerely
Jason Kudla

Hi there,

I just wanted to share my extreme concern for adding the covid 19 shot to the school requirements. We have a cousin (in her 20s), perfectly fine and healthy. Immediately after her vaccine, she started feeling sick. She apparently had blood clots in her intestines. She had to be hospitalized and ended up in the ICU for over 3 weeks on a ventilator. She has since lost 90% of her small intestine.

This vaccine has not at all been proven safe and hasn't been around long enough for that even to be possible. A friend of one of my very good friends, young, very health conscious, and fit...died after he received his booster.

It should be up to families to get this for their children, not be made a requirement by the schools!

Thank you,
Valerie

Dear Kelie Kahler,

I hope this email finds you and your family well.

A few days ago, during a WA State Board of Health meeting, the advisory group spoke of whether they should recommend adding Covid vaccination to the current WA vaccine schedule for school and daycare entry. Unfortunately public comments were not allowed. The advisory group would be making a recommendation for our children without hearing from the parents.

I oppose the Covid vaccine being added to the school and daycare schedule. Children have mild to no symptoms from the virus, and are thus the safest. Covid Vaccine inserts are none existent to the public, leaving us without a knowledgeable and informed choice. Pharmacists themselves do not have access to a vaccine insert. We are told to believe and take the plunge yet so many have had horrible and evenly deadly complications from these vaccines. Please urge the advisory group to be cautious and not make recommendations for the Covid vaccine to be added to the school and daycare schedule.

Thank you for taking the time to read my opposition and concerns. I look forward to reading your reply.

External Email

Dear Board of Health Members,
Hopefully, as you discuss the pros/cons of requiring children to be covid-vaccinated in order to attend school, you will remember that our school registration numbers here in WA are way down. My grandson is now in a combined class because enrollment was down this year by 40%. I believe that a vaccine requirement will further reduce enrollment, and I would like you to be advised that public schools need students in order to thrive.

Thank you.

Subject: Vaccines for children

External Email

Good evening,

I am a parent of two children and I am strongly opposed to any requirements for children to have the Covid vaccine to attend school. Children do not spread Covid easily and they do not get extremely sick from Covid. Dr. Malone, the mRNA vaccine inventor said that kids will die from the vaccine (I have attached the webpage about this). It is an experimental vaccine and it should not be required to go to school. Many parents agree with me and we do not want to send our kids to school if there is a Covid vaccine requirement. My kids have had all of their vaccines, I am not anti-vaccine. I am, however, opposed to the Covid vaccine which has not been out very long and it could harm our children. We may not see the severe side affects for many years.

Sincerely,
A concerned parent

For consideration re school policies mandate for children,

To Whom it May Concern:.

I submitted my concerns to the FDA board advisory committee before they discussed recommendations for vaccinating children aged 5-11. I documented my concerns with the findings and data from health care providers from around the world.

My biggest problem with the way bureaucracy handling this issue is there was too short a time for clinical testing these vaccines, and there is no standard for informed consent for taking these vaccines and clinical knowledge of the contraindications, side effects, adverse reactions and especially the potential for long-term and/or lasting effects on the human body, adult and child. Indeed, the vaccines themselves have been proven to cause death.

Please look into this actual footage at the link at the end of this paragraph:

@ minute 39:36 on the timeline, review expert opinion and the reason Mr. Bill left MS (I watched another video of him saying it on YT). It is all about the money,

and

@45:02 concerning vaccine safety: "... Why are they pushing it on the children?"

and

please continue to minute 51:03 and watch a CBS News Chief Legal Correspondent weigh in on a Face the Nation clip regarding the effect of CoV policies on children right here:

<https://flashpoint.govictory.com/episode/flashpoint-prepare-for-revival-december-28-2021/>

Be encouraged!

Data for Deaths from Covid-19 Vaccines; considering the number being historically underreported deaths and adverse reactions to VAERS:

12/20/2020 - 151 deaths

12/20/2021- 20622 deaths

Risk of adverse reaction from COVID vaccine is 55 times greater than Flu Vaccine.

<https://vaersanalysis.info/2021/12/25/vaers-summary-for-covid-19-vaccines-through-12-17-2021/>

Another source:

Three researchers analyzed data from the Vaccine Adverse Event Reporting System and concluded that 1,300 children have died from the vaccine. The report, titled "Estimating the number of COVID vaccine deaths in America," was conducted by Dr. Jessica Rose, MIT graduate Steve Kirsch, and statistician Matthew Crawford. (<https://headlineusa.com/researchers-estimate-covid-vaccine-deaths-at-150k-including-1300-children/>)

As of December 10, the World Health Organization had reported zero known deaths from the Omicron variant.

Guy Benson | Dec 13, 2021 10:05 AM

Total Number of Confirmed Omicron Deaths So Far: Zero? (Update: One Death, 'With' Omicron?)

Source: AP Photo/Steven Senne, File

<https://townhall.com/tipsheet/guybenson/2021/12/13/total-number-of-confirmed-omicron-deaths-zero-n2600477>

Let's review where things stand on Omicron, vis-a-vis my big three initial questions upon the new variant's emergence: On transmissibility, it does seem quite contagious. On vaccine efficacy, it's a mixed bag. Boosters appear to help, while 'hybrid' immunity (vaccine plus natural immunity) is robust. On virulence, the news continues to be quite encouraging. This is very important stuff:

????? Cautiously optimistic... <https://t.co/YxZAo0JY61>

— Nicole Saphier, MD (@NBSaphierMD) December 12, 2021

Meanwhile,

"It seems inconceivable that no one will ever die with or from the Omicron variant, but the fact that there have been no confirmed examples of this happening thus far is incredibly heartening. If Omicron were even close to as virulent as Delta, let alone more virulent, we would almost certainly know about it by this stage. It's been the dominant strain in South Africa for weeks. It's entirely fair and prudent to say that we still need more information and data. But the available information on the severity of Omicron is good news:

December 11, 2021 - Omicron update from Europe:

- all cases for which there is available information have been asymptomatic or mild
- no deaths so far

"It's the same story everywhere: Too early to draw strong conclusions, but the lack of bad news on severity is good news." pic.twitter.com/FStZ9str4Y

— Derek Thompson (@DKThomp) December 11, 2021

More affirmation from doctors on the ground in South Africa, as flagged by Allahpundit:

"As the omicron variant sweeps through South Africa, Dr. Unben Pillay is seeing dozens of sick patients a day. Yet he hasn't had to send anyone to the hospital..."They are able to manage the disease at home," Pillay said of his patients. "Most have recovered within the 10 to 14-day isolation period." said Pillay. And that includes older patients and those with health problems that can make them more vulnerable to becoming severely ill from a coronavirus infection, he said... "At the moment, virtually everything points toward it being milder disease," Willem Hanekom, director of the Africa Health Research Institute, said, citing the national institute's figures and other reports.

Since then, up to 2 days ago, I read that there have been 2 deaths due to Omicron.

Washington State doesn't need another discriminatory policy against children (who have 1 in a million chance of serious illness with Covid-19, lower than getting killed in a motor vehicle accident on a road trip), and against those who have natural immunity after recovering from Covid-19. Omicron might be the variant that has spread quicker and wider throughout the world, but it is the least virulent as an illness – milder, with low hospitalization rates and only 2 deaths from it to my knowledge.

Thank you for your consideration of my research and deeply felt convictions regarding NOT subjecting children to Covid-19 injected serums.

Most Sincerely,

Linda Cowin

Subject: Vaccine mandates- Really?

External Email

HI, Washington State Board of Health:

The history of smallpox includes both "natural" immunity from contraction and survival from the disease, and "naturally acquired" immunity. The naturally acquired immunity came about because a Doctor discovered milkmaids working on a farm who were passing out the information that a "cowpox" infection was rampant in the dairy where some were working. All the milkmaids in the area were showing up to milk those cows, so that they too could catch cowpox and thereby become immune to smallpox. A 30% death rate is not uncommon from smallpox. Cowpox had almost no deaths from it.

The cowpox virus (same genus, different species than smallpox), when contracted by humans, confers "immunity" to smallpox.

Edward Jenner, a British physician, conducted an experiment on his own son to "prove" that cowpox provides that smallpox immunity. He inoculated his own eight year old son with the fluid from a smallpox lesion, after his son had endured a bout of cowpox.

If Mr. Jenner's eight year old son had died, I suspect that Mr. Jenner would not have ever been tagged as "the father of immunology".

Smallpox is deadly. It has now considered to have been eradicated worldwide. That is a good thing.

The common cold has also been considered deadly, but historically, only a very small percentage of infected people die from it. It is considered a "normal" part of childhood, and most certainly it is credited with a process considered to develop the immune system in young people. It is a fact that without challenges from pathogenic organisms, the human immune system does not develop to as high a level.

This covid-19 virus was and remains problematic. There is no numerical objectivity available on sensitivity or specificity of the testing methods. This leads to utter falsification of outcomes. If no one has any information regarding accuracy of the testing, there can be no truly objective outcome measures- whether people undergo "vaccination" from it or not.

Did they die of covid? We have no idea if the testing is accurate, therefore, we have no idea if covid was even involved in the death.

We do know that "vaccinated" individuals (vaccine is truly an incorrect term) are still dying- different than the cowpox/smallpox connection. We also know that those deaths are attributed to "covid"- but we know that could be completely incorrect, the tiny amount of research that is available is equivocal, and we have no information regarding long-term outcomes. We do know that our national average life expectancy is no longer increasing, and may be decreasing. We know that "autism spectrum disorder" is at higher numbers than ever before in history. Autoimmune diseases have gone up about 15% in the past ten or so years. Why? That information is not yet available.

This new "vaccine" is virtually untested technology, it is RNA based. No "vaccine" in history has been RNA based, it is new technology.

I am not against either new technology, or against untried technology a la Edward Jenner. But I find the fact that he used his own young child as a guinea pig to inoculate with the material from a smallpox pustule reprehensible.

I find your consideration of mandatory vaccination with this unproven new technology especially of young individuals just as reprehensible as the stunt Mr. Jenner pulled on his own son.

Please reject it.

Hello

I am writing in opposition to your proposal to make the Covid vaccine part of the state's child immunization schedule.

1) It is ridiculous that you would add a vaccine to the schedule that is brand new and still under EUA.

2) The injuries being reported, though not covered by mainstream news, are everywhere. My own 28 year old stepson came down with heart inflammation and tremors within 48 hours of getting his first Pfizer vaccine. Do you think I am going to give this to my young children? Absolutely not.

3) My husband and I have traveled all over the country throughout this pandemic. In our classes, we would ask if students knew of anyone who had specifically died of covid. Typically no hands were raised - though once in a while we would get one. We would then ask if anyone knew of someone who 1) had lost their business; 2) committed suicide; 3) had children who were struggling, etc. Typically most of the class would raise their hands. Today when we travel we hear story after story of vaccine injuries. People who have had heart attacks, strokes, killed by hospital protocols, blood clots, etc. If there is this kind of risk involved in a so-called vaccine, parents should have a choice.

4) As a former public school teacher, mandates like this will continue to destroy the foundation of our public school system. I removed our children when the MMR vaccine was mandated. How many parents will remove their children and leave the state as a result of another vaccine mandate?

5) Children have a 99.99% survival rate when it comes to covid. Putting this on the immunization schedule makes less than zero sense.

6) We are 2 years into this mess. Those who wanted to give their children the shot have done so. Those that remain will likely not change their stance. Making this a requirement for public school attendance would be no less than coercion.

Thank you,

Pamela Leslie

Subject: Covid Vaccine

I am greatly disappointed that you are even considering this item - the Covid vaccine is not the same as the required vaccines for school. I am retired from 27 years in public health, immunizations, emergency preparedness and planning.

You all have forgotten how viruses work, as well as giving new and still experimental vaccines more credit than they deserve. You have ignored natural immunity, and do not use our common benefit risk analysis to exclude children from vaccines. They have more risk from the Covid vaccines than the virus.

I have never seen this much manipulation from the political health side of life. Falsifying numbers for hospitalizations of children and increasing the death rate in kids from this disease, before being forced to walk it back. Stop buying into the hype of these vaccines saving everyone. The elderly yes not anyone else unless they are already high risk.

People are better off getting and recovering from this virus unless they are over 65-75 years of age or high risk. STOP political health and please go back to Standard Public Health practices and policies...

For kids Covid is easier than the flu!
kids don't need this...

This vaccine has issues-take away the liability protection for the manufacturers and you'll get the real picture. No required Covid vaccines for kids, this is not a solution to this communicable disease problem.

Please be informed listen to what this doctor wrote.

My name is Robert Malone, and I am speaking to you as a parent, grandparent, physician and scientist. I don't usually read from a prepared speech, but this is so important that I wanted to make sure that I get every scientific fact and word correct.

I stand by this statement with a career dedicated to vaccine research and development. I'm vaccinated for COVID and I am generally pro-Vaccination. I have devoted my entire career to developing safe and effective ways to prevent and treat infectious diseases. After this, I will be posting the text of this statement so you can share it with your friends and family.

Before you inject your child - a decision that is irreversible, I wanted to let you know the scientific facts about this genetic vaccine, which is based on the mRNA vaccine technology I created:

There are three issues parents need to understand

- The first is that a viral gene will be injected into your child's cells. This gene forces your child's body to make toxic spike proteins. These proteins often cause permanent damage in children's critical organs, including

- ☐ Their brain and nervous system

- ☐ their heart and blood vessels, including blood clots

- ☐ their reproductive system

- ☐ And this vaccine can trigger fundamental changes to their immune system

- The most alarming point about this is that once these damages have occurred, they are irreparable

- ☐ You can't fix the lesions within their brain

- ☐ You can't repair heart tissue scarring

- ☐ You can't repair a genetically reset immune system, and

- ☐ The reproductive damage could affect future generations of your family.

- The second thing you need to know about is the fact that this novel technology has not been adequately tested

- ☐ We need at-least 5 years of testing/research before we can really understand the risks

- ☐ Harms and risks from new medicines often become revealed many years later

- Ask yourself if you want your own child to be part of the most radical medical experiment in human history

- One Final point: the reason they're giving you to vaccinate your child is a lie.

- ☐ Your children represent no danger to their parents or grandparents

- ☐ It's actually the opposite. Their immunity, after getting Covid, is critical to save your family if not the world from this disease

In summary: there is no benefit for your children or your family to be vaccinating your children against the small risks of the virus, given the known health risks of the vaccine that as a parent, you and your children may have to live with for the rest of their lives. The risk/benefit analysis isn't even close.

As a parent and grandparent, my recommendation to you is to resist and fight to protect your children

Subject: WA BOH Technical Advisory Group Begins Exploring Adding C-19 Shots to School Requirement

External Email

This is a request to NOT enforce the Covid-19 vaccine for children in the state of Washington for attendance of public and private school.

Based on the information provided by the CDC's Covid-19 Response team titled Epidemiology of Covid-19 during a meeting held in October of 2021(<https://www.fda.gov/media/153508/download> <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F153508/download>>) it noted that children ages 5-11 make up .00012% of total deaths from Covid-19. This does not include the considerations of co-morbidity at the time of death. The actual number of deaths of children from solely Covid-19 aged 5-11 is likely substantially lower than .00012%

The right to a fair and equal public education should be granted to all children in the state of Washington. A large percentage of the US population is not fully vaccinated. For these families imposing a mandatory vaccination will cause another wave of exodus from the public school system. Some of these children may have adequate support at home for schooling, but not all of these children will. Children have already suffered emotionally and educationally due to online school requirements, masking, social distancing and overall destruction of normalcy. Children that have a lack of support at home and unstable family dynamics are at the greatest risks of once again being negatively affected by state requirements.

The level of risk of children being infected from Covid-19 does not justify the state forcing families to vaccinate their children. We've already seen that the vaccinations have not ended this pandemic. In fact, statistics are coming out that show that deaths have actually increased since vaccinations have been put into place especially in Washington state. (DOH tallied 3,736 COVID deaths in Washington in 2020. When 2021 ends in a few days, Washington will probably record about 6,215 annual COVID deaths.) Even with some of the strictest rules in the country regarding masks and vaccine requirements it has shown that these do not actually effectively decrease the spread of Covid-19.

Our state is failing our children. The school system is making decisions based more on potential liability than what is best for the children of our state.

Thank you for your consideration,

Eva Carper

Hello, thank you for providing us this opportunity to comment. This is greatly appreciated.

Please do not make COVID-19 vaccinations a requirement. Kids have a statistically low risk from Covid. This risk is so low, in fact, that forced vaccinations completely do not make sense. This must be a choice.

Many parents have strong convictions against the COVID vaccinations, and attempting to force them into this decision will make many parents pull their kids out of school.

Then these children will be put into alternative schooling situations, which may prove to be a hardship on many. Some kids (my son included) absolutely need a school environment. When school was closed, he was losing weight and depressed. (As we have seen with the lockdowns, not going to school regularly can wreak havoc on children's mental health.) Now that schools are open, my son is thriving again. Please don't take this opportunity away from him (as well as the many other kids who view school as an integral and important part of their lives).

COVID-19 vaccinations are by nature experimental because no one knows the long-term effects of mRNA vaccines. And most parents I know don't want to try this new technology out on their kids.

Please give parents this choice. Please make school a place where people of diverse beliefs are included. If people want to get the vaccine, that's fine. But if they don't, that must be okay as well.

Thank you so very much for your consideration,

Sarah Benjamin

Can you tell me of any FDA approved COVID vaccines in the USA? If not, how do you think you are going to legally get away with mandating an experimental drug which is clearly against the Nuremberg Code and unconstitutional! Our children are guinea pigs! Expect lawsuits and a mass exodus from public schools. Schools will lose funding for the next year!

Dear WSBOH,

My public comments and questions are below.

I don't understand why you are even considering this "vaccine" when our children are at ZERO risk for death from Covid?

What is the rush? There are safety signals for myocarditis and pericarditis. These are our children, our most precious commodity. These vaccines take a lot of time to see if they are safe. There is no way around time, so rushing is to our children's peril.

Initially, we were promised that the Spike/MRNA/lipids would stay in the arm, and the body would dispose of these lipids/MRNA quickly. Unfortunately, this isn't the case; the lipids and MRNA are being found to be crossing the blood-brain barrier, it's found attacking the heart (myocarditis/pericarditis). Since this is a significant flaw, why are we moving forward? Wouldn't we be concerned that these particles are free-floating throughout the body and the effect of that?

This shot doesn't prevent you from catching or transmitting Covid, nor does it reduce viral loads. Viral loads in vaccinated and unvaccinated are the same. So what is the purpose of vaccinating with a "warp speed vaccine" with no long-term safety data on children? Dr. Fauci and the CDC have said this themselves.

Since the shot's effectiveness is only a couple of months, are you going to require boosters as well? The CDC is now considering boosters for 12-17-year-olds because this is not a vaccine one and done. Its effectiveness is very short-lived. This can be dangerous because new research shows the spike protein from vaccines stays in the body for up to 15 months.

Are any panel members being paid, or is their place of business receiving grants from Gavi, Bill & Melinda Gates Foundation, NIH, NAID, or Big Pharma?

Are you aware the FDA/CDC takes almost half of its budget from Big Pharma, which does not make them unbiased?

How many people on the board do not agree? Do you have a rounded board, or is it just an echo chamber/rubber stamp?

If you are worried about vaccine-preventable illness and the costs, how does this vaccine fill that since it does not prevent transmission, catching, or viral loads? This seems like a complete failure right here, so this is just a rubber stamp, and you aren't aware that Fauci/CDC said this themselves.

Did you and our Governor already purchase these vaccines before it was even approved?

Subject: VERY concerned about adding covid vaccine to children's immunizations

External Email

Hello,

I am extremely concerned about adding covid vaccine to our children's list of vaccines. There are still many unanswered questions about their efficacy and problematic issues after taking the vaccine.

The pharma companies don't have to tell us exactly what's in the formula for many, many years.

I object to putting mystery ingredients into children, after all I don't feed food to kids without first seeing what's in it.

Some questions:

1. Does this injection have MRC-5 in it?
2. Is there a possibility of a iatrogenic reaction taking this?
3. If the vaccine is so effective, why are just as many if not more people getting covid?
4. Why aren't any of the government agencies recommending: exercise, taking supplements, eating nutritional food to prevent illness?
5. How much monetary kickback is each State, Health Dept receiving for each dose administered?
6. Many young healthy athletes worldwide are literally falling to their deaths after taking this vaccine , why should I trust any health official telling me the truth, that these vaccines are "safe"?

Sincerely,
Kathy Cooper

My name is Michael Krahner and my kids attend school in the federal way public schools. I am writing to have the panel vote no on required covid 19 vaccine requirements. They are not preventing the spread of infection of this virus like other vaccines do, it is simply jabbing them just to get it. It has not had the time to evaluate side effects either. It is too much of a gamble to require the kids to get it. I cannot allow you to give my kids this vaccine. Thanks for listening to my concerns.

As a teacher in a WA. public school, I urge you not to make the Covid vaccine mandatory for students. We have already faced dropping enrollment, and will continue to lose kids if this is required to attend our schools. Since Covid has less than 1% death rate, and kids are not being impacted like the older populations are, it should be up to parents to decide on this vaccine for their children. Please do not require the Covid vaccine for public school children.

Washington State Board of Health:

I, along with many other concerned Parents across this State have grave concerns about adding the Covid-19 Vaccine to the list of required vaccinations amongst children of any age.

Requiring an mRNA injection that DOES NOT PREVENT DISEASE was never the intent of the legislature in it's delegation of authority to the State Board of Health to approve a schedule of immunizations for "vaccine preventable diseases". As you are all aware, this vaccine does not prevent one from getting the virus, or spreading it, even with follow up boosters.

Children are not at high risk of death from Covid-19. The latest variant comes to the majority of them as cold symptoms or nothing at all, and that INCLUDES children who's parents made the choice to vaccinate.

Requiring me to put my child at risk by getting a vaccine that offers perceived safety rather than actual immunity- is reason enough for me to pull my child from the public school system, and that is what I will do if this becomes a requirement.

Dear Washington Board of Health,

As a parent, I strongly oppose of the possibility of the board including the experimental Covid-19 (mRNA) vaccines for children in the State of Washington to attend school/daycare. After being fully informed of the risks and benefits of a medical procedure, patients have the right to reject or accept that procedure. Governmental preemption of patients' or parents' decisions about accepting drugs or other medical interventions is a serious intrusion into individual liberty, autonomy, and parental decisions about child rearing. I have outlined for you information I am fully aware of in regards to the mRNA vaccines. Please review the information listed.

1. **SERIOUS ADVERSE VACCINE REACTIONS ARE REAL AND ARE UNDERREPORTED** As of 12/15/21, 965,843 adverse events following COVID vaccines have been reported to VAERS, including 20,244 deaths. According to a government-funded study at Harvard, less than 1% of all adverse reactions to vaccines are actually submitted to the National Vaccine Adverse Events Reports System (VAERS).

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdigital.ahrq.gov%2Fsites%2Fdefault/files/docs/publication/r18hs017045-lazarus-final-report-2011.pdf&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C9feb6874adf4768b2c108d9cbfbbef8%7C11d0e>

<https://www.medalerts.org/vaersdb/findfield.php?TABLE=ON&GROUP1=CAT&EVENTS=ON&VAX=COVID19>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medalerts.org%2Fvaersdb%2Ffindfield.php%3FTABLE%3DON%26GROUP1%3DCAT%26EVENTS%3DON%26VAX%3DCOVID19>

<https://www.medalerts.org/vaersdb/findfield.php?TABLE=ON&GROUP1=CAT&EVENTS=ON&VAX=COVID19>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.medalerts.org%2Fvaersdb%2Ffindfield.php%3FTABLE%3DON%26GROUP1%3DCAT%26EVENTS%3DON%26VAX%3DCOVID19>

2. **VACCINE MAKERS ARE IMMUNE FROM LIABILITY** Vaccine manufacturers have no incentive to ensure their vaccines are as safe as possible. Established in 1986 with the National Childhood Vaccine Injury Act and reinforced by the PREP Act, vaccine makers cannot be sued even if they are shown to be grossly negligent.

<https://www.congress.gov/bill/99th-congress/house-bill/5546>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.congress.gov%2Fbill%2F99t-congress%2Fhouse-bill%2F5546&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C9feb6874adf4768b2c108d9cbfbbef8%7C11dhttps://www.phe.gov/Preparedness/legal/prepact/Pages/default>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.phe.gov%2FPreparedness%2F>
. Aspx

3. VACCINE COMPANIES HAVE LONG RAP SHEETS Vaccine makers have paid out tens of billions of dollars for crimes, including fraud and violating the False Claims Act, when they knew products would cause injuries and death. (Think Vioxx, Opioids and more.) If they knowingly put harmful products on the market when they can be sued, why should we trust them to make safe vaccines when they have no liability and rushed clinical trials?

<https://violationtracker.goodjobsfirst.org/industry/pharmaceuticals>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fviolationtracker.goodjobsfirst.org%2F>

4. PREVIOUS ATTEMPTS TO MAKE SIMILAR VACCINES HAVE FAILED In one study, vaccinated infants got much sicker than the unvaccinated infants when exposed to the respiratory syncytial virus (RSV) naturally, with 80% of the vaccinated infants requiring hospitalization. Two died. In subsequent studies, vaccinated animals became very sick when they later became infected with the actual virus. Many died. This phenomenon is called Antibody Dependent Enhancement (ADE).

<https://www.nature.com/articles/s41579-020-00462-y#Sec11>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nature.com%2Farticles%2Fs41579-020-00462-y%23Sec11&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C9feb6874adf4768b2c108d9cbfbbef8%7C11dhttps://www.nature.com/articles/s41579-020-00462-y#Sec11>

5. COVID VACCINES HAVE NO LONG-TERM SAFETY TESTING There is no way to determine what these experimental vaccines will do to humans in the medium- to long-term. Not all vaccine injuries manifest immediately. Additionally, given that all current COVID vaccines have Emergency Use Authorization status only, people cannot be subject to mandates under federal and international law.

<https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Femergency-preparedness-and-response%2Fmcm-legal-regulatory-and-policy-framework%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C9feb6874adf4768b2c108d9cbfbbef8%7C11dhttps://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/>
emergency-use-authorization

6. COVID VACCINES DO NOT STOP TRANSMISSION The clinical trial study designs for COVID vaccines did not address transmission, but merely addressed reducing symptoms, as explained in the materials they submitted to the FDA to obtain Emergency Use Authorization.

<https://www.fda.gov/media/144245/download>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F144245/download>>
<https://www.fda.gov/media/144434/download>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F146217/download>>

7. YOUNG ADULTS HAVE UNDER .04% RISK OF DEATH FROM COVID-19 According to the CDC, COVID overall has a 99.74% survival rate. Among young people, that number is even higher. For people aged 18 to 29, the survival rate is 99.97%. Consider this low risk from COVID when deciding whether to take an experimental vaccine that causes significant side effects, including death.

<https://data.cdc.gov/NCHS/Provisional-COVID-19-Death-Counts-by-SexAge-and-S/9bhg-hcku/data>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdata.cdc.gov%2FNCHS%2FProvisional-COVID-19-Death-Counts-by-SexAge-and-S%2F9bhg-hcku%2Fdata&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C9febf6874adf4768b2c108d9cbfbbef8%7C11d0e2f8&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C9febf6874adf4768b2c108d9cbfbbef8%7C11d0e2f8>>

8. mRNA VACCINES CONTAIN PROBLEMATIC INGREDIENTS Both mRNA vaccines (Pfizer's and Moderna's) contain polyethylene glycol (PEG), and J&J's vaccine contains polysorbate 80— structurally similar ingredients associated with hypersensitivity reactions and anaphylaxis. Although the unlicensed mRNA vaccines are the first in widespread use to feature PEG, there are a number of approved vaccines that include polysorbate 80—all of which document anaphylaxis in their package inserts.

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fdefender/inactive-ingredients-covid-vaccines-allergic-reactions%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C9febf6874adf4768b2c108d9cbfbbef8%7C11d0e2f8&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C9febf6874adf4768b2c108d9cbfbbef8%7C11d0e2f8>>
<https://www.nejm.org/doi/full/10.1056/NEJMra2035343>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nejm.org%2Fdoi%2Ffull%2F10.1056%2FNEJMra2035343>>

12. None of these treatments has been approved, but only granted emergency use authorization, hence cannot be mandated nor can informed consent be dispensed with;
13. Most vaccines are trialed for at least 5-10 years and COVID-19 vaccines have been in trials for less than one year;
14. No previously attempted coronavirus vaccines (ie. MERS, SARS-1) has been approved for market, due to antibody-dependent enhancement resulting in severe illness and deaths in animal models;
15. Numerous doctors, scientists and medical experts are issuing dire warnings about the short and long-term effects of COVID-19 vaccines, including but not limited to death, infertility, miscarriages, Bell's palsy, blood clots, cancer, inflammatory conditions, autoimmune disease, early-onset dementia, convulsions, anaphylaxis, myocarditis, and antibody dependent enhancement leading to death;
16. Children and youth are at virtually no risk of dying from COVID-19 or transmitting it to others, but deaths and injuries to children and youth have already occurred in the COVID-19 injection clinical trials;
17. There have been more deaths from COVID-19 vaccines, as reported to the Vaccine Adverse Events Reporting System (VAERS), than deaths in the last 10 years from all vaccines combined;
18. Only 1% -10% of vaccine injuries are reported to VAERS. The full extent of adverse events from the COVID vaccines is unknown as there is a significant delay in uploading reports to the VAERS database;
19. Breakthrough cases of COVID-19 infections in those who have received COVID-19 vaccines is on the rise;
20. The trials have not proven that COVID-19 vaccines prevent infection or transmission;
21. Safe and effective treatments and preventive measures exist for COVID-19;

AND

22. Students are at nearly zero % risk of contracting or transmitting this respiratory illness and are instead buffers which help others build their immune system. The overall survival rate is 99.997%.

23. Children have already been exposed to unprecedented amounts of fear, instability, shaming, psychological trauma, and segregation through the COVID-19 measures and are therefore even more suggestible than their developmental stage would usually entail;

24. It is the job of parents or legal guardians, not of principals, teachers, teacher assistants, school board executives or other adults with influence on children, to make medical decisions for them;

Schools include vaccine and COVID-19 vaccine curriculum, which is biased, prejudicial and is a form of undue influence on any minor child which excludes full disclosure of the known risks of vaccination and the emerging evidence that vaccines do not provide protection as claimed;

25. Vaccine compliance elicited from children under threat of coercion, bullying, or suspension and who are not of fully informed consent that they have the legal right to refuse vaccination, constitutes extreme bullying and coercion and could be construed as a "battery" as well as a violation of constitutionally protected rights.

26. Contrary to misinformation spread by the World Health Organization, "implied consent" is not "informed consent," and "informed consent" is mandatory by law;

27. The Mature Minor doctrine cannot override the wishes and consent of the parents outside of preventing imminent harm or death. Vaccinations do not fall under the Mature Minor doctrine.

28. The engagement of medical experimentation without informed consent further constitutes the indictable offense of crimes against humanity.

For all of the foregoing reasons, I respectfully request that Washington Board of Health give serious consideration to not approve of the COVID-19 vaccine.

Sincerely,

Christina Carrillo Dela Paz

Dear Technical Advisory Group,

I've heard someone was planning to add the COVID-19 experimental, dangerous drug to School Requirement. It is unethical, radical and disgusting! Please think about consequences.

A few facts based on common sense, science and what we've been through last 2 years:

- * COVID-19 = FLU – based on different sources, survival rate is ~99.98%
- * Omicron is nothing – not dangerous at all, not even close – symptoms of a common cold
- * There are absolutely no cases of COVID-19 among kids!
- * Natural immunity is much more effective (1000x times) than any kind of Flu\C-19 shots
- * It is not a vaccine! It is a dangerous experimental drug, technically it's a poison, that kills people and makes the immune system vulnerable – As minimum, please check out the VAERS which has just 1% of registered cases and it's already having ~20K death and more than 1 million adverse reactions where people become disabled in many cases. Ask around and you'll see how dangerous it is!
- * Seems like Fauci lied to Congress and will be prosecuted for that. Hopefully soon and imprisoned for a lifetime.
- * Also, regular masks are 100% useless and do not stop viruses like Flu at all – have never been stopping the spread and each and every doctor knows that fact – or I'd say, those who studied biology in school knows that too. Forcing people to wear masks is a silly idea came from radical and ignorant people who want to show their political power.
- * All VACCINE MANDATES are unconstitutional, radical and extremely immoral. I hope it's clear
- * Do you even know how many people died because of smoking last year? No? So please go and check all statistics before talking about COVID!

COVID-19 'VACCINE' MAKES ZERO SENSE!!!

PARENTS DECIDE, NOT SCHOOL OR GOVERNMENT!

I hope, you will make a good decision!

Sincerely,

Denis Ankuda

Dear Sirs,

What authority do you have to create a Committee to advise on whether or not Matt vaccine should be mandated for children when the the PCR test itself has been proven to be faulty.

Children have no adverse reactions to Covid themselves so why are you trying to implement mandates for children in school.?

Please provide proof of an isolated SARS-Covid 19 virus

Why does 1 shot not work like originally sold to the public?

Why hasn't 2 shots within 1 year not worked?

Are you implying that any new rule change, ie boosters, would make a child ineligible to revive a standard education?

Are you implying discriminating against children who have not had their dna modified?

What exactly is on these injections?

Full ingredient list. Otherwise, this is not informed consent rather medical Coercion.

Also known as crimes against humanity and children.

Please provide all listed members on this committee.

They will be added to the new Nuremberg list. We understand you're just doing your job.

Therefore it is our job to place the proper restraints on your unchecked powers.

Sincerely

Concerned WA resident

Yvette Montgomery

Hello Kelie,

We all are worried about the health and lives of our children, our parents, our families and ourselves.

Many people suffered from COVID, some lost their lives, some lost loved ones.

We are all sharing that worry.

We all want to protect our families and our children as much as possible.

There must be a solution to stop all that.

What is that solution?

After 2 years of trying different approaches from masking to lockdowns to vaccination to treatment there is hardly any conclusive solution.

There is a lack of sources of data that everyone would trust and that we could be based on for decision making.

Some of us believe that if we all were vaccinated including children then we all would live in a safer place.

if the virus didn't mutate that could have been a solution.

Unfortunately the reality is that the virus does mutate.

Vaccines created against Wuhan virus variant provide lesser protection from each new variant.

Omicron is no exception.

Vaccines failed to protect us from getting the virus, spreading the virus, getting into the hospital and beyond.

They are still somewhat reducing chances of severe disease, but vaccine-provided immunity wanes way too quickly.

There are research papers showing that vaccination is reducing chances of getting the Omicron variant only during the first 2-3 month after vaccination or booster.

After 3 month since the last vaccination or booster, people have LOWER protection and a HIGHER chance of catching COVID than those who never get a vaccine.

The actual numbers vary with vaccine brands, but they share the trend.

Other research papers show that vaccination adverse side effects in children are not uncommon. For certain groups of children the risk of getting permanent damage or death from vaccines exceeds the risks from the virus.

Another research paper shows that mRNA vaccine makes the immune system focused on early Wuhan COVID variant, which weakens immune response to all other non-COVID related diseases like cancer, etc.

With a lack of data sources that we ALL could trust there is no scientific way to say if the above researches are scientifically correct or not.

Some of the above research can explain why vaccination rate among doctors is only 55%, which is lower than the national average.

Please be informed that all the COVID vaccines available right now are experimental including the Pfizer vaccine. Emergency Use Authorization for Pfizer from FDA does not change the fact that it is still an experimental vaccine.

There is a reason why Pfizer or Moderna are immune to lawsuits for side effects or death from the vaccines.

As a father of three I am very concerned about mandating my children to get vaccinated with experimental drugs.

Nurbsberg trials after World War 2 declared that no one should get experimental medical treatment without informed consent.

And you do not get informed consent from our side.

So what about a solution to the problem?

I personally can see a solution in treatment.

There are effective COVID prophylaxis and treatment protocols that significantly reduce the risk of severe illness and death from COVID.

A lack of trusted data sources prevents us from making conclusions on that. But everything I am aware of suggests that it could be a viable alternative to vaccination and associated risks.

Thank you for reading all that. I appreciate your patience and hope that WA schools will remain a safe place for our children like it was all these years.

Thank you for your hard work.

Thanks,

Oleg

Subject: Vaccine mandate for schools concerns

External Email

To whom it may concern.

As I write this please pardon my Grammar as it isn't my strongest point.

I do NOT support covid-19 vaccine requirements for kids. Here are a few well known concerns and I beg you to consider each of them.

1. Child statistically speaking are not at major risks from covid19. Currently according to hhs data 699 deaths with over 4 million cases.
2. We don't know the long term effects of these vaccines. Historically even past vaccines like MMR didn't become required till it was around for a while and had several years of testing and data behind it.
3. If you look around the world other countries have banned vaccines in kids under certain ages due to the possibility of side effects.
4. The political backlash will be horrific. If you look in California a school reversed its requirements because of public frustration.
5. The mRNA covid vaccines still have NOT been fully approved. Despite media claims the Pfizer vaccine being admitted to individuals is NOT fully approved and recent court cases have had ruling pointing that factor out.

These are just 5 topics that we all know to be facts if one simply does the research. And claiming to follow the SCIENCE is a huge mistake as the SCIENCE has continued to change. Just today Dr Focui admitted that isolation may not be the best thing and is harmful to society. Also the CDC has changed guidelines yet again. So to claim you are basing it on science is a easy excuse. I implore you to consider the following along with your so called science

1. Do you want parents to withdraw their kids by the hundreds? Imagine the financial cost to schools.
2. Do you want it on your conscience if down the road these vaccines have caused severe medical issues in kids? Knowing you required it....
3. Would you volunteer your children to receive this vaccine even though we don't know the long term effects? Especially when the risk of death is .004%?
4. Are you aware as administrators that more children die every year from diabetes, cancers, car accidents, and several other health risks? But yet you don't require anything for these kids to attend the school...
5. Religious reasons.. the mRNA vaccines are produced using fetal stem cell walls. Granted it's from the 60s or so they claim. Individuals may have a major conflict from

this.

Look right now everyone is scared and government officials don't want the what ifs or the deaths to be on their hands. I get that. I respect that... but we already know the "science" recommend distance learning and iqs are being reported to have dropped 25% from the start of this. We don't know the effects these masks are having on kids besides the acne, hypoxia, and excessive co2 intake not to mention the health risks from rebreathing the particulates exhaled. Keep in mind the mouth is the dirtiest part of the human body.

Again I understand stand what you are trying to do..... as a parent if required my children will NOT be getting it.... I think it would be best if the DoH didn't require it.... putting it in the same level as the flu shot would be the best. I also feel that should you require it parents will fight you sue you and so on

In conclusion given what we know , given what we don't know. Requiring the covid-19 vaccines right now I feel is too soon too fast. The vaccines don't stop the spread don't stop contracting it and many parents will refuse to get their kids the shots every 6 months. I also feel you need to remove the mandate over masks for students. The so called science on them for kids is b.s their is zero proof they have slowed or stopped covid-19 to start with.... I know you claim to follow the science and I'm just your average jo . But I see and deal and talk with people daily. I am vaccinated also . I am not against recommending it just feel this is one factor one thing you need to leave in the hands of the parents.

Here is what I would recommend and I feel would be better received by parents then a mandate.

1. Recommend the vaccine but not require it.
2. Encourage masks to be worn but don't require it...
3. Provide information to parent as a orientation package for school listing all ingredients all reported side effects both confirmed and not.
4. Provide the vaccines to students on a set day at each school for those who get "WRITTEN" parental consent...
5. Allow children the ability to do social learning if child is sick ...
5. Request proof of vaccines if received it for track purposes only.
6. And continue with the recommend testing prior to return to school if symptoms are at a set threshold.....

This is a very slippery slope and as a committee I implore you to look beyond the so called science. Look with compassion. Look at it as what would you do. People are scared . The government has changed things so much and now new york policy are acting the exact same way the Germans did in the beginning. This is a road we don't want to go down. Leave this to the parents..... Provide you recommend precautions for now atleast until more data is available on the effects on kids.

P.S. I strongly ask everyone to go look at the hash tag protectyourfamily or protectyourkids.. listen the stories see and think before you force tens of thousands of kids to inject something we don't know a whole lot about hell the general public can't even get all the data , all the ingredients. And they want 55 years before its released. This needs to pause for now.

Thank you for your time hopefully it makes sense and hopefully you and your group will just slow down!!!! And wait. Kids are not at risk so don't rush this!!! Their is no reason too and all side-effects will fall on your conscience..... just remember the late night commercials . YOU MAY BE ENTITLED TO COMPASSION.. DO we want to risk that on

our kids.....

Travis.....

Where there is risk, there must be choice.

Coercion is not consent.

Every child according to the Wa state constitution must be afforded an equal fair and adequate education.

Regardless of medical Choices, sexual preference, religion or race.

Discrimination based on vaccine choice is a violation of constitutional and civil rights.

Please listen to the parents of the children you represent, force and mandates is not choice and is most definitely not informed consent.

Signed

As this "vaccine" is still experimental and only has emergency use authorization for all age groups, it is unconscionable to require that students must injected in order to attend school. It is also not an actual vaccine, rather it is a therapy. Under no circumstances should this be mandatory for anyone living in a free society.

Please stop considering C-19 shots a requirement for our school aged children. There is so much science data out there to show, that children are not likely to get Sars-Covid-2 or give it, and even if they do happen to get it, they make it through easily. Scientific data shows that no healthy child has died of it.

I think it would be criminal to make an injection for our children with a substance that has possibly so many bad, side effects, some of which are permanent, for an infection that

children sail through, mandatory. Also, even admitted by the CDC, NIH and FDA, the Covid 19 shot does not keep anyone from getting it, or transmitting it. So why would we expose the children to this potential harm, if it doesn't prevent the infection.

Please look up the data yourselves, and don't just repeat what the narrative of the government entities are, which everyone by now knows, is not the truth.

Thank you.

TAG,

I appreciate you for taking the time to read this email. I am writing in as a very concerned parent and citizen.

It is unethical, immoral and illogical to place this unapproved product on the children's vaccine schedule. The effects of covid on children are negligible to nonexistent. We need our children's natural immunity to covid to weaken and buffer the virus for the "at risk population" (older, immune compromised) so this pandemic may come to an end.

We would be sacrificing innocent, healthy children to risks of injury and death from a product that has NO longterm safety data.

Thousands of experts at the Global Covid Summit have declared that these vaccines should NOT be used on children.

The Vaers database is signaling risks of heart inflammation, Myocarditis, Pericarditis, period irregularities, blood clots, etc. after covid vaccination.

If placed on the children's vaccine schedule to attend school, we run the risks of uninformed parents assuming "approval" and "safety," neither of which are true. Especially among those with language barriers.

If placed on the children's vaccine schedule to attend school, we run the risk of exemptions being eroded and a future of compulsory experimental vaccination of healthy, innocent children.

If placed on the children's vaccine schedule to attend school, we run the risk of continuous, compulsory, untested booster shots, further endangering healthy, innocent children.

I am attaching part of the Global Covid Summit Declaration:

NOW THEREFORE, IT IS:

RESOLVED, THAT HEALTHY CHILDREN SHALL NOT BE SUBJECT TO FORCED VACCINATION (view supporting evidence

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdoctorsandscientistsdeclaration.org/evidence%2F%23children&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C4e73917260fb4d64d00f08d9cb>>
)

- * Negligible clinical risks from SARS-CoV-2 infection exist for healthy children under eighteen.

- * Long term safety of the current COVID vaccines in children cannot be determined prior to instituting such policies. Without high-powered, reproducible, long term safety data, risks to the long-term health status of children remain too high to support use in healthy children.

- * Children risk severe, adverse events from receiving the vaccine. Permanent physical damage to the brain, heart, immune and reproductive system associated with SARS-CoV-2 spike protein-based genetic vaccines has been demonstrated in children.

- * Healthy, unvaccinated children are critical to achieving herd immunity. Natural immunity is proven to tolerate infection, benefiting community protection while there is insufficient data to assess whether Covid vaccines assist herd immunity.

In conclusion, anyone involved in the approval and implementation of an experimental product which causes future injury & death will be morally responsible for harming innocent, healthy children.

If there exists any financial incentives for placing these experimental products on the child vaccine schedule, the immorality increases tenfold.

We need your help now to stop this process. We need your help now to protect our children. We need your help.

Please consider the words of terrified parents everywhere. Parents who are trying to protect their children from unnecessary harm. And with all of my heart, I appreciate you reading this email.

Sincerely,

Jennifer Groeneweg

Comments for the Immunizations Technical Advisory Group

To: Those who are participating on the Technical Advisory Group of the Washington State Board of Health

Many of my friends, family, and myself are adamant that the Covid-19 vaccines cannot and must not be required by governmental agencies, legislators, courts, governors, or presidents. No person ought to be required to take this vaccine.

Since living and dying people testify of their own experiential results with the vaccines, we ought to face the fact that the vaccines have a high rate of harm. The blood-guiltiness of leaders who continue to require that the American people receive these vaccines should prick our consciences and shake us free of the lies and peer pressures which are compelling them to support something harmful to their fellow man.

The American people say "Fie" on you who stringently impose vaccines on our children. Young people are the greatest wealth of our nation and we who are parents and grandparents must protect their lives from danger using the free exercise of our soundest judgment apart from any state interposition. The young people are God's gift to us! Young people are not the property of an impersonal, inhumane, or synthesized state.

Dear TAG,

As you review data and arguments for and against adding the Covid vaccine as a required immunization for school I hope you will consider the following.

Why are we rushing towards the decision for a Covid vaccine to be required when we still know so little. What is driving this need?

The Covid-19 vaccine even with multiple boosters has not proven effective at preventing those vaccinated from contracting Covid and spreading Covid. What other approved immunizations require boosters every 6 months and potentially indefinitely? What does being vaccinated even mean? How can you have a requirement for something that doesn't even have a definition of what constitutes being vaccinated?

We don't know the long term impacts on the health of our children. How is that for the greater good?

Will you sleep at night knowing you voted for a vaccine requirement that has been shown to cause myocarditis with permanent heart impact in a child that had no previous heart issues?

Thank you for careful consideration of this very important decision.

Debbie Tatu

To Whom it May Concern:

The minute the Covid-19 vaccine is mandated in schools, our 4 children will be pulled! This is a non-negotiable in our household! This includes our high schooler at Ridgeline HS.

You should not ethically force a vaccine that is still EUA, and has not even completed phase 3 in the FDA's safety trials. I love my children too much to risk a vaccine complication when they have, and will survive Covid with a 99.9 percent rate! The CDC has finally recently acknowledged a correlation between Myocarditis and the vaccine. (Especially in young teen athlete boys! Links from the CDC attached to this email)

It's time we start considering natural immunity. Omicron could be something that ends Covid because its so contagious. Everyone will have natural immunity at that point! The schools should be considering natural immunity. Follow the science, unless it doesn't follow your agenda!!

Sincerely,
Katie Roe

Re: Forcing kids to receive the experimental Covid 19 vaccine. You have no right to force children to take an un-proven, experimental vaccine. The only thing that's proven about this vaccine is it's hit or miss ability to actually stop the virus.

There hasn't been enough testing or time to have discovered the various side effects currently being seen and that will more than likely be found in the future.

Don't possibly harm my grand children or any other children for that matter by forcing this experimental and not fully proven dangerous product to be put into their bodies.

Hello,

I was listening in on this TAG meeting to determine adding covid 19 vaccinations for school entry.

A few comments and questions so far:

- as parents of school aged children it is in OUR best interest to determine what is best for our children, not a TAG. This includes medical decisions.
- an early comment was made how "dozens" of Washington children have lost their lives to covid. An exact number was not stated, no reference for this number, no details or distinction if those children died directly from covid or with covid.
- additional comment was made about children being affected by death of loved ones from covid. Again, no details given. This has little impact on determining if we need to require a vaccine be administered to a segment of the population (our children) that the disease has not proven fatal to the overwhelming majority of children in our state and nationwide.
- most of the TAG group are somehow aligned and/or associated with the Washington state Board of Health and are policy wonks, not practicing pediatricians.
- how much personal bias will be entering into the TAG members voting? How will this be mitigated?
- how much of a legislative influence will there be on the TAG? How will this be mitigated?
- how were the TAG members chosen?
- who are the SMEs that will be presenting data to the TAG?
- will the TAG be evaluating the long term effects of vaccines that have not been through Phase 3 testing on children? If so, how since there is no data to evaluate?
- will the TAG consider the financial burden of the state and parents/caregiver if the children do suffer adverse reactions to the vaccines? - - to what extent will the BOH to include this group be held accountable if such a thing occurs?
- what recourse does a parent/caregiver have if a child does suffer a severe or fatal reaction to a vaccine?
- will the TAG consider natural and "herd immunity"?

There are many more questions I have as a concerned and very angry parent, but I will hold them for now.

This continued government overreach into our privacy and its authoritarian demands are doing very little to manage this disease. The desire to "do something instead of nothing" and to "err on the side of caution/abundance of caution" is causing more damage than covid.

The willingness to disregard parents and violate our privacy and that of our children disgusts me utterly.

The statement made by one TAG member to "not worry about perfection to prevent the good" and other comments clearly signals that this TAG has already come to a conclusion and they are just going through the motions. Science, data and long term repercussions to our children be damned.

I hope I am proved wrong.

Sincerely,
John Pavlick

Good morning,

I am writing to you in opposition to the covid 19 mandate for school children. I am asking for this vaccine not to be added to the required vaccines to attend schools.

If this is mandated many will seek private schools that do not require this vaccine, will homeschool or leave the state of Washington.

This vaccine should not be included until there are years of data to show possible side effects. Many countries are banning this vaccine for children due to the amount of side effects. I am not anti vaccine - I am asking for time and data before it's mandated for children.

Thank you for your time

Greetings,
Say NO to covid shot requirements for kids. Kids are very low risk to C19 and the "vaccine " is under A EUA and is NOT approved. The only "approved" is corminity , which is not available in the US. There are already over a million adverse reactions documented on VAERS, the Lazerus study shows that only about 1% are reported. That was before reporting was actively discouraged or forbidden. The so called vaccine presents more hazards than the disease itself. Thank you.

To Whom it May Concern,

I received information that the Board of Health in Washington is considering imposing a Covid-19 vaccine on children as a requirement for attending school.

This is unreasonable and foolish.

The vaccines are still experimental, children are largely unaffected by the virus, and the efficacy of the vaccine has severely diminished as new variants have come into play.

If you do this, it will prove to everyone that the Board of Health is only a political tool, and wholly unconcerned with the actual health of Washington residents. We already suspect that because of the ridiculous and harmful mask mandates.

If tyranny is the real goal here, then by all means lay aside science and reason, and stick it to the kids.

Sincerely,
Elizabeth Thiede

To Whom It May Concern,

Thank you for all the work you continue to do behind the scenes. I have attached the following letter to support many of the parents whose children attend my school. Many parents do not feel comfortable with vaccinating their children for Covid 19 yet and I can understand their concern. My family and adult children have all chosen to get vaccinated 3 times over now, but I do not know how I would feel if I had young children and feel strongly that I need to share their concerns with you. Thank you for taking the time to read the attached letter.

God bless and stay well,

Washington State Board of Health –
Technical Advisory Group
PO Box 47990 Olympia, WA 98507-7990
wsboh@sboh.wa.gov

Dear Washington State Board of Health Board - Technical Advisory Group Members:

I am writing this letter in opposition to adding Covid-19 to the list of state required immunizations for school entry at this current time or in the near future. My primary concerns are the facts that the current vaccine that is being used for children does not eradicate Covid 19 and the long term effects have not been studied. From what I have personally witnessed and documented, most children have only mild to moderate symptoms from Covid-19 and appear to recover quickly. I can understand why many parents are apprehensive about their child receiving the Covid-19 vaccine and their concerns should be listened to. I'm strongly opposed to the Covid-19 immunization being required without the option for parents to write an exemption for their child based on personal, philosophical, religious, and medical reasons.

Many parents are uneasy about having their children vaccinated for Covid 19 and many may pull their children from the educational institutions they are attending if it becomes required without the opportunity to opt out. One reason parents are nervous is because of the expedited timeline. It was just on October 29th that the Covid-19 vaccine, by a single manufacturer, received emergency use authorization only for the 5–11-year-old age group. The trials for this drug were minimal at best including approximately 3,000 children and lasting only two months. Requiring a Covid-19 immunization for school entry could cause some school age children to be put in the middle of the state's recommendations versus what their parents believe to be best for their child. This tug and pull is not good for children's mental health which has already had a significant negative impact by the pandemic. Children have not had significant issues with Covid-19 and I think it is important that we allow parents to decide what is best for their child when it comes to the Covid-19 vaccine as the state has always allowed this simple liberty for the annual Flu shot. Furthermore, parents and educators can attest to other research that there is no significant mortality among children. For the past two years, parents and schools have navigated Covid-19 and have been successful without mandatory immunization. There are established protocols within schools to keep students with fevers, runny noses, and other symptoms at home. These actions along with social distancing, cleaning procedures, and testing have proven successful. There are many other things that pose a far greater risk to the health of children such as injuries, motor vehicle crashes, suicides, suffocations, drownings, and fire. Likewise, the most recent strain – Omicron – has been found to be far less severe, with symptoms similar to the common cold – and could greatly increase natural immunity amongst all age groups, particularly in younger populations.

Part of the criteria you use in the review process is vaccine effectiveness, safety, and an acceptable level of side effects.

- We continue to hear daily about the ineffectiveness of these vaccines, with efficacy diminishing after only months. Those who have had Covid-19 vaccinations are coming down with Covid-19, 100's of thousands of individuals.
- Safety is and should be a huge concern for the Washington State Board of Health as decision makers as well as for parents. There are so many unknowns in vaccinating children for Covid-19. The trial was too small and the outcomes and long term effects on this age group are still unknown.

Disease Burden is another criterion used in your review.

- Covid-19, particularly among school aged children, does not have significant morbidity. The chance of death is less than one percent.
- Because of the many break-through cases amongst the vaccinated, vaccination is not a key factor in reducing person to person transmission..

Implementation is also considered.

- The Covid-19 vaccine is acceptable to some in the medical community and the public, but definitely not to all. There should not be a division like we see or as much uncertainty amongst medical professionals and citizens.
- Mandating this for school age children will place a huge burden on parents as it will force them to have to make very difficult decisions about the health of their children and an education for those children. Just as adults have been forced out of their jobs for making a personal decision regarding taking the vaccine, requiring a Covid-19 vaccination for children at school will force kids out of school. Consider the devastating impacts of a year plus of on-line school on students. Suicide is already the 2nd leading cause of death in those ages 10-18. If your decision is based on what is best for children, it will be against any **forced** requirement for the Covid-19 vaccine.

Education is a great equalizer and a right for all children. A decision to require a Covid 19 immunization for school entry will be disadvantageous for many and unethical. Again, I ask you to listen to the parents who have valid concerns. Many highly educated medical professionals, firefighters, and business owners are just a few amongst those parental demographics who deserve for their voices to be heard and respected. Please allow parents the choice to choose what is best for their children when it comes to the Covid 19 vaccine.

Sincerely,
Danette Jones

To Whom it May Concern,

As a constituent with children I desperately ask for you to NOT mandate the covid experimental vaccines upon the children of this state! There are many reasons this should not be mandated upon our children. 1) it is illegal for you to mandate an experimental drug on anyone even in the name of "public safety". 2) continuous evidence since the beginning of the pandemic show that children are at little to no risk of serious side effects due to covid. So why would we mandate an experimental drug on them when what they are having injected does nothing to lower their risk and only increases the risk of side effects? 3) the covid jab was not designed to stop the transmission of covid or the infection of covid to the person vaccinated. Therefore, they can still be infected and transmit the virus. So there is no need to give it to children. 4) there is increasing evidence that those who have received the jab are having heart and reproductive issues after being injected....we must not do this to our children. Because the risk to children is great and there derives no benefit to them or to others (point 3) by injecting them with this experimental drug, one can only assume you would mandate this for children for nefarious reasons and not for the health of the public. DO NOT EXPERIMENT ON OUR CHILDREN! As a constituent and a parent, I say STOP THIS MADNESS! I will protect my child. The Protection of my child is NOT your job!

Defending the children,
A parent who actually is concerned for public health

My husband and I are against the COVID shots for school attendance. In the 5th Circuit Court on October 12, 2021, the judge questioned the compelling interest and urgency of the government mandating these shots because employers with less than 100 employees do not have to comply with OSHA's rule on them. Children are at a very low risk of serious complications from the disease and questionably higher risk from the shots. Parents should decide whether their children get these shots, not the government.

Thank you,

Eric and Elizabeth Soliday

Dear Board members,

There is absolutely no scientific basis for the policy to mandate vaccination of children. This vaccine neither prevents infection, nor transmission...and as the efficiency weans over 90 days, there has been shown negative efficiency, which actually makes a vaccinated individual MORE susceptible to infection. It is unconscionable to hold a child's access to education hostage with an experimental EUA biological injection.

Our children have sacrificed enough for politics this past 2 years. Please don't fail them again.

Regards,
Maureen Crabtree

Please don't make the COVID 19 vaccine mandatory. It'll be detrimental to the schools. The attendance will be cut down so much and it'll put a strain on a lot of families. There is way too much controversy over this and I feel like we're jumping to conclusions way too fast on this. This vaccine is will not stop COVID like the polio vaccine stopped polio. It's 100% different. There will be different strains of COVID each year, just like the flu. I don't understand why everyone can't see this. COVID is here to stay, just like the flu and we as humans will adapt naturally. Please please please don't mandate the vaccine for schools or sports. I have a career and family and friends and my whole life here in this great state, but I'm willing to give it all up to protect my and my children's freedoms. I don't want to move, so I beg again please don't make this mandatory.

Thanks,

To whom it may concern:

I urge you to NOT take any sort of action on the matter of mandating child vaccinations in public schools. The data for Covid-19 is not anywhere close to supporting any such action. Frankly it would be reckless and only exasperate harm to our children's education and mental health, which is incredibly fragile right now... and not because the virus has harmed our children but because of our reaction to it. Please stop the suffering of our children and the decline in their education. Not only is their mental health and quality of education concerning but I believe this only further widens the wealth gap.

While your intentions on this matter may be good please consider the actual data and risks involved in children. I believe confidently there are much bigger unintended consequences looming if you were to take action on this issue.

Dear Washington State Board of Health,

Please DO NOT make the Covid 19 vaccines mandatory for school children in Washington state.

Science tells us that these vaccines aren't effective in stopping the spread of Covid, nor have they been studied enough to show their inevitable negative, long-term effects on the body.

There is no reason to put our future generations at risk, when they're faced with catching an illness that is 99.9% survivable.

End the insanity surrounding Covid NOW.

Respectfully,

Shelbey Davis
A concerned parent of school-aged children in Washington

Dear Washington State Board of Health,

I urge you to consider the real science and full spectrum of medical data when considering requiring a COVID vaccine for day care and school attendance. Randomized controlled trials are the gold standard in medical research because there is a control group. Pfizer conducted a randomized control trial of 44,000 patients divided into two groups. One group gets vaccine, one group gets placebo. More people died in the Pfizer vaccine group than the placebo group. The difference wasn't statistically significant but scientifically one cannot claim these vaccines reduce death.

The Pfizer and Moderna vaccines use non-FDA-approved mRNA gene therapy, according to their filings with the US Securities and Exchange Commission. Clinical trials for the drugs conclude in 2023. The only FDA approved version of the vaccine is Comirnaty, is not currently available, and is different than the emergency use authorized Pfizer-BioNTech vaccine. 21 US Code 360BBB protects one's right to refuse any emergency use authorized medical products, therefore it is illegal to mandate an EUA vaccine.

The VAERS database is the database for vaccine injuries. A Harvard report in 2010 shows that fewer than 1% of vaccine adverse events are reported to VAERS. The CDC validates all entries and false allegations are prosecuted. Pre-COVID, VAERS shows about 158 deaths due to vaccines per year. In January 2021, over 17,000 deaths and over 70,000 hospitalizations from the Covid Vaccines were reported. This quantity of lethal reactions historically shut down other vaccine programs.

Further, the CDC says that the Covid hospitalization risk for children is about the same risk of the flu.

Tens of thousands of doctors around the world, including the creator of the mRNA technology Dr. Robert Malone, warn of the extreme dangers of this experimental Covid drug. It is not safe, responsible, or legal to require this experimental drug for children.

a viral gene will be injected into your children's cells. This gene forces your child's body to make toxic spike proteins

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fchildrenshealthdefense.org%2Fde-vaccine-spike-protein-travels-from-injection-site-organ-damage%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C5d6ac7d525574328e89308d9cfcb294b%7C1>>
. These proteins often cause permanent damage in children's critical organs, including:

*

*

- * Their brain and nervous system.
- * Their heart and blood vessels, including blood clots.
- * Their reproductive system.
- * This vaccine can trigger fundamental changes to their immune

system.

The most alarming point about this is that once these damages have occurred, they are irreparable:

*

*

- * You can't fix the lesions within their brain.
- * You can't repair heart tissue scarring.
- * You can't repair a genetically reset immune system.
- * This vaccine can cause reproductive damage that could affect future generations of your family.

The second thing you need to know about is the fact that this novel technology has not been adequately tested.

*

*

- * We need at least 5 years of testing/research before we can really understand the risks.
- * Harms and risks from new medicines often become revealed many years later.

Thank you for your time.

I absolutely do NOT believe that COVID shots should be mandatory for children. Medical freedom has always been a choice of the American public and a virus that generally is not dangerous to otherwise healthy children should not be the exception to that freedom.

Thank you,

Nicole McLean

Subject: NO to Covid Vaccine Requirement for students

External Email

Dear WA school board committee,

I am writing to oppose any and all Covid vaccine requirements for school children. Vaccine requirements/mandates should NEVER be allowed. Children/students are the responsibility of their parents and NO government authority should ever have a right to decide what is best for a child. Only their parent or legal guardian should by law have that right. If a parent/guardian wants to take this risk with their child, that should be their doctor's and their own personal choice. NO ONE ELSE's.

This also includes all adults. By saying you have a right to force vaccinate or put anything into another person's body without their full consent, you are NO BETTER THAN THE NAZI GERMANS. We still have Nuremberg laws, and if you haven't read them and actually looked at the FDA's 'supposed approval' you will see these covid 'vaccines' are STILL EXPERIMENTAL. They are injuring and killing thousands of children, teens, and adults in the United States alone. Look at the latest numbers from the life insurance companies. Deaths in people 18-40 are up 40%. 100,000 extra/abnormal deaths every MONTH since these shots in the USA alone. Insurance figures, not mine!

I know of 15 people who have DIED as a direct result of the covid vaccine within 5 days of the shot. I know of several with neurological damage.

You can not in ANY GOOD CONCIENCE actually think the WA State citizens will not hold each and everyone of you personally responsible if you even think to make these shots/vaccines a requirement for children and students.

Sincerely,

Diane Gerig

I feel my kids are being subjected to something that shouldn't be applied to them!! This has all be being forced onto the kids because adults are more scared of a man made virus that does affect certain people more then others, but this vaccine SHOULD NOT BE FORCED onto children! I use to support the views of the school board. But now. All I see are bullies, pushing their "beliefs and fear" onto children that have no voice because they are under 18 years old! And you undermining the PARENTS choice for our children, religious views or beliefs are thrown ou the window without us even being herd in the first place.....and if this continues my children WILL NOT be a part of mead district from here on out.

Hello,

It is my understanding that the next meeting is to discuss involuntary isolation and quarantine of individuals at a quarantine facility with communicable diseases. Also, that you are considering using this to force people into compliance to become vaccinated. I hope the board realizes the territory they are treading on. It has been shouted down as "conspiracy theory" that the unvaccinated would be forced into quarantine camps much like the Jews in WWII. But this Board of health seems to be very interested in exactly that. Building quarantine facilities in WA state and discussing how to involuntarily quarantine people?!

Covid-19 has been a farce since the beginning. Has anyone been able to supply an isolated strain of covid-19? The state and local health boards really like to count numbers of cases without taking into consideration how sick those individuals actually are. Counting hospitalizations and deaths has also been skewed. Simply being covid positive is counted as a death or hospitalization whether or not it has anything to do with the death/hospitalization. If someone goes to the hospital for surgery they are required to take a covid test. If the test is positive it is counted as a covid hospitalization even though that has nothing to do with why they're in the hospital. You've done the same thing with counting deaths. Covid positive? Count it even if covid had zero bearing on why they died. I personally know more people who have died from remdesivir than covid.

And now you want to further your power hungry, corrupt agenda and involuntarily detain people. This virus is not nearly as dangerous as you want everyone in this state to believe. Everyone I know has had covid. Some barely sick at all. Some about the same as a typical influenza virus. Some hospitalized and murdered by the treatments they received.

It is also my understanding that you want to discuss adding the covid vaccine to the school immunization schedule. We all know very well by now that you can not claim the vaccination prevents anyone from getting or spreading the virus. But you're still making the unvaccinated out to be villains. Forcing them to lose their livelihood. This vaccine has ZERO long term studies. The VAERS reports have gone through the roof. The FDA isn't even willing to release their data for 55 years!! And you want to require people to shoot this into their kids to get an education?! I read a lot of comments online from parents. This is their line in the sand. Even vaccinated parents are not willing to give this shot to their kids. If you require this jab as a condition to go to school, you will see a mass exodus of students from public schools across the state. Mine included. There will be some who feel like they have no other option and they will feel forced into getting their kids these shots and there WILL be kids harmed. Are you going to be personally liable for their injuries and deaths? Because that blood will be on your hands. Are you ok with that? For a virus that is mostly asymptomatic for kids? For a "vaccine" that does more harm than good?

Also, omicron is now our most prevalent strain. It's symptoms are widely reported to be that of the common cold. Your propaganda has people terrified of the common cold?! Do you believe that these measures of forced isolation and forced vaccination are acceptable for the common cold?!

I beg of you to stop this madness. This all needs to end. NOW.

Thank you.

Subject: No more mandates!

External Email

Happy New Year! It is now 2022 and we are still pretending there is a state of emergency related to a virus from 2019. It is time to move on. Most of us have already moved on and it is time for the board of health to try to keep up. It is time to end the emergency declaration and all associated mandates. It is definitely not time to add more mandates to the list. It would be a particularly bad idea to mandate COVID vaccinations for children. Those of us who are opposed to the idea will not be complying anyway, so don't waste your time. Please review the declaration and information at the following link as you consider your decisions: <https://doctorsandscientistsdeclaration.org/>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdoctorsandscientistsdeclaration.org>>
. It is important that you get this decision right for the sake of our society and for the sake of your own credibility and reputation.

Thank you.

My name is Karli Britt. I am completely against making the COVID-19 vaccine mandatory for school-age children. I do not believe that should be a requirement for children to go to school. The flu vaccine is not a requirement for school and Covid is much like the flu. If this becomes mandatory I myself will pull my child out of the public school system.

To whom it may concern,
I would like to express my concern and issues regarding making vaccines mandatory for kids. They should NOT be mandatory and it should be something that is determined by parents, not the state. My kids both had Covid a few months ago, my son having very mild symptoms and my daughter being asymptomatic. There is not enough research done to show the long term effects it has on kids, especially for an illness that is mild in kids. I am not anti-vaccinations, but I do not agree with making them mandatory. It is taking away the rights of parents.
Thank you for your time

To WSDOH,

I am writing in opposition for mandating Covid vaccines in our school children. If this is mandated we will lose a large portion of students which will lead to many teachers and administrators losing their jobs. With the Omicron variant doing what viruses typically do, become less virulent but easier to spread we are finally heading out of the pandemic according to many epidemiologists. Children should not be forced into taking a vaccine that does not prevent spread (that is well known now) to protect their elders or immunocompromised individuals.

Recently, a study came out showing that the risk of myocarditis is actually larger in vaccinated males under 40 than it is from natural infection. There is also currently a study going on through Johns Hopkins regarding various menstrual issues being seen after vaccination in women. If we do not have answers yet about why these things are happening and how we can prevent them, how can we mandate this for our children? The answer is we can't in good conscience. The fact that there are no long term studies and the BLA for Comirnaty

(<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.fda.gov%2Fmedia%2F15171>) requires these over the next 5 years is very telling. We cannot have informed consent without the knowledge obtained from these studies. The data on the AAP shows that Omicron is not more severe in our children, "In states reporting, 0.00%-0.02% of all child COVID-19 cases resulted in death" (AAP Report: 12/30/21) furthermore, .8% result in hospitalization which includes those that are in the hospital for other reasons but are asymptomatic and test positive for Covid.

I don't think anyone wants to do anything that may be a danger to our children. Unfortunately, like Eric Rubin said in the FDA panel meeting before the 5-11 age group was approved for the vaccine, "We're never going to learn about how safe the vaccine is unless we start giving it, and that's just the way it goes." (Vaccines and Related Biological Products Advisory Committee – 10/26/2021)

Thank you,
Martina Collom

Subject: NO Vaccination Mandate

External Email

To Whom It May Concern:

There is absolutely no reason to be considering a vaccine mandate for kids of any age in this state for this ridiculous COVID situation for many reasons starting with it is completely unnecessary. Kids are not causing or part of any outbreaks in the schools in Washington where they are forced to wear a mask or even in states or countries where kids are not and have not been wearing masks. Our state since the beginning of this so-called pandemic has been inept in the handling of this situation. There are states around the country that have had fewer mandates and restrictions with lower infection rates and death rates than ours. With that said, mistreatment of cases with ventilators has been a huge cause of deaths around the world per numerous studies found on NEJM, NIH, Harvard Health

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.health.harvard.edu%2Fdiseases-and-conditions%2Fcoronavirus-outbreak-and-kids&data=04%7C01%7CNathaniel.Thai%40sboh.wa.gov%7C1552df2adfd545cd62b908d9d06f20e6%7C11>>
, and real studies in countries that actually care about healthcare instead of money.

If kids were transmitting and causing major outbreaks which they are not part of, it would make sense, but not only are they not transmitting or part of major outbreaks, our state is still using PCR tests that the CDC has long been admitting does not even work as a valid source of determining a true positive test nor can it differentiate between Covid19 and the flu. A Yale study states that there are positive tests when no genetic material is even on the swab, FDA states that the test frequently shows false-positive results, I could go on, but that should be adequate.

The point of this email is not actually to point out the inconsistencies and level of incompetence shown in our state but to point out that vaccination for kids is completely unnecessary. Let those who choose to vaccinate their kids do so and those who do not wish to do so to not vaccinate their kids. If this was a plague or something that is actually medically significant, that would be one thing, but this is not the case here. I encourage you to stop and look at the actual data, not what the state is telling you, but the actual medical journals from around the world as well as comprehensive data from all states. What you will find is my argument to be valid. I do not email my representatives just because, I have done a significant amount of research from the beginning of this pandemic, have talked with doctors and experts here and around the country to base my decision on. You owe us at least that before you start mandating things as serious as this.

Thank you for your consideration of my request for you to do the right thing and not approve a vaccine mandate for our youth.

Sincerely,

Kevin Barquest

Subject: NO VACCINE REQUIREMENTS FOR CHILDREN

External Email

Vaccine requirements for school-age children are a terrible idea. It should be up to the individual parent(s) to make the decision about whether or not vaccinate their child for COVID-19.

Furthermore, if a child has already had COVID-19, they should not be required to have a vaccine, as they now have natural immunity.

Understand that if this vaccine requirement goes into place, you will have many children withdrawn from your schools statewide.

I urge you to fight this mandate.

Sincerely,

Elizabeth McCabe

To Whom It May Concern,

Children should not sacrifice themselves or be put at risk of any kind for the greater good of adults. Let what you just read sink in. As adults, we have the responsibility to protect our children, not put them in potential danger that could be avoided. Per the CDC website, as of January 4th 2022, children ages 0-17 in the US have a 99.99918% survival rate against COVID. Statistically, children have a higher probability of contracting Myocarditis or another adverse side effect from the vaccine than they do of contracting COVID and dying. That being said, how do we as adults with any shred of moral compass or conscience mandate this?

The COVID protocol for students i.e. masks, isolation, remote learning, social distancing, etc. pose a far greater threat to the current generation of children than the disease itself does. The silence amongst the health and school officials regarding this issue is deafening, however the erosion of our youth, suicide numbers and drug overdoses speak at unmeasurable decibels.

My wife and I have three school aged children. A vaccine mandate in Washington schools is our line. Our kids will be pulled from public school without question, without hesitation if a COVID vaccine mandate is imposed.

Follow the science. Read the data. Do what is right. It is time we put a stop to this and start living again.

I am an emergency room nurse. I worked through hot and cold of CoVid pandemic. Children remain low risk, and recover extremely well from CoVid symptoms. As a nurse I strongly discourage CoVid vaccination for children as the vaccine is still under emergency use and there is no long term data available about it long term side effects! Every human should have a choice in what they choose to have in their body!
Thank you.

I do not support the vaccine mandate for children.

There are no long term randomized studies therefore you cannot tell me this vaccine is safe. There needs to be proof of the efficacy of these vaccines in children.

I feel if it is mandated you're going to see where parents hard line is and a lot of children will be kept home. We're already seeing the effects of children having missed a year of school please don't make it mandatory and cause more hardship on these poor kids. Let us the parents decide whether it's right to vaccinate our children.

I recently heard that the Washington State BOH was considering a requirement for the covid vaccination. This is very disturbing! Not only are children at effectively zero risk from covid, there are considerable non-zero risks of adverse reactions.

Do not put this mandate in place. The blood of our children will be on your hands.

Subject: Public Comment re: vaccinating children

External Email

To Whom it May Concern,

I am writing on behalf of my child and the upcoming decision regarding a potential vaccine mandate for students to attend public schools. We have been battling this pandemic for nearly 2 years now and science has proven that the vaccine does NOT protect us from nor prevent the spread of the virus. ALL of our vaccinated friends have had a breakthrough case - many of them worse than their unvaccinated family members. Not only that, the vaccine has caused far too much damage to be considered safe, especially among healthy children who are capable of getting over Covid in a day or two and are better off with natural immunity. In addition, nearly every person I know - from young and healthy to old and extremely unhealthy- has already had the virus, and not a single one of them was hospitalized. Those who have experienced Covid have natural immunity and absolutely should not be forced to be injected with a vaccine that has the potential to cause injury and/or death. We know that social distancing, masks, and vaccines have NOT been successful, and have actually caused more harm with their continued implementation. Ask school counselors about the impact of these mandates and you'll discover the astounding number of suicides that are being contemplated and/or attempted each day. Kids want to live normal, mask-free lives again without being forced to be vaccinated when it has proven to be not only unsuccessful but dangerous. You have the power to stop the divisiveness and fear mongering and help us get back to a place where kids have the freedom to hug and be hugged without fear, shame, or guilt. Science has proven that there is power in physical touch, but fear is crippling. In schools right now, kids are yelled at, shamed, and even disciplined for being in close contact with their friends and/or removing their masks. Ironically, most of them do these things outside of school and/or have already had Covid, and these mandates have gone on far too long. If you mandate the vaccine for students, it will undoubtedly be the final straw. We - and most, if not all, of our friends - will pull our children from their public schools if the vaccine is mandated in Washington.

Thank you for your consideration, and please allow kids to be kids again without the weight of these mandates on their shoulders.

Sincerely,
Jody Bishopp

Subject: No to mandatory covid vaccine for children

External Email

Dear WSBOH members,

Please do not make Covid vaccination a requirement for children to attend school. Unlike all the other vaccines required for children, covid is not a deadly childhood disease. The data is clear that covid is not a threat to children. My children barely had any symptoms when they had covid and they now have natural immunity. The vaccine has not had the benefit of long term testing for children to know if there are any adverse long term effects. Also, as is clear from surging cases across the globe, the vaccine won't prevent them from getting covid, so what's the point?

Sincerely,
Dawn Larson

Subject: SAYING NO TO MANDATORY VACCINATIONS

External Email

To whom it may concern,

Mandatory vaccinations to children is like child abuse when we do not know the damage it can cause that we are not aware of yet. If someone has already had COVID and they get the vaccine their chances of having adverse reactions is 4 fold and unnecessary.

I am asking you all to consider this and let it be up to families to make these choices for their children.

The Washington State Board of Health (WSBOH) will have it's January meeting on Wednesday, January 12th @ 9:30 am. On the agenda: Immunization Criteria for Child Care and School Entry. (making Covid shots mandatory for child care and school admission)

I am a state licensed family home childcare for over 30 years in Tumwater WA, and I have 2 grandchildren, currently in a public school in Tumwater, WA.

I say NO to state mandated Covid-19 shots for children!
Covid shots should absolutely NOT be a requirement for our children. especially since they are at an extremely low risk for Covid. The vaccines are still only EUA (emergency use authorization). Please protect our children from experimental vaccines. Parents are the only ones that should be deciding if their children should get vaccinated for Covid.

Sincerely, Lydia Sanders

To Whom It May Concern,

I am writing to oppose mandated Covid vaccines for school age children. It should absolutely NOT be a requirement for our children to attend public or private school. I'd like to remind the BOH that children are at extremely low risk for Covid-19 and that the vaccines are still only emergency use authorization. Quit the fear mongering and lets move on with our lives, and please leave our children out of this.

"All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws."

I Mickey Ambeau and my husband William Ambeau are opposed to mandate this vaccine for our 2 children. This is our right as parents in our country that my husband served in the military. There are medical and religious reasons. Please listen to parents concerns and pray that you make the right decision children are not at risk for the covid 19 and the vaccine is not needed for them. We have already had it and the natural immunity that our bodies have is best and needs to be considered.

Hi! I oppose the vaccine mandate for children! For one, children are at an extremely low risk of having complications with Covid 19. The vaccine also does not "cure Covid". Most of the patients I see infected with Covid are indeed vaccinated. This vaccine has only been out for a year now. In the past have you seen experiments involving children? Have you researched it? I am a healthcare professional and in the American medical association encyclopedia the coronavirus is labeled as the common cold. My children are not required to get the influenza vaccine so why would the Covid vaccine be any different? The impact to schools will be detrimental if this passes. Many people will consider homeschooling and districts will lose funding. Again I say NO to the vaccine mandate for children. As you can see the virus is mutating and turning into the common cold, example, Omnicron. I hope you can take a stand and do what is right for our children.

Hello-

Covid shots should not be required for anything, especially school. There is simply not enough data to be able to ensure how "safe" they are. You cannot guarantee how safe they are nor will you take responsibility for any adverse reactions.

I will pull both of my children out of the Seattle public schools if it is decided that COVID shots (much like a flu shot) is required.

After experiencing Covid myself as well as taking care of many family members, add to that seeing & watching many friends who have it & are now fine. It is absolutely unconscionable to mandate anyone, especially children to be mandated in receiving this injection which is NOT FDA approved! In fact I have witnessed more family & friends getting severe side effects from these shots & yet still get Covid. Most of these side effects are life changing & will eventually lead to their death. The fact that myocarditis is a side effect should be extremely concerning. And let's get this straight, there is no such thing as mild myocarditis! And the fact that the mRNA & the spike protein goes straight to the ovaries should be extremely worrisome too! I would love for any one of you to experience a week with my autistic grandson. Because if this is our future, we are in serious trouble! The key to Covid is early treatment, which has been neglectedly ignored by our government. The fact that a cheap drug that is safer than aspirin is banned is an absolute travesty. Do Not. I repeat, Do Not in any way or form mandate these shots for our children! They should not be mandated for ANYONE!

Dear WSBOH,

I am writing this email to you in opposition to the recent developments that WSBOH will give guidance on COVID vaccinations for children and as a requirement for enrollment in the "PUBLIC" education system. You may be convinced that we are in a "PANDEMIC", but what we are in NOW is an endemic. Tests have shown that children are completely unaffected by COVID, additionally, children once vaccinated are susceptible to the many adverse affects (myocarditis, thrombosis, etc.). If Washington State fails to protect MY children from a vaccine that I feel is unwarranted, then I have no choice, but to pull both my children out the public school system and provide homeschooling.

Dean A. Furr

Dear Washington State Board of Health,

I absolutely oppose of any Covid vaccine requirements for school age children. If this occurs, I know of many families that will pull their children out of the school districts. This is a gross over reach. Vaccinated individuals can still spread and catch the disease. Also, the vaccine is still being tested and we don't know the full range of side effects. The variants are proving to be mild. Please let this be a personal family decision.

Sincerely,

Maria Eng

Dear WA State Board of Health,

Hello. I'm writing as a WA state educator (Spanish) and a parent to an immunocompromised child. Prior to the Covid outbreak, I taught at Lincoln HS in Seattle and my daughter attended Olympic View Elementary. However, because of Covid, I resigned my position as I simply didn't feel safe interacting with and teaching over 160 students/day coming home to an immunocompromised child who wasn't yet eligible to get vaccinated.

As such, we are currently staying with my parents in Spokane, where I grew up. I was watching the local news tonight and saw the story on the upcoming vote by the Board of Health on mandating covid-19 vaccines for school children and how the Mead school district is asking families to speak out against the mandate. However, I found it striking that the only people being encouraged to reach out and voice their opinion are those opposed to vaccination mandates. I am writing in strong opposition to that stance.

As a native Eastern Washingtonian (grew up in the Palouse Country south of Spokane and attended Freeman Elementary, Middle, and High school and Whitman College in Walla Walla for my undergraduate studies), a teacher, and a parent, I implore you to please require Covid-19 vaccination mandates not only for students but for ALL who work in schools—students, teachers, administrators, food service workers, librarians, administrative staff, janitorial crews, and support staff. This virus is so highly contagious and has disrupted so much of our student's childhood (and learning) that we need to do everything possible to ensure not only continuity of education but minimize the collective trauma of all involved in education. There are many ways to do this but vaccination and mask mandates, coupled with investments into air purifiers and updates HVAC systems in schools are proven ways to ensure that our students AND teachers can attend schools in as safe a manner as possible.

As a teacher, I know I won't feel safe in the classroom, interacting with over 160 students daily, until I know that the my are vaccinated. As a parent, I won't feel comfortable sending my daughter back to school in a classroom with 25ish other students until I know they, too, are vaccinated. What might manifest as a minor illness for one person might result in death for someone else. Sadly, my daughter (who has spent over 2 weeks at Children's Hospital in Seattle this year alone) falls into the latter category.

Please help keep my daughter and other children like her safe and healthy. People who are at higher risk are not disposable. They are the most vulnerable on our society and we should be doing everything in our power to help protect them and ensure their health and well-being. Many of these families (mine included) have been living like hermits for the past two years and returning safely to the classroom is one way we can start to have some sort of normalcy in our lives.

Please prioritize the health of the most vulnerable. Please prioritize minimal interruptions and in-person education done safely.
Please help all who work in schools feel safe and protected.

Please vote to require a covid-19 vaccination for all students who attend WA state public schools.

Further, please vote to require a covid-19 vaccination for all who work in WA state public schools.

Thank you for your time and consideration.

Sincerely,

Heather Cline

Regarding Mandating child Covid vaccine for daycare and school entry....

First, the Covid vaccine is still under Emergency Use Authorization (EUA), which means it is still EXPERIMENTAL. Animal studies have never been done, and human studies were very brief, and did not include children prior to the release of the vaccine over a year ago.

Second, the risk of Covid to children is vanishingly small, as well documented by the CDC, and children are not spreaders of the virus.

Third, the toxicity of the vaccine in children is now clearly manifested, most alarmingly with the particular serious and persistent side effect of myocarditis (heart inflammation). This is seen in numbers orders of magnitude more than ever before—and filling the offices of pediatric cardiologists. Therefore, the risks far outweigh benefit in children, and thus the vaccine is NOT indicated medically nor ethically—and certainly should NOT be mandated.

Fourth, a mandate for children (or any age) is unethical, illegal and unconstitutional, and contravenes the Nuremberg Code, which expressly forbids any form of coercion for medical experimentation, which the Covid vaccine still remains under the EUA status.

I am a retired MD, and can provide the Board with documentation from world-class scientists and physicians detailing the above points.

To Whom it May Concern-

Covid is a reality. As we can see today the vaccine has done nothing to help stop this pandemic. I am a teacher and have no fear from getting Covid from my students. They are not the ones at risk and as science shows. They are not the ones spreading it nor are they the ones getting very ill.

Requiring children, innocent children, from getting a vaccine that still has not been properly tested. Today, we already have 1 in 25 with autism yet no one is asking why?? So now we throw another "wait and see" the effects vaccine into young children. Washington, committee, governor and all those involved you must let families make their own choices of what is safe for them. We live in a free country that must let this virus run it's course and stop letting \$\$\$ and control be your guide.

Do the right thing for children's sake.

Ann

To whom it may concern,

Please vote NOT to include the Covid shot in the immunization criteria for children.

Children are extremely low risk and the Covid shots are still emergency use authorization.

Children are experiencing more adverse reactions to the shot than Covid itself.

Even if you get the shot you still get Covid and pass it on.

In order to keep this short that is all I'll state for now. If you'd like more information and where I got this information from, please let me know and I can provide my research.

Thank you for your consideration,
Rhonda Tatum

In regards to the upcoming meeting topic of possible requirement for Covid vaccines, as a parent I absolutely oppose requiring this vaccine. Prior to Covid, best practice in the healthcare setting is to follow evidence practice research. Not only is forcing a vaccine in trials and under emergency use onto all children unethical, but the school district would be setting themselves up for legal ramifications. There should be at least 7-10 years of research (even more with children) looking at the long term effects. There is no way to "fast track" research. So many students have already been pulled from public schools due to some of the teaching practices, why add another reason for parents to pull their kids and decrease funding that is already strapped?

The expressed views in this email are solely my own as a parent and do not express the views or opinions of my employer.

I am asking that NO vaccine requirement be placed on our children for school admissions. This vaccine by definition is still emergency use only. There have been thousands of cases reported of adverse reactions in young, healthy people. Including severe heart and blood clot issues. This shot is more harmful to children than the virus is. Please do not force this on our most beautiful and vulnerable. Thank you.

Honored Board of Health,

Shots/Vaccines should and always be a parents decision and responsibility. The government is overreaching when it comes to Covid-19 and students receiving shots. Heard immunity has worked in the past and it's a FACT that children are the least likely to die from this. There are MANY doctors and scientist that rebuke Dr. Fauci.

Please do not make it a mandate for children. Let parents make their choice for their kids. Period.

Good day ,
Please do not have mandatory covid shots for children. It doesn't stop the spread . They are a very low risk . And we don't know the long term effects that this will have on their future. This shot hasn't had YEARS of trial and they can't prove that it is safe. I believe it is our right to say what we put into our bodies. It should be a CHOICE if the parents feel the need then let them make the choice for themselves and their family. And the ones that don't want the shot it should be their choice for them and their family's. PLEASE DONT MANDATE THE SHOT.
Please don't
Thank you

Hello all from Spokane Board of Health,
I am grateful that you are taking out your time to hear my opinion and voice about the possible mandate of the COVID-19 vaccine for children who attend Spokane public schools. I know that our children's health is important to us all as a community, however in my opinion I feel COVID-19 is just like the flu. The children are already in a mask throughout the whole entire class session and it still does not stop the transmission or spread of the coronavirus. The coronavirus is just as easily transmittable like the influenza and children did not have to wear a mask for the influenza. My child has already been through enough by wearing the masks for two years and being shut down from school for almost a year and the science behind the vaccine is not substantial for me to honor the mandate of children to get the vaccine. there have been so many adverse vaccine reactions for children who have gotten this vaccine and I am scared for my child to have to get one. I do not think that this mandate should be implemented for children to attend school when the parents help pay the teachers to teach our children. It is not fair that my child will get denied an education because they do not have the COVID-19 vaccine. You are punishing the children and the parents who elect to keep their children unvaccinated until the science proves otherwise that this vaccine can be helpful to the children. Please take into consideration of my thoughts on not making this vaccine mandatory for children to attend public schools.

Subject: Reject Covid Vaccine Requirement for School Aged Kids

External Email

To All Whom This Concerns:

I am writing to urge you to reject the notion of requiring school aged kids to have the Covid vaccine. Please consider the facts below.

* Long term safety of the current COVID vaccines in children cannot be determined prior to instituting such policies. Without high-powered, reproducible, long term safety data, risks to the long-term health status of children remain too high to support use in healthy children.

* Children risk severe, adverse events from receiving the vaccine. Permanent physical damage to the brain, heart, immune and reproductive system associated with SARS-CoV-2 spike protein-based genetic vaccines has been demonstrated in children.

* Healthy, unvaccinated children are critical to achieving herd immunity. Natural immunity is proven to tolerate infection, benefiting community protection while there is insufficient data to assess whether Covid vaccines assist herd immunity.

Please remember that children are not a one size fits all, or even most. We do not require children to receive a flu vaccine to attend school, why would we require a Covid vaccine. The Covid virus has a 99% survival rate in children, the vaccine is not necessary and if required is an overstep of power.

Thank you for your time.

Subject: Public Comment RE: JAN 12th Meeting

External Email

To whom it may concern:

I have come to understand that the upcoming meeting on January 12th will prompt a discussion regarding the forced injections of the EUA mRNA inoculations for attending school and related events. Besides being fundamentally wrong, there is no scientific basis or common sense whatsoever in this policy.

1. Inoculated or not, both individuals have the same propensity for becoming infected and consequently shedding the virus to other individuals, regardless of their personal choice for, or against, inoculation of this Emergency Use Authorized mRNA prophylactic. By extension it could be argued that the non-inoculated students are more easily identifiable while the inoculated students may continue to spread this disease unabated, thus rendering your policy moot.
2. Students are required to wear masks and remain distanced. This policy alone implies that viral spread is limited or eliminated altogether. Therefore, why would any student be forced to quarantine because a fellow masked, socially-distanced, asymptomatic and potentially inoculated/naturally immune student is in the vicinity of a student that has tested positive?
3. I have also been informed that a negative test for a non-inoculated student is disregarded, while an inoculated, and potentially infected student, may continue with their regular schedule without a test. If this is true, and please refer to my first bulleted statement, then this policy is most asinine and hypocritical in the heap.

Lastly, natural immunity surpasses inoculated protection exponentially. Why does this not apply? Why would a parent risk exposing their children to myocarditis, blood clots or any of the other debilitating side affects that the inoculation has been proven to cause, especially to our young men, following a recovery from the fairly benign infection that the youth experience? And why is the public school system so adamant in their efforts to force the injection of this EUA substance into our children? If your answer is that the benefits outweigh the risks then I must assert to you that this is not your choice to make. Given the limited efficacy of this EUA prophylactic injection and the never-ending requirement to achieve "Full Vaccination" then this risk is now indefinitely multiplied and inherently more dangerous and risky for our children and young adults.

As you are probably aware I have used the term inoculation in place of vaccination. While these have been historically interchangeable I believe that this subtle nuance in terminology is prudent. I am referencing the alteration of the definitions on the CDC website. Why would we, as a society, actively choose to take steps backward from full immunity to limited protection? Why would we prefer an endless cycle of "protective injections" to full immunity? Personally, I have never experienced the following: Chicken Pox, Small Pox, Measles, Mumps, Polio, Pertussis, Yellow Fever, Tetanus or any other of the diseases for which I have been "vaccinated" against as an infant. I have traveled the world and have never encountered a single disease from which I was "vaccinated" against in my very first year of life.

These games have to stop. Now.

CDC Definitions until only recently:

Immunity: Protection from an infectious disease. If you are immune to a disease, you can be exposed to it without becoming infected.

Vaccine: A product that stimulates a person's immune system to produce immunity to a specific disease, protecting the person from that disease. Vaccines are usually administered through needle injections, but can also be administered by mouth or sprayed into the nose.

Vaccination: The act of introducing a vaccine into the body to produce immunity to a specific disease.

Immunization: A process by which a person becomes protected against a disease through vaccination. This term is often used interchangeably with vaccination or inoculation.

CDC definitions now:

Immunity: Protection from an infectious disease. If you are immune to a disease, you can be exposed to it without becoming infected.

Vaccine: A preparation that is used to stimulate the body's immune response against diseases. Vaccines are usually administered through needle injections, but some can be administered by mouth or sprayed into the nose.

Vaccination: The act of introducing a vaccine into the body to produce protection from a specific disease.

Immunization: A process by which a person becomes protected against a disease through vaccination. This term is often used interchangeably with vaccination or inoculation.

Sincerely,

Hal Stokes

As a parent to 5 children ranging from 13 to 28, I have always chosen to vaccinate when given the opportunity. You see, the science was always there to support the facts. But in this case- the covid vaccine- absolutely NOT. The science is just not there. The polio vaccine eradicated polio. The chicken pox vaccine eradicated pox. The COVID vaccine has NOT eradicated ANYTHING! I was vaccinated myself, and I got covid. It was just as bad the second time as it was the first time before I had the vaccine. And on top of that, I spread it to my whole family. The science is not there. You have absolutely NO BUSINESS pushing the vaccine on children, let alone adults.

I would like to say I am not for or against the vaccine. But I do not think this vaccine which is causing more harm than good should be placed on our children to be forced to have it to have a public education. It should be a choice and a parents choice if they decide to have their kids vaccinated with the Covid shot. They shouldn't require anything if the parents do it want to take a chance on giving this shot to their kids. No one knows the long term effects this will have on anyone. There are no long term studies done, what if they give it to their kids and this causes long term effects or are infertile or worse die because you are requiring it? This is ridiculous and taking away our choice and freedom as parents and our childrens rights. You should be ashamed at yourselves for taking away a child's right to have an education- get the shot or get the education.

Please do not vote for this and do not support this.

We the people need to take back our freedoms as we are losing them and will not stand for this!! If you vote for this there will be thousands of kids pulled from schools and homeschooled. The education system will fall apart. Just as our jobs are going to fail if this is mandated on the job markets as well. Do not be one who will let this country fall apart, please!!

Thank you,

Carri Coe

I am encouraging everyone involved with this to please consider the fact that none of these vaccines have been tested to the degree that other vaccines have been tested before in the fight against other flu like viruses. There is no way of knowing what the long term affects will be on anyone, from children to adults. Please do not force this on children. They will have to live with your decisions for them. Let them make the choice later in life when it is possible to obtain more information about these vaccines. Thank you for your consideration.

Hello,

I personally do not agree with the new mandate they are trying to pass. This vaccine is way too new to try and enforce. Parents as myself are going to start pulling kids out of school if they try to mandate this vaccine, and in the long run it will affect schools with funding and resources.

Hello,

I am writing to give feedback about the consideration of required vaccinations for children in Washington State. I am writing as a citizen, a teacher and a mother.

Please do not require vaccinations of children in Washington State. I know you have three buckets that you are considering in making this decision: vaccine effectiveness, disease burden and implementation.

Regarding Vaccine Effectiveness:

This vaccine is not proving to be effective, as seen by the many "break through" cases. More and more boosters are being required and sunseting.

Additionally, people are carriers of covid regardless of their vaccination status.

Regarding Disease Burden:

Children without co-morbidities have not suffered severe symptoms with covid, and the symptoms are lessening with the onset of Omicron. Children with co-morbidities should talk to their doctor, instead of having the shot blanketedly mandated by the state.

Implementation:

Many parents view this as an affront to their parental choices. Implementing this will be difficult in many communities across the state.

Let parents make their own decisions where their family is concerned. A required vaccine mandate is not right for our children.

Thank you,

Christi Chang

Mandatory shots for kids (for anyone) is not ok. It wasn't ok before covid 19 and it's not ok now. Make the shots available for people but please do not make it mandatory. The more you push the harder people will push back. We are asking nicely for you to make the right decision. Thank you!
Mom of two littles.

I have just been made aware that the BOH is meeting to form recommendations regarding mandatory Covid vaccinations for all students in Washington state. The information I received also stated there has been no input allowed from educators and the general public from all regions in this state? If so I feel like there should be consultation from all regions of this state regarding this issue especially as to how it affects the involved professionals and public citizens. Furthermore another source has stated the voting to be held will not include how each member of the board voted on this issue. If so, what is the purpose for this? It's very disturbing at the least that public officials would not have accountability (to the many involved professional and private lives) and will have left them without any form of due process on an issue that is one of the most important issues that I have ever encountered in my lifetime. As a citizen of this state I request that there be allowed an opportunity for all regions of this state be represented before forming any guidance on this issue. Thank you for your time and consideration, Sincerely, John Batts

Vaccine mandates for school age children to attend public school are simply NOT necessary!

Children are NOT at risk of adverse health effects of any significant degree with Covid19, therefore it is absolutely NOT necessary to vaccinate them.

Any adult has had ample opportunity to obtain a vaccine against Covid and it is NOT the children's responsibility to assure all adults' health when they can chose themselves to get the vaccine or refuse it.

These vaccines are still very new with many unknown long term effects still unknown! It's just not necessary at this point. Covid is not a serious threat to health at this point.

Please say NO to this particular requirement. It's not necessary for children, so WHY mandate it?

Troy Isakson

Subject: NO VACCINE MANDATE FOR CHILDREN

External Email

Dear members of the Washington State Board of Health,

Due to the following reasons and many more, ethical & moral, I demand that you refuse to make COVID vaccinations/shots mandatory for children of Washington State for childcare and school admission:

1. COVID vaccines remain under Emergency Use Authorization
2. Children under the age of 18 have 99.995% survival rate for COVID infection
3. Children have a higher chance of death or adverse reaction to COVID vaccines than COVID-19

Sincerely,

Janis Slansky

Subject: STOP Covid "mandated" shots

External Email

Mandates are NOT law! I oppose COVID-19 shot mandates. This is government over reach and goes against our US constitution and WA state constitution. You are not acting in the best interest of its people by making this trial and error crap-shot of a mess be some immunization. We can see that nearly everyone is getting the flu or cold and many times some variant of Covid as there are more being shot with whatever is in these "declared Covid-19 vaccines." Our local hospital ER says it's 50-50 at this date of unvaccinated and vaccinated coming in with Covid concerns. A friend who works in ER said that the biggest issue now is the young men with blood clots who have taken the Covid-19 shots.

Health care is not able to operate upon TRUE data. Therefore this is not science. It needs TIME and the 2 years we are coming upon is not enough for TRUE scientific research.

There must be FREEDOM! All vaccines are not alike nor are all our bodies! We have had the right to choose what we would like for ourselves and our children. Get a new rule that prohibits adding any Emergency Use Authorized product, or any licensed one that hasn't completed Phase 3 trial studies.

Good evening,

I am asking that the Washington State Board of Health vote NO to mandatory Covid-19 vaccine for children (both for school entry and child care). Children should not be forced to take a vaccine that is designated only as emergency use authorization (EUA).

The long term health concerns are very real and have not been proven as safe and effective, therefore could be very damaging to a child's body for the rest of their lives.

I, as a parent, and a grandparent, am 100% AGAINST a Covid-19 vaccine mandated requirement any child in Washington state (or any other state), and ask that the board vote NO on this important matter.

Respectfully,
Steve Storgaard
Auburn, WA

Subject: State BOH proposal for Covid Mandate for school children

External Email

Dear State Board of Health,
I believe it is not acceptable for the State Board of Health to enact a covid vaccination mandate for school children. If such a mandate is necessary, that is the duty of the Washington State Legislature to enact as the elected representatives of the citizens of Washington State. As they will start the 2022 legislative session January 10th, two days prior to your meeting on January 12th, they will have ample time and opportunity to pass such a law if needed and to debate and decide if this measure is necessary. I urge you not to attempt acting on behalf of the legislature, especially when they are in session.

Sincerely,
Art Swannack

WA state simply needs to stop this tyranny.

Masks are ineffective & you continue to dehumanize students and school staff by requiring them: https://www.poverty-action.org/sites/default/files/publications/Mask_Second_Stage_Paper_20211108.pdf.pdf
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.poverty-action.org%2Fsites%2Fdefault%2Ffiles%2Fpublications%2FMask_Second_Stage_Paper_20211108.pdf.pdf&

The latest version of covid--the omicron variant proves without a doubt the vaccination does not stop transmission. Our children are not dying, aside from the death of a normal childhood and school experience which was stolen from them by the governor of WA, the state superintendent, and I can only assume teacher's unions.

Stop, please, just stop. I attended the WA board of health meeting and it is clearly a sham--one person has vaccinate WA on his screen the whole time and a grandfather celebrates his grandbabies having gotten the shot. This is unfair & unjust. We are Americans in a free country.

I am a parent of 2 kids in the Fife school district. My children are my life and I would do anything to protect theirs. There is currently NO FDA approved "vaccine" for adults or children and I would never give them an experimental dose of anything that could potentially cause them harm. Pfizer's website states the only claim of benefit of the vaccine is that it can protect from transmission of Covid-19, which has proved to be false with so many vaccinated people infected. Children have been shown to be very low risk, especially healthy ones. I have not seen/heard of one healthy child that has died from Covid. Our whole family just had Covid and it was nothing more than a mild cold/flu and now we have natural antibodies to fight it. My husband is vaccinated and he caught it as well.

To be blunt...If vaccine mandates are passed knowing full and well the harm that it can cause to children and that they are NOT FDA approved, I will pull my children from the school districts and home school them myself. I'd rather live in a tent, in the woods, off grid than put something in my kids body that can give them heart problems, which is being shown in their age group.

PLEASE think of ALL these precious kids lives that you are putting at risk by contemplating giving them and experimental injection for the sake of learning! What happened to FREEDOM and parental choice?!?!?!? The government needs to know it's place and this is beyond an over step.

Jackie

I am writing to urge you not to require children to have the COVID or Flu vaccines in order to attend school. COVID poses very little threat to children. The vaccine could do more harm than good. The vaccine is still in emergency use authorization so it's against the Nuremberg code to coerce people to take an experimental drug.

Please don't take away parental rights to choose what's best for our kids. Vote NO on requiring the COVID vaccines for our children.

As part of Pfizer, Moderna and Johnson & Johnson's plan to increase their revenue on the backs of us the U.S. taxpayer, we know you (WSBOH) are going to force 'vaccines' on kids no matter what is said at your next meeting. FYI, they're not vaccines, it's an experimental gene therapy drug (let's call it what it is)

You're all completely brainwashed lemmings with no capacity for critical thinking and you're violating many laws by blindly complying with everything that's come out of Inslee's office since March 13 2020.

Remember when natural immunity was a thing? Remember when Doctor/Patient confidentiality was a thing?

Below is the survey response I sent the school district.

Mead School Board, WA DOH and Governor Inslee,

As we begin year 3 of 'two weeks to flatten the curve', anyone who still believes the lies propagated by the media and our government will get what they deserve when this is all said and done. We in the Mead community have answered multiple surveys and spoken for hours upon hours at school board meetings. The President of the Mead School board (Burchard, along with Denholm and Olson) lack the ability to represent their constituents and will continue to do whatever the SRHD tells them to do instead of representing the people of Mead who voted them into office. This is yet another survey that will fall on deaf ears.

It's extremely disheartening to see our School Board, our elected officials, stand by and let the Governor overreach his authority by abusing his power under a completely fabricated "pandemic". You were elected to represent the people of this community. 73% of your constituents replied to "your survey" and said they wanted medical choice. You have a moral obligation to sue the Governor for his egregious overreach. When asked (at the 16 August School Board meeting) if you'd be willing to stand up for our children if "the State wanted to inject them with an experimental drug", Mike Cannon was the only person who said he would object to that. This is completely horrifying. Parents had the courage to speak for two hours on medical freedom at the 16 August meeting, because they knew they were in the right. Your response was to move the next meeting to a Zoom call (that had "technical difficulties" and therefore you wouldn't have to listen to parents), and you could hide behind technology. You know what you're supporting is evil. I believe most people are good, therefore I can only conclude you are uninformed about what is happening to this country.

At first (during the two weeks to flatten the curve), I thought this was a political stunt (left vs. right, D vs. R, etc). Now it has become completely clear, this is a battle between good and evil. We know Fauci said there would be a "surprise pandemic" during Trump's first term. We know the virus was funded in part by the American people (via Fauci and the NIAID) in a bioweapon lab in China. We know China released it 9 months before a presidential election. We know that Joe Biden has prostituted his son to China and

Ukraine, therefore compromising his ability to lead. We know the recipe for the experimental gene therapy drug came from scientists in China, and it possesses nano lipid technology and many toxic chemicals such as SM-102.

In 1938, good men started rounding up Jews and conducting medical experiments on them because they were "just following orders". Now YOU are going to stand by and allow thousands of children in our community to be coerced into taking a Chinese developed, untested experimental gene therapy drug. I believe "good" will prevail in the end and we will see similar Military Tribunals to hold people like you accountable for these crimes against humanity. I believe that all elected officials, politicians, and military members who promoted these tyrannical mandates will be held accountable.

Friday marks day 666 of Inslee's 14 days to "flatten the curve"; you have run out of time to stand up for "Good".

Good Luck and God Bless you all...

On behalf of 73% of Mead families,

Rich Gockley

All that is required for evil to succeed is for good people to stand by and do nothing.

[The Nuremberg trials were a series of military tribunals held following World War II by the Allied forces under international law and the laws of war. The trials were most notable for the prosecution of prominent members of the political, military, judicial, and economic leadership of Nazi Germany, who planned, carried out, or otherwise participated in the Holocaust and other war crimes.]

Anyone who supports mandatory injections of 5-year-old children, with Chinese developed experimental gene therapy drugs that are neither safe nor effective, is sick in the head.

Cheers,

Rich Gockley

Subject: No recommendation for vaccine Mandate

External Email

Good morning,
as a parent to four children in the Washington State schools, I do not recommend you mandate the vaccine to children. We will not stand by your decisions to mandate our children for a vaccine that has caused disfunction to children's health. We used to pull vaccines if they had a high chance of health concerns towards children and now you are looking at expecting parents to vaccinate their child with a vaccine that does not even have a full 1 or 2 year (normally five year) study done on it to make sure it is healthy for our kids. As I am a high believer in vaccines, this is not one I accept that our children should be sacrificed to.

We already mask our children. We already have taught them being antisocial and not being near each other is okay when in fact it is not. Humans are meant to be social. You are teaching kids that mental health does not matter and neither does their physical health if you are okay mandating this vaccine to them.

You need to leave this choice to parents and parents only. Not the school boards or the school districts. We will be pulling our children from the school districts as my children are not going to be receiving this vaccine or we will keep accepting our exemptions as my children's medical information is not your business or anyone else's.

Your goal is for a safe environment. But you're also denying the choices of freedoms to these children. Next you will be trying to take away consent from all children in this state. Children deserve informed consent. If you explained to your children that you were going to give them a vaccine that has a low chance of working but a small chance of a cardiac heart arrhythmia which could be a lifetime issue that is not covered by health insurance and you will be financially responsible for, do you think they would choose that? Do you actually understand the problems you see by mandating this vaccine? In five years, let us reconvene and look at the statistics to see if this vaccine is worth giving to children. Are the side effects worth it? Did you give it to your children?

It is not my child's responsibility or my responsibility to take a vaccine to prevent the spread of COVID-19. It is MY responsibility to look at the best interest of my children and their health. My children know in detail what informed consent is and how important it is. My job is to protect my children. My job is to raise them into consenting adults who know the difference in right and wrong, and safe and not safe. My job is to let them make informed decisions in their life to be better human beings to this world. My job is to make this world a better place with these kids as they grow. I will do that by teaching them they have to stand up for what is right (morally), even if they stand alone. They will be strong enough to do that. Just like my mother did.

I hope you see that most parents' can make this decision for their family on their own. If they want to vaccinate their children, they have the ability too. If they choose not to, they made the decision to protect their family how they see fit.

Thank you,
Gabrielle Abbott

Dear WSBOH Committee Members,

I urge you all in the strongest terms possible to drop immediately any consideration of mandating COVID-19 vaccinations for children (or anyone else) attending WA State schools. If you haven't yet watched or listened to Joe Rogan's interviews of Dr Peter McCullough (Internist and Cardiologist) and Dr Robert Malone (inventor of mRNA vaccine tech) during which they discuss COVID-19 vaccines and the current global situation, you should. Both of these doctors have been vaccinated, yet neither recommend it. Dr Malone in fact was injured by the vaccine. You can view or listen to both interviews at the links below.

Shots against Covid should NOT be mandated for school or daycare entry for children.
Children are at low risk regarding Covid, and this shot only has EUA for children.
I am AGAINST COVID VACCINE MANDATES.
Thank you,
Jacy L. Christensen

External Email

PLEASE HEED THE WARNING FROM A RESPECTED PHYSICIAN & SCIENTIST THAT HELPED CREATE THE MRNA TECHNOLOGY IN THESE UNSAFE VACCINES.

DON'T BE A PART OF HARMING OUR CHILDREN'S FUTURE!! GOD GIVES CHILDREN A WONDERFUL IMMUNE SYSTEM THAT WILL PROTECT THEM. THEY HAVE VERY LITTLE CHANCE OF GETTING THE VIRUS OR BEING HARMED FROM THE VIRUS.

Dr. Malone's statement in its entirety and his video:

My name is Robert Malone, and I am speaking to you as a parent, grandparent, physician and scientist. I don't usually read from a prepared speech, but this is so important that I wanted to make sure that I get every single word and scientific fact correct. I stand by this statement with a career dedicated to vaccine research and development. I'm vaccinated for COVID and I'm generally pro-vaccination. I have devoted my entire career to developing safe and effective ways to prevent and treat infectious diseases. Before you inject your child – a decision that is irreversible – I wanted to let you know the scientific facts about this genetic vaccine, which is based on the mRNA vaccine technology I created:

There are three issues parents need to understand:

The first is that a viral gene will be injected into your children's cells. This gene forces your child's body to make toxic spike proteins. These proteins often cause permanent damage in children's critical organs, including

- ☐ Their brain and nervous system
- ☐ Their heart and blood vessels, including blood clots
- ☐ Their reproductive system
- ☐ And this vaccine can trigger fundamental changes to their immune system

The most alarming point about this is that once these damages have occurred, they are irreparable

- ☐ You can't fix the lesions within their brain
- ☐ You can't repair heart tissue scarring
- ☐ You can't repair a genetically reset immune system, and

☐ This vaccine can cause reproductive damage that could affect future generations of your family

The second thing you need to know about is the fact that this novel technology has not been adequately tested.

☐ We need at least 5 years of testing/research before we can really understand the risks

☐ Harms and risks from new medicines often become revealed many years later

Ask yourself if you want your own child to be part of the most radical medical experiment in human history

One final point: the reason they're giving you to vaccinate your child is a lie.

☐ Your children represent no danger to their parents or grandparents

☐ It's actually the opposite. Their immunity, after getting COVID, is critical to save your family if not the world from this disease

In summary: there is no benefit for your children or your family to be vaccinating your children against the small risks of the virus, given the known health risks of the vaccine that as a parent, you and your children may have to live with for the rest of their lives.

The risk/benefit analysis isn't even close.

As a parent and grandparent, my recommendation to you is to resist and fight to protect your children.

WATCH DOCTOR MALONE HERE:

I am vehemently opposed to requiring vaccinations for children. In doing so you are failing the children and the community you claim to serve. This is an absolute abuse of power which has already overreached by allowing implementation of far more strict isolation/quarantine protocol than the CDC has established. Children are impacted with much less severity and Covid continues to demonstrate rapid evolution that the current vaccines will not keep up with. In my particular situation, my family has Covid as I type. Oddly enough, being the only ones vaccinated, my husband and I were hit far harder with illness than our three children. How can you justify requiring the vaccine when that is the case? Children are at low risk and the vaccine is still under emergency use only. I have abided by every rule and protocol there is the entirety of Covid but I refuse to sit idly by and allow such an egregious overstep of boundaries for our community.

Cancer and heart disease and diabetes kill people left and right but do you require healthy requirements for our food? Do you require people to take ownership of their own health and refuse service/medical care when they don't? Do you put absolute regulations on chemicals that are found in everything that seep their way into our water? NO. You don't. Until you can have sweeping reform for these items that have been impacting our communities for far longer than Covid you have zero business even discussing vaccine mandates for children. It is shameful that I even have to write this email.

Covid shots should absolutely NOT be a requirement for our children. Children are at extremely low risk for Covid and that the vaccines are still only EUA (emergency use authorization).

It should be criminal to force children to take this!!!

To whom it may concern:

I do not believe school age children should be vaccinated in order to attend school. My reasons are listed below. This is an excerpt from the Mercola newsletter. One of many that I have researched about vaccinating children. I find that the risks of injury and deaths to children do not warrant this response.

Children are the future. Over the centuries, many have suffered atrocities at the hands of adults. Yet the recent push to inject children with a genetic experiment may be one of the worst public health offenses perpetrated on a population of people who are unable to speak for themselves, do not have a legal voice and depend on adults to protect them.

In the push to ensure there is a shot in every arm, Pfizer recently announced the clinical trials for the COVID jab in children has hit a snag. And yet, you would be hard-pressed to call the "Warp Speed" creation, testing and manufacture of this shot anything but implausible.

At no other time in history have "vaccines" been created and distributed with such impunity. Despite low rates of infection and death, we do know that the risk to children birth to 17 years is so small as to be inconsequential.

The CDC reports a total number of deaths in 2020 and 2021 from COVID-19 in this age group as 668 as of December 23, 2021. One study posted July 7, 2021, looked at deaths in the U.K. during the first 12 months of the pandemic and found that 99.995% of children survive.

Between March 2020 and February 2021 only 25 children under the age of 18 had died in the U.K. as a direct result of the infection. The researchers found there were 61 children with positive test results, but 36 deaths were attributed to other causes. ***This is a 2-in-1 million absolute mortality rate for children.

Health officials are telling parents that children should be vaccinated for the sake of herd immunity. What is largely ignored are the studies that show children are not driving the pandemic and, in fact, appear less likely to transmit the virus than adults. The Children's Health Defense notes:

"In short, public health leaders say, parents must 'vaccinate the young to protect the old.' Given the federal government's estimate that one vaccine injury results from every 39 vaccines administered, it seems clear that officials expect children to shoulder 100% of the risks of COVID vaccination in exchange for zero benefit."Should society be considering vaccinating children, subjecting them to any risk, not for the purpose of

benefiting them but in order to protect adults? We believe the onus is on adults to protect themselves."

In the case of COVID-19 injections, children cannot benefit, seeing how they only have a 0.005% risk of death in the first place. Healthy children have died shortly after the jabs and dozens of cases of heart inflammation have been reported. Since when, in the history of public health, have children been sacrificed to protect the sick and elderly? Public health authorities have completely reversed the conventional risk/reward analysis.

Sincerely,

Pamela Penney

I strongly disagree that COVID-19 vaccine should be mandatory for school age children. It is in the same class as the flu vaccine which is not mandatory. For the balance of required vaccines for children, there are broad exemptions available such as personal, religious and medical.

This vaccine has no long studies on children. The risk reward for children is not a factor because kids do not statistically get severe illness from COVID-19 nor do they carry heavy viral loads to spread the illness.

Let families decide what is the best for them within their own family environment.

Hi. My name is Elizabeth Southwick.

I have two children in public school.

I am writing with my concerns about making the Covid vaccine mandatory to attend school. I don't believe it should be a requirement because my children have natural antibodies as they have already had covid. They should not be forced to receive an injection. My children as most, do not need a vaccine forced upon them, if they want to get it, that should be their choice, discussed with their parents, not coerced or made to, just to get a basic education. They have immune systems that are capable of fighting off illnesses. I understand for some, the vaccine may prevent harsher symptoms, however it does not stop the virus. This vaccine can create issues for some as well and I don't believe it's right for all.

Thank you for listening & considering my family's health.

-Elizabeth Southwick & boys ☐☐

Subject: NO to covid vaccines.

External Email

Good Morning,

I am writing today to express my view regarding mandating Covid Vaccines for youth in order to attend school in person in Washington State.

I would like to start off by stating the risk of death associated with COVID-19 in healthy children is virtually non-existent, as children have significant immunologic advantages relative to the older adult population (> 65 years) which comprises the high risk cohort for COVID-19. The risk of death and disease in children has become even more rare with Omicron. Yet even prior to the advent of Omicron, a peer reviewed study clearly demonstrated (using safety data accumulated during past variant circulation) that the genetic COVID-19 vaccines carry a risk/benefit ratio of five deaths in the older, high risk cohort for every one life saved from COVID-19 (and those data did not account for the reporting bias inherent in US deaths due to COVID consequent to inappropriate use of PCR tests). See "Why are we vaccinating children against COVID-19?" (Toxicology Reports, Volume 8, 2021, Pages 1665-1684).

The new variant of COVID-19, Omicron, has exploded onto the scene. What was already an inverted risk benefit ratio for genetic vaccination in children and adults (greater risk of death from vaccine than from COVID-19) will become even more inverted since the risks of COVID-19 are further reduced with Omicron. The Omicron variant is different in five essential ways:

More infectious and will soon be the dominant variant in the USA

Less pathogenic

Poorly matched to currently available vaccines

Natural immunity is providing good protection against Omicron

Disease symptoms are more similar to the common cold

The International Alliance of Physicians and Medical Scientists (16,000+ physicians from around the world) released a resolution concerning these exact issues. [HERE](#) is the link to that resolution where they state:

Negligible clinical risks from SARS-CoV-2 infection exist for healthy children under eighteen.

Long term safety of the current COVID vaccines in children cannot be determined prior to instituting such policies. Without high-powered, reproducible, long term safety data, risks to the long-term health status of children remain too high to support use in healthy children.

Children risk severe, adverse events from receiving the vaccine. Permanent physical

damage to the brain, heart, immune and reproductive system associated with SARS-CoV-2 spike protein-based genetic vaccines has been demonstrated in children.

Healthy, unvaccinated children are critical to achieving herd immunity. Natural immunity is proven to tolerate infection, benefiting community protection while there is insufficient data to assess whether Covid vaccines assist herd immunity.

With this information, it is my strong belief and the data empirically shows that using COVID-19 Gene Therapy in children has a strong probability to do more harm than good, and attempting to force said therapies on the children of our state would be a gross violation of medical ethics, individual rights, and parental rights. In addition, it would inevitably force families to remove their children all together from public education. This action would not only affect children in general, but would disproportionately affect minority and economically challenged families across our state.

It is in the best interest of our state, our people, and most importantly our children, that there is no further attempt to force COVID-19 Gene Therapy on our children!

Sincerely,

Stacie Garza

Washington State Board of Health

PO Box 47990

Olympia, WA 98505-7990

Dear Board Members,

I respectfully submit the following comments for the board meeting regarding decisions to be made for mandating the COVID vaccine for school aged children.

Facts

First and foremost, the risk of death associated with COVID-19 in healthy children is virtually non-existent. When considering Omicron, the risk and death and disease in children has become even more rare. Children have significant immunologic advantages relative to the older adult.

It has been stated by Dr. Fauci himself that the Covid-19 Vaccine does NOT prevent the spread of Covid-19 virus. The vaccine's main purpose is to reduce severe cases and life-threatening effects of the virus if one were to get it. Let me re-iterate, the purpose is to protect the person who received the vaccine. It has no direct relationship with any other person aside from the person who received it. While I appreciate that our community and schools heightened care about the well-being and safety of its populous, I do not agree with the mandatory restraints that are being placed on how individuals choose to keep themselves safe.

The CDC's Morbidity and Mortality Weekly Report (MMWR) shared data demonstrating that Covid infections resulted in similarly high SARS-CoV-2 viral loads in vaccinated and unvaccinated people. Vaccinated people infect and transmit the virus the same as unvaccinated people. [1] Let me reiterate again, the PURPOSE OF THE VACCINE IS TO

PROTECT THOSE THAT RECEIVE IT. IT HAS NO DIRECT EFFECT ON ANY OTHER PERSON.

Ugar Sahin, CEO of BioNTech warns, "We must be aware that even the triple-vaccinated are likely to transmit the disease..." [2] COVID-19 vaccines will not withstand the new covid variant Omicron. BioNTech is the German company behind the mRNA vaccine produced with Pfizer.

We know COVID numbers have not been accurately reported. Hospitals have been reporting positive COVID cases regardless of what the person is in the hospital for. On December 20, 2021, Dr. Anthony Fauci told MSNBC's Ayman Mohyeldin that "The important thing is that if you look at the children who are hospitalized, many of them are hospitalized with COVID as opposed to because of COVID and what we mean by that-if a child goes in the hospital, they automatically get tested for COVID. And they get counted as a COVID-hospitalized individual. When in fact, they may go in for a broken leg or appendicitis or something like that. So it's over-counting the number of children who are, quote 'hospitalized with COVID,' as opposed to because of COVID."

Vaccine Injury

As of December 17, 2021 the CDC VAERS (Vaccine Adverse Events Reporting System) has reported 20,622 deaths post vaccination and over 983,000 adverse events. Between January 2021 and October 2021, more than 1,000 deaths were reported per month.

As of November 19, 2021, 14,428 cases of myocarditis have been reported to VAERS following COVID injections.

Currently it is estimated that only 1-10% of injuries are being reported to VAERS worldwide.

It is all risk and no benefit for children to receive unnecessary experimental vaccines. There have been no recorded deadly school outbreaks and no child-teacher transmission to warrant placing our children in this dangerous situation.

A peer reviewed study, "Why are we vaccinating children against COVID-19?" clearly demonstrated that the genetic COVID-19 vaccines carry a risk/benefit ratio of five deaths...for every one life save from COVID-19. "Thus, our extremely conservative estimate for risk-benefit ratio is about 5/1. In plain English, people in the 65+ demographic are five times and likely to die from the inoculation as from COVID-19

under the most favorable assumptions! This demographic is the most vulnerable to adverse effects from COVID-19. As the age demographics go below about 35 years old, the chances of death from COVID-19 become very small, and when they go below 18, become negligible." [3]

Dr. Peter McCullough, a board certified cardiologist, internist and epidemiologist says, "Children aged 12 to 17 are five times more likely to be hospitalized with COVID jab-induced myocarditis than they are to be hospitalized for COVID infection."

Dr. Louis P. Coates states, "Vaccinating school age children definitely should NOT be mandated. Particularly knowing that the risks of myocarditis are more than initially thought ..., parents need to make this decision not politicians or school boards. In a study in the New England Journal myocarditis was found in 2.5 per 100,000 in all ages and 10 per 100,000. Parents need to have the chance to weight these risks themselves, not have someone else tell them what they have to do."

As a common person and a matter of public information you have access to run reports on Covid-19 vaccine total injuries, total deaths, deaths/injuries by age, death/injuries by Vaccine maker etc. I encourage each person sitting on this board to take a look at <https://vaers.hhs.gov>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fvaers.hhs.gov%2F&data=04%7C> and do appropriate investigation as I am doing to make intelligent decisions based on risk vs reward. If the estimated reporting is as low as some are suggesting then the potential injuries caused by this vaccine is so much greater than the actual reward in my opinion. I am attaching several individual VAERS reports of the age group that I am following in case you don't have the capability to research. This is just a tiny sampling of what I am documenting. I can easily provide you with hundreds more at your request. If I run reporting on all age classes of vaccine injured then I can supply you with thousands more, in to which I will more than happy to do for you.

Rights

Parents have the basic right under common law, basic morality, and The Constitution to raise their children and live according to their religious or spiritual beliefs without interference from The Federal Government, as stated in The First Amendment.

Covid-19 has a 99% recovery rate. The vaccine injuries, deaths and adverse side-effects of mRNA technology far exceed this risk. Risk should never exceed the benefit. The vaccines are "still in research" and our children should not be mandated to participate in research.

Summary

There is no benefit for our children to be vaccinated against the small risks of this virus, given the known health risks of the vaccine. The mRNA vaccine is irreversible and injury from this vaccine are what our children may have to live with for the rest of their lives.

Thank you,
Jamie Peterson

I am writing in response to the conversation of mandatory vaccinations, specifically the COVID-19 vaccine, for children to attend school and daycare. They should absolutely not be mandatory as data shows that children have an extremely low risk to getting Covid-19 or becoming severely ill from the virus. There are zero long term studies to show the impact of these vaccines.

This vaccine should not be mandatory for children, or anyone else.

Sincerely,

Ryan & Heather Chadwick

Subject: No Vaccine mandate

External Email

Dear Washington State Board of Health,

I absolutely oppose of any Covid vaccine requirements for school age children. If this occurs, I know of many families that will pull their children out of the school districts. This is a gross over reach. Vaccinated individuals can still spread and catch the disease. Also, the vaccine is still being tested and we don't know the full range of side effects. The variants are proving to be mild. Please let this be a personal family decision.

Sincerely,

Stephanie Stetler

Subject: School-Age COVID-19 Vaccine Requirement Recommendation

External Email

Greetings -

I respectfully request a NO as a decision on requiring the COVID-19 vaccine for school age children. COVID-19 has become endemic, like the flu and colds. Immunizations are meant to be preventative. Per WAC 246-105-020 item 13 immunizing agents are for vaccine-preventable diseases. The COVID-19 vaccine is NOT preventative. It does not prevent the infection of or the spread of the COVID-19 virus. Much like the flu shot, the COVID-19 shot may, however, reduce the severity of the virus - which is a great option for those that feel they may have a greater risk. The hospitalization & death rate for children because of COVID-19 is so small, the CDC isn't even reporting the numbers.

While I am not making light of what can be a very serious virus, I urge you to reconsider your recommendation of a new requirement and keep the COVID-19 vaccine optional, like the flu shot. Children with underlying conditions or comorbidities should probably get it, or anyone that WANTS to get it should. But that is a choice that a parent should be able to make with the guidance of their child's health care provider.

Thank you for your time.

Best Regards,
Haley Kauzlarich

I want to urge the Washington BOH not to make COVID 19 vaccinations mandatory for children to attend public and private schools Very few children get the virus or are severely affected by it. Also, the vaccines are not EUA approved nor has there been sufficient time to ascertain the adverse effects of the vaccines.
Healthcare decisions need to made by the parents, not the government.

Sincerely,
Kay Hibbard

To whom it may concern,

As a parent of a multiple students enrolled in a public school district within the state of Washington, I strongly urge you to steer away from vaccination requirements related to COVID-19. The reasons are simple:

1. It has been proven from the CDC recently that COVID will be considered repetitive as the modern day flu. We should treat it as the flu where we have the freedom to choose to put any vaccination in our bodies for illnesses related to the flu (such as COVID). Public schools currently require vaccinations but they also allow parents to be the decision makers for their kids and they can exempt from vaccinations without conflict.
2. The vaccination for children under 12 is not FDA approved. Period.
3. There is no way to properly test. It's common that those vaccinated are asymptomatic. If we have asymptomatic kids going to school not knowing they are "sick", the virus is still spreading. If a child gets COVID and has symptoms then as a parent you simply keep them home as any other illness they may get. If they are asymptomatic then the odds of spreading the virus heightens. Isn't the point of all this to lessen spreading the virus? Testing is not easily available and if so is taking 3-5 days to get results back. Per the CDC, it's only a 5 day quarantine now so what is the point to test if your results are received at day 5.
4. The survival rate for children with COVID is 99.98% of all positive cases in kids. Per the CDC, there have been more flu deaths in children than COVID deaths and flu shots are currently suggested but optional.
5. There are MANY parents who are against the schools making long term health decisions for kids. We are paying taxes and voting for public schools to provide education and not health care. Public schools only survive where tax payers are willing to vote in favor of schools and willing to purchase homes or rent in desirable areas that have schools they strive to have their kids be enrolled at. A vaccination require will absolutely drive families out of public schools and/or out of WA state. It's already happening. Public districts are hurting for enrollment and funds because nobody wants to support the districts nor live where they have no freedom of their child's health.
6. The last dashboard numbers provided from Tumwater School District shows that the most recent cases show that only 21 students out of 6599 were positive for COVID. That is only .312% of students. There are more students with disabilities or mental health issues or bullying or drugs or violence or home abuse or obesity in the schools that aren't addressed. We are going to change requirements because of the chance that less than 1% of students may be affected? Let's say someone was creating a school lunch menu and one student out of 300 didn't like pizza, does that mean you will refuse to serve pizza because that 1 student doesn't like it? Highly doubtful. I know that COVID affects families but does that stop families from making the decision to smoke or eat healthy to protect their families? Most likely no.

It's all about choice, why do YOU get a choice? Why can't I choose for my kids? Why do YOU get to choose for my kids? Give us the choice.

Subject: School vaccines for children

External Email

Dear Washington State Board of Health-

I am a WA state resident and mother of public school elementary aged children.

My husband and I are against requiring the COVID vaccine for children. Please consider these reasons why:

1) Dr. Robert Malone, MD, who helped create the vaccine, said himself that this particular vaccine could harm or hinder the development of children's hearts, nervous systems and reproductive systems.

2) Not all vaccines are created equal. The COVID vaccine does completely prevent people from getting COVID like, for example, the polio vaccine prevents people from getting polio. Children (and anyone else) can contract COVID AND spread it to others whether they are vaccinated or not. There have been many "breakthrough" cases of vaccinated people who have still contracted COVID.

3) COVID is usually mild in children and does not pose a significantly dangerous health risk. The flu is actually more of a risk for young, healthy children than COVID is. I understand that COVID is potentially fatal for those with preexisting health conditions and older adults. Those people should get vaccinated if they wish. However, if the "at risk" group is already vaccinated, then why do our children need to be?

4) There have not been long term studies in how the vaccine affects children and therefore it seems reasonable not to mandate all children to get the vaccine in order to go to school. Many doctors and vaccine researchers agree that at least five years is required to sufficiently study the effects of a vaccine, especially in children.

I sincerely hope that you will listen to the concern of parents on this issue. Please do not mandate the COVID vaccine for children to attend to school.

Thank you,
-Lauren Ahn

This is a step too far. People, and especially parents, should make decisions on their children's health.

I DO NOT support the mandated vaccine to youth. I am personally am vaccinated, but am not comfortable with my children being vaccinated. I feel it should be a choice that families can make individually. PLEASE listen to the people in the entire state, not just the populated Seattle area! Thanks for your time!

Hello,

I am providing commentary based on the agenda item for immunization criteria for children. I do not believe children should be required to have the COVID 19 vaccine (assuming that is the topic of this particular discussion). My reasons include the fact that children are mostly unaffected by the virus, the shot has not been tested properly nor is it FDA approved and there have been too many adverse reactions including myocarditis. This vaccine is not considered "safe" in my book and should therefore not be a requirement of public schools where all families and children should have the opportunity to attend without this burden.

Thank you for your time,

Kylee Win'E

Subject: No vaccine mandates for students

External Email

Dear Washington State Board of Health,
As a parent, educator, and Washingtonian, I implore you to not mandate a COVID vaccine or any variation/booster for any variant of COVID for K-12 students. Public schools are founded on the guiding principles of equally educating our future and this vaccine is already separating students from opportunities in the classroom, fields and courts, along with service opportunities due to vaccination status or quarantines, that mandating something that takes away control of the body and rights of the family to guide what goes into the body of their child will only further segregate our future leaders, thinkers, and doers. Parents will pull their kids from our public school classrooms when given no choice, which will further change the landscape of the learning space. All schools are doing great jobs with COVID protocols and mitigating the spread of the virus with masking, social distancing, contact tracing, HEPA filters, and open windows/doors year round that a vaccine that is not proving to prevent the spread of the virus being mandated will only do more harm than good and counteract the processes in place in our classrooms and schools as well as divide our communities. Leave the choice with parents and families and let the schools do their job of educating our students without mandating what qualifies the student to receive access to our free education system that is supposed to be for all of our students, not just the vaccinated. We don't turn away students based on language needs, special education needs, or with housing needs so why start using medical status as a discriminatory barrier to the one thing that unites us as a state and a nation, freedom to learn uninhibited and without fear of discrimination? Thank you for your time and for considering all viewpoints.

Sincerely,
Kiera Wright

Please do not make the Covid shot mandatory for any child. The shot is very new and we do not have enough information or research on it. It is too dangerous to administer it to any child. Parents have the right to choose if they want their child to have the Covid shot or not.

Thank you,
Concerned WA Resident

To whom it may concern:

Vaccines mandated for school age kids and daycares,—— Absolutely not! It's still under EAU and we think this is safe?Our kids are not experiments!
Kids are very low risk for even contracting the virus.

If we wanted to get the shots we would get them. Mandating is unconstitutional and worrisome that this would even be considered.

No, no, no.

Thanks!

Dear Ms. Kahler,

I wanted to follow-up on the agenda for the January 12th BoH meeting.

I recently submitted, on behalf of Informed Choice Washington, a petition to adopt changes to the state administrative rules.

I have not received any communication from the Washington State government offices that this petition will be discussed at the meeting and I have only seen the item 11 on the agenda (Notice of Public Meeting, Wednesday, January 12, 2022 - 11. Rulemaking Petition – Chapter 246-105, WAC, Immunization Criteria, Child Care and School Entry – Possible Action) published, but have not received communications that it will be this specific petition. Could you confirm that the petition I submitted will be discussed in item 11 of the draft agenda? I have included the petition for your reference.

I would also like to receive clarification on the TAG board. In the PROCESS FOR REVIEWING ANTIGENS FOR POTENTIAL INCLUSION IN WAC 246-105-030, Section 2 states the following:

"2. If the Board determines that the assumptions above have been met, the Board will establish a TAG to review the antigen against the nine criteria below. For antigens that are part of a combination vaccine, each antigen will be considered separately against the criteria. The TAG must include representatives from the fields of public health, primary care, epidemiology, medical ethics, and representatives of diverse communities in Washington State. At the discretion of the Board sponsor, the TAG can also include consumers (parents); community members with diverse perspectives on immunizations; and representatives from the fields of school health, school administration, child care, child advocacy, immunization administration, and others important to the discussion and review. In addition to providing the TAG with current literature and other relevant information such as survey data, the Board will ask the Department of Health to supply current information about the antigen that is specific to Washington State."

Who is the board sponsor? How do we contact the board sponsor the be included in the TAG. As a trained scientist in Toxicology and community member, I want to be on the TAG.

Finally, I am making a request to extend the time for item 11 and to include a

*Informed*CHOICEWA.org

Date: January 7, 2021

To: The Washington State Board of Health Members and COVID-19 TAG

From: The Board and Members of Informed Choice WA

Dear Board of Health and TAG Members:

You are facing what may prove to be the most important decision you will ever face as a member of the board or a group, or perhaps in your life.

The mRNA and DNA COVID-19 shots are unlike any other vaccines given before. The global push for their uptake and the volume of reported adverse reactions and deaths following administration are unprecedented. The hundreds of thousands of medical and scientific professionals globally standing up and speaking out against the response to COVID and to the shots is unprecedented, as is censorship on scientific debate. When this nation's top doctors and scientists are being kicked off of social media platforms and being fired from their jobs for daring to speak on their findings and science critical of current policies, it is clear something has gone terribly wrong.

The CDC acknowledges the shots do not prevent infection or transmission and that any protection afforded fades rapidly, yet they refuse to abandon their push for increased uptake and boosters, and they refuse to promote existing early treatment protocols or acknowledge the mountain of evidence of the superior safety and effectiveness of naturally-acquired immunity. The systemic capture of federal agencies by the drug industry and globalists has never been more obvious.

Public Health in the U.S. is currently suffering from a lack of checks and balances and a dangerous dilution of critical facts. If every citizen were to watch the FDA's Vaccine and Related Biologicals Advisory Committee (VRBAC) meetings and to read the entirety of the clinical trial submissions to the FDA and the injury and death reports filed with Pfizer and VAERS, they would understand the experimental nature of the COVID shots and the known and suspected risks. They would question the clinical trial irregularities, the buried data, the lack of independent evaluation, and the high levels of conflicts of

interest. But most do not. Votes for recommendation are made by federal entities despite the lack of scientific justification and the details of the meetings are not incorporated into the language passed down to citizens. The messaging becomes, “The vaccines are safe and effective and recommended by the CDC.” This simplistic false messaging creates division at all levels of society, undermines fully informed consent, violating federal regulations and human rights declarations.

If after the past two years of witnessing the erratic federal response to COVID you still have faith in federal recommendations, we ask you to consider one clear example that reveals the federal agencies and committees do not deserve your trust. In the absence of a single co-administration safety study, the ACIP approved and the CDC actively promotes this message:

“COVID-19 vaccine and other vaccines may be administered on the same day.”

This is not science. This is not safety. This is not in the best interest of vaccine recipients. This is using Americans, especially our children who are most impacted, as unwitting test subjects. This is human experimentation without informed consent. This is criminal.

We are asking you today to honor the Precautionary Principle and First Do No Harm. We are asking you to dismantle the TAG, to halt rulemaking consideration for adding COVID shots to school requirements, and to adopt our Rulemaking Petition for a new rule that would prohibit mandating Emergency Use Authorized products and licensed products that lack completed Phase 3 trials.

Attached is our preliminary response to the “Criteria for Reviewing Antigens for Potential Inclusion in WAC 246-105-030” that supports our requests. There is far more scientific and medical information available. We hope this is just the beginning of your reviewing the critically important information you have likely been missing until now.

Sincerely,

The ICWA Board

Bernadette Pajer, Yael Kantor, Heidi Hartnell, Angela Dye

**Informed Choice Washington Presents:
A review of the COVID-19 shots
(Pfizer, Moderna, Janssen)
using the Washington State Board of Health's
"Criteria for Reviewing Antigens for Potential Inclusion in
WAC 246-105-030"**

<https://sboh.wa.gov/Portals/7/Doc/Publications/ImmunizationCriteria-Update2017-Final.pdf>

Before proceeding, it must be noted that the COVID-19 shots currently available do not meet the definition of "immunizing agent" per WAC 246.105.020(13), which states:

"Immunizing agent" means any vaccine or other immunologic drug licensed and approved by the United States Food and Drug Administration (FDA), or meeting World Health Organization (WHO) requirements, for immunization of persons against vaccine-preventable diseases.

None of the currently available COVID-19 shots are licensed and approved by the FDA for school-age children; the shots similarly do not meet WHO requirements and are only authorized by the WHO for emergency use.

WAC: <https://app.leg.wa.gov/WAC/default.aspx?cite=246-105-020>

For clarity, BOH's criteria language is shown in red, and ICWA language is shown in black.

I. Criteria on the effectiveness of the vaccine

1. A vaccine containing this antigen is recommended by the Advisory Committee on Immunization Practices and included on its Recommended Childhood & Adolescent Immunization Schedule.

The vaccine **must** be recommended by the ACIP. The ACIP reviews **licensed** vaccines. It makes recommendations for newly licensed vaccines and regularly updates its recommendations. Its process includes:

- (1) a review of the Food and Drug Administration (FDA) labeling/package inserts for each vaccine;
- (2) a thorough review of the scientific literature (both published and unpublished, when available) on the safety, efficacy, acceptability, and effectiveness of the immunizing agent, with consideration of the relevance, quality, and quantity of published and unpublished data;
- (3) an assessment of cost effectiveness;
- (4) a review of the morbidity and mortality associated with the disease in the population in general and in specific risk groups;
- (5) a review of the recommendations of other groups; and
- (6) a consideration of the feasibility of vaccine use in existing child and adult immunization programs. Feasibility issues include (but are not limited to) acceptability to the community, parents, and patients; vaccine distribution and storage; access to vaccine and vaccine administration; impact on the various health care delivery systems; population distribution effects; and social, legal, and ethical concerns. [emphasis added]

Do any of the COVID-19 shots fulfill this criterion? No.

The ACIP did NOT recommend a COVID-19 shot licensed by the FDA for use in ages 5-11 or 12-15, nor did it place such a shot on the CDC Recommended Schedule.

There is no FDA COVID-19 shot licensed for ages 5-15 and no COVID-19 shot whatsoever on any CDC Recommended Schedule for any age. CDC Immunization Schedules, <https://www.cdc.gov/vaccines/schedules/index.html>.

The CDC recommended schedule website page for ages 7-18 mentions the ACIP's EUA and BLA recommendations for COVID, but it DOES NOT include the shots on the schedule.

On May 12, 2021, the ACIP adopted the following recommendation: "The Pfizer-BioNTech COVID-19 vaccine is recommended for children 12-15 years of age in the U.S. population under the FDA's Emergency Use Authorization." *May 12, 2021 ACIP Meeting - Discussion and Vote*, CDC YouTube channel, <https://youtu.be/91FCQN1aYqk>.

On November 2, 2021, the ACIP adopted a similar recommendation for 5-11 year olds. *Nov 2, 2021 ACIP Meeting - Clinical considerations for COVID-19 vaccination & Votes*, CDC YouTube channel, <https://youtu.be/Fknv90AxSn8>.

Federal Emergency Use Authorization statutes indirectly prohibit school mandates of EUA products by requiring recipients be informed they have the option to accept or refuse the vaccine:

"The possible side effects of the vaccine are still being studied in clinical trials. . . Under the EUA, there is an option to accept or refuse receiving the vaccine."
Vaccine Information Fact Sheet for Recipients and Caregivers about the Pfizer-BioNTech COVID-19 Vaccine to Prevent Coronavirus Disease 2019

(COVID-19) for Use in Individuals 5 through 11 Years of Age, pp. 4-5,
<https://www.fda.gov/media/153717/download>.

The option to accept or refuse an EUA product is not conditioned upon written assertion of exemption. Medical, personal, or religious exemptions are not required in order to exercise the right to refuse. Under EUA law, a parent or guardian may simply decline a shot for their minor child, without providing explanation or paperwork. A state-level daycare or school requirement would introduce the need for filing of exemptions, unlawfully exceeding the parameters set forth by Congress for EUA products.

“FDA believes that the terms and conditions of an EUA issued under section 564 preempt state or local law, both legislative requirements and common-law duties, that impose different or additional requirements on the medical product for which the EUA was issued in the context of the emergency declared under section 564.” *Vaccine EUA Questions and Answers for Stakeholders*, U.S. Food & Drug Administration,
<https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/vaccine-eua-questions-and-answers-stakeholders#61b6059d67093>

Alarming, the CDC and ACIP made this recommendation even though they acknowledged that for both age groups:

Regarding potential harms after vaccination, evidence was type 4 (very low certainty) for serious adverse events and type 1 (high certainty) for reactogenicity. No data were available to assess the other GRADE benefits and harms including prevention of hospitalization due to COVID-19, prevention of multisystem inflammatory syndrome in children (MIS-C), SARS-CoV-2 seroconversion to a non-spike protein, or prevention of asymptomatic SARS-CoV-2 infection.

The Advisory Committee on Immunization Practices’ Interim Recommendation for Use of Pfizer-BioNTech COVID-19 Vaccine in Adolescents Aged 12–15 Years — United States, May 2021, CDC MMWR, May 21, 2021,
<https://www.cdc.gov/mmwr/volumes/70/wr/mm7020e1.htm> and *The Advisory Committee on Immunization Practices’ Interim Recommendation for Use of Pfizer-BioNTech COVID-19 Vaccine in Children Aged 5–11 Years — United States, November 2021*, CDC MMWR November 12, 2021,
<https://www.cdc.gov/mmwr/volumes/70/wr/mm7045e1.htm>.

Vaccines and Related Biological Products Advisory Committee (VRBPAC) member Dr. Eric Rubin stated “[Just b]ecause we give an EUA to the vaccine, doesn’t mean we have to use it. And I think we would have to think hard about how to use it given all of the concerns that have been raised.” Transcript of *FOOD AND DRUG ADMINISTRATION (FDA) Center for Biologics Evaluation and Research (CBER) 166th Vaccines and Related Biological Products Advisory Committee (VRBPAC) Meeting*, June 10, 2021, p. 242. <https://www.fda.gov/media/150815/download>.

How can the CDC claim that benefits outweigh risks when they admit they do not know the risks?

Comirnaty is the only COVID-19 product that has ostensibly received FDA licensure for any pediatric populations—namely those 16 and up; however, that licensure is limited to manufacturing and delivery. The FDA has stated that this product is merely “**ready** for approval for **use** in individuals 16 years of age and older . . .” [emphasis added]. *August 23, 2021 Approval Letter - Comirnaty*, from FDA to BioNTech, p. 4, <https://www.fda.gov/media/151710/download>. The Comirnaty vaccine is not available anywhere in the United States, and there is debate about whether the vials of Pfizer’s EUA product are now “licensed” for those 16 and up, or if those are still EUA products. The FDA states that EUA Pfizer-BioNTech COVID-19 Vaccine and the Comirnaty (COVID-19 Vaccine, mRNA) “are legally distinct with certain differences that do not impact safety or effectiveness.” There is much debate over what “legally distinct” means, especially to consumers. If “legally distinct” means that the currently available Pfizer products in the U.S. are under EUA regulations, then there is no licensed product available for 16-18 year olds. Regardless of whether the Pfizer product is licensed for 16-18 year olds, the product lacks completed Phase 3 clinical trials, and the PREP Act still shields manufacturers for liability for injuries and deaths. As far as we can tell, never in history has the FDA licensed a product without completed clinical trials, nor when all the ongoing trials have been unblinded, subverting the ability to compare outcomes.

There are ZERO co-administration safety studies; therefore, it is highly concerning that the CDC states, and the Washington State Department of Health repeats: “COVID-19 vaccine and other vaccines may be administered on the same day.” CDC, Immunization Schedule, COVID-19 Vaccination, <https://www.cdc.gov/vaccines/schedules/hcp/imz/child-adolescent.html>

Disregarding the absence of any safety studies, the Washington DOH states, “Your child can get a COVID-19 vaccine at the same time they get other vaccines. You do not need to schedule your child’s required school vaccinations or other recommended vaccines separately from COVID-19 vaccination. A COVID-19 vaccine appointment is another opportunity to get your child caught up on all of their recommended vaccines.”

Washington State Department of Health, Vaccinating Youth,
<https://www.doh.wa.gov/Emergencies/COVID19/VaccineInformation/VaccinatingYouth#VaccineTiming>

As noted in our cover letter, this is not science. This is not safety. This is not in the best interest of vaccine recipients. This is using Americans, especially our children who are most impacted, as unwitting test subjects. This is human experimentation without informed consent. This is criminal.

2. The vaccine containing this antigen is effective as measured by immunogenicity* and population-based prevention data in Washington State, as available.

*Immunogenicity means the ability of an antigen or vaccine to stimulate the body to produce an immune response. Vaccines often include antigens that stimulate an immune response to a particular disease but are not necessarily the same as the organism that would cause the disease.

In the clinical development of a vaccine, the effectiveness of the vaccine is studied using FDA-approved research protocols that evaluate whether a vaccine protects individuals from contracting the disease in population-based studies or generates an immunologic response (immunogenicity) comparable to vaccines that have been shown to be effective in preventing disease. More information about its population-based effectiveness is gained from large trials and community-based analyses after FDA approval. There may or may not be effectiveness data from Washington State, but the disease prevalence and incidence in the state should be sought and reviewed.

Do any of the COVID-19 shots fulfill this criterion? No.

Immunogenicity: While the COVID-19 shots trigger the recipient's cells to create spike proteins, which then trigger an immune response and antibodies to the self-created spike proteins, this immune response has proven incapable of preventing infection or transmission. In short, the COVID shots do not prevent recipients from "contracting the disease."

Some studies show recipients may be afforded a short window—a few weeks or months—during which their risk of infection or risk of severe disease is minimally reduced in comparison to those without natural immunity, but even this protection appears to be dropping with each new variant.

This preprint study shows that PCR-positive tests for Delta variant occurred in a higher percentage of vaccinated individuals than in unvaccinated. From this it could be concluded that, regardless of vaccination status, all individuals are able to spread COVID-19 with similar viral loads. Riemersma et al., *Shedding of Infectious SARS-CoV-2 Despite Vaccination*,

<https://www.infosperber.ch/wp-content/uploads/2021/10/210731-Wisconsin.Viral-Load.pdf>.

Dr. Rochelle Walensky states that the vaccine does not prevent infection or transmission of the Delta variant, CNN interview with Wolf Blitzer, July 27, 2021, <https://www.youtube.com/watch?v=TKFWGvvlVLI>

Another pre-print study, Acharya et al., *No Significant Difference in Viral Load Between Vaccinated and Unvaccinated, Asymptomatic and Symptomatic Groups Infected with SARS-CoV-2 Delta Variant*, “found no significant difference in cycle threshold values between vaccinated and unvaccinated, asymptomatic and symptomatic groups infected with SARS-CoV-2 Delta.” <https://www.medrxiv.org/content/10.1101/2021.09.28.21264262v1>.

The CDC reported that among the first U.S. cases of COVID-19 attributed to the Omicron variant, 79% of the 43 cases studied occurred in fully vaccinated individuals, including 14 who had received booster doses. *SARS-CoV-2 B.1.1.529 (Omicron) Variant — United States, December 1–8, 2021*, CDC MMWR, December 17, 2021, <https://www.cdc.gov/mmwr/volumes/70/wr/mm7050e1.htm>.

The criterion explicitly requires that “information about population-based effectiveness is gained from large trials,” yet the clinical trial study on which the EUA was based for 5-11 year olds included only 2,268 children total. CDC and ACIP acknowledged that the study was too small to find serious adverse reactions. (See our response above to Criterion #1.) *Evaluation of the BNT162b2 Covid-19 Vaccine in Children 5 to 11 Years of Age*, N Engl J Med 2022; 386:35-46, DOI: 10.1056/NEJMoa2116298, <https://www.nejm.org/doi/full/10.1056/NEJMoa2116298>.

A pre-print study suggests that vaccine effectiveness wanes to negative effectiveness, therefore increasing chances of contracting COVID, after 90 days. The authors suggest a booster would be necessary in order to attain previous levels of protection. Do parents really want their child to get a booster every 90 days? Would this be practical or manageable? Hansen et al., *Vaccine effectiveness against SARS-CoV-2 infection with the Omicron or Delta variants following a two-dose or booster BNT162b2 or mRNA-1273 vaccination series: A Danish cohort study*, <https://www.medrxiv.org/content/10.1101/2021.12.20.21267966v3#p-5>

In contrast to the inability of the COVID shots to prevent disease, natural immunity has been found to prevent infection. This superior, broad protection will serve children well throughout their lives. “[C]hildren display a characteristically robust and sustained adaptive immune response against SARS-CoV-2 with substantial cross-reactivity against other hCoVs.” Dowel, et al., *Children develop robust and sustained*

cross-reactive spike-specific immune responses to SARS-CoV-2 infection,
<https://www.nature.com/articles/s41590-021-01089-8>

In study after study, it has been shown that natural immunity far exceeds vaccine-induced immunity in length and quality. Please view the following studies here that show the superiority of natural immunity: "144 Research Studies Affirm Naturally Acquired Immunity to Covid-19: Documented, Linked and Quoted," Brownstone Institute, October 17, 2021.

<https://brownstone.org/articles/79-research-studies-affirm-naturally-acquired-immunity-to-covid-19-documented-linked-and-quoted/>

3. The vaccine containing this antigen is cost effective from a societal perspective.

This analysis should consider both the costs of the immunization (e.g. antigen, storage, administration, medical and societal costs of adverse reactions to the immunization, etc.) and the benefits of the immunization (e.g. lives saved, medical and societal benefits of preventing adverse reactions from vaccine-preventable disease, etc.). This process may include consultation with an economist as resources allow. Vaccines may be cost effective without being cost saving. In other words, the direct costs of some vaccines (e.g. antigen, storage, administration) balanced against direct savings (e.g. medical care, disability, death) may not result in net savings. Societal or indirect costs (e.g. lost productivity of care takers of ill children) will also need to be taken into consideration. These costs are much harder to quantify. Not all vaccines recommended by the ACIP are cost saving or equally effective, so some determination of the vaccine's relative cost effectiveness may need to be made for comparison purposes when applying the criteria.

Do any of the COVID-19 shots fulfill this criterion? No.

To parents and members of Informed Choice Washington, the most important consideration in this criterion is the "medical and societal costs of adverse reactions to the immunization" as well as what the criterion overlooks:

- the cost of ignoring or outright censoring lifesaving preventative and early treatment protocols, which lead to superior natural immunity;
- the cost of exposing children to genetic therapies, such as DNA and mRNA injections, in the absence of adequately sized and designed safety studies for either short or long-term outcomes;
- and the cost of interrupting a child's natural immune response to what is now an endemic virus without a complete understanding of how that interruption will impact their immunity to the virus and its mutations in the future.

Please see risk information provided under Criterion #4 below, in particular, the two graphs summarizing data from Pfizer's clinical trials that have already demonstrated that any benefits from the shots are outweighed by the injuries and death they cause. This does not account for long-term and yet unknown harms.

4. Experience to date with the vaccine containing this antigen demonstrates that it is safe and has an acceptable level of side effects

Vaccinations are not without side effects. The known risks associated with each vaccine (or antigen) must be balanced against the risks of the disease. Vaccine safety will be evaluated using research and reports from: pre-licensure, the Vaccine Adverse Event Reporting System (VAERS) and the Vaccine Safety Datalink (VSD) project, and other reliable sources.

Do any of the COVID-19 shots fulfill this criterion? No.

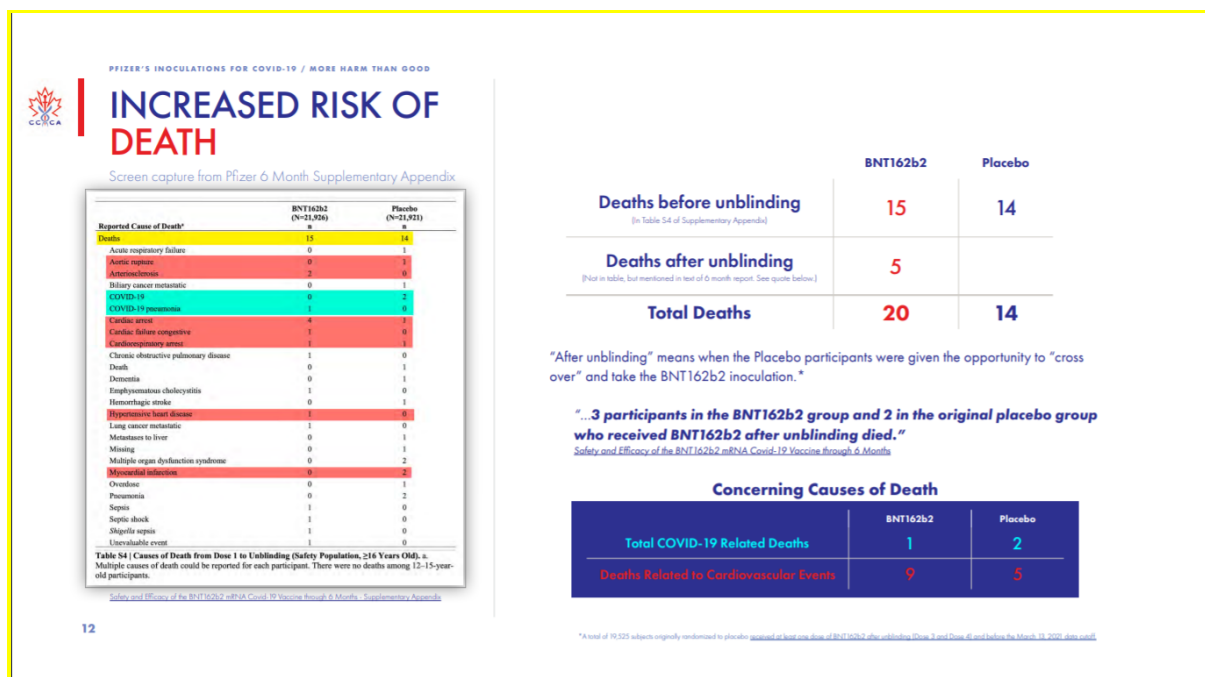

While Pfizer's own randomized control trial data indicated a decrease in positive cases, they also showed an increase in illnesses and deaths compared to the placebo group. There is no benefit to reducing cases if it comes at the cost of increased illness, hospitalizations, and death.

The graphic below includes Table S3, *Participants Reporting at Least 1 Adverse Event From Dose 1 to 1 Month After Dose 2 During the Blinded Follow-up Period*, on page 11 of [Pfizer's six-month supplementary appendix](#) to its study entitled [Safety and Efficacy of the BNT162b2 mRNA Covid-19 Vaccine through 6 Months](#). Vaccinees experienced worse health outcomes than did placebo recipients.

The following graphic, which includes Table S4, *Causes of Death from Dose 1 to Unblinding*, on page 12 of [Pfizer's six-month supplementary appendix](#) to its study entitled [Safety and Efficacy of the BNT162b2 mRNA Covid-19 Vaccine through 6 Months](#), illustrates the increase in deaths within six months for those who received the injections. Of particular concern are the types of death, including cardiovascular events

(in red); there are almost twice as many in the test group as in the control group. This is Level One evidence of harm, as the data is derived from a randomized control trial (RCT).

Although FDA press releases proclaim that the benefits of the product would outweigh its risks, this conclusion is based upon modeling, which is the lowest quality of evidence given its reliance on layers of assumptions and subjectivity. FDA already had access to a superior form of data: the RCT results from the manufacturer itself, which it disregarded; "Therefore, the FDA conducted its own benefit-risk assessment using modelling to predict how many symptomatic COVID-19 cases, hospitalizations, intensive care unit (ICU) admissions and deaths from COVID-19 the vaccine in children 5 through 11 years of age would prevent versus the number of potential myocarditis cases, hospitalizations, ICU admissions and deaths that the vaccine might cause. The FDA's model predicts that overall, the benefits of the vaccine would outweigh its risks in children 5 through 11 years of age." FDA NEWS RELEASE: "FDA Authorizes Pfizer-BioNTech COVID-19 Vaccine for Emergency Use in Children 5 through 11 Years of Age," U.S. Food & Drug Administration, <https://www.fda.gov/news-events/press-announcements/fda-authorizes-pfizer-biontech-covid-19-vaccine-emergency-use-children-5-through-11-years-age>

One 12-year-old child, Maddie de Garay, participated in Pfizer's study. She suffered multiple and severe injuries, requiring 9 ED visits and 3 hospital stays (totaling 64 days by June 1, 2021). She is still in a wheelchair today. The New England Journal of Medicine article in which Pfizer's RCT results was reported, [Safety and Efficacy of the](#)

[BNT162b2 mRNA Covid-19 Vaccine through 6 Months](#), failed to disclose any of Maddie's adverse reactions. Pfizer disingenuously mischaracterized her injuries as "functional abdominal pain" in its *Emergency Use Authorization (EUA) Amendment for an Unapproved Product Review Memorandum*, p. 30.

<https://www.fda.gov/media/148542/download>. Senator Ron Johnson held a roundtable, in which many individuals who took the COVID-19 vaccine shared their adverse reaction experiences that required medical attention.

<https://thehighwire.com/videos/stephanie-and-maddie-de-garay-testimony/> at 5:13.

This study asks a very pertinent question: Why are we vaccinating children against COVID-19? The abstract in this study explains the following:

A novel best-case scenario cost-benefit analysis showed very conservatively that there are five times the number of deaths attributable to each inoculation vs. those attributable to COVID-19 in the most vulnerable 65+ demographic. The risk of death from COVID-19 decreases drastically as age decreases, and the longer-term effects of the inoculations on lower age groups will increase their risk-benefit ratio, perhaps substantially... (emphasis added.)

This study goes on to say that:

... it will use the term 'inoculated' rather than vaccinated, because the injected material in the present COVID-19 inoculations prevents neither viral infection nor transmission (emphasis added.)

Kostoff, Ronald, et al., "Why Are We Vaccinating Children Against Covid-19?" Toxicology Reports, Vol 8 2021, pages 1665-1684,
<https://www.sciencedirect.com/science/article/pii/S221475002100161X>

Here is a list of websites where medical professionals and/or individuals have documented their experiences with reactions from the COVID-19 vaccine:

<https://openvaers.com/covid-data/adverse-events-by-state>

<https://vaers.hhs.gov/data.html>

<https://www.c19vaxreactions.com>,

<https://www.RealNotRare.com/>

<https://www.medalert.org>

<https://www.scivisionpub.com/pdfs/us-covid19-vaccines-proven-to-cause-more-harm-than-good-based-on-pivotal-clinical-trial-data-analyzed-using-the-proper-scientific--1811.pdf>

Dr. Cody Meissner, VRBPAC member, stated: “I want to be sure that the risk of the vaccine is less than the risk of hospitalization because four [COVID hospitalizations per million in children under 18] certainly does not constitute an emergency, and there are significant questions about the safety of this vaccine. . . . [This hospitalization rate is] on the CDC website. That is not an emergency. It is a very low hospitalization rate. And the rates may change as the season changes, but we’re starting from a tiny, tiny rate. . . . [T]he rates are also falling pretty dramatically among adults and children. So as more people are immunized and become immune from infection, I think it’s very likely that we’re going to get this pandemic under pretty good control. Now the issue -- so the issue to me is safety. . . . [W]e can look at the 2,000 or 2,200 adolescents who are enrolled in the Pfizer vaccine between 12 through 15 years of age -- 2,200, so half got the vaccine, half got placebo. Nobody was hospitalized. Nobody died. And there were some who got URIs[upper respiratory infections] So 2,200 is not going to address the issue of safety. I’m worried about myocarditis. . . . [W]e don’t know what that means on a longterm basis. Will there be scarring of the myocardium? Will there be a predisposition to arrhythmias later on? Will there be an early onset of heart failure? I think that’s unlikely, but we don’t know that. And so before we start vaccinating millions of adolescents and children, it is so important to find out what the consequences are because COVID-19 disease is disappearing in adolescents and children. And I think we have to be so clear about what we’re dealing with. Let me make one more point. In 2003, there was a publication in JAMA regarding myocarditis following the Dryvax vaccine, the smallpox vaccine which is, of course, a live vaccine. But in that situation, the military -- it was given to young recruits. The rates of myocarditis in the military young men -- because it was mostly men in those days -- was 2 per 100,000. And after the Dryvax vaccine the rates were 7.8 cases of myocarditis in the 30 days afterwards. So there was a three-fold increase. And in fact, Dr. Tony Fauci wrote an editorial in that same issue of JAMA discussing these rates of myocarditis. So I am really concerned that the FDA may by not insisting on a full BLA, which to me means at least 12 months, maybe even 18 or 24 months of follow up in children and adolescents, before they are recommended to receive this vaccine. I do not feel we can justify a EUA including children under an Emergency Use Authorization. The burden of disease is so small, and the risks are just not clear. We don’t know.” June 10, 2021, VRBPAC meeting transcript, p. 62, p. 225- 228. <https://www.fda.gov/media/150815/download>

From the front lines in medical care

Many medical professionals are speaking up and sharing their experiences of working in hospitals right now as they care for patients who are coming in with what they can associate to vaccine reactions. “More VC Nurses Blow Whistle on ‘Overwhelming’ Numbers of Heart Attacks, Clotting, Strokes,” *The Conejo Guardian*, December 14, 2021. <https://conejoguardian.org/2021/12/14/more-vc-nurses-blow-whistle-on-overwhelming-numbers-of-heart-attacks-clotting-strokes/>

Individuals are sharing their own experiences with their health while taking the COVID shots. U.S. Senator Ron Johnson hosted a round table on November 2, 2021, to allow these individuals to tell their stories.

<https://childrenshealthdefense.org/defender/nov-2-sen-ron-johnson-cdh-covid-vaccine-injuries-federal-mandates/>

Colette Martin, an RN of 17 years, testified in front of the Louisiana House about the harms of vaccine reactions that she has witnessed. She also stated that more children have died from the vaccine than from covid itself. Louisiana House of Representatives Health and Welfare Committee Hearing, December 6, 2021,

https://www.house.louisiana.gov/H_Video/VideoArchivePlayer?v=house/2021/dec/1206_21_HW (begin at 6:54:00)

In the first two and a half months after EUA was granted, 1,223 deaths were reported to Pfizer. This is a huge red flag that requires deep investigation. See Table 1, Page 7, showing fatal case outcomes in Pfizer’s “5.3.6 Cumulative Analysis of Post-Authorization Adverse Event Reports of PF-07302048 (BNT162B2) Received Through 28-Feb-2021”

<https://phmpt.org/wp-content/uploads/2021/11/5.3.6-postmarketing-experience.pdf>,

While critics commonly question the veracity of VAERS data, as reported on the U.S. government’s Healthy People 2020 site, 83% of the reporters to the Vaccine Adverse Events Reports System were health care workers or pharmaceutical and government-based sources during the years 1990-2010. “The majority of VAERS reports are submitted by vaccine manufacturers (37%) and health care providers (36%). The remaining reports are obtained from state immunization programs (10%), vaccine recipients (or their parents/guardians, 7%) [sic], and other sources (10%).” Office of Disease Prevention and Health Promotion, Vaccine Adverse Reporting System, <https://www.healthypeople.gov/2020/data-source/vaccine-adverse-event-reporting-system>.

Further, 72% of a sampling of 250 of the 1,644 VAERS reports of early death received in the first three months of 2021 were filed either by health service employees or pharmaceutical employees. “We identified health service employees as the reporter in at least 67% of the reports, while pharmaceutical employees were identified as the reporter in a further 5%.” Even though the sample contained only people vaccinated early in the rollout, *i.e.*, those who were elderly or with significant health conditions, an adverse vaccine reaction could be ruled out in only 14% of the cases. McLachlan, et al., *Analysis of COVID-19 vaccine death reports from the Vaccine Adverse Events Reporting System (VAERS) Database Interim: Results and Analysis*. 10.13140/RG.2.2.26987.26402. (2021)

“While it seems that the incidence of pericarditis during the vaccination campaign period is increased, a more comprehensive data collection on a wider scale should be done. We hope this report will raise awareness to the subject and will serve as a reminder to report events as part of the post-marketing investigations and allow for a thorough adverse events following immunization analysis.” *Transient Cardiac Injury in Adolescents Receiving the BNT162b2 mRNA COVID-19 Vaccine*, https://journals.lww.com/pidj/Fulltext/2021/10000/Transient_Cardiac_Injury_in_Adolescents_Receiving.1.aspx

II. Disease Burden Criteria

5. The vaccine containing this antigen prevents disease(s) that has significant morbidity and/or mortality in at least some sub-set of the population.

Vaccines have the potential to reduce, or in some cases even eliminate, diseases that can result in serious illness, long-term disability, or death. For example, before measles vaccine was available, nearly everyone in the United States contracted measles and an average of 450 measles-associated deaths were reported each year between 1953 and 1963. The morbidity/mortality burden of measles was not equal for all members of the population. Examples of significant morbidity measures include rates of hospitalizations, long-term disability, disease incidence, and disproportionate impact.

Do any of the COVID-19 shots fulfill this criterion? No.

First, we must emphatically state that it is unethical to use children as shields for adults.

Peter Doshi, Ph.D: “I want to address this idea of vaccinating children to protect adults. I encourage the Advisory Committee to read Dr. Lavine et al.’s editorial to explain why, “Vaccinating children is likely to be of marginal benefit in reducing the risk to others.” And even if you think a small benefit is better than nothing, let’s not forget that it’s an unproven hypothetical benefit. We need confirmatory evidence, not just assumptions. And then there’s the ethics and the law. **FDA can only indicate a product for use in a**

given population if benefits outweigh risks in that same population. So if benefits don't outweigh risks in children themselves, it can't be indicated for children, full stop. Whether vaccinating children might help adults is a moot point." Comments before the Vaccines and Related Biological Products Advisory Committee, June 10, 2021 <https://www.fda.gov/media/150815/download>, pp. 171-172. (emphasis added)

Children and young adults are at an extremely low risk of mortality from COVID-19. When one subset of the population (children) carries a high risk for injury from an antigen but low risk for injury from the disease, we must consider the mandate of such an antigen to be unethical. Bhopal, "Children & Young People Remain at a Low Risk of Covid-19 Mortality," *The Lancet Children & Adolescent Health*, Correspondence, Vol 5, Issue 5, E12-E13, May 1, 2021. [https://www.thelancet.com/journals/lanchi/article/PIIS2352-4642\(21\)00066-3/fulltext](https://www.thelancet.com/journals/lanchi/article/PIIS2352-4642(21)00066-3/fulltext)

The *Forbes* article "The Hideous Truths of Testing Vaccines on Humans" examined the testing of hepatitis vaccines on the residents of Willowbrook, a home for severely disabled children. The author states: "In 1966, renowned medical ethicist Henry K. Beecher published an article titled, "Ethics and Clinical Research," which listed Willowbrook as an example of an unethical clinical experiment and concluded that "there is no right to risk an injury to one person for the benefit of others." *Forbes*, June 12, 2020, <https://www.forbes.com/sites/leahrosenbaum/2020/06/12/willowbrook-scandal-hepatitis-experiments-hideous-truths-of-testing-vaccines-on-humans/>

Second, the measles example given in this criterion reveals that historically the BOH and DOH have never stepped back to consider the long term or unintended consequences of mass-vaccination campaigns. We agree that nearly everyone in the United States used to be exposed to measles, mostly in childhood when it's safest to experience, and they developed lifetime immunity. Merck's on-trial-for-fraud MMR vaccine does not confer lifetime immunity for a significant portion of the population, pushing susceptibility into the very young and into adult populations. We are nearing a time when more people in the U.S. will be susceptible to measles than before the vaccines were released. And studies show a third dose doesn't help. Was there perhaps a better way to reduce those 450 annual deaths and the cases of very severe illness, without sacrificing superior natural immunity for the vast majority (99.99%) of the population—and without exposing millions of children annually to the risks of the MMR? What about the failure of the mumps portion of the shot? More information can be found here: <https://informedchoicewa.org/measles/> To learn about the politics surrounding the loss of the personal exemption to the MMR, see this post: <https://informedchoicewa.org/education/were-wa-lawmakers-deceived-about-measles-last-session-part-1/>

Is there perhaps a better way to protect those susceptible to severe disease and fatal COVID-19 outcomes, without sacrificing superior natural immunity for the >99.9% of the population who fully recover and develop natural immunity? Optimal nutritional support, early treatment protocols, and the benefits of natural immunity are tragically not part of public health's approach with any vaccine-targeted infection. With COVID, the neglect of these public health tools has cost many lives.

Third: as shown in our response to Criterion #1, the shots do not prevent transmission; any unethical attempt to use children as shields will fail.

As of January 6, 2022, the seven-day case rate in Washington State for ages 4-11 was 504.8 per 100,000. The seven-day hospitalization rate was 1.2 in 100,000. Compare this with the risk of myocarditis in vaccinated adolescents, which is 18.52 in 100,000 as seen in <https://pubmed.ncbi.nlm.nih.gov/34849657/>

Age Group	7-Day Case Rate	7-Day Hospitalization Rate	7-Day Testing Rate	7-Day Percent Positivity
Ages 4-10	504.8	1.2	--	--
Ages 11-13	558.1	0.7	--	--
Ages 14-19	731.8	1.8	--	--
Ages 0-11	480.7	2.3	--	--
Ages 12-19	692.4	1.5	--	--
Ages 20-34	869.9	10.7	--	--
Ages 35-49	724.5	12.0	--	--
Ages 50-64	444.2	20.0	--	--
Ages 65-79	227.3	30.9	--	--
Ages 80+	211.2	56.2	--	--

Cases, Hospitalizations, Testing and Percent Positive by Age

Graph from <https://www.doh.wa.gov/Emergencies/COVID19/DataDashboard>

Between January 4, 2020, and January 6, 2022, 573 children between the ages of 5-18 have died with COVID in the entire United States. CDC Deaths by Sex, Ages 0-18 years, <https://data.cdc.gov/NCHS/Deaths-by-Sex-Ages-0-18-years/xa4b-4pzy>

On December 31, 2021, Anthony Fauci stated, “ . . . [I]f a child goes into the hospital, they automatically get tested for COVID, and they get counted as a COVID-hospitalized individual, when in fact they may go in for a broken leg or appendicitis of something like that, so it's overcounting the number of children who are . . . hospitalized **with** COVID as opposed to **because** of COVID.” MSNBC interview, <https://twitter.com/TheEliKlein/status/1476917049435856925>

Vaccines and Related Biological Products Advisory Committee member Dr. Cody Meissner stated “[F]our per million [pediatric hospitalizations] certainly does not constitute an emergency, and there are significant questions about the safety of this product.” June 10, 2021, VRBPAC meeting transcript, p. 62.

<https://www.fda.gov/media/150815/download>

6. Vaccinating against this disease reduces the risk of person-to-person transmission, with transmission in a school or child care setting or activity being given the highest priority.

Having a large proportion of the population vaccinated with the antigen helps to stem person to person transmission of the disease (i.e., herd immunity). Even community members who are not vaccinated (such as newborns and those with chronic illnesses) are offered some protection because the high immunization rate results in the disease having less opportunity to spread within the community. Vaccinating children in school and/or child care can increase the percentage of children in these groups who are immune and thus reduce the risk of outbreaks of the disease in these groups and in the community at large. Special consideration of disease transmission in a school or child care setting or activity should be given the highest priority. For the purpose of this criterion, “activity” refers to school or child care extracurricular activities including, but not limited to, field trips, sports events, or other activities held on or off campus.

Do any of the COVID-19 shots fulfill this criterion? No.

The Pfizer, Moderna, and Janssen products do not prevent transmission, serious disease, or death.

The CDC director says that vaccines do not prevent transmission. “Fully vaccinated people who get a Covid-19 breakthrough infection can transmit the virus, CDC chief says,” *CNN Health*,

<https://www.cnn.com/2021/08/05/health/us-coronavirus-thursday/index.html>

“COVID-19 infections are increasing in Gibraltar, with 128 new infections reported on average each day. That’s 97% of the peak — the highest daily average reported on January 5. There have been 9,600 infections and 100 coronavirus-related deaths reported in the country since the pandemic began. . . Gibraltar has administered at least 108,323 doses of COVID vaccines so far. Assuming every person needs 2 doses, that’s enough to have vaccinated about 160.7% of the country’s population.” Reuters COVID-19 Tracker, accessed January 7, 2022,

<https://graphics.reuters.com/world-coronavirus-tracker-and-maps/countries-and-territories/gibraltar/>

Vaccinated people can still spread the Delta variant. Vaccination does not stop the transmission of COVID. “Testing a subset of low-Ct samples revealed infectious

SARS-CoV-2 in 15 of 17 specimens (88%) from unvaccinated individuals and 37 of 39 (95%) from vaccinated people.” Riemersma, “Shedding of Infectious SARS-CoV-2 Despite Vaccination,” <https://www.medrxiv.org/content/10.1101/2021.07.31.21261387v4>

Individuals who have been previously infected do not show a need to be vaccinated. This is consistent with Chapter 246-105-020 WAC: “fully immunized” means an immunization status where a child has proof of acquired immunity . . . ’ It is unreasonable to mandate that those with natural immunity be “boosted” with a vaccine when there is not scientific evidence that this practice is safe or effective in the long term. Boosting an individual’s levels of antibodies to the vaccine-induced spike protein—which no longer matches the dominant strain now circulating—is experimental. Also see Shrestha, “Necessity of COVID-19 vaccination in previously infected individuals,” <https://doi.org/10.1101/2021.06.01.21258176>.

Children have sustained and robust natural immunity after contracting COVID. Dowel, “Children develop robust and sustained cross-reactive spike-specific immune responses to SARS-CoV-2 infection,” *Nat Immunol* 23, 40–49 (2022). <https://doi.org/10.1038/s41590-021-01089-8>.

Long-term effects of the vaccine trials in children are unknown. Deaths in children are a fraction of the percentage of deaths in all other age categories. Kostoff, “Why are we vaccinating children against COVID-19?” *Toxicology Reports*, Vol 8, 2021, Pages 1665-1684, <https://doi.org/10.1016/j.toxrep.2021.08.010>.

Barnstable County, Massachusetts, had an outbreak amongst a population of tourists that was approximately 74% vaccinated, which indicates that vaccination does not prevent contracting or transmitting COVID. Brown, “Outbreak of SARS-CoV-2 Infections, Including COVID-19 Vaccine Breakthrough Infections, Associated with Large Public Gatherings - Barnstable County, Massachusetts, July 2021,” *MMWR Morb Mortal Wkly Rep*, 2021 Aug 6;70(31):1059-1062. <https://pubmed.ncbi.nlm.nih.gov/34351882/>.

Despite 100% vaccination rate, consistent testing, and quarantining, a research station in Antarctica still had an outbreak of COVID cases. “COVID-19 Outbreak Hits Research Station in Antarctica,” WebMD News Brief, <https://www.webmd.com/lung/news/20220103/covid-19-outbreakohitsoresearchostation-in-antarctica>

III. Implementation of the Criteria

7. The vaccine containing this antigen is acceptable to the medical community and the public.

It is possible to gauge the level of provider acceptance of a vaccine by querying state professional societies such as the Washington Academy of Family Physicians and the Washington State Chapter of the American Academy of Pediatrics. Vaccine uptake data are also available from the Department of Health to determine provider use of the vaccine. While there is generally a good correlation between the levels of physicians' and the general public's acceptance of particular vaccines, the TAG should consider additional ways of accurately gauging public acceptance of the particular vaccine. Adding an antigen to WAC 246- 105-030 related to a vaccine with poor provider or public acceptance would likely be resisted. Postponing the regulation until there is greater approval of the vaccine would assure more effective policy.

Do any of the COVID-19 shots fulfill this criterion? No.

There has never been more opposition from the medical and scientific community or the public to any type of vaccine or vaccine policy than there is to the COVID-19 products and policies.

EXAMPLES OF MEDICAL AND SCIENTIFIC OPPOSITION

- Over 15,000 members of the [International Alliance of Physicians and Medical Scientists](#) published a declaration resolving that healthy children shall not be subject to forced vaccination. They state:
 - Negligible clinical risks from SARS-CoV-2 infection exist for healthy children under eighteen.
 - Long term safety of the current COVID vaccines in children cannot be determined prior to instituting such policies. Without high-powered, reproducible, long term safety data, risks to the long-term health status of children remain too high to support use in healthy children.
 - Children risk severe, adverse events from receiving the vaccine. Permanent physical damage to the brain, heart, immune and reproductive system associated with SARS-CoV-2 spike protein-based genetic vaccines has been demonstrated in children.
 - Healthy, unvaccinated children are critical to achieving herd immunity. Natural immunity is proven to tolerate infection, benefiting community protection while there is insufficient data to assess whether COVID vaccines assist herd immunity.

Supporting Evidence:

<https://doctorsandscientistsdeclaration.org/home/supporting-evidence/#children>

- More than 500 scientists, medical doctors and health care and other professionals united as the [Canadian Covid Care Alliance](https://www.canadiancovidcarealliance.org). Their presentation *More Harm Than Good* reviews Pfizer's six-month data and reveals that Pfizer's COVID-19 inoculations cause more illness than they prevent. See the *More Harm than Good* video and PDF slides here: <https://www.canadiancovidcarealliance.org>

"It's clear that Pfizer - and the agencies overseeing their trials - failed to follow established, high quality safety and efficacy protocols right from the beginning. . . Any government that approved this medical intervention for its citizens should have ensured that the trial had used the appropriate clinical endpoints and high quality safety science. . . Any government official who possesses this evidence and continues to allow its citizens to be inoculated with a toxic agent is, at the very least, negligent."

1. The [Association of American Physicians and Surgeons](#), established in 1943, opposes COVID-19 vaccination mandates. In regards to children, AAPS states:
 - a. In the testing, only 1,518 children received the shots, and 750 received a placebo. This is far too few to see uncommon side effects, such as myocarditis/pericarditis, as Pfizer admits.
 - b. Follow-up was for two months in one group and only 2.5 weeks in another. The Pfizer application states that long-term sequelae of post-vaccination myocarditis/pericarditis in participants 5 to 12 years of age will be studied after the vaccine is authorized for children.
 - c. The children were not examined for mild, asymptomatic myocarditis, which might cause long-term damage, as by checking troponin levels or echocardiograms, or for blood clotting problems, as by checking platelet counts and D-dimers.
 - d. The only FDA-approved product, BioNTech's Comirnaty (not yet available in the U.S.) is required to do studies on myocarditis lasting 5 years.
 - e. Monthly safety report cards on the three available vaccines, which have different dosages, are supposedly required, but none have been produced or released.
 - f. The claim of 91% relative effectiveness against symptomatic COVID in children is based on 16 cases of COVID in the placebo group and three cases in the vaccinated group over the brief follow-up period. This is an absolute risk reduction of about 2%.
 - g. We do not and cannot know the long-term effects on cancer, fertility, or autoimmune diseases. "But we're never going to learn about how safe this vaccine is unless we start giving it. That's just the way it goes," stated committee member Dr. Eric Rubin, physician at Boston's Brigham and

Women's Hospital, immunology professor at the Harvard T.H. Chan School of Public Health, and current editor-in-chief of the New England Journal of Medicine. The alternative to giving a product to most of an entire generation is animal studies or restricting use to a defined group most likely to benefit, with close follow-up.

- h. The dosage for children is one-third the adult dose. Dosage in pediatrics is generally determined by weight. Not all children weigh the same, and their weight does not triple between age 11.9 and 12.0 years.
 - i. The COVID products are not shown to interrupt infection and transmission. Masking and distancing are still being recommended or required for adults. Thus, hopes for a return to normalcy once vaccinated are misplaced.
 - j. To give truly informed consent, parents need complete information about possible side effects, such as the outcome for Maddie de Garay, a 12-year-old whose public-spirited parents enrolled her in a trial. Post-shot, she experienced excruciating pain and a 2-month hospitalization, and is now in a wheelchair. Pfizer has not acknowledged a connection to the shot, nor did it fully disclose her injuries in it. The reaction may be "extremely rare," but many would decline to take even a 1-in-1 million chance of this outcome.
 - k. The government has already ordered 68 million doses, so authorization is anticipated, and likely will be followed by mandates.
 - l. Several Nordic countries have paused the use of COVID vaccines in persons under the age of 30. Persons at low risk for COVID complications are more likely to die from the shot than from COVID.
 - m. Dr. Harvey Risch, Yale epidemiologist, stated that he would home-school his children if public schools mandated this vaccine.
 - n. No one should administer a COVID shot to a child unless parents have given fully informed, completely voluntary consent, without threats or inducements.
 - o. SOURCE:
<https://aapsonline.org/aaps-statement-on-covid-shots-for-children/>
2. The [Physicians for Informed Consent](#) have compiled a Pfizer Vaccine Risk Statement for children that highlights FDA, CDC, and Pfizer clinical trial data finding:
- a. The clinical trial found there were zero cases of severe COVID-19 in children of any age who did not receive the vaccine. In contrast, the trial found that the vaccine causes severe (grade 3) and grade 4 systemic reactions in children.

- b. The clinical trial indicates that vaccine efficacy declines significantly in less than six months. Although a booster dose of the vaccine is authorized for individuals 16 years of age or older, the clinical trial states that efficacy was not evaluated for Phase 3 BNT162b2 booster group participants. Instead, vaccine efficacy was inferred based on antibody levels observed in only about 300 vaccinated subjects over a one-month time period.
- c. The clinical trial provided no evidence that the vaccine prevents asymptomatic infection or transmission of SARS-CoV-2 or COVID-19. In addition, recent studies have observed that a significant proportion of severe, critical, and fatal cases of COVID-19 occurred in vaccinated individuals.

4. Paul E Alexander MSc PhD, Howard C. Tenenbaum DDS, Dip. Perio., PhD, Dr. Parvez Dara, MD, MBA: “We must not expose our children to ‘unnecessary’ harm. We must not expose them to a substance that has not been tested on children (or plan to be) in the way it should be and for as long as necessary. We must not expose children to a vaccine that based on their risk, is absolutely not needed. Moreover, they can become infected naturally, if their immunity is needed.”
<https://www.aier.org/article/why-we-must-not-be-forced-into-vaccinating-our-children-from-covid-beware/>
5. Dr. Robert Malone (MD, Northwestern School of Medicine, MS, UC San Diego and Salk Institute Molecular Biology and Virology Laboratories, Giannini Postdoctoral Research Fellow, UC Davis, Harvard Medical School fellow -- Global Clinical Research Scholar (2016), original inventor of the mRNA vaccine platform used in the Pfizer and Moderna COVID-19 vaccines as well as the DNA vaccine platform used by Inovio): Interview in which Dr. Malone voices his grave medical and scientific concerns for the use of any of the COVID shots, especially in children:
<https://unityprojectonline.com/news/dr-robert-malone-md-on-the-joe-rogan-experience/>
6. Dr. Peter McCullough (MD, FACC, FAHA, FASN, FNKF, FNLA, FCRSA, Chief Medical Advisor, Truth for Health Foundation; President, Cardiorenal Society of America; Editor-in-Chief, Reviews in Cardiovascular Medicine; one of the most highly published medical specialists in practice today and an authoritative commentator for major media on COVID-19). Dr. McCullough has been interviewed hundreds of times and testified to numerous legislatures and to Congress. He is a tireless proponent for early treatment to save lives, and although he at first administered the EUA shots to his patients, as information began to emerge, he stayed informed and up-to-date. He no longer supports use of any of the existing COVID-19 shots. His interview by Joe Rogan is extensive and can be found here:
<https://unityprojectonline.com/news/dr-peter-a-mccullough-on-the-joe-rogan-experience/>

In an [interview in August 2021](#), Dr. McCullough reviewed his five main points of education:

- a. COVID-19 is NOT spread asymptotically
- b. Asymptomatic people should not get tested

- c. Natural immunity is robust complete and durable
- d. COVID-19, no matter what variant, is easily treatable at home
- e. Current COVID-19 vaccines are obsolete and should be considered unfit for human use. “They [the vaccines] do not cover the new variants; patients are failing on these vaccines. They’re being hospitalized and getting sick despite having had the vaccines . . .the vaccines at this point in time have amounted to record mortality and injury and should be considered unsafe and unfit for human use.”

EXAMPLES OF U.S. PUBLIC OPPOSITION

Evidence that half the country refusing; people willing to lose jobs rather than comply; large organizations of professionals publishing position papers; example of LA Unified School district; Enumclaw example?

<https://www.cityofenumclaw.net/DocumentCenter/View/6670/Res-1734---Covid-19-Vaccine-Verification-Discrimination>

Less than half of parents support a requirement for middle and high school students to be vaccinated for COVID. "About One in Five Americans Remain Vaccine-Resistant," Gallup, August 6, 2021,

<https://news.gallup.com/poll/353081/one-five-americans-remain-vaccine-resistant.aspx>

Healthcare workers are willing to lose their job rather than take the COVID vaccine.

"Roughly 3,000 hospital workers lost jobs over Washington's COVID-19 vaccine mandate," KING 5 News, November 17, 2021,

<https://www.king5.com/article/news/local/washington-hospitals-lose-roughly-3000-workers-over-covid-19-vaccine-mandate/281-b0ff14de-27b6-4b0a-bcca-ed924c314ca0>

As of October 19, 2021, nearly 2,000 state workers chose to be fired rather than take the vaccine. "Nearly 1,900 Washington state workers quit or are fired over COVID vaccine mandate," *The Seattle Times*, October 19, 2021,

<https://www.seattletimes.com/seattle-news/politics/nearly-1900-washington-state-workers-quit-or-are-fired-over-covid-vaccine-mandate/>

There have also been many stories in the news describing our service members who are being discharged secondary to their declination of the shots.

8. The administrative burdens of delivery and tracking of vaccine containing this antigen are reasonable.

Many institutions and individuals are involved in implementation of the rule when the Board adds a new vaccine to WAC 246-105-030. These include: the Department of Health, the Department of Social and Health Services, the Office of Superintendent of Public Instruction (OSPI), local health jurisdictions, schools, child care, health plans, health care providers, and families. For each of these key players, there are issues that affect the feasibility of implementing an immunization recommendation. For example, introduction of a new vaccine can result in schools conducting more parental follow-up and making changes to record and information systems—this in turn can impact school staff workload. Assuring that a reasonable burden of work is present will enhance the effectiveness of the policy. The TAG includes representatives from affected parties such as OSPI, schools, and child care when assessing an antigen against this criterion.

Do any of the COVID-19 shots fulfill this criterion? No.

The burden on school nurses for tracking COVID cases and for managing all the COVID measures is already unreasonable. ICWA board member Heidi Hartnell is a teacher in Washington State and can speak to the amount of time schools already spend tracking COVID cases and close contacts. If the requirement of vaccination is added to the existing required measures, this would create an extensive amount of maintenance and updating of immunization records. She says, “With the demonstrated waning efficacy of the COVID vaccination in adults, it would seem that this would also be true with children. If children are required to be “up to date” with a booster every six months, this will be a huge burden on schools as vaccination records will constantly need to be checked and updated. Currently, a majority of the required vaccinations are completed by the time a child enters kindergarten and these forms do not require frequent updating. However, if the COVID shot and subsequent boosters were to be added, this would place a hardship on already wearied teachers and school personnel. Ultimately these shots do not prevent contracting or transmitting the virus, and so this work achieves nothing in the public health sense.”

The only thing that makes sense, given that >99.9% of children are at zero risk from COVID, is to simply enforce the “stay at home if symptomatic” rules that have served public health well for decades. We can never achieve, nor would we want to achieve, zero exposure schools. Children’s immune systems need exposure to the microbial world, including to viruses, to properly develop and protect them as adults. This is just as true for COVID, which has become endemic, so children will be encountering the virus and mutations for the rest of their lives. More than 140 studies demonstrate that natural immunity will serve them well and far longer than the shots, and it is their

parents who should make the risk-benefit decision, not the State of Washington. "144 Research Studies Affirm Naturally Acquired Immunity to Covid-19: Documented, Linked and Quoted," Brownstone Institute, October 17, 2021.

<https://brownstone.org/articles/79-research-studies-affirm-naturally-acquired-immunity-to-covid-19-documented-linked-and-quoted/>

Public health would be even better served if the BOH would acknowledge natural immunity, and support and promote early treatment protocols, so that everyone of all ages and of any vaccination status could see better outcomes.

<https://www.cdc.gov/media/releases/2021/s1227-isolation-quarantine-guidance.html> -

9. The burden of compliance for the vaccine containing this antigen is reasonable for the parent/caregiver.

Parents and caregivers are often involved in obtaining vaccines for children. This can include: transporting children to medical appointments, taking time off of work for medical appointments, maintaining the child's immunization records, etc. When a vaccine is required for child care and/or school entry it affects the health decisions that parents make on their child's behalf because parents must, at the very least, take the required vaccine into account.

Do any of the COVID-19 shots fulfill this criterion? No.

Considering the risks discussed in Criterion #4 above, the burden of compliance on parents is unacceptable.

Considering that any injury sustained by a child is borne completely by the parents because the manufacturers are shielded under the Public Readiness and Emergency Preparedness (PREP) Act, the burden of compliance is unacceptable.

<https://aspr.hhs.gov/legal/PREPact/Pages/default.aspx>

The shots are available everywhere, even grocery stores often without an appointment, so it is easy for most parents to find an opportunity to get their child a shot if they so choose, but for those parents who choose to opt out of a school vaccine requirement, the burden is out of balance.

Parents can't go to Safeway or Rite Aid for an appointment with a practitioner to get the required risk-benefit consultation and signature. They must make an appointment with a practitioner, take time off work, arrange transportation, etc. That first step is now the most burdensome. For the past several years, it has been increasingly difficult for parents to find any practitioner willing to give them the required risk-benefit consultation. Many doctors and clinics are kicking families out of their practices who do not vaccinate, or who do not fully vaccinate according to the CDC schedule. This has nothing to do with health or protection and everything to do with the financial incentives built into the

insurance and public health systems that reward high vaccination uptake. This practice is supported by the American Academy of Pediatrics, which has critical conflicts of interest associations with the pharmaceutical and medical industries. “The AAP recently issued a clinical report that stated it is an “acceptable option for pediatric care clinicians to dismiss families who refuse vaccines”

<https://www.infectiousdiseaseadvisor.com/home/topics/prevention/new-aap-policy-on-patient-dismissal-for-vaccine-refusal-may-erode-solidarity-among-pediatricians/>

The BOH’s criterion is based on the assumption that “a process exists to opt out of immunization requirements by children attending either child care or school.” If parents are unable to find a practitioner willing to provide the required risk-benefit consultation and sign an exemption form or letter stating that they have done so, then that opt-out does not exist.

And finally, a tremendous burden exists in the coercive aspect of any vaccine requirement. Parents who opt their children out of one or more vaccinations experience emotional and psychological stress because they know they face scrutiny by school staff, by health care providers, by surveillance systems, as well as cultural pressure. Children who lack one or more vaccinations are singled out at various times, excluded from school and extracurricular activities. If a vaccine is NOT on the schedule, a parent is able to choose what is best for their child without the added stress. It is an unreasonable burden to stress entire families with a requirement that should be a personal medical decision. It is incomprehensible that the Board would even consider such a requirement with products that cannot prevent infection or transmission.

BOARD CRITERIA FRAMEWORK:

The only purpose for which power can rightfully be exercised over any member of a civilized community, against his will, is to prevent harm to others. His own good, either physical or moral, is not a sufficient warrant.” Harm to others cannot be prevented by requiring children attending school to take this vaccine.

presentation for item 11.

Hi WA State Board of Health Members,

I am writing to you regarding the agenda item: Immunization Criteria for Child Care and School Entry. Covid shots should absolutely NOT be a requirement for our children to attend school or child care. Children have less ACE2 receptors (which the coronavirus binds to for infection) and are at an extremely low risk of disease and disease severity. The Covid shots have not received full FDA Approval and are only allowed at this time under the EUA (Emergency Use Authorization). There is no data regarding how these shots will impact our children in the long term. The spike proteins in the shots cause inflammation throughout the body and can cause long term harm including death. Therefore, this shot should NOT be required for our children to attend school or child care. It should remain optional.

Sincerely,
Kristen Mendenhall

Greetings,

Regarding the question of vaccinating children against Covid to attend school and daycare, I say the following:

1. The current vaccines do not cover the Omicron variant which is now the dominant strain.
2. Children have very mild symptoms when they have any form of Covid. This isn't smallpox, folks.
3. This vaccine is still for emergency use only and is considered experimental. Mild cold symptoms are not an emergency use situation.
4. Omicron is more mild (I've had it) than the common cold even for adults. We don't require vaccines for the common cold so requiring it for a variant that's mild AND that the vaccine doesn't address, is ridiculous and unnecessary.
5. You will see an army of parents pulling their children out of public school if you choose the path of mandatory vaccines to attend school. So consider how your school levies will look going forward in the years to come. It won't go well for school funding because everyone will be using online schooling at home. Except the low income people who don't have the same resources, that is. So you will end up with a public school system largely comprised of low-income families which makes this whole idea ultimately discriminatory against low income children who will be left with a shell of the current public education system.

Do not. Absolutely do not. Do not require children get this emergency-use-only-injection to attend school. Children are at extremely minimal risk to COVID but are at risk for a lifetime of possible complications, especially young males with myocarditis. I implore you - allow this to be a personal choice, not a forced coercion (which is specifically outlawed in the Nuremberg Code !!). These injections are not stopping the spread but are acting as a personal therapy (to potentially lessen severity). To mandate this would be a crime.

Subject: NO Vaccine mandate!

External Email

I strongly encourage and request that you leave our children out of the COVID vaccine mandate! There is not enough research behind this vaccine and complications can be severe. As a family, our girls, 9 and 15, do not want the vaccine and that should be theirs-and ours as parents-choice and decision. I nearly died from a rare autoimmune disorder and cannot be vaccinated for anything any longer or I risk relapse and death. To force a vaccine on our girls frightens them on numerous levels, especially since they know what I went through-paralyzed for two months because of my autoimmune disorder and battling to get back to normal! To risk this side effect happening to our children is not acceptable to me. We have a special needs child that thrives in school and a teenager getting ready to do running start through her high school. A mandate would've force us to withdraw them from school and homeschool. This places a burden financially on our family. Many friends we have spoke with would do the same. This would cause teachers to lose their jobs and schools to lose funding. In addition, some children may not receive an adequate education, nutrition, and much more if families feel forced to homeschool. Make it a choice but don't force our kids!

To whom it may Concern,

You are stealing our rights as Americans and as parents. We do not need others to make a judgment on whether we should vaccinate our children or not. This should be a freedom of choice. You are destroying everything that America stands for. Absolutely against vaccinating our children just so they can attend public school. Please seriously consider this decision to FORCE vaccinations on our children.

I was raised with parents who came from communism and nothing ever turns out right when one or two people decide to make a choice that most people do not want. God have mercy on our country.

Subject: Public school COVID vaccine mandate meeting on Jan. 7th 2022

External Email

Hello,

I am writing to you with my parental input on requiring COVID vaccinations for public school children ages 5 - 18. This email has been sent on Wednesday, January 5th, 2022. In regards to the board meeting scheduled this Friday, January 7th, 2022.

My son attends the Medical Lake School district in Eastern Washington.

I do NOT believe schools should require this vaccine for attendance, and this vaccine should be optional as the FLU vaccine is for staff and students.

If this requirement is passed, my child will never again attend public school in Washington state. I will home school.

I have left the field of Education in this state, due to the teacher COVID vaccine mandates. This choice is parental and personal, I will not give my child this vaccine. And if the Washington DOE loses funding from the government due to low enrollment, then that is their loss.

Again, I am highly against the COVID vaccine mandate for students to attend public schools in Washington state.

Thank you for your time,
Wren Wiley

LEAVE OUR CHILDREN ALONE! Our children should never be forced to wear masks or to get any vaccine if their parents are against it. And making children sit outside in the cold to eat lunch is criminal. You and Washington school districts are abusing our children and soon we will have more children being home schooled than going to school, but maybe that's a good thing as they have forgotten to teach reading, writing, and arithmetic. Healthy children have very little or no risk of dying from Covid and it has been found that they do not infect their older relatives. Asymptomatic spread has been proven to be false. Please listen to the doctors who are not trying to sell vaccines or are not afraid of losing their licenses. We will not comply!

Subject: No to mandatory Covid vaccine for children

External Email

It has come to my attention that you are planning to vote on a decision whether or not to make the Covid vaccine mandatory for children. I am asking you to please vote NO to this requirement! There are no long-term safety studies and the ones that have been done are extremely alarming. It is well-known that one thing that is definitely affected in many recipients is female ovaries. Making a shot mandatory that has the potential to affect the health and fertility of our girls is heinous! The reports of myocarditis in young healthy male athletes is another alarming report. Please DO NOT make a vaccine with such serious potential side effects mandatory. It should be left the personal choice. I for one will not be vaccinating my children with this shot so if it becomes mandatory my children will not be attending anymore public schools in the state of Washington, and I know many others feel the same. Make your decisions carefully! Saying yes to this vaccine is saying NO TO OUR CHILDREN'S HEALTH and WELFARE.

Thank you for your consideration.

Subject: No recommendation for vaccine Mandate

External Email

Good morning,

as a parent to four children in the Washington State schools, I do not recommend you mandate the vaccine to children. We will not stand by your decisions to mandate our children for a vaccine that has caused disfunction to children's health. We used to pull vaccines if they had a high chance of health concerns towards children and now you are looking at expecting parents to vaccinate their child with a vaccine that does not even have a full 1 or 2 year (normally five year) study done on it to make sure it is healthy for our kids. As I am a high believer in vaccines, this is not one I accept that our children should be sacrificed to.

We already mask our children. We already have taught them being antisocial and not being near each other is okay when in fact it is not. Humans are meant to be social. You are teaching kids that mental health does not matter and neither does their physical health if you are okay mandating this vaccine to them.

You need to leave this choice to parents and parents only. Not the school boards or the school districts. We will be pulling our children from the school districts as my children are not going to be receiving this vaccine or we will keep accepting our exemptions as my children's medical information is not your business or anyone else's.

Your goal is for a safe environment. But you're also denying the choices of freedoms to these children. Next you will be trying to take away consent from all children in this

state. Children deserve informed consent. If you explained to your children that you were going to give them a vaccine that has a low chance of working but a small chance of a cardiac heart arrhythmia which could be a lifetime issue that is not covered by health insurance and you will be financially responsible for, do you think they would choose that? Do you actually understand the problems you see by mandating this vaccine? In five years, let us reconvene and look at the statistics to see if this vaccine is worth giving to children. Are the side effects worth it? Did you give it to your children?

It is not my child's responsibility or my responsibility to take a vaccine to prevent the spread of COVID-19. It is MY responsibility to look at the best interest of my children and their health. My children know in detail what informed consent is and how important it is. My job is to protect my children. My job is to raise them into consenting adults who know the difference in right and wrong, and safe and not safe. My job is to let them make informed decisions in their life to be better human beings to this world. My job is to make this world a better place with these kids as they grow. I will do that by teaching them they have to stand up for what is right (morally), even if they stand alone. They will be strong enough to do that. Just like my mother did.

I hope you see that most parents' can make this decision for their family on their own. If they want to vaccinate their children, they have the ability too. If they choose not to, they made the decision to protect their family how they see fit.

Thank you,

Gabrielle Abbott

I strongly oppose forced covid shots for children to be able to attend public schools. These shots have proven to have serious adverse reactions and we still don't know the long term effects. To put at risk our most precious children for an experimental risky shot is unbelievable to me. If this moves forward many parents will pull their children from public schools and have to figure out alternatives. I request that you all vote no on these mandates for the future of our kids.

Respectfully,
Becky Hernandez

Dear Government,

You will not be making health decisions for my children, you are not their parent. Their mother and I will make those decisions you nor any other government official will ever make those decisions for my children. It is highly presumptive to think that making that kind of decision for anyone's child is your responsibility or your right. You as government officials work for the people, know your place. My child's health records and anything related is none of your concern. Should you make a ridiculous decision to require a vaccine that your beloved "science" has shown to be ineffective, FYI denial of the obvious is not an effective political strategy. I will effectively withdraw my children from public school.

Again, anyone's medical decisions, that includes yours, are no business of the government's. Stop politicizing ailments for financial gain and coercing people through fear, the gig is up and everyone knows it. Look into the miraculous return of influenza A and B, weird.

Deep down you know the correct answer and if you don't you lack a conscience, any kind of moral turptitude, have completely lost any reverence for the Constitution, the rule of law, and the freedom that makes this country successful.

A mandate is not a law.

NO TO VACCINE MANDATES OF ANY KIND!! NO TO MASK MANDATES OF ANY KIND!!!
I have 4 children, 2 are out of school because masks, 4 will be out of school if there is a vaccine mandate.
These vaccines are Emergency Use Authorized! They do not belong on the schedule.
Several European countries are not even recommending them to children at all!!
THEY DONT STOP IN TRANSMISSION OR INFECTION AND CHILDREN ARE THE LEAST LIKELY TO END UP GRAVELY ILL REGARDLESS OF VACCINATION STATUS!!
Furthering, vaccine clinics shouldn't be help at or by schools. How are they providing informed consent!
NO MANDATES!!! NO MANDATES!!!

I am writing to you regarding mandating the covid vaccines for day cares and for entry into school for school age children. It is completely unconstitutional and against the very fabric of our country and its freedoms. I am for everyone's rights to choose. I am asking you to vote NO on mandatory vaccines.

I do not agree with requiring Covid vaccines for children to attend school. Children are rarely affected by this virus and at way less severity if they are. The numbers are so drastically low for this age group that requiring a vaccine for it would be asinine. I stand for choice and what is best for individuals and families.

To the board,

Please consider this, the reason we as parents have gotten our children vaccinated from poliovirus, chickenpox, measles, and the list of viruses they Prevent them from getting is simply because they Prevent them from getting those viruses.

My husband is a police officer and he and I were both vaccinated by choice back in March and April of 2020, we chose to be vaccinated knowing it would help us from getting sick, and knowing when adults get Covid it the result is much worse.

Our daughter has had 4 colds in her entire 7 1/2 year life, she goes to public school, rides the bus, participates in lots of extra activities with groups of different children and has not gotten sick. Please don't make her have to get vaccinated from a virus it is not going to Prevent her from getting. If the vaccine would Prevent Covid, and was FDA approved, of course I would give it to my child. But being that her body is changing and I didn't develop my severe allergies until I was an adult I'm not putting it in her body. She doesn't need it.

Please put yourselves in our shoes as parents and consider how we feel.

Thank you for your time.

Jenn Dery

Have a great day! ☐☐

To Whom it May Concern,

My name is Summer Pruitt and I am a wife, a mother, and a life long resident of Washington State. I am completely OPPOSED to any mandate of the Covid vaccine for public school children. This is unconstitutional and would be of great detriment to the Washington State public school system. With enrollment already down by nearly 60,000 this would cause an even greater nose dive as I fully believe a majority of parents would pull their kids from public schools immediately. I want my voice to be heard! The parents of Washington State will not sit by and let this happen. We will stand our ground for our freedoms and the freedoms of our children!

Sincerely,
Summer Pruitt

We need to look long and hard before mandating a vaccine that has no long term studies and for something that will continue to mutate, requiring constant boosters, as it is beyond illogical. Historically, many other vaccines have been pulled from the market due to complications after seeing long term effects that had not shown up during short term testing. We have family that are still dealing with the consequences of the Zostravax fiasco, so we know too well what bad science can cause.

We are responsible for our children, including looking out for their futures, not just the short term "safe feeling" regardless of side effects.

Thank you for your time.

Dear Board Members,

I am writing to express my concern about the decision to mandate covid vaccines to school age children.

- * As you know, children are at extremely low risk of contracting covid.
- * The unreliable vaccines are only for emergency use, they are not FDA approved.
- * There is no long term research on these vaccines regarding what could happen down the road. Especially for children.

Please wait on your decision to allow the research to be acknowledged.

Thank you,

Teresa Hodges

WSOH Members,

This meeting to propose mandated vaccines for our children to attend school is total insanity!

These vaccines are still in the trial stages. There is NO vaccine currently approved by the FDA. With all the injuries and yes, even death from these vaccines it's not even being discussed to give people the chance to make an informed decision. You are causing division and I would ask that you get informed before turning our State into an authoritarian socialist State that is not operating under the Constitution!

Many Doctors and Scientists are speaking out to what is happening to people who take these vaccines. There have been hearings held by Senator Ron Johnson from people damaged permanently from these experimental vaccines. These brave people are being deplatformed, canceled, losing their jobs and professions to get the truth out.

These vaccines being forced on unwilling individuals and are clearly against the Nuremberg Code.

I beg you all to stop forced vaccines to our children.... If I had school age children, I would pull them out from School and homeschool or move from this terrible authoritarian socialist State! I do have grandchildren and this is not somewhere I would want them growing up.

Please I beg you, do the RIGHT THING..... NO MANDATES FOR VACCINES!

To Whom it may Concern;

We are parents in Mead School District in Spokane Washington, and we feel that parents should have the right to choose which vaccinations are appropriate for our own children. The Covid vaccination has not had enough years to be proven safe. There have been many side effects even in adults. We will not be injecting this into our children.

If a mandatory Covid vaccination is required for all school children then we will withdraw all of our children from the district, as I know many other parents will do as well!

Thank you,

Sophia Niggemeyer

Thank you for being concerned about taking care of kids in Washington State. I understand this is a hard place for everyone right now. It is a super hard place for parents especially. We are responsible ultimately for our children. It is us who will face the ramifications of any vaccine injury. Please take that into the utmost consideration. As a parent of 5 children, four grown and one in school, I would like to request that you do not mandate children to take the C-19 vaccine. There are too many questions on this product, a product in Emergency Use Authorized (EUA) and a product that has not yet completed Phase 3 clinical trials. It is so important that humanity be given informed consent. Where there is risk, there must be choice! Please recognize the best care for children is found in freedom not coercion! Government is never the best decision maker for children, parents are. Thank you!

Concerned mom,

Subject: School Vaccine Mandate Parental Input

External Email

Hello,

My input to you as a mother of 3 young children and my oldest about to begin kindergarten this next school year, please do not mandate the covid vaccine.

I received the vaccine and had numbness and tingling in my arm for two months after the vaccine and I do not want my child to have to endure any symptoms she may have from it. My husband had a 104 degree fever from the vaccine as well.

I believe exposure to covid in our young children is essential for their bodies to create immunity and for their bodies to already recognize this virus before they age.

Also, this vaccine is not covered under the National Childhood Vaccine Injury Act. If anything were to happen to my child due to the force of our state and schools imposing this requirement, there could be liability issues.

Please, no additional vaccine requirements.

Best,
Ashley West

Subject: School Districts Vaccination Requirement

External Email

To whom it may concern;

My name is Jacqueline McQuown, and I currently have two children enrolled in the Mead School District #354 in Washington State. I work for the Department of Social and Health Services as a Mental Health Technician at Eastern State Hospital. My husband also works here, as a Psychiatric Security Attendant. We have both worked for the State of Washington for multiple years and enjoy our work. We have both worked throughout the duration of the Covid Pandemic, many times working in direct contact with those infected with the disease. While neither of us argues the dangers of this illness, we do argue the effectiveness and danger of the vaccination as given to our children. This vaccine's protection is minimal at best. My husband was diagnosed with Covid-19 early 2021. He had very mild symptoms (headache and loss of taste), and amazingly, no one else in our household caught the infamously contagious virus from him. He remained in direct close contact with the entirety of our family for the duration of his quarantine. Conversely I have family who have been placed in the hospital on life support and almost succumbed to the virus and they have all been young (mid 20s) and healthy. This virus is unpredictable at best.

My husband and I both have been fully vaccinated. It's a requirement now where we work. We are also in danger every single day where we work, and NOT because we are in contact with this virus. Not any more than we were before. The virus still takes just as many staff down as it did before, and just as many patients. We have been lucky enough to see very FEW deaths as a result of it. Our danger comes in the form of SEVERE understaffing. We are at critical levels. Today, on a ward where we should have a minimum of 12 staff to maintain safety and care for our patients, we have four. Weather conditions are terrible, and at 8:30 am (1 hour into shift) we were already told that the hospital was understaffed for evening shift by 15 people. That number results in mandatory overtime for employees who are already overworked and tired. People who have children at home that they won't get to see at all today, which adds to stress levels. This hospital is dangerous, and our patient count is only increasing. Our staff count steadily decreases. When the state employee mandate went into effect we lost SO MANY people, many more than have been reported.

With that all being said, we now face mandatory vaccinations for our children. I know for myself, with the first hand experience I have with a child who's vaccination complications became so severe, so quickly that she died at the age of five... that I will NOT have my children vaccinated. Under any circumstance, until it has been properly vetted and these side effects and complications are brought to a minimum. I will not put my children in danger. I will NOT put something into their bodies that may or may not give them protection against a virus that may or may not infect them and may or may not make them extremely ill with the chance that the vaccine may or may not KILL them. The risk is too high.

My husband and I will remove our children from the public school system here in Washington, as I am sure many other parents will opt to do if vaccination is forced upon them. Will this cause stress on our family? Yes. Will it be difficult to do? Yes. Will this put my children's future in jeopardy? Yes. Will this put a harder strain on Washington's work force as a result of all the parents who will have to quit their jobs to educate their

children from home? Yes. Will this put further strain on our public assistance programs that are already stretched so thin they're close to a breaking point? Absolutely yes. Will it kill my children? No. Would they be safer at home, in a structured and loving learning environment? Yes. Would it be worth all the negative impacts I mentioned above and more to home school my kids if a vaccine is forced? Absolutely yes. Beyond a shadow of a doubt.

Pulling my children from public school is not something I am prepared to do by any means. I don't know where to begin and it scares me, but if there is one thing that I have learned as a result of this virus, it is that I am resilient, I can handle so much more than I ever thought possible, and I can face my fears head on and hold my head high knowing that I am doing what is right for my family. Removing my children from Public school would be the right decision. I don't believe that the loss of support for public schools would be something that the state could absorb. Many of us opted to get vaccinated in order to retain our jobs, I know that for the safety of my family, that is not something I am willing to do with my children. I will not be forced. They will not be forced.

The decision to require vaccination is up to you, but it stops there.

Thank you for your time, and with kindest regards,

Jacqueline McQuown

Subject: Regarding COVID vaccine for public school

External Email

To whom this May concern:

I am writing in to voice my concern regarding a possible vaccine requirement for Washington state public education attendance.

My 5 students will not be attending public education if this mandate for students becomes a policy. I will not bend to the government mandates that impede on my right and my children's right to medical freedom. My Unvaccinated children pose no more of a threat to the vaccinated than they do to my children. After all, their vaccine works so how are my unvaccinated Children imposing any threat/risk to them?

Futhermore, the public education system will not dictate what I can or cannot do with my children and their bodily autonomy. I refuse to inject a experimental drug into my children's bodies in the name of public safety/science.

When the FDA and other government agencies address the injuries cause by these vaccines, then I would be willing to come to table with an open mind. Until then, if necessary, I will respectfully withdraw my students without incident and educate them from home.

Sincerely,
D. Johnson

Subject: School Vaccine Mandate Feedback

External Email

I am writing to speak on behalf of the school vaccine mandate. I am a mother and a grandmother who is deeply disturbed by the direction our country is headed in regard to losing our God given liberties. To force our children to be vaccinated against a virus that has almost no chance of touching them or harming them is criminal. Look at the statistics. More children are being adversely affected by the vaccines than by the virus. BUT, take all that out of the equation....even if this was a deadly virus among children, it is the parent's responsibility and right to make the decisions regarding their child's healthcare. It is not the position of the health board, government, or anyone else to take that away. There has been too much over-reach in this area. It is time for it to stop. I DO NOT support vaccine mandates in the schools. Let's think of our children, their mental health, their futures, their freedom.

Please govern accordingly,

Karla Darcy

Please do not make this part of the required vaccine requirements for children in schools.

We know that children are the smallest group affected by Covid, and they are recovering so quickly.

With the country divided in half already for the Covid Vaccine, this will surely divide it further, impacting our school children hugely!

Let it be a choice.

The work load it will create for all is also a reason why to NOT make it a required vaccine.

I believe many will choose to find other options for school, and therefor the mental health of our children will be of grave concern.

To Whom It May Concern:

This entire idea is a total infringement and stretch to consider "including" COVID-19 vaccines under WAC 246-105-030! It's also a total waste of tax payers money!! This WAC says it all....."IMMUNIZATION OF CHILD CARE AND SCHOOL AGAINST CERTAIN VACCINE-PREVENTABLE DISEASES"! I am focusing on the word "preventable" in this WAC. The message from the drug companies, our government, and local municipalities from the start was that the vaccine would "prevent" a person from getting and or spreading the COVID-19 virus in adults. Since then we have learned this to be untrue! Not only can vaccinated get COVID-19, they can also spread it just as easily. Not to mention every 6-12 month there have already been 2 widely known variants in Delta and Omicron and many more variants to come, as Coronavirus has been around for decades. It has already been proven the vaccine in adults did not prevent, stop, or even mitigate these variants in industries with 97%+ vaccination rates such as the NFL, NBA, and NHL to mention a few. All of which have had higher rates of COVID than the previous seasons/year with "choice" vaccinations! Or the Airline industry which is cancelling flights at unprecedented rate that they say is COVID related. Interesting, since almost every Airline demanded employees' be vaccinated!

Chicken Pox, Measles, Polio, Mumps, etc. listed under WAC 246-105-030 in Numbers 1-11 are preventable with an early childhood vaccine regiment between parent and physician. Again, the word "preventable". This whole process is unnecessary! Allow choices to be made on all FLU vaccines, just as we have for decades. It's unconstitutional and against our civil rights to force an experimental vaccine that hasn't been properly tested in our kids or adults.

All this discussion, fear, and misuse of emergency power will create chaos, distrust, and massive un-enrollment in the public school systems of Washington State. Ultimately harming the public school system, the amount of staff they employ, disrupting our children's education, the quality of education, and community division! We and many others will unenroll or kids immediately if this is forced. We have enough reasons and problems in the world creating division already, we don't need our local school systems creating more! And remember that covid is a 99.9% SURVIVAL rate not a DEATH rate, more people die from the normal flu every year!

Regarding the vaccine mandate for children..

The statistics are NOT there to support mandating children to be immunized for COVID-19.

Children are a very low risk.

The vaccines are experimental and as a result are flawed. Do not place our children at a greater risk of vaccine side effects for a statistically low transmission among children.

To Whom it May Concern,

I am writing to you re: the Immunization Criteria for Child Care and School Entry agenda item. Covid shots should absolutely NOT be a requirement for our children to attend school or child care. Children are at an extremely low risk of disease and disease severity. The Covid shots have not received full FDA Approval and are only allowed at this time under the EUA (Emergency Use Authorization). There is no data regarding how these shots will impact our children in the long term. Even the FDA approval panel said so. It should be an option for a child to take the Covid shot NOT a requirement for our children in order to attend school or child care. I repeat, this should remain optional. Thank you for your time.

No on mandatory COVID vaccines for all
School age children. It is not worth the risk.

Children are at extremely low risk for Covid. The vaccines are still only EUA (emergency use authorization).

The vaccine does not stop the spread of Covid, it only reduces symptoms. People with reduces symptoms may be asymptomatic and if vaccinated can carry a viral load as high if not higher than non vaccinated individuals. These individuals can become super spreaders.

Trials were not performed on children and the recommendations are based on real time data coming out of other countries. There is no way of knowing what future damage this will cause.

VARES reporting tables and data shown below. There is more risk with vaccination for the health of our children verses them getting and recovering from Covid naturally.

Where there is risk there must be choice.

VARES data for vaccinated individuals:

Mayo/Pericarditis: vaccinated

Anaphylaxis: vaccinated

AGE CASES

05-11 3

12-29 147

Cardiac: vaccinated

AGE CASES

05-11 2

12-29 36

Death: vaccinated

AGE DIED

05-11 2

12-24 17

The fertility of our children is at risk. What kind of reproductive issues will be created?

VARES vaccinated reports:

Miscarriage 3,435

Menstrual Disorders 20,162

Vaginal/Uterine Haemorrhage (All Ages) 7,629

Testicular Pain/Swelling 1,370

Erectile Dysfunction 48

Please consider the health of our children.

Covid shots should not be mandated for children (or anyone). Simply put, ALL vaccines put stress on the body. Training the body to make the spike protein (via these covid vaccines) in hopes that the body will then amount an immune response to it, puts major stress on the body.

The body reacts to stress the same way, whether it be physical, chemical or emotional stress. Stress raises cortisol. When the body is stressed, and cortisol is raised the vagus nerve comes into play, which can turn on or off the digestion process. High stress puts the body into survival mode. When digestion is slow or turned off you won't make the proper amount of stomach acid or enzymes to break down food or any pathogen that enters as well. When food is not properly digested it can cause major damage/inflammation throughout the body.

Not only will the inflammation reek havoc on the body's tissues, there is a high chance that the body will not be able to fight off any infections (pathogens) that enter the body as well. Ask any nerve doctor (chiropractor) if this is true. Our kids are stressed out enough as it is. Mandating this vaccine will only do more harm to their fragile, and vulnerable little bodies. Not to mention make them MORE susceptible to other pathogens which can spread further and could possibly lead to death of the child or to others. Do NOT do this!

Thank you for providing the opportunity for public comments and inquiries regarding adding the Covid 19 vaccine to the regular schedule of vaccines for school aged children.

I have questions in several areas that I would like addressed

Safety

1. Has the DOH ever added a vaccine to the schedule that has been in use for under 6 months with no long term data?
2. Were any children harmed during the studies of these vaccines? Who is providing that data?
3. Who is tasked with investigating the record number of injuries and deaths reported in the VAERS system and factoring that into your work?
4. How do we justify mandating a novel vaccine with known increased risk of myocarditis, especially in young boys?

Risk for kids

1. Given the low risk of severe COVID 19 outcomes for kids (less than annual influenza), how does WA state DOH justify adding this novel vaccine to the schedule?

<https://data.cdc.gov/NCHS/Provisional-COVID-19-Deaths-by-Sex-and-Age/9bhg-hcku>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdata.cdc.gov%2FNCHS%2FProvisional-COVID-19-Deaths-by-Sex-and-Age%2F9bhg-hcku&data=04%7C01%7Cwsboh%40sboh.wa.gov%7Cb3871aedc8914292ed8708d9cfd73579%7C11d0e21>>

Effectiveness

1. Data now shows that current vaccines wane in efficacy to a great degree within 6 months. These vaccines do not seem to actually function like traditional vaccines that impart long time immunity and controlled transmission. Why are we considering mandating vaccines that are non-sterilizing?
2. Do we expect the definition of "fully vaccinated" will be routinely assessed to include additional boosters? How is this logical and appropriate with no long term studies, including no studies on mixing vaccines? Are boosters of older version vaccines even appropriate given new variants that evade older versions of vaccines?

Liability

1. Are there actually any approved and licensed Comirnaty Vaccines available in WA state? If not, then how can we mandate the EUA BioNtech vaccines which are legally distinct?
2. Who is liable for injuries from mandated vaccines? If injuries are caused by EUA vaccines instead of Comirnaty then who is liable? The school system? The medical providers of the vaccines? Parents of injured children?

This is a beginning list of questions that I would like addressed as you move forward with your investigation.

I have become more concerned in recent weeks as I have encountered these questions from other parents in my community. When my 9 year old son became eligible in recent weeks, I began investigating more. I'm looking for answers and am no longer convinced that all the information that is necessary to ensure the health and safety of my child is being considered.

I believe that we are rushing ahead with policies that will potentially have long lasting harms on our children. What unintended consequences are we setting our kids up for due to rushed policies? That's what I want to find out before creating more harm. I hope that you will, too.

Thank you for your attention to these concerns and your work on this important subject.

Please let me know that you received this email and provide a response.

Best regards,

Heidi Ochsner

Requiring a vaccine for children when covid is not a threat to children is ludicrous. If WA does this, our state will be unrecognizable. Parents will move out of state or pull their children from public school. It will take years and years to truly know the side effects for the covid vaccine. Children are not Guinea pigs and have their whole lives ahead of them. My child had covid, low fever for 2 days, loss of taste and smell and fatigue. The risk of side effects from the the shot are way higher than risk of my son dying or being hospitalized from covid.

Sincerely,
Amy Low

I would like to see Covid vaccine mandates in schools. It would be one more way to limit the spread of the virus and get us back to a sense of normalcy. I believe they have been proven safe and effective. Other vaccines are required for attendance; so Covid vaccine should too.

This is the most studied vaccine in history. Side effects, especially in children, have been very minimal. If we're going to get on the other side of this pandemic, we need as many people vaccinated as possible, including children. For now, the effects of this disease have been less for children, but that could change with future variants, so we need to give the virus fewer chances to spread and potentially mutate again. Also, children with minor or no symptoms can still pass on the disease to someone who might have more devastating outcomes. This vaccine mandate is the wise, scientific route to bringing the end of the pandemic closer.

Greetings,

I am for science, therefore I am for vaccines! Plain and simple.
It's the lack of education on the part of the individuals protesting the vaccine.
We need to address how to educate all those we have clearly missed and how to turn this back into a science issue.

Thank you for listening and please make vaccinations a mandate and make masks a mandatory requirement for entering public places.

I am in favor of updating vaccine requirements for children attending school, until this pandemic is better controlled, children should be vaccinated against Covid-19. Children are at risk of serious illness and we don't know the long term effects a natural Covid infection will pose to children or adults. Everyone needs protection

Dear State Board of Health,

I'm writing in response for your request for parent input regarding a requirement for children to receive the COVID-19 vaccine to attend school. This is a measure I support. Vaccinations have allowed us to keep schools running smoothly for many years. Requiring the vaccination for all students will allow schools to more effectively meet the needs of students and families in Washington. That said, it may be best to require the vaccine when it is fully authorized for children, rather than the emergency authorization currently in effect.

The school my children attend has had many staffing issues due to staff being out with their own children in quarantine. There have also been a lot of children missing school due to quarantine. I substitute teach at this school and others in District 81 and have seen the impacts of quarantine on staff and student morale, and feel this vaccination will help us alleviate this burden.

Thank you,
Summer Beers

attachments\B04F08A945574B2F_image001.png

External Email

Dear Honorable Members of the Washington State Board of Health,

I am writing as a pediatrician and medical educator to voice my strong support for requiring current COVID vaccination for children ages 5 -18 in our schools. My recommendations come from my experience and research as an expert in pediatric care and as a clinical educator with the Washington State University Elson S. Floyd College of Medicine. These recommendations are informed by the facts and talking points below:

- * Vaccination against COVID is safe and effective for children ages 5 – 18 and all ages of adults
- * Concerns regarding adverse effects of COVID vaccination, while relevant, are strongly mitigated by the higher risk of COVID disease for all ages
- * Vaccination of children ages 5 – 18 will help prevent COVID disease in our teachers, principals, counselors, and other school staff
- * Without more robust immunization rates in Washington state, the continued high incidence of COVID infections during the pandemic will continue to significantly disrupt students' school attendance and performance
- * Epidemiological studies support the lack of herd immunity without consistently high immunization rates

It is therefore my expert opinion that our state must move forward with this COVID vaccination requirement under Chapter 246-105 WAC.

Sincerely,

Charles Christian Anderson, MD, FAAP, CEPS-PC

Clinical Education Director for Pediatrics

Department of Medical Education & Clinical Sciences

Dear Washington State Board of Health:

I am writing you regarding the proposal to add the Covid-19 vaccine to the list of required vaccines for school age children. I will be giving my parental and professional input .

We need to utilize all available resources, including the Covid-19 vaccine, to combat this pandemic. Yes, for the overall public health, but also to help our schools stay in-person as new variants arise. We also need schools to stay in-person for the physical and mental wellbeing of all students.

In addition, if students are vaccinated then they will miss less school because they will be less likely to become as sick from the virus and they will not have to quarantine if exposed but have no symptoms. As the many studies have shown (see link below), attendance rates greatly impact a student's academic success. Not only for their current grade level, but for future grade levels as well. Students who are frequently absent in elementary and/or middle school are more likely to fail/drop out of high school.

Furthermore, students of color, English Language Learners, and students living in poverty are already more likely to have high absenteeism, thus more likely to drop out of high school. Adding absences due to Covid-19 only further exasperates the issue of chronic absenteeism and has a direct impact on the students' future opportunities and only perpetuates the circle of poverty.

Chronic Absenteeism in the Nation's Schools

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww2.ed.gov%2Fdatastory%2Fchronicabsenteeism.html>>

Students who are chronically absent—meaning they miss at least 15 days of school in a year—are at serious risk of falling behind in school. Yet, for too long, this crisis in our nation's public elementary and secondary schools has not been fully understood. Now, under the Every Student Succeeds Act, many states are reporting chronic absenteeism data annually. This data story, updated ...

As the mother of a child with immunity issues and asthma I believe Covid 19 vaccine should absolutely be mandated as part of the regular vaccines for our children. It will keep our kids safe! It's not pushing it on anyone. Parents have the choice to not vaccinate and keep their kids out of school.
It should not be a case of having to keep kids who are vaccinated out of school to stay safe and away from the unvaccinated.
We teach science; so let's stand behind it!
Please please make this a requirement

Requiring the Covid-19 vaccine in schools is only going to help WA mitigate the harm principle, preventing all these bullet points: • The state's obligation to protect the public's health and safety would be compromised. • An individual's decision could place others' health in jeopardy; • The state's economic interests could be threatened by the costs of care for vaccine preventable illness, related disability, or death, and by the cost of managing vaccine preventable disease outbreaks; • The state's duty to educate children could be compromised.

The vaccines are experimental and proven ineffective. We do not know what lasting effects will come as a result of this mRNA substance, but we do know that many young people have had very bad reactions and even died after taking the injection. Additionally, it is an indisputable fact that student aged children are not at risk for covid.

We can't let the Covid virus hold us hostage. We can't educate the public enough so they do the right thing. Yes mandatory Covid vaccinations is the only way out of this. I don't tell my kids its up to you if you want to do your chores or to do your homework.. etc. if I left it up to them nothing wouldn't get done. Don't ask... mandate. I've been held hostage by everyone that refuses to get vaccinated because they are the ones filling up our hospitals and making life impossible.

I live in Pullman, attend WSU as a PhD student, and am mother to an 11 year old child in the public school system. I believe, very strongly, that COVID-19 vaccines must be added to the vaccine requirements for public school students. The vaccines are safe and effective. It is unfortunate that this very real public health crisis has been politicized by Trump and his supporters.

Best,

Wyn Richards

To whom it may concern,

I would like to add my voice to the conversation regarding immunization requirements. I believe that adding COVID-19 vaccinations to the required list of vaccinations is absolutely necessary. We in the health care field are exhausted with caring for COVID patients. My ICU staff, doctors, nurses, nursing assistants have been showing up for two years now, and have given their hearts and souls to this pandemic. The effects of that will not be known for a very long time, however I can tell you how they look and feel today, and it is not good! They are tired and broken and need help in getting people to do the right thing. We need to take a stand in curbing this virus, just as we have done in the past with Polio, Measles, Chicken Pox and a multitude of other potentially deadly diseases. I cannot think of a single rational reason why this vaccine would be any less valuable or required than the others. Please, consider the overall well being of our communities and push to make this a required vaccine.

Thank you,

Heather Barfield, BSN, RN, NE-BC

9.

Do you have any special expertise relevant to this topic?

2. No

10.

Are you testifying on a specific proposal under consideration by the board?

1. Yes

Proposal to require COVID vaccination for children attending Washington schools.

11.

Are you Pro or Con on the proposal?

1. Pro

1. We already require multiple vaccinations against many diseases for children to attend school. We are living with a dangerous disease and it very much represents a threat to our children and families, but also to the larger society. We also have a vaccine. To NOT require the COVID vaccination for school age children is to not fully engage all resources to fight this pandemic. 2. Children need socialization the way we need food and water. We should not, on one hand, encourage school attendance if on the other hand we refuse to fully protect children, teachers, and staff. 3. When you go to battle you use everything in your arsenal to win the battle. We are at war with a deadly, and life-altering disease. To not require vaccination is to not fully utilize the weapons in your arsenal. If we believe COVID is as threatening as the measles, chicken pox, pertussis, mumps, rubella, and we know it is, we choose to mandate vaccination for schools.

2. No

11.

Are you Pro or Con on the proposal?

1. Pro

Mandatory covid vaccine for school children is critical. There are many other vaccines that are mandatory. If families do not want their child to get their vaccines, the said child has to stay home during an outbreak. This is well past an outbreak. This is a global health crisis. Of course, they should be vaccinated to attend public school.

Are you Pro or Con on the proposal?

1. Pro

I feel that the COVID 19 vaccine should be included as required in chapter 246-105 WAC due to the physical environment of our schools. Close proximity of children has always been a spreader of sickness. Now there is a sickness of particular concern of which the spread can be slowed. Though children don't seem to suffer the brunt of the physical

affects of the virus it seems likely that they do more than their respective share of spreading it. Furthermore I feel that philosophical and personal exemptions to this vaccine should be prohibited at public schools. I feel that private schools should be able to decide for themselves if these exemptions will be permitted, allowing that they make it known to all students and their families.

1. Yes

To require the COVID-19 vaccine for students in the Mead School District

11.

Are you Pro or Con on the proposal?

1. Pro

This proposal sets no new precedent. We have long had required vaccines (with some exclusions) against other preventable diseases, and though no vaccine is 100% effective, the COVID-19 vaccine's efficacy rate is on par with other required vaccines' efficacy rates. For example, the required MMR vaccine has an efficacy rate of between 93-97%, whereas the Pfizer vaccine is around 95%. The only real-world difference, in other words, between the two vaccines is the politicization of the COVID-19 vaccine, and to use politics to make health choices has always been and will always be a terrible idea. If we care about public health and want the best chance at returning to something resembling "normal life," we will do everything we reasonably can to squelch this virus. Requiring students to be vaccinated is reasonable.

My family 100% supports a covid-19 vaccine requirement in order for kids to attend public school. Washington state has always been a leader in public health in terms of vaccine requirements for children in school. This is necessary to protect and provide a quality education for kids that are legitimately medically unable to receive the vaccine. People who have refused to get vaccinated due to illegitimate religious exemptions(no major religions has forbid this vaccine, in fact most support it) and selfish actions due to misinformation have held the people of this state, the VAST majority, hostage long enough. If they don't want to protect their own children or society as a whole they should be the ones that have consequences such as not being able to attend in person class, not the families who have done the right thing and been vaccinated. I believe this vaccine should be required just like all other vaccines for public school ESPECIALLY if the mask mandates will be removed next school year. Stop letting the anti-science anti-vax loud MINORITY gas light and run the show. Please protect our children by requiring the vaccine and only allowing legitimate medical exemptions!

Thank you.

Subject: Support adding COVID-19 vaccine to school vax list

External Email

Hi,

My family, including my teenager, is fully vaccinated against COVID-19. I hope once the covid-19 vaccine is fully approved it will be added to the list of vaccines for school entry. I know there are legitimate concerns about some parents who are ill prepared to homeschool will choose that instead of complying, but it really is the least worst choice. Fall out of some kind is inevitable but we also don't know that it will stay a relatively mild disease for kids and if a new variant could emerge that would be much worse for them. Then they have no immunity. Resources should be used to address parental concerns but there should only be medical exemptions allowed that are actually vetted by an independent health official. (Really that should be the case for all vaccines and their exemptions.) Thanks, Julie Gorom

Covid-19 vaccinations should be voluntary NOT mandated.

11.

Are you Pro or Con on the proposal?

1. Pro

The covid-vaccine is NOT a preventative absolute measure for ensuring the spread of covid-19. I and my son along with a dozen more individuals got covid from individuals who had been fully vaccinated and had boosters. Therefore, the comment in Chapter 246-105 WAC; where it states that the covid-19 vaccine is a preventable disease measure; is in fact false and does not support the science to warrant a public mandate of an experimental stage vaccine on our children.

I am the founder of Vaccinate Washington and a CDC Immunization Champion. I have closely followed the science behind covid19 and covid19 vaccines. I've also closely followed immunization science and mandates for years. We know that vaccine mandates lead to an increase in immunization rates and a decrease in disease rates. We know that covid vaccines are incredibly safe. As a parent and a teacher and a vaccine advocate, I urge you to add covid vaccines to the required vaccine list for school and child care attendance. This will lead to lower covid19 death and hospitalization rates.

Thank you for following and espousing valid science and for keeping Washingtonians safe and healthy.

Subject: support adding COVID vaccine to 246-105WAC

External Email

Dear Sir or Madam:

We are writing to support adding covid vaccines to required vaccinations for children to attend school. We believe it's an important step to prevent transmission within our schools as well as unnecessary closures and absences.

Our children are immune compromised due to a genetic immune disorder, and don't respond normally to vaccines. They have received their covid vaccines, but it is unlikely that they responded to make protective antibodies due to their disorder. Our family relies on those around our children to be vaccinated in order to protect them. We have chosen to homeschool our middle schooler for the past 2 years because of the risk to him of covid. He will not be able to attend public school until covid vaccines are required for all students. It's simply too dangerous for him, which presents us with an unfair choice between homeschooling or risking his health. His brother attends a small private elementary school, which does require the covid vaccination and performs weekly testing. But we plan to homeschool him next year as well when he reaches middle school because without universal vaccination, it's just not safe to send them.

Please consider our position, and the impacts of vaccination policy on immune compromised students and their access to quality public education.

Thank you,
Dr. Stephen Farris

It is in my opinion that all students attending school in person should be fully vaccinated for the safety of all other students and staff. This is not only for the safety of the school but it will slow down the spread of the virus outside of school as well. Our children have a tendency to bring home viruses.

Subject: Public Comment Concerning Covid-19 Vaccination Requirement for Public Schools - Agenda Item #11, 1/7/22 Meeting

External Email

Esteemed Board Members,

My name is Justin Mullen and I have two children currently attending public schools in Washington State. My oldest child has received two doses of the Covid-19 vaccine, and both his mother and I have also received two doses. Our youngest child has not been vaccinated. I am also an educator with fourteen years of public school teaching experience. This e-mail is intended to share both my respect for the noble intent behind the possible addition of the Covid-19 vaccines to the list of requirements to attend public school as well as my deep reservations concerning the possible consequences for implementing such a change.

As we all know, vaccinations have played a crucial role in saving countless lives since they were first created. Their positive impact on humanity is both obvious and indisputable. The list of vaccine preventable diseases in WAC 246-105-030 each malady has historically impacted children in significant and profound ways. It is a tremendous blessing that kids today don't know what Polio is and don't typically have to be concerned about Measles or Whooping Cough. However, this is where my reservations concerning the Covid-19 vaccination begin. As we have been learning more about the virus, the vaccine, and how each of them interact over time, it has become clear from the data that the vaccine does not prevent people from catching Covid-19, nor does it prevent passing it onto others. Immediately, that places this vaccine in a different position than the other vaccines in WAC 246. Without the benefit of vaccine-provided herd immunity, the vaccinated child is not protected, and vulnerable students who cannot be vaccinated due to health conditions are also not protected.

The current best argument for vaccination is that it prevents the recipient from becoming more ill than they would have otherwise been without the vaccine. This is supported by the data in adults and it is being reinforced by additional information with this new Omicron variant. However, the number of children who have been admitted to hospitals due to Covid is so low that no reasonable informed claim can be made concerning the risk/benefit of a child receiving the vaccine with this variant. We simply do not have the data to back the claim that children need to be vaccinated. Even the trials conducted by the vaccine manufacturers saw so few children enter the hospital from both the control and vaccine group, that a conclusion is not clear on their efficacy. For a vaccine to be added to a list of those required for attending public school, I would want to see a lot more evidence that justifies it. The last thing we should want is to seriously undermine the success of previous vaccines if we act out of fear or a lack of information.

Even if there weren't the previously mentioned issues with the Covid-19 vaccine, in the lack of prevention of illness or transmission, this is not a typical vaccine. It uses a new process that does not employ dead virus in a manner that most people understand from learning about the first vaccine for Small Pox. This being a given, we do not know what the long-term impacts of this type of vaccine are on the human body over the course of

years because it hasn't existed long enough to find out. Even if we had 100% faith in it, with all of its known issues, we don't know what will happen in five years, ten, or a lifetime. There's an old saying about putting all of your eggs into one basket that may best explain my reservations concerning demanding that all of humanity take the vaccine.

Our children are the most important people in the world. Our decisions concerning what to feed them, how to raise them, how to educate them, and even what medications they're given are key to passing on knowledge, values, culture, and faith. Kids are so important that they deserve the most stringent and rigorous criticism of anything that the state might mandate. The benefits of required Covid vaccinations must be proven so clearly that there cannot be doubt, as we know that the vaccines do not come without risk of harm. If those who are proposing the addition of this vaccination to the WAC to attend school cannot demonstrate it without appealing to emotion, or panic, or fear, then it should not be included on the list of required vaccinations.

I will wrap up this E-mail with a final concern over the disproportionate impact on POC students of Washington Schools. As we saw with online learning in 2019 and 2020, measures implemented to limit the spread of Covid have had a profoundly inequitable impact on POC students. The achievement gap widened and many students were lost in convoluted online systems. It was a clear violation of their constitutional right to a high quality education. In Washington, and around the country, POC are more likely to be vaccine hesitant. This discrepancy will be intensified as many more parents look at the risk/reward of vaccinating children and choose not to take the jab. If the state wishes to recover from the 12+ year problem created with online learning, requiring Covid vaccinations will exacerbate the issue. The most valuable thing the state can give to students is a high quality education that will serve them for their entire lives. Anything that might take that away from those students must be of tremendous importance. Endemic covid does not meet this criteria.

I hope that you can take the time to consider what I have shared in this e-mail. I know that you have the best of intentions for my students and all the other students in Washington State. However, I cannot with good conscience vaccinate my youngest child. If the Covid-19 vaccine is added to the WAC246 to attend public schools in Washington State, I will un-enroll him and homeschool. I expect I won't be alone in this decision. Respectfully,

Justin Mullen
Washington State Parent

Please find attached a letter regarding the TAG and consideration of the Covid 19 shot for inclusion as a requirement for school entry. I am greatly opposed to this.

Washington State Board of Health – Technical Advisory Group
PO Box 47990
Olympia, WA 98507-7990
wsboh@sboh.wa.gov

Dear Washington State Board of Health Board - Technical Advisory Group Members:

I am writing this letter in strong opposition to adding Covid-19 to the list of state required immunizations for school entry.

It was just on October 29th that the Covid-19 vaccine, by a single manufacturer, received emergency use authorization only for the 5–11-year-old age group. The trials for this drug were minimal at best including approximately 3,000 children and lasting only two months. There is no FDA approved vaccine for children ages 5-11 and it could be argued that the “approved” vaccine for those 12 and older is not specifically approved either. Requiring a Covid-19 immunization for school entry would be catastrophic and tragic for school age children.

Children have not had significant issues with Covid-19. Typically their symptoms are mild, and they recover quickly. There is no significant mortality among these age groups. In fact, mortality is less than one percent. For the past two years, parents and schools have navigated Covid-19 and have been successful without a mandatory immunization. There are established protocols within schools to keep students with fevers, runny noses, etc. at home. These actions along with social distancing and cleaning procedures have proven successful. The CDC has concluded that asymptomatic cases are unlikely to contribute substantially to the spread of Covid. Those who are not sick cannot make others sick. There are many other things that pose a far greater risk to the health of children. The most recent strain – Omicron – has been found to be far less severe, with symptoms similar to the common cold – and could greatly increase natural immunity amongst all age groups, particularly in younger populations.

Part of the criteria you use in the review process is vaccine effectiveness, safety and an acceptable level of side effects.

- We continue to hear daily about the ineffectiveness of these vaccines, with efficacy diminishing after only months. Those who have had Covid-19 vaccinations are coming down with Covid-19, 100's of thousands of individuals.
- Safety is and should be a huge concern for you as decision makers as well as for parents. There are so many unknowns in vaccinating children for Covid-19. The trial was too small and the outcomes and effects on this age group very unknown. Information on Covid -19 vaccine impacts has been skewed and censored. Prior vaccines adhered to a very high threshold of safety, one that would have resulted in the Covid-19 vaccine being discontinued months ago if followed. The Swine Flu vaccine was withdrawn after 25 deaths were reported.

- There are many side effects with this vaccination and a lot of information still not known. The FDA has stated that myocarditis is a concern, particularly for young men. There are questions regarding its impact on fertility, hypertension and many other health issues. Research shows the risk to children is far less in having Covid-19 vs. receiving the immunization.

Disease Burden is another criterion used in your review.

- Covid-19, particularly among school aged children, does not have significant morbidity. The chance of death is less than one percent.
- Because of the many break-through cases amongst the vaccinated, vaccination is not a key factor in reducing person to person transmission. As stated earlier, protocols around health monitoring, extra cleaning and distancing have proven effective in reducing transmission.

Implementation is also considered.

- The Covid-19 vaccine is acceptable to some in the medical community and the public, but definitely not to all.
- Mandating this for school age children will place a huge burden on parents as it will force them to have to make very difficult decisions about the health of their children and an education for those children. Just as adults have been forced out of their jobs for making a personal decision regarding taking the vaccine, requiring a Covid-19 vaccination for children at school will force kids out of school. Consider the devastating impacts of a year plus of on-line school on students. Suicide is already the 2nd leading cause of death in those ages 10-18. If your decision is based on what is best for children, it will be against any forced requirement for the Covid-19 vaccine.

Education is a great equalizer and a right for all children. A decision to require a Covid-19 immunization for school entry will be catastrophic and, in my opinion, both inhumane and unethical. I implore you to not include the Covid-19 vaccine among those required for school attendance.

I implore you as a Father and Grandfather of WA state children to REJECT this proposal.

There is absolutely NO peer reviewed SCIENCE that supports child vaccination. Additionally, NO long term study exists to show what the effect of the MRNA – gene altering therapy will do such as myocarditis.

Please do not be rubes of Big Pharma that is pushing this view point.

I urge you to complete actually follow science and research that includes differing points of view from medical practitioners such as Dr Peter McCullough.

Subject: Public Comment - mandatory injections for children

External Email

To Washington State Board of Health:

We urge you to say "No" to mandated covid injections for children. Children at at such a low risk for Covid-19 - virtually 0% and there are some known risks for the Covid injections as more information is coming out. There are more cases now of juvenile myocarditis and other adverse events associated with the injection. From an accounting perspective, one would never take the odds when you're at a higher risk of adverse reactions the injection than from the virus itself. In addition, since the injection is under Emergency Use Authorization, it should never be mandated under that status.

Please say "No" to mandatory injections - especially for children. We need to protect our kids, not make them the part of the experiment.

Sincerely,

Deborah Leyde

Would it not be prudent to determine that a certain vaccine is safe and effective before forcing its use? This article; Critics Outraged by FDA Request to Hide Pfizer Vaccine Data for 55 Years

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.msn.com%2Fen-us%2Fnews%2Fus%2Fcritics-outraged-by-fda-request-to-hide-pfizer-vaccine-data-for-55-years%2Far-AAQUufd&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C99662bf8614c4e06ab7008d9cb026051%7C11d>

may indicate there is reason to proceed with caution. The attached document (On COVID vaccines: why they cannot work, and irrefutable evidence of their causative role in deaths after vaccination; Sucharit Bhakdi, MD and Arne Burkhardt, MD) brings even more questions.

Concerned Citizen

On COVID vaccines: why they cannot work, and irrefutable evidence of their causative role in deaths after vaccination

Sucharit Bhakdi, MD and Arne Burkhardt, MD

This text is a written summary of Dr. Bhakdi's and Dr. Burkhardt's presentations at the Doctors for COVID Ethics symposium that was live-streamed by [UKColumn](#) on December 10th, 2021. The two presentations can be viewed at the very beginning of [the video recording](#) of the symposium.

The authors

Dr. Bhakdi has spent his life practicing, teaching and researching medical microbiology and infectious diseases. He chaired the Institute of Medical Microbiology and Hygiene at the Johannes Gutenberg University of Mainz, Germany, from 1990 until his retirement in 2012. He has published over 300 research articles in the fields of immunology, bacteriology, virology and parasitology, and served from 1990 to 2012 as Editor-in-Chief of Medical Microbiology and Immunology, one of the first scientific journals of this field that was founded by Robert Koch in 1887.

Dr. Arne Burkhardt is a pathologist who has taught at the Universities of Hamburg, Berne and Tübingen. He was invited for visiting professorships/study visits in Japan (Nihon University), the United States (Brookhaven National Institute), Korea, Sweden, Malaysia and Turkey. He headed the Institute of Pathology in Reutlingen for 18 years. Subsequently, he worked as an independent practicing pathologist with consulting contracts with laboratories in the US. Burkhardt has published more than 150 scientific articles in German and international scientific journals as well as contributions to handbooks in German, English and Japanese. Over many years he has audited and certified institutes of pathology in Germany.

The evidence

We herewith present scientific evidence that calls for an immediate stop of the use of gene-based COVID-19 vaccines. We first lay out why the agents cannot protect against viral infection. While no positive effects can be expected, we show that the vaccines can trigger self-destructive processes that lead to debilitating illness and death.

Why the vaccines cannot protect against infection

A fundamental mistake underlying the development of the COVID-19 vaccines was to neglect the functional distinction between the two major categories of antibodies which the body produces in order to protect itself from pathogenic microbes.

The first category (secretory IgA) is produced by immune cells (lymphocytes) which are located directly underneath the mucous membranes that line the respiratory and intestinal tract. The antibodies produced by these lymphocytes are secreted through and to the surface of the mucous membranes.

These antibodies are thus on site to meet air-borne viruses, and they may be able to prevent viral binding and infection of the cells.

The second category of antibodies (IgG and circulating IgA) occur in the bloodstream. These antibodies protect the internal organs of the body from infectious agents that try to spread via the bloodstream.

Vaccines that are injected into the muscle – i.e., the interior of the body – will only induce IgG and circulating IgA, not secretory IgA. Such antibodies cannot and will not effectively protect the mucous membranes from infection by SARS-CoV-2. Thus, the currently observed “breakthrough infections” among vaccinated individuals merely confirm the fundamental design flaws of the vaccines. Measurements of antibodies in the blood can never yield any information on the true status of immunity against infection of the respiratory tract.

The inability of vaccine-induced antibodies to prevent coronavirus infections has been reported in recent scientific publications.

The vaccines can trigger self-destruction

A natural infection with SARS-CoV-2 (coronavirus) will in most individuals remain localized to the respiratory tract. In contrast, the vaccines cause cells deep inside our body to express the viral spike protein, which they were never meant to do by nature. Any cell which expresses this foreign antigen will come under attack by the immune system, which will involve both IgG antibodies and cytotoxic T-lymphocytes. This may occur in any organ. We are seeing now that the heart is affected in many young people, leading to myocarditis or even sudden cardiac arrest and death. How and why such tragedies might causally be linked to vaccination has remained a matter of conjecture because scientific evidence has been lacking. This situation has now been rectified.

Histopathologic studies: the patients

Histopathologic analyses have been performed on the organs of 15 persons who died after vaccination. The age, gender, vaccination record, and time of death after injection of each patient are listed in the table on the next page. The following points are of utmost importance:

- Prior to death, only 4 of the 15 patients had been treated in the ICU for more than 2 days. The majority were never hospitalized and died at home (5), on the street (1), at work (1), in the car (1), or in home-care facilities (1). Therefore, in most cases, therapeutic intervention is unlikely to have significantly influenced the post-mortem findings.
- Not a single death was brought into any possible association with the vaccination by the coroner or the public prosecutor; this association was only established by our autopsy findings.
- The initially performed conventional post-mortems also uncovered no obvious hints to a possible role of vaccination, since the macroscopic appearance of the organs was overall unremarkable. In most cases, “rhythmicogenic heart failure” was postulated as the cause of death.

But our subsequent histopathological analyses then brought about a complete turnaround. A summary of the fundamental findings follows.

Case #	Gender	Age (years)	Vaccine (injections)	Time of death after last injection
1	female	82	Moderna (1. and 2.)	37 days
2	male	72	Pfizer (1.)	31 days
3	female	95	Moderna (1. and 2.)	68 days
4	female	73	Pfizer (1.)	unknown
5	male	54	Janssen (1.)	65 days
6	female	55	Pfizer (1. and 2.)	11 days
7	male	56	Pfizer (1. and 2.)	8 days
8	male	80	Pfizer (1. and 2.)	37 days
9	female	89	Unknown (1. and 2.)	6 months
10	female	81	Unknown (1. and 2.)	unknown
11	male	64	AstraZeneca (1. and 2.)	7 days
12	female	71	Pfizer (1. and 2.)	20 days
13	male	28	AstraZeneca (1.), Pfizer (2.)	4 weeks
14	male	78	Pfizer (1. and 2.)	65 days
15	female	60	Pfizer (1.)	23 days

Histopathologic studies: findings

Histopathologic findings of a similar nature were detected in organs of 14 of the 15 deceased. Most frequently afflicted were the heart (14 of 15 cases) and the lung (13 of 15 cases). Pathologic alterations were furthermore observed in the liver (2 cases), thyroid gland (Hashimoto's thyroiditis, 2 cases), salivary glands (Sjögren's Syndrome; 2 cases) and brain (2 cases).

A number of salient aspects dominated in all affected tissues of all cases:

1. inflammatory events in small blood vessels (endothelitis), characterized by an abundance of T-lymphocytes and sequestered, dead endothelial cells within the vessel lumen;

2. the extensive perivascular accumulation of T-lymphocytes;
3. a massive lymphocytic infiltration of surrounding non-lymphatic organs or tissue with T-lymphocytes.

Lymphocytic infiltration occasionally occurred in combination with intense lymphocytic activation and follicle formation. Where these were present, they were usually accompanied by tissue destruction.

This combination of multifocal, T-lymphocyte-dominated pathology that clearly reflects the process of immunological self-attack is without precedent. Because vaccination was the single common denominator between all cases, there can be no doubt that it was the trigger of self-destruction in these deceased individuals.

Conclusion

Histopathologic analysis show clear evidence of vaccine-induced autoimmune-like pathology in multiple organs. That myriad adverse events deriving from such auto-attack processes must be expected to very frequently occur in all individuals, particularly following booster injections, is self-evident.

Beyond any doubt, injection of gene-based COVID-19 vaccines places lives under threat of illness and death. We note that both mRNA and vector-based vaccines are represented among these cases, as are all four major manufacturers.

Subject: In Kind regards to your meeting of 1/14/22, Recommend Covid shot for Children

attachments\795BCA16CEE545D6_Handwritten_2022-01-03_143641.pdf

External Email

Thank you for your consideration to read my important words on your upcoming meeting to recommend the Covid shot for Children.

We as a society rely heavily on our parental instincts, the aid of our pediatricians, the advice of our family and friends to guide us in raising healthy children. We have now come to an age, just as in 1971 when our country left the Gold Standard and created inflation with fiat currency in order to control our society and make way for classism that Sars-Covid-19 will create with vaccinations of the mRNA classes. I appreciate science and what it has done for the health of our community. We in our family, follow the school district and state recommendations of vaccinations in order for our children to enter public school, but with the control you think you are going to have over this next group of up and coming tax paying citizens it will be unforgiving.

Not one official can tell me what the Covid-19 vaccination will or how it will affect my daughter in her possible fertile years. BUT - you will say, because you've been taught to say that 'nothing will happen.' You will tell me that the vaccination is safe for my 2 year old son, but if he were to develop a heart condition, one of which we have no family history of, the Pharma companies cannot be held liable for the side effects. You are part of the Mass Formation Psychosis, welcome aboard.

When will you stop and let nature take its course? We have seen through science and medicine that the Covid-19 virus has mutated into a more contagious BUT LESS SEVERE virus. Which is more important to you, the more contagious part or the less severe part?

Our household will not be getting the Covid-19 shot, until there are years of data behind it and that the pharma companies be held liable for major health side effects. We have no issues removing our child from public government schooling and teaching them on our own, giving them global learning. If you were to implement this vaccine as a requirement, as a 'law,' for children to remain in school you will lose many students. Yes, the public schools will still get their share of property taxes, but for each child that un-enrolls in school, that district can lose up to \$14,000 in value for that child (

<https://schoolchoiceweek.com/guide-school-choice-washington/>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fschoochoiceweek.com%2Fguide-school-choice-washington%2F&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C51e8ce3dba3c4549137d08d9cf0a845e%>).

You are teaching children they have no rights over their own body, you are not good leaders if you vote for this to pass. You are showing our communities that body autonomy is soon to be a thing of the past.

I have attached for you, in my own handwriting the years in which I was born and my

children. It shows when the required vaccines were FDA approved (you can do your own google search to verify) and how long the vaccine was out, before we got whatever shot is on the list. The closest shot that I received to FDA approval was 8 years. That is about my comfort level from testing to final usage, not like Covid-19 vaccine, which had final approval just in August of 2021.

Sincerely,

Michele Pearson

Your life is an occasion. Rise to it.

Subject: Re: Revise mask mandates for children schools

External Email

Educators,

DOH is useless and has been since the start of this plandemic. Still trying to control a virus that is still out of control. They hopefully realize this fact.

Now, after the turn of the new year, would like to get updated guidance as to the unconstitutional/forced masking policies that you are trying to enforce. Stop this nonsense. I'll ask the simple question once again to hopefully get some answers.

- What is Washington's plan/goal as to when masks can be recommended/optional for children while at school? (Currently, mask up until we say so...)

Is anyone going to respond to my queries? Now with omicron/xi, the studies are now pointing to the uselessness of cloth masks. WSJ LINK

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.wsj.com%2Farticles%2Fcloth-face-mask-omicron-11640984082&data=04%7C01%7CWSBOH%40sboh.wa.gov%7C93450f04464548ce66c108d9cf278a07%7>>

One more item to bring back up as you clearly haven't understood it the first time:

"If masks, mandates & lockdowns work, why aren't they working?"

Clearly you all have some deprogramming that needs to be done. Hope for some answers this year...

Currently preparing on moving our family out of state. I hope you finally get the message as more people leave this 'power-hungry' dem-led state.

Happy New Year to more restrictions! Hmm, maybe you should bring schools back to online-only. Still, no plans...

Josh Daugherty

DO NOT COMPLY.

On Dec 13, 2021, at 6:13 AM, Joshua Daugherty
<joshua.daugherty.wa@gmail.com <mailto:joshua.daugherty.wa@gmail.com> > wrote:

Week 15, then already Winter/Christmas break,

Still no constructive, healthy dialogue on this question.

- What is Washington's plan/goal as to when masks can be recommended/optional for children while at school? (Currently, mask up until we say so...)

As all addressed on this continue to be complicit with 'policy', I propose in 2022, new year, new rules. Masks = Recommended for all, not mandated. I will not comply with your demands. At least begin a phased approach to mirror the restaurant half-assed policy of wearing masks walking around in the restaurant, but then when you sit down, you may take them off. Our children deserve better. Please share your thoughts on this, as you clearly do not have any other ideas. Since the beginning of the school year, you've been shrugging my concerns off or ignoring this altogether. Great job, now I'm starting to adopt some of these ideas, to ignore/disregard any & all communication coming down concerning force masking, vaccinations, etc.

You do not have control over what I do, what I wear, how I live. Our children wear the minimal 'protection' to abide by mandates only to 'not get in trouble'. They can also see that this is all theater and wearing masks for 'show' under the guise of 'keeping everyone safe'. My underlying question all along has been, who is 'dangerous'? Certainly not our children as they have a larger chance of dying from the flu or common cold than covid. Covid is weak when it comes to them. Stop with this nonsense.

If WA DOH were TRULY trying to keep everyone 'safe' against a virus that only negatively impacts a very small portion of the public, they've been doing a BAD job at that. According to the DOH website, and due to the fact that 9,554 individuals have lost their lives to this. A whopping 1.2% of the WA population. A large majority of those are in the at risk age group and those that have had multiple health issues already. You've been failing since the beginning, and every death (including those hidden from view attributed to depression/suicide) is on you.

<PastedGraphic-2.tiff>

What I am finding even more surprising, the fact that you are pressing forward with 5-11 year old vaccinations and I highly doubt that many children in the state are medically 'at-risk' for this emergency use authorization. Shame on you all.

<PastedGraphic-3.tiff>

Additional facts to consider:

- 1) We've had viral illnesses for every single year of human history.
 - 2) Covid has ~same fatality rate as a flu.
 - 3) We've managed to live like normal humans until 2020.
- Why are we still obsessed with covid?

Have a wonderful week and a happy holiday season,

Josh Daugherty

On Dec 7, 2021, at 6:41 AM, Joshua Daugherty
<joshua.daugherty.wa@gmail.com <mailto:joshua.daugherty.wa@gmail.com> > wrote:

To whom this may concern,

Is it already week 14? How can this be where the WA DOH only has the plan to see force masking our children until they say so? I believe this will fall on deaf ears as many of you are still complicit with this madness, but I will not comply.

All I'm requesting is to change from 'mandate' to 'recommended'. That would allow parents to make up their own minds as to mask their children or not. I can already expect that when masking eventually ends, common cold & flu cases will go up as masks prevent us from building our immunity to anything.

I will ask again:

- What is Washington's plan/goal as to when masks can be recommended/optional for children while at school?

Let the children breathe. If parents are still scared for the .000007% chance that their child may be adversely affected by this virus, they can add masks if they choose. This needs to be a choice. I see that the DOH hasn't updated their page since 29 November 2021 which shows me they still have no plan. Or have you realized that you are probably getting to the end of mass vaccines? The rest of WA will not do what you tell them. Give up. Will not get to 100% vaccinated, but that still isn't the plan, right?

I would like to also point out a quick observation that Ohio Rep Jim Jordan had mentioned recently:

Summary: If masks, mandates & lockdowns work, why aren't they working?

The 'health' community has been wrong at almost every step of the way since the beginning. Their plan seems to be: 'lets try this...what about this...next we should try this...'

Quite the 'science', hmmm. If you don't have a plan, just say it. Still advocating for my previous comment, begin with a phased approach like in restaurants. Our students can remove their masks while seated. What is so wrong about this?

I am still looking forward to our comments & replies with answers. Not more of the political jargon...it doesn't work anymore.

Awaiting solutions & dialogue,

Josh Daugherty

Surprise! I have received a response from last week's request from the DOH Information email. Still no answers (not a true surprise). I look forward to the weekly, one-way communication with all involved. No one seems to be doing anything to assist in this. I hold all accountable for this non-action.

Please see below for the thread from today preceded by my latest response.:

DOH Information,

This question was asked over a week ago and just now you are getting back to me. Bottom line: My question still isn't answered. You really need to update your sources as that CDC links were updated as of November 2020 & May 2021. That is between 6 months and a year ago!

- What is Washington's plan/goal as to when masks can be recommended/optional for children while at school?

According to the WA DOH, covid doesn't spread in restaurants while diners have meals, that can take off their masks then, why not our children while seated? I have no issues with parents who wish to have their child masked all day, just do not force it on all of our children. Statistically speaking, our children have more of a risk of adverse problems with the flu and the common cold than they do against covid. No one mentioned prior to 2019/2020 wearing masks for any flu seasons. Odds are the common cold & flu cases will spike once our kids remove their masks as they all have been weakening their immune systems with this forced masking.

As of yesterday, the WA DOH covid page shows vaccination stats. I am asking the WA DOH to come up with a % as to how many people need to get vaccinated against this useless virus that only hurts the weakest in the population (immunocompromised). I guarantee that we will not get to 100%, probably never 90% but how long do we need to continue this nonsense? What is the plan? I will say this again: IF YOU FAIL TO PLAN, THE YOU PLAN TO FAIL.

<PastedGraphic-1.png>

I look forward to your reply with answers and or a plan. Maybe begin a 'phased approach' that was tried to reopen after the government shut all the small businesses at the beginning. Quite the asinine approach at that but we at least tried that.

REQUEST

RESPONSE FROM DOH PA THIS MORNING TO MY 23 NOVEMBER

Hello,

Thank you for contacting the Department of Health.

DOH disease experts continue to monitor COVID-19 infection, hospitalization, death rates and health system capacity closely. While disease rates are declining, they remain high and hospital occupancy is still over 90 percent. We feel cautiously optimistic now that kids age 5 and older are eligible for the vaccine; however, the majority of children are still not vaccinated. We need to continue to do everything we can to prevent the spread of COVID-19, especially in light of the highly contagious Delta variant. As we head into winter and the holiday season, when the number of social get-togethers and indoor gatherings increase, a combination of masks and vaccines remain the best tools we have available to ensure that kids stay healthy and businesses and schools stay open.

You may view the studies below about the reduction in virus transmission and mask use:

Contacts,

Here we are at week 13, still no plan for children, the
HEALTHIEST of us all, to have masks optional in school.

I will try to ask the question again, expecting someone to
give any answers to the question:

- What is Washington's plan as to when masks can be
recommended/optional for children while at school?

"Until we say so..." isn't science. Show me the proof that kids
are dropping like flies while at school. I will restate my previous comment, our kids are
much healthier and can fight off any common cold & flu (read covid) much quicker than
any of us. Why is the state still providing the useless nonsense direction as to 'keep
everyone safe' and 'keep masking up until we say so'.

If you are awaiting 100% covid vaccinations, even for VAST
majority of children that do NOT need it, we will not reach that goal. But it seems like the
DOH still doesn't have a plan...

Not to mention, no one is keeping the conversation open
except for parents, so everyone else in this chain is being complicit with these mandates.

I believe I've said it before, but this sounds a lot like when I
was growing up, if someone told you to jump off a bridge, many of you would. Sorry to
disappoint but I think for myself and will not jump.

Still frustrated and I will talk to you again next week!
Parental choice should be part of this conversation. If masks work, then let those that
continue to wear them, and be afraid of this virus continue. I will not comply.

Washington State Board of Health,

12 weeks and still no answers from anyone as to what the plan is concerning the forced masking of our children at school. Here is the question, should be simple and to the point:

- What is Washington's plan/goal as to when masks can be recommended/optional for children while at school?

Wear masks until we say so... isn't rooted in any science that I know of. Our children already have a much lower chance of health issues even if they contract Covid. I will reiterate my previous request: "mirror the restaurant policy" so that when our children are seated at their desk in the classroom, they may take off their masks. If some children still feel scared to take their masks off, they may keep them on. This should still be about choice of the parents/students. With these false-rooted mandates, they aren't allowing us freedom of choice.

I look forward to your comments/dialogue concerning this topic. If you will not help, then step aside as your inaction shows just how deeply you care about the health of my children.

Josh Daugherty

Just in case you missed it, here's some educational reading when it comes to our children.

Washington State Board of Health,

Still awaiting an answer to my queries below. Here we are, 11 weeks into the school year and it's still the same: "do it until we say so...". If you fail to PLAN, you plan to FAIL. I see a lot of failing by those in all positions of 'office'.

I've been contacting the WA DOH without answers every week, including Cc'ing our non-action school district, principals etc. No one will

assist with speaking to anyone that may have any indication as to how long should we expect to force-mask our children at school. This virus is NOT a threat to our children, as it is comparable to the flu or the common cold. They are healthy.

Would like to at least begin some conversation with relaxing these 'mandates' to at least mirror restaurants in the area. If the children are seated, they should be able to remove these face diapers. Not to mention, cloth masks don't do anything for Covid particles. This continues to show this is all for 'show'. I will not participate.

If parents still wish to mask their child, feel free to.
They should have the choice.

Still a frustrated parent,

Josh Daugherty

If you would like further information, please look at the following website. I am also open to conversation.

Subject: Revise mask mandates for children schools

☐ WBoard of Health,

To date, I have been requesting updates for the
forced masking in schools:

10 weeks, still nothing from the state...

How much longer to force mask our children? We should have a choice on whether to mask or not.

I just want to know what the goal is of the force masking! "Until we say so..." isn't ANYTHING near common sense or science.

Don't you dare start with the force vaccinations for our children when only about .000003% may even need it.

Answers requested as to what the education plan is. I will continue to request weekly updates until a plan shows an end in sight. Just because "we said so" isn't right.

Maybe as a start. We could mirror the restaurant policy where if you are seated, you may take off your mask. I understand keeping children safe, but they are not in danger. If children want to continue to mask up, please have them continue. If children do not want to wear a mask, they shouldn't need to.

Where is the proof that children are all infected?

Irritated parent,
Joshua Daugherty

Week 9,

Still nothing. Exactly what I expect from this school district and even nothing from the DOH. My concern/question is:

How long do our kids need to be masked in school?
What is the end goal?

So far WA DOH is basically saying to wear them until they say so. So WRONG!

As of today in WA, 78.6% 12+ has one dose and
72.5% fully vaccinated.

85.6% in King County.

I've been requesting information from the schools,
district and the DOH with no answers. How does anyone think this is the 'correct' way?

Going back to when I was young, if someone told you
to jump off a bridge, would you? Too many people are just following the 'guidance'
whether it makes sense or not, without question.

Just asking for the choice. Our kids should have a
choice. Currently they are being taught that everyone is infected. If you want to still
mask up, feel free to.

Don't you dare agree with vaccine mandates!

This is now my 9th week of requesting answers.
Unbelievable poor management at all levels. Will continue until I receive dialogue.

<joshua.daugherty.WA@gmail.com <mailto:joshua.daugherty.WA@gmail.com> > wrote:

☐ Still waiting any information from the WA DOH.
Nothing yet and we are only 8 weeks into this. I know that many of you don't care about
the safety of my child, as you just follow the same guidance pushed from 'above',
without questions. This is WRONG.

From today to the WA DOH:

Another week, more nonsense. I have been
requesting follow-ups to my questions and nothing has been done. Every week I am
asking the same, MAIN question.

- What is WA state's end goal when it comes to
children's force masking policies?

If there is no plan, then you plan to fail. This has been
the case since the 'pandemic' began. The science doesn't back the policy of 'wear a mask
until we say so...' I need additional information as this is WRONG and many know it. I
would like to have a constructive dialogue with someone that can say when our children
can opt into masks or not at school. Again, if parents choose to mask their kids, it is their
choice. Please let me know what the plan is beyond, 'wear them until we say so.'

Still no answers,
Josh Daugherty

Week 7,

Starting out 'right'? How does this make any sense?
Please show me which part makes any sense at all.

It's a good thing that my daughters aren't playing sports. Kids now need to be given the vaccine, or test every 2 weeks. Studies even show that even with the vaccine, they can still spread covid/common cold... Are you going to be ensuring that they are wearing masks while participating too? Or is that just while sitting, spectating?

This must be more of that 'science' stuff. Just regurgitating the nonsense that the DOH puts out.

<Another useless mandate.png>

Have there been any further guidance or discussions concerning the forced-masking mandates to become 'recommended'? Still awaiting anyone to respond back to me from the WA DOH. Anything besides wear it until we say stop?

Still awaiting answers,

Josh Daugherty

<joshua.daugherty.wa@gmail.com <mailto:joshua.daugherty.wa@gmail.com> > wrote:

Week 6,

Still trying to find out the following:

- How long do our children need to be force masked?
What is the end goal to go back to breathing fresh air?

Freedom, this is still America. If you want to stay masked, fine. Do not force it on us. Under the guise of 'public safety', keep wearing masks to 'protect everyone'. That infers that my kids are dangerous! DOH WA needs to let us know the plan, we must demand that from them, 'until we say so' is NOT science.

Oh, and mandate doesn't equal law.

So glad I'm actively teaching my children & family CRITICAL THINKING. Something that the Gov, DOH, School districts, etc have no idea what it is. Just mandate compliance. Basically continuing a 'shut up and color' attitude. We know who is at fault. Just because it's 'popular', doesn't mean that it's right. If this continues to go on for an extended period of time, expect more pushback.

Just asking to give us the choice. Why is this so hard for you to comprehend? Maybe we start dictating what you need to wear and how you need to act.

Such a relevant article to this:
<https://notthebee.com/article/covid-theater-a-personal-tale-about-the-gaslighting-of-a-nation-and-its-schoolchildren>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fnotthebee.com%2Farticle%2Fcovid-theater-a-personal-tale-about-the-gaslighting-of-a-nation-and-its-schoolchildren&data=04%7C01%7CWsBOH%40sboh.wa.gov%7C93450f04464548ce66c108d9cf278a07%7>>

Looking forward to continued dialogue as to the end of these unconstitutional mandates.

Still frustrated,
Josh Daugherty

Awaiting DOH responses too.

□

Week 4,

Fourth request for information:

When is the mask mandate for schools going to end? I've requested info from DOH as they need to answer to my requests. They have not and I will continue to request weekly from the DOH and the district on down to our schools. They do not stop the virus from being passed. It is just for show/theater. Otherwise the wording in the 'order' wouldn't be 'anything'.

"A cloth face covering is anything that completely covers the mouth and nose and fits securely on the sides of the face and under the chin."

It may have plenty of holes throughout the mask. This further proves that DOH doesn't care about the transmission of the virus. Just to mandate the "do it or else".

Enough of this nonsense. I'm just trying to communicate with someone other than just a 'Customer Service Specialist' that is just passing junk back. Awaiting the constructive dialogue.

Continuing on my requests for common sense and/or parent choice for masks in schools. Mandates are just asking for push back. I will continue to push back.

<joshua.daugherty.WA@gmail.com <mailto:joshua.daugherty.WA@gmail.com> > wrote:

□ WeeR,

Finally received an email back from WA DOH with more of the same, no answers to my questions. My main question will continue until I receive answers instead of just a 'Customer Service Specialist' responding to my web query with a loosely prepared, blanket statement, that mentions 'keeping the CDC recommendations as of August 5, 2021'.

My question seems to be simple, straightforward and to the point.

- What is Washington's plan/goal concerning the mask mandates for school-age children? There needs to be a plan besides 'wear the mask because I said so'. (aka mandate)

If they were going with the CDC recommendations, forced masking wouldn't be in our schools.

I am requesting that they at least update the guidance to 'recommended' as the current failed 'plans' make zero sense. There is NO scientific data that has been collected to warrant this abuse across the board. Especially state-wide. As of 13 September, posted on the WA DOH website it shows that 75.1% of residents have at least one dose and 68.1% are FULLY vaccinated against COVID. Of that, King County has vaccination rates of 77.7% (12+). Auburn School District is in King County.

<PastedGraphic-1.png>

The hospitalization rate for those that are school-age is so minuscule, the data you have been collecting doesn't make sense to continue with the mask mandates. How much longer do we need to live under this authoritarian 'leadership' (aka mismanagement) of state resources? I will add to this as we have already received communication from the schools that COVID/common cold/sniffles/flu has popped up in school.

Looking at anyone that I've communicated with concerning this. Fail to plan, plan to fail... Seems spot-on for this situation that we are in!

<https://www.unmaskourkidswa.com>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.unmaskourkidswa.com%2F8>

All I am asking is that we give parents the CHOICE whether to mask/unmask our children.

Looking forward to future constructive dialogue,
Josh Daugherty

<joshua.daugherty.wa@gmail.com <mailto:joshua.daugherty.wa@gmail.com> > wrote:

Week 2 of the insanity continues,

I have been trying to communicate with the WA DOH, and I am still awaiting their responses and/or dialogue of any kind showing this fake-science behind their blind mandates.

This is no longer about the safety of students and staff members. Masks are turning out to become a direct contributor of learning issues, social interaction struggles, increased headaches, anxiety & overall discomforts. As a parent, I am still disturbed to see our children treated this way. Totally unnecessary.

Please assist in communication with the WA DOH in changing this to 'recommended', not mandated for all. I will not comply if I visit the schools or the district.

Still a concerned parent,
Josh Daugherty

On Sep 8, 2021, at 8:23 PM, Joshua Daugherty
<joshua.daugherty.wa@gmail.com <mailto:joshua.daugherty.wa@gmail.com> > wrote:

That is what I have been doing and they continually give me the run around with 'that is the way it is.' Not acceptable, hence the 'because I said so' attitude. Is there nothing that the Districts can assist with?

I have reached out to them, and will continue to do so until something is modified, or at least a goal set for when we can return to normal. Actual normal, without face masks on our kids if we, as parents choose. We have had it with these non-science mandates and will continually be pushing back against them.

So glad to hear that the crooked DOH & schools have finally wised up and allowed our kids to play outside, WITHOUT masks. So idiotic from last year while being in-person that they needed masks outside at recess.

Still concerned,
Josh Daugherty

To whom it may concern,

I am a concerned parent and citizen of Washington state and I am strongly requesting the covid "vaccine" not be added to the list of required immunizations for school attendance. There is increasing concern that the current covid shots offered are dangerous and ineffective. VAERS, as of December 17, 2021 lists 987,756 reports of adverse side effects; 20,622 deaths, 108,572 hospitalizations, 107,860 Urgent care visits, 153,971 doctor visits, 8,590 anaphylaxis events, 12,317 Bells palsy, 3,365 Miscarriages, 10,429 Heart Attacks, 20,560, myocarditis/Pericarditis, 34,615 permanently disabled, 4,907 thrombocytopenia/low Platelet, 23,405 life threatening, 35,997 severe allergic reactions, 11,292 Shingles, and that is just what has been reported. Under-reporting of adverse events is an on-going issue.

Dr. Jane Ruby has an excellent resume, and in the attachment I am sending with this email, she lays out how the current covid shots are potentially extremely dangerous and ineffective. Current covid shots offered are experimental gene therapies under EUA. Cominarty is the only currently approved covid shot, and it is currently not offered in the US. Clinical trials were not run appropriately and are still not being run appropriately, therefore the data is likely very skewed. The insert for the covid shots do not fully disclose what ingredients are in the covid shots, therefore, No one can give full consent when receiving a covid shot. There are doctors who have examined covid shot vials under a microscope and they have discovered deadly parasites and harmful metals, etc. Coercion to take these experimental gene therapies is a violation of Nuremberg Code. Please read attached document below for further information as to why these covid shots should not be required for school attendance.

Thank you,

Katrina Mason

I, **Dr. Jane Ruby**, being duly sworn, depose and state as follows:

1. I make this affidavit in support of the above-referenced MOTION as expert testimony in support thereof. I understand that I am swearing or affirming under oath to the truthfulness of the claims made in this affidavit under penalties of perjury. I have read these statements in this affidavit, these statements are my understanding of the facts and my opinion provided is based upon a reasonable degree of medical and pharmaceutical industry processes certainty. I am providing this affidavit as I have serious, grave concerns for the United States military and the public-at-large.

2. The expert opinions expressed here are my own and arrived at from my personal, professional and educational experiences taken in context, where appropriate, by scientific data, publications, treatises, opinions, documents, reports and other information relevant to the subject matter.

Experience & Credentials

3. I am competent to testify to the facts and matters set forth herein. A true and accurate copy of my *curriculum vitae* is attached hereto as **Exhibit A**.

4. I have personal knowledge and understanding of these matters and I make this affidavit in support of the truth of the contents contained herein.

5. After receiving a bachelor's degree from Alfred University, I completed my master's degree as a Sigma Theta Tau, cum laude graduate from the University of Rochester, Rochester, NY. I went on to complete my nurse practitioner residency at the University of Rochester, Internal Medicine, with a sub-specialty in Medical and Surgical Cardiology. My clinical experiences include being on the staffs of Rochester General Hospital and the University of Rochester Medical Center.

6. I taught undergraduate and graduate nursing curricula at Nazareth College of Rochester. I served on the faculty of the Margaret Warner Graduate School of Education and Human Development of the University of Rochester where I taught doctoral research methods. I hold a second master's degree in International Health Economics and Pharmacoeconomics from Universitat Pompeu Fabra in Barcelona, Spain. I have two earned doctorates, an EdD and a PhD.

7. I was the managing Director of the Scharf Institute for Neuroscience and Sleep Research in Rochester, New York. In that capacity I managed all personnel including medical doctors, psychologists, medical technicians, polysomnographers, and nurses. My main role was to oversee the execution of multicenter pharmaceutical Phase 2 and Phase 3 human research studies with approved protocols and to follow a patient informed consent process as directed by any number of Institutional Review Boards (IRB), some of which were privately based and others that

were situated in universities and colleges, both certified by the federal government. I also created and wrote original research protocols and informed consent documents for industry and IRB review and approval, as I am highly trained in the requisite elements of a human study protocol. I am also familiar with human subjects' safety during clinical trials.

8. I have over twenty years of experience in pharmaceutical drug development and medical affairs, including the prior experience described as a principal investigator for multi-center randomized, placebo-controlled trials in the United States and ROW. My experience extends to interfacing with FDA guidance documents, regulations, and submission reviews. My experience in the pharmaceutical industry extends to medical affairs functions, regulatory functions, animal and human subjects research study methodology and health economic and patient outcomes research.

Opinion

9. Since the outset of the pandemic, I have been an advocate of good health and health practices and evaluated the health effects of these products that I believe have been authorized and approved prematurely. I believe within a reasonable degree of medical certainty that the COVID-19 vaccines available and under mandate in the United States are not safe generally; and particularly dangerous for military personnel. It is my belief, based upon a reasonable degree of medical certainty, that the injection could cause serious and permanent injury and the deaths of military personnel in the course of their duties to protect the American people, the American homeland and the U.S. Constitution.

10. I believe within a reasonable degree of medical certainty that the data upon which Department of Defense has based its mandate is flawed and/or inaccurate; and imposing these injections is dangerous and could cause harm to military members.

11. It is my opinion that the processes undertaken for all of the Emergency Use Authorizations and specifically for the recent FDA approval of the Comirnaty (including the Pfizer-BioNTech Covid 19 Vaccine injections deemed by both the FDA and the Pfizer Inc., to be "the same formulation" and "interchangeable," – please see <https://www.fda.gov/vaccines-blood-biologics/qa-comirnaty-covid-19-vaccine-mrna> and <https://www.pfizer.ca/COMIRNATY-Now-Health-Canada-Approved>) are incomplete and missing key standard study data, FDA required data to establish safety and efficacy, and all safety surveillance and pharmacovigilance processes.

**COVID-19 Vaccine Research and Development – Inherent Dangers and Omission of
Standard Safety Structures for Investigational Trials**

12. In the Pfizer COMIRNATY and Pfizer-BioNTech Covid 19 Vaccination Series package insert, (See Exhibit B), the label states that on December 11, 2020, during the randomized, placebo-controlled pivotal trial (the research design required for FDA approval), “participants were “unblinded to offer placebo participants COMIRNATY,” which in my expert opinion, immediately transformed the study (as the company itself indicated in its registry on ClinicalTrials.gov, NCT04368728) into **a modified-open label, observational, variable dose trial with no informed consent** as to the status change, the exact dosage, or full disclosure of ingredients and completely compromised the requisite data for license application and that should render the study data insufficient and inappropriate to file for or be considered for review for FDA approval. What resulted was the distribution of an incomplete marketing label out to the public. In my expert opinion this is an egregious and fraudulent misrepresentation of the **Safe and Effective** statements made to the public.

13. The COVID-19 genetic modification injections (Pfizer, Moderna, J&J) failed to test for standard parameters in human studies. The areas missing critical study results include genotoxicity, mutagenicity, teratogenicity, and oncogenicity. In other words, it is not certain if these products will permanently change human genetic material, cause birth defects, reduce fertility, or cause cancer. Pfizer and Moderna claim to use similar mRNA technology and Moderna has stated that the mRNA does indeed intermingle and modify the recipient’s genetic code, characterizing it as the patient’s “operating system,” (see <https://www.modernatx.com/mrna-technology/mrna-platform-enabling-drug-discovery-development>). Of concern, the manufacturer publicly declares on their website that the mechanism of action of their mRNA is as follows: “[g]enerally, the only thing that changes from one potential mRNA medicine to another is the coding region – the actual genetic code that instructs ribosomes to make protein. Utilizing these instruction sets gives our investigational mRNA medicines a software-like quality. We also have the ability to combine different mRNA sequences encoding for different proteins in a single mRNA investigational medicine.” (Source: <https://www.modernatx.com/mrna-technology/mrna-platform-enabling-drug-discovery-development>). To my knowledge, there is no informed consent, nor anything stamped with the approval of a human subjects’ review board, to the public advising that they are submitting to a permanent change in their native genetic sequencing or any of their natural genetic material.

14. When compared to other, standard package inserts/labeling of FDA approved drugs, biologics, and medical devices, there is also an absence of a description of the molecular structure of the biologic. This is a further failure to disclose to medical prescribers, the formula and molecular weight. These disclosures are critical because they determines the fate of a

compound regarding molecular interactions in the body generally and in the presence of concomitant medication therapy.

15. In the human trial for Comirnaty / Pfizer-BioNTech Covid-19, the protocol lists a significant number of exclusions whereby subpopulations of people and those with certain medical comorbidity or conditions could not enter the trial; this results in the absence of controlled trial data for both safety and efficacy. In my expert opinion, this should render any mandates for those populations as **contraindications**. These populations or conditions are missing from the final Approval label (See **Exhibit B**). Taken from the Pfizer protocol for Comirnaty / Pfizer-BioNTech Covid Vaccine protocol (Clinicaltrials.gov, see Study NCT04368728) are as follows:

- a. Medical or psychiatric condition including recent (within the past year) or active suicidal ideation/behavior or laboratory abnormality that may increase the risk of study participation or, in the investigator's judgment, make the participant inappropriate for the study.
- b. Known infection with human immunodeficiency virus (HIV), hepatitis C virus (HCV), or hepatitis B virus (HBV).
- c. History of severe adverse reaction associated with a vaccine and/or severe allergic reaction (e.g., anaphylaxis) to any component of the study intervention(s).
- d. Receipt of medications intended to prevent COVID 19.
- e. Previous clinical (based on COVID-19 symptoms/signs alone, if a SARS-CoV-2 NAAT result was not available) or microbiological (based on COVID-19 symptoms/signs and a positive SARS-CoV-2 NAAT result) diagnosis of COVID 19.
- f. Individuals at high risk for severe COVID-19, including those with any of the following risk factors:
 - i. Hypertension
 - ii. Diabetes mellitus
 - iii. Chronic pulmonary disease
 - iv. Asthma
 - v. Current vaping or smoking
 - vi. History of chronic smoking within the prior year
 - vii. BMI >30 kg/m²
- g. Anticipating the need for immunosuppressive treatment within the next 6 months.
- h. Individuals currently working in occupations with high risk of exposure to SARS-CoV-2 (e.g., healthcare worker, emergency response personnel).
- i. Immunocompromised individuals with known or suspected immunodeficiency, as determined by history and/or laboratory/physical examination.

- j. Individuals with a history of autoimmune disease or an active autoimmune disease requiring therapeutic intervention.
- k. Bleeding diathesis or condition associated with prolonged bleeding that would, in the opinion of the investigator, contraindicate intramuscular injection.
- l. **Women who are pregnant or breastfeeding.**
- m. Previous vaccination with any coronavirus vaccine. *(These did not exist at the time).*
- n. Individuals who receive treatment with immunosuppressive therapy, including cytotoxic agents or systemic corticosteroids, e.g., for cancer or an autoimmune disease, or planned receipt throughout the study.
- o. Regular receipt of inhaled/nebulized corticosteroids.
- p. Receipt of blood/plasma products or immunoglobulin, from 60 days before study intervention administration or planned receipt throughout the study.
- q. Participation in other studies involving study intervention within 28 days prior to study entry through and including 6 months after the last dose of study intervention, with the exception of non-Pfizer interventional studies for prevention of COVID 19, which are prohibited throughout study participation.
- r. Previous participation in other studies involving study intervention containing lipid nanoparticles.
- s. Positive serological test for SARS-CoV-2 IgM and/or IgG antibodies at the screening visit.
- t. Any screening hematology and/or blood chemistry laboratory value that meets the definition of a \geq Grade 1 abnormality.
- u. Positive test for HIV, hepatitis B surface antigen (HBsAg), hepatitis B core antibodies (HBc Abs), or hepatitis C virus antibodies (HCV Abs) at the screening visit.
- v. SARS-CoV-2 NAAT-positive nasal swab within 24 hours before receipt of study intervention.
- w. Less than 12 years of age. *this is particularly significant because Pfizer-BioNTech companies have requested EUA for <12 years of age, including 2-11 year olds with no randomized, controlled study data and no proof of Human Subjects Review Board evaluation and approval.*

16. The COVID-19 genetic modification vaccines (Pfizer, Moderna, J&J) failed to disclose or conduct and/or include any study results for standard pre-licensing safety that would adequately and at a minimum, inform prescribers and patients of serious considerations. These findings are, by good standard practices, included in the Prescriber's Information / Package Insert, commonly referred to as the Label. The missing studies and results include key information such as:

- a. Pharmacokinetics – studies on the fate of the drug after administration:
 - i. Drug Half Life
 - ii. Drug-Drug Interactions (against standard metric drugs)
 - iii. Absorption
 - iv. Elimination
 - v. Receptor Affinity
 - vi. Tissue and Body Fluid Mass and Volume
 - vii. Drug Metabolism
 - viii. Maximum Drug Concentration
 - ix. Time to Concentration
 - x. CYP450 Isoenzyme Impact on Liver and Drug: Identification of the microsomes in this system that are affected by this biologic and how that may interfere with or enhance effect on liver function. Interaction with this human enzyme system of concern can increase or decrease the mechanism of action of other medications or endogenous hormones and enzymes.
- b. Pharmacodynamics – the entity's actions on the body
 - i. Receptor Binding – a critical component for drug-drug interactions and safety issues related to mechanism of action.
 - ii. Drug Effect at Receptor Binding, *particularly Angiotensin Converting Enzyme-2 Receptors, the key receptor for the resulting Subunit 1 pathogen, the Spike Protein resulting from the Pfizer, Moderna, and J&J self-proclaimed mechanism of action (MOA).*
 - iii. Concentration of the Drug at the Receptor Sites

17. There are four phases to human trials in drug development and Phase 3 is most critical as it comprises the last phase of testing to be completed before the drug's details and clinical trial results are submitted to the regulatory authorities for approval of the drug's release on the open market. See Exhibit C, Phases of Human Trials). While Phase 1 focuses on tolerability and safety in a small number of healthy subjects and Phase 2 establishes efficacy and optimal dosing regimen, Phase 3 should demonstrate and confirm the preliminary evidence gathered in the previous trials that the entity is, a safe, beneficial and effective treatment for the intended indication. The absence of findings from this part of the study as well as from the missing elements enumerated in Sections 15 and 16 violate FDA Guidance Expectations for proper review submission and approval.

18. The COVID-19 genetic vaccines (Pfizer, Moderna, J&J) are currently conducting Phases 1, 2 & 3 simultaneously which is dangerous and unprecedented in drug development. My expert position is that this departure from standard human trial phases conduct whereby FDA is allowing Phases 1/2/3 of human trials to run consecutively,

(without Subjects' Informed Consent), is a serious departure from standard human trial phases, which should run *consecutively*, because each Phase must incorporate the results in order to inform the subsequent Phase on next steps for safety and efficacy. See Exhibit C, Phases of Clinical Drug Trials)

19. The COVID-19 genetic vaccines (Pfizer, Moderna, J&J) failed to study the following standard good practice subpopulations for the effects enumerated in the exclusion criteria sufficiently with a placebo control arm:

- a. Age
- b. Gender
- c. Race
- d. Liver Impairment
- e. Kidney/Renal Impairment

20. The COVID-19 genetic vaccines (Pfizer) claim in the labeling (See **Exhibit B**, page 6, section 6.1) that “because clinical trials are conducted under widely varying conditions, adverse reaction rates observed in the clinical trials of a vaccine cannot be directly compared to rates in the clinical trials of another vaccine and may not reflect the rates observed in practice.” The manufacturer uses this unorthodox proclamation to justify failure to conduct safety evaluation that it had planned to do in the manufacturer’s own protocol and in its Pharmacovigilance Plan, both submitted to the FDA and that currently sits on ClinicalTrials.gov, the U.S. government website repository for trial registration. (<https://clinicaltrials.gov/ct2/show/NCT04368728?cond=NCT04368728&draw=2&rank=1>).

- a. Prior to COMIRNATY’s full FDA approval, the FDA issued a Warning regarding the rates of heart inflammation and heart failure in teenagers; but that Warning did not translate equally to the product labeling, no Black Box Warning transferred to the Label, and in fact did not even translate to Contraindications Section for these products.
- b. It is good standard practice to include studies for any entity administered concomitantly with monoamine oxidase inhibitors (MAOIs) and/or include a contraindication for simultaneous use.
- c. Prescribers and medical providers are not only not discouraged, but they are affirmatively encouraged, to proceed with injecting this series into populations that were either excluded in the study or who subsequently reported serious life-threatening adverse events as reported by the federal government’s tracking sites Vaccine Adverse Reporting System (VAERS) and V-Safe.
- d. In direct contradiction to the FDA/CDC Safety meeting in October 2020, prior to the vaccination roll out program, there are no warning or precautions included in the Label relative to the FDA’s known and prior warnings.

- e. The Serious Adverse Event Section in the Label is devoid of data already known to the public through the VAERS and V-SAFE reporting systems, both the only sources for the public to be informed of risks. This raises the question as to why the reported rates of cardiac injury, sudden cardiac death, blood clot caused strokes, teen heart attacks, paralysis and serious permanent motor impairment and blood dyscrasias (as demonstrated by numerous scientists including UK physician Dr. Philippe VanWelbergen, Dr. Barbel Ghitalla, and Dr. Robert Young among others) are absent from the Label. Dr. Robert Young has provided recent evidence that vials of Pfizer, Moderna, Johnson & Johnson, & AstraZeneca properly constituted for individual use per the manufacturers' instructions yielded visual microscopy evidence of lethal parasites, stainless steel aggregations, graphene oxide, and "nanoparticles of bismuth, titanium, vanadium, iron, copper, silicon, aluminum embedded in Pfizer vials." (See **Exhibit D**, Blood smears, Dr. VWB & Dr. BG); Source: <https://www.drrobertyoung.com/post/transmission-electron-microscopy-reveals-graphene-oxide-in-cov-19-vaccines>
- f. Teratogenicity is a primary concern in all experimental medical interventions and drugs under review, and unless it is studied (after human subjects' review board approval), it is a de facto contraindication to give, much less mandate, any medical intervention to a woman of child bearing years, a pregnant woman, or newborn baby. In fact, the reason there is no guidance in the Label for use in pregnant women is because pregnant women were not studied. Women of child-bearing age were also excluded; therefore, no safety data is included in the Label and the Label only indicates that "Available data on COMIRNATY administered to pregnant women is insufficient to inform vaccine-associated risks in pregnancy." If the data is insufficient by the Companies' and the P-B Label, then it should be contraindicated in that population.
 - i. Similarly, the Label states, "It is not known whether COMIRNATY is excreted in human milk." Pursuant to good and standard clinical research practices this would constitute a de facto contraindication.
- g. There is no information or data to guide prescribers on whether to use this and what the degree of safety would be for use in those with concomitant illnesses, otherwise known as medical comorbidity.
- h. There is no information on how to consider dose adjustment for special populations and those already medically compromised.
- i. The Label is missing data and guidance information on Carcinogenesis, Mutagenesis, and Impairment on Fertility – despite the disclosure by Pfizer that researchers during the trial were warned to avoid contact between people of child-bearing age and those who have gotten this entity. (See **Exhibit E**, Pfizer Protocol, page 132).

21. The COMIRNATY product that has been deemed (<https://www.pfizer.com/news/press-release/press-release-detail/pfizer-biontech-covid-19-vaccine-COMIRNATYr-receives-full>) to “have the same formulation [as the Pfizer-BioNTech Covid-19 Vaccine] and can be used interchangeably to provide the Covid-19 vaccination series,” was granted full FDA approval, licensed, and labeled with the Indication “to prevent Covid-19 in individuals 16 years of age and older.” This is in contrast to the a priori primary endpoint in the study protocol (See **Exhibit E**). The primary endpoint is the measure used to validate the entity’s separation from placebo which indicates the degree of efficacy and if the entity statistically separates from placebo, this constitutes the basis for the FDA approved indication or otherwise known as the legal marketing authorization. In the Pfizer protocol NCT04368728 on Clinicaltrials.gov, the primary endpoint was less severe symptoms and lower rates of hospitalizations. Upon FDA approval on August 23, 2021, both the company and the FDA announced the approval of Comirnaty/ Pfizer-BioNTech Covid 19 Vaccine for the indication “to prevent Covid 19.” See Label Exhibit B)

22. The companies declare that the COMIRNATY product, while the same formulation, is currently “unavailable,” in direct contradiction to Pfizer’s statement that COMIRNATY was used in over 20,000 people in 2021. (See **Exhibit B**, Pfizer Package Insert).

23. The FDA approval letter for COMIRNATY, dated August 23, 2021, from RADM Denise Hinton to Pfizer that has been used by the Department of Defense to claim that there is now a “fully licensed vaccine”, constitutes a “deceptive or misleading statement” about a product as that term is used in regards to marketing or labeling a drug or vaccine. Until a vaccine has shown the requisite safety, efficacy, and potency requirements by rigorous scientific studies designed according to FDA’s established standard criteria, the vaccine, in my expert opinion has not been shown to meet the FDA’s own standards for FDA approval.

24. The FDA’s approval letter clearly states that a different vaccine, manufactured by BioNTech Manufacturing GmbH in Germany and known as COMIRNATY, is being approved as a fully licensed vaccine. In this same letter, RADM Hinton also extends the Emergency Use Authorization for the Pfizer BioNtech vaccine. Later in the same letter, RADM Hinton states that the BioNtech vaccine is the equivalent to the COMIRNATY vaccine, while they are “legally distinct”, that no safety or efficacy concerns are present, and that because of the lack of availability of the COMIRNATY vaccine that the Pfizer BioNtech is allowed to be substituted in place of the approved COMIRNATY vaccine. This is all done without any evidence as to how the BioNtech vaccine can be declared safe or effective when it has not even completed a successful Phase III trial. (See Exhibit F for FDA Guidance Document on requirements for Phase 3 trials; <https://www.fda.gov/media/87621/download>. Furthermore, in the Pfizer protocol (See Exhibit E) three formulations are enumerated, with no disclosures on the distinctions:

a. BNT 162b1

- b. BNT 162b2
- c. BNT 162SA
- d. The protocol indicates that injectees will randomly be injected with any one of at least 8 doses including one dose 100mcg, which is essentially >3 times the approved dose, 30 mcg in Comirnaty.

25. The COVID-19 genetic vaccine companies (Pfizer, Moderna, J&J) have not provided complete FDA or the public disclosure on their vaccine boxes, package inserts or labels for all of the ingredients within these injection vials. Vis a vis fundamental human rights, governed by International Law and the Nuremberg Code of 1947, the vaccine-specific ingredient information is critical, required and necessary to know so that any human can make an informed decision whether or not to consent to inoculation.

26. The Pfizer, Moderna, and J&J vaccines are considered “genetic vaccines”, or vaccines produced from gene therapy molecular platforms which, according to US FDA regulatory guidance, are classified as gene delivery therapies and should be under a **fifteen-year** regulatory cycle with annual visits for safety evaluation by the research sponsors. (*Long Term Follow-up After Administration of Human Gene Therapy Products. Guidance for Industry.* FDA-2018-D-2173. 2020. Accessed July 13, 2021, at <https://www.fda.gov/regulatory-information/search-fda-guidance-documents/long-term-follow-after-administration-human-gene-therapy-products>).

27. The FDA has “advised sponsors to observe subjects for delayed adverse events for as long as fifteen years following exposure to the investigational gene therapy product, specifying that the long-term follow-up observation should include a minimum of five years of annual examinations, followed by ten years of annual queries of study subjects, either in person or by questionnaire.” (emphasis added). Thus, the administration of the Moderna, Pfizer, and J&J vaccines should not be undertaken without the proper consent and arrangements for long-term follow-up which are currently not offered in the US. (See, EUA briefing documents for commitments as to follow up: Moderna, Pfizer, J&J).

28. Because the US FDA and CDC have offered no methods of risk mitigation or proof of continued safety surveillance for these serious adverse effects which can lead to permanent disability or death, no one should be pressured, coerced, receive the threat or reprisal, or be mandated to receive one of these investigational products against their will.

29. It is never good, nor standard, nor reasonable research practice to perform a large-scale clinical investigation without the necessary structures in place to ensure the safety and protection of human subjects. These structures include a critical event committee, data safety monitoring board and human ethics committee. These groups in large studies work to objectively assess the safety of the investigational product and research integrity. The goal is to mitigate risk

and protect human subjects. It is my understanding that the COVID-19 vaccine program sponsored by the CDC and FDA has implemented none of these crucial safety structures which, to my knowledge, have never before been omitted from any large-scale clinical investigation, not to mention that the subject clinical investigation is of far greater and unprecedented magnitude and complexity than any of its predecessors. It is my assessment that the COVID-19 clinical investigation has provided no meaningful risk mitigation for subjects (restricting groups, a special assessment of side effects, or follow-up visits) to ensure or improve the safety of the program.

30. According to expert medical opinion, there are emerging trends demonstrating that any Covid-19 vaccine is especially risky for those in the 12 – 29 year-old demographic, with resulting complications in the cardiovascular, neurological, hematologic, and immune systems. (See, Rose J, et al). Increasingly, the medical community is acknowledging the possible risks and side effects inclusive of myocarditis, Bell's Palsy, Pulmonary Embolus, Pulmonary Immunopathology and severe allergic reaction causing anaphylactic shock. See Chien-Te Tseng, Elena Sbrana, Naoko Iwata-Yoshikawa, Patrick C Newman, Tania Garron, Robert L Atmar, Clarence J Peters, Robert B Couch, *Immunization with SARS coronavirus vaccines leads to pulmonary immunopathology on challenge with the SARS virus*, <https://pubmed.ncbi.nlm.nih.gov/22536382/> (last visited June 21, 2021); Centers for Disease Control and Prevention, *Allergic Reactions Including Anaphylaxis After Receipt of the First Dose of Pfizer-BioNTech COVID-19 Vaccine*—United States, December 14–23, 2020 (Jan 15, 2021), <https://www.cdc.gov/mmwr/volumes/70/wr/mm7002e1.htm> (last visited June 26, 2021).

31. The Centers for Disease Control has held emergency meetings on this issue and the medical community is responding to the crisis. It is known that myocarditis causes injury to heart muscle cells and may result in permanent heart damage culminating in heart failure, arrhythmias, and cardiac death. These conditions could call for a lifetime need for multiple medications, implantable cardio defibrillators, and heart transplantation. Heart failure has a five-year 50% survival and would markedly reduce the lifespan of a child or young adult who develops this complication after vaccine-induced myocarditis (McCullough PA, Philbin EF, Spertus JA, Kaatz S, Sandberg KR, Weaver WD; Resource Utilization Among Congestive Heart Failure (REACH) Study. Confirmation of a heart failure epidemic: findings from the Resource Utilization Among Congestive Heart Failure (REACH) study. *J Am Coll Cardiol*. 2002 Jan 2;39(1):60-9. doi: 10.1016/s0735-1097(01)01700-4.

32. COVID-19 vaccine-induced myocarditis has a predilection for young males below age 30 years, a substantial demographic of the US military. The Centers for Disease Control has held emergency meetings on this issue, the medical community is responding to the crisis, and the US FDA has issued a warnings on the Pfizer and Moderna vaccines “Fact Sheet for Patients and Caregivers,” the apparent substitute for an official, and comprehensive Informed Consent

document, for myocarditis. Given the prevalence of this event in younger males, no individual under age 30 under any set of circumstances should feel obliged to take this risk with the current genetic vaccines, particularly the Pfizer and Moderna products. <https://www.fda.gov/news-events/press-announcements/coronavirus-COVID-19-update-june-25-2021>.

33. Multiple recent studies and news reports detail young adults, ages 18-29, dying from myocarditis after receiving the COVID-19 vaccine. According to the CDC, 475 cases of pericarditis and myocarditis have been identified in vaccinated citizens aged 30 and younger. See FDA, *Vaccines and Related Biological Products Advisory Committee June 10, 2021, Meeting Presentation*, <https://www.fda.gov/media/150054/download#page=17> (last visited June 21, 2021).

34. The FDA found that young people ages 12-24 account for 8.8% of the vaccines administered; yet this demographic comprises 52% of the cases of myocarditis and pericarditis reported through May 31, 2021. *Id.*

Table 5: VAERS Report

Preliminary myocarditis/pericarditis reports to VAERS following dose 2 mRNA vaccination, Exp. vs. Obs. (data thru May 31, 2021)

Age groups	Doses admin	Crude reporting rate*	Expected†,‡ Myocarditis/pericarditis cases	Observed† Myocarditis/pericarditis reports
12–15 yrs	134,041	22.4	0–1	2
16–17 yrs	2,258,932	35.0	2–19	79
18–24 yrs	9,776,719	20.6	8–83	196
25–39 yrs	26,844,601	5.0	23–228	124
40–49 yrs	19,576,875	3.0	17–166	51
50–64 yrs	36,951,538	1.3	31–314	39
65+ yrs	42,124,078	0.9	36–358	26
NR	—	—	—	11

8.8% of doses admin { 12–15 yrs, 16–17 yrs, 18–24 yrs } n=277 reports 52.5% of total reports

* Per million doses administered; † Assumes a 31-day post-vaccination observation window; ‡ 528 reports with symptom onset within 30 days of vaccination shown; † Based on Gubernot et al. U.S. Population-Based background incidence rates of medical conditions for use in safety assessment of COVID-19 vaccines. Vaccine. 2021 May 14;50(26):4109(21):00578-8.

35. Furthermore, the CDC announced on June 24, 2021, that the vaccine is “likely linked” to myocarditis. “Advisory Board, CDC panel reports ‘likely association’ of heart inflammation and mRNA COVID-19 vaccines in young people,” (June 24, 2021) <https://www.advisory.com/daily-briefing/2021/06/24/heart-inflammation>.

36. On July 12, 2021 the US FDA sent out an additional warning for Guillain-Barre Syndrome or ascending paralysis for the J&J vaccine which is not predictable and, when it occurs, can result in ascending paralysis, respiratory failure, the need for critical care and death. Not all

cases completely resolve, and some vaccine victims may require long term mechanical ventilation, or become quadra- or paraplegics. Prolonged neurological rehabilitation is commonly required, and this will call for time away from school and studies for those children injured from the J&J vaccine with Guillain-Barre Syndrome. <https://www.fda.gov/media/150723/download>

Risks of COVID-19 Vaccines for Those Recovered from COVID-19

37. There is recent research demonstrating that the COVID-19 vaccine is dangerous for those who have already had COVID-19 and recovered with inferred robust, complete, and durable immunity. These patients were excluded from the FDA-approved clinical trials performed by Pfizer, Moderna, and J&J. From these trials the safety profile was unknown when the products were approved for Emergency Use Authorization in 2020. There has been no study demonstrating clinical benefit with COVID-19 vaccination in those who have well documented or even suspected prior COVID-19 illness.

38. To my knowledge, there are no studies that demonstrate the clinical benefit of COVID-19 vaccination in COVID-19 survivors or those with suspected COVID-19 illness or subclinical disease who have laboratory evidence of prior infection.

Conclusion

I have reviewed the Complaint For Declaratory and Injunctive Relief which delineates the aforementioned significant departures from standard procedures, protocols and safety measures and conclude as follows:

39. It is my expert medical opinion that it is not good, nor standard, nor reasonable professional research or clinical practice to widely utilize these never-before-tested-in-human beings, biologic therapy (mRNA, adenoviral DNA COVID-19 vaccines) in populations where there is no information generated from fully completed, controlled registrational trials with the FDA, specifically COVID-19 survivors, suspected COVID-19-recovered, pregnant or women who could become pregnant at any time after investigational vaccines; and especially our military.

40. In my expert opinion, the risks associated with the investigational COVID-19 vaccines far outweigh any theoretical benefits, are not minor or unserious, and many of those risks are unknown and have not been adequately quantified; nor the duration of their consequences evaluated or shown to be calculable. Therefore, in my expert medical opinion, the Emergency Use Authorization and FDA Approval for the administration of COVID-19 vaccines creates an unethical, unreasonable, clinically unjustified, unsafe, and unnecessary risk to the military of the United States of America.

41. The gross deviations in conducting adequate safety and efficacy studies, the lack of disclosure on product content, the absence of informative trial data in good clinical research practices for basic categories and conditions, the absence of Human Subjects Review (HSRB)

oversight, the absence of Good Manufacturing Practices oversight created by the FDA, the lack of a full human subjects' review board approval stamped, informed consent for replaced only by an abbreviated patient one-page checklist, and the deviations and omissions from protocol to Label are of great concern to me. In my expert opinion, the foregoing constitutes a lack of scientific justification for the Approval, all Emergency Use Authorizations, and any mandated administration of both the COMIRNATY and Pfizer-BioNTech vaccine formulations, both of which have been declared by the companies as one and the same.

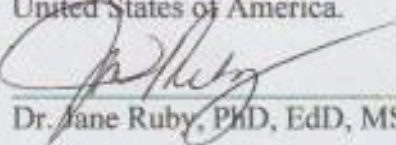

State of Florida

County of Palm Beach

The undersigned, being duly sworn, deposes and says:

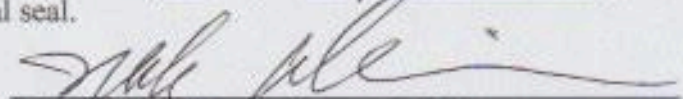

I, Jane Ruby, declare under the penalty of perjury of the laws of the United States of America, and state upon personal knowledge that:

I am an adult of sound mind, over 21 years old, and declare that the information herein is true, correct and complete and that I have voluntarily affirmed this affidavit based upon my own personal knowledge, education, and experience, and under the penalty of perjury of the laws of the United States of America.

Dr. Jane Ruby, PhD, EdD, MS, MS Economics, NP

SUBSCRIBED AND SWORN TO BEFORE ME on the 27 day of September 2021,
to certify which witness my hand and official seal.

Notary Public for the State of Florida

My Commission Expires:

MARK F. WEISSMAN
Commission # HH 067532
Expires March 28, 2025
Bonded Thru Budget Notary Services

Dr. Jane Ruby has an excellent resume, and in the attachment I am sending with this email, she lays out how the current covid shots are potentially extremely dangerous and ineffective. Current covid shots offered are experimental gene therapies under EUA. Cominarty is the only currently approved covid shot, and it is currently not offered in the US. Clinical trials were not run appropriately and are still not being run appropriately, therefore the data is likely very skewed. The insert for the covid shots do not fully disclose what ingredients are in the covid shots, therefore, no one can give full consent when receiving a covid shot. There are doctors who have examined covid shot vials under a microscope and they have discovered deadly parasites and harmful metals, etc. Coercion to take these experimental gene therapies is a violation of Nuremberg Code. Please read attached document below for further information as to why these covid shots should not be required for school attendance.

Thank you,

Katrina Mason

I, **Dr. Jane Ruby**, being duly sworn, depose and state as follows:

1. I make this affidavit in support of the above-referenced MOTION as expert testimony in support thereof. I understand that I am swearing or affirming under oath to the truthfulness of the claims made in this affidavit under penalties of perjury. I have read these statements in this affidavit, these statements are my understanding of the facts and my opinion provided is based upon a reasonable degree of medical and pharmaceutical industry processes certainty. I am providing this affidavit as I have serious, grave concerns for the United States military and the public-at-large.

2. The expert opinions expressed here are my own and arrived at from my personal, professional and educational experiences taken in context, where appropriate, by scientific data, publications, treatises, opinions, documents, reports and other information relevant to the subject matter.

Experience & Credentials

3. I am competent to testify to the facts and matters set forth herein. A true and accurate copy of my *curriculum vitae* is attached hereto as **Exhibit A**.

4. I have personal knowledge and understanding of these matters and I make this affidavit in support of the truth of the contents contained herein.

5. After receiving a bachelor's degree from Alfred University, I completed my master's degree as a Sigma Theta Tau, cum laude graduate from the University of Rochester, Rochester, NY. I went on to complete my nurse practitioner residency at the University of Rochester, Internal Medicine, with a sub-specialty in Medical and Surgical Cardiology. My clinical experiences include being on the staffs of Rochester General Hospital and the University of Rochester Medical Center.

6. I taught undergraduate and graduate nursing curricula at Nazareth College of Rochester. I served on the faculty of the Margaret Warner Graduate School of Education and Human Development of the University of Rochester where I taught doctoral research methods. I hold a second master's degree in International Health Economics and Pharmacoeconomics from Universitat Pompeu Fabra in Barcelona, Spain. I have two earned doctorates, an EdD and a PhD.

7. I was the managing Director of the Scharf Institute for Neuroscience and Sleep Research in Rochester, New York. In that capacity I managed all personnel including medical doctors, psychologists, medical technicians, polysomnographers, and nurses. My main role was to oversee the execution of multicenter pharmaceutical Phase 2 and Phase 3 human research studies with approved protocols and to follow a patient informed consent process as directed by any number of Institutional Review Boards (IRB), some of which were privately based and others that

were situated in universities and colleges, both certified by the federal government. I also created and wrote original research protocols and informed consent documents for industry and IRB review and approval, as I am highly trained in the requisite elements of a human study protocol. I am also familiar with human subjects' safety during clinical trials.

8. I have over twenty years of experience in pharmaceutical drug development and medical affairs, including the prior experience described as a principal investigator for multi-center randomized, placebo-controlled trials in the United States and ROW. My experience extends to interfacing with FDA guidance documents, regulations, and submission reviews. My experience in the pharmaceutical industry extends to medical affairs functions, regulatory functions, animal and human subjects research study methodology and health economic and patient outcomes research.

Opinion

9. Since the outset of the pandemic, I have been an advocate of good health and health practices and evaluated the health effects of these products that I believe have been authorized and approved prematurely. I believe within a reasonable degree of medical certainty that the COVID-19 vaccines available and under mandate in the United States are not safe generally; and particularly dangerous for military personnel. It is my belief, based upon a reasonable degree of medical certainty, that the injection could cause serious and permanent injury and the deaths of military personnel in the course of their duties to protect the American people, the American homeland and the U.S. Constitution.

10. I believe within a reasonable degree of medical certainty that the data upon which Department of Defense has based its mandate is flawed and/or inaccurate; and imposing these injections is dangerous and could cause harm to military members.

11. It is my opinion that the processes undertaken for all of the Emergency Use Authorizations and specifically for the recent FDA approval of the Comirnaty (including the Pfizer-BioNTech Covid 19 Vaccine injections deemed by both the FDA and the Pfizer Inc., to be "the same formulation" and "interchangeable," – please see <https://www.fda.gov/vaccines-blood-biologics/qa-comirnaty-covid-19-vaccine-mrna> and <https://www.pfizer.ca/COMIRNATY-Now-Health-Canada-Approved>) are incomplete and missing key standard study data, FDA required data to establish safety and efficacy, and all safety surveillance and pharmacovigilance processes.

**COVID-19 Vaccine Research and Development – Inherent Dangers and Omission of
Standard Safety Structures for Investigational Trials**

12. In the Pfizer COMIRNATY and Pfizer-BioNTech Covid 19 Vaccination Series package insert, (See Exhibit B), the label states that on December 11, 2020, during the randomized, placebo-controlled pivotal trial (the research design required for FDA approval), “participants were “unblinded to offer placebo participants COMIRNATY,” which in my expert opinion, immediately transformed the study (as the company itself indicated in its registry on ClinicalTrials.gov, NCT04368728) into **a modified-open label, observational, variable dose trial with no informed consent** as to the status change, the exact dosage, or full disclosure of ingredients and completely compromised the requisite data for license application and that should render the study data insufficient and inappropriate to file for or be considered for review for FDA approval. What resulted was the distribution of an incomplete marketing label out to the public. In my expert opinion this is an egregious and fraudulent misrepresentation of the **Safe and Effective** statements made to the public.

13. The COVID-19 genetic modification injections (Pfizer, Moderna, J&J) failed to test for standard parameters in human studies. The areas missing critical study results include genotoxicity, mutagenicity, teratogenicity, and oncogenicity. In other words, it is not certain if these products will permanently change human genetic material, cause birth defects, reduce fertility, or cause cancer. Pfizer and Moderna claim to use similar mRNA technology and Moderna has stated that the mRNA does indeed intermingle and modify the recipient’s genetic code, characterizing it as the patient’s “operating system,” (see <https://www.modernatx.com/mrna-technology/mrna-platform-enabling-drug-discovery-development>). Of concern, the manufacturer publicly declares on their website that the mechanism of action of their mRNA is as follows: “[g]enerally, the only thing that changes from one potential mRNA medicine to another is the coding region – the actual genetic code that instructs ribosomes to make protein. Utilizing these instruction sets gives our investigational mRNA medicines a software-like quality. We also have the ability to combine different mRNA sequences encoding for different proteins in a single mRNA investigational medicine.” (Source: <https://www.modernatx.com/mrna-technology/mrna-platform-enabling-drug-discovery-development>). To my knowledge, there is no informed consent, nor anything stamped with the approval of a human subjects’ review board, to the public advising that they are submitting to a permanent change in their native genetic sequencing or any of their natural genetic material.

14. When compared to other, standard package inserts/labeling of FDA approved drugs, biologics, and medical devices, there is also an absence of a description of the molecular structure of the biologic. This is a further failure to disclose to medical prescribers, the formula and molecular weight. These disclosures are critical because they determines the fate of a

compound regarding molecular interactions in the body generally and in the presence of concomitant medication therapy.

15. In the human trial for Comirnaty / Pfizer-BioNTech Covid-19, the protocol lists a significant number of exclusions whereby subpopulations of people and those with certain medical comorbidity or conditions could not enter the trial; this results in the absence of controlled trial data for both safety and efficacy. In my expert opinion, this should render any mandates for those populations as **contraindications**. These populations or conditions are missing from the final Approval label (See **Exhibit B**). Taken from the Pfizer protocol for Comirnaty / Pfizer-BioNTech Covid Vaccine protocol (Clinicaltrials.gov, see Study NCT04368728) are as follows:

- a. Medical or psychiatric condition including recent (within the past year) or active suicidal ideation/behavior or laboratory abnormality that may increase the risk of study participation or, in the investigator's judgment, make the participant inappropriate for the study.
- b. Known infection with human immunodeficiency virus (HIV), hepatitis C virus (HCV), or hepatitis B virus (HBV).
- c. History of severe adverse reaction associated with a vaccine and/or severe allergic reaction (e.g., anaphylaxis) to any component of the study intervention(s).
- d. Receipt of medications intended to prevent COVID 19.
- e. Previous clinical (based on COVID-19 symptoms/signs alone, if a SARS-CoV-2 NAAT result was not available) or microbiological (based on COVID-19 symptoms/signs and a positive SARS-CoV-2 NAAT result) diagnosis of COVID 19.
- f. Individuals at high risk for severe COVID-19, including those with any of the following risk factors:
 - i. Hypertension
 - ii. Diabetes mellitus
 - iii. Chronic pulmonary disease
 - iv. Asthma
 - v. Current vaping or smoking
 - vi. History of chronic smoking within the prior year
 - vii. BMI >30 kg/m²
- g. Anticipating the need for immunosuppressive treatment within the next 6 months.
- h. Individuals currently working in occupations with high risk of exposure to SARS-CoV-2 (e.g., healthcare worker, emergency response personnel).
- i. Immunocompromised individuals with known or suspected immunodeficiency, as determined by history and/or laboratory/physical examination.

- j. Individuals with a history of autoimmune disease or an active autoimmune disease requiring therapeutic intervention.
- k. Bleeding diathesis or condition associated with prolonged bleeding that would, in the opinion of the investigator, contraindicate intramuscular injection.
- l. **Women who are pregnant or breastfeeding.**
- m. Previous vaccination with any coronavirus vaccine. *(These did not exist at the time).*
- n. Individuals who receive treatment with immunosuppressive therapy, including cytotoxic agents or systemic corticosteroids, e.g., for cancer or an autoimmune disease, or planned receipt throughout the study.
- o. Regular receipt of inhaled/nebulized corticosteroids.
- p. Receipt of blood/plasma products or immunoglobulin, from 60 days before study intervention administration or planned receipt throughout the study.
- q. Participation in other studies involving study intervention within 28 days prior to study entry through and including 6 months after the last dose of study intervention, with the exception of non-Pfizer interventional studies for prevention of COVID 19, which are prohibited throughout study participation.
- r. Previous participation in other studies involving study intervention containing lipid nanoparticles.
- s. Positive serological test for SARS-CoV-2 IgM and/or IgG antibodies at the screening visit.
- t. Any screening hematology and/or blood chemistry laboratory value that meets the definition of a \geq Grade 1 abnormality.
- u. Positive test for HIV, hepatitis B surface antigen (HBsAg), hepatitis B core antibodies (HBc Abs), or hepatitis C virus antibodies (HCV Abs) at the screening visit.
- v. SARS-CoV-2 NAAT-positive nasal swab within 24 hours before receipt of study intervention.
- w. Less than 12 years of age. *this is particularly significant because Pfizer-BioNTech companies have requested EUA for <12 years of age, including 2-11 year olds with no randomized, controlled study data and no proof of Human Subjects Review Board evaluation and approval.*

16. The COVID-19 genetic modification vaccines (Pfizer, Moderna, J&J) failed to disclose or conduct and/or include any study results for standard pre-licensing safety that would adequately and at a minimum, inform prescribers and patients of serious considerations. These findings are, by good standard practices, included in the Prescriber's Information / Package Insert, commonly referred to as the Label. The missing studies and results include key information such as:

- a. Pharmacokinetics – studies on the fate of the drug after administration:
 - i. Drug Half Life
 - ii. Drug-Drug Interactions (against standard metric drugs)
 - iii. Absorption
 - iv. Elimination
 - v. Receptor Affinity
 - vi. Tissue and Body Fluid Mass and Volume
 - vii. Drug Metabolism
 - viii. Maximum Drug Concentration
 - ix. Time to Concentration
 - x. CYP450 Isoenzyme Impact on Liver and Drug: Identification of the microsomes in this system that are affected by this biologic and how that may interfere with or enhance effect on liver function. Interaction with this human enzyme system of concern can increase or decrease the mechanism of action of other medications or endogenous hormones and enzymes.
- b. Pharmacodynamics – the entity's actions on the body
 - i. Receptor Binding – a critical component for drug-drug interactions and safety issues related to mechanism of action.
 - ii. Drug Effect at Receptor Binding, *particularly Angiotensin Converting Enzyme-2 Receptors, the key receptor for the resulting Subunit 1 pathogen, the Spike Protein resulting from the Pfizer, Moderna, and J&J self-proclaimed mechanism of action (MOA).*
 - iii. Concentration of the Drug at the Receptor Sites

17. There are four phases to human trials in drug development and Phase 3 is most critical as it comprises the last phase of testing to be completed before the drug's details and clinical trial results are submitted to the regulatory authorities for approval of the drug's release on the open market. See Exhibit C, Phases of Human Trials). While Phase 1 focuses on tolerability and safety in a small number of healthy subjects and Phase 2 establishes efficacy and optimal dosing regimen, Phase 3 should demonstrate and confirm the preliminary evidence gathered in the previous trials that the entity is, a safe, beneficial and effective treatment for the intended indication. The absence of findings from this part of the study as well as from the missing elements enumerated in Sections 15 and 16 violate FDA Guidance Expectations for proper review submission and approval.

18. The COVID-19 genetic vaccines (Pfizer, Moderna, J&J) are currently conducting Phases 1, 2 & 3 simultaneously which is dangerous and unprecedented in drug development. My expert position is that this departure from standard human trial phases conduct whereby FDA is allowing Phases 1/2/3 of human trials to run consecutively,

(without Subjects' Informed Consent), is a serious departure from standard human trial phases, which should run *consecutively*, because each Phase must incorporate the results in order to inform the subsequent Phase on next steps for safety and efficacy. See Exhibit C, Phases of Clinical Drug Trials)

19. The COVID-19 genetic vaccines (Pfizer, Moderna, J&J) failed to study the following standard good practice subpopulations for the effects enumerated in the exclusion criteria sufficiently with a placebo control arm:

- a. Age
- b. Gender
- c. Race
- d. Liver Impairment
- e. Kidney/Renal Impairment

20. The COVID-19 genetic vaccines (Pfizer) claim in the labeling (See **Exhibit B**, page 6, section 6.1) that “because clinical trials are conducted under widely varying conditions, adverse reaction rates observed in the clinical trials of a vaccine cannot be directly compared to rates in the clinical trials of another vaccine and may not reflect the rates observed in practice.” The manufacturer uses this unorthodox proclamation to justify failure to conduct safety evaluation that it had planned to do in the manufacturer’s own protocol and in its Pharmacovigilance Plan, both submitted to the FDA and that currently sits on ClinicalTrials.gov, the U.S. government website repository for trial registration. (<https://clinicaltrials.gov/ct2/show/NCT04368728?cond=NCT04368728&draw=2&rank=1>).

- a. Prior to COMIRNATY’s full FDA approval, the FDA issued a Warning regarding the rates of heart inflammation and heart failure in teenagers; but that Warning did not translate equally to the product labeling, no Black Box Warning transferred to the Label, and in fact did not even translate to Contraindications Section for these products.
- b. It is good standard practice to include studies for any entity administered concomitantly with monoamine oxidase inhibitors (MAOIs) and/or include a contraindication for simultaneous use.
- c. Prescribers and medical providers are not only not discouraged, but they are affirmatively encouraged, to proceed with injecting this series into populations that were either excluded in the study or who subsequently reported serious life-threatening adverse events as reported by the federal government’s tracking sites Vaccine Adverse Reporting System (VAERS) and V-Safe.
- d. In direct contradiction to the FDA/CDC Safety meeting in October 2020, prior to the vaccination roll out program, there are no warning or precautions included in the Label relative to the FDA’s known and prior warnings.

- e. The Serious Adverse Event Section in the Label is devoid of data already known to the public through the VAERS and V-SAFE reporting systems, both the only sources for the public to be informed of risks. This raises the question as to why the reported rates of cardiac injury, sudden cardiac death, blood clot caused strokes, teen heart attacks, paralysis and serious permanent motor impairment and blood dyscrasias (as demonstrated by numerous scientists including UK physician Dr. Philippe VanWelbergen, Dr. Barbel Ghitalla, and Dr. Robert Young among others) are absent from the Label. Dr. Robert Young has provided recent evidence that vials of Pfizer, Moderna, Johnson & Johnson, & AstraZeneca properly constituted for individual use per the manufacturers' instructions yielded visual microscopy evidence of lethal parasites, stainless steel aggregations, graphene oxide, and "nanoparticles of bismuth, titanium, vanadium, iron, copper, silicon, aluminum embedded in Pfizer vials." (See **Exhibit D**, Blood smears, Dr. VWB & Dr. BG); Source: <https://www.drrobertyoung.com/post/transmission-electron-microscopy-reveals-graphene-oxide-in-cov-19-vaccines>
- f. Teratogenicity is a primary concern in all experimental medical interventions and drugs under review, and unless it is studied (after human subjects' review board approval), it is a de facto contraindication to give, much less mandate, any medical intervention to a woman of child bearing years, a pregnant woman, or newborn baby. In fact, the reason there is no guidance in the Label for use in pregnant women is because pregnant women were not studied. Women of child-bearing age were also excluded; therefore, no safety data is included in the Label and the Label only indicates that "Available data on COMIRNATY administered to pregnant women is insufficient to inform vaccine-associated risks in pregnancy." If the data is insufficient by the Companies' and the P-B Label, then it should be contraindicated in that population.
 - i. Similarly, the Label states, "It is not known whether COMIRNATY is excreted in human milk." Pursuant to good and standard clinical research practices this would constitute a de facto contraindication.
- g. There is no information or data to guide prescribers on whether to use this and what the degree of safety would be for use in those with concomitant illnesses, otherwise known as medical comorbidity.
- h. There is no information on how to consider dose adjustment for special populations and those already medically compromised.
- i. The Label is missing data and guidance information on Carcinogenesis, Mutagenesis, and Impairment on Fertility – despite the disclosure by Pfizer that researchers during the trial were warned to avoid contact between people of child-bearing age and those who have gotten this entity. (See **Exhibit E**, Pfizer Protocol, page 132).

21. The COMIRNATY product that has been deemed (<https://www.pfizer.com/news/press-release/press-release-detail/pfizer-biontech-covid-19-vaccine-COMIRNATYr-receives-full>) to “have the same formulation [as the Pfizer-BioNTech Covid-19 Vaccine] and can be used interchangeably to provide the Covid-19 vaccination series,” was granted full FDA approval, licensed, and labeled with the Indication “to prevent Covid-19 in individuals 16 years of age and older.” This is in contrast to the a priori primary endpoint in the study protocol (See **Exhibit E**). The primary endpoint is the measure used to validate the entity’s separation from placebo which indicates the degree of efficacy and if the entity statistically separates from placebo, this constitutes the basis for the FDA approved indication or otherwise known as the legal marketing authorization. In the Pfizer protocol NCT04368728 on Clinicaltrials.gov, the primary endpoint was less severe symptoms and lower rates of hospitalizations. Upon FDA approval on August 23, 2021, both the company and the FDA announced the approval of Comirnaty/ Pfizer-BioNTech Covid 19 Vaccine for the indication “to prevent Covid 19.” See Label Exhibit B)

22. The companies declare that the COMIRNATY product, while the same formulation, is currently “unavailable,” in direct contradiction to Pfizer’s statement that COMIRNATY was used in over 20,000 people in 2021. (See **Exhibit B**, Pfizer Package Insert).

23. The FDA approval letter for COMIRNATY, dated August 23, 2021, from RADM Denise Hinton to Pfizer that has been used by the Department of Defense to claim that there is now a “fully licensed vaccine”, constitutes a “deceptive or misleading statement” about a product as that term is used in regards to marketing or labeling a drug or vaccine. Until a vaccine has shown the requisite safety, efficacy, and potency requirements by rigorous scientific studies designed according to FDA’s established standard criteria, the vaccine, in my expert opinion has not been shown to meet the FDA’s own standards for FDA approval.

24. The FDA’s approval letter clearly states that a different vaccine, manufactured by BioNTech Manufacturing GmbH in Germany and known as COMIRNATY, is being approved as a fully licensed vaccine. In this same letter, RADM Hinton also extends the Emergency Use Authorization for the Pfizer BioNtech vaccine. Later in the same letter, RADM Hinton states that the BioNtech vaccine is the equivalent to the COMIRNATY vaccine, while they are “legally distinct”, that no safety or efficacy concerns are present, and that because of the lack of availability of the COMIRNATY vaccine that the Pfizer BioNtech is allowed to be substituted in place of the approved COMIRNATY vaccine. This is all done without any evidence as to how the BioNtech vaccine can be declared safe or effective when it has not even completed a successful Phase III trial. (See Exhibit F for FDA Guidance Document on requirements for Phase 3 trials; <https://www.fda.gov/media/87621/download>. Furthermore, in the Pfizer protocol (See Exhibit E) three formulations are enumerated, with no disclosures on the distinctions:

a. BNT 162b1

- b. BNT 162b2
- c. BNT 162SA
- d. The protocol indicates that injectees will randomly be injected with any one of at least 8 doses including one dose 100mcg, which is essentially >3 times the approved dose, 30 mcg in Comirnaty.

25. The COVID-19 genetic vaccine companies (Pfizer, Moderna, J&J) have not provided complete FDA or the public disclosure on their vaccine boxes, package inserts or labels for all of the ingredients within these injection vials. Vis a vis fundamental human rights, governed by International Law and the Nuremberg Code of 1947, the vaccine-specific ingredient information is critical, required and necessary to know so that any human can make an informed decision whether or not to consent to inoculation.

26. The Pfizer, Moderna, and J&J vaccines are considered “genetic vaccines”, or vaccines produced from gene therapy molecular platforms which, according to US FDA regulatory guidance, are classified as gene delivery therapies and should be under a **fifteen-year** regulatory cycle with annual visits for safety evaluation by the research sponsors. (*Long Term Follow-up After Administration of Human Gene Therapy Products. Guidance for Industry.* FDA-2018-D-2173. 2020. Accessed July 13, 2021, at <https://www.fda.gov/regulatory-information/search-fda-guidance-documents/long-term-follow-after-administration-human-gene-therapy-products>).

27. The FDA has “advised sponsors to observe subjects for delayed adverse events for as long as fifteen years following exposure to the investigational gene therapy product, specifying that the long-term follow-up observation should include a minimum of five years of annual examinations, followed by ten years of annual queries of study subjects, either in person or by questionnaire.” (emphasis added). Thus, the administration of the Moderna, Pfizer, and J&J vaccines should not be undertaken without the proper consent and arrangements for long-term follow-up which are currently not offered in the US. (See, EUA briefing documents for commitments as to follow up: Moderna, Pfizer, J&J).

28. Because the US FDA and CDC have offered no methods of risk mitigation or proof of continued safety surveillance for these serious adverse effects which can lead to permanent disability or death, no one should be pressured, coerced, receive the threat or reprisal, or be mandated to receive one of these investigational products against their will.

29. It is never good, nor standard, nor reasonable research practice to perform a large-scale clinical investigation without the necessary structures in place to ensure the safety and protection of human subjects. These structures include a critical event committee, data safety monitoring board and human ethics committee. These groups in large studies work to objectively assess the safety of the investigational product and research integrity. The goal is to mitigate risk

and protect human subjects. It is my understanding that the COVID-19 vaccine program sponsored by the CDC and FDA has implemented none of these crucial safety structures which, to my knowledge, have never before been omitted from any large-scale clinical investigation, not to mention that the subject clinical investigation is of far greater and unprecedented magnitude and complexity than any of its predecessors. It is my assessment that the COVID-19 clinical investigation has provided no meaningful risk mitigation for subjects (restricting groups, a special assessment of side effects, or follow-up visits) to ensure or improve the safety of the program.

30. According to expert medical opinion, there are emerging trends demonstrating that any Covid-19 vaccine is especially risky for those in the 12 – 29 year-old demographic, with resulting complications in the cardiovascular, neurological, hematologic, and immune systems. (See, Rose J, et al). Increasingly, the medical community is acknowledging the possible risks and side effects inclusive of myocarditis, Bell's Palsy, Pulmonary Embolus, Pulmonary Immunopathology and severe allergic reaction causing anaphylactic shock. See Chien-Te Tseng, Elena Sbrana, Naoko Iwata-Yoshikawa, Patrick C Newman, Tania Garron, Robert L Atmar, Clarence J Peters, Robert B Couch, *Immunization with SARS coronavirus vaccines leads to pulmonary immunopathology on challenge with the SARS virus*, <https://pubmed.ncbi.nlm.nih.gov/22536382/> (last visited June 21, 2021); Centers for Disease Control and Prevention, *Allergic Reactions Including Anaphylaxis After Receipt of the First Dose of Pfizer-BioNTech COVID-19 Vaccine*—United States, December 14–23, 2020 (Jan 15, 2021), <https://www.cdc.gov/mmwr/volumes/70/wr/mm7002e1.htm> (last visited June 26, 2021).

31. The Centers for Disease Control has held emergency meetings on this issue and the medical community is responding to the crisis. It is known that myocarditis causes injury to heart muscle cells and may result in permanent heart damage culminating in heart failure, arrhythmias, and cardiac death. These conditions could call for a lifetime need for multiple medications, implantable cardio defibrillators, and heart transplantation. Heart failure has a five-year 50% survival and would markedly reduce the lifespan of a child or young adult who develops this complication after vaccine-induced myocarditis (McCullough PA, Philbin EF, Spertus JA, Kaatz S, Sandberg KR, Weaver WD; Resource Utilization Among Congestive Heart Failure (REACH) Study. Confirmation of a heart failure epidemic: findings from the Resource Utilization Among Congestive Heart Failure (REACH) study. *J Am Coll Cardiol*. 2002 Jan 2;39(1):60-9. doi: 10.1016/s0735-1097(01)01700-4.

32. COVID-19 vaccine-induced myocarditis has a predilection for young males below age 30 years, a substantial demographic of the US military. The Centers for Disease Control has held emergency meetings on this issue, the medical community is responding to the crisis, and the US FDA has issued a warnings on the Pfizer and Moderna vaccines “Fact Sheet for Patients and Caregivers,” the apparent substitute for an official, and comprehensive Informed Consent

document, for myocarditis. Given the prevalence of this event in younger males, no individual under age 30 under any set of circumstances should feel obliged to take this risk with the current genetic vaccines, particularly the Pfizer and Moderna products. <https://www.fda.gov/news-events/press-announcements/coronavirus-COVID-19-update-june-25-2021>.

33. Multiple recent studies and news reports detail young adults, ages 18-29, dying from myocarditis after receiving the COVID-19 vaccine. According to the CDC, 475 cases of pericarditis and myocarditis have been identified in vaccinated citizens aged 30 and younger. See FDA, *Vaccines and Related Biological Products Advisory Committee June 10, 2021, Meeting Presentation*, <https://www.fda.gov/media/150054/download#page=17> (last visited June 21, 2021).

34. The FDA found that young people ages 12-24 account for 8.8% of the vaccines administered; yet this demographic comprises 52% of the cases of myocarditis and pericarditis reported through May 31, 2021. *Id.*

Table 5: VAERS Report

Preliminary myocarditis/pericarditis reports to VAERS following dose 2 mRNA vaccination, Exp. vs. Obs. (data thru May 31, 2021)

Age groups	Doses admin	Crude reporting rate*	Expected†,‡ Myocarditis/pericarditis cases	Observed† Myocarditis/pericarditis reports
12–15 yrs	134,041	22.4	0–1	2
16–17 yrs	2,258,932	35.0	2–19	79
18–24 yrs	9,776,719	20.6	8–83	196
25–39 yrs	26,844,601	5.0	23–228	124
40–49 yrs	19,576,875	3.0	17–166	51
50–64 yrs	36,951,538	1.3	31–314	39
65+ yrs	42,124,078	0.9	36–358	26
NR	—	—	—	11

8.8% of doses admin { 12–15 yrs, 16–17 yrs, 18–24 yrs } n=277 reports 52.5% of total reports

 * Per million doses administered; † Assumes a 31-day post-vaccination observation window; ‡ 528 reports with symptom onset within 30 days of vaccination shown; † Based on Gubernot et al. U.S. Population-Based background incidence rates of medical conditions for use in safety assessment of COVID-19 vaccines. Vaccine. 2021 May 14;50(26):4109(21):00578-8.

35. Furthermore, the CDC announced on June 24, 2021, that the vaccine is “likely linked” to myocarditis. “Advisory Board, CDC panel reports ‘likely association’ of heart inflammation and mRNA COVID-19 vaccines in young people,” (June 24, 2021) <https://www.advisory.com/daily-briefing/2021/06/24/heart-inflammation>.

36. On July 12, 2021 the US FDA sent out an additional warning for Guillain-Barre Syndrome or ascending paralysis for the J&J vaccine which is not predictable and, when it occurs, can result in ascending paralysis, respiratory failure, the need for critical care and death. Not all

cases completely resolve, and some vaccine victims may require long term mechanical ventilation, or become quadra- or paraplegics. Prolonged neurological rehabilitation is commonly required, and this will call for time away from school and studies for those children injured from the J&J vaccine with Guillain-Barre Syndrome. <https://www.fda.gov/media/150723/download>

Risks of COVID-19 Vaccines for Those Recovered from COVID-19

37. There is recent research demonstrating that the COVID-19 vaccine is dangerous for those who have already had COVID-19 and recovered with inferred robust, complete, and durable immunity. These patients were excluded from the FDA-approved clinical trials performed by Pfizer, Moderna, and J&J. From these trials the safety profile was unknown when the products were approved for Emergency Use Authorization in 2020. There has been no study demonstrating clinical benefit with COVID-19 vaccination in those who have well documented or even suspected prior COVID-19 illness.

38. To my knowledge, there are no studies that demonstrate the clinical benefit of COVID-19 vaccination in COVID-19 survivors or those with suspected COVID-19 illness or subclinical disease who have laboratory evidence of prior infection.

Conclusion

I have reviewed the Complaint For Declaratory and Injunctive Relief which delineates the aforementioned significant departures from standard procedures, protocols and safety measures and conclude as follows:

39. It is my expert medical opinion that it is not good, nor standard, nor reasonable professional research or clinical practice to widely utilize these never-before-tested-in-human beings, biologic therapy (mRNA, adenoviral DNA COVID-19 vaccines) in populations where there is no information generated from fully completed, controlled registrational trials with the FDA, specifically COVID-19 survivors, suspected COVID-19-recovered, pregnant or women who could become pregnant at any time after investigational vaccines; and especially our military.

40. In my expert opinion, the risks associated with the investigational COVID-19 vaccines far outweigh any theoretical benefits, are not minor or unserious, and many of those risks are unknown and have not been adequately quantified; nor the duration of their consequences evaluated or shown to be calculable. Therefore, in my expert medical opinion, the Emergency Use Authorization and FDA Approval for the administration of COVID-19 vaccines creates an unethical, unreasonable, clinically unjustified, unsafe, and unnecessary risk to the military of the United States of America.

41. The gross deviations in conducting adequate safety and efficacy studies, the lack of disclosure on product content, the absence of informative trial data in good clinical research practices for basic categories and conditions, the absence of Human Subjects Review (HSRB)

oversight, the absence of Good Manufacturing Practices oversight created by the FDA, the lack of a full human subjects' review board approval stamped, informed consent for replaced only by an abbreviated patient one-page checklist, and the deviations and omissions from protocol to Label are of great concern to me. In my expert opinion, the foregoing constitutes a lack of scientific justification for the Approval, all Emergency Use Authorizations, and any mandated administration of both the COMIRNATY and Pfizer-BioNTech vaccine formulations, both of which have been declared by the companies as one and the same.

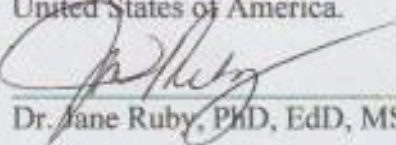

State of Florida

County of Palm Beach

The undersigned, being duly sworn, deposes and says:

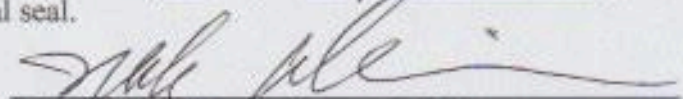

I, Jane Ruby, declare under the penalty of perjury of the laws of the United States of America, and state upon personal knowledge that:

I am an adult of sound mind, over 21 years old, and declare that the information herein is true, correct and complete and that I have voluntarily affirmed this affidavit based upon my own personal knowledge, education, and experience, and under the penalty of perjury of the laws of the United States of America.

Dr. Jane Ruby, PhD, EdD, MS, MS Economics, NP

SUBSCRIBED AND SWORN TO BEFORE ME on the 27 day of September 2021,
to certify which witness my hand and official seal.

Notary Public for the State of Florida

My Commission Expires:

External Email

I am writing as an incredibly concerned parent of 3 and very involved community member.

This concept of mandating vaccination for school attendance is unfair, unruly and reckless.

I am not sharing data due to the urgency of writing this email.

The numbers don't lie ! The chances/percentages of problematic results from covid in kids does not justify forcing parents to inject their children with something that is still so new

The covid vaccine poses more risks to children then covid itself!

This simply cannot happen.

I along with several other community members and parents will pull out children from public education and the system will never see a monetary contribution from us again

We beg you to consider. Wait this out. Kids are doing fine. Do not create more reasons for social emotional mental illness....please please do not do it.

Beyond the ethical and financial burden, simply consider the social emotional health of our youth.....future leaders of this country when you create a greater divide and emotional instability

With incredible grace and faith that you will not force a mandate to vaccinate

Subject: Public Comment - 1/7 Meeting - Say No to Mandate

External Email

This email is to publicly express my position to have choice when it comes to vaccinating our children for covid19 and express my position of being adamantly against the vaccine being a mandate for students in educational settings and school age children.

I vote NO on mandating covid19 vaccines in schools for children under the age of 18.

Respectfully submitted,
Hope Reyes

RE: Comments for the Immunizations Technical Advisory Group

To the Washington State Board of Health, Technical Advisory Group on Covid vaccines for schoolchildren.

People across the state have hoped that COVID-19 vaccines would work as a...well, as a vaccine. Vaccines are supposed to prevent infection and transmission.

Yet, the makers of the shots can't say they prevent infection or transmission. The CDC Director Walensky is quoted a few months ago as saying the same thing.

On Wednesday December 15th, the New England Journal of Medicine published an editorial Perspective by three authors, including one Anthony Fauci. They make a case for better, different vaccines while admitting: "As important as these vaccines are, however, their protective efficacy wanes over time, necessitating booster doses. Vaccination has also been unable to prevent "breakthrough" infections, allowing subsequent transmission to other people ..." [emphasis added]

<https://www.nejm.org/doi/pdf/10.1056/NEJMp2118468>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.nejm.org%2Fdoi%2Fpdf%2F10.1056%2FNEJMp2118468>>

If a product doesn't do what was intended, how can it be mandated? Let alone approved? Now people's intelligence is further insulted as many agencies are changing the definition of a vaccine to sound more like a typical medicine that reduces symptoms. The shots are hardly worth mandating on a school entry list when it doesn't work as a vaccine. You might as well mandate Dayquil for Kids - it reduces symptoms of the common cold and allows transmission of the cold viruses too.

Many other states have gone so far as to make mandates illegal.

There are now a lot of safety and effectiveness data on the one-size-fits-all solution being forced on everyone. Public comments made to the Board of Health during the pandemic are not misinformation. It is the missing information - factual information supported by hundreds, if not thousands of scientific studies and doctors and PhDs proving the products do not work as advertised. What is indisputable about the COVID shots? Risk. The chance of significant personal or child harm, coupled with the ineffectiveness of the products, does not warrant mandates. Policy not backed by sound rationale is arbitrary and amounts to punishment for many.

The argument against including COVID shots on the WA school mandate list can be summed up concisely:

- * Children and adolescents are not at measurable risk from bad infections, so they don't need the shot.
- * The shots don't prevent transmission, so the argument to have the kids take the shots to protect older people doesn't hold water.
- * The shots have only been in children for about 12 months. The virus will be endemic before any long-term effects of the shots are understood in the young.

To consider this shot for schoolchildren while the products are waning in efficacy and remain under Emergency Use Authorization is only more proof you are being manipulated by a narrative that's myopically focused on a one-size-fits-all approach since the beginning of the pandemic.

If you recommend that COVID shots be added to the school schedule, the Public Health agencies will lose what little credibility remains and no one will listen when a truly bad health emergency arises.

Sincerely,

Robert Runnells

Vancouver, WA

RE: Comments for the Immunizations Technical Advisory Group

Please SAY NO to state mandated Covid-19 shots for children!

For profit, experimental gene therapy Covid shots should absolutely NOT be a requirement for our children. Children are at extremely low risk for Covid and the vaccines are still only EUA (emergency use authorization).

Please read this October 2021 study "COVID vaccination and age-stratified all-cause mortality risk" by Spiro Pantazatos of Columbia University and Herve Seligman:

https://www.researchgate.net/publication/355581860_COVID_vaccination_and_age-stratified_all-cause_mortality_risk

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.researchgate.net%2Fpublication/355581860_COVID_vaccination_and_age-stratified_all-cause_mortality_risk&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C243925d8d1ab4c4dc7a308d9cfc3a2>

conclusion: "The estimate converges with independent estimates based on the Vaccine Adverse Events Reporting System (VAERS) and suggests VAERS deaths are 15

underreported by a factor of 20

The estimate converges with independent estimates based on the Vaccine Adverse Events Reporting System (VAERS) and suggests VAERS deaths are 15

underreported by a factor of 20

Parents and children cannot give informed consent to get a vaccine with scientific results that prove the vaccine is more dangerous than Covid-19 and no studies yet on female ovaries, neurological disease, autoimmune disease, cancer or enough study of young males developing myocarditis.

Thank you for standing up for truth.

Patients With Acute Myocarditis Following mRNA COVID-19 Vaccination

Han W. Kim, MD; Elizabeth R. Jenista, PhD; David C. Wendell, PhD; Clerio F. Azevedo, MD; Michael J. Campbell, MD; Stephen N. Darty, BS; Michele A. Parker, MS; Raymond J. Kim, MD

IMPORTANCE Vaccine-associated myocarditis is an unusual entity that has been described for the smallpox vaccine, but only anecdotal case reports have been described for other vaccines. Whether COVID-19 vaccination may be linked to the occurrence of myocarditis is unknown.

OBJECTIVE To describe a group of 7 patients with acute myocarditis over 3 months, 4 of whom had recent messenger RNA (mRNA) COVID-19 vaccination.

DESIGN, SETTING, AND PARTICIPANTS All patients referred for cardiovascular magnetic resonance imaging at Duke University Medical Center were asked to participate in a prospective outcomes registry. Two searches of the registry database were performed: first, to identify patients with acute myocarditis for the 3-month period between February 1 and April 30 for 2017 through 2021, and second, to identify all patients with possible vaccine-associated myocarditis for the past 20 years. Once patients with possible vaccine-associated myocarditis were identified, data available in the registry were supplemented by additional data collection from the electronic health record and a telephone interview.

EXPOSURES mRNA COVID-19 vaccine.

MAIN OUTCOMES AND MEASURES Occurrence of acute myocarditis by cardiovascular magnetic resonance imaging.

RESULTS In the 3-month period between February 1 and April 30, 2021, 7 patients with acute myocarditis were identified, of which 4 occurred within 5 days of COVID-19 vaccination. Three were younger male individuals (age, 23-36 years) and 1 was a 70-year-old female individual. All 4 had received the second dose of an mRNA vaccine (2 received mRNA-1273 [Moderna], and 2 received BNT162b2 [Pfizer]). All presented with severe chest pain, had biomarker evidence of myocardial injury, and were hospitalized. Coincident testing for COVID-19 and respiratory viruses provided no alternative explanation. Cardiac magnetic resonance imaging findings were typical for myocarditis, including regional dysfunction, late gadolinium enhancement, and elevated native T1 and T2.

CONCLUSIONS AND RELEVANCE In this study, magnetic resonance imaging findings were found to be consistent with acute myocarditis in 7 patients; 4 of whom had preceding COVID-19 vaccination. Further investigation is needed to determine associations of COVID-19 vaccination and myocarditis.

Vaccine-associated myocarditis is an unusual entity that has been described for the smallpox vaccine,¹ but otherwise only anecdotal case reports have been described for other vaccines. Among 416 629 adults receiving live measles, mumps, and rubella; varicella; oral polio; or yellow fever viral vaccinations in the Vaccine Safety Datalink, there were no patients with myocarditis in the 42 days following vaccination.² There are a few case reports of myocarditis following the seasonal influenza vaccine in otherwise healthy adults,^{3,4} but a causal relationship is difficult to establish and the case reports could have been due to chance.

In late December 2020, COVID-19 vaccination began in the US, and on April 7, 2021, vaccination was opened to all adults 16 years or older in North Carolina. Here, we report cardiac magnetic resonance (CMR) imaging findings in 4 patients consistent with acute myocarditis at our institution; all 4 had recent vaccination for COVID-19. All presented with severe chest pain associated with biomarker evidence of myocardial injury and were hospitalized. Included are data on clinical presentation and results from in-hospital testing. To provide context, we also report the prevalence of acute myocarditis by CMR imaging at our institution during the same 3-month period for each of the past 5 years.

Methods

All patients referred for CMR imaging at Duke University Medical Center are asked to participate in a prospective CMR imaging outcomes registry, which contains clinical data, finalized clinical CMR imaging reports, and full Digital Imaging and Communications in Medicine image data sets.⁵ The registry has been approved by the institutional review board at Duke University Medical Center, and all patients sign informed consent prior to participating.

We performed 2 searches of the registry. First, to identify patients with acute myocarditis for February, March, and April of 2017 through 2021, a search for the term *myocarditis* was performed within the report summary and limited to the relevant time period. Second, to identify all patients with possible vaccine-associated myocarditis for the past 20 years, we searched for the terms *vaccine* or *vaccination* in the report

Key Points

Question Is COVID-19 vaccination linked to the occurrence of myocarditis?

Findings In this study of 7 patients with acute myocarditis, 4 occurred within 5 days of COVID-19 vaccination between February 1 and April 30, 2021. All 4 patients had received the second dose of a messenger RNA (mRNA) vaccine, presented with severe chest pain, had biomarker evidence of myocardial injury, were hospitalized, and had cardiac magnetic resonance imaging findings typical of myocarditis.

Meaning Although causality cannot be established, the findings raise the possibility of an association between mRNA COVID-19 vaccination and acute myocarditis.

summary and the history fields without limitation in the time period. A second independent reviewer performed the same searches and confirmed the counts. Once patients with possible vaccine-associated myocarditis were identified, data available in the registry were supplemented with information from the electronic health record and telephone interview.

CMR imaging was performed on 1.5-T or 3-T scanners. A standard protocol for myocarditis was used, which included cine, T1 and T2 mapping, and late gadolinium enhancement (LGE).^{6,7} Native T1 and T2 times were measured on pixelwise maps with regions drawn to match areas with and without LGE. Cutoffs for abnormally elevated T1 and T2 were based on 2 SDs above the respective means in a healthy population imaged on the same scanners.

Results

In the 3-month period between February 1 and April 30, 2021, we identified 7 patients with acute myocarditis of whom 4 had recent COVID-19 vaccination (**Figure 1**). A search of the entire registry identified a single additional patient with myocarditis diagnosed by CMR imaging within days following quadrivalent influenza vaccination. The patient was a member of the military, and

Figure 1. Patients With Cardiac Magnetic Resonance Imaging Findings Consistent With Acute Myocarditis

The total number of patients with acute myocarditis is highest for 2021 with 4 associated with recent COVID-19 vaccination. Only 1 patient had myocarditis associated with acute COVID-19 infection.

Table. Characteristics of Patients Who Received COVID-19 Vaccination

Characteristic	Patient 1	Patient 2	Patient 3	Patient 4

(continued)

this was his second episode; he had documented myocarditis associated with smallpox vaccination 4 years earlier.

The clinical characteristics of the 4 patients with myocarditis following COVID-19 vaccination are shown in the **Table**. Data on race and ethnicity were not available. Three were younger male individuals (age, 23-36 years) and 1 was a 70-year-old female individual. All 4 had received the second dose of a messenger RNA (mRNA) vaccine (2 received mRNA-1273 [Moderna], and 2 received BNT162b2 [Pfizer-BioNTech]) between 1 and 5 days before hospitalization. None had a viral prodrome or prior COVID-19 infection. COVID-19 and respiratory virus polymerase chain reaction test results were negative in 3 and 2 patients, respectively, who underwent testing. None had acute pulmonary disease on chest radiograph.

All 4 patients had abnormal electrocardiogram results and elevated troponin levels. The older female individual underwent coronary angiography, which revealed no atherosclerosis. CMR imaging was performed between 3 and 5 days after vaccination. All had regional wall motion abnormalities on cine imaging, and ejection fraction ranged between 40% and 59%. LGE was present in a nonischemic pattern consistent with

myocarditis in all 4 patients (**Figure 2**). Both native T1 and T2 were elevated in the regions with LGE, consistent with acute injury, except in 1 patient who did not have a T2 map acquired at a slice location that included an area with LGE. Pericardial thickness was normal in all, and no patients had pericardial LGE.

The hospital courses for all 4 were uneventful without evidence of arrhythmias or heart failure, and treatment was conservative with nonsteroidal anti-inflammatory drug and colchicine, with 1 receiving corticosteroids. All were discharged within 2 to 4 days of hospitalization.

Discussion

We identified at our institution 4 patients with acute myocarditis occurring within days of mRNA COVID-19 vaccination. Although a causal relationship cannot be established, we note that none had a viral prodrome or had coincident testing (including COVID-19 polymerase chain reaction and respiratory virus polymerase chain reaction) that revealed an alter-

^a Upper respiratory tract symptoms, fever, muscle aches.

^b Performed within 2 days after the onset of chest pain in those who underwent testing.

^c Isothermal COVID-19 test was performed (Abbott ID Now; lower detection limit of 125 genome equivalent/mL).

^d Real-time PCR COVID-19 test was performed (Cepheid Xpert Xpress SARS-CoV-2; lower detection limit of 131 copies/mL).

^e Influenza A, influenza B, respiratory syncytial virus.

native explanation. None had COVID-19 infection in the prior year, suggesting that myocarditis from subsequent multisystem inflammatory syndrome is also unlikely.⁸ Additionally, the diagnosis of acute myocarditis was straightforward. The presenting symptom was acute onset of severe chest pain, and myocardial injury was detected by elevated troponin levels in all patients. CMR imaging abnormalities were observed across multiple techniques (regions with wall motion abnormalities on cine imaging–matched regions with LGE and regions with abnormal native T1 and T2) and cannot be attributed to image artifacts. Moreover, the concordant findings were typical for

acute myocarditis. Hence, it is possible that these 4 cases of acute myocarditis represent a rare, potential adverse event linked to mRNA COVID-19 vaccination.

On January 7, 2021, the first patients at our institution began receiving COVID-19 vaccines, and vaccination was opened to all people 16 years and older on April 7, 2021. The first patient at our institution with myocarditis following COVID-19 vaccination was observed in the middle of February 2021, in line with the timing of the second vaccination dose. As of April 30, 2021, there were 561 197 individuals in North Carolina living in the 6 counties surrounding our institution who had been fully vaccinated against

Figure 2. Cardiac Magnetic Resonance Imaging in Patients With Acute Myocarditis Following COVID-19 Vaccination

Late gadolinium enhancement (LGE) images and T1 maps are shown in 4 patients who recently received COVID-19 vaccine. Patients 1, 2, and 4 demonstrate epicardial LGE, and patient 3 demonstrates patchy, diffuse LGE

(pink arrowheads), which are consistent with myocarditis. T1 maps demonstrate abnormal (elevated) native T1 in the regions with LGE (blue arrowheads).

COVID-19 infection, representing 33% of the population (state-wide, 99.1% received an mRNA vaccine).⁹ Since we have identified 4 patients with myocarditis following vaccination, this indicates that if COVID-19 vaccination is associated with myocarditis, it is quite rare. Nonetheless, these 4 patients represent the majority of patients with acute myocarditis identified in the past 3 months at our institution, and this led to the highest total number of patients with acute myocarditis compared with the same 3-month period for the past 5 years (Figure 1). Additionally, we identified only those patients with severe unremitting chest pain who sought medical attention. Those with mild or moderate chest pain might not seek medical attention, and it is possible that sub-clinical myocarditis may occur and could be detected by active surveillance, as has been described with smallpox vaccination.¹⁰

Fortunately, the hospital courses of the 4 patients with myocarditis following COVID-19 vaccination were unevent-

ful, and they were discharged within 2 to 4 days. In brief follow-up, none required rehospitalization (1 was seen in the emergency department for chest pain with negative troponin and pro-brain-type natriuretic peptide levels and was discharged), suggesting that the early prognosis could be benign. This is consistent with the study by Ammirati et al¹¹ that showed that the cardiac mortality plus transplant rate was 0% at 5 years in patients with an uncomplicated presentation of acute myocarditis. Conversely, patients with a complicated presentation (left ventricular ejection fraction, <50% with sustained ventricular arrhythmias or a low cardiac output syndrome requiring inotropes or mechanical circulatory support) had a cardiac mortality plus transplant rate of 14.7% at 5 years. Further study is needed to determine the range of clinical presentations and outcomes for patients with myocarditis following mRNA vaccines.

Limitations

Several caveats should be considered. First, there is no control group, and it is not possible to compare rates of acute myocarditis between those randomly assigned to receive vaccination vs no vaccination. Second, given the media attention, there could be recall or referral bias after COVID-19 vaccination compared with other vaccine exposures, and any temporal link between vaccination and myocarditis could just be due to chance. Third, although tests for COVID-19 infection and respiratory viruses were undertaken in some of the patients, these tests are neither foolproof nor comprehensive. Finally, there is no serological data, which could provide evidence of an excessive response to vaccination or prior subclinical COVID-19 infection (as determined by antinucleocapsid antibodies).

Conclusions

The findings from the present report raise the possibility of an association between mRNA COVID-19 vaccination and acute myocarditis. Since most individuals in North Carolina have received mRNA vaccines, it remains unknown if acute myocarditis will be observed following non-mRNA vaccines. Additionally, whether patients who experience acute myocarditis following COVID-19 vaccination should receive subsequent booster vaccinations for COVID-19 variants (or annual vaccinations for prophylaxis, if needed) is an open question, and the risk vs benefit profile will have to be considered carefully.

Myocarditis Following Immunization With mRNA COVID-19 Vaccines in Members of the US Military

Jay Montgomery, MD; Margaret Ryan, MD, MPH; Renata Engler, MD; Donna Hoffman, MSN; Bruce McClenathan, MD; Limone Collins, MD; David Loran, DNP; David Hrcir, MD; Kelsie Herring, MD; Michael Platzer, MD; Nehkonti Adams, MD; Aliye Sanou, MD; Leslie T. Cooper Jr, MD

IMPORTANCE Myocarditis has been reported with COVID-19 but is not clearly recognized as a possible adverse event following COVID-19 vaccination.

OBJECTIVE To describe myocarditis presenting after COVID-19 vaccination within the Military Health System.

DESIGN, SETTING, AND PARTICIPANTS This retrospective case series studied patients within the US Military Health System who experienced myocarditis after COVID-19 vaccination between January and April 2021. Patients who sought care for chest pain following COVID-19 vaccination and were subsequently diagnosed with clinical myocarditis were included.

EXPOSURE Receipt of a messenger RNA (mRNA) COVID-19 vaccine between January 1 and April 30, 2021.

MAIN OUTCOMES AND MEASURES Clinical diagnosis of myocarditis after COVID-19 vaccination in the absence of other identified causes.

RESULTS A total of 23 male patients (22 currently serving in the military and 1 retiree; median [range] age, 25 [20-51] years) presented with acute onset of marked chest pain within 4 days after receipt of an mRNA COVID-19 vaccine. All military members were previously healthy with a high level of fitness. Seven received the BNT162b2-mRNA vaccine and 16 received the mRNA-1273 vaccine. A total of 20 patients had symptom onset following the second dose of an appropriately spaced 2-dose series. All patients had significantly elevated cardiac troponin levels. Among 8 patients who underwent cardiac magnetic resonance imaging within the acute phase of illness, all had findings consistent with the clinical diagnosis of myocarditis. Additional testing did not identify other etiologies for myocarditis, including acute COVID-19 and other infections, ischemic injury, or underlying autoimmune conditions. All patients received brief supportive care and were recovered or recovering at the time of this report. The military administered more than 2.8 million doses of mRNA COVID-19 vaccine in this period. While the observed number of myocarditis cases was small, the number was higher than expected among male military members after a second vaccine dose.

CONCLUSIONS AND RELEVANCE In this case series, myocarditis occurred in previously healthy military patients with similar clinical presentations following receipt of an mRNA COVID-19 vaccine. Further surveillance and evaluation of this adverse event following immunization is warranted. Potential for rare vaccine-related adverse events must be considered in the context of the well-established risk of morbidity, including cardiac injury, following COVID-19 infection.

Myocarditis is a heterogeneous disease with diverse clinical patterns, etiologies, and therapeutic responses, reflecting inflammatory injury to myocardial tissue in the absence of ischemia.¹ While viral infections, now including SARS-CoV-2, are the most common triggers of the disease, some myocarditis cases are associated with certain drugs and vaccine exposures.¹ With the exception of cases following live-attenuated smallpox vaccine in the military population,² myocarditis as an adverse event following immunization is described in rare published case reports and infrequent submissions to the Vaccine Adverse Events Reporting System (VAERS).^{3,4}

Serious adverse events associated with receipt of new vaccines targeting COVID-19 are of high interest to the public and to public health vaccine safety surveillance. We describe a series of 23 individuals who developed probable hypersensitivity myocarditis in temporal association with COVID-19 messenger RNA (mRNA) vaccination.

Methods

The US military initiated COVID-19 vaccination following US Centers for Disease Control and Prevention (CDC)-defined phased distribution in December 2020. Adverse events following immunizations were identified from referrals to Defense Health Agency clinical specialists and through review of VAERS reports. Retrospective review of cases was conducted in accordance with the Walter Reed National Military Medical Center Institutional Review Board-approved protocol, "Adverse Events Following Immunization: Case Definitions and Outcomes Retrospective Review," and exempt from formal consent procedures.

Results

A total of 23 male patients (22 currently serving in the military and 1 retiree; median [range] age, 25 [20-51] years) were evaluated between January and April 2021 for acute-onset chest pain following mRNA COVID-19 vaccination. Care was provided in 15 distinct geographic locations globally with varying diagnostic evaluations. Each patient had a final diagnosis of myocarditis without infectious, ischemic, or autoimmune

Key Points

Question Should myocarditis be considered a potential adverse event following immunization with messenger RNA (mRNA) COVID-19 vaccines?

Findings In this case series of 23 male patients, including 22 previously healthy military members, myocarditis was identified within 4 days of receipt of a COVID-19 vaccine. For most patients (n = 20), the diagnosis was made after the second dose of mRNA COVID-19 vaccine; these episodes occurred against the backdrop of 2.8 million doses of mRNA COVID-19 vaccines administered.

Meaning Vigilance for rare adverse events, including myocarditis, after COVID-19 vaccination is warranted but should not diminish overall confidence in vaccination during the current pandemic.

etiologies identified. Diagnoses were reviewed by an adjudication process and met the CDC case definition criteria for probable myocarditis (Table 1). A total of 8 patients had cardiac magnetic resonance imaging (cMRI) with T2 weighting showing subepicardial late gadolinium enhancement and/or focal myocardial edema, consistent with Lake Louise criteria for myocarditis.¹ The eFigure in the Supplement exemplifies cMRI findings for one of these patients.

The demographic and clinical characteristics of patients are summarized in Table 2. All military service members were physically fit by military standards and lacking any known history of cardiac disease, significant cardiac risk factors, or exposure to cardiotoxic agents. All patients presented with acute chest pain and significantly elevated cardiac troponin levels (10-fold to 400-fold the upper limits of their respective reference ranges). Their symptoms began within 12 to 96 hours following immunization with an mRNA COVID-19 vaccine. Sixteen had received the mRNA-1273 vaccine (Moderna), and 7 had received the BNT162b2-mRNA vaccine (Pfizer-BioNTech). For all but 3 patients, the second dose of vaccine preceded their myocarditis presentations. Among the 3 patients presenting after an initial vaccine dose, all had confirmed COVID-19 infection more than 2 months prior to vaccination.

All patients underwent electrocardiography and echocardiography (Table 2). Abnormal electrocardiography findings were recorded in 19 patients (83%); findings included ST-segment elevations, T-wave inversions, and nonspecific ST

Table 1. Case Definition Criteria for Myocarditis Following Immunization^a

Suspected case	Probable case	Confirmed case
Dyspnea, palpitations, or chest pain of probable cardiac origin, with either one of the following: A. ECG abnormalities beyond normal variants, not documented previously, including: • ST-segment/T-wave abnormalities • Paroxysmal or sustained atrial or ventricular arrhythmias • AV nodal conduction delays or intraventricular conduction defects • Continuous ambulatory ECG monitoring that detects frequent atrial or ventricular ectopy B. Focal or diffuse depressed LV function of indeterminate age identified by an imaging study	Meets criteria for suspected myocarditis, in the absence of other likely cause of symptoms, in addition to one of the following: A. Elevated cardiac enzymes (troponin-I, troponin-T, or creatine kinase-MB) B. New-onset or increased degree of severity of focal or diffuse depressed LV function by imaging C. Abnormal imaging findings indicating myocardial inflammation (cardiac MRI with gadolinium, gallium-67 scanning, antimyosin antibody scanning)	Histopathologic evidence of myocarditis by endomyocardial biopsy or autopsy

Abbreviations: ECG, electrocardiography; LV, left ventricular; MRI, magnetic resonance imaging.

^a This definition was originally developed to evaluate cardiac events after smallpox vaccine. The definition is currently being reviewed by the international Brighton Collaboration for application to COVID-19 vaccine.

Positive	3 (13)
Negative	20 (87)

Abbreviations: LVEF, left ventricular ejection fraction; MRI, magnetic resonance imaging; mRNA, messenger RNA; PCR, polymerase chain reaction.

^a Inconsistencies in troponin types and laboratory sensitivity of testing preclude reporting combined quantified results.

^b Electrocardiogram findings included ST elevations, T-wave inversions, and nonspecific ST changes.

^c Echocardiogram findings are reported as LVEF; no structural abnormalities were noted in any patients.

^d All abnormal cardiac MRIs reportedly met current Lake Louise criteria for myocarditis, with subepicardial late gadolinium enhancement and/or focal myocardial edema.

^e Testing for other acute viral infections varied in each case; panels included some or all of these pathogens: coxsackie viruses, cytomegalovirus, Epstein-Barr virus, hepatitis A virus, hepatitis B virus, hepatitis C virus, herpes simplex virus, human herpesvirus 6, HIV, influenza viruses, and parvoviruses.

Table 3. Expected vs Observed Cases of Myocarditis in Military Health System Patients Based on Number of Messenger RNA (mRNA) COVID-19 Vaccine Doses Administered

Doses of mRNA COVID-19 vaccine (through April 30, 2021)	No. of myocarditis cases
	Expected ^a Observed
2 810 000 Total doses	2 to 52 23
1 065 000 Second doses	1 to 20 20
544 000 Second doses to military members	0 to 10 19
436 000 Second doses to male military members	0 to 8 19

^a Expected number is based on an expected annual incidence ranging from 1 per 100 000 person-years to 22 per 100 000 person-years^{5,6} presenting within a 30-day period after vaccination.

changes. Echocardiography in 4 patients (17%) demonstrated reduced left ventricular ejection fractions (40% to 50%). No structural abnormalities were noted on any echocardiograms. A total of 16 patients underwent coronary artery imaging (11 had cardiac catheterization and 5 had coronary computed tomography angiography); none showed evidence of coronary artery disease.

Nineteen patients had respiratory specimens tested for SARS-CoV-2 by polymerase chain reaction at the time of presentation; none had evidence of acute SARS-CoV-2 infection. There were no positive findings among 13 patients who were tested for other infections, nor among 9 patients who were tested for autoimmune diseases.

Cardiac symptoms resolved within 1 week of onset for 16 patients. Seven patients continued to have chest discomfort at the time of this report; follow-up is ongoing.

The number of doses of mRNA COVID-19 vaccine administered by the Military Health System through April 30, 2021, is shown in Table 3. Overall, 2 810 000 doses were administered; 1 065 000 second doses were administered; 544 000 second doses were administered to military service members; and 436 000 second doses were administered to male military service members. The expected number of myocarditis cases occurring in a 30-day period after vaccination may be estimated using an international incidence of 22 cases per 100 000 person-years⁵ or a US incidence of 1 to 10 cases per 100 000 person-years.⁶ Observed numbers of myocarditis in the Military Health System were higher than some estimates of expected numbers, especially when considering the subset of the population who were military service members who received second doses of an mRNA COVID-19 vaccine (Table 3).

Discussion

In this case series, we describe 23 patients with clinical evidence of myocarditis following mRNA COVID-19 vaccination and meeting the CDC case definition for probable myocarditis. Eight patients had cMRI findings consistent with myocarditis. All patients in this series reflect substantial similarities in demographic characteristics, proximate vaccine dose, onset interval, and character of vaccine-associated myocarditis. The consistent pattern of clinical presentation, rapid recovery, and absence of evidence of

other causes support the diagnosis of hypersensitivity myocarditis. Without myocardial biopsy, histology cannot be defined, but the clinical course suggests eosinophilic hypersensitivity myocarditis as described in the context of other drug-associated and vaccine-associated myocarditis.¹⁻³ Presentation after second vaccine dose or, in 3 patients, when vaccination followed SARS-CoV-2 infection, suggests that prior exposure was relevant in the hypersensitivity response.

With the exception of the smallpox vaccine, immunizations are rarely associated with hypersensitivity myocarditis. The spectrum of clinical presentation and reliance on patients seeking health care and on health care professionals recognizing a rare vaccine-associated adverse event limits determination of the true incidence of this condition.⁷ In contrast to passive case finding, Engler et al² reported a significantly higher incidence of myocarditis and pericarditis after smallpox vaccination through active prospective follow-up of vaccinated participants. They noted that 60% of these patients would not have sought medical care for symptoms outside of the study protocol.² Recognition of vaccine-associated myocarditis is clinically important since diagnosis impacts management, recommendations for exercise, and monitoring for cardiomyopathy.⁸

Notably, myocarditis cases were not reported following vaccination in clinical trials of current COVID-19 vaccines.^{9,10} Adverse cardiac events of any kind were reported in less than 0.1% of trial participants, and rates were not higher in recipients of vaccine compared with placebo. The inability to identify rare adverse events is understandable in preauthorization testing since fewer than 20 000 participants received a vaccine in each trial.

Background rates of myocarditis in the general population are variable and may be challenging to determine. As noted, a global estimate of incidence is 22 cases per 100 000 person-years.⁵ More recent estimates of US incidence are lower (1 to 10 cases per 100 000 person-years) and may be more appropriate for estimating expected rates of diagnoses in evaluations of immunization safety.⁶ Applying both the US and global background incidence to the population vaccinated by the US military yields a range of expected numbers of cases of myocarditis in this period (Table 3). The observed number of male military members who experienced myocarditis after their second dose of mRNA vaccine, while relatively small, is substantially higher than the expected number.

Finally, it is important to frame concerns about potential vaccine-associated myocarditis within the context of the cur-

rent pandemic. Infection with SARS-CoV-2 is a clear cause of serious cardiac injury in many patients.¹¹ The mechanism of injury may be direct infection, an immune-mediated response, or a combination of direct or indirect effects. Prevalence of cardiac injury may be as high as 60% in seriously ill patients. Notably, nearly 1% of highly fit athletes with mild COVID-19 infection have evidence of myocarditis on cMRI.^{12,13} Given that COVID-19 vaccines are remarkably effective at preventing infection, any risk of rare adverse events following immunization must be carefully weighed against the very substantial benefit of vaccination.

Limitations

Important limitations to this case series should be considered. Passive surveillance, even when stimulated by global attention on vaccine safety, may not identify all cases. The patients described in this report were identified in a brief period of observation after vaccine implementation from a cohort of essential workers who are not necessarily representative of the general population. Clinical evaluations varied and did not include complete testing in some patients who received care in different hospitals and in different countries. In particular, consistent application of cMRI and thorough viral testing would have strengthened clinical conclusions. This early report is also unable to describe longer-term outcomes among these patients. Despite limitations of this review, it is notable that the clinical presentations of these 23 patients appear consistent with other recent case reports of myocarditis after second doses of mRNA COVID-19 vaccines.^{14,15}

Conclusions

We report a case series of probable hypersensitivity myocarditis with consistent temporal association to receipt of an mRNA COVID-19 vaccine. While the true incidence of this adverse event is unknown at this time, the presentation pattern and clinical course suggest an association with an inflammatory response to vaccination. Increased attention to myocarditis as a potential adverse event following immunization is warranted. Recognition of the substantial morbidity associated with COVID-19 infection, including risk of cardiac injury, and the strong effectiveness of immunization in preventing infection provide important context for this topic. Concerns about rare adverse events following immunization should not diminish overall confidence in the value of vaccination.

Experimental Assessment of Carbon Dioxide Content in Inhaled Air With or Without Face Masks in Healthy Children: A Randomized Clinical Trial

Many governments have made nose and mouth covering or face masks compulsory for schoolchildren. The evidence base for this is weak.^{1,2} The question whether nose and mouth covering increases carbon dioxide in inhaled air is crucial. A large-scale survey³ in Germany of adverse effects in parents and children using data of 25 930 children has shown that 68% of the participating children had problems when wearing nose and mouth coverings.

The normal content of carbon dioxide in the open is about 0.04% by volume (ie, 400 ppm). A level of 0.2% by volume or 2000 ppm is the limit for closed rooms according to the German Federal Environmental Office, and everything beyond this level is unacceptable.⁴

Methods | We measured carbon dioxide content in inhaled air with and without 2 types of nose and mouth coverings in a well-controlled, counterbalanced, short-term experimental study in volunteer children in good health (details are in the eMethods in [Supplement 1](#)). The study was conducted according to the Declaration of Helsinki and submitted to the ethics committee of the University Witten/Herdecke. All children gave written informed consent, and parents also gave written informed consent for children younger than 16 years. A 3-minute continuous measurement was taken for baseline carbon dioxide levels without a face mask. A 9-minute measurement for each type of mask was allowed: 3 minutes for measuring the carbon dioxide content in joint inhaled and exhaled air, 3 minutes for measuring the carbon dioxide content during inhalation, and 3 minutes for measuring the carbon dioxide content during exhalation. The carbon dioxide content of ambient air was always kept well under 0.1% by volume through multiple ventilations. The sequence of masks was randomized, and randomization was blinded and stratified by age of children. We analyzed data using a linear model for repeated measurements with $P < .05$ as the significance threshold. The measurement protocol (trial protocol in [Supplement 2](#)) is available online.⁵ Data were collected on April 9 and 10, 2021, and analyzed using Statistica version 13.3 (TIBCO).

Results | The mean (SD) age of the children was 10.7 (2.6) years (range, 6-17 years), and there were 20 girls and 25 boys. Measurement results are presented in the **Table**. We checked potential associations with outcome. Only age was associated with carbon dioxide content in inhaled air ($y = 1.9867 - 0.0555 \times x$; $r = -0.39$; $P = .008$; **Figure**). Hence, we added age as a continuous covariate to the model. This revealed an association (partial $\eta^2 = 0.43$; $P < .001$). Contrasts showed that this was attributable to the difference between the baseline value and the values of both masks jointly. Contrasts between the 2 types of masks were not significant. We measured means (SDs) between 13 120 (384) and 13 910 (374) ppm of carbon dioxide in inhaled air under surgical and filtering facepiece 2 (FFP2) masks, which is higher than what is already deemed unacceptable by the German Federal Environmental Office by a factor of 6. This was a value reached after 3 minutes of measurement. Children under normal conditions in schools wear such masks for a mean of 270 (interquartile range, 120-390) minutes.³ The **Figure** shows that the value of the child with the lowest carbon dioxide level was 3-fold greater than the limit of 0.2 % by volume.⁴ The youngest children had the highest values, with one 7-year-old child's carbon dioxide level measured at 25 000 ppm.

Table. Carbon Dioxide Values Under Various Conditions

Measurement	Participants, No.	Carbon dioxide, % by volume	
		Mean (SD) [95% CI]	Range
Baseline

Carbon dioxide content in ambient air	NA	0.074 (0.003) [0.073-0.075]	0.067-0.083

Abbreviations: FFP, filtering facepiece; NA, not applicable.

^a Posttest scores were missing in 6 children because they stopped the measurement after wearing the masks.

This article has been retracted

Figure. Scatterplot of Carbon Dioxide Content in Inhaled Air Under Filtering Facepiece Mask by Age

Linear regression line with locally weighted scatterplot smoothing.

Discussion | The limitations of the study were its short-term nature in a laboratory-like setting and the fact that children were not occupied during measurements and might have been apprehensive. Most of the complaints reported by children³ can be understood as consequences of elevated carbon dioxide levels in inhaled air. This is because of the dead-space volume of the masks, which collects exhaled carbon dioxide quickly after a short time. This carbon dioxide mixes with fresh air and elevates the carbon dioxide content of inhaled air under the mask, and this was more pronounced in this study for younger children.

This leads in turn to impairments attributable to hypercapnia. A recent review⁶ concluded that there was ample evidence for adverse effects of wearing such masks. We suggest that decision-makers weigh the hard evidence produced by these experimental measurements accordingly, which suggest that children should not be forced to wear face masks.

Subject: Public Comment - children vaccine mandate

External Email

Greetings,

I am a parent of three kids ranging from 14 down to 4.
I am 100% opposed to mandating the covid vaccine as a part of WA states vaccine requirements for school.

It is irresponsible to mandate these vaccines for kids when the threat to kids is so incredibly minimal, and we have zero long-term studies on their after-effects.

Do not mandate this vaccine. I repeat - do NOT mandate this vaccine for kids.

Thank you,
Laurie Jensen
Spokane County resident

THE NUREMBERG CODE

1. The voluntary consent of the human subject is absolutely essential.

This means that the person involved should have legal capacity to give consent; should be so situated as to be able to exercise free power of choice, without the intervention of any element of force, fraud, deceit, duress, over-reaching, or other ulterior form of constraint or coercion; and should have sufficient knowledge and comprehension of the elements of the subject matter involved, as to enable him to make an understanding and enlightened decision. This latter element requires that, before the acceptance of an affirmative decision by the experimental subject, there should be made known to him the nature, duration, and purpose of the experiment; the method and means by which it is to be conducted; all inconveniences and hazards reasonably to be expected; and the effects upon his health or person, which may possibly come from his participation in the experiment.

The duty and responsibility for ascertaining the quality of the consent rests upon each individual who initiates, directs or engages in the experiment. It is a personal duty and responsibility which may not be delegated to another with impunity.

2. The experiment should be such as to yield fruitful results for the good of society, unprocurable by other methods or means of study, and not random and unnecessary in nature.
3. The experiment should be so designed and based on the results of animal experimentation and a knowledge of the natural history of the disease or other problem under study, that the anticipated results will justify the performance of the experiment.
4. The experiment should be so conducted as to avoid all unnecessary physical and mental suffering and injury.
5. No experiment should be conducted, where there is an a priori reason to believe that death or disabling injury will occur; except, perhaps, in those experiments where the experimental physicians also serve as subjects.
6. The degree of risk to be taken should never exceed that determined by the humanitarian importance of the problem to be solved by the experiment.
7. Proper preparations should be made and adequate facilities provided to protect the experimental subject against even remote possibilities of injury, disability, or death.
8. The experiment should be conducted only by scientifically qualified persons. The highest degree of skill and care should be required through all stages of the experiment of those who conduct or engage in the experiment.
9. During the course of the experiment, the human subject should be at liberty to bring the experiment to an end, if he has reached the physical or mental state, where continuation of the experiment seemed to him to be impossible.
10. During the course of the experiment, the scientist in charge must be prepared to terminate the experiment at any stage, if he has probable cause to believe, in the exercise of the good faith, superior skill and careful judgement required of him, that a continuation of the experiment is likely to result in injury, disability, or death to the experimental subject.

Subject: Public comment for January 12th meeting

External Email

Hello,

I would like to provide a comment for the meeting next week. The COVID vaccine should not be mandated for school children. Children are not dying from COVID unless they have an underlying health condition. They have an incredibly low risk of mortality. We do not know enough about these vaccines to mandate them. An FDA adviser actually said in a recent meeting that we need to give kids the vaccine to fully understand their safety. This is unacceptable. I am not going to risk my child's life with an experimental shot. These shots are not preventing anyone from getting COVID. They are not preventing transmission. To top all of this off, the criteria that pediatric vaccines are required to meet, have not been at all met by this vaccine. Please do not bow down to political pressure to accept the narrative without really doing the research and listening to ALL of the voices in the community.

Thank you,
Sarah Kaster

Subject: Public Comment NO to VAX CHILDREN

External Email

Children do not need to be vaxxed from covid. This is still experimental. Children hardly ever get covid and more will die from the side affects than the disease. There are a lot of side effects from this shot, that is not being talked about in the media. If a child dies from this, their death will be on YOUR hands.

Subject: children covid vaccination

External Email

Dear Kelie Kahler. Please find enclosed attachment from Sacred Heart medical Center informed consents for all three covid vaccines.

A few days ago, during WA State Board of Health meeting, the advisory group spoke of whether they should recommend adding Covid vaccination to current WA vaccine scheduled for school and daycare entry. Unfortunately, public comments were not allowed. The advisory group would be making a recommendation for our children without hearing from parents.

I strongly oppose the covid vaccine being added to the school and daycare schedule. As a nurse for 36 years, as a mother, and as a grandmother, I am shocked how easily we implement vaccines are being in clinical trial, particularly for kids. I have seen breakthrough cases and even vaccinated people died from covid. I have seen life threatening adverse reactions to vaccines.

Please look at cdc.org selected adverse reactions to vaccines. From 12/14/2020 to 12/20/2021, just for one year, there are 10 688 deaths from covid vaccines.

Children have mild to no symptoms. Why do we need to have them vaccinated?

COVID - MODERNA - CONSENT V1.7

* indicates required fields

COVID-19 MODERNA - CONSENT

MODERNA COVID-19 VACCINE is a vaccine developed by Moderna to prevent disease caused by COVID-19. This vaccine has been authorized by the US Food & Drug Administration (FDA) for use under an Emergency Use Authorization (EUA). There is no FDA approved vaccine to prevent COVID-19. The purpose of this form is to obtain your consent to receive this vaccine.

EXCLUSION QUESTIONS: ANSWERING YES TO ANY OF THESE QUESTIONS EXCLUDES YOU FROM RECEIVING THE VACCINE.

Do you have a known history of a severe allergic reaction (e.g., anaphylaxis) to any component of the Moderna COVID-19 Vaccine: SM-102, polyethylene glycol [PEG], 2000 dimyristoyl glycerol [DMG], cholesterol, and 1,2-distearoyl-sn-glycero-3-phosphocholine [DSPC]), tromethamine, tromethamine hydrochloride, acetic acid, sodium acetate, and sucrose.

Have you had an immediate allergic reaction of ANY severity to a previous dose of an mRNA COVID-19 vaccine or any of its components, including polyethylene glycol (PEG)?

Are you younger than 18 years of age?

ANSWERING "YES" TO THIS QUESTION EXCLUDES YOU FROM RECEIVING THE VACCINE AT THIS TIME

SCREENING QUESTIONS:

Immunizer: If patient answers "yes" to any of the below, provide patient counseling or instruct them to consult with their provider prior to receiving the vaccine.

Are you feeling sick today?

Have you ever received a dose of COVID-19 vaccine?

- If yes, which vaccine product did you receive?

If other, please provide name of vaccine

Have you had a new onset of fever, chills, cough, shortness of breath, difficulty breathing, fatigue, muscle or body aches, headache, new loss of taste or smell, sore throat, nausea, vomiting or diarrhea?

In the past two weeks have you tested positive for COVID-19?

In the past 90 days have you received passive antibody therapy (i.e. convalescent plasma or a monoclonal antibody) as part of COVID-19 treatment?

Are you pregnant or breastfeeding or do you plan to become pregnant?*

*** PREGNANT WOMEN AND BREASTFEEDING WOMEN HAVE NOT BEEN INCLUDED IN ANY COVID VACCINE CLINICAL TRIALS TO DATE, SO THERE IS CURRENTLY NO SAFETY DATA SPECIFIC FOR THIS POPULATION. IF YOU ARE PREGNANT, PLAN TO BECOME PREGNANT, OR ARE BREASTFEEDING, WE STRONGLY RECOMMEND YOU SPEAK TO YOUR CARE PROVIDER BEFORE GETTING THE VACCINE**

Are you immune compromised or on a medicine that affects your immune system?

Do you have a bleeding disorder or are you on a blood thinner?

Do you have a weakened immune system caused by something such as HIV infection or cancer or do you take immunosuppressive drugs or therapies?

Do you have a known polysorbate allergy?

Do you have history of myocarditis (inflammation of the heart muscle) or pericarditis (inflammation of the lining outside the heart)?

Do you have a history of severe allergic reaction (e.g. anaphylaxis) to another vaccine or injectable medication?

- If yes, what vaccine or injectable medication:

If yes to any of the above, I attest that I have discussed my condition with my provider and vaccination is recommended or I acknowledge that there may be risks and consent to proceed with vaccination

*Vaccinator: if patient answers yes to question concerning blood thinner, instruct patient to monitor injection site for bruising and swelling. If develops, patient may use compression and ice to relieve symptoms.

Caregiver safety is our number one priority. By receiving this COVID-19 vaccine you are agreeing to our safety protocol, which requires caregivers remain in the vaccination area for at least 15 minutes following their vaccination. This additional time is for caregiver safety and allows the vaccine team to monitor caregivers in the event of a reaction.

I KNOW THAT IF I HAVE A SEVERE ALLERGIC REACTION, INCLUDING DIFFICULTY BREATHING, SWELLING OF MY FACE AND/OR THROAT, A FAST HEARTBEAT, A BAD RASH ALL OVER MY BODY OR DIZZINESS AND WEAKNESS I SHOULD CALL 9-1-1 OR GO TO THE NEAREST HOSPITAL. I KNOW I CAN CALL MY HEALTH CARE PROVIDER IF I HAVE ANY SIDE EFFECTS THAT BOTHER ME OR DO NOT GO AWAY.

ACKNOWLEDGEMENT AND CONSENT TO RECEIVE VACCINATION

The following has been discussed with me or I have been provided information about:

1. The FDA has authorized the emergency use of Moderna COVID-19 Vaccine, which is not FDA approved in this population, for vaccination against COVID-19.
2. The option to accept or refuse vaccination and alternative options.
3. Information on available alternative vaccines and the risks and benefits of those alternatives.
4. Significant and potential risks and benefits of vaccination, and the extent to which they may occur, is not known at this time.

I HAVE BEEN PROVIDED A COPY AND/OR OPPORTUNITY TO REVIEW THE EUA FACT SHEET

- FDA Fact Sheet for Patients/Patients/Caregivers
- I have been provided a vaccination card with the timeframe for when I need to return for the second dose of Moderna COVID-19 Vaccine.

I understand and agree that this consent form and records relating to my vaccination will be maintained in designated records, including, if applicable, my medical record and/or my occupational health record.

I consent to the release of my information to state or federal health authorities (e.g. state immunization registries) for the purpose of tracking immunizations during the public health emergency.

I was provided information on the V-SAFE program. The program does health checks on the people who get the COVID-19 vaccine.

I confirm that I have been told about the pros and cons of this vaccine and have been able to ask any questions. I consent to receive this vaccine injection.

By selecting the check box below, you certify that (i) you are the individual completing the form; (ii) all information entered on this form is true and accurate to the best of your knowledge; (iii) you agree with all terms and conditions as listed on this form; and (iv) you consent to using the check box as the means of providing your signature electronically and that such electronic signature is valid.

☐ I consent to receive the Moderna COVID-19 vaccine.*

COVID - PFIZER - CONSENT V1.7

* indicates required fields

COVID-19 PFIZER VACCINE CONSENT

BNT162B2 is a vaccine developed by Pfizer-BioNtech to prevent disease caused by COVID-19. This vaccine has been authorized by the US Food & Drug Administration (FDA) for use under an Emergency Use Authorization (EUA). The purpose of this form is to obtain your consent to receive this vaccine.

EXCLUSION QUESTIONS: ANSWERING YES TO ANY OF THESE QUESTIONS EXCLUDES YOU FROM RECEIVING THE VACCINE.

1. Do you have a known history of a severe allergic reaction (e.g. anaphylaxis) to any components of the Pfizer BioNTech COVID-19 vaccine: mRNA, lipids ((4- hydroxybutyl)azanediyl)bis(hexane-6,1-diyl)bis(2-hexyldecanoate), 2 [(polyethylene glycol)- 2000]-N,N-ditetradecylacetamide, 1,2-Distearoyl-sn-glycero-3-phosphocholine, and cholesterol), potassium chloride, monobasic potassium phosphate, sodium chloride, dibasic sodium phosphate dihydrate, and sucrose?

2. Have you had an immediate allergic reaction of ANY severity to a previous dose of an mRNA COVID-19 vaccine or any of its components, including polyethylene glycol (PEG)?

3. Are you under the age of 12 years?

SCREENING QUESTIONS: IMMUNIZER: IF PATIENT ANSWERS "YES" TO ANY OF THE BELOW, PROVIDE PATIENT COUNSELING OR INSTRUCT THEM TO CONSULT WITH THEIR PROVIDER PRIOR TO RECEIVING THE VACCINE.

4. Are you feeling sick today?

5. Have you ever received a dose of COVID-19 vaccine?

• If yes, which vaccine product did you receive?

If other, please provide name of vaccine:

6. In the past two weeks have you tested positive for COVID-19?

7. In the past 90 days have you received passive antibody therapy (i.e. convalescent plasma or a monoclonal antibody) as part of COVID-19 treatment?

8. Are you pregnant or breastfeeding or do you plan to become pregnant? *

* PREGNANT WOMEN AND BREASTFEEDING WOMEN HAVE NOT BEEN INCLUDED IN ANY COVID VACCINE CLINICAL TRIALS TO DATE, SO NO SAFETY DATA SPECIFIC FOR THIS POPULATION. IF YOU ARE PREGNANT, PLAN TO BECOME PREGNANT, OR ARE BREASTFEEDING, YOU MAY WANT TO SPEAK TO YOUR CARE PROVIDER BEFORE GETTING THE VACCINE.

9. Are you immune compromised or on a medicine that affects your immune system?

10. Do you have a bleeding disorder or are you on a blood thinner?

11. Do you have a weakened immune system caused by something such as HIV infection or cancer or do you take immunosuppressive drugs or therapies?

12. Do you have a known polysorbate allergy?

13. Do you have a history of myocarditis (inflammation of the heart muscle) or pericarditis (inflammation of the lining outside the heart)?

14. Do you have a history of severe allergic reaction (e.g. anaphylaxis) to another vaccine or injectable medication?

- If yes, what vaccine or injectable medication:

15. If yes to any of the above, I attest that I have discussed my condition with my provider and vaccination is recommended or I acknowledge that there may be risks and consent to proceed with the vaccination.

Caregiver safety is our number one priority. By receiving this COVID-19 vaccine you are agreeing to our safety protocol, which requires caregivers remain in the vaccination area for at least 15 minutes following their vaccination. This additional time is for caregiver safety and allows the vaccine team to monitor caregivers in the event of a reaction.

I KNOW THAT IF I HAVE A SEVERE ALLERGIC REACTION, INCLUDING DIFFICULTY BREATHING, SWELLING OF MY FACE AND/OR THROAT, A FAST HEARTBEAT, A BAD RASH ALL OVER MY BODY OR DIZZINESS AND WEAKNESS I SHOULD CALL 9-1-1 OR GO TO THE NEAREST HOSPITAL. I KNOW I CAN CALL MY HEALTH CARE PROVIDER IF I HAVE ANY SIDE EFFECTS THAT BOTHER ME OR DO NOT GO AWAY.

ACKNOWLEDGEMENT AND CONSENT TO RECEIVE VACCINATION

The following has been communicated with me: • The FDA has authorized the emergency use of Pfizer-BioNTech COVID-19 Vaccine (also known as BNT162b2), which is not FDA approved in this population, for vaccination against COVID-19. • The option to accept or refuse vaccination and alternative options. • Information on available alternative vaccines and the risks and benefits of those alternatives. • Significant and potential risks and benefits of vaccination, and the extent to which they may occur, is not known at this time. I have been provided a copy and/or opportunity to review the EUA Fact Sheet

I was provided a vaccination card with the date when the recipient needs to return for the second dose of Pfizer-BioNTech COVID-19 Vaccine

I was provided information on the V-SAFE program. The program does health checks on the people who get the COVID-19 vaccine.

I understand and agree that this consent form and records relating to my vaccination will be maintained in designated records, including, if applicable, my medical record and/or my occupational health record.

I consent to the release of my information to state or federal health authorities (e.g. state immunization registries) for the purpose of tracking immunizations during the public health emergency.

Therefore, I attest that I understand the nature of administering Pfizer-BioNTech Covid-19 Vaccine the relative known risks and benefits, available alternatives, and have received information and answers to questions. I am consenting to being vaccinated under the EUA until such a time as I have completed the vaccination schedule of two doses, I substantially decompensate or show a significant adverse reaction to the vaccine, or my goals of care have changed. I understand that I am free to withdraw consent and stop treatment prior to the second dose. I understand that stopping the vaccination series will not impact other medical care and treatment options.

By selecting the check box below, you certify that (i) you are the individual completing the form; (ii) all information entered on this form is true and accurate to the best of your knowledge; (iii) you agree with

all terms and conditions as listed on this form; and (iv) you consent to using the check box as the means of providing your signature electronically and that such electronic signature is valid.

☐ I consent to receive the Pfizer COVID-19 vaccine.*

COVID-19 - JANSSEN - CONSENT V1.5

* indicates required fields

COVID-19 JANSSEN VACCINE CONSENT

Janssen COVID-19 VACCINE is a vaccine developed by Johnson & Johnson to prevent disease caused by COVID-19. This vaccine has been authorized by the US Food & Drug Administration (FDA) for use under an Emergency Use Authorization (EUA). There is no FDA approved vaccine to prevent COVID-19. The purpose of this form is to obtain your consent to receive this vaccine.

EXCLUSION QUESTIONS: ANSWERING YES TO ANY OF THESE QUESTIONS EXCLUDES YOU FROM RECEIVING THE VACCINE.

Do you have a known history of a severe allergic reaction (e.g., anaphylaxis) to any component of the Janssen COVID-19 vaccine: citric acid monohydrate (0.14 mg), trisodium citrate dihydrate (2.02 mg), ethanol (2.04 mg), 2-hydroxypropyl- β -cyclodextrin (HBCD) (25.50 mg), polysorbate-80 (0.16 mg), sodium chloride (2.19 mg)?

Are you younger than 18 years of age?

SCREENING QUESTIONS:

Vaccinator: If patient answers "yes" to any of the below, consult with provider prior to proceeding with administration.

Are you feeling sick today?

Have you ever received a dose of COVID-19 vaccine?

• If yes, which vaccine product did you receive?

If other, please provide name of vaccine

In the past two weeks have you tested positive for COVID-19?

In the past 90 days have you received passive antibody therapy (i.e. convalescent plasma or a monoclonal antibody) as part of COVID-19 treatment?

Are you pregnant or breastfeeding or do you plan to become pregnant? *

* Pregnant women and breastfeeding women have not been included in any COVID vaccine clinical trials to date, so there is currently no safety data specific for this population. If you are pregnant, plan to become pregnant, or are breastfeeding, we strongly recommend you speak to your care provider before getting the vaccine.

Are you immune compromised or on a medicine that affects your immune system?

Do you have a bleeding disorder or are you on a blood thinner? *

*If patient answers yes to question concerning blood thinner, instruct patient to monitor injection site for bruising and swelling. If develops, patient may use compression and ice to relieve symptoms.

Do you have a weakened immune system caused by something such as HIV infection or cancer or do you take immunosuppressive drugs or therapies?

Do you have a history of severe allergic reaction (e.g. anaphylaxis) to another vaccine or injectable medication?

If yes, what vaccine or injectable medication:

Note: must remain in observation area for 30 minutes post vaccination

If yes to any of the above, I attest that I have discussed my condition with my provider and vaccination is recommended or I acknowledge that there may be risks and consent to proceed with vaccination

POTENTIAL ADVERSE EFFECTS

I understand that blood clots involving blood vessels in the brain, abdomen, and legs along with low levels of platelets (blood cells that help your body stop bleeding), have occurred in some people who have received the Janssen COVID-19 Vaccine. In people who developed these blood clots and low levels of platelets, symptoms began approximately one to two-weeks

following vaccination. Most people who developed these blood clots and low levels of platelets were females ages 18 through 49 years. The chance of having this occur is remote.

I know that I should seek medical attention right away if I have any of the following symptoms after receiving Janssen COVID-19 Vaccine: • Shortness of breath • Chest pain • Leg swelling • Persistent abdominal pain • Severe or persistent headaches or blurred vision • Easy bruising or tiny blood spots under the skin beyond the site of the injection

I understand that Guillain Barré syndrome (a neurological disorder in which the body's immune system damages nerve cells, causing muscle weakness and sometimes paralysis) has occurred in some people who have received the Janssen COVID-19 Vaccine. In most of these people, symptoms began within 42 days following receipt of the Janssen COVID-19 Vaccine. The chance of having this occur is very low.

I know that I should seek medical attention right away if I develop any of the following symptoms after receiving the Janssen COVID-19 Vaccine: • Weakness or tingling sensations, especially in the legs or arms, that's worsening and spreading to other parts of the body • Difficulty walking • Difficulty with facial movements, including speaking, chewing, or swallowing • Double vision or inability to move eyes • Difficulty with bladder control or bowel function I understand there are other COVID-19 vaccines available for which these risks have not been seen.

I also know that if I have a severe allergic reaction, including difficulty breathing, swelling of my face and/or throat, a fast heartbeat, a bad rash all over my body, or dizziness and weakness, I should call 9-1-1 or go to the nearest hospital. I know I can call my health care provider if I have any side effects that bother me or do not go away.

ACKNOWLEDGEMENT AND CONSENT TO RECEIVE VACCINATION

The following has been discussed with me or I have been provided information about: • The FDA has authorized the emergency use of Janssen (Johnson & Johnson) COVID-19 Vaccine, which is not FDA approved in this population, for vaccination against COVID-19. • The option to accept or refuse vaccination and alternative options. • Information on available alternative vaccines and the risks and benefits of those alternatives. • Additional significant and potential risks and benefits of vaccination, and the extent to which they may occur, is not known at this time.

I have been provided a copy and/or opportunity to review the EUA Fact Sheet. • FDA Fact Sheet for Patients/Patients/Caregivers

I have been provided a vaccination card. I consent to the release of my information to state or federal health authorities (e.g. state immunization registries) for the purpose of tracking immunizations. I was provided information on the V-SAFE program. The program does health checks on the people who get the COVID- 19 vaccine. (<https://www.cdc.gov/coronavirus/2019-ncov/vaccines/safety/vsafe.html>) I confirm that I have been told about the pros and cons of this vaccine and have been able to ask any questions. I consent to receive this vaccine injection.

Recipient printed name:

By selecting the check box below, you certify that (i) you are the individual completing the form; (ii) all information entered on this form is true and accurate to the best of your knowledge; (iii) you agree with

all terms and conditions as listed on this form; and (iv) you consent to using the check box as the means of providing your signature electronically and that such electronic signature is valid.

☐ I consent to receive the Janssen (Johnson & Johnson) COVID-19 vaccine.*

Subject: Public comment for the January 12, 2022 meeting agenda

External Email

To The Washington State Board of Health,

Thank you for accepting public comments in regards to the topic of immunization createria for child care and school entry. We absolutely should NOT make the Covid shot a requirment for our children. Children are at extremely low risk for Covid-19. We should not make the Covid-19 shots required as they still only have a status of Emergency use authorization. We should not require a vaccine of any type that is only authorized for Emergency use through the FDA.

Thank you for your time and consideration.

Sincerely,

Dawn Thompson

To whom it may concern,

I strongly oppose vaccine mandates for children for the following reasons. My area of expertise is in physiology, toxicology, and pharmacokinetics. Please read the attachments and email me if you have questions

1. The COVID injections do not prevent infection and do not prevent transmission.
2. According to the CDC the risk of death for children aged 17 years and under is 0.2% and if adjusted to remove children with co-morbidities it then becomes 0.058%, which rounds to 0 for healthy children.
3. Research shows that highly vaccinated countries, states and counties do not have lower infection rates.
4. The inoculations were developed against the original strain of COVID-19 and are only 39-42% effective against the Delta variant.
5. Natural immunity is robust, complete, and durable. In a public records request, the CDC admitted there has NEVER been a case of a anyone with natural immunity spreading COVID.
6. Children are not spreaders of COVID because they have a very low expression of ACE2 receptors in the upper airway.

Dr. Zana A. Carver

Subject: 8 reasons vaccine mandates for 5- to 11-year-olds are unscientific (and

immoral)

<<http://250ok.chriskresser.com/ea/HQWz3xVCAD/?e=%5BUNIQUE%5D>>

Hi, Everyone,

As promised, I am following up on the email I sent a couple of weeks ago examining the risks and benefits of vaccinating healthy children and young adults against Covid-19.

Today, I'd like to focus on the 5- to 11-year-old age group. In particular, I'd like to answer the question, "Is there any scientific basis for a vaccine mandate for 5- to 11-year-olds?"

This is a critical question because as we speak, school districts across the U.S. (and the world) are beginning to require Covid vaccines for kids as a condition for attending school. Excluding children from in-person education is a dramatic and unprecedented step to take, so the bar for evidence to support a decision with such far-reaching consequences should be very high.

In this email, I will argue that not only has this high bar not been met, but there is also no evidence whatsoever to support a vaccine mandate for 5- to 11-year-old kids, and such a mandate is both unscientific and immoral.

Specifically, I will show that:

1. Covid was already a very mild illness for healthy children, and the Omicron variant looks to be even milder.
2. Kids 5 to 11 years old have never been significant spreaders of SARS-CoV-2 (to other children or adults).
3. Covid infection in kids produces far more robust and long-lasting immunity than the vaccines.
4. More than half of kids in the U.S. (and likely other industrialized countries) have already had Covid-19, and vaccinating kids with natural immunity doesn't provide additional protection.
5. There is no direct evidence that vaccines reduce severe illness, hospitalization, or death in 5- to 11-year-old kids. This is even more true with Omicron.
6. The Covid vaccines do not prevent transmission of the virus (especially with the Omicron variant).
7. There is already concerning evidence of harm from the vaccines in 5- to 11-year-old kids—and the long-term effects are unknown.
8. The mandates will cause serious and lasting harm to unvaccinated children.

This will be a long email. I considered splitting it into parts, but I wanted to present the entire case in one place so you can more easily refer back to it and share it with others.

So, grab a cup of tea, and get comfortable!

[Author's note: the question of whether Covid vaccine mandates make sense for any age group is also worthy of critique, but I want to dedicate this email to 5- to 11-year-old children for reasons that will become clear shortly.]

#1: Covid was already a very mild illness for healthy children, and Omicron looks to be even milder

We've known since the beginning of the pandemic that the vast majority of Covid-19 cases in healthy children 5 to 11 years old are extremely mild.

According to the Centers for Disease Control and Prevention (CDC)

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2Fp5nKwhV3Zsc37CgKP2W8pfLvs5B2DVqW7qnK7M5HYP0sW5TRNpK6wwLbCW3llwqp5ZtmGHVjpbwk4Gx2vR1822f6TP2N8SNXJ7t0xN4W38Yckx4j8h8XW4VKf9n7DVk3DW6Vyg3p93Vp1IN3PdwbP8ZVcKW4PpflQ9dbITKW304PNx9PW1Z2hWx5NMr9VW8j90qG8-3VQSVfqw_28qghjRW4ZbFcQ1IBq1BW20vIDD1qt-BkN8hfGH3bsm3YW4Z_d4k5ZWkdFW36v_XS6V3rXXW6QD_3Y3Bkp-LW1v7N0B6dVyStW6mK1lw9gn1P2W49ZBxs5r8CR1W5JDW1-4wqKc5W61QkZz7j4lWXW32GnmN5qjJJCW20DFr48JPGVF3cWX1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff32>, there have been just 216 deaths in this age group since the start of the pandemic. This represents only 0.03% of the total Covid-19 deaths, despite the fact that 5- to 11-year-old kids comprise almost 9% of the population.

<https://lh6.googleusercontent.com/l-9KkeDnomcRKGAHtuC5oeRI5cU3Ly1UnXSZVWsmiGAeBLQTDHENBqRiVIEwXYVwZ46XYTx_UGVinwSBD9k0E>

With 28,384,878 kids in this age group, that's a mortality rate of 0.0008%. Put another way, at worst, a child 5 to 11 years old has a 1 in 131,411 chance of dying from Covid-19.

But even this very low number is likely to be a significant overestimate for healthy children for two reasons.

The first is that Covid deaths have almost certainly been over-counted in the U.S. and other industrialized countries because of how they are classified. For example, say a child with a pre-existing leukemia diagnosis is admitted to the hospital for issues related to their disease. The child tests positive for SARS-CoV-2 upon admission, does not develop any signs or symptoms of Covid-19 infection, but later dies due to complications of leukemia. This will be classified as a Covid-19 death—even though, in this case, Covid-19 likely had nothing to do with the child's passing.

The overestimate of hospitalizations and deaths due to this method of classification is not small. A recent analysis out of the U.K.

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2Fp5nKwhV3Zsc37CgKP2W8pfLvs5B2DVqW7qnK7M5HYP0sW5TRNpK6wwLbCW3llwqp5ZtmGHVjpbwk4Gx2vR1822f6TP2N8SNXJ7t0xN4W38Yckx4j8h8XW4VKf9n7DVk3DW6Vyg3p93Vp1IN3PdwbP8ZVcKW4PpflQ9dbITKW304PNx9PW1Z2hWx5NMr9VW8j90qG8-3VQSVfqw_28qghjRW4ZbFcQ1IBq1BW20vIDD1qt-BkN8hfGH3bsm3YW4Z_d4k5ZWkdFW36v_XS6V3rXXW6QD_3Y3Bkp-LW1v7N0B6dVyStW6mK1lw9gn1P2W49ZBxs5r8CR1W5JDW1-4wqKc5W61QkZz7j4lWXW32GnmN5qjJJCW20DFr48JPGVF3cWX1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff32>NpxB4rDw0rW2H5s9s8K-7fmW25LtVB5G-Y9KW2rGTH69l_jhSW4TrPc43CR9kVW6ynhJd5Vmg6IVyvVF95sqhDVW8m3dNN3QPQvRN10PGTyQW3zcW2JLW6PbLM_W6SMIG26DPm3-W2XWmf1rgpFRN4Q7rX08wpstW897PyM44IQRYW8F8WID9gF2bSW2jwXsP6JIKBtT9c2P7FGQQgW4HpYqG8 found that a full two-thirds of patients with Covid-19 in the hospital only tested positive AFTER being admitted for another condition.

The second reason is that the majority of hospitalizations and deaths in 5- to 11-year-olds occur in children with pre-existing health conditions. A study by the CDC back in September 2020

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2Fp5nKwhV3Zsc37CgKP2W8pfLvs5B2DVqW7qnK7M5HYP0sW5TRNpK6wwLbCW3llwqp5ZtmGHVjpbwk4Gx2vR1822f6TP2N8SNXJ7t0xN4W38Yckx4j8h8XW4VKf9n7DVk3DW6Vyg3p93Vp1IN3PdwbP8ZVcKW4PpflQ9dbITKW304PNx9PW1Z2hWx5NMr9VW8j90qG8-3VQSVfqw_28qghjRW4ZbFcQ1IBq1BW20vIDD1qt-BkN8hfGH3bsm3YW4Z_d4k5ZWkdFW36v_XS6V3rXXW6QD_3Y3Bkp-LW1v7N0B6dVyStW6mK1lw9gn1P2W49ZBxs5r8CR1W5JDW1-4wqKc5W61QkZz7j4lWXW32GnmN5qjJJCW20DFr48JPGVF3cWX1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff32>J3q90pV1-WJV7CgPh_W3TP7qp3mZmNXW9kNg8t8-N98FW2KltjK4-Tw4sN8gGggDHDCTmW8Ftjk15kYwNyW8_ghZ_5bN9XYN3R-4tR6DqZjW5q6ZdR54-92gW1HpxM-3T1XlZw3VGWCC5FvtCxVtwHBK6fKX_CW3xmJ907Vgb6rN4QcL5YB0M_jW6FsP4M49C8IJW28QHqH6md6Ltw_1whc9LW1v-Zw82FKYKdN8Gkkl5FHydwW2VddWx18zG313fvX1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff32 found that, among 121 childhood deaths related to Covid-19, 75% had an underlying health condition. Another study by the CDC

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2Fp5nKwhV3Zsc37CgKP2W8pfLvs5B2DVqW7qnK7M5HYP0sW5TRNpK6wwLbCW3llwqp5ZtmGHVjpbwk4Gx2vR1822f6TP2N8SNXJ7t0xN4W38Yckx4j8h8XW4VKf9n7DVk3DW6Vyg3p93Vp1IN3PdwbP8ZVcKW4PpflQ9dbITKW304PNx9PW1Z2hWx5NMr9VW8j90qG8-3VQSVfqw_28qghjRW4ZbFcQ1IBq1BW20vIDD1qt-BkN8hfGH3bsm3YW4Z_d4k5ZWkdFW36v_XS6V3rXXW6QD_3Y3Bkp-LW1v7N0B6dVyStW6mK1lw9gn1P2W49ZBxs5r8CR1W5JDW1-4wqKc5W61QkZz7j4lWXW32GnmN5qjJJCW20DFr48JPGVF3cWX1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff32>WJV7CgXymW8MIHMx7vkr27W8JDc175fPh_pW1pKptc2dxDSvV3_kw53Z536LW1TYV8H4zHTMPW8LhDr02ky

Jdj21CwqdW21B9_l4ln6GpW8vPsqS7ntr3DW2k8RN074zYJyW3GrrdX2w96YP3nhm1&data=04%7C01%7Cw found that 53% of kids hospitalized for Covid-19 had at least one pre-existing condition, the most common being obesity (45%), asthma (14%), and neurological conditions (13%). Yet another large, international review of 14 studies <https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2F%2FyNW6P1GnW7k0JxvN6Ngq6SSdJzxW3kWvHC3NcjKFW10YHFJ5ldhMdW6jKRRB6JLTn_W6mLBPf8S7Kz-W96jx0z978lgFW7cDBPz8h4-1DW6JLNDq1T5RJMW4GQwk_1FQbqLV81HN-1GjBqZW6wxT_1348jYSW4TPLqp2y_-DjW3byK0d3kg-jbW19jVKJ1tnny0W5rnRwz7DvTVgW8rhwZV5CB1CjW7PM8MG1Z2YzQW540tBL5jPVz6W83Vzn55w2dIIW9lX09w2N1nWzH4M_vNJW6TwkHJ4Qk9k2W75Qbqd4PJMFmw2rPVRH6bpGnyW3s_B2q85kkfL3mtr1&data=04%7C01%7Cw covering almost 20,000 children found that kids with pre-existing conditions were over 25 times more likely to experience severe symptoms from Covid-19 infection than healthy kids.

The point here is not that kids with pre-existing conditions don't deserve our consideration. Of course they do! The question I am trying to answer in this email is whether the vaccines should be mandated for all 5- to 11-year-old children, including healthy ones. And to do that properly, we have to know what the risk is for healthy children specifically.

Unfortunately, the CDC does not routinely distinguish between healthy kids and kids with pre-existing conditions in their reporting of Covid-19 hospitalizations and deaths. But some other industrialized countries do.

For example, a recent study out of Germany

[illegible]

- * A rate of hospitalization of 8.5 per 100,000 (~1 in 11,750)
- * A rate of ICU admission of 2 per 100,000 (1 in 50,000)
- * A rate of death of ZERO (there was not a single death in this age group)

This gives us a much better idea of what we can expect in terms of the risk of hospitalization and death in healthy kids in this age group.

Omicron appears to be milder than previous variants

That said, even these incredibly low numbers are related to previous variants of Covid-19, like Alpha, Beta, and, most recently, Delta. But the Omicron variant has already become dominant for new cases in many countries like South Africa, Denmark, the U.K., and the U.S.

And all of the early data we have so far suggest that Omicron is far milder than all previous variants.

Denmark has been producing very detailed daily reports of Covid cases and hospitalizations throughout December. According to their most recent report from December 24

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%
WJV7CgJcdW3WVwqd88Zz-jW48mtzc4BXT0HW84gv0s5_xhPLW8FHZ0t33MDz-
W9frqv1T4QZ1W8d1MdH6PWCTRV883Rr3WPBMRW7V6BZP2mm64fW1NjN077r8Pk1W60nvVx9IQSXwW2p8
gcZn42gtMcw38QMW5ZfQrh7rXdSPW97tbDR8P6B1RW2S8YvW8rHk_wW6NHjmQ3Vp94tW2vZxpZ4IW_wdW

N5_SZRp1tG2sW3F6t9S5xmrn3N3hr8xK8R_mj3jsZ1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff3265f77c43991f0f08d9cb , there have been 27,132 Omicron cases so far, but there have been only 35 Omicron-related hospitalizations. This is a hospitalization rate of 0.13%—which is approximately 8-fold lower than the estimated hospitalization rate for Delta (~1%).

It's also worth pointing out that there have been fewer than 5 ICU admissions from Omicron. Denmark doesn't report on the exact number, so, for all we know, it could be zero. Or, it could be 4. Either way, it's an incredibly small number given almost 30,000 cases.

There's more to say about Omicron, and I'll be writing a separate email about that soon. For now, it's enough to say that if the current trends hold, we should expect the risk of hospitalization and death from Covid-19 in healthy children—which is already incredibly low—to be lower still in the future.

When we consider that:

- * Covid-19 was already an extremely mild illness for healthy kids 5 to 11 years old
- * Hospitalizations and deaths have been over-counted
- * Omicron appears to be far milder than previous variants

... we get a current risk of serious outcomes like ICU admission or death in healthy 5- to 11-year-old kids that is minuscule.

#2 Kids have never been significant spreaders of SARS-CoV-2 (to other children or adults)

Some advocates of vaccine mandates have argued that, while Covid-19 is a mild illness in kids, we should vaccinate them anyway in order to protect those at the highest risk, like the elderly and individuals with pre-existing conditions.

In order for this argument to be valid, two things would need to be true:

1. We'd need evidence of significant child-to-adult and child-to-child transmission of Covid-19.
2. We'd need evidence that the vaccines prevent, or at least significantly reduce, the transmission of SARS-CoV-2.

In fact, neither of those is the case.

Studies have now shown that kids under 10 years old rarely transmit Covid-19

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2F3q90JV1->

WJV7CgLnXW4ztJ7Q8yB_DwW93NPYQ6ps8vdW6ljXD828K41LW8Cjk_14rY56SW7YKCgl4nCHg6W2wNRfz1pN3VMRXGJS5PzVml8q51YtCBzW64tYmx1zN-

, and all kids/adolescents up to 20 years old are only 43% as susceptible to the disease and 63% as likely to infect others

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FWJV7CgVWzVZgrtW4fRnJMW8qzcsc1m_WG2W3pcMfQ2YpxrHW92B1fj58PfwMW8NCNNV61JmQ0W72f5Tt6MZ-7Vr3ybW3HpqqP1FX-2qVV_c9C9k-

than adults.

I will address the question of whether the vaccines prevent or reduce transmission in detail below, in section #5. The short answer is: they don't.

Given that neither of these things is true, the argument that we should vaccinate kids to protect the vulnerable has no scientific basis.

#3: Covid infection in kids produces far more robust and long-lasting immunity than the vaccines

Another argument I've heard to justify a massive vaccination campaign for 5- to 11-year-old kids is that the vaccines provide more robust immunity than a natural infection and that because of this, the vaccines will "end the pandemic."

Numerous studies have now shown that this is not the case, and, in fact, the opposite is true: kids who have a Covid-19 infection go on to develop much stronger, more lasting, and broader immunity against future SARS-CoV-2.

A new, peer-reviewed study published in Nature Immunology on December 22
https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2F3q90pV1-WJV7CgK1VW90bbNy99wX-FW8HSWzW5c05jIW75jw-F22Z96qW2ZpQPr3kJFmYW1N_JL71T-D7sW7nZ7778S8CLSW8CMV-T3WhpYRW5Cwrqy8NFVWYW30tYPY20CWTCV3-S6m7-YkpmW8yfCh51BSh6GW9dnx0P8gbtW-W738rvb7snVsHW6tWWvG7-g5nxW8t21m64fkp7JW5WPZwp6Ls3IW14p0NL973BS5W2tSypF4qJ_mnW6wJ6M5381wsbW6bXFFC8-RKqPN3pKRr26g4kRW1mQ38M8x58QDN2Djy8sn7mgTW4MwzsJ6bFs7mVKTHx_9kLbLnW1bFvKI5sDWXy3hM
 found that both the innate (initial antibody response) and adaptive (later T-cell response)
 immune reaction to SARS-CoV-2 is much stronger in children than in adults.

In other words, kids who get Covid-19 mount a more effective and robust immune response to the disease than adults do. What's more, this immune response lasted throughout the entire length of the study period—which was nearly one year—and it appeared to protect them against multiple SARS-CoV-2 variants.

The authors speculate that increased immunity to coronaviruses that cause the common cold, and are cross-reactive with SARS-CoV-2, may be part of the reason that children are more protected from Covid-19 than adults.

From the study:

“In conclusion, we showed that children display a characteristically robust and sustained adaptive immune response against SARS-CoV-2 with substantial cross-reactivity against other hCoVs [human coronaviruses].”

Given how remarkably low the risk of serious illness is in 5- to 11-year-old kids, and given how strong and long-lasting their immune response is to natural infection, wouldn't it make more sense to simply allow healthy kids in this age group to get Covid-19—especially now that the Omicron variant is becoming dominant—rather than expose them to vaccines with uncertain benefits and concerning side effects (more on both of these points below)?

#4: More than half of kids in the U.S. (and likely other industrialized countries) have already had Covid-19

At the end of May of this year, the CDC estimated

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%3q90JV1-WJV7CgZ0wW1G0t_l8r0ft9W3-2zjm81mxvCW3Lfr2j7p5P1fW72XrQ51ny42ZW9k5Rmr6BHMm9W8XX32Z3GrXRvW8R1_h661wmpZW4KZB4PPTwW1fNkmp23RDdhW32Mc9b2-xZbzN2_l5FGDPfXIW2yKW_j2GMcDMW27xQt3NX1_jW58skH792Y3JXN4CyBx97QwP6VfNZjn6g53LLW5NrF0JVV3y79wVW5h4yqj4qH8hLW2ppnK36zMgS5W3G0NMj1vM8B-W31PSjD2wHR2tW4sbNKh3G0FQxW9h0VRG7x0vYXW2jC0Mx1YM3DqW7fKCHR96xY2T3kcz1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff3265f77c43991f0f08d9cb3f4713%7C11d0e>
that 36% of all children had been infected with SARS-CoV-2. That estimate was made 16 months into the pandemic. If we adjust that estimate for the current time frame (22 months), we get 49.8% or roughly half of U.S. children.

However, the CDC estimate was performed before the emergence of the Delta and Omicron variants, both of which are significantly more transmissible than prior variants. Therefore, it is highly likely that the rate at which kids were getting infected between May 2021 and now is significantly higher than during the first 16 months of the pandemic. This means that more than half of U.S. children have natural immunity against Covid-19.

The Nature Immunology paper I just mentioned above clearly indicates that natural immunity to Covid-19 is especially robust in children.

We also have other evidence that natural immunity is stronger than vaccine-induced immunity. For example, previous research out of Israel

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%3q90JV1-WJV7CgCWHW5C6tLr8_3ZvcW80FTHc3HfvvIVmx7TQ88Ckd9W1zYN4364XsJqVFsc673yPv0W3Gxk7B1n7fX1W1yFG628NJPC-W8DbxRg5PF0b5W52YZ6F7JsSGwW138k6z6Bmk7TVfcZ0R2FCPg3W82h5pv4PDXfGW1kQ1t_1j0CCZW1VIHtX31dp1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff3265f77c43991f0f08d9cb3f4713%7C11d0e>
suggested that those who had recovered from Covid-19 infection were 13 times less likely to be reinfectd than those who'd been vaccinated but had not yet had Covid-19.

And so far, there is little convincing evidence that vaccinating someone who has already been infected offers any benefit.

For example, a study published in June 2021 by Cleveland Clinic

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%3q90JV1-WJV7CgZLNW8Z-bdN5dws_jN1CP05RHGrjhW2mwjjV9gvhbrW11zHWC6pBKXrW8F0tmv1FsY4VW3twJmt7n9n-3W84cnN_7sLVC1W1wmKwF6mfMY9VgxjR4Z5G4RW5D1fqk6gSGRDVzT7np2y-G_HW2VKpdZ5sZ05pW8jt3RB6n_hkMW7fJ4pm7X5X0xW26k1dJ2LCclZW897jQj3g1dp3V_p71j5v8TB4W5tCs7wW5QNbKS59k3J5W17LK_86_xJ_tW4MVCrf7pIIVDW21VM5N7GNIQ7Mltp1-75hvWW99qnX_92ckzfW2fB2hj7pvYP0W5YfXxt1dj_2kW1wQ4YZ3NHhnL3pbf1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff3265f77c43991f0f08d9cb3f4713%7C11d0e>
of almost 53,000 people found that vaccinating people with natural immunity (i.e., those who had already been infected with SARS-CoV-2) did not confer additional protection. Most importantly, there was not a single case of reinfection among the 1,359 previously infected, unvaccinated subjects in the study.

The fact that most kids have already had Covid-19 and thus already have immunity to it, and that vaccinating people who've already been infected doesn't strengthen their protection against the virus, casts even further doubt on a universal vaccine campaign for 5- to 11-year-olds.

#5: There is no direct evidence that vaccines reduce severe illness, hospitalization, or death in 5- to 11-year-old kids

When I have a chance to talk to parents about the Covid vaccines for kids, I'll often ask them what they've heard about the effectiveness of the vaccines in kids 5 to 11 years old.

Most will respond by saying that they've read that the vaccines are "over 90% effective" for kids in this age group.

They're often quite surprised—even shocked—to learn that, in fact, we know very little about the potential benefits of these vaccines in kids 5 to 11 years old.

Why? Because severe illness in kids is so rare that there wasn't a SINGLE case of severe Covid-19 or a SINGLE death from Covid-19 in the 2,268 kids that Pfizer studied to obtain their Emergency Use Authorization (EUA)

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FJQ0_5FLhP3W887DsY8VvgrlW2fJ79B4z_jp7W88g6T32btrFmW4N1ytf9fzDkXW1wJ8wW1YT1N3N3yT1YzqR5v8ZD-N4dpk-xg_lhgW1hcQvY7Xb-6CV82xCQ534258W15QVnx4byKRqW6VZbQ78GxHY_W7y8wK78m70RFVMBIMz4K2w_ZW2pXtQ15dkGWhW20LnhM64r8z1W5CXT5k80bnlnW2-7jt41prMxSW77KZfC6-7JZHW7flNb-5FkhHwW4yl-jJ5WtPgXW1LrVP02qNjWzW6zChqH4_8PnWW84dJ_-99j3LBW9cMMH-53vpf8W6NzK1b22dtK8W5c6GqL23b27F3g4F1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff3265f7>
by the CDC.

Because there were no significant adverse outcomes from Covid-19 in the trial, Pfizer had to estimate the potential benefit by looking at the antibody response generated by the vaccine in the kids' blood.

There are several problems with this. First, antibodies are a poor predictor of clinical response to Covid-19

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FJW5wrQZ1622TxTN93lyL_PJ-KkVJD0w-5Kyx0QVWnrby7VRgR2W4sZS621d0zThW8JsrbK3sfDKPW4Jq1HG4l5NfsW51NIZG4qwZMSW8kxsFP3jk9DmVnd86W1RYssR6gDSxCW4MfDvR7j92XmW83LGqn11Q42wVNCbbF76RBJCW6hDvK62Wh22NVL9dcM49WRzjWlW6W8HL4xn8hJJyTW8LZ49f7cVQP6N2GVhbyl8FcbW2xC9r41_DYNIW84Xp8j4JRSmNW5xgppR6D8wMHW5K>
. Second, since there were no cases of severe Covid-19 in kids in this study, Pfizer had no idea what antibody level would be protective against severe infection.

This means that any claims you've seen that the Pfizer vaccine is 90% effective are misleading because this only refers to an antibody response in the blood from the vaccine and not actual protection against severe illness, hospitalization, or death.

Yes, the massive campaign to vaccinate 5- to 11-year-old kids is based on a small study of 2,268 kids in which the vaccines did not prevent a single case of severe Covid-19 or a single death and demonstrated only an elevated antibody response in those that received the vaccine.

As hard as that is to believe, that's where we are.

#6: The Covid vaccines do not prevent transmission of the virus (especially with the Omicron variant)

Even before the emergence of the Omicron variant, we already knew that the Covid vaccines do not significantly reduce transmission of the virus. Unlike the measles or polio vaccines, they do not provide "sterilizing immunity"—that is, they don't keep people from getting the virus or spreading it to others.

CDC Director Rochelle Walensky disclosed this back in August 2021 in an interview with Wolf Blitzer on CNN

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FvVIW3c98tFzYtTI5hs7qmjLYN4Nm-2H3Sr1MMZIV3r9NYGtV3G21J5wYBpYW2m2F8M2bVk51Vc6ysQ6nYHntW70HCV14P9NGfN3X20fhVBRsHW8sTVdK12Mt04W6nNXN5rly2RW69JCbs1bnRGZN1bxLVvXSY0NW6DNXvh9jP0qVW4DptTY33116rW7WLCTM8H>>
. She said:

"They [the vaccines] continue to work well with 'Delta' with regard to severe illness and death, but what they can't do anymore is prevent transmission." [Emphasis added]

But in countries where Omicron has become the dominant variant, we have even less reason to believe that the vaccines do anything at all to reduce transmission.

According to Denmark's Covid-19 report from December 24

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FWJV7CgS8dW7fx6S-6fV2z4VxBjMk7JqXc5W281gWP4g-LFwW3f60_F8BDMvRW8df3qW8ZN-Z9W7tGmL75gp4pFW4m2S8R34BJ5jW2zQByq5-S6y_VpV9Ng662WBYW94QDR_7dmwGXW1Bw4XN5nNK3mW2nPRTP1FXx-SW2WYyGq4LtwJfW3TZMpP1_vRC2Vhb5ZX2hvTNRW1PY0WH610wc_W42rzZI7z9Nw_N3X7zZvd7W1KW5bD7cnM80qkFtW5DG3w81mt6PPW4NTKxb1Db9m_W2JMjjY75G0nHW88Twp4ft5KZW1LmCn87ZcYISN5bLJty5kW973mg24VrbckW5ZVLvV5wSvwWW394zPy54_3RxW74zByw88n7-33hXh1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff3265f77c43991f0f08d9cb3f4713%7C11d0e21>
(mentioned earlier in this email), 92% of confirmed Omicron cases occurred in people who had received either 1, 2, or 3 doses of a Covid vaccine:

<https://lh3.googleusercontent.com/T2PN9u2tJkEV-1b4-lbTt3Zu7nxtbSyJgBaPY2qapmESv62S6As9TQBpep2ZGxcvg4x7beyGkaibH_j2p2uK3gu8u_TnPviWuU1cT-bcQ_IULO7YPzkbBkw0gcgZnJEY6HNeqr83>

We're seeing similar data out of Ontario, Canada

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2Fp3q905V1-WJV7CgTVGN4yfZBDGdFnbW2ZkzgK7xM-P5W1_grMh5kCSskW50nQ177mln14W95dhQw8CS4HmW7d3ZZ12m2mR-VZpP718jBRN2W2bcMDM4plf0-W5t-0kb2PBNzzW5vXyNc1CY4kYW2HFkpF2t3fvVN62-0D7zNT07W8hCf1P4NSSR_W5NYt6j50L7RYW3xmj-p4QGyZwW6sG-pb4k80zkW3XhtlX97-4s9W7nN4W26NgrzmW60STsK5vgh89W8jn9kp3xsN6DW65sT_75-X75LW5R1V107R99msW52SJIF6fR-Q_W5IHTg02-W51h32kJ1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff3265f77c43991f0f08d9cb3f4713%7C11d0e21>
, which has also been issuing detailed reports on cases. You can see in the chart below that, as of late December, the number of Omicron cases per 100,000 people is virtually identical in the unvaccinated, partially vaccinated, and fully vaccinated:

<https://lh4.googleusercontent.com/-i3io-VfRkQWF3UG9gbFtHLURZiQ_gvIPXBZaYYXIJg7S6LI8CJMs1t7xu3USpPqQC7w3FbmkN8fKMqjpg5jausfcqBCO>

Also, a preprint study out of Denmark

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2F_3q90JV1-WJV7CgB8XW66w4cV6VSB5GW3rNxW-7GfCYsW12W01C2XcpBDW9bynHD75hDs1W1g5sFm183QM5W4kwDvB2ZzLcJW8tD0_52XwtBwVHbqgc65nwXmW1fD3dP39Mc1nW6VIHs76ymbPcVXLxyj5HGhB7W2f3yMZ6mKGyHW4QRgN43dH5KIW4k1xVq8tlv6tW8LJW597GPL4ysTpNW2CZxTL7FkJ8pW8w1kVC7RD1rsW1rZXmV98z-S12FS1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff3265f77c43991f0f08d9cb3f4713%7C11d0e21>
shows that vaccine effectiveness against Omicron drops to nearly zero just over two months after peak protection (14 days after the second dose). Even more disturbingly, the vaccines go into negative effectiveness—meaning those who were vaccinated were more likely to contract Covid-19—3 months after peak protection.

Here's the key figure from that study. The blue dots represent vaccine effectiveness against Delta, and the green dots/bars represent vaccine effectiveness against Omicron. When the dot is above the horizontal line, effectiveness is positive. When it's below the line, it's negative.

C0VW6BR1fT89h6sNW2NRSZ47wKWNPW5sWHyt365tBx3kz91&data=04%7C01%7Cwsboh%40sboh.wa.gov

" indicating that even with a booster, symptomatic protection against Omicron wanes

significantly after just 10 weeks:

"Among those who received an AstraZeneca primary course, vaccine effectiveness was around 60% 2 to 4 weeks after either a Pfizer or Moderna booster, then dropped to 35% with a Pfizer booster and 45% with a Moderna booster by 10 weeks after the booster. Among those who received a Pfizer primary course, vaccine effectiveness was around 70% after a Pfizer booster, dropping to 45% after 10-plus weeks and stayed around 70 to 75% after a Moderna booster up to 9 weeks after booster."

Frankly, these are remarkable data that raise questions about the effectiveness of the current vaccines against Omicron for people of all ages, not just 5- to 11-year-old kids.

It's clear that we are not in the same situation today that we were in when the vaccines were initially developed. Omicron is very different from Alpha, which was the dominant strain when the vaccines were released. And as these studies clearly show, these vaccines aren't as effective against Omicron as they were against earlier variants.

At best:

- * Two shots of Pfizer provide just over 50% effectiveness for about a month; that drops close to zero just after the second month and goes deeply negative before the third month.

- * Two shots of Moderna provide just under 50% effectiveness for about two months; that drops to zero in the third month, and into negative territory shortly after that

- * A booster provides an additional 2.5 months of partial protection (below 45% for all but people who received two shots of Pfizer plus a Moderna booster).

If we were starting out with the current vaccines today, with Omicron, that's the level of protection they would provide. We'd have to start giving boosters just 2-3 months after the initial shots and then give a booster every 2-3 months after that. Does that make sense, given how mild Omicron is for healthy kids (and most adults)?

It's worth noting that most of these data regarding Omicron infections and vaccination status are from adults, not children, because the vaccines have only recently been offered to 5- to 11-year-old kids. But there is no reason to believe that vaccines will be more effective against Omicron in children than they are in adults (and, in fact, there are reasons to believe they would be less effective, as I've described earlier in this email).

#7: ☐☐ There's already concerning evidence of harm from the vaccines in 5- to 11-year-old kids—and the long-term effects are unknown

Despite the incredibly low risk that Covid-19 poses to healthy children, the fact that over 50% of kids have already had Covid, and that natural immunity is robust and durable, some still might argue that vaccinating children makes sense.

After all, if we can save even one life with the vaccines, shouldn't we do that?

Certainly, if we knew without a doubt that 1) vaccinating every 5- to 11-year-old child would prevent even a small number of severe illnesses and deaths, and 2) the vaccines were 100% safe and would not cause any adverse events, then this would be a strong argument.

However, we still don't know that vaccinating children this age actually reduces severe illnesses or deaths. All we know is that the vaccines induce an antibody response.

And we already know that the vaccines are not 100% safe and are producing a significant number of adverse events in children 5 to 11 years old. This should not be surprising. All medical interventions have potential side effects and risks, and the Covid vaccines are no exception.

The CDC's own data show harm for the vaccines—despite Director Walensky's denial

According to the CDC's data, as of December 9, 2021, there have been 3,233 reports of adverse events in kids 5 to 11 years old from the Covid-19 vaccines, including 14 reports of myocarditis (8 of which have already met the CDC criteria for a vaccine-induced myocarditis case).

<https://lh3.googleusercontent.com/1BsulH6gyu_FwVy3CnpyEngRhZPkluo0hxtb7PFpv0DCZB4q7P1krdDhviEBFzYIgVyk7LFfd2yF8DV5>

Yet, strangely, Director Walensky went on ABC News

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FyK35W1_SQyT3zyvJMW5C4Dvd47QX9XW70wvHG6fxKMhW6kDqTn7skrSTVqns645NtP4YW64Pmk3179fr0V4k4kJLSfW8_cgRP2rVf_fw4P50W75ZMvKwW8xfbTR7-f4KsW72CKFF2kCzkNW8wtq6N8qw9qzW3ynghL1PmWF5W5Hzwc76FLSQ-N8DJWVn7sQZ1N7DDfGDcjQTmW4BnWJf5Wtx7tW7-543j8pJTT0Tqsc82xl8pCN3Jy32jfm1HHN7mzVrjmKrZXVDGZsl74_h1YW6Qm_fm3g4nHBN7Wy7bksBJzLW74JPVbDBlp85ltXPN4s5C5cvpCrS33ym1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff3265f77c43991>
the following day, December 10, and said that there have been no cases of myocarditis seen in kids. How is this possible? Was she not aware of the data her own agency issued just the day before? Or was she lying? Either way, it's incredibly disturbing.

<https://lh5.googleusercontent.com/A9dSMSs5swMuXdMulqgzB1fVdhZDtImTEsJjdeWcCWjb_WkcyJ0hvxNY>

It's worth pointing out that myocarditis is only one of several possible side effects that

have been observed with the Covid-19 vaccines

<[https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2F3q90JV1-WJV7CgQs8W6tVh8w7g3xx0N95499qIS-m4W4_CrbB6ngfkpW3bms_D5IMp6wW6K9Glc6LmYr6V5ZJXs11ww2CW8yVtJw6fJ1s9W1Sv87c7XwcFDW7ItG2pfrXbV80dBl3RbvJ4W4xr6Qb2xCfcDN7XbwXpFQ7QFW8Vvznj34MH3BW4dYF5k3wNtnf387r1&data=04%](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2F3q90JV1-WJV7CgQs8W6tVh8w7g3xx0N95499qIS-m4W4_CrbB6ngfkpW3bms_D5IMp6wW6K9Glc6LmYr6V5ZJXs11ww2CW8yVtJw6fJ1s9W1Sv87c7XwcFDW7ItG2pfrXbV80dBl3RbvJ4W4xr6Qb2xCfcDN7XbwXpFQ7QFW8Vvznj34MH3BW4dYF5k3wNtnf387r1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff3265f77c43991f0f08d9cb3f47)
, which include arthritis, autoimmunity, acute liver and kidney injury, thyroiditis, and more.

It's also important to know that the Vaccine Adverse Event Reporting System (VAERS) is imperfect, and adverse effects are often underreported. For example, a 2001 study

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2FJ3q90pV1-WJV7CgRsnW97yB_j4ZZdfQW89q3vK7vCJkJW2MDb846rsp-CW82I00K7LGSDrW4mMfRv870F92N35nwVkQKShWV65zF071-TPkW5JgZzV30Y6VGW3kRML934NCxsW4dgXBz2zTcm9W4V7LnZ4JhzlBW5rRNjK3pKMP-W2ftWPT88YBKsW7Mym3C5SCTV0W8CmjGh8D85qdW9564nS1r6d6LW2xXkJ48SKm_QW8wK4Fc4Yn_zFW1
found that less than half of cases of rotavirus vaccine-associated intussusception (severe intestinal disorder) were successfully reported to VAERS. And a 2020 study
<[https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2F55nKv_V3Zsc37CgDd1W7ShT_m5XWtW4W8kHvFM5_Z0FrW6pVQqS7v9SvvW8BF8d467wrZBW70KGLL27WzzW81XkmP8WgJKZW8v0WYc4Nlpb4W22GBMv1nZDbcVxJ-pt5Pkcf8N8409q27gF1WVB6y0V5yZW8FW9d91td4KlbqsW9dsDFY7yFkvdV4wM6h3Nty3HW25_MPX7q03J9WvybW91IQzM6RVgnWW83qQm11jFGTZW1HWRsK3pkjL6W5xCXkN4n9rKyVD8-Zz264yVYN71bskpfXNRJW4wfn4R2RSJ4IW23Pwb396Ljv8W45vfyz7yfxTYW8TyMJv247qLDMNwz7JcfK-MW2Zb0hK84vWNk148DtP43r42_W8sqxJ66rB_4DW8HsZ3L6qCb5-W77TyqR1nSvvNW47GrFw8K_ZJKW850cx67m8P-fW955X_53YrrX434JD1&data=04%](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2F55nKv_V3Zsc37CgDd1W7ShT_m5XWtW4W8kHvFM5_Z0FrW6pVQqS7v9SvvW8BF8d467wrZBW70KGLL27WzzW81XkmP8WgJKZW8v0WYc4Nlpb4W22GBMv1nZDbcVxJ-pt5Pkcf8N8409q27gF1WVB6y0V5yZW8FW9d91td4KlbqsW9dsDFY7yFkvdV4wM6h3Nty3HW25_MPX7q03J9WvybW91IQzM6RVgnWW83qQm11jFGTZW1HWRsK3pkjL6W5xCXkN4n9rKyVD8-Zz264yVYN71bskpfXNRJW4wfn4R2RSJ4IW23Pwb396Ljv8W45vfyz7yfxTYW8TyMJv247qLDMNwz7JcfK-MW2Zb0hK84vWNk148DtP43r42_W8sqxJ66rB_4DW8HsZ3L6qCb5-W77TyqR1nSvvNW47GrFw8K_ZJKW850cx67m8P-fW955X_53YrrX434JD1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff3265f77c43991f0f08d9cb3f47)
found that the reporting sensitivity for anaphylaxis (severe allergic reaction) and Guillain-Barré syndrome (severe nerve disorder)—both of which have been seen with the Covid-19 vaccines—ranged from 12%–76%.

There are at least 2 reasons to believe that underreporting of side effects for the Covid-19 vaccines is at least as prevalent as the studies above suggest—and probably more:

- * Many doctors and nurses are afraid to report side effects of the vaccines because of the current polarized political climate.
- * The vaccine program for 5- to 11-year-olds began only recently, and there's often a lag time between receiving the vaccines, side effects, and reporting of those side effects.

Nevertheless, let's be generous and assume that the underreporting of side effects from the Covid-19 vaccines in VAERS is only 0.5, or one-half. This would mean 6,466 adverse events reported from 7,141,428 doses of the vaccine in 5- to 11-year-olds, or a risk of a vaccine-related adverse event of 1 in 1,104.

This compares with (according to the German study I mentioned above) a risk of hospitalization of 1 in 11,750, a risk of ICU admission of 1 in 50,000, and a risk of death of zero from Covid-19 in a sample of 400,000 kids.

To make it as clear as possible: these data suggest that, for healthy kids 5 to 11 years old, there is a much higher risk of an adverse event from the vaccine than there is of preventing a hospitalization, ICU admission, or death from Covid-19.

You might argue, "Well, if those adverse events from the vaccine are mild, what does it matter?" That's a reasonable question to ask. However, many of the side effects reported to VAERS are in the moderate-to-severe range. Most people won't bother with the time or hassle required to file a VAERS report if they simply had a sore arm for a couple of days.

OpenVAERS

RB9MW1JPdYq77k33bW2Q5nVp7Cn_fW35BH1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff3265f77c43991f0f08d9cb3f4713

has been diligently reporting on the raw VAERS data throughout the pandemic. According to their website, there have been 983,756 Covid vaccine-related reports submitted to VAERS as of December 17, 2021 across all ages. Within the 5- to 11-year-old age group, these include:

- * 2 deaths
- * 90 hospitalizations
- * 331 urgent care visits
- * 772 doctor's visits
- * 2 cases of Bell's Palsy
- * 3 cases of anaphylaxis

These are clearly not mild side effects, and together with the CDC's data on myocarditis risks, there is enough evidence to warrant concern about both the short- and long-term effects of these vaccines—especially since they are being given to healthy children with their entire lives ahead of them.

In addition to the known risks above, there are also the unknown risks. While mRNA vaccines have been studied for many years, they are new, experimental therapies in humans with no long-term safety data. We simply don't know the long-term risks of these vaccines.

#8: The mandates will cause serious and lasting harm to unvaccinated children

So far, we've focused on the risks and benefits for 5- to 11-year-olds receiving the Covid vaccines.

But if these vaccines are mandated as a condition of attending schools in person, as some districts in the U.S. and abroad have already done, we also must consider the potential harm that children who remain unvaccinated—for any reason—may experience as a result of not being able to go to school.

An unvaccinated child will be punished by withholding in-person education and contact with their peers and teachers. This is a far higher risk than a healthy child faces from contracting Covid-19.

School closures have already caused untold harm to children—some of which may be lifelong. As Dr. Vinay Prasad of UCSF has argued, "school closure was the greatest self-inflicted wound of the pandemic

."

As evidence for this, we've seen a disturbing rise in mental and behavioral health issues

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2F33q90pV1-WJV7CgBP7W6RNrcQ8bw3pNW6XyVRy7RL38dW74n1RL74Lyk4W8d6fpK6JsdCNW87mZx055ffTnW7hq_rQ6Zv37Ry3TW3yRX2Z7S0mL9W21pwm56Dm680W1cmZ7W7-wrP8W6_SmFd6Q8D4tVp-SpC5prqgmW9dz-mB1x3y5ZN38mdy0VxS1mW522PZD11K9rjW8KXT3G7PNWFrW5BpTYt2RR_p6W5VxxT13dQb7vW6kYKhV57W68IBkD1zR9gmN3Xkhf3Bs-HQ313g1&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff3265f77c43991f0f08d9cb3f4713%7C11d0e documented a wide range of harms experienced by children during lockdown (which would be similarly experienced by kids excluded from in-person education because of their vaccination status):

- The list goes on and on. But even studies like this one, which can take months to research and publish, are not documenting the full effects. Public health departments, school counselors, and mental health professionals around the world are reporting deeply disturbing patterns.

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%2F3q90pV1-WJV7CgZHtW7L7dRq1JJXXhW3tBQ9m4n_Qr3W8xx0Bk4cj88vW5lQ1xh3KVpsyW8qZN708wtXdrF3_-lmQjxd3W416WS_3z0XRIW11dFp_6M_qFkW8wdvIx45mwD9W7tdlkL439rCGW1f98bs2p8Vf1Mk0kczJD5mCWYVgxsgp1Q7vn3Vbg0r74GsSWtW3HG61v5WQ04QW4jVwhp97gRmYN27W48nh2vmqW6tHH069ldmX2W6dFYdYsW19BcNB7J1LT_N14sW0fxrr8BW3DBGI88N_IM1V4d5y11z6Fnf39Sf1&data=04%7C01%7Cwsboh%40sl

This is a terrifying and horrific statistic that should be sounding the alarms on the impact of keeping kids away from school and isolating them from their peers and other important people in their lives.

<https://lh4.googleusercontent.com/YOnNPNxeMVypaWGZKvJfFo0XxP8XZxZH0iB7bD8TGAPQVdxbxy3Ax4acuXNYIHfTmdSY5XCq050xP6niqGdAKFjYN-Pr3CLmkFVGqfHI0PCCMWiA930TEB8c1I48OD8>

Is this the world that we want to live in, where parents are forced to decide between giving their children an unnecessary, ineffective, untested, and unsafe vaccine with both known and unknown adverse effects, so the kids can continue to participate in a normal, healthy life, or not give their kids the vaccine and remove them from many if not most of

their typical activities, including attending school in person, eating out at a restaurant, or playing on a sports team?

We do not have to take this path.

Other countries have chosen not to. For example, the U.K.'s expert body the Joint Committee on Vaccination and Immunisation (JCVI) has decided not to vaccinate healthy 5- to 11-year-old children

<[\(https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%55nKv_V3Zsc37CgRpxN7P6RwrFMHyJV-zzwd3TsslnW9dWjTm7Cf4c8W4dqTTQ7tlPcQW2n6h206D2H3BW5QBNdg302x2mW6fF5Pp8SJ3XbW6_pFQk7V4Pv7m60v0W64RTsP4bNm2HW4lDh6R91nl9IW6JPk6d7bkLYmW5dvcnz63dLX_W4hg1S41WWw9N7QNNQJN2pW7GH0fp46BX-QW75gH0X27qc44W3870k55CsShIW843X8x2myNsfVxMHLq6r9SQMN83-NgDg6FyNVpkfV880qTkhW70F7729dqNQgN58nQWKd1rkSW7YISsl84nD4BW2dQRHr9gMcPsw3N13CB3ZZvr9Sylv1y69Z131B61&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff3265f77c43991f0f08d9cb3f4713%](https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fcmq5z04.na1.hubspotlinks.com%55nKv_V3Zsc37CgRpxN7P6RwrFMHyJV-zzwd3TsslnW9dWjTm7Cf4c8W4dqTTQ7tlPcQW2n6h206D2H3BW5QBNdg302x2mW6fF5Pp8SJ3XbW6_pFQk7V4Pv7m60v0W64RTsP4bNm2HW4lDh6R91nl9IW6JPk6d7bkLYmW5dvcnz63dLX_W4hg1S41WWw9N7QNNQJN2pW7GH0fp46BX-QW75gH0X27qc44W3870k55CsShIW843X8x2myNsfVxMHLq6r9SQMN83-NgDg6FyNVpkfV880qTkhW70F7729dqNQgN58nQWKd1rkSW7YISsl84nD4BW2dQRHr9gMcPsw3N13CB3ZZvr9Sylv1y69Z131B61&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C91ff3265f77c43991f0f08d9cb3f4713%)) (though they did approve vaccination for kids in this age group with underlying health conditions).

Even if we decided to make the vaccines available for healthy kids in this age group—which I don't think is an evidence-based decision, for the reasons I've laid out above—there's absolutely no basis for making them mandatory.

- * They do not prevent transmission, especially with Omicron.
- * There is no direct evidence that they reduce the risk of hospitalization or death.
- * The risk of serious illness in healthy kids is extremely low (and likely even lower with Omicron).
- * Over half of kids have already had Covid-19 and have robust and lasting immunity. There is no evidence that vaccinating kids with natural immunity provides additional protection.
- * There is already evidence of harm from the vaccines.

As parents and caregivers, we have a moral and ethical obligation to safeguard the health and well-being of our children. Mandating the Covid vaccines for 5- to 11-year-olds not only fails to achieve this goal, but it works directly against it in numerous ways.

I believe that once the facts I've outlined in this article become more widely known, mandating the Covid vaccines for kids will be viewed as one of the most egregious and unconscionable failures of public health in the history of humanity.

That is why I wrote this email. I want those of you who are parents to truly have informed consent—which is the process by which a healthcare provider educates a patient about the risks, benefits, and alternatives of a given procedure or intervention.

It should be the job of our public health authorities to provide this informed consent regarding the vaccines for 5- to 11-year-olds (and other age groups, as well).

Unfortunately, our agencies and authorities are no longer fulfilling their vital role. (As a side note, this shouldn't surprise my long-time readers. I've been writing about the regulatory capture of public health agencies in other contexts for many years. See here

for examples.)

I know that many of you as parents are finding yourselves in extremely difficult situations, where you feel pressured into giving your children a vaccine that you don't believe is necessary, just so your kids can continue to participate in normal life.

It's up to us, as informed citizens, to fight back against these unscientific and immoral mandates, and protect the health and well-being of our children.

There is no duty that is more sacred.

In health,
Chris

ABSTRACT

This article examines issues related to COVID-19 inoculations for children. The bulk of the official COVID-19-attributed deaths per capita occur in the elderly with high comorbidities, and the COVID-19 attributed deaths per capita are negligible in children. The bulk of the normalized post-inoculation deaths also occur in the elderly with high comorbidities, while the normalized post-inoculation deaths are small, but not negligible, in children. Clinical trials for these inoculations were very short-term (a few months), had samples not representative of the total population, and for adolescents/children, had poor predictive power because of their small size. Further, the clinical trials did not address changes in biomarkers that could serve as early warning indicators of elevated predisposition to serious diseases. Most importantly, the clinical trials did not address long-term effects that, if serious, would be borne by children/adolescents for potentially decades.

A novel *best-case scenario* cost-benefit analysis showed *very conservatively* that there are five times the number of deaths attributable to each inoculation vs those attributable to COVID-19 in the most vulnerable 65+ demographic. The risk of death from COVID-19 decreases drastically as age decreases, and the longer-term effects of the inoculations on lower age groups will increase their risk-benefit ratio, perhaps substantially.

1. Introduction

Currently, we are in the fifteenth month of the WHO-declared global COVID-19 pandemic. Restrictions of different severity are still in effect throughout the world [1]. The global COVID-19 mass inoculation is in its eighth month. As of this writing in mid-June 2021, over 800,000,000 people globally have received at least one dose of the inoculation and roughly half that number have been fully inoculated [2]. In the USA, about 170,000,000 people have received at least one dose and roughly 80 % of that number have been fully inoculated [2].

Also, in the USA, nearly 600,000 deaths have been officially attributed to COVID-19. Almost 5,000 deaths following inoculation have been reported to VAERS by late May 2021; specifically, “Over 285 million doses of COVID-19 vaccines were administered in the United States from December 14, 2020, through May 24, 2021. During this time, VAERS received 4,863 reports of death (0.0017 %) among people who received

a COVID-19 vaccine.” [3] (the Vaccine Adverse Events Reporting System (VAERS) is a passive surveillance system managed jointly by the CDC and FDA [3]. Historically, VAERS has been shown to report about 1% of actual vaccine/inoculation adverse events [4]. See Appendix 1 for a first-principles confirmation of that result). By mid-June, deaths following COVID-19 inoculations had reached the 6000 levels.

A vaccine is legally defined as any substance designed to be administered to a human being for the prevention of one or more diseases [5]. For example, a January 2000 patent application that defined vaccines as “compositions or mixtures that when introduced into the circulatory system of an animal will evoke a protective response to a pathogen.” was rejected by the U.S. Patent Office because “The immune response produced by a vaccine must be more than merely some immune response but must be protective. As noted in the previous Office Action, the art recognizes the term “vaccine” to be a compound which prevents infection” [6]. In the remainder of this article, we use the term

‘inoculated’ rather than vaccinated, because the injected material in the present COVID-19 inoculations prevents neither viral infection nor transmission. Since its main function in practice appears to be symptom suppression, it is operationally a “treatment”.

In the USA, inoculations were administered on a priority basis. Initially, first responders and frontline health workers, as well as the frailest elderly, had the highest priority. Then the campaign became more inclusive of lower age groups. Currently, approval has been granted for inoculation administration to the 12–17 years demographic, and the target for this demographic is to achieve the largest number of inoculations possible by the start of school in the Fall. The schedule for inoculation administration to the 5–11 years demographic has been accelerated to start somewhere in the second half of 2021, and there is the possibility that infants as young as six months may begin to get inoculated before the end of 2021 [7].

The remainder of this article will focus on the USA situation, and address mainly the pros and cons of inoculating children under eighteen. The article is structured as follows:

Section 1 (the present section) introduces the problem.

Section 2 (Background):

- 1) provides the background for the declared COVID-19 “pandemic” that led to the present inoculations;
- 2) describes the clinical trials that provided the justification for obtaining Emergency Use Authorization (EUA) from the FDA to administer the inoculations to the larger population;
- 3) shows why the clinical trials did not predict either the seriousness of adverse events that have occurred so far (as reported in VAERS) or the potential extent of the underlying pre-symptomatic damage that has occurred as a result of the inoculations.

Section 3 (Mass Inoculation) summarizes the adverse events that have occurred already (through reporting in VAERS) from the mass inoculation and will present biological evidence to support the potential occurrence of many more adverse effects from these inoculations in the mid-and long-term.

Section 4 (Discussion) addresses these effects further

Section 5 (Summary and Conclusions) presents the conclusions of this study.

There are four appendices to this paper.

Appendix A provides some idea of the level of under-reporting of post-inoculation adverse events to VAERS and presents estimations of the actual number of post-inoculation deaths based on extrapolating the VAERS results to real-world experiences.

Appendix B provides a detailed analysis of the major clinical trials that were used to justify EUA for the inoculants presently being administered in the USA.

Appendix C summarizes potential adverse effects shown to have resulted from past vaccines, all of which could potentially occur as a result of the present inoculations.

Appendix D presents a novel *best-case scenario* cost-benefit analysis of the COVID-19 inoculations that have been administered in the USA.

2. Background

2.1. Pandemic history

In December 2019, a viral outbreak was reported in Wuhan, China, and the responsible coronavirus was termed Severe Acute Respiratory Syndrome Coronavirus 2 (SARS-CoV-2) [8,9]. The associated disease was called Coronavirus Disease 2019, or COVID-2019. The virus spread worldwide, and a global pandemic was declared by the WHO in March 2020 [10,11]. Restrictive measures of differing severity were implemented by countries globally, and included social distancing, quarantining, face masks, frequent hand sanitation, etc. [12,13]. In the USA, these measures were taken as well, differing from state-to-state [14]. At

the same time, vaccine development was initiated to control COVID-19 [15]. In the USA, non-vaccine treatments were not encouraged at the Federal level, but different treatment regimens were pursued by some healthcare practitioners on an individual level [11,16,17].

By the end of May 2021, the official CDC death count attributed to COVID-19 was approaching 600,000, as stated previously. This number has been disputed for many reasons. First, before COVID-19 testing began, or in the absence of testing, after it was available, the diagnosis of COVID-19 (in the USA) could be made by the presumption of the healthcare practitioner that COVID-19 existed [4,18]. Second, after testing began, the main diagnostic used was the RT-PCR test. This test was done at very high amplification cycles, ranging up to 45 [19–21]. In this range, very high numbers of false positives are possible [22].

Third, most deaths attributed to COVID-19 were elderly with high comorbidities [1,22]. As we showed in a previous study [22], attribution of death to one of many possible comorbidities or especially toxic exposures in combinations [23] is highly arbitrary and can be viewed as a political decision more than a medical decision. For over 5 % of these deaths, COVID-19 was the only cause mentioned on the death certificate. For deaths with conditions or causes in addition to COVID-19, on average, there were 4.0 additional conditions or causes per death [24]. These deaths with comorbidities could equally have been ascribed to any of the comorbidities [22]. Thus, the actual number of COVID-19-based deaths in the USA may have been on the order of 35,000 or less, characteristic of a mild flu season.

Even the 35,000 deaths may be an overestimate. Comorbidities were based on the clinical definition of specific diseases, using threshold biomarker levels and relevant symptoms for the disease(s) of interest [25,26]. But many people have what are known as pre-clinical conditions. The biomarkers have not reached the threshold level for official disease diagnosis, but their abnormality reflects some degree of underlying dysfunction. The immune system response (including pre-clinical conditions) to the COVID-19 viral trigger should not be expected to be the same as the response of a healthy immune system [27]. If pre-clinical conditions had been taken into account and coupled with the false positives as well, the CDC estimate of 94 % misdiagnosis would be substantially higher.

2.2. Clinical trials

2.2.1. Clinical trials to gain FDA Emergency Use Authorization (EUA) approval

The unprecedented accelerated development of COVID-19 vaccines in the USA, dubbed Operation Warp Speed, resulted in a handful of substances available for clinical trials by mid-2020 [28]. These clinical trials were conducted to predict the safety and efficacy of the potential vaccines (which have turned out to be treatments/inoculations as stated previously), and thereby gain approval for inoculating the public at large [29]. An overview of the Pfizer clinical trials is presented in this section, and a more detailed description of the main clinical trials is shown in Appendix B.

Two types of inoculants have gained FDA EUA in the US: mRNA-based inoculants and viral vector-based inoculants, with the mRNA inoculants having the widest distribution so far. Comirnaty is the brand name of the mRNA-based inoculant developed by Pfizer/BioNTech, and Moderna COVID-19 Vaccine is the brand name of the mRNA-based inoculant developed by Moderna [30]. Both inoculants contain the genetic information needed for the production of the viral protein S (spike), which stimulates the development of a protective immune response against COVID-19 [31]. Janssen COVID-19 Vaccine is the brand name of the viral vector-based inoculant developed by Johnson and Johnson. Janssen COVID-19 vaccine uses an adenovirus to transport a gene from the coronavirus into human cells, which then produce the coronavirus spike protein. This spike protein primes the immune system to fight off potential coronavirus infection [32].

The results of these trials that allowed granting of EUA by the FDA

Table 1

Demographics (population for the primary efficacy endpoint). The number of participants who received vaccine and placebo, stratified by age.

AGE GROUP	Pfizer-BioNTech COVID-19 Vaccine (N = 18,242) n (%)	Placebo (N = 18,379) n (%)
≥12 through 15 years ^b	46 (0.3 %)	42 (0.2 %)
≥16 through 17 years	66 (0.4 %)	68 (0.4 %)
≥16 through 64 years	14,216 (77.9 %)	14,299 (77.8 %)
≥65 through 74 years	3176 (17.4 %)	3226 (17.6 %)
≥75 years	804 (4.4 %)	812 (4.4 %)

Symbols: b: “100 participants 12 through 15 years of age with limited follow-up in the randomized population received at least one dose (49 in the vaccine group and 51 in the placebo group). Some of these participants were included in the efficacy evaluation depending on the population analyzed. They contributed to exposure information but with no confirmed COVID-19 cases, and did not affect efficacy conclusions.”; N: number of test subjects, n: number of controls.

Fig. 1. COVID-19 Deaths per capita by age in the United States (as of Jun 5, 2021). Population-based on U.S. CDC WONDER Bridge-Race Population Estimate 2019. Data obtained from <https://wonder.cdc.gov/bridged-race-v2019.html> on 6/15/2021. Provisional COVID-19 deaths based on CDC data provided by the National Center for Health Statistics for the period 1/1/2020 – 6/5/2021. Data obtained from <https://data.cdc.gov/NCHS/Provisional-COVID-19-Deaths-by-Sex-and-Age/9bhg-hcku> on 6/10/2021.

can be found in the inserts to the inoculation materials. For example, the Pfizer inoculation trial results are contained in the fact sheet for healthcare providers administering vaccine (vaccination providers) [33].

There were two clinical trials conducted to gain FDA EUA for Pfizer: a smaller Phase 1/2 study, and a larger Phase 1/2/3 study. The age demographics for the larger clinical study are as follows (from the Pfizer insert): “Of the total number of Pfizer-BioNTech COVID-19 Vaccine recipients in Study 2 (N = 20,033), 21.4 % (n = 4,294) were 65 years of age and older and 4.3 % (n = 860) were 75 years of age and older.” Additionally: “In an analysis of Study 2, based on data up to the cutoff date of March 13, 2021, 2,260 adolescents (1,131 Pfizer-BioNTech COVID-19 Vaccine; 1,129 placebo) were 12 through 15 years of age. Of these, 1,308 (660 Pfizer-BioNTech COVID-19 Vaccine and 648 placebo) adolescents have been followed for at least 2 months after the second dose of Pfizer-BioNTech COVID-19 Vaccine. The safety evaluation in Study 2 is ongoing.”

The relevant demographics are presented in Table 7 on p.31 of the Pfizer insert. The age component of those demographics is shown below in Table 1.

There are very minor differences between most of the data in the above table and the preceding narrative shown, and they are probably due to different time horizons. The major difference is the number of adolescents used and appears to result from a much later reporting time.

Fig. 1 uses the official large CDC numbers (coupled with USA census data estimates from CDC Wonder) to show the COVID-19 deaths per capita as a function of age, circa early June 2021. Unfortunately, the most critical range, 85+, has the least resolution. It is obvious that most of the deaths occurred in the 55 to 100+ range, and the remaining individuals in the other ranges (especially under 35) have negligible risk of dying from the disease.

The age distribution in Fig. 1 differs substantially from the age distribution in Table 1. Why is this important? When designing a trial for the efficacy and safety of a potential treatment, the focus should be on the target population who could benefit from that treatment. There is little rationale for including participants in a trial for whom the treatment would not be relevant or warranted.

For the COVID-19 Pfizer trials, based on the data from Fig. 1, the trial population should have been limited at most to the 45–100+ age segment, appropriately weighted toward the higher end where the deaths per capita are most frequent. That was almost the exact opposite of what was done in the Pfizer clinical trials. In Fig. 1, approximately 58 % of the deaths occurred in the age range 75+, whereas 4.4 % of the participants in the Pfizer clinical trial were 75+. Thus, the age range most impacted by COVID-19 deaths was minimally represented in the Pfizer clinical trials, and the age range least impacted by COVID-19 deaths was maximally represented in the Pfizer clinical trials. This skewed sampling has major implications for predicting the expected numbers of deaths for the target population from the clinical trials.

Besides age, the other metric of importance in determining COVID-19 deaths is the presence of comorbidities. The more comorbidities, and the more severe the comorbidities, the greater the chances of death or severe adverse outcomes from COVID-19. It is not clear how well the number and severity of comorbidities in the clinical trial sample matched those reflected in Fig. 1, but the insert does mention the large number of conditions that excluded participation in the trials. In sum, the results from the clinical trials could not be expected to reflect the results that could occur (and have occurred) from mass inoculation of the public, given the unaffected nature of the bulk of the trial population from SARS-CoV-2 exposure.

The prior discussion on the clinical trials has focused on the efficacy and safety of the inoculants, and the relationship of the trial test population to the total target population. We have limited the focus so far to the safety and efficacy issues since these constituted the core of what was presented to the FDA for EUA approval. We have not focused on the trials from an early warning indicator perspective.

We will address summarily the science/early warning indicator issues associated with the Pfizer trials, and how the neglect of these issues has translated into disastrous consequences during the mass inoculation rollout. Standard practice for determining and understanding the impact of new technology (such as mRNA “vaccines”) on a system involves measuring the state and flux variables of the system before the new technology intervention, measuring the state and flux variables of the system after the new technology intervention, and identifying the types and magnitudes of changes in the state and flux variables attributable to the intervention. This would be in addition to evaluating performance metrics before and after the intervention.

In Pfizer’s proposed clinical trials for the mRNA “vaccine” (Study to Describe the Safety, Tolerability, Immunogenicity, and Efficacy of RNA Vaccine Candidates Against COVID-19 in Healthy Individuals - <https://clinicaltrials.gov/ct2/show/NCT04368728>), the focus was on determining 1) adverse events/symptoms, 2) SARS-CoV-2 serum neutralizing antibody levels, 3) SARS-CoV-2 anti-S1 binding antibody levels and anti-RBD binding antibody levels, and 4) effectiveness. These metrics are all related to safety at the symptom level and performance.

However, symptoms/diseases are typically end points of processes

Fig. 2. Post-inoculation deaths per dose of inoculant. 7-day COVID-19 vaccine deaths per inoculation by age in the United States (as of 5/28/2021). Data shown includes the total number of all deaths up to 7 days after receiving the vaccine for both those administered 1 dose and the complete series of doses by age in the United States as of 5/28/2021 reported in VAERS (updated on 5/28/2021). COVID-19 Vaccinations (Inoculations) based on CDC data provided by ISSInfo up thru 5/28/2021. Data obtained from <https://data.cdc.gov/Vaccinations/COVID-19-Vaccination-Demographics-in-the-United-St/km4m-vcsb> on 6/10/2021. COVID-19 Vaccinations Deaths based on CDC WONDER VAERS Database as of 5/28/2021, obtained from <https://wonder.cdc.gov/controller/datarequest/D8.jsessionid=4B5522C8D1DA68F1A364646B0DA5> on 6/9/2021.

that can take months, years, or decades to surface. During that symptom/disease development period, many biomarker early warning indicators tend to exhibit increasing abnormalities that reflect an increasing predisposition to the eventual symptom/disease. Thus, serious symptoms/diseases that ordinarily take long periods to develop would be expected to be rare events if they occurred shortly following an inoculation. If the clinical trials that were performed by Pfizer and Moderna were designed to focus on efficacy and *only adverse effects at the symptom level of description* as an indicator of safety, the trial results would be limited to the identification of rare events, and the trial results would potentially under-estimate the actual pre-symptom level damage from the inoculations.

Credible safety science applied to this experiment would have required a much more expansive approach to determining effects on a wide variety of state and flux metrics that could serve as early warning indicators of potentially serious symptoms/disease, and might occur with much higher frequencies at this early stage than the rare serious symptoms. The only mention of these other metrics in the above proposal is in the Phase I trial description: “Percentage of Phase 1 participants with abnormal haematology and chemistry laboratory values”, to be generated seven days after dose 1 and dose 2.

A paper published in NEJM in December 2020 [34] summarized the Phase 1 results. The focus was on local and systemic adverse events and efficacy metrics (antibody responses). The only metrics other than these reported were transiently decreased lymphocyte counts.

We view this level of reporting as poor safety science for the following reasons. Before the clinical trials had started, many published articles were reporting serious effects associated with the presence of the SARS-CoV-2 virus such as hyperinflammation, hypercoagulation, hypoxia, etc. SARS-CoV-2 includes the S1 Subunit (spike protein), and it was not known how much of the damage was associated with the spike protein component of SARS-CoV-2. A credible high-quality safety science experiment would have required state measurements of specific biomarkers associated with each of these abnormal general biomarkers before and after the inoculations, such as d-dimers for evidence of enhanced coagulation/clotting; CRP for evidence of enhanced inflammation; troponins for evidence of cardiac damage; occludin and claudin for evidence of enhanced barrier permeability; blood oxygen levels for evidence of enhanced hypoxia; amyloid-beta and phosphorylated tau for

evidence of increased predisposition to Alzheimer’s disease; Serum HMGB1, CXCL13, Dickkopf-1 for evidence of an increased disposition to autoimmune disease, etc. A credible high-quality safety science experiment would have required flux measurements of products resulting from the mRNA interactions, from the LNP shell interactions, from dormant viruses that might have been stimulated by the mRNA-generated spike protein, etc., emitted through the sweat glands, faeces, saliva, exhalation, etc.

Most importantly, these types of measurements would have shown changes in the host that did not reach the symptom level of expression but raised the general level of host abnormality that could predispose the host to a higher probability of serious symptoms and diseases at some point in the future. Instead, in the absence of high-quality safety science reflected in these experiments, all that could be determined were short-term adverse effects and deaths. This focus on symptoms masked the true costs of the mRNA intervention, which would probably include much larger numbers of people whose health could have been degraded by the intervention as evidenced by increased abnormal values of these biomarkers. For example, the trials and VAERS reported clots that resulted in serious symptoms and deaths but gave no indication of the enhanced predisposition to forming serious clots in the future with a higher base of micro-clots formed because of the mRNA intervention. The latter is particularly relevant to children, who have a long future that could be seriously affected by having an increased predisposition to multiple clot-based (and other) serious diseases resulting from these inoculations.

3. Mass inoculation

3.1. Adverse events reported for adults

This section describes the adverse effects that followed COVID-19 mass inoculation in the USA. The main source of adverse effects data used was VAERS. Because VAERS is used to estimate adverse event information by many other countries as well, a short overview of VAERS and its intrinsic problems is summarized in Appendix 1.

The period in the present study covered by the reported inoculations is mid-December 2020 to the end of May 2021. The population inoculated during this period is mainly adults. Child inoculations did not begin until mid-May. Because the different age groups were inoculated starting at different times based on priority, the elapsed times after inoculation will be different, and any adverse event comparisons across age groups will require some type of elapsed post-inoculation time normalization.

We examined VAERS-reported deaths by age group, normalized to:

- 1) the number of inoculations given
- 2) the period within seven days after inoculation.

This allows a credible comparison of very short-term adverse effects post-inoculation for all age groups. During this period, which is eight days post-inoculation (where day zero is the day of inoculation), sixty percent of all post-inoculation deaths are reported in VAERS.

Fig. 2 below shows the results circa late May 2021 [3]. The age band ranges are different from those in Fig. 1 because the CDC provides inoculation after-effect age bands differently from COVID-19 death age bands. In general, the inoculation deaths by age per inoculant roughly parallel the COVID-19 deaths by age per capita (the curve structures are very similar), with one exception: the 0–17 demographic. In the normalized COVID-19 death graph (Fig. 1), the deaths per capita in the 0–17 demographic are negligible, while in the normalized inoculant death graphs (Fig. 2) the normalized deaths are small, but not negligible. The members of the 65+ demographic, where the bulk of deaths are occurring in Figs. 1 and 2, have been receiving inoculations for five months, whereas the members of the youngest demographic have been receiving inoculations only for a few weeks. More time needs to pass

before more definitive conclusions can be drawn about the youngest demographic, and how its members are impacted adversely following the inoculations.

The high death rates from both COVID-19 and the inoculations in the 65+ demographic should not be surprising. In both cases, the immune system is challenged, and in both cases, a dysfunctional immune system characteristic of many elderly people with multiple comorbidities cannot respond adequately to the challenge.

3.1.1. Specific short-term adverse events reported in VAERS

The most comprehensive single evaluation of VAERS-reported adverse events (mainly for adult recipients of the COVID-19 “vaccines”) we have seen is a non-peer-reviewed collection of possible side effects by Dr. Ray Sahelian [35]. We recommend reading this short data-rich summary of the broad types of events reported already, in the context that these events are very short-term. Dr. Sahelian identifies five mechanisms he believes are responsible for most of these events, with research potentially uncovering other mechanisms. These five mechanisms include:

- 1 “An overreacting inflammatory response is known as systemic inflammatory response syndrome (SIRS). This SIRS reaction, perhaps a cytokine storm, can range from very mild to very severe. It can begin the very first day of the shot or begin days or weeks later as a delayed reaction.”
- 2 “Interaction of the spike proteins with ACE2 receptors on cell membranes. Such cells are found widely in the body including the skin, lungs, blood vessels, heart, mouth, gastrointestinal tract, kidneys, and brain.”
- 3 “Interaction of spike proteins with platelets and/or endothelial cells that line the inside of blood vessels. This can lead to clotting or bleeding (low number of circulating platelets in the bloodstream). Some of the clots, even if tiny, cause certain neurological symptoms if the blood supply to nerves is compromised.”
- 4 “Immediate or delayed release of histamine from mast cells and basophils (mast cell activation syndrome, MCAS).”
- 5 “Swelling of lymph nodes in various areas of the body could interfere with blood flow, put pressure on nerves causing pain, or compromise their proper function.”

These reactions can be classified as Hyperinflammation, Hypercoagulation, Allergy, and Neurological, and can contribute to many symptoms and diseases, as VAERS is showing.

An excellent review of acute and potential long-term pathologies resulting from the COVID-19 inoculations [36] showed potential relationships to blood disorders, neurodegenerative diseases and autoimmune diseases. This review discussed the relevance of prion-protein-related amino acid sequences within the spike protein.

3.1.2. Potential mid- and long-term events and serious illnesses for adults and children from past vaccines

A detailed description of potential mid- and long-term events and serious illnesses for adults and children from past vaccines is presented in Appendix C. Most of these events and illnesses are not predictable, and most, if not all, would be possible for the COVID-19 inoculations in the mid- and long-term for adults and children.

3.1.3. Potential short-, mid-, and long-term risks of mass COVID-19 inoculation for children

3.1.3.1. Intrinsic inoculant toxicity. Children are unique relative to COVID-19. They have negligible risks of serious effects from the disease, as shown in Fig. 1. Given that the COVID-19 inoculants were only tested for a few months, and mid-or long-term adverse effects are unknown, any mid- or long-term adverse events that emerge could impact children

adversely for decades.

We believe that mid-or long-term adverse effects are possible based on the recent emergence of evidence that would support the probability of mid-and long-term adverse effects from the COVID-19 inoculants, such as:

- 1) The spike protein itself can be a toxin/pathogenic protein:
- 2) S protein alone can damage vascular endothelial cells (ECs) by downregulating ACE2 and consequently inhibiting mitochondrial function [37].
- 3) it is concluded that ACE2 and endothelial damage is a central part of SARS-CoV2 pathology and may be induced by the spike protein alone [38].
- 4) the spike protein of SARS-CoV-1 (without the rest of the virus) reduces ACE2 expression, increases angiotensin II levels, exacerbates lung injury, and triggers cell signaling events that may promote pulmonary vascular remodeling and Pulmonary Arterial Hypertension (PAH) as well as possibly other cardiovascular complications [39].
- 5) the recombinant S protein alone elicits functional alterations in cardiac vascular pericytes (PCs) [40]. This was documented as:
- 6) increased migration
- 7) reduced ability to support EC network formation on Matrigel
- 8) secretion of pro-inflammatory molecules typically involved in the cytokine storm
- 9) production of pro-apoptotic factors responsible for EC death. Furthermore, the S protein stimulates the phosphorylation/activation of the extracellular signal-regulated kinase 1/2 (ERK1/2) through the CD147 receptor, but not ACE2, in cardiac PCs, the S protein may elicit vascular cell dysfunction, potentially amplifying, or perpetuating, the damage caused by the whole coronavirus [40].
- 10) “even in the absence of the angiotensin-converting enzyme 2 receptors, the S1 subunit from SARS-CoV-2 spike protein binding to neutral phospholipid membranes leads to their mechanical destabilization and permeabilization. A similar cytotoxic effect of the protein was seen in human lung epithelial cells.” [125].
- 11) The LNP layer encapsulating the mRNA of the inoculant is highly inflammatory in both intradermal and intranasal inoculation [41] and “Polyethylene glycol (PEG) is a cause of anaphylaxis to the Pfizer/BioNTech mRNA COVID-19 vaccine” [42]. “Humans are likely developing PEG antibodies because of exposure to everyday products containing PEG. Therefore, some of the immediate allergic responses observed with the first shot of mRNA-LNP vaccines might be related to pre-existing PEG antibodies. Since these vaccines often require a booster shot, anti-PEG antibody formation is expected after the first shot. Thus, the allergic events are likely to increase upon re-vaccination” [43].
- There is also the possibility that the components of the LNP shell could induce the ASIA Syndrome (auto-immune/inflammatory syndrome induced by adjuvants), as shown by studies on post-inoculation thyroid hyperactivity [44] and post-inoculation subacute thyroiditis [45].
- 12 The spike protein has been found in the plasma of post-inoculation individuals, implying that it could circulate to, and impact adversely, any part of the body [46].
- 13 The spike protein of SARS-CoV-2 crosses the blood-brain barrier in mice [47], and “the SARS-CoV-2 spike proteins trigger a pro-inflammatory response on brain endothelial cells that may contribute to an altered state of BBB function” [48].
- 14 The spike proteins manufactured in vivo by the present COVID-19 inoculations could potentially “precipitate the onset of autoimmunity in susceptible subgroups, and potentially exacerbate autoimmunity in subjects that have pre-existing autoimmune diseases”, based on the finding that anti-SARS-CoV-2 protein

antibodies cross-reacted with 28 of 55 diverse human tissue antigens [49].

- 15 “The biodistribution of ChaAdOx1 [Astra Zeneca’s recombinant adenovirus vaccine candidate against SARS-CoV-2] in mice confirmed the delivery of vaccine into the brain tissues [50]. The vaccine may therefore spur the brain cells to produce CoViD spike proteins that may lead to an immune response against brain cells, or it may spark a spike protein-induced thrombosis. This may explain the peculiar incidences of the fatal cerebral venous sinus thrombosis (CVST) observed with viral vector-based CoViD-19 vaccines” [51,52].

A complementary perspective to explain adenovirus-based vaccine-induced thrombocytopenia is that “transcription of wildtype and codon-optimized Spike open reading frames enables alternative splice events that lead to C-terminal truncated, soluble Spike protein variants. These soluble Spike variants may initiate severe side effects when binding to ACE2-expressing endothelial cells in blood vessels.” [100].

- 16 A Pfizer Confidential study performed in Japan showed that “modRNA encoding luciferase formulated in LNP comparable to BNT162b2” injected intramuscularly concentrated in many organs/tissues in addition to the injection site [53]. The main organs/sites identified were adrenal glands, liver, spleen, bone marrow, and ovaries. While damage to any of these organs/sites could be serious (if real for humans), adverse effects on the ovaries could be potentially catastrophic for women of child-bearing or pre-childbearing age.

The main objective of credible biodistribution studies (of inoculants for eventual human use) is to identify the spatio-temporal distribution of the actual inoculant in humans; i.e., how much of the final desired product (in this case, expressed protein antigen/spike protein) is produced in different human tissues and organs as a function of time. That’s not what was reported in the Pfizer Confidential study.

Rats were used for the *in vivo* studies; the relationship of their biodistribution to that of humans is unclear. They were injected in different locations (hindpaw/intramuscular); the relationship to human injections in the deltoid muscle is unclear. They were injected with “modRNA encoding luciferase formulated in LNP comparable to BNT162b2”; it is unclear why they weren’t injected with BNT162b2, it is unclear why spike protein expression wasn’t evaluated rather than LNP concentration, and it is unclear how well the biodistribution from the actual inoculant used in the experiments compares to the biodistribution from BNT162b2.

They were injected once per rat. Given that a second injection would not be in the same exact location as the first, and that the circulatory system might have changed due to clotting effects from the first injection and other potential vascular complications, it is unclear how the biodistribution change with the second injection would compare with the first. If a booster injection is given to counter variants, it is unclear how its biodistribution would be altered as a consequence of the preceding two injections.

Clotting will occur with the highest probability where the blood flow is reduced (and more time is available for LNP-endothelial cell interaction). It is unclear whether the clotting process would show *positive feedback* behaviour where the initial inoculation constricts the flow in low-velocity regions even further by enhanced clotting, and subsequent inoculations further amplify this reduced flow-enhanced clotting cycle.

The rats were injected under pristine conditions; how that compares with humans, who have been, are being, and will continue to be exposed to multiple toxic substances in combination, is open to question. We know these combinations can act synergistically to adversely impact myriad organs and tissues throughout the body [23]. We don’t know how these toxic exposures in humans affect the permeability of the blood/tissue barriers, and especially the ability of the injected material to diffuse into the bloodstream (and also the ability of the manufactured

spike proteins to diffuse from the bloodstream into the surrounding tissue).

Higher-level primates should have been used for these short-term experiments, to obtain a more realistic picture of the biodistribution of inoculant in human organs and tissues. In other words, these laboratory experiments may be just the tip of the iceberg of estimating the amount of inoculant that concentrates in critical organs and tissues of human beings.

The many studies referenced above indicate collectively that the mRNA-based COVID-19 inoculations (the most prolific inoculations used in the USA for COVID-19 so far) consist of (at least) two major toxins: the instructions for the spike protein (mRNA) and the mRNA-encapsulating synthetic fat LNP. The vaccine is injected into the deltoid muscle, at which time it contributes to inflammation at the injection site due in part to the LNP and potentially to anaphylaxis from the LNP PEG-2000 component. Some of the injected material stays at the injection site, where it combines with cells through endocytosis to express spike protein on the cell surface, stimulating the adaptive immune system to eventually produce antibodies to the spike protein [54].

The remainder of the injected material enters the lymphatic system and the bloodstream, and is distributed to tissues and organs throughout the body: e.g., “Drugs administered by the intramuscular (IM) route are deposited into vascular muscle tissue, which allows for rapid absorption into the circulation” [55]. The basis of this process is that the bulky muscles have good vascularity, and therefore the injected drug quickly reaches the systemic circulation and thereafter into the specific region of action, bypassing the first-pass metabolism [56]. The widespread distribution is greatly enhanced by the LNP PEG-2000 coating as follows: building from the success of PEGylating proteins to improve systemic circulation time and decrease immunogenicity [57]. PEG coatings on nanoparticles shield the surface from aggregation, opsonization, and phagocytosis, prolonging systemic circulation time. [57]. PEG coatings on nanoparticles have also been utilized for overcoming various biological barriers to efficient drug and gene delivery associated with other modes of administration. [57]

In the bloodstream, one possible outcome is that the LNPs coalesce with the endothelial cells on the inner lining of the blood vessels and transfer the mRNA to the cells through endocytosis. The endothelial cells would then express the spike protein on their surface. Platelets flowing by the spike protein express ACE2 receptors on their surface; therefore, one possible outcome would be activation of the platelets by the spike protein and initiation of clotting. Another possible outcome would be the modified endothelial cells being recognized by innate immune system cells as foreign. These immune killer cells would then destroy parts of the endothelium and weaken the blood-organ barriers. The LNPs would inflame the endothelium as well, both increasing barrier permeability and increasing the blood vessel diameter. This weakening of the blood-organ barriers would be superimposed on any inflammation due to the myriad toxic contributing factors operable [4]. The newly-formed cells with spike proteins would penetrate the blood-organ barriers and bind to tissue with expressed ACE2 receptors. Any LNPs that did not coalesce with the endothelial cells, but remained intact, could also pass through the permeable blood-organ barrier, and coalesce directly with the organ cells. This could lead to an attack by innate immune system cells, and be a precursor to autoimmunity [4].

In the preceding discussion of the Pfizer biodistribution studies, the issue of multiple inoculations on changes in biodistribution was raised. Similarly, the alteration of effects as described above by multiple inoculations must be considered. Each inoculation will have positive aspects and negative aspects. The positive aspects are the formation of antibodies in the muscle cells and lymphatic system. The negative aspects include, but are not limited to, the potential clotting effects and permeability increases for that fraction of the inoculant that enters the bloodstream. The first inoculant dose can be viewed as priming the immune system. The immune response will be relatively modest. The second inoculant dose can be expected to elicit a more vigorous immune

Table A1
Expected deaths from non-COVID-19 causes for inoculees (Thousands).

Potential covid deaths/# non-covid expected	Mean time location/five months									
	0	%REP	1/3	%REP	1/2	%REP	2/3	%REP	1	%REP
0	723	0.5	482	0.74	362	0.98	242	1.47	4.77	75
.5	1085	0.33	723	0.5	543	0.66	363	0.98	7.14	50
1	1446	0.25	964	0.37	724	0.49	484	0.74	9.51	37

Fig. A1. Figure A1-1 is a plot of number of deaths from COVID-19 inoculation (reported to VAERS and obtained from the CDC search engine CDC Wonder) as a function of days from inoculation (zero reflects day of inoculation). If there were no effect from the inoculation, as claimed by the CDC and other official government agencies, the curve would be essentially a straight horizontal line, reflecting normal expected deaths in a non-COVID-19 year. The curve is stepped past the tenth day because the data after that point is provided in bands by CDC Wonder. The knee of the curve, which will denote the beginning of the transition of 1) deaths **from** inoculation to 2) deaths **expected**, appears somewhere in the range between day ten and day thirty.

response. This will enhance the desired antibody production in the muscle cells and lymphatic system, but may also enhance the immune response to both the blood vessel-lining endothelial cells displaying the spike protein and the platelets, causing more severe damage. If a booster (s) inoculation is also required, this may further enhance both the positive and negative immune responses resulting from the second inoculation. While the positive effects are reversible (antibody levels decrease with time), adverse effects may be cumulative and irreversible, and therefore injury and death rates may increase with every additional inoculation [58].

These effects can occur throughout the body in the short term, as we are seeing with the VAERS results. They can occur in the mid- and long-term as well, due to the time required for destructive processes to have full effect and the administration of further inoculations. For example, micro-clots resulting from the inoculation that were insufficient to cause observable symptoms could in effect raise the baseline for thrombotic disease [92]. Lifestyle activities that contribute to enhanced blood clotting would have less distance to travel to produce observable symptoms, and thus the serious effects of clotting would have been accelerated [59,60]. As an example: the risk of venous thrombosis is approximately 2- to 4-fold increased after air travel [61]. How much this rate would increase after the inoculations, where microthrombi have formed in some recipients, is unknown. These potential baseline-raising effects could impact the interpretation of the VAERS results, as we show at the end of Appendix 1.

3.1.3.2. Adverse inoculant effects on children. What are the potential mid- and long-term adverse health effects from the COVID-19 inoculation on children specifically, taking into account that they will be exposed not only to the spike protein component of the SARS-CoV-2 virus but also to the toxic LNP encapsulating-shell? This toxic combination will have bypassed many defensive safeguards (typically provided by the innate immune system) through direct injection [62]. As we have shown, the main reasons why we believe the spike protein could be harmful to children even though they don't seem to get sick from exposure to SARS-CoV-2 are 1) the bypassing of the innate immune system by inoculation, 2) the larger volume of spike protein that enters the bloodstream, and 3) the additional toxic effects of the encapsulating LNP layer.

3.1.3.2.1. Potential mid-term adverse health effects. Examination of the myriad post-COVID-19 inoculation symptoms/biomarker changes for the 0–17 age demographic reported to VAERS circa mid-June 2021 provides some indication of very early damage [84]. Main regions/systems affected adversely (VAERS symptoms/biomarkers shown in parentheses) include:

- Cardiovascular (blood creatine phosphokinase increased, cardiac imaging procedure abnormal, echocardiogram abnormal, electrocardiogram abnormal, heart rate increased, myocarditis, palpitations, pericarditis, tachycardia, troponin I increased, troponin increased, fibrin D-Dimer increased, platelet count decreased, blood pressure increased, bradycardia, brain natriuretic peptide increased, ejection fraction decreased, migraine)
- Gastrointestinal (abdominal pain, diarrhoea, vomiting, alanine aminotransferase increased, aspartate aminotransferase increased.)
- Neural (gait disturbance, mobility decreased, muscle spasms, muscle twitching, seizure, tremor, Bell's Palsy, dyskinesia)

- Immune (C-Reactive Protein increased, red blood cell sedimentation rate increased, white blood cell counts increased, inflammation, anaphylactic reaction, pruritis, rash, lymphadenopathy)
- Endocrine (heavy menstrual bleeding, menstrual disorder)

In addition, there were large numbers of different vision and breathing problems reported.

All the major systems of the body are impacted, and many of the major organs as well. Given the lag times in entering data into VAERS and the fact that inoculations of children started fairly recently, we would expect the emphasis to be immediate symptomatic and biomarker reactions. More time is required for organ and system damage to develop and emerge. Cardiovascular problems dominate, as our model for spike protein/LNP circulation and damage predicts, and it is unknown how reversible such problems are. Many of the VAERS symptoms listed above were also found in COVID-19 adult patients [64].

Consider the example of Multisystem Inflammatory Syndrome in Children (MIS-C). It has emerged in VAERS with modest frequency so far, and it also occurred about a month after COVID-19 infection [65]. In both cases, the presence of the spike protein was a common feature. Many of its characteristic symptoms are those listed above from VAERS. MIS-C has similarities with known disease entities like Kawasaki Disease (KD), toxic shock syndrome (TSS) and macrophage activation syndrome (MAS)/secondary hemophagocytic lymphohistiocytosis (HLH) [66]. One presentation of MIS-C is in adolescents with a high disease burden as evidenced by more organ systems involved, almost universally including cardiac and gastrointestinal systems, and with a higher incidence of shock, lymphopenia, and elevated cardiac biomarkers indicating myocarditis [67]. Since the first reports of children developing MIS-C, it was evident that others presented with some of the classic symptoms of the well-recognized childhood illness KD [68]. Further, despite KD being ordinarily incredibly rare in adults, patients with MIS-A have also been reported with KD-like features. [68] Thus, an examination of the adverse effects from COVID-19 as evidenced through these diseases might shed some light on what can be expected further down the line from the inoculations.

The following section addresses Kawasaki disease (KD) and Multisystem Inflammatory Syndrome in Children (MIS-C) [65].

KD is an acute vasculitis and inflammation that predominantly affects the coronary arteries and can cause coronary artery aneurysms. Other KD manifestations include systemic inflammation of arteries, organs, and tissues, with consequent hepatitis and abdominal pain; lung interstitial pneumonitis, aseptic meningitis due to brain membrane inflammations; myocarditis, pericarditis, and valvulitis; urinary tract pyuria, pancreatitis; and lymph-node enlargement [69]. In general, although almost all children fully recover, some of them later develop coronary artery dilation or aneurysm [70]. Etiologically and pathologically, numerous studies indicate that KD is triggered by an abnormal autoimmune response caused by an infection [71]. The infection hypothesis is supported by epidemiology data showing that an infectious disease is involved at least as a starting point. Previously proposed infectious agents include Herpesviridae, retroviruses, Parvovirus B19, bocavirus, and bacterial infections such as staphylococci, streptococci, Bartonella, and Yersinia infections [72].

SARS-CoV-2 adds to these infectious agents by eliciting autoantibodies likely via molecular mimicry and cross-reactivity with autoantigens [72,73].

Then, the formation of antigen–antibody immune complexes can lead to KD symptoms via activation of the receptors of mast cells, neutrophils, and macrophages with consequent release of pro-inflammatory cytokines and increase of blood vessel permeability; activation of the complement system, stimulation of neutrophils and macrophages to secrete proteases and more proinflammatory cytokines [74], thus merging into the “cytokine storm” that characterizes MIS-C [75]. Indeed, features of KD are raised levels of Interleukin (IL)-6, IL-8, IL-15, and IL-17, with the cytokine level predicting coronary aneurysm

formation in KD patients [76,77]

3.1.3.2.2. Potential long-term adverse health effects. In the long-term, SARS-CoV-2-induced KD vasculitis can lead to severe pathologies. Vasculitis has a predilection for coronary arteries with a high complication rate across the lifespan for those with medium to large coronary artery aneurysms [78]. The cytokine-induced inflammation produces endothelial dysfunction and damage to the vascular wall, leading to aneurysmal dilatation. Successively, vascular remodeling can also occur, but this does not imply resolution of the disease or reduction of risk for future complications. A rigorous follow-up to detect progressive stenosis, thrombosis and luminal occlusion that may lead to myocardial ischemia and infarction becomes mandatory [78]. Of equal importance, among other long-term outcomes, children with KD may have increased risks not only for ischemic heart disease, but also for autoimmune disorders, cancer as well as an increased all-cause mortality [71].

Additional questions regarding mass inoculation of children and adolescents include:

- a) Do children, being asymptomatic carriers of SARS-CoV-2, transmit the virus?
- b) Do recently vaccinated people, infected with SARS-CoV-2, transmit the virus?

There is evidence of children transmitting SARS-CoV-2 in community settings, but the existing literature is heterogeneous with regards to the relative rate at which they do so compared to adults [79].

Studies from South Korea and Thailand found a very limited number of secondary cases [80,81]. On the contrary, a large contact tracing study from India concluded that the highest probability of transmission was between case-contact pairs of similar age and that this pattern of enhanced transmission risk was highest among children 0–4 years of age as well as adults 65 years of age and older [80].

With regard to the second question, it was shown that household members of healthcare workers inoculated with a single dose of either Pfizer or Astra Zeneca COVID-19 inoculant were at significantly reduced risk of PCR-confirmed SARS-CoV-2 infection but at non-statistically significant reduced risk of hospitalization, compared to household members of uninoculated healthcare workers, fourteen days after inoculation [82]. This finding again underlines the association of severe disease to the characteristics of the infected person and not directly to the transmission, implying that the elderly should be inoculated and not the children.

3.2. Novel best-case scenario cost-benefit analysis of COVID-19 inoculations for most vulnerable

Traditional cost-benefit analyses are typically financial tools used to estimate the potential value of a proposed project. They involve generating cost streams over time, benefit streams over time, and then comparing the net present value of these two streams (including risk) to see whether the risk-adjusted discounted benefits outweigh the risk-adjusted discounted costs. Appendix D presents a detailed non-traditional *best-case scenario* pseudo-cost-benefit analysis of inoculating people in the 65+ demographic in the USA. In this incarnation of a cost-benefit analysis, the costs are the number of deaths resulting from the inoculations, and the benefits are the lives saved by the inoculations. The time range used was from December 2019 to end-of-May 2021. No discounting was done; an inoculation-based death occurring immediately post-inoculation was given the same importance/weighting as an inoculation-based death months after inoculation.

Why was this non-traditional approach selected for a cost-benefit analysis? In a traditional non-financial cost-benefit analysis relative to inoculations, the adverse events prevented by the inoculations would be compared with the adverse events resulting from the inoculations. Presently, in the USA, definitions, test criteria, and reporting incentives

for COVID-19 and its inoculants have shifted over time, and we believe a standard approach could not be performed credibly. Appendix Da presents some of the problems with the COVID-19 diagnostic criteria on which the above statements are based.

In contrast to the pandemic buildup phase, where many who died *with* COVID-19 were assumed to have died *from* COVID-19 by the medical community and the CDC, the post-inoculation deaths reported in VAERS are assumed by the CDC to be mostly from causes other than the inoculations. We wanted to use a modified cost-benefit analysis that would have less dependence on arbitrary criteria and subjective judgments.

The approach selected can be viewed as a *best-case scenario* pseudo-cost-benefit analysis. We assume the inoculations prevent *all* the deaths *truly* attributable to COVID-19 (these are the total deaths attributed to COVID-19 officially minus 1) the number of false positives resulting from the PCR tests run at very high amplification cycles and 2) the number of deaths that could have been attributed to one of the many comorbidities that were typical of those who succumbed, as shown in our results section) over the period December 2019 to end-of-May 2021, and relate that number to the deaths *truly* attributable to the inoculation (from January 2021 to end-of-May 2021) based on our computations in the results section. The results show *conservatively* that there are five times the number of deaths *truly* attributable to each inoculation vs those *truly* attributable to COVID-19 in the 65+ demographic. As age decreases, and the risk for COVID-19 decreases, the cost-benefit increases. Thus, if the best-case scenario looks *poor* for benefits from the inoculations, any realistic scenario will look *very poor*. For children the chances of death from COVID-19 are negligible, but the chances of serious damage over their lifetime from the toxic inoculations are not negligible.

4. Discussion

Two issues arise from these results.

First, where is the data justifying inoculation for children, much less most people under forty? It's not found on Fig. 1, where the most vulnerable are almost exclusively the elderly with many comorbidities [83]. Yet, in the USA, Pfizer has been approved to inoculate children 12–17, and the goal is to accomplish this by the start of the school year in the Fall. As stated previously, there are plans to inoculate children as young as six months starting before the end of 2021.

What is the rush for a group at essentially zero risks? Given that the inoculations were tested only for a few months, only very short-term adverse effects could be obtained. It is questionable how well even these short-term effects obtained from the clinical trials reflect the short-term effects from the initial mass inoculation results reported in VAERS.

Figs. 1 and 2 reflect only these very short-term results. A number of researchers have suggested the possibility of severe longer-term autoimmune, Antibody-Dependent Enhancement, neurological, and other potentially serious effects, with lag periods ranging from months to years. If such effects do turn out to be real, the children are the ones who will have to bear the brunt of the suffering. There appear to be no benefits for the children and young adults from the inoculations and only Costs!

The second issue is why the deaths shown on Fig. 2 were not predicted by the clinical trials. We examined the Pfizer trial results (based on a few months of testing) and did not see how (potentially) hundreds of thousands of deaths could have been predicted from the trials' mortality results. Why this gap?

As we showed in the clinical trials section, 17.4 % of the Pfizer sample members were over 65, and 4.4 % were over 75. When the later phases of the trials started in late July 2020, the managers knew the COVID-19 age demographics affected from the July 2020 analog of Fig. 1. Rather than sampling from the age region most affected, they sampled mainly from the age region least affected! And even in the very limited sampling from the oldest groups, it is unclear whether they

selected from those with the most serious comorbidities. Our impression is that the sickest were excluded from the trials, but were first in line for the inoculants.

It is becoming clear that the central ingredient of the injection, the recipe for the spike protein, will produce a product that can have three effects. Two of the three occur with the production of antibodies to the spike protein. These antibodies could allegedly offer protection against the virus (although with all the "breakthrough" cases reported, that is questionable), or could suppress serious symptoms to some extent. They could also cross-react with human tissue antigen, leading to potential autoimmune effects. The third occurs when the injected material enters the bloodstream and circulates widely, which is enabled by the highly vascular injection site and the use of the PEG-2000 coating.

This allows spike protein to be manufactured/expressed in endothelial cells at any location in the body, both activating platelets to cause clotting and causing vascular damage. It is difficult to believe this effect is unknown to the manufacturer, and in any case, has been demonstrated in myriad locations in the body using VAERS data. There appears to be modest benefit from the inoculations to the elderly population most at risk, no benefit to the younger population not at risk, and much potential for harm from the inoculations to both populations. It is unclear why this mass inoculation for all groups is being done, being allowed, and being promoted.

5. Overall conclusions

The people with myriad comorbidities in the age range where most deaths with COVID-19 occurred were in very poor health. Their deaths did not seem to increase all-cause mortality as shown in several studies. If they hadn't died with COVID-19, they probably would have died from the flu or many of the other comorbidities they had. We can't say for sure that many/most died from COVID-19 because of: 1) how the PCR tests were manipulated to give copious false positives and 2) how deaths were arbitrarily attributed to COVID-19 in the presence of myriad comorbidities.

The graphs presented in this paper indicate that the frail injection recipients receive minimal benefit from the inoculation. Their basic problem is a dysfunctional immune system, resulting in part or in whole from a lifetime of toxic exposures and toxic behaviors. They are susceptible to either the wild virus triggering the dysfunctional immune system into over-reacting or under-reacting, leading to poor outcomes or the injection doing the same.

This can be illustrated by the following analogy. A person stands in a bare metal enclosure. What happens when the person lights a match and drops it on the floor depends on what is on the floor. If the floor remains bare metal, the match burns for a few seconds until extinguished. If there is a sheet of paper on the floor under the match, the match and the paper will burn for a short time until both are extinguished. If, however, the floor is covered with ammonium nitrate and similar combustible/explosive materials, a major explosion will result! For COVID-19, the wild virus is the match. The combustible materials are the toxic exposures and toxic behaviors. If there are no biomarker 'footprints' from toxic exposures and toxic behaviors, nothing happens. If there are significant biomarker 'footprints' from toxic exposures and toxic behaviors, bad outcomes result.

Adequate safety testing of the COVID-19 inoculations would have provided a distribution of the outcomes to be expected from 'lighting the match'. Since adequate testing was not performed, we have no idea how many combustible materials are on the floor, and what the expected outcomes will be from 'lighting the match'.

The injection goes two steps further than the wild virus because 1) it contains the instructions for making the spike protein, which several experiments are showing can cause vascular and other forms of damage, and 2) it bypasses many front-line defenses of the innate immune system to enter the bloodstream directly in part. Unlike the virus example, the injection ensures there will always be some combustible materials on the

floor, even if there are no other toxic exposures or behaviors. In other words, the spike protein and the surrounding LNP are toxins with the potential to cause myriad short-, mid-, and long-term adverse health effects even in the absence of other contributing factors! Where and when these effects occur will depend on the biodistribution of the injected material. Pfizer's own biodistribution studies have shown the injected material can be found in myriad critical organs throughout the body, leading to the possibility of multi-organ failure. And these studies were from a single injection. Multiple injections and booster shots may have cumulative effects on organ distributions of inoculant!

The COVID-19 reported deaths are people who died **with** COVID-19, not necessarily **from** COVID-19. Likewise, the VAERS deaths are people who have died **following** inoculation, not necessarily **from** inoculation.

As stated before, CDC showed that 94 % of the reported deaths had multiple comorbidities, thereby reducing the CDC's numbers attributed strictly to COVID-19 to about 35,000 for all age groups. Given the number of high false positives from the high amplification cycle PCR tests, and the willingness of healthcare professionals to attribute death to COVID-19 in the absence of tests or sometimes even with negative PCR tests, this 35,000 number is probably highly inflated as well.

On the latter issue, both Virginia Stoner [85] and Jessica Rose [86] have shown independently that the deaths **following** inoculation are not coincidental and are **strongly related to** inoculation through strong clustering around the time of injection. Our independent analyses of the VAERS database reported in Appendix 1 confirmed these clustering findings.

Additionally, VAERS historically has under-reported adverse events by about two orders-of-magnitude, so COVID-19 inoculation deaths **in the short-term** could be in the hundreds of thousands for the USA for the period mid-December 2020 to the end of May 2021, potentially swamping the *real* COVID-19 deaths. Finally, the VAERS deaths reported so far are for the very short term. We have no idea what the death numbers will be in the intermediate and long-term; the clinical trials did not test for those.

The clinical trials used a non-representative younger and healthier sample to get EUA for the injection. Following EUA, the mass inoculations were administered to the very sick (and first responders) initially, and many died quite rapidly. However, because the elderly

who died following COVID-19 inoculation were very frail with multiple comorbidities, their deaths could easily be attributed to causes other than the injection (as should have been the case for COVID-19 deaths as well).

Now the objective is the inoculation of the total USA population. Since many of these potential serious adverse effects have built-in lag times of at least six months or more, we won't know what they are until most of the population has been inoculated, and corrective action may be too late.

Appendix A

EXPECTED DEATHS IN 65+ DEMOGRAPHIC VS COVID-19 INOCULATION DEATHS

The goal of this appendix is to estimate the number of actual deaths from the COVID-19 inoculation based on the number of deaths following inoculation reported in VAERS [93,94,101]. The approach used will:

- 1) identify the number of deaths following COVID-19 inoculation that would have been **expected** without COVID-19 inoculation (i.e., pre-COVID-19 death statistics);
- 2) relate the VAERS **expected** death data to the actual number of deaths **expected** based on historical death statistics; and
- 3) apply this ratio to scale-up the deaths attributed to COVID-19 inoculation reported in VAERS to arrive at actual deaths attributable to COVID-19 inoculation.

For example, if ten deaths could be shown in VAERS to reflect expected pre-COVID-19 deaths, and the actual number of expected pre-COVID-19 deaths from historical data was 100, the scaling factor of deaths would be ten to translate VAERS-reported deaths to actual deaths. Then, the deaths reported in VAERS that can be attributed to the COVID-19 inoculation will be multiplied by the expected deaths scaling factor, ten, to arrive at the actual number of deaths resulting from the COVID-19 inoculation. Thus, if VAERS shows fifty deaths that can be attributed to the COVID-19 inoculation, then the actual number of deaths attributed to COVID-19 will be 500 with these assumptions [3].

The basis for our approach is the following statement from the USA Federal government: "Healthcare providers are required to report to VAERS the following adverse events after COVID-19 vaccination [33] and other adverse events if later revised by FDA" [96,102,103]. "Serious AEs regardless of causality.", including death [3,95].

If there had been full compliance with this requirement in VAERS, then the VAERS-reported deaths would have equaled the sum of

- 1) actual expected deaths (based on past statistics)

2) actual deaths over and above expected deaths that could be attributed to the COVID-19 inoculations.

Based on this requirement, we will generate a rough estimate (in the simplest form possible) of the number of deaths that would have occurred in the 65+ demographic if there had been no COVID-19 “pandemic”. Then, we will relate this number to the number of deaths reported to VAERS following COVID-19 inoculations in the 65+ demographic. This would provide a “floor” for estimating the fraction of actual deaths reported to VAERS. This will be followed by parameterizing potential deaths attributable to the COVID-19 inoculations and displaying the effects on ratio of reported deaths to actual deaths. We will perform a global analysis and a local analysis, to see whether major or minor differences occur. The local analysis (Section A1-a2) may be somewhat easier to comprehend than the global analysis, but both come to similar conclusions.

A1-a Deaths Following COVID-19 Inoculations Reported to VAERS Compared to Expected Deaths

A1-a . Problems with VAERS

Before we discuss numbers of adverse events reported by VAERS, we need to identify potential shortcomings of, and problems with, VAERS, so these numbers of adverse events can be understood in their proper context. As stated previously, VAERS is a passive surveillance system managed jointly by the CDC and FDA, and historically has been shown to report about 1% of actual vaccine/inoculation adverse events (confirmed by the first principles analysis that follows in this appendix). There is no evidence that even the 1% reported have been selected randomly.

Some of this gross underreporting of adverse events reflects a major conflict-of-interest of CDC with respect to VAERS. CDC provides funding for administration of many vaccines, including the COVID-19 inoculations. Prior to COVID-19, the CDC provided about five billion dollars annually to the Vaccines for Children Program alone [102].

For COVID-19, the CDC has received many billions of dollars in supplemental funding for myriad activities, including vaccine distribution. It is difficult to separate out the CDC funding available for vaccine distribution from other CDC COVID-19 related activities, but one budget item (of many) should illustrate the magnitude of the effort: “Coronavirus Response and Relief Supplemental Appropriations Act, 2021 (P.L. 116–260): P.L. 116–260 provided \$8.75 billion to CDC to plan, prepare for, promote, distribute, administer, monitor, and track coronavirus vaccines to ensure broad-based distribution, access, and vaccine coverage.” [3]. Low reporting rates of actual adverse events in VAERS should not be surprising, since the same organization that receives multi-billions of dollars in funding annually for promoting and administering vaccines also has responsibility for monitoring the safety of these products (whose liability has been waived).

In addition, the 1% reporting rates came from a thirty-day tracking study [22], and therefore are strictly applicable to *very near-term* adverse events. For mid-term and especially long-term events, the reporting rates would be much lower, since the links between inoculation and adverse events would be less obvious. That doesn’t mean these non-very-short-term adverse events don’t exist; it just means they haven’t been tracked. Absence of evidence is not evidence of absence. Thus, the VAERS numbers should be viewed as a very low “floor” of the numbers and types of adverse events from COVID-19 inoculations that exist in the real-world.

A1-a2 Global analysis

We used 2019 death statistics from CDC to start the analysis. According to search results from CDC Wonder [104] obtained 11 June 2021, there were 2,117,332 deaths from all causes for people aged 65+ in the United States in 2019. Assuming uniformity throughout the year, there would have been 882,000 deaths occurring the first five months of the year, and that number will be used as the expected deaths for the first five months of 2021. From the same source, the population estimate is 54,000,000 for the 65+ age range. From CDC COVID-19 data tracker, the number of people 65+ vaccinated with at least one dose is 44,000,000 [24].

For those who were inoculated somewhere in the time frame 1 January 2021 to 31 May 2021, the number who would have been expected to die in the period from inoculation to 31 May will be a function of the duration of this period. For example, if all 44,000,000 people had been fully inoculated on 1 January 2021, then the number expected to die post-inoculation from non-COVID-19 inoculation causes would be simply $(44,000,000/54,000,000) \times 882,000$, or 723,000 deaths. Conversely, if all 44,000,000 people had been fully inoculated on 31 May 2021, then the number expected to die post-inoculation from non-COVID-19 inoculation causes would be extremely small [24].

For an accurate estimation of the number expected to die post-inoculation from non-COVID-19 causes, one would need to integrate the time between inoculation and 31 May over the inoculation temporal distribution function. For present purposes, we will do a very rough approximation by modeling the inoculation distribution function as a delta function occurring at a mean temporal location. In other words, we compress all inoculations an individual receives into one, identify the mean temporal location from the actual inoculation distribution function, and compute the expected deaths based on the distance from 31 May to the temporal mean point.

From a graph of inoculation trends in the CDC data tracker [101] the distribution appears to be non-symmetrical pyramidal, rising to a peak in mid-April. This is slightly over the 2/3 point in the five-month range of interest. We will approximate the mean time point as 2/3 of the distance.

Table A1 displays the mean time normalized to the five-month study window vs potential deaths from COVID-19 inoculation (not expected from prior census data) normalized to the deaths expected from prior census data. Each cell represents the percent of deaths reported in VAERS following inoculation relative to total deaths (number of deaths expected from prior census data plus number of deaths following COVID-19 inoculation not contained in the expected death group). The model on which the table is based is as follows: there are two classes of deaths for the period following COVID-19 inoculation. One is the deaths expected from prior census data, and the other is deaths attributable mainly to COVID-19 inoculation. There would be potentially substantial overlap between the two in this age group (and perhaps other age groups as well). We assume that we can tag those individuals who would be expected to die based on prior census data. The remaining deaths attributable to COVID-19 inoculation not contained within the tagged group are classified as potential COVID deaths in Table A1.

Consider the cell (2/3,0). The mean time is about mid-April 2021 and the only deaths occurring are those expected (some may have died because of the inoculation, but they were sufficiently ill that they would have died during that period without the inoculation). There were 723,000 expected deaths and 3560 reported, yielding a ratio of deaths reported in VAERS to actual deaths of ½%.

Consider the cell (1/2,1). The mean time would have been about mid-March 2021 and the inoculation distribution would have resembled an isosceles triangle. The total deaths occurring are those expected and an equal number whose deaths were attributed to COVID-19 inoculation but did not overlap with those in the tagged expected group (there still could have been some/many in the latter group that may have died because of the

inoculation, but they were sufficiently ill that they would have died during that period without the inoculation). There were 724,000 total deaths that occurred during that period and 3560 reported, yielding a ratio of deaths reported in VAERS to actual deaths of $\frac{1}{200}$. [3]

So, according to Table A1, focusing on the parameter most closely reflecting the actual inoculation distribution (2/3), the reporting percentages of actual to total are about 1%. This mirrors the Harvard Pilgrim study results (referenced in our vaccine safety study) which were obtained through an entirely different empirical approach [4]. At least for deaths reporting, there appears to be an approximately two order of magnitude difference between actual and reported deaths in VAERS.

Table A1 used two parameters to examine a broad spectrum of possible results, the mean time and the number of deaths solely attributable to COVID-19 inoculation. The mean time parameter was fairly well known and constrained in interpretation, because it was based on an empirical inoculation distribution function. The number of deaths solely attributable to COVID-19 inoculation is completely unknown.

As will be shown in the next section, the numbers of deaths reported in VAERS are strongly related to the inoculation date by clustering, but those who died might also have been those who would have died anyway because they were expected to die. There were probably some of each in that group reported. But we have no idea of the total number whose death could be directly attributed to COVID-19 inoculation and who were not in the group expected to die. For all we know, there could have been ten million people in that group, and only an extremely small fraction of that total group was reported in VAERS.

Suppose, for example, that the actual number of deaths reported in VAERS came from two groups: 90 % were from the inoculation-attributable death group and 10 % were from the expected death group. Assume there is no overlap between the two groups. In that case, what VAERS shows is not that 1% of actual expected deaths were reported, but rather that 1/10 of one percent of the expected deaths were reported. If that metric is used as the standard to scale up to total deaths, then the number in the actual inoculation-attributable death group is not 100 times the VAERS reported deaths, but rather 1000 times the VAERS-reported deaths! The point is we can't "reverse-engineer" the reported VAERS death numbers to get the actual inoculation-attributable deaths because it depends on the unknown contribution of each of the two groups (expected deaths and inoculation-attributable deaths) to the VAERS reported deaths, and we can't separate those out.

All this analysis shows is that, at best, only about 1% of the number expected to die was reported, and because the number reported in VAERS included deaths from both groups, the fraction from each actual group of deaths could not be determined. Realistically, we may have to wait until mid-2022, when the 2021 total deaths for each age group are finalized, to ascertain whether we can see increases in all-cause mortality that could have come from the inoculation-attributable deaths.

A1-a3 Local Analysis

Another way of estimating VAERS reporting efficiency is to perform a local analysis, focused on clustering about date of COVID-19 inoculation. For the 65+ demographic, the post-inoculation deaths cluster near the vaccination date, providing evidence of a **strong link to the inoculation**.

Following the approach in the first section of this appendix, we calculate the deaths expected in any ten-day period based on 2019 pre-COVID-19 death statistics. For the inoculated group, the number of deaths expected for any ten-day period are (2,117, 332 deaths/per year) x (44,000,000/54,000,000 fraction of population in age range inoculated) x (10/365 fraction of year), or 47,270 deaths.

BEST-CASE SCENARIO

Consider the ten days following inoculation (including day of inoculation). Approximately 2,000 deaths were reported in VAERS. Assume hypothetically that all these deaths were in the expected category; this can be viewed as a *best-case scenario*. In this *best-case scenario*, where the concentration of deaths is the highest and is normalized to the expected number of non-COVID-19 inoculation deaths (excluding deaths due solely to COVID-19 inoculation), 2,000/47,270 % of actual deaths (inoculation-related or not), or 4.23%, are reported in VAERS. Thus, at best, VAERS is underreporting by a factor of 20.

Suppose in that ten-day interval there had been 10,000 deaths that could be directly attributed to COVID-19 inoculation in addition to the expected deaths. This would have given a ratio of 2,000/57,270 actual total deaths, or 3.5 % reported in VAERS. This latter approach requires less assumptions than the former approach, but still yields results of only a few percent actual deaths reported in VAERS.

The Harvard Pilgrim electronic tracking study of post-vaccination events reported to VAERS performed in 2010 [4] showed a 1 % reporting rate for a thirty-day period. In the present case, 2900 post-inoculation deaths were reported to VAERS within thirty days of inoculation, or 82 % of total deaths for the 65+ demographic. Substituting thirty days for ten in the above computation yields 141,810 expected non-COVID-19 post-inoculation deaths for the thirty-day period, or 2% that are reported in VAERS. The Harvard study used an electronic system that automatically tracked every event that occurred, no matter how small. Because of the effort (time and cost) required to submit event reports to VAERS, we suspect that only the more serious events, such as death, would be reported, and even in this case, the numbers reported are miniscule.

We also did an analysis for sixty days post-inoculation. In the present case, 3300 post-inoculation deaths were reported to VAERS within sixty days of inoculation, or 93 % of total deaths for the 65+ demographic. Substituting sixty days for ten in the above computation yields 283620 expected non-COVID-19 post-inoculation deaths for the thirty-day period, or 1.2 % that are reported in VAERS. Remember, this normalization is based only on expected deaths. If 100,000 deaths attributable mainly to the COVID-19 inoculation beyond those that overlapped with the expected group occurred during this period, then the denominator would have to be increased by 100,000, yielding a VAERS reporting rate of 0.86 %.

Thus, both the global and local analyses, and the Harvard Pilgrim empirical analysis, are converging on the same two orders-of-magnitude difference between the actual number of deaths that occurred in the USA and those reported in VAERS. Depending on how many people have really died as a result of the COVID-19 inoculation, this reporting rate could well be a fraction of a percent!

A1-a3a Local Clustering Analysis

We end this appendix with one more example from the local analysis. Some background perspective is required. In the buildup to the pandemic (putting aside the issue of high false positives from PCR tests run at high numbers of amplification cycles), almost anyone who died **with** COVID-19 was assumed to have died **from** COVID-19, irrespective of the number of potentially lethal comorbidities they had. The CDC admitted later that about

94 % of the deaths attributed to COVID-19 would ordinarily have been attributed to one of the comorbidities.

For this example, we adopt a similar philosophy for the COVID-19 inoculations. People in the 65+ demographic who have died following inoculation are divided into two groups: those who died **from** the inoculation and those who died as **expected** based on pre-COVID-19 death data. The two groups range from being entirely separate to completely overlapping. We will examine two cases: entirely separate and completely overlapping.

How are the members of each group determined? The death **from** inoculation group consists of those whose deaths cluster significantly around the date of inoculation. The deaths expected group are the number who would have died in the absence of COVID-19. We allow for overlap, where each person who died can be double-valued (a member of both groups), but not double-counted.

To obtain a relatively precise estimate of expected deaths, we would want to select a region of time where the distribution function has substantially leveled off. From Fig. A1, the thirty-sixty-day range appears reasonable. However, there is a time issue here. Given the lag time in data reported by VAERS, most of the data in this range will probably have come from inoculations in January and February, and early-mid March, approximately 35 percent of the total inoculations. Therefore, we could multiply the thirty-sixty-day average number of deaths by 3 to obtain 40 expected deaths per day. An even simpler way to estimate the expected deaths reported in VAERS is to use the 15–30-day average shown, which will represent most of the range. This value is 37, which is close to the 40 obtained with the above approximation. This analysis should be re-run in three-four months, when more of the long-range data has been filled in.

Table A2 shows the results of our analysis. As stated previously, two separate cases were analyzed: completely separate groups and completely overlapping groups. Two values of daily expected deaths were used: the 37 as described above, and 20 to account for potentially lower expected death reporting when the VAERS data has filled in more completely.

Thus, based on the deaths reported in VAERS following COVID-19 inoculation, and assuming the inoculation-related deaths are reported in the same ratio as expected deaths, the actual number of deaths strongly related to the COVID-19 inoculation should be scaled up by factors of 100–200. For the broadest definition of VAERS coverage provided by CDC Wonder, which includes the USA and all territories, protectorates, and possessions, the total deaths following COVID-19 were 5200 in early June 2021. Using our scaling factors, this translates into somewhere between one-half million and one-million deaths, and this has not taken into account the lag times associated with entering data into VAERS. Compared with the 28,000 deaths the CDC stated were due to COVID-19 and not associated morbidities for the 65+ age range, the **inoculation-based deaths are an order-of-magnitude greater than the COVID-19 deaths!** It should be remembered these are only the **very-short-term inoculation-based deaths**, and could increase dramatically if mid- and long-term adverse effects come to fruition.

We end this appendix with an even more unsettling possibility. The main assumption upon which the results in Table A2 were based is that the post-inoculation temporal distribution function shown in Fig. A1 could be divided into two regions. The strongly varying region originating from the inoculation date reflected deaths from the inoculation, and the essentially flat region that followed reflected expected deaths (that flat region also started at the inoculation date, and formed the base on which the highly varying region is positioned). This model excludes the possibility that deaths from the inoculation extend well beyond the limits of the highly varying region.

We know in general this is not true. There can be lag effects such as ADE in the Fall viral season, and longer-term effects such as autoimmune diseases. We postulate that there are other effects from the inoculation that could result in the same flat death profile as that for expected deaths.

Consider the following. Some of the damage we have seen following the inoculations in VAERS includes coagulation/clotting effects and neurological effects of all types [63]. If these effects are not lethal initially, they raise the level of dysfunction. Thus, platelet aggregation has increased to a new base level, and micro-clots have raised the probability of serious clots forming from other lifestyle factors [105]. Death of specific neurons can increase the risk of Alzheimer's disease or Parkinson's disease, and can accelerate the onset of these and many other diseases. Thus, the adverse impacts of the COVID-19 inoculations could be viewed as raising the level of expected deaths in the future. Any deaths of this nature reported in VAERS would need to be viewed as inoculation-driven, and the expected deaths used in the computations would be reduced accordingly.

Consider Table A3 below. The “expected deaths reported” have been reduced below their counterparts in Table A2 to illustrate parametrically how the total inoculation-based deaths would change from VAERS reporting if this baseline effect is operable. While Table A2 used values of 37 and 20 for expected deaths, Table A3 uses values of 10 and 15.

Thus, if the baseline of the host for coagulation/clotting, inflammation, hypoxia, neurodegeneration, etc., has been raised by the inoculations, translating into an increase in expected deaths and accelerated deaths, then it is entirely plausible that the VAERS death numbers reflect over a million deaths from COVID-19 inoculations so far. These are very short-term-effects only, and time will tell whether the large potential waves of ADE-driven deaths and autoimmune-driven deaths come to pass.

Appendix B

DETAILED ANALYSIS OF MAJOR COVID-19 INOCULANT CLINICAL TRIALS

A2-a Clinical Trials in the Mainly Adult Population

Definitions. *Efficacy* is the degree to which a vaccine prevents disease, and possibly also transmission, under ideal and controlled circumstances – comparing a vaccinated group with a placebo group [106].

Effectiveness refers to how well a vaccine performs in the real world [107]

Relative Risk (RR) is computed by dividing the percentage of patients that contracted disease in the vaccine arm by the percentage of patients that contracted disease in the placebo arm.

Relative Risk Reduction (RRR) is computed by subtracting the RR from 1.

Absolute Risk Reduction (ARR) is computed by subtracting the percentage that contracted disease in the vaccine arm from the percentage that contracted disease in the placebo arm.

Absolute Risk = probability = incidence.

Cumulative Incidence represents the number of new cases in a period of time / population at risk.

Incidence Density is the number of new cases of a given disease during a given period in specified population; also, the rate at which new events occur in a defined population.

Immunogenicity is the ability of a molecule or substance to provoke an immune response or the strength or magnitude of an immune response. It can be a positive (wanted) or negative (unwanted) effect, depending on the context.

Immune Response is an integrated systemic response to an antigen (Ag), especially one mediated by lymphocytes and involving recognition of Ags by specific antibodies (Abs) or previously sensitized lymphocytes [108]

Safety data for Pfizer and Moderna trials:

There were two major COVID-19 inoculant clinical trials: Pfizer/BioNTech and Moderna.

The Pfizer clinical trials were titled officially “a phase 1/2/3, placebo-controlled, randomized, observer-blind, dose-finding study to evaluate the safety, tolerability, immunogenicity, and efficacy of sars-cov-2 rna vaccine candidates against covid-19 in healthy individuals” [98]. The “Actual Study Start Date” was 29 April 2020, the “Estimated Primary Completion Date” was 2 November 2020, and the “Estimated Study Completion Date” is 2 May 2023. Thus, the mass inoculation rollout so far has been conducted in parallel with the Pfizer Phase III Clinical Trial. For all practical purposes, the mass global inoculation of the Pfizer inoculant recipients can be considered Phase III 2.0 of the Clinical Trials! The inclusion criteria for the official Phase III Clinical Trials incorporated (as stated in the title and in the protocol document) healthy individuals, while the criteria for mass inoculation went well beyond healthy individuals. In essence, we have an official Phase III Clinical Trial with 73,000+ healthy individuals, and an unofficial Phase III Clinical Trial with billions of individuals covering a wide spectrum of health levels [98].

The Pfizer Phase III trials were initiated July 2020, the efficacy data were submitted to the FDA for EUA approval in November 2020, and FDA approval was granted in December 2020. Six deaths occurred in the Pfizer trial, two in the inoculated group and four in the placebo group (which received saline) [33]. The two inoculated, both over the age of 55, died of cardiovascular causes. One died three days after inoculation and the other died 62 days after inoculation [109]. These two deaths were comparable (in frequency and cause) to placebo group deaths and perhaps more importantly, similar to the general population at that age. In the case of Moderna, there were 13 deaths, six in the inoculated group, seven in the placebo group (normal saline placebo, a mixture of sodium chloride in water 0.90 % w/v) at 21–57 days after the inoculation ([103]b).

In a report by the Norwegian National Medicines Association, published on 15 January 2021, there were 23 elderly people (all over the age of 75 and frail) in nursing homes, who died at various intervals from the time of inoculation with mRNA inoculant. The report then suggested that, following the assessment, 13 of the 23 deaths would have been a direct result of the side effects of inoculation. It is possible that the other 10 deaths were post-inoculation, but not directly related to side effects, so not necessarily related to the inoculant itself [109].

It is no surprise that frail elderly people can be fatally destabilized by adverse reactions associated with post-inoculation inflammation, which in a young adult would have been considered minor. It is also no surprise that frail elderly people with comorbidities can be fatally destabilized from COVID-19 infection, which in a young adult or child would have been considered minor. A frail elderly person can be fatally destabilized by a simple coughing fit! This does not mean that these deaths are not events that need to be taken very seriously; on the contrary, if confirmed, they should guide inoculation policies in this category of patients from now on. Specifically, each case should be carefully assessed and an inoculation decision made based on the risk-benefit ratio [110].

In light of these data, the question may arise as to why there were no inoculant-attributed deaths in clinical testing of inoculants. The answer is that neither Pfizer nor Moderna included frail patients and included only a small number of very elderly patients - those over 75 accounted for 4.4 % of the total tested for Pfizer and 4.1 % for Moderna. While they could not in fact determine a causal relationship between inoculation and death, they also could not rule out that the inoculations had accelerated the deterioration of the condition of those patients [33].

Effectiveness data

As defined previously, the effectiveness of a vaccine lies in its ability to prevent a particular disease. If designed, tested, and administered correctly, authorized vaccines are effective in preventing disease and protecting the population. Like medicines, vaccines are not 100 % effective in all vaccinated people. Their effectiveness in a person depends on several factors. These include: age; other possible diseases or conditions; time elapsed since vaccination; previous contact with the disease.

To be declared safe and effective, a vaccine against COVID-19 infection must pass a series of tests and must meet regulatory standards, like any other vaccine or drug approved on the pharmaceutical market [111].

Regarding Pfizer and Moderna trials:

The first important note is that maximum efficiency does not come immediately, because the immune response needs time.

In the case of Pfizer, the chance of developing COVID-19 becoming virtually the same between the inoculated and placebo groups increases up to 12 days after the first inoculation, then gradually decreases for those inoculated. The inoculum efficiency between the first and second doses is 52 % [106], but it is unclear what long-term protection a single dose provides. After the second dose, the effectiveness rises to 91 % and only beyond 7 days after the second dose is 95 % reached. However, the ARR for the latter case is only 0.7 % [112]. In other words, within 12 days after the first dose we can get COVID-19 as if we had not been inoculated. Another important aspect is that we still do not know if the Pfizer inoculant prevents severe cases. Seven days after the second dose, there were four severe cases of COVID-19, one in the inoculated group and three in the placebo group, which is far too low for us to make a statistical assessment. There are as yet no data on the inoculant’s ability to prevent community transmission. Realistically, the effectiveness of the inoculant in preventing asymptomatic cases has not been tested.

For Moderna, the effectiveness is only 50 % in the first 14 days after the first dose and reaches a maximum of 92.1 % on the edge of the second dose (ARR of 1.1 %, which is 28 days, not 21 as in the case of Pfizer) [46]. Moderna also did not test the long-term efficacy of a single dose. Then, 14 days after the second dose, the effectiveness rises to 94.1 %, with the amendment being an average. Thus, in people over 65 it was 86.4 %, compared to 95.6 % in the 18–65 age range ([103]). It is a minor difference from Pfizer, which declares equal efficiency in all age groups. An important observation is the statement by Moderna that their inoculant prevents severe cases, but only more than 14 days after both doses [126]. All 30 severe cases were in the placebo group, suggesting 100 % efficacy. After a single dose, there were two severe cases among those inoculated and four in the placebo group [33]. Last, but not least, unlike Pfizer, Moderna tested the presence of asymptomatic infection by RT-PCR before the second dose: there were 39 asymptomatic cases in the placebo group and 15 in the inoculated group. It is difficult to draw definitive conclusions due to the small number of cases. These data suggest that the inoculant reduces, but does not prevent, asymptomatic transmission [126].

A2-b Ongoing Clinical Trials in the Pediatric Population

In a recent Phase III study performed in the pediatric population, Comirnaty (Pfizer) was tested on a group of 2,260 children, aged 12–15, years who had no previous clinical signs of SARS-CoV-2 infection. They were divided into two groups, one placebo (978 children) and the other with Comirnaty (1005 children). In the Comirnaty group, of the 1005 children in whom the serum was administered, none developed COVID-19 disease,

compared with the placebo group in which 16 children in 978 had clinical signs of the disease. The Pfizer study showed that the children's immune response was comparable to the immune response in the 16–25 age group (measured by the level of antibodies against SARS-CoV-2). It could be concluded that in this study, Comirnaty was 100 % effective in preventing SARS-CoV-2 infection, although the actual rate could be between 75 % and 100 %. [63]. The results will be evaluated by the FDA and EMA.

The predictive value (for mass inoculation results) of the Comirnaty trial for the children aged 12–15 years is questionable. There were 1005 children who were inoculated with Comirnaty. Using the rule of three in statistics, where to obtain a predictive result of 1/x with high confidence (e.g., 1 in a thousand), 3x participants are required for the test sample. For the Comirnaty test sample of 1005, an adverse event of about 1/340 could be detected with high confidence.

What does this mean in the real world? In the USA, there are approximately 4,000,000 children in each age year for adolescents. Thus, there are 16,000,000 children in the 12–15 age band. A serious adverse event, including death, that occurred at a 1/800 rate would not be detectable with high confidence in a sample of 1005 people. Thus, the results of the trials for 1005 children would allow for 20,000 children to suffer a non-trial-detected serious adverse event, including death, when extrapolated to potential inoculation of all children in the 12–15 age group! Given that the risk of contracting COVID-19 with serious outcomes is negligible in this population, ***proceeding with mass inoculation of children 12–15 years old based on the trials that were conducted cannot be justified on any cost-benefit ratio findings.***

Also, the evaluation of efficacy in children aged 6 months to 11 years has recently begun and continues [24]. Pfizer began enrolling children under 12 to evaluate the COVID-19 mRNA inoculant. Also, Comirnaty will be evaluated in a new clinical trial for children aged 6 months to 11 years. In the first phase, the study will enroll 144 people and will identify the required dose for 3 age groups (6 months - 2 years, 2–5 years and 5–11 years). After a 6-month follow-up period, the parents/guardians of children in the placebo group will have the option of allowing their children to receive the inoculation. The results are expected in the second half of 2021.

Moderna also began a study to evaluate the mRNA inoculation in children aged 6 months to 12 years. Both companies have already started testing vaccines in 14-year-olds. In the US, children make up 23 % of the population [113].

Data on the risks and benefits of possible inoculation in children and adolescents are currently insufficient and no recommendation can be made. Specifically, mass child inoculations cannot be recommended until the benefits and minimal projected risks have been demonstrated in a sufficiently large trial to provide confidence that mass inoculation will have an acceptable level of adverse effects relative to the demonstrated benefits. On the other hand, children often experience COVID-19 asymptotically, and the SARS-CoV-2 infection progresses harmlessly. Currently, in the context of limited inoculation capacities, there is no indication of urgent inoculation of children. In the context of declining incidences of SARS-CoV-2 infections and demonstrated low serious adverse effects from COVID-19 infections for children and adolescents, the issue of inoculating children and adolescents is no longer paramount. Authorized forums must calculate what prevails for children and adolescents: the benefits or risks.

A2-c Clinical Trial Issues for Other Categories

Although people with severe comorbidities such as obesity or oncological conditions were not initially included in the clinical trials that led to obtaining EUA, they were included in subsequent studies, some even ongoing. In their case, it seems that the efficacy was lower compared to the results obtained initially with healthy adults.

The interim analysis of data from a prospective observational study indicates the need to prioritize cancer patients for timely (respectively 21-day) booster administration in the case of administration against COVID-19 with Comirnaty. According to the study, the effectiveness of a single dose of Comirnaty among cancer patients is low, but the immunogenicity of patients with solid cancers increased at 2 weeks after receiving the second dose of inoculant 21 days after the first dose. Because the study was conducted in the UK, participants inoculated before December 29, 2020 received two doses of Comirnaty 21 days apart, and those who started the regimen after this date were scheduled to receive a second dose of Comirnaty 12 weeks apart. first administration. Thus, the study continues to collect data from participants receiving Comirnaty 12 weeks after the first dose.

Approximately 21 days after a single dose of Comirnaty, the proportion of study participants who tested positive for anti-S IgG antibodies was [114]:

- 94 % among healthy participants;
- 38 % among patients with solid cancers;
- 18 % among patients with hematological cancers.

Among participants who received the 21-day booster and for whom biological samples were available two weeks after the second dose, the following proportions of confirmation as seropositive for anti-S IgG antibodies were reported [114].

- 100 % of healthy participants, compared to 86 % of the same group of participants who did not receive the second dose;
- 95 % of patients with solid cancers, compared with 30 % of the same group of participants who did not receive the second dose;
- 60 % of patients with hematological cancers, compared with 11 % of the same group of participants who did not receive the second dose.

Two other studies suggest low immunogenicity in the context of Comirnaty administration in patients with hematological cancers. In one study, patients with chronic lymphocytic leukemia (CLL) had significantly reduced immune response rates to COVID-19 inoculation compared to healthy participants of the same age. Considerable variations in post-administration immune response have been reported among patients with CLL depending on their stage of treatment

The effectiveness of Comirnaty administration was also evaluated in elderly patients with multiple myeloma [115]. 21 days after administration of the first dose of Comirnaty inoculation (before receiving the second dose), 20.5 % of patients with multiple myeloma compared to 32.5 % of control participants had neutralizing antibodies against SARS-CoV-2. One possible explanation could be that the therapy negatively affects the production of antibodies. However, the administration of the second dose is important for the development of the immune response in these patients [115].

Preliminary data from the v-safe surveillance system, the v-safe pregnancy registry and the Vaccine Adverse Event Reporting System (VAERS) do not indicate obvious safety signals regarding pregnancy or the associated neonatal implications with mRNA injections against COVID-19 *in the third trimester of pregnancy* [3]. The study included 35,691 pregnant women [116]. Compared to non-pregnant women, pregnant women reported more frequent pain at the injection site as an adverse event associated with mRNA COVID-19 vaccination, and headache, myalgia, chills, and fever were reported less frequently. In the context where initial clinical trials of messenger RNA-based inoculants have not evaluated the efficacy and safety of innovative technology among pregnant women, these preliminary data *from the third trimester only* help to inform both pregnant women and health professionals in making the inoculation decision. However, continuous monitoring through large-scale longitudinal studies remains necessary to investigate the effects associated with maternal anti-COVID-19 inoculation on mothers, pregnancies, the neonatal period and childhood.

On the other hand, the inoculation landscape has become even more complex due to new circulating viral variants. Authorities recommend genomic surveillance and adaptation in order to be effective against new variants (different from the initial strain that was detected at the end of 2019). The efficacy data of Comirnaty against circulating viral variants are highlighted in a very recent study in Israel which showed that the protection offered by the Pfizer inoculant against variant B.1.351 (first identified in South Africa) is lower [112].

The results have not yet been submitted to the expertise of specialists. The study compared nearly 400 adults who were diagnosed with COVID-19 at least 14 days after receiving one or two doses of the inoculant to the same number of uninoculated people. It was found that B.1.351 represents approximately 1 % of the COVID-19 cases studied. But among patients who received two doses of inoculant, the prevalence rate of the variant was eight times higher than in those not inoculated - 5.4 % compared to 0.7 %. This suggests that Comirnaty is less effective against variant B.1.351, compared to the original variant and variant B.1.1.7. The limitation of the study comes from the small number of adult people studied, but it is an alarm signal for a closer study of these cases. In addition, it seems that at present, the prevalence of this variant is low. On the other hand, in early April, Pfizer announced that according to the results of the Phase III study in the adult population, Comirnaty also demonstrated 100 % efficacy in the prevention of Covid-19 disease caused by SARS-CoV-2 variant B.1.351 (9 cases of Covid-19 were recorded, all in the placebo group, and after sequencing it was found that 6 had been determined by B.1.351) [117].

Appendix C

MID- AND LONG-TERM ADVERSE EFFECTS FROM PRIOR VACCINES

A 2020 study emphasizing mid- and long-term adverse effects from prior vaccines [4] identified the following sixteen mid- and longer-term potential issues concerning vaccines. These include:

- 3.1. Antibody-Dependent Enhancement** (where enhanced virus entry and replication in a number of cell types is enabled by antibodies);
 - 1a. Intrinsic Antibody-Dependent Enhancement (where non-neutralizing antibodies raised by natural infection with one virus may enhance infection with a different virus);
 - 1b. Immune Enhancement (enhancement of secondary infections via immune interactions);
 - 1c. Cross-Reactivity (an antibody raised against one specific antigen has a competing high affinity toward a different antigen.);
 - 1d. Cross-Infection Enhancement (infection enhancement of one virus by antibodies from another virus);
- 3.2. Vaccine-Associated Virus Interference** (where vaccinated individuals may be at increased risk for other respiratory viruses because they do not receive the non-specific immunity associated with natural infection);
 3. Vaccine-Associated Imprinting Reduction (where vaccinations could also reduce the benefits of ‘imprinting’, a protection conferred upon children who experienced infection at an early age)
 4. Non-Specific Vaccine Effects on Immune System (where previous infections can alter an individual’s susceptibility to unrelated diseases);
 5. Impact of Infection Route on Immune System (where immune protection can be influenced by the route of exposure/delivery);
 6. Impact of Combinations of Toxic Stimuli (where people are exposed over their lifetime to myriad toxic stimuli that may impact the influence of any vaccine);
 7. Antigenic Distance Hypothesis (negative interference from prior season’s influenza vaccine (v1) on the current season’s vaccine (v2) protection may occur when the antigenic distance is small between v1 and v2 ($v1 \approx v2$) but large between v1 and the current epidemic (e) strain ($v1 \neq e$).);
 8. Bystander Activation (activation of T cells specific for an antigen X during an immune response against antigen Y);
 9. Gut Microbiota (Impact of gut microbial composition on vaccine response);
 10. Homologous Challenge Infection Enhancement (the strain of challenge virus used in the testing assay is very closely related to the seed virus strain used to produce the vaccine that a subject received);
 11. Immune Evasion (evasion of host response to viral infection);
 12. Immune Interference (interference from circulating antibody to the vaccine virus);
 - 12a. Original Antigenic Sin (propensity of the body’s immune system to preferentially utilize immunological memory based on a previous infection when a second slightly different version of that foreign entity (e.g. a virus or bacterium) is encountered.);
 13. Prior Influenza Infection/Vaccination (effects of prior influenza infection/vaccination on severity of future disease symptoms);
 14. Timing between Viral Exposures (elapsed time between viral exposures);
 15. Vaccine-Associated Enhanced Respiratory Disease (where vaccination enhances respiratory disease); and
 16. Chronic Immune Activation (continuous innate immune responses).

Most of these events are not predictable, and most, if not all, would be possible for the COVID-19 inoculant in the mid- and long-term for adults and children.
- 3.3. Mid- and Long-Term Serious Illnesses for Adults and Children from Past Vaccines**

As stated in the aforementioned 2020 study on vaccine safety: “The biomedical literature is very sparse with studies on long-term vaccine effects, especially long-term adverse effects. Large numbers of people and long periods of time are required to identify such adverse events, and draw statistically-valid connections between vaccinations and disease. These efforts would be very resource-intensive, and there appears to be little motivation among the vaccine producers and regulators to make these resources available for such studies. Thus, the following examples reflect the extremely small tip of an extremely large iceberg of long-term adverse vaccine effects.” [4]

“The two main categories of diseases reported in the biomedical literature triggered by past vaccinations are “Autoimmune (e.g., Systemic Lupus Erythematosus, Psoriasis, Arthritis, Multiple Sclerosis, Hepatitis, Uveitis, Pseudolymphoma, Guillain-Barre Syndrome, Thrombocytopenic Purpura, etc.) and Neurological (e.g., Central Demyelinating Diseases, Developmental Disability, Febrile seizures, Narcolepsy, Encephalomyelitis, Autonomic Dysfunction, etc.). Others include Diabetes, Gastrointestinal, Joint-related, Necrobiotic Granuloma, Neutropenia, Pulmonary Fibrosis, etc.”

“Vaccinations may also contribute to the mosaic of autoimmunity [118]. Infrequently reported post-vaccination autoimmune diseases include systemic lupus erythematosus, rheumatoid arthritis, inflammatory myopathies, multiple sclerosis, Guillain-Barre syndrome, and vasculitis”.

“Studies have demonstrated a latency period of years between Hib vaccination and diabetes mellitus, and between HBV vaccination and demyelinating events [118] latency periods can range from days to years for postinfection and postvaccination autoimmunity”.

“Most of the extra cases of IDDM appeared in statistically significant clusters that occurred in periods starting approximately 38 months after

immunization and lasting approximately 6–8 months. Immunization with pediatric vaccines increased the risk of insulin diabetes in NOD mice. Exposure to HiB immunization is associated with an increased risk of IDDM.” [4]

Thus, even the sparse past vaccine studies that went beyond the short-term showed latency effects of serious diseases occurring **three years or more** post-vaccination.

Appendix D

COST-BENEFIT ANALYSIS OF COVID-19 INOCULATIONS

This appendix presents a non-traditional *best-case scenario* pseudo-cost-benefit analysis of the COVID-19 inoculations for the 65+ demographic in the USA. In this incarnation of a cost-benefit analysis, the costs are the number of deaths resulting from the inoculations, and the benefits are the lives saved by the inoculations. The time range used was from December 2019 to end-of-May 2021.

It is assumed, in this best-case scenario, that all the deaths truly attributable to COVID-19 only could have been eliminated by the inoculations given (about half the USA population has been inoculated at this time) [88,119]. It can be conceptualized as the vaccines having been available in Summer 2019, and subsequent administration having eliminated all the deaths experienced that were truly attributable to COVID-19. If the cost-benefit ratio is **poor** for this *best-case scenario*, it will be **very poor** for any real-world scenario [120].

We will use Figs. 1 and 2 as starting points to conduct a cost-benefit analysis of COVID-19 inoculations for the most vulnerable demographic, those 65+. We start with the official government numbers for COVID-19 and post-inoculation deaths, and modify them to arrive at actual deaths resulting from COVID-19 and the inoculations. We compare the two numbers (appropriately normalized) to ascertain costs vs benefits.

As Fig. 1 shows, there are three age bands that comprise the 65+ demographic. We weight the COVID-19 deaths per capita in each band by the band's population, and divide the sum of these three products by the total 65+ population to arrive at an average COVID-19 deaths per capita of 0.0087 for the total 65+ demographic.

Fig. 2 contains two normalizations. First, the deaths were normalized by total inoculations given, not by people inoculated or people who had completed the full series of inoculations. We will retain the normalization by total inoculations given, since it will provide the **most conservative results** (largest denominator) for estimation purposes. Second, the deaths were normalized/restricted to those occurring within seven days post-inoculation. This normalization was done to compare across age bands, where the inoculations started at very different points in time. For the present cost-benefit purpose, where we are concentrating on the 65+ band, we remove this latter normalization, and include all post-inoculation deaths. Removing this normalization increases deaths per inoculation by about 40 % to a value of 0.000032, and offers a more credible comparison to the numbers from Fig. 1.

Thus, based on the CDC's official numbers, there are an average COVID-19 deaths per capita of 0.0087 and an average deaths per inoculation of 0.000032 for the 65+ demographic. The chances of a person 65+ dying from an inoculation relative to their chances of dying from COVID-19 are approximately 0.0037, or about 1/270, based on these official CDC figures.

However, as we have shown previously, three corrections to these numbers are required to convert them to real-world effects. First, as the Harvard Pilgrim study has shown and as our results in Appendix 1 confirm, VAERS is underreporting actual deaths by about two orders of magnitude. Applying this correction alone to the above 1/270 ratio changes the risk benefit to about 1/3. Second, as the CDC has stated, approximately 94 % of the COVID-19 deaths could have been attributed to any of the comorbidities these patients had, and only 6% of the deaths could actually be attributed to COVID-19. As we pointed out, if pre-clinical comorbidities had been included, this number of 6% would probably be decreased further. For **conservative** purposes, we will remain with the 6%. Applying this correction to the 1/3 risk-benefit ratio changes it to 5/1! Third, as a comprehensive survey of false positives from RT-PCR tests concluded: “evidence from external quality assessments and real-world data indicate enough a high enough false positive rate to make positive results highly unreliable over a broad range of scenarios” [127]. Because of the myriad RT-PCR tests performed in the USA to screen for/diagnose COVID-19 using different values for Ct and different procedures, a specific number for false positives cannot be obtained at this point in time. Again, these false positives would reduce the 6% number, perhaps substantially. And again, for **conservative** purposes, we will remain with the 6% number.

Thus, our **extremely conservative** estimate for risk-benefit ratio is about 5/1. In plain English, people in the 65+ demographic are five times as likely to die from the inoculation as from COVID-19 under the most favorable assumptions! This demographic is the most vulnerable to adverse effects from COVID-19. As the age demographics go below about 35 years old, the chances of death from COVID-19 become very small, and when they go below 18, become negligible.

It should be remembered that the deaths from the inoculations shown in VAERS are short-term only (six months for those inoculated initially), and for children, extremely short-term (one month) [3]. Intermediate and long-term deaths remain to be identified, and are possible from ADE, auto-immune effects, further clotting and vascular diseases, etc., that take time to develop. Thus, the long-term cost-benefit ratio under the *best-case scenario* could well be on the order of 10/1, 20/1, or more for all the demographics, increasing with decreasing age, and an order-of-magnitude higher under real-world scenarios! In summary, the value of these COVID-19 inoculations is not obvious from a cost-benefit perspective for the most vulnerable age demographic, and is not obvious from any perspective for the least vulnerable age demographic.

Appendix Da

PROBLEMS WITH TEST CRITERIA FOR DETERMINING COVID-19

Consider the criteria for determining whether an RT-PCR test result is positive for SARS-CoV-2. The CDC instruction (until 1 May 2021) specifies running the RT-PCR tests for 45 amplification cycles. Then, to interpret the data: when all controls exhibit the expected performance, a specimen is considered positive for SARS-CoV-2 if all SARS-CoV-2 marker (N1, N2) cycle threshold growth curves cross the threshold line within 40.00 cycles (< 40.00 Ct). The RNase P may or may not be positive as described above, but the SARS-CoV-2 result is still valid ([103]a).

Many false positives are possible in the upper part of this cycle threshold range, especially in areas of low prevalence. In particular, virus culture has been found to be unfeasible in cases with a Ct value exceeding 33. A prospective cohort study involving the first 100 COVID-19 patients in Singapore also showed that attempts to culture the virus failed in all PCR-positive samples with a Ct value >30” [121]. During mass testing in Germany, it was found “that more than half of individuals with positive PCR test results are unlikely to have been infectious” [122]. Another study

found that tests with low specificity (deriving from use of many cycles) cannot provide strong evidence for the presence of an infection [123]. A systematic review of PCR testing concluded “Complete live viruses are necessary for transmission, not the fragments identified by PCR. Prospective routine testing of reference and culture specimens and their relationship to symptoms, signs and patient co-factors should be used to define the reliability of PCR for assessing infectious potential. Those with high cycle threshold are unlikely to have infectious potential.” [89].

As skeptics have argued, in the buildup of the pandemic, the rapid increase in numbers of COVID-19 cases was due in part to the high values of cycle threshold used in the tests. Unfortunately, the true numbers of false positives will probably be unobtainable if an audit were performed, since these values are not reported with the test results: all currently-available nucleic acid tests for SARS-CoV-2 are FDA-authorized as qualitative tests, and Ct values from qualitative tests should never be used to direct or inform patient management decisions. Therefore, it is not good for laboratories to include Ct values on patient reports [124].

After mass inoculations started, a large number of “breakthrough” cases emerged, and a total of 10,262 SARS-CoV-2 vaccine breakthrough infections had been reported from 46 U.S. states and territories as of April 30, 2021 [18]; the number of reported COVID-19 vaccine breakthrough cases is likely a substantial undercount of all SARS-CoV-2 infections among fully vaccinated persons. The national surveillance system relies on passive and voluntary reporting, and data might not be complete or representative. Many persons with vaccine breakthrough infections, especially those who are asymptomatic or who experience mild illness, might not seek testing [18].

This negative outcome of increased “breakthrough” cases motivated the CDC to change a number of reporting and test procedures and issue new regulations for identifying and investigating hospitalized or fatal vaccine breakthrough cases starting 1 May 2021, stating: “For cases with a known RT-PCR cycle threshold (Ct) value, submit only specimens with Ct value ≤ 28 to CDC for sequencing. (Sequencing is not feasible with higher Ct values.)”. Thus, the Ct values for sequencing were lowered from the high false positive range allowed during the pandemic buildup to a limit that would eliminate many of these false positives in the ‘breakthrough case’ identification phase [101].

Abstract:

mRNA-based vaccines provide effective protection against most common SARS-CoV-2 variants. However, identifying likely breakthrough variants is critical for future vaccine development. Here, we found that the Delta variant completely escaped from anti-N-terminal domain (NTD) neutralizing antibodies, while increasing responsiveness to anti-NTD infectivity-enhancing antibodies. Although Pfizer-BioNTech BNT162b2-immune sera neutralized the Delta variant, when four common mutations were introduced into the receptor binding domain (RBD) of the Delta variant (Delta 4+), some BNT162b2-immune sera lost neutralizing activity and enhanced the infectivity. Unique mutations in the Delta NTD were involved in the enhanced infectivity by the BNT162b2-immune sera. Sera of mice immunized by Delta spike, but not wild-type spike, consistently neutralized the Delta 4+ variant without enhancing infectivity. Given the fact that a Delta variant with three similar RBD mutations has already emerged according to the GISAID database, it is necessary to develop vaccines that protect against such complete breakthrough variants.

Introduction

Newly developed mRNA-based vaccines for SARS-CoV-2 have proven to be quite effective in preventing infection as well as severe COVID-19 (Jackson et al., 2020; Polack et al., 2020). However, new SARS-CoV-2 variants have repeatedly appeared and spread within the human population. Recent variants have acquired numerous mutations throughout the genome and are highly infectious compared to the original SARS-CoV-2. Although the spike protein used in currently approved mRNA-based vaccines consists of the original spike protein without mutations, these vaccines are nonetheless effective against variants of concern (VOC) (Collier et al., 2021; McCallum et al., 2021; Muik et al., 2021; Wang et al., 2021b). The receptor binding domain (RBD) of the spike protein binds to the host cell receptor ACE2, and the interaction mediates membrane fusion during SARS-CoV-2 infection (Hoffmann et al., 2020). Neutralizing antibodies against SARS-CoV-2 are mainly directed to the RBD and block the interaction between the RBD and ACE2. Most SARS-CoV-2 variants have acquired mutations in the neutralizing antibody epitopes of the RBD, resulting in escape from neutralizing antibodies (Cele et al., 2021; Collier et al., 2021; Davies et al., 2021; Madhi et al., 2021; Planas et al., 2021a; Tegally et al., 2021; Wang et al., 2021a). However, mutations in the RBD also tend to affect binding to ACE2. Therefore, there is a tradeoff in the evolution of the RBD between mutations that maintain ACE2 binding while escaping the recognition by neutralizing antibodies. In addition, mRNA vaccine-immune sera contain various neutralizing antibodies that recognize epitopes in different parts of the spike protein. It is an important to ascertain whether SARS-CoV-2 variants are likely to emerge that are completely resistant to immunity induced by the current mRNA-based vaccines. Vigilance against such resistant variants is essential for development of next-generation vaccines.

The SARS-CoV-2 Delta variant (B.1.617.2) is highly contagious and is rapidly spreading (Callaway, 2021). The neutralizing activity of sera from vaccinated individuals as well as convalescent COVID-19 patients decreases for the Delta variant compared to the wild-type (Liu et al., 2021a; Planas et al., 2021b). The Delta variant has several mutations in both the N-terminal domain (NTD) and RBD. The L452R and T478K mutations in the RBD of the Delta variant are also observed in other variants that are not as infectious as the Delta variant. Therefore, mutations in the RBD alone do not explain the high infectivity of the Delta variant. In contrast, among Delta mutations, several substitutions or deletions in the NTD—T19R, G142D, E156G, F157del and R158del—have not been observed in other major variants. This suggests that mutations in the NTD may play a key role in the high infectivity of the Delta variant. Although anti-RBD antibodies are thought to play a dominant role in vaccine-induced immunity against SARS-CoV-2 (Robbiani et

al., 2020), neutralizing antibodies directed against the NTD are also important for SARS-CoV-2 neutralization (Chi et al., 2020; Li et al., 2021; Liu et al., 2020; Suryadevara et al., 2021; Voss et al., 2021). Moreover, we and others have recently demonstrated that antibodies against a specific site on the NTD can enhance the infectivity of SARS-CoV-2 by inducing the open form of the RBD (Li et al., 2021; Liu et al., 2021b). Therefore, it is important to elucidate the function of both the neutralizing and enhancing antibodies in order to understand the pathogenicity of the emerging SARS-CoV-2 variants. In this study, in order to understand the mechanism of the Delta variant's high infectivity, we systematically examined Delta variant mutations in the NTD and RBD and suggest an evolutionary pathway by which the Delta variant could achieve complete escape from vaccine-induced immunity, which provides important information for the design of next-generation vaccines.

Results

Neutralizing activity of anti-NTD and anti-RBD monoclonal antibodies from COVID-19 patients against the Delta variant.

In order to understand the mechanism underlying the increased infectivity of the SARS-CoV-2 Delta variant, we analyzed the binding of various types of anti-spike monoclonal antibodies obtained from COVID-19 patients to the Delta spike protein (**Figure 1A**). Because these monoclonal antibodies were obtained from patients infected in mid-2020, at a time when the SARS-CoV-2 variants had not yet emerged, it is likely that they were elicited by the same wild-type spike protein as is used in current vaccines (Brouwer et al., 2020; Chi et al., 2020; Li et al., 2021; Robbiani et al., 2020; Suryadevara et al., 2021; Zost et al., 2020). Most neutralizing antibodies are directed against the RBD, and the Delta variant has two mutations in this domain, L452R and T478K. L452R has been reported to be an epitope for some, but not most, neutralizing antibodies (McCallum et al., 2021; Wang et al., 2021b). T478K is located in the ACE2 binding site and appears to be mainly involved in increased ACE2 binding affinity (Xu et al., 2021). In our analysis of various anti-RBD antibodies, we found that only a few of the neutralizing antibodies failed to recognize the Delta spike, while most anti-RBD neutralizing antibodies bound to Delta spike at levels comparable to wild-type spike (**Figure 1A**).

The Delta variant possesses several unique mutations in the NTD—T19R, G142D, E156G, F157del and R158del—suggesting the possibility that binding of some anti-NTD neutralizing antibodies elicited by wild-type spike could be disrupted. In addition to the 13 published anti-NTD neutralizing antibodies (Chi et al., 2020; Li et al., 2021; Liu et al., 2020; Suryadevara et al., 2021; Voss et al., 2021), we found that COV2-2016, COV2-2026 and COV2-2150 are also anti-NTD neutralizing antibodies for wild-type spike (**Figure 1B**). We analyzed these 16 anti-NTD neutralizing antibodies, and found that none of the anti-NTD neutralizing antibodies could recognize Delta spike (**Figure 1A**). In contrast, when we analyzed the binding of the anti-NTD infectivity-enhancing antibodies (Li et al., 2021; Liu et al., 2021b), eight out of ten anti-NTD enhancing antibodies bound to Delta spike at levels comparable with wild-type spike (**Figure 1A**). Some of the anti-NTD antibodies that were not well characterized as either neutralizing/enhancing antibodies showed partial or complete reduction in binding to Delta spike compared to wild-type spike, while others showed strong binding. The high frequency of reduced or enhanced recognition by anti-NTD antibodies against the Delta variant suggests that the antigenicity of the NTD has been greatly affected by mutations in the NTD.

Next, we analyzed the function of the enhancing and neutralizing antibodies on the Delta variants using pseudovirus bearing either the Delta spike protein (Delta pseudovirus) or wild-type spike (wild-type pseudovirus) (**Figure 1B-1D**). The viral titer of each pseudovirus was checked by its infectivity to HEK293T cells transfected with ACE2 (**Figure S1**). Anti-RBD neutralizing antibodies that bound to the Delta spike completely neutralized the infection of either Delta or

wild-type pseudovirus (**Figure 1C**). All anti-NTD neutralizing antibodies we tested failed to recognize the Delta spike protein (**Figure 1A**). As expected, these anti-NTD antibodies did not neutralize infection by the Delta pseudovirus, whereas they decreased the infectivity of the wild-type pseudovirus (**Figure 1B**). The neutralizing efficiency of anti-NTD neutralizing antibodies against the wild-type pseudovirus was lower than that of anti-RBD neutralizing antibodies, as previously reported (Chi et al., 2020; Li et al., 2021; Liu et al., 2020; Suryadevara et al., 2021; Voss et al., 2021). Enhancing antibodies increase the infectivity of SARS-CoV-2 by inducing the open form of the RBD (Liu et al., 2021b). As described above, the recognition by most of the enhancing antibodies was well conserved in the Delta variant (**Figure 1A**). When the effect of the enhancing antibodies was analyzed, the infectivity enhancement of the Delta pseudovirus by some of the enhancing antibodies was more than that of the wild-type pseudovirus (**Figure 1D**). These data suggested that the Delta variant completely escaped from anti-NTD neutralizing antibodies while maintaining functional enhancing antibody epitopes. Because the enhancing antibodies decrease the effect of anti-RBD neutralizing antibodies (Li et al., 2021; Liu et al., 2021b), there is a possibility that the Delta variant maintains the infectivity in the presence of anti-RBD neutralizing antibodies as a result of enhancing antibodies.

Neutralizing activity of BNT162b2-immune sera against Delta variants.

We next analyzed the neutralizing activity of twenty sera from healthy individuals fully immunized with Pfizer-BioNTech BNT162b2 mRNA vaccine against the Delta pseudovirus (**Figure 2A**). Although most of BNT162b2-immune sera completely blocked the infection of the Delta pseudovirus at high concentration, the neutralizing titer of BNT162b2-immune sera against Delta pseudovirus decreased significantly compared to wild-type pseudovirus (**Figure 2B**), similar to a previous report (Liu et al., 2021a; Planas et al., 2021b). Because none of the anti-NTD neutralizing antibodies were effective against the Delta variant (**Figure 1A and 1B**), it is likely that anti-RBD neutralizing antibodies play a major role in the neutralizing activity of BNT162b2-immune sera against the Delta variant.

To elucidate the contribution of the NTD and RBD in the resistance of the BNT162b2-immune sera against the Delta variant, we generated chimeric spike proteins in which the NTD, RBD or S2 subunit was encoded by either the wild-type (W) or Delta (D) variant (**Figure 3A**). Anti-NTD enhancing antibody, COV2-2490, binds to both the wild-type and Delta NTD, whereas anti-NTD neutralizing antibody, 4A8, binds to the wild-type NTD but not Delta NTD. Similarly, Anti-RBD neutralizing antibody, C144, binds to both the wild-type and Delta RBD, whereas anti-RBD neutralizing antibody, C002, binds to the wild-type RBD but not Delta RBD. As expected, C002 bound well to spike with the wild-type RBD (WWD or DWD) but weakly to spike with Delta RBD (DDD or WDD) (**Figure S2**). Similarly, anti-NTD neutralizing antibody, 4A8, bound to spike with the wild-type NTD (WWD or WDD) but failed to bind to spike with the Delta NTD (DDD or DWD). COV2-2490 and C144 bound to all of the chimeric spike proteins. These data suggest that each domain of the chimeric spike proteins retains its original antigenicity.

We next generated pseudovirus containing these recombinant spike proteins and analyzed the effect of BNT162b2-immune sera. The neutralizing activity of the BNT162b2-immune sera against WWD pseudovirus decreased slightly compared to that of wild-type pseudovirus (WWW), suggesting that mutations in the S2 domain are involved in the resistance of the Delta variant (**Figure 3B and 3C**). When infectivity of DWD pseudovirus, in which wild-type NTD was substituted to the Delta NTD, was compared with WWD pseudovirus, the neutralizing activity of BNT162b2-immune sera significantly decreased further. The neutralizing activity of the BNT162b2 immune sera was reduced against WDD pseudovirus, in which wild-type RBD was replaced by Delta RBD, compared to DWD pseudovirus. The neutralizing activity of the BNT162b2-immune sera decreased further against Delta pseudovirus (DDD). These data suggest

that both NTD and RBD mutations in the Delta spike are involved in the resistance of the BNT162b2-immune sera against the Delta variant.

Cryo-EM analysis of the Delta spike

All anti-NTD monoclonal neutralizing antibodies from COVID-19 patients failed to bind to Delta spike whereas most of the enhancing antibodies maintained reactivity to Delta spike (**Figure 1A**). Although there are several mutations in the NTD of Delta spike, known epitopes for anti-NTD neutralizing antibodies are conserved in the Delta variant. To evaluate the effect of mutations in the Delta variant on anti-NTD neutralizing antibody epitope structure, single particle cryo-EM analysis was employed. Data were analyzed by heterogenous refinement and *ab-initio* reconstruction followed by non-uniform refinement. As a result, a density map of the spike protein was obtained at 3.1 Å resolution (**Figure S3 and Table S1**). To build an atomic model of the spike, we predicted the structures of the Delta variant NTD using AlphaFold2 (Jumper et al., 2021). The predicted NTD model of the Delta variant was used as an initial model for fitting into the obtained map. The statistics of the model of the Delta variant spike are summarized in **Table S1**. When the NTD models of Delta variant and wild-type spike were compared, the major epitope residues for the enhancing antibody—H64, W66, V213 and R214—were structurally well conserved (**Figure 4**). In contrast, a large conformational change was observed in the residues of anti-NTD neutralizing antibody epitopes (**Figure 4**). The maximum interatomic distance between the Delta variant and the wild-type was more than 9 Å (**Figure 4B**). In the NTD of the Delta variant, the β strands containing four epitope residues—Y144, K147, K150 and W152—were shortened and shifted significantly compared to the wild-type (**Figure 4A**). These structural changes were most likely caused by deletion of F157 and R158. As a result, these four residues were quite different from the wild type. R246 and W258 showed large changes compared to the wild-type (**Figure 4**), and the loop connecting these two residues appeared to be highly flexible. These data suggest that dramatic changes in the structure of the anti-NTD neutralizing antibody epitope residues are responsible for the complete loss of reactivity to anti-NTD neutralizing antibodies against the Delta spike.

Prediction of possible future mutations of the Delta variant

The Delta variant became completely resistant to anti-NTD neutralizing antibodies in the BNT162b2 immune serum by acquiring mutations in the NTD, and thus anti-RBD neutralizing antibodies seem to be mainly responsible for the neutralizing activity in the BNT162b2 immune sera (**Figure 1, Figure 2 and Figure 3**). These results suggest that the Delta variant may acquire full resistance to BNT162b2 immune sera by acquiring additional mutations in the RBD that disrupt recognition of anti-RBD neutralizing antibodies. Indeed, a Delta variant that has acquired the K417N mutation in the RBD, known as AY.1 (Delta plus), has already emerged and its frequency in the general population is increasing (Gupta et al., 2021). To investigate the potential occurrence of additional mutations, we analyzed the additive effects of mutations acquired by the Delta variant in the GISAID database (**Figure S4**). The Delta variant has already acquired large numbers of additional mutations in the RBD, some of which occur in epitopes for anti-RBD neutralizing antibodies (Greaney et al., 2021a; Greaney et al., 2021b; Greaney et al., 2021c; Wang et al., 2021b; Weisblum et al., 2020). In addition to the K417N mutation, Delta variants with E484K, F490 or N501Y mutations—observed in the Alpha, Beta, Gamma and/or Lambda variants—are also increasing (**Figure 5A**). Considering the very rapid increase in the population of people infected with the Delta variant, the Delta variant is likely to acquire further mutations in infected people, and those with further increased infectivity will be selected. Indeed, the Delta variant with multiple mutations in anti-RBD neutralizing antibody epitopes have already emerged according to the GISAID database (**Figure 5B**). In particular, EPI_ISL_2958474 possesses three additional

mutations in anti-RBD neutralizing antibody epitopes, although the NTD sequence is not identical to the representative Delta variant. Accordingly, we analyzed the effect of major mutations observed in SARS-CoV-2 variants on the RBD of the Delta variant (**Figure 5C**). Because the Delta variant contains the T478K mutation and neighboring residues may show similar effects, the S477N mutation was excluded. Accordingly, we introduced four mutations in the Delta spike (Delta 4+)—K417N, N439K, E484K and N501Y—and analyzed the effect of these mutations (**Figure 5D**).

Enhanced infectivity of the Delta 4+ pseudovirus by some BNT162b2-immune sera.

We analyzed the binding of several anti-RBD neutralizing antibodies to the Delta spike with a single additional mutation or multiple mutations in the RBD (**Figure 6A**). Most anti-RBD antibodies recognized Delta spike with a single additional mutation, but not the Delta 4+ spike protein. The C135 anti-RBD neutralizing antibody, whose major epitopes are R346 and N440 (Greaney et al., 2021b; Weisblum et al., 2020), still recognized the Delta 4+ spike. We then generated pseudovirus bearing mutant spike proteins. The Delta pseudovirus with additional single RBD mutations was slightly more resistant to BNT162b2-immune sera (**Figure 6B**). The effects of the single additional mutations were slightly different depending on the individuals, although infection was completely blocked at the highest concentration of the serum. Next, we analyzed the Delta 4+ pseudovirus with four additional RBD mutations (**Figure 6C**). Surprisingly, most BNT162b2-immune sera enhanced infectivity of the Delta 4+ pseudovirus in a dose-dependent manner at relatively low concentrations of BNT162b2-immune sera, but showed weak neutralization only at the highest concentration of the sera (**Figure 6D and 6E**). Especially, PFZ7 greatly enhanced the infectivity at relatively low serum concentration. Some sera, such as PFZ13 and PFZ14, did not show neutralizing activity even at the highest concentration of the sera. The neutralizing titers of PFZ13 and PFZ14 against wild-type or Delta variant were apparently lower than others (**Figure 2A**). On the other hand, PFZ15 effectively neutralized the Delta 4+ pseudovirus, but the neutralizing titers of PFZ15 against the wild type and Delta variant were not particularly high compared to the others. Because most neutralizing antibodies against either NTD or RBD do not work for the Delta 4+ pseudovirus, while most enhancing antibodies remain functional for the Delta 4+ pseudovirus, the increased infectivity in the presence of BNT162b2-immune sera appears to be mediated by anti-NTD enhancing antibodies.

In order to analyze the contribution of Delta NTD to the enhanced infectivity, we generated pseudovirus bearing spike protein with wild-type NTD and Delta 4+ RBD (**Figure 6C**). Although some BNT162b2-immune sera enhanced infectivity of the Delta 4+ pseudovirus, the Delta 4+ virus with wild-type NTD did not show enhanced infectivity by BNT162b2-immune sera (**Figure 6D and 6E**). These data suggested that mutations in the NTD of the Delta variant made the virus more susceptible than the wild-type to anti-NTD enhancing antibodies in BNT162b2-immune sera, and thus reduced the neutralizing effect of anti-RBD neutralizing antibodies.

Sera from the Delta spike immunized mice do not show enhanced infectivity against Delta 4+ pseudovirus.

Because wild-type spike was used for BNT162b2 mRNA vaccine, the enhanced infectivity of the Delta 4+ pseudovirus by some BNT162b2-immune sera appears to be caused by the decreased neutralizing antibody titer of anti-NTD and anti-RBD neutralizing antibodies against Delta 4+ pseudovirus. Therefore, neutralizing antibody titers against the Delta variants may be relatively high compared to enhancing antibodies when immunizing with the Delta spike, even though the enhancing antibody epitopes are conserved in the Delta spike protein. To test the effect of immunization by Delta spike, we immunized mice with B16F10 mouse melanoma cells transiently transfected with wild-type or Delta spike protein (**Figure 7A**). We used B16F10 cells because the

immunogenicity of B16F10 melanoma cell line is quite low (Priem et al., 2020). In addition, the conformation of spike protein expressed on transfectants is likely to be similar to that of spike protein expressed by mRNA vaccines. All mice effectively produced antibodies against spike protein (**Figure S5**). The wild-type spike immunized sera neutralized wild-type pseudovirus well, whereas the neutralizing effect against the Delta pseudovirus decreased, similar to BNT162b2-immune sera (**Figure 7B and 7C**). In contrast, Delta spike immunized sera neutralized both wild-type and Delta pseudovirus well. Just one mouse produced antibodies that neutralize the Delta pseudovirus better than wild-type pseudovirus. When we analyzed the Delta-4+ pseudovirus, some sera from wild-type spike immunized mice showed enhanced infectivity in a dose dependent manner at relatively low concentrations of sera similar to some BNT162b2-immune sera (**Figure 7D and 7E**). Especially, #w1 mouse serum showed enhanced infectivity at any concentration, although the same serum neutralized the wild-type pseudovirus well. In contrast, the enhanced infectivity by immunized sera was not observed when the Delta spike was used for immunization. Sera from the Delta-spike immunized mice did not exhibit enhanced infectivity at any concentration of sera. These data suggest that vaccines containing the Delta, but not wild-type, spike might be required to control the Delta subvariant that may emerge in the future.

Discussion

The Delta variant is highly contagious and breakthrough infection to fully vaccinated individuals is often observed (Lopez Bernal et al., 2021), suggesting that neutralizing antibodies in fully vaccinated individuals are not sufficient to protect against infection by the Delta variant. Anti-RBD antibodies are thought to play a major role in protection against SARS-CoV-2 infection. The Delta variant has L452R and T478K mutations in the RBD, and L452 has been shown to be an epitope for some neutralizing antibodies (McCallum et al., 2021; Wang et al., 2021b). However, most neutralizing antibodies bound to the Delta RBD and neutralized the infection. Therefore, mutations in the RBD alone may not explain the decreased neutralizing titers of the BNT162b2-immune sera against the Delta variant.

The Delta variant has multiple mutations in the NTD: T19R, G142D, E156G, F157del and R158del. All anti-NTD neutralizing antibodies failed to recognize the Delta spike, indicating that the Delta variant is completely resistant to anti-NTD neutralizing antibodies elicited by wild-type spike protein, which is the antigenic component of widely used mRNA vaccines. In contrast, most anti-NTD enhancing antibodies recognized Delta spike at the same level as wild-type spike, and some anti-NTD enhancing antibodies exhibited increased infectivity enhancement by Delta pseudovirus compared to wild-type pseudovirus. Consistent with this observation, the structures of enhancing anti-NTD antibody epitopes were well conserved with the wild type. Because enhancing antibodies reduced neutralizing activity of anti-RBD neutralizing antibodies (Li et al., 2021; Liu et al., 2021b), mutations in the NTD may play an important role in the resistance of the Delta variant to the BNT162b2-immune sera. Indeed, a Delta pseudovirus with wild-type NTD was more susceptible to neutralization by BNT162b2-immune sera than full Delta pseudovirus. The effect of the Delta NTD was more obvious for the Delta 4+ pseudovirus. These data indicated that mutations in the NTD are involved in the escape of SARS-CoV-2 from neutralizing antibodies. It is likely that the mutations in the NTD that abrogate neutralizing antibody binding while retaining enhancing antibody binding are beneficial to the virus. These mutations in the Delta variant may suggest adaptation to the presence of enhancing antibodies while maintaining evasion of anti-NTD and anti-RBD neutralizing antibodies in immunized or previously infected hosts.

Not only Delta, but also other VOCs such as Alpha (B.1.1.7), Beta (B.1.135), and Gamma (P.1) show more mutations in the NTD than in the RBD. Because the NTD is involved in the regulation of the conformation of the RBD but not in direct binding to the host receptor ACE2 (Liu et al., 2021b), it can tolerate many mutations. As with the Delta variant, most anti-NTD neutralizing

antibodies have been reported not to bind to the Alpha and Beta variants (Voss et al., 2021; Wang et al., 2021a). Recently, L-SIGN has been reported to be an entry receptor for SARS-CoV-2 (Amraei et al., 2021; Kondo et al., 2021; Soh et al., 2020; Thepaut et al., 2021). L-SIGN specifically bound to NTD but not RBD of SARS-CoV-2 spike protein and mediated SARS-CoV-2 infection of non-ACE2 expressing cells by inducing membrane fusion (Soh et al., 2020). Furthermore, anti-NTD neutralizing antibodies efficiently blocked SARS-CoV-2 infection of L-SIGN-expressing cells compared to that of ACE2-expressing cells. Considering the fact that most VOCs have completely escaped from anti-NTD neutralizing antibodies regardless of the fact that the neutralizing efficiency is quite low compared to anti-RBD neutralizing antibodies *in vitro*, SARS-CoV-2 infection mediated by the NTD through L-SIGN or other unknown receptors may play a more important role *in vivo* than *in vitro*. Further analyses of function of NTD as well as anti-NTD neutralizing antibodies are required to elucidate the pathogenicity of SARS-CoV-2.

The enhancing antibodies bind to a specific site on the NTD, inducing the open form of the RBD, which increases the affinity of spike protein to ACE2 (Liu et al., 2021b). Recently, it has been reported that the enhancing antibodies do not increase the infectivity *in vivo* (Li et al., 2021). However, only one human IgG1 monoclonal enhancing antibody, among 11 known enhancing antibodies, has been tested *in vivo*. The affinities and epitopes of enhancing antibodies to the NTD, as well as the IgG subclass of enhancing antibodies, may affect their *in vivo* function. Recently, it has been reported that binding of neutralizing antibodies to Fc receptors is required for their neutralizing activity *in vivo* (Schafer et al., 2021; Suryadevara et al., 2021; Winkler et al., 2021). Indeed, IgG1, which is the most frequently used antibody subclass in *in vivo* studies, has the strongest affinity for Fc receptors and shows strong effector function; whereas, IgG2 and IgG4 weakly bind to Fc receptors (Nimmerjahn and Ravetch, 2008). Therefore, it is likely that the *in vivo* function of anti-NTD enhancing antibodies will vary depending on the antibody subclass, the specific variable region sequence, or both. Given the fact that the Delta variant maintained enhancing antibody epitopes and is more sensitive to enhancing antibodies, it is likely that the enhancing antibodies are involved in augmentation of the SARS-CoV-2 infectivity *in vivo*.

Several BNT162b2 immune sera showed neutralizing activity against the Delta 4+ pseudovirus at a 1:10 dilution, but conversely increased infectivity at 1:30 dilution. In general, the activity of neutralizing antibodies does not change so drastically with a three-fold difference in concentration. Therefore, the effect of the BNT162b2 immune sera against the Delta 4+ pseudovirus cannot be explained simply by the concentration of neutralizing antibodies. The BNT162b2 immune sera did not show enhanced infectivity against the Delta 4+ pseudovirus with wild-type NTD at any serum concentration. Since the effect of anti-NTD infectivity-enhancing monoclonal antibodies is affected by the concentration of anti-RBD neutralizing antibodies (Li et al., 2021; Liu et al., 2021b), the effect of infectivity-enhancing antibodies in BNT162b2 immune sera is likely to be more pronounced when the concentration of anti-RBD neutralizing antibodies falls below a certain threshold. Indeed, the BNT162b2 immune sera with low neutralizing titers against the Delta pseudovirus showed enhancement against the Delta 4+ pseudovirus even at high serum concentration. Although the neutralizing antibody titer is the highest three weeks after the second immunization, it gradually decreases (Doria-Rose et al., 2021; Widge et al., 2021). As in the case of diluted sera, it is possible that the effect of infectivity-enhancing antibodies may become more evident some time after immunization, even if the neutralizing and enhancing antibody titers decrease equally. In addition, neutralizing antibody titers induced by adenovirus vaccines and inactivated vaccines are lower than those induced by mRNA vaccines (Lim et al., 2021; Shrotri et al., 2021). Therefore, there is a possibility that the enhancing effect might be more pronounced against the Delta 4+ pseudovirus with immune sera of adenovirus vaccines or inactivated vaccines, similar to BNT162b2 immune sera with low neutralizing titers. On the other hand, some BNT162b2 immune sera did not enhance infection of Delta 4+ pseudovirus at any serum concentration and

neutralized well. Similarly, despite the use of inbred mice, the effect of sera on the infectivity of Delta 4+ pseudovirus varied greatly among individual mice immunized with the wild-type spike. The sera of some mice showed enhancement of the Delta 4+ pseudovirus infection, while others showed neutralization at any serum concentration. The delicate balance of antibody titer, affinity, or epitope between neutralizing and enhancing antibodies might affect the effect of sera on the infectivity. It is important to further analyze the characteristics of neutralizing and enhancing antibodies produced after immunization.

SARS-CoV-2 has acquired a number of mutations to date, which have arisen within infected individuals. Therefore, new variants are likely to emerge more frequently in situations where many people are infected. Because the Delta variant is spreading so explosively, it has already acquired numerous additional mutations in the spike protein coding region, suggesting that the Delta variant will continue to acquire further mutations. Some mutations observed in the RBD of the Delta variant have been reported to be epitopes for anti-RBD neutralizing antibodies (Greaney et al., 2021a; Greaney et al., 2021b; Wang et al., 2021b). Newly emerged variants that adapt to the environment of their host's immune system will be selected and expand. The Delta variant with 4 additional mutations in the RBD were not neutralized by most BNT162b2-immune sera because of unique mutations in the NTD. More importantly, infectivity of the Delta 4+ was enhanced by some BNT162b2-immune sera. Furthermore, of the four additional mutations, a Delta variant with three mutations has already been registered in the GISAID database; it is likely that a Delta variant that has acquired five mutations in the RBD in total will acquire additional mutations in the near future. Although we have selected K417N, N439K, E484K, and N501Y as additional mutations for the Delta variant, other combinations of anti-RBD neutralizing epitopes can be expected to have similar or stronger effects than the Delta 4+ variant. Indeed, the Delta 4+ still possess R346, one of major epitope residues for anti-RBD neutralizing antibodies such as C135. Given the current high mutation rate of SARS-CoV-2, predicting emerging spike mutations is very important to develop effective vaccines against emerging SARS-CoV-2 variants. Immunization by dangerous spike protein variants that are likely to emerge in the future may be effective in preventing the emergence of such variants.

A third round of booster immunization with the SARS-CoV-2 vaccine is currently under consideration. Our data suggest that repeated immunization with the wild-type spike may not be effective in controlling the newly emerging Delta variants. We demonstrated that immunization by Delta spike induces antibodies that neutralize not only the Delta variant but also wild-type and the Delta 4+ variant without enhancing the infectivity. Although mRNA vaccination may yield different results from our animal model, development of mRNA vaccine expressing the Delta spike might be effective for controlling the emerging Delta variant. However, epitopes of the enhancing antibodies, not neutralizing antibodies, are well conserved in most SARS-CoV-2 variants, including the Delta variant. Therefore, additional immunization of the spike protein derived from SARS-CoV-2 variants may boost enhancing antibodies more than the neutralizing antibodies in individuals who were previously infected with wild-type SARS-CoV-2 or immunized with vaccines composed of wild-type spike protein. Immunization using the RBD alone, which will not induce anti-NTD enhancing antibodies, could be a strategy for a vaccination. However, anti-NTD neutralizing antibodies that protect against SARS-CoV-2 infection similar to anti-RBD-neutralizing antibodies are not induced by immunization by RBD alone (Chi et al., 2020; Li et al., 2021 ; Liu et al., 2020; Suryadevara et al., 2021; Voss et al., 2021). Whole spike protein containing RBD mutations observed in major variants but lacking the enhancing antibody epitopes may need to be considered as a booster vaccine.

Author contributions

Y.L., Y.M., D.M.S., T.K., M.O., M.F., H.A. designed the experiments. Y.L., J.K., M.H., A.T., S.M., A.A., K.A., C.O., H.J., K.K., W.N., performed the experiments. N.A., A.K., H.N., Y.Y., M.F. collected vaccine sera. J.K., S.L., D.M.S., T.K., H.A. constructed a model of NTD spike. Y.L., N.A., J.K., M.K., D.M.S., H.A. wrote the manuscript. All authors read, edited, and approved the manuscript.

Declaration of interests

Osaka University has filed a patent application for the enhancing antibodies. HA and YL are listed as inventors. HA is a stockholder of HuLA immune Inc.

Methods

Data and code availability

Cryo-EM density maps for the SARS-CoV-2 Delta spike protein were deposited at the EMDB under accession code EMD-31731. A molecular model of the SARS-CoV-2 Delta spike protein fitted to Cryo-EM data were deposited to PDB under accession code 7V5W. The data that support the findings of this study are available from the Lead Contact on request.

Cell lines

HEK293T cells (RIKEN Cell Bank) and B16F10 melanoma cells (National Institute of Biomedical Innovation) were cultured in DMEM (Nacalai, Japan) supplemented with 10% FBS (Biological Industries, USA), penicillin (100 U/mL), and streptomycin (100 µg/mL) (Nacalai, Japan) and cultured at 37°C in 5% CO₂. The Expi293 cells (Thermo) were cultured with the Expi293 medium. The cells were routinely checked for mycoplasma contamination. ACE2-stably transfected HEK293 cells (HEK293T-ACE2-transfectants) were reported previously (Liu et al., 2021b).

Human samples

The collection and use of BNT162b2-immune sera were approved by Osaka University Hospital (20522-3). Written informed consent was obtained from the participants according to the relevant guidelines of the institutional review board. All sera were collected from 26-65 years old healthy individuals three weeks after immunization with two cycles of 30 µg of BNT162b2 mRNA vaccine.

Plasmid construction

The SARS-CoV-2 spike gene (NC_045512.2) was prepared by gene synthesis (IDT). The sequences encoding the spike protein lacking the C-terminal 19 amino acids (amino acids 1–1254) were cloned into the pME18S expression vector. NTD (amino acids 14–333) and RBD (amino acids 335–587) were separately cloned into a pME18S expression vector containing a SLAM signal sequence and a PILRα transmembrane domain (Saito et al., 2017). A series of mutants and the Delta variants (T19R, G142D, E156G, del_157, del_158, L452R, T478K, D614G, P681R, D950N)

were prepared from wild-type SARS-CoV-2 spike using the QuickChange Lighting Multi Site-directed Mutagenesis kit (Agilent). Additional RBD mutations were introduced into the Delta spike also using the QuickChange Lighting Multi Site-directed Mutagenesis kit (Agilent). The primers for mutagenesis were designed on Agilent's website (<https://www.agilent.com/store/primerDesignProgram.jsp>). For Cryo-EM analysis, the sequence encoding the spike protein's extracellular domain with a foldon and His-tag at the C-terminus (Cai et al., 2020) was cloned into a pcDNA3.4 expression vector containing the SLAM signal sequence. Also, mutations D614G, R686G R687S R689G, K986P, and V987P were introduced using a Quick change multi-mutagenesis kit (Agilent) for stabilization of recombinant spike protein (Yurkovetskiy et al., 2020). The DNA sequences of these constructs were confirmed by sequencing (ABI3130xl).

Transfection

A pME18S expression plasmid containing the full-length or subunit spike protein was transiently transfected into HEK293T cells using PEI max (Polysciences); the pMx-GFP expression plasmid was used as the marker of transfected cells.

Anti-spike monoclonal antibodies from COVID-19 patients

The variable regions of anti-SARS-CoV-2 spike antibodies from COVID-19 patients were synthesized according to the published sequence (IDT) (Brouwer et al., 2020; Chi et al., 2020; Li et al., 2021; Robbiani et al., 2020; Suryadevara et al., 2021; Zost et al., 2020). Variable region sequences of some antibodies were obtained from the CoV-AbDab database (<http://opig.stats.ox.ac.uk/webapps/covabdab/>). The cDNA of the variable regions of the heavy chain and light chain were cloned into a pCAGGS vector containing sequences that encode the human IgG1 or kappa constant region. The pCAGGS vectors containing sequences encoding the immunoglobulin heavy chain and light chain were co-transfected into Expi293 (Thermo) cells, and the cell culture supernatants were collected according to the manufacturer's protocols. Recombinant IgG was purified from the culture supernatants using protein A Sepharose (GE healthcare). The concentration of purified IgG was measured at OD280.

Antibodies and recombinant proteins

Allophycocyanin (APC)-conjugated donkey anti-mouse IgG Fc fragment antibody and APC-conjugated anti-human IgG Fc fragment specific antibody (Jackson ImmunoResearch, USA) were used. The pcDNA3.4 expression vector containing the sequence that encodes the His-tagged extracellular domain of the spike protein was transfected into Expi293 cells and the His-tagged spike protein produced in the culture supernatants was then purified with a Talon resin (Clontech).

Immunization of mice

B16F10 cells were transfected with WT spike protein or Delta spike protein by PEI as described above. 48 hours later, B16F10 cells were washed twice with PBS, and then the cells were collected and frozen and thawed. Balb/c female mice (7-weeks-old females) were purchased from SLC. Two groups of five mice ($n = 5$) were subcutaneously immunized with 1×10^7 B16F10 transfectants in the presence of complete Freund's adjuvant (CFA). Serum samples were collected three weeks after the immunization.

Flow cytometric analysis of antibodies

Plasmids expressing the full-length SARS-CoV-2 spike protein, Flag-NTD-PILR-TM and Flag-RBD-PILR-TM were co-transfected with the GFP vector into HEK293T cells. The transfectants were incubated with the mAbs, followed by APC-conjugated anti-human IgG Ab. The antibodies

bound to the stained cells were then analyzed using a flow cytometer (Attune™, Thermo; FACSCelesta BD bioscience). Antibodies binding to the GFP-positive cells were shown in the figures using FlowJo software (BD bioscience).

SARS-CoV-2 spike-pseudotyped virus infection assay

The HEK293T cells were transiently transfected with expression plasmids for the SARS-CoV-2 spike protein lacking the C-terminal 19 amino acids (Hu et al., 2020; Johnson et al., 2020). At 24 hours post-transfection, VSV-G-deficient VSV carrying a Luciferase gene complemented in *trans* with the VSV-G protein was added for incubation for 2 hours. The cells were then carefully washed with DMEM media without FBS and incubated with DMEM with FBS at 37°C in 5% CO₂ for 48 hours. The supernatant containing the pseudotyped SARS-CoV-2 virions was harvested and aliquoted before storage at -80°C. To determine the virus titers of the pseudovirus, 1×10^4 HEK293T-ACE2-transfectants were mixed with the pseudovirus for 20 hours at 37 °C in 5% CO₂ in a 384-well plate (Greiner, Germany). Luciferase activity was measured using a ONE-Glo™ luciferase assay (Promega, USA) according to the manufacturer's instructions. The signals were measured by a luminescence plate reader (TriStar LB94, Berthold Technologies, Germany) (**Figure S1**). For the neutralization assay, 5 µl pseudovirus was mixed with equal volume of sera or monoclonal antibodies at the concentrations indicated in the figure. The mixture was added to 20 µl of 1×10^4 HEK293T-ACE2-transfectants. To calculate % neutralization, the relative luminescence units of the virus control wells (pseudovirus only) were subtracted from those of the sample wells, and the subtracted values were divided by those of the virus control wells. The PRNT50 neutralization titers for vaccinated sera were determined using 3-parameter nonlinear regression curve (GraphPad Prism). If the PRNT50 titer was less than 1:10, it was defined as 0.

Structure prediction by AlphaFold2

The NTD and RBD structures of the wild type and Delta variant were predicted by AlphaFold2 (Jumper et al., 2021). The structure of the NTD was predicted in CASP14 mode without template. The structure of the RBD was predicted in CASP14 mode, using the template of 2020-05-14. The highest ranked prediction results were used.

Cryo-EM data collection

A 2.5 µl protein solution of the spike protein (2.2 mg/ml) was applied onto the cryo-grid and frozen in liquid ethane using a Vitrobot IV (Thermo Fisher Scientific, USA, 4°C and 100% humidity). Quantifoil Au R0.6/1.0 holey carbon grids were used for the grid preparation. Data collection of the sample was carried out on a Titan Krios (Thermo Fisher Scientific, USA) equipped with a thermal field emission electron gun operated at 300 kV, an energy filter with a 20 eV slit width and a bioquantum K3 direct electron detection camera (Gatan, USA) (Figure S4). For automated data acquisition, SerialEM software was used to collect cryo-EM image data. Movie frames were recorded using the K3 camera at a calibrated magnification of $\times 81,000$ corresponding to a pixel size of 0.88 Å with a setting defocus range from -0.8 to -2.0 µm. The data were collected with a total exposure of 3 s fractionated into 62 frames, with a total dose of ~ 60 electrons Å² in counting mode. A total number of movies were collected; 15,000 for the spike protein.

Image processing and 3D reconstruction

All of image processes were carried out on cryoSPARC software (Punjani et al., 2017). After motion correction of movies and CTF parameter estimation, the particles were automatically picked using Topaz software (Bepler et al., 2019). The detailed information is summarized in Table S1. The picked particles were extracted into a box of 360×360 pixels. After particle extraction, the particles were applied to two rounds of heterogenous refinement with C1 symmetry. The

selected particles (735,623 particles) were applied to two rounds of *ab-initio* reconstruction into three classes with C1 symmetry. In the first and second rounds of *ab-initio* reconstruction, the class similarity parameter, 0.1 and 0.8, was used, respectively. After that, the selected 147,497 particles were further used as non-uniform refinement with optimizing per-particle defocus. As the result, the density map for the spike protein was obtained at 3.16 Å resolution. Local resolution of the obtained maps were estimated by Local resolution estimation job on cryoSPARC.

Model building and refinement

To generate the atomic model for the spike protein, the structure of NTD of Delta variant was predicted using AlphaFold2 (Jumper et al., 2021). For other domains, the model from previous study (PDBID; 7JJI) was used. These structures were fitted into the density map as rigid body using UCSF chimera (Pettersen et al., 2004). The initial model was extensively manually corrected residue by residue in COOT (Emsley et al., 2010) in terms of especially side-chain conformations. The corrected model was refined by the phenix.real_space_refine program (Liebschner et al., 2019) with secondary structure and Ramachandran restraints, then the resulting model was manually checked by COOT. This iterative process was performed for several rounds to correct remaining errors until the model was in good agreement with geometry, as reflected by the MolProbity score of 2.07 (Williams et al., 2018). For model validation against over-fitting, the built models were used for calculation of FSC curves against the final density map used for model building by phenix.refine program. The statistics of the obtained maps and the atomic model were summarized in Supplemental Table S1.

Data and statistical analysis

FlowJo version 10.7 (BD Biosciences, USA) was used to analyze the flow cytometry data, and Graphpad Prism version 7.0e was used for graph generation and statistical analysis.

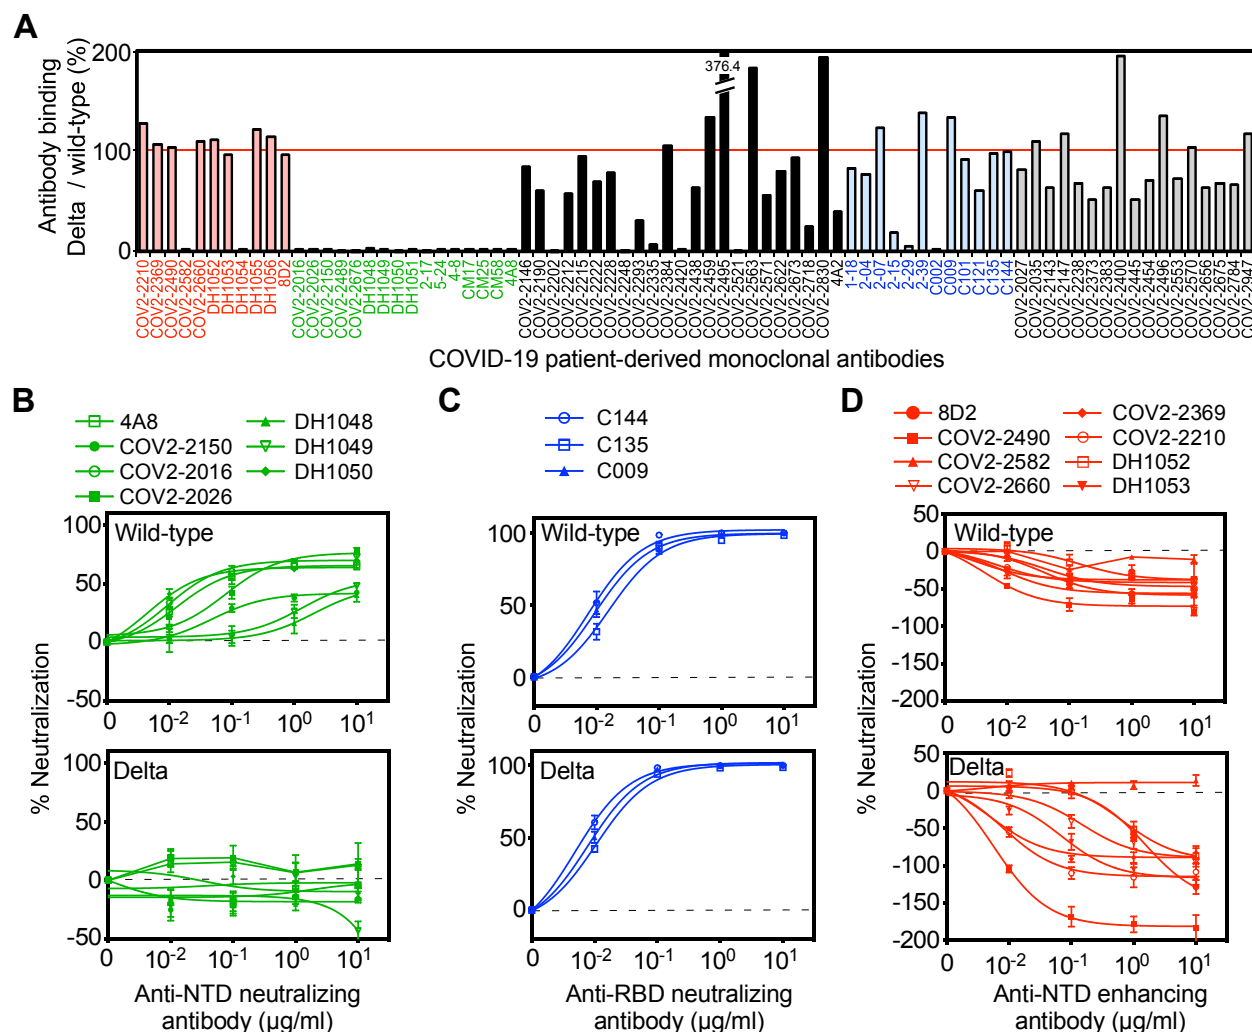

Figure 1. Neutralizing and enhancing effects against the wild-type and Delta spike pseudovirus by anti-spike monoclonal antibodies from COVID-19-patients.

(A) The HEK293 cells transfected with the wild-type or the Delta spike were stained with anti-NTD enhancing antibodies (red), anti-NTD neutralizing antibodies (green), anti-NTD non-enhancing, non-neutralizing antibodies (black), anti-RBD neutralizing antibodies (blue) and anti-S2 antibodies (gray) (1 μg/ml). The stained cells were analyzed by flow cytometer. The relative mean fluorescence intensities (MFI) of antibodies binding to the Delta spike were compared with that for the wild-type spike.

(B-D) The ACE2-expressing HEK293 cells were infected with the wild-type (upper) or the Delta (lower) pseudovirus in the presence of the anti-NTD neutralizing antibodies (B), anti-RBD neutralizing antibodies (C) and anti-NTD enhancing antibodies (D). A negative value for % neutralization indicates enhanced infectivity. The data from quadruplicates are presented as mean ± SEM. The representative data from three independent experiments are shown. See also Figure S1.

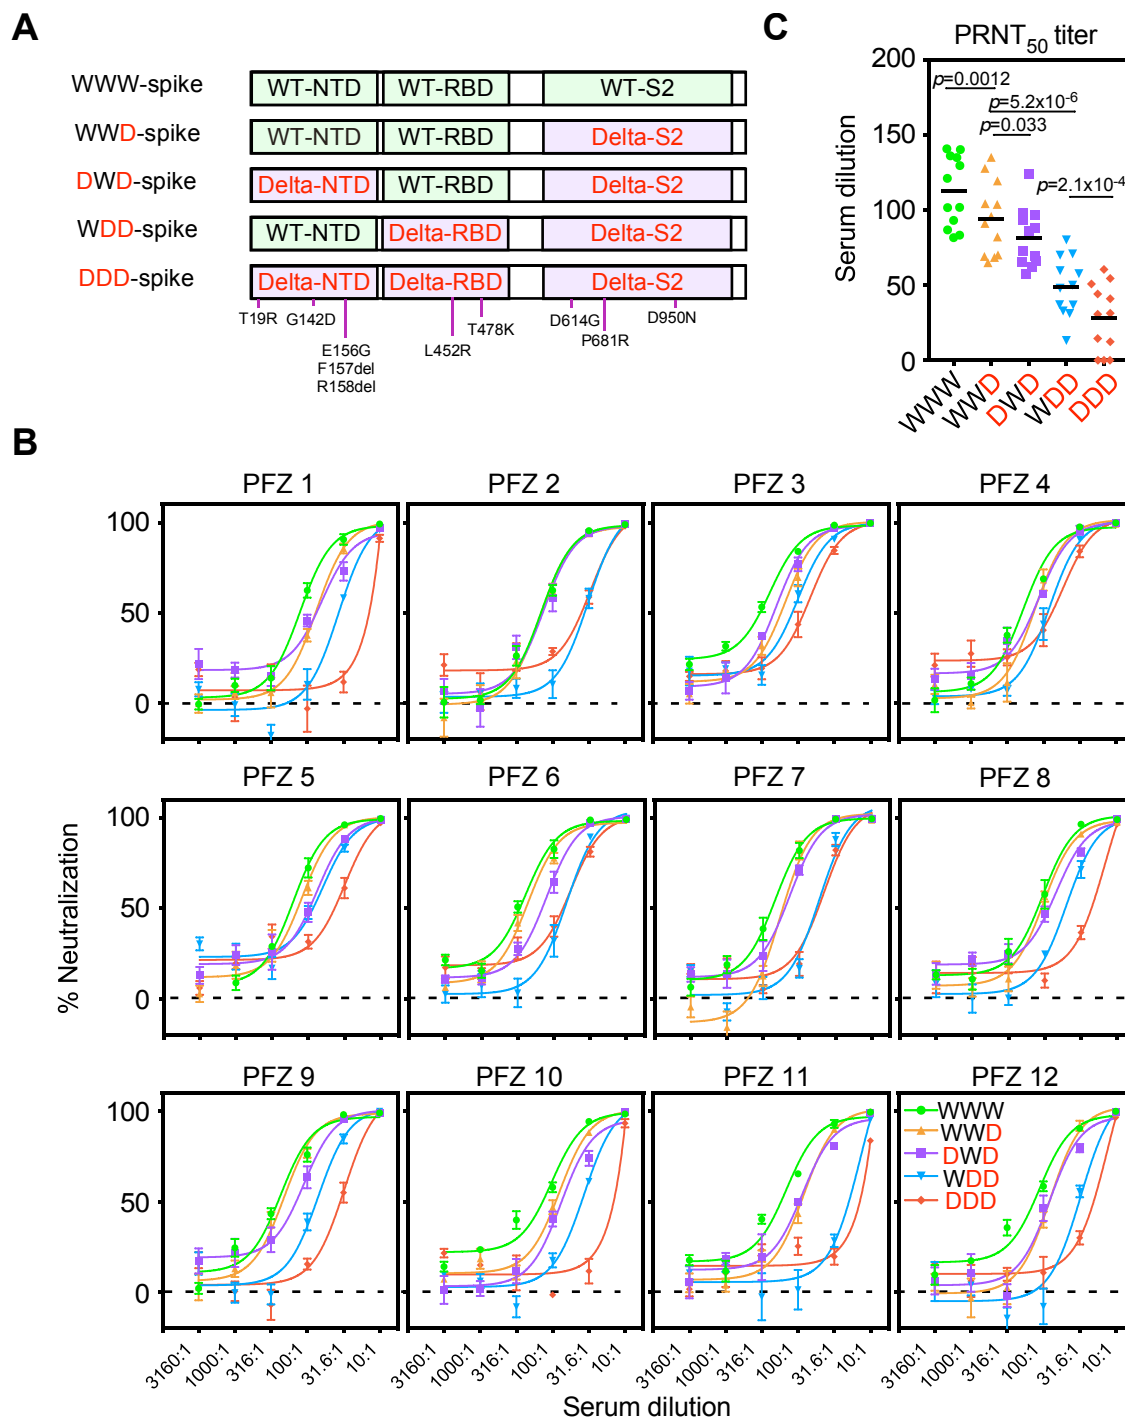

Figure 3. Neutralizing activity of BNT162b2-immune sera against the pseudovirus with chimeric spike protein of the wild-type and Delta variants.

(A) The chimeric spike proteins between the wild-type (W) and Delta variant (D). Mutations of the Delta spike are indicated.

(B) Neutralizing activity of BNT162b2-immune sera against the pseudoviruses with chimeric spike proteins. The data from quadruplicates are presented as mean \pm SEM.

(C) PRNT50 titers of BNT162b2-immune sera against the pseudoviruses with chimeric spike proteins. *p* values determined by paired t-test were indicated. The representative data from 2 independent experiments are shown. See also Figure S1 and S2.

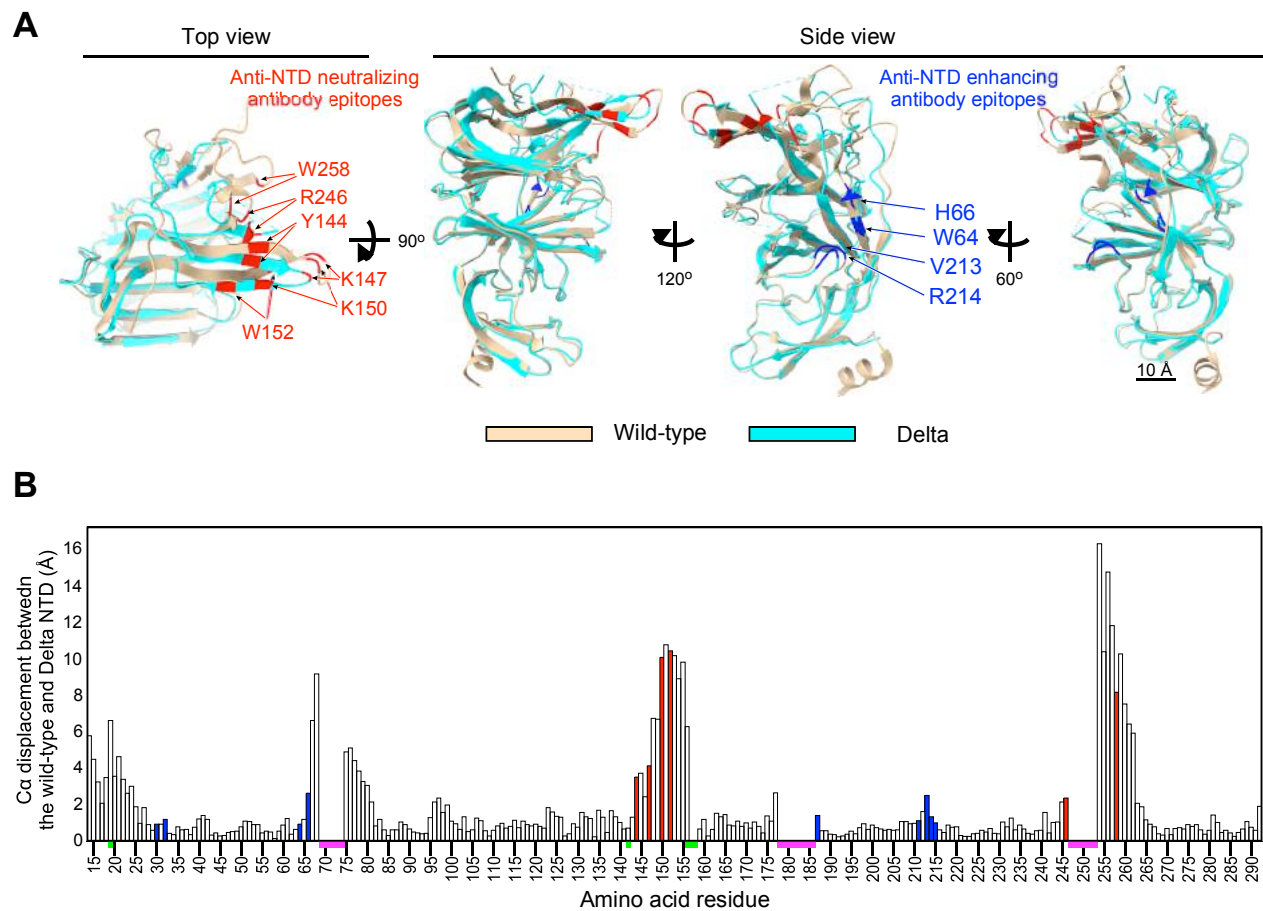

Figure 4. Cryo-EM analysis of the Delta NTD

(A) Structure of the Delta NTD (light blue) analyzed by the Cryo-EM were superimposed with the wild-type NTD (light brown, PDB: 7LY3). Major anti-NTD enhancing antibody epitopes (blue) and anti-NTD neutralizing antibody epitopes (red) were indicated in the figure.

(B) Cα displacement between the wild-type and the Delta NTD was shown. The value was calculated by UCSF chimera. All known anti-NTD enhancing antibody epitopes (blue) and anti-NTD neutralizing antibody epitopes (red) were indicated. The regions where structures of wild-type or Delta NTD were not determined (magenta), and mutations in the Delta NTD (green) are indicated on the axis. See also Figure S3 and Table S1.

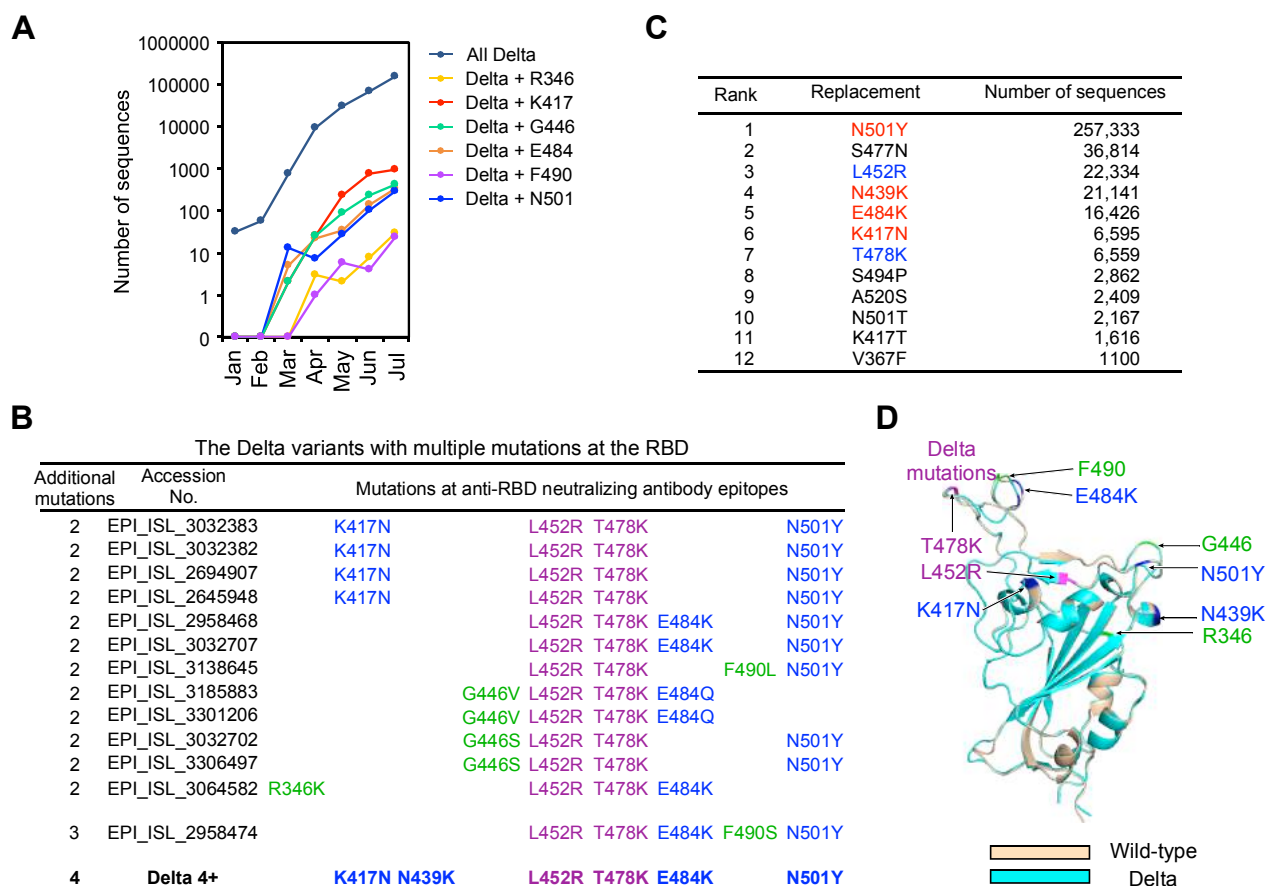

Figure 5. Possible mutations that may be acquired by the Delta variant

(A) Number of the Delta variants with additional mutations at the RBD registered in the GISAID database in each month from January, 2021 to July, 2021. The data registered at July are not enough and will be increased later.

(B) The Delta variants with additional mutations at multiple epitopes of the anti-RBD neutralizing antibodies. L452R and T478K mutations are observed in all the Delta variants (purple). Anti-RBD neutralizing antibody epitopes introduced into the Delta 4+ (blue), and anti-RBD neutralizing antibody epitopes observed in the natural Delta variants but not introduced into the Delta 4+ (green) are shown with the respective GISAID accession number.

(C) Number of the major RBD mutations acquired by all SARS-CoV-2 variants. L452R and T478K are mutations observed for the representative Delta variant (blue). N501Y, N439K, E484K and K417N were selected to generate the Delta 4+ variant (red).

(D) Location of additional mutations introduced into the Delta RBD. Structures of the RBD of the wild-type (light brown) and the Delta variant (light blue) predicted by AlphaFold2 were superimposed. Mutations of the Delta variant (purple), anti-RBD neutralizing antibody epitopes to generate the Delta 4+ (blue), and anti-RBD neutralizing antibody epitopes observed in the natural Delta variants but not introduced into the Delta 4+ (shown in C; green) are indicated in the figure. See also Figure S4.

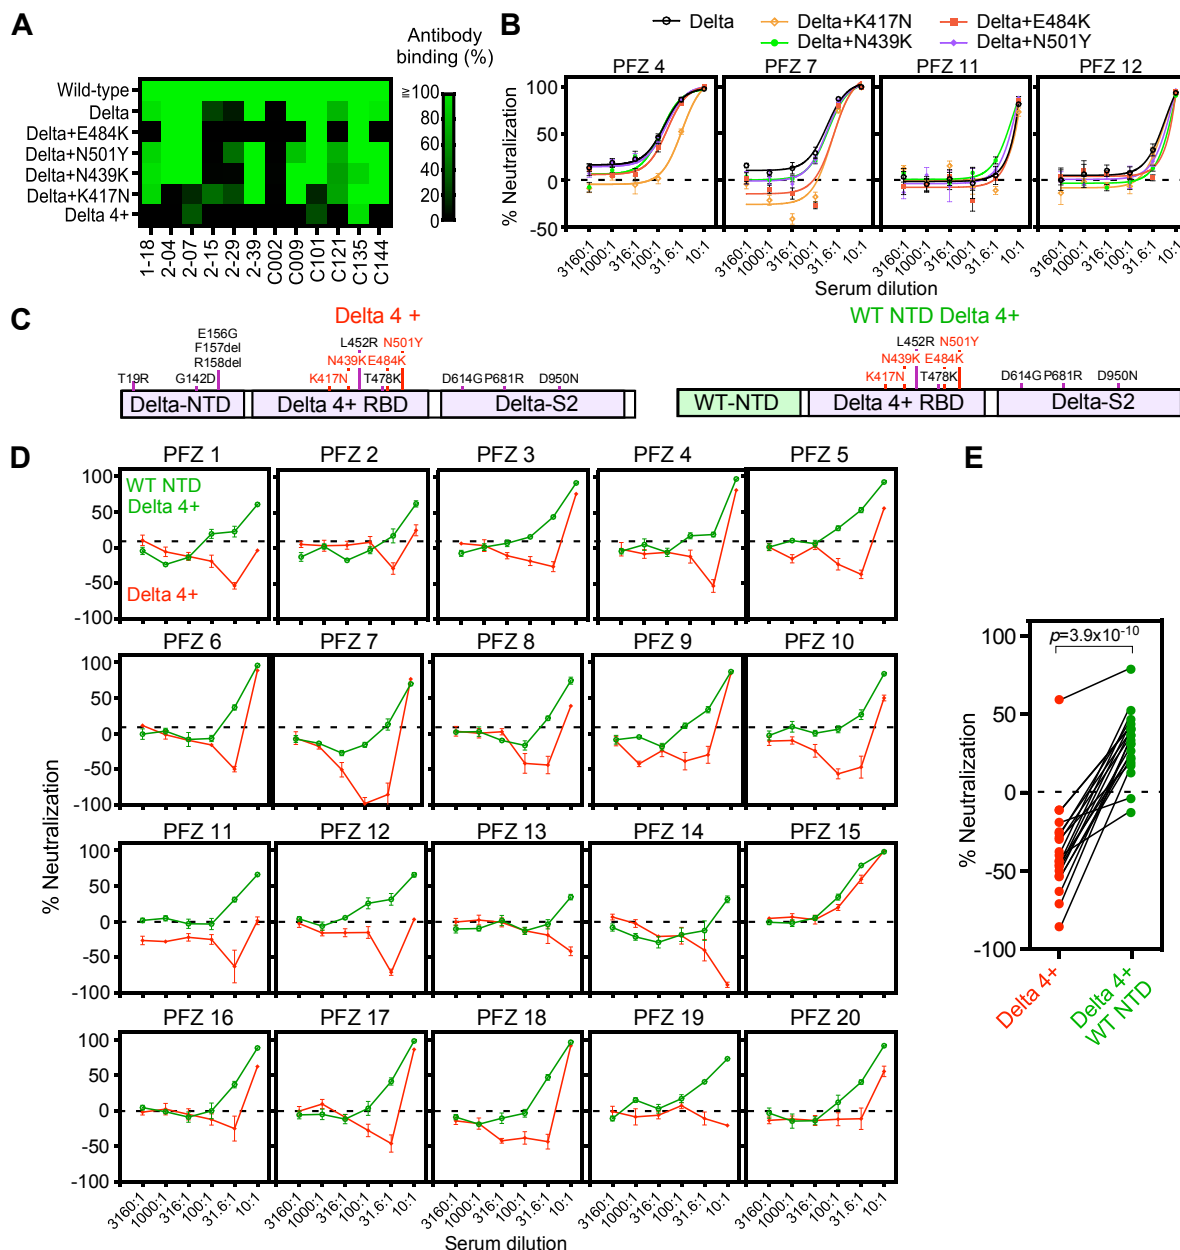

Figure 6. Enhanced infectivity of the Delta 4+ pseudovirus by the BNT162b2-immune sera

(A) Anti-RBD antibody binding to the Delta spike with additional mutations at the RBD. Anti-RBD mAb binding (1 μ g/ml) to the mutant spike was compared to that of the wild-type spike. The Delta 4+ spike contains additional mutations of K417N, N439K, E484K and N501Y.

(B) Neutralizing activity of BNT162b2-immune sera against the Delta pseudoviruses with a single additional mutation at the RBD as indicated in the figure. The data from quadruplicates are presented as mean \pm SEM.

(C) The construct of the Delta 4+ and Delta 4+ with wild-type (WT) NTD. Mutations in the original Delta variant (black) and the four mutations added to the Delta RBD (red) were shown.

(D) Neutralizing activity of BNT162b2-immune sera against the pseudovirus with Delta 4+ spike (red) and Delta 4+ spike with wild-type NTD (green).

(E) Neutralizing activity of 31.6 times diluted BNT162b2-immune sera. p value determined by paired t-test were indicated. Negative values for % neutralization indicates enhanced infectivity (B, D, E). The data from quadruplicates are presented as mean \pm SEM. The representative data from three independent experiments are shown.

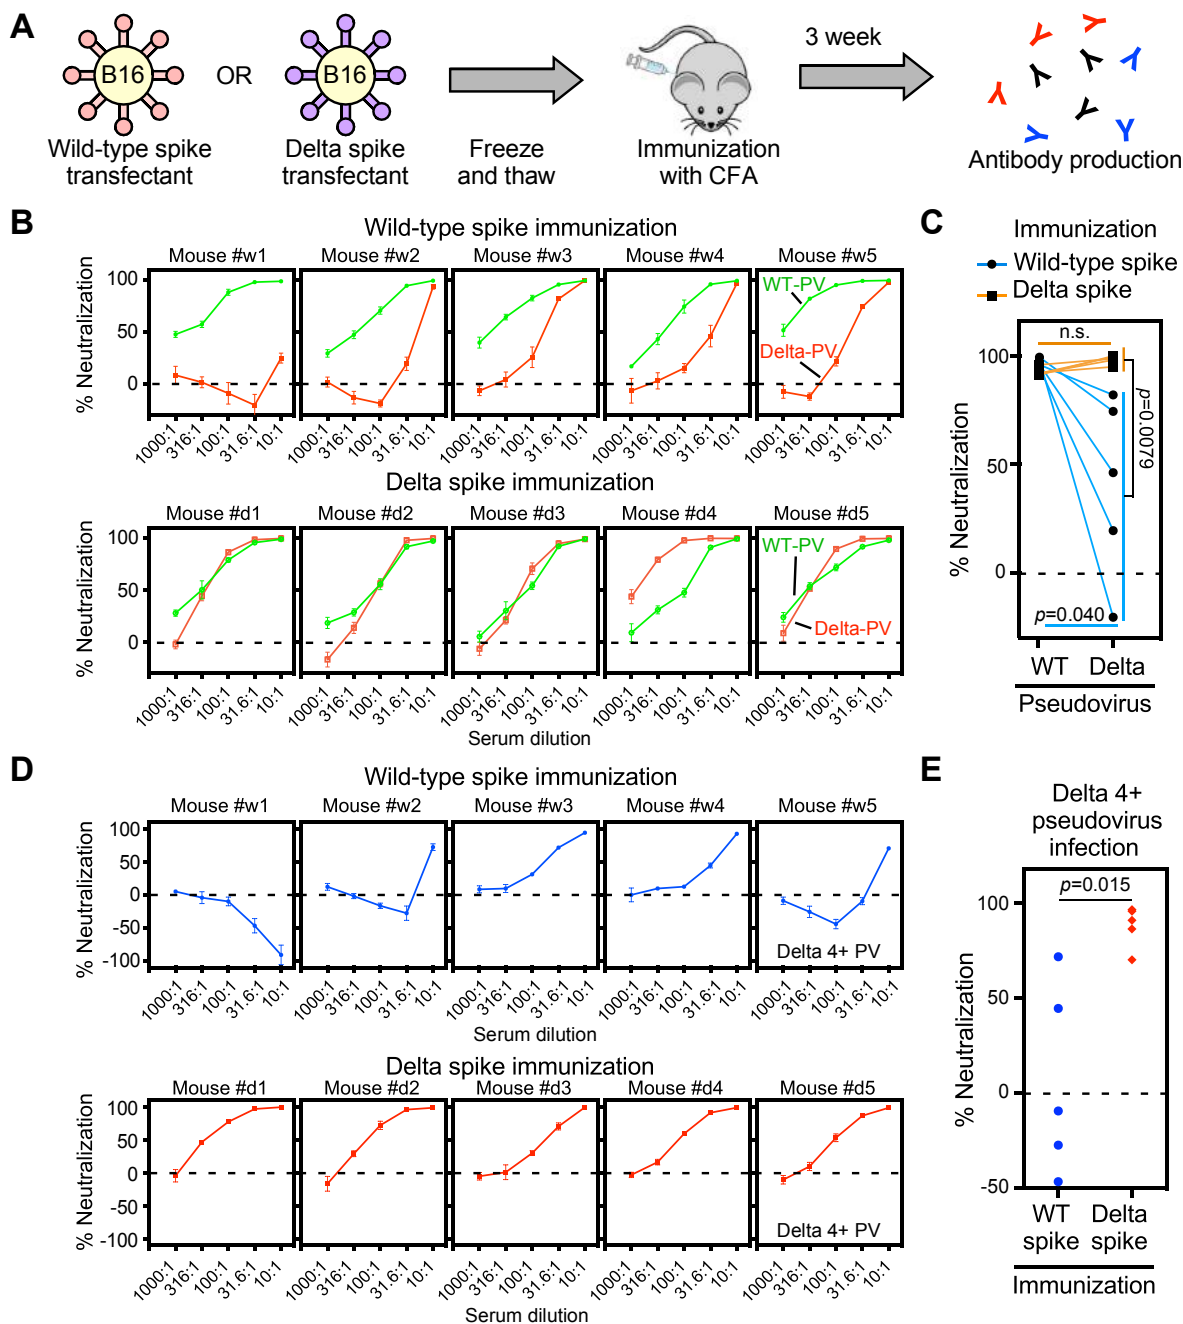

Figure 7. Sera from delta spike-immunized mice do not show enhanced infectivity

(A) Freeze and thawed wild-type and Delta spike-B16 transfectants were immunized to the mice with complete Freund's adjuvant (CFA).

(B) Neutralizing activity against the wild-type (green) or Delta (red) pseudovirus (PV) by sera from the wild-type spike (upper column) or Delta spike (lower column) spike-immunized mice.

(C) Neutralizing activity against the wild-type and Delta pseudovirus by 31.6 times-diluted sera from wild-type (light blue line) or Delta (orange line) spike-immunized mice.

(D) Neutralizing activity against the Delta 4+ pseudovirus by sera from the wild-type spike (upper column, blue) or Delta spike (lower column, red) immunized mice.

(E) Neutralizing activity against the Delta 4+ pseudovirus by the 31.6 times-diluted sera from the wild-type spike (blue) or Delta spike (red) immunized mice. n.s.: not statistical significance, p value was determined by t-test. A negative values for % neutralization indicates enhanced infectivity. All data from quadruplicates are presented as mean \pm SEM. See also Figure S1 and S5.

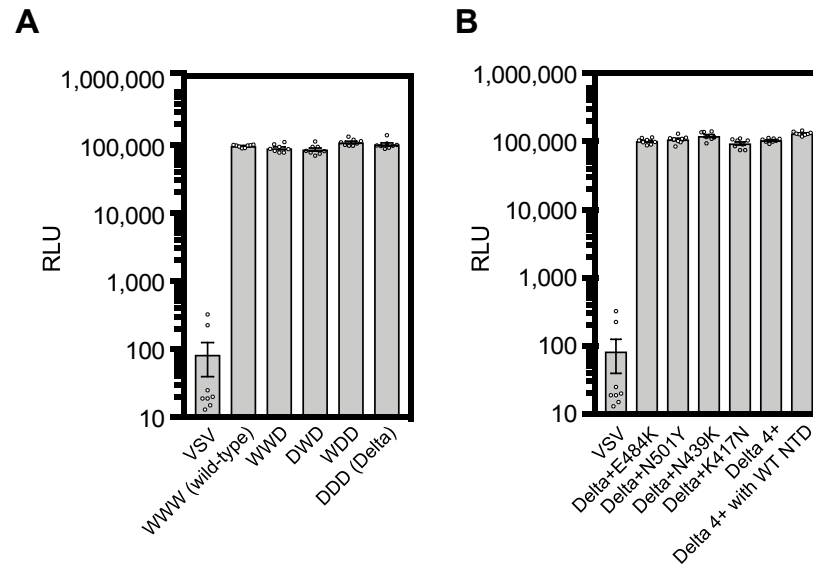

Figure S1. Viral titers of pseudotyped viruses, related to Figure 1, 2, 3, 6 and 7.

The viral titer for each pseudovirus was measured by infection of ACE2-transfected HEK293T cells as described in Methods.

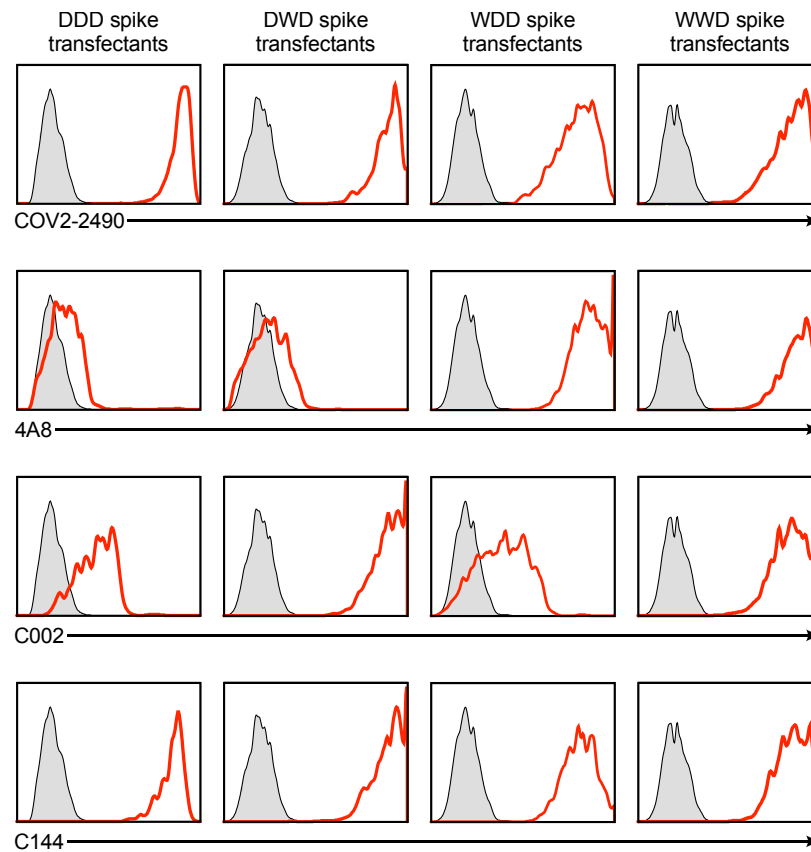

Figure S2 Anti-spike monoclonal antibody binding to the chimeric spike proteins, related to Figure 3.

Chimeric spike proteins DDD, DWD, WDD and WWD were transfected with GFP to HEK293T cells and the transfectants were stained with 1 μ g/ml COV2-2490, 4A8, C002, and C144 antibodies. Antibody bound to the GFP positive cells are shown (red histogram). Control staining: shaded histogram.

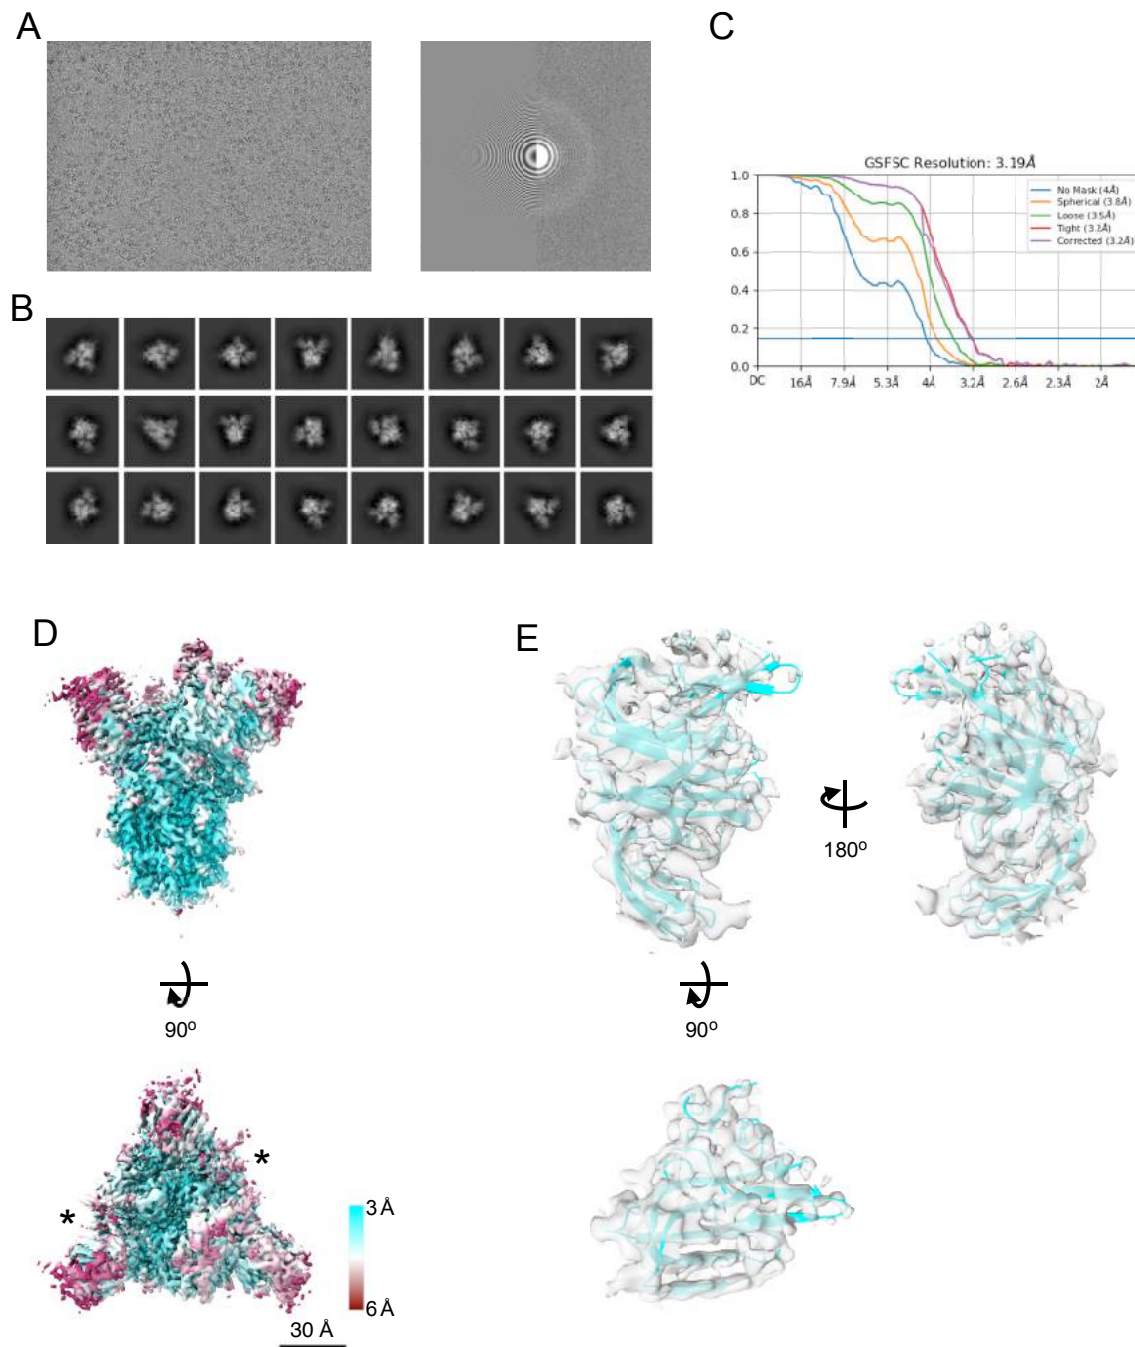

Figure S3. Cryo-EM density map of spike of SARS-CoV-2 Delta variant, related to Figure 4.

(A) A representative micrographs (left), CTF estimation of a micrograph on left panel (right).

(B) Typical 2D class averages.

(C) The GS-FSC curves for the obtained map from cryoSPARC software are shown. Blue flat line indicates FSC=0.143 criteria.

(D) The density map of spike protein from Delta strain (EMDBID: 31731). The map is colored with local resolution. Asterisks indicate the up form of RBDs. Scale bars are 30 Å.

(E) The structure of NTD from spike protein of Delta variant. The density map and the model are shown as semi-transparent surface and cartoon, respectively (PDBID: 7V5W).

Figure S4. RBD mutations acquired by the Delta variant, related to Figure 5.

Number of RBD mutations acquired by the Delta variant. The numbers of mutations at each residue registered in the GISAID database are shown. L452 and T478 mutations included in all the Delta variant were excluded. The red bars indicate the known epitopes for anti-RBD neutralizing antibodies.

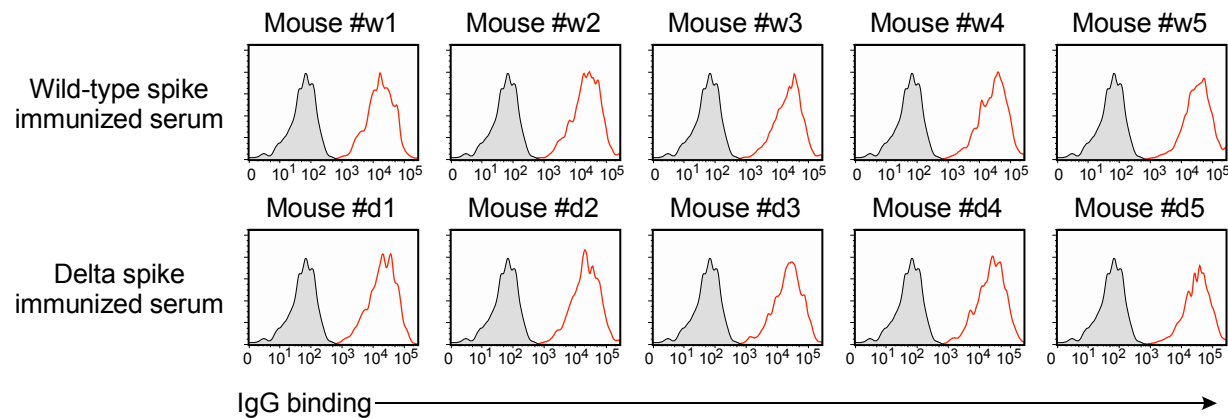

Figure S5 Anti-spike antibodies of the wild-type and delta spike-immunized mice, related to Figure 7.

IgG antibody binding of the 100 times diluted spike-immunized mouse sera to the wild-type spike transfectants were analyzed by flow cytometer. Red: IgG binding. Gray: Control staining.

Table S1. Cryo-EM data collection and processing statistics, related to Figure 4.

Data collection		
Sample	Spike protein of SARS-CoV2 Delta strain	
Micorscope	Titan Krios	
Acc. Voltage (kV)	300	
Total electron dose (e ⁻ /Å)	50	
Pixel size (Å)	0.88	
Defocus range (µm)	-0.8 – -2.0 (0.15)	
Magnification	81,000	
Corrected Cs (mm)	0.064	
Data processing		
Software	CryoSparc v3.2.0	
# of Micrographs	15,000	
# of particles	147,497

Citation: Classen B. US COVID-19 Vaccines Proven to Cause More Harm than Good Based on Pivotal Clinical Trial Data Analyzed Using the Proper Scientific Endpoint, “All Cause Severe Morbidity”. Trends Int Med. 2021; 1(1): 1-6.

ABSTRACT

Three COVID-19 vaccines in the US have been released for sale by the FDA under Emergency Use Authorization (EUA) based on a clinical trial design employing a surrogate primary endpoint for health, severe infections with COVID-19. This clinical trial design has been proven dangerously misleading. Many fields of medicine, oncology for example, have abandoned the use of disease specific endpoints for the primary endpoint of pivotal clinical trials (cancer deaths for example) and have adopted “all cause mortality or morbidity” as the proper scientific endpoint of a clinical trial. Pivotal clinical trial data from the 3 marketed COVID-19 vaccines was reanalyzed using “all cause severe morbidity”, a scientific measure of health, as the primary endpoint. “All cause severe morbidity” in the treatment group and control group was calculated by adding all severe events reported in the clinical trials. Severe events included both severe infections with COVID-19 and all other severe adverse events in the treatment arm and control arm respectively. This analysis gives reduction in severe COVID-19 infections the same weight as adverse events of equivalent severity. Results prove that none of the vaccines provide a health benefit and all pivotal trials show a statically significant increase in “all cause severe morbidity” in the vaccinated group compared to the placebo group. The Moderna immunized group suffered 3,042 more severe events than the control group ($p=0.00001$). The Pfizer data was grossly incomplete but data provided showed the vaccination group suffered 90 more severe events than the control group ($p=0.000014$), when only including “unsolicited” adverse events. The Janssen immunized group suffered 264 more severe events than the control group ($p=0.00001$). These findings contrast the manufacturers’ inappropriate surrogate endpoints: Janssen claims that their vaccine prevents 6 cases of severe COVID-19 requiring medical attention out of 19,630 immunized; Pfizer claims their vaccine prevents 8 cases of severe COVID-19 out of 21,720 immunized; Moderna claims its vaccine prevents 30 cases of severe COVID-19 out of 15,210 immunized. Based on this data it is all but a certainty that mass COVID-19 immunization is hurting the health of the population in general. Scientific principles dictate that the mass immunization with COVID-19 vaccines must be halted immediately because we face a looming vaccine induced public health catastrophe.

Keywords

Clinical trial, Vaccines, COVID-19.

Introduction

For decades, true scientists have warned that pivotal clinical trial designs for vaccines are dangerously flawed and outdated

[1]. Vaccines have been promoted and widely utilized under the false claim they have been shown to improve health. However, this claim is only a philosophical argument and not science based. In a true scientific fashion to show a health benefit one would need to show fewer overall deaths during an extended period in the vaccinated group compared to a control group. Less stringent

indicators of a health benefit would include fewer severe events of all kinds, fewer days hospitalized for any reason, lower health care expenses of all types, fewer missed days from work for any health reason. No pivotal clinical trial for a vaccine preventing an infectious disease has ever demonstrated an improvement in health using these scientific measurements of health as a primary endpoint. Instead, vaccine clinical trials have relied on misleading surrogate endpoints of health such as infection rates with a specific infectious agent. Manufacturers and government agents have made the scientifically disproved and dangerous philosophical argument that these surrogate endpoints equate to a health benefit.

True medical scientists, outside the vaccine fields, have embraced the use of true health measurements as the proven proper scientific endpoint of clinical trials. Decades ago, a pharmaceutical manufacturer would only need to show that a chemotherapeutic agent shrank a tumor or reduce cancer deaths to obtain FDA approval. Manufacturers would market their products under the fraudulent philosophical argument that shrinking tumors or reducing cancer deaths equates to improved survival. However, many of the toxic chemotherapeutic agents would destroy vital organs and actually reduce survival while decreasing cancer deaths at the same time. The FDA and comparable agencies around the world switched to “all cause mortality” as the primary endpoint for pivotal cancer drug trials. The gold standard for marketing approval is to show that those receiving a cancer drug actually live longer than those who do not. Typically, new “miracle” anticancer drugs only prolong survival about 2 months but this added time may be spent severely ill suffering from adverse events caused by the chemotherapy. Application of true scientific principles often severely deflates the hype promoting pharmaceutical products.

All previous vaccine trials have suffered not only from lacking a proper primary clinical endpoint but also from insufficient perspective follow up of adverse events. The trials have failed to account for the well-established toxicity data and epidemiology data that vaccines are associated with chronic immune mediated disorders that may not develop for years after immunization. These adverse events, for example type 1 diabetes, are quite common, develop 3 or more years after immunization, and can exceed the reduction in infectious complications induced by the vaccine as was shown with a hemophilus vaccine [1]. Pivotal trials for the recombinant hepatitis B vaccine prospectively recorded adverse events for about 7 days after immunization and newer vaccines typically prospectively follow patients 6 months for adverse events.

Use of “all cause morbidity or mortality” as the primary endpoint is warranted in vaccine trials for several reasons. First, the recipients are generally healthy (relative to patients with terminal cancer for example) and the risk of severe morbidity from the target infection is low so even rare adverse events can result in an unfavorable risk benefit. Second, stimulating the immune system with a vaccine can lead to almost any type of adverse event including increasing the incidence or severity of diseases already present in the population. One needs a trial design with a primary endpoint that captures both a decline in infectious complications as well as small rises in hundreds of different immune modified disorders of similar or worse severity as the infectious complications.

Three COVID-19 vaccines are approved by the US FDA under Emergency Use Authorization (EUA). These vaccines have been developed by Pfizer-BioNTech, Moderna, and Janssen. Since marketing has begun multiple reports of potential, adverse events have been recorded. These reports include prion disease [2,3], clotting disorders [4], myocarditis, reproductive issues, death and many more. A clear difference in frequency of adverse events between different COVID-19 vaccines has been published [3]. The clinical trial designs of the pivotal trials and the resulting data was evaluated to determine if scientifically the results support mass immunization with the vaccines for COVID-19. The published data from the manufacturers’ own clinical trials was re analyzed using the proper scientific endpoint “all cause severe morbidity”.

Method

Data from all three US COVID-19 vaccines was published in the New England Journal of Medicine [4-6]. Data from these three publications and the accompanying published appendixes provided the bulk of the information analyzed. On rare occasions supplemental data was found on the FDA’s website (<https://www.fda.gov/advisory-committees/advisory-committee-calendar>) in briefing documents pertaining to FDA advisory panel committees for COVID-19 vaccines from Pfizer-BioNTech, Moderna, and Janssen. The scientific primary endpoint, “all severe events”, in the treatment group and controls was calculated by adding all severe or life threatening events reported in the clinical trials by the manufacturers. Severe events included both severe cases of COVID-19 and all other severe events in the treatment arm and control arm respectively.

A Chi square analysis using a 2x2 table was used to calculate statistical p values. An online statistical chi square calculator (<https://www.socscistatistics.com/tests/chisquare>) was used. Statistical calculations ignored small differences in total subject number between efficacy and adverse event populations. The randomized number, shown in Table 1, was used as the study population for statistical calculations. In general, the population for adverse events was slightly higher than that for efficacy. Given the statistical significant p, values generated (see Table 1), these small differences do not appear to be material.

The FDA document entitled Guidance for Industry Toxicity Grading Scale for Healthy Adult and Adolescent Volunteers Enrolled in Preventive Vaccine Clinical Trials, 2007, provided the following definitions for adverse events.

Grades 3, Severe: Prevents daily activity and requires medical intervention.

Grades 4, Potentially life threatening: ER visit or hospitalization.

Results

Moderna

The Moderna pivotal Phase III trial results and protocol are published in the New England Journal of Medicine (NEJM) [5]. The primary endpoint was COVID-19 illness starting 14 days after the second dose of vaccine however the trial had a secondary endpoint

which was patients developing severe COVID-19 symptoms. This later endpoint allowed for a direct comparison to severe adverse events. The study randomized 30,420 individuals, 15,210 were randomized to receive injections with Moderna's mRNA-1273 vaccine and 15,210 were randomized to receive injections with placebo. Two shots were administered 28 days apart. "Solicited" adverse events were collected 7 days after immunization and "unsolicited" adverse events were reported up to 28 days after administration of each vaccine or approximately 56 days after the first dose according to protocol. Because of dropouts, adverse events were recorded on 15,185 vaccinated patients and 15,166 placebo patients (reference 5, appendix table S8). The treatment group had 11 cases of symptomatic COVID-19 infections and 0 cases severe COVID-19 infections (reference 5, appendix table S13). There were 234 cases of severe "unsolicited" adverse events in the treatment group (reference 5, appendix table S8), and an additional 3,751 "solicited" severe or life threatening (Grade 3 or Grade 4) adverse events (reference 5, appendix table S3 and S4). By contrast, the control group had 185 cases of symptomatic COVID-19 infections and 30 cases of severe COVID-19 infections. However, only one of these case of COVID-19 out of 15,166 controls required admission to an intensive care unit (see reference 5, appendix table S13). There were 202 cases of severe "unsolicited" adverse events in the placebo group and an additional 711 "solicited" severe or life threatening (Grade 3 or Grade 4) adverse events. There were 3 deaths in the placebo group and 2 in the vaccinated group (reference 5, appendix table S8).

Pfizer-BioNTech

The Pfizer-BioNTech (Pfizer) pivotal Phase III trial results are published in the New England Journal of Medicine [6]. The Pfizer trial was classified as a Phase 1/2/3 trial. Two shots were administered 21 days apart. The primary endpoint was confirmed COVID-19 infections 7 days after the second dose. A post hoc analysis of severe COVID-19 infections was included in the appendix published by the NEJM. The study randomized 43,548 individuals of which 100 did not receive injections, 21,720 received injections with the vaccine and 21,728 received injections with placebo. "Solicited" adverse events were collected 7 days after immunization and "unsolicited" severe adverse events were reported up to 14 weeks after administration of the second dose. However, median safety follow up for "unsolicited" events was only approximately 2 months after the second dose at the time of publication in the NEJM. In the treatment arm there was 1 case of severe Covid-19 (reference 6, appendix table S5), 240 "unsolicited" severe adverse events and 21 "unsolicited" life threatening adverse events (reference 6, appendix table S3). In the placebo arm, there were 9 cases of severe COVID-19, 139 "unsolicited" severe adverse events and 24 "unsolicited" life threatening adverse events. Pfizer used a safety subset of approximately 8,183 (both vaccinated and unvaccinated) to record "solicited" adverse events at 7 days. These data that are not shown in Table 1 in part because the data was depicted graphically in the NEJM manuscript. However, graphical data in the NEJM strongly

Table 1: All Cause Severe Morbidity

	Moderna		Control		Difference	P value
Randomized	15,210		15,210			
Days of Safety Follow Up	56		56			
# Severe COVID-19 Cases	0		30			
# Unsolicited Severe Adverse Events	234		202			
# Solicited Grade 3 AE, Shot 1	848		361			
# Solicited Grade 4 AE, Shot 1	5		6			
# Solicited Grade 3 AE, Shot 2	2884		341			
# Solicited Grade 4 AE, Shot 2	14		3			
# Total Severe Events	3985		943		3042	p=0.00001
#Deaths	2		3			
	Pfizer		Control		Difference	P value
Randomized	21,720		21,728			
Days of Safety Follow Up	81		81			
# Severe COVID-19 Cases	1		9			
# Unsolicited Severe Adverse Events	240		139			
# Unsolicited Life Threatening Adverse Events	21		24			
# Total Severe Events	262		172		90	p=0.000014
#Deaths	2		4			
	Jansen	Jansen	Control	Control	Difference	P value
Randomized	19,630		19,691			
Safety Subset		3,356		3,386		
Days of Safety Follow Up	28		28			
# Severe COVID-19 Cases	21		78			
# Solicited Grade 3 Adverse Events						
Local (extrapolated)	135	23	35	6		
Systemic (extrapolated)	357	61	122	21		
# Unsolicited Grade 3-4 Adverse Events	83		96			
# Total Severe Events	595		331		264	p=0.00001
# Deaths	3		16			

indicates the vaccinated group has more “solicited” adverse events of all grade levels than the control group.

Janssen

The Janssen pivotal Phase III trial design and trial results are published in the New England Journal of Medicine [4]. The primary endpoint was prevention of molecularly confirmed, moderate to severe–critical COVID-19 14 days post vaccination however a secondary endpoint was prevention of molecularly confirmed, severe–critical COVID-19 14 days post vaccination. This later endpoint allowed for a direct comparison to severe adverse events. The study randomized 19,630 to receive a single injection with Janssen’s adenovirus COVID-19 vaccine and randomized 19,691 to receive a single injection with placebo. “Solicited” adverse events were collected 7 days after immunization and “unsolicited” adverse events were reported up to 28 days after administration of the single dose of vaccine. The treatment group had 21 cases of severe or critical COVID-19 infections while the placebo control group had 78 (reference 4, appendix table S9). Further analysis shows that only 2 of 19,514 immunized patients needed medical intervention for COVID-19 infections starting 14 days after immunization, while only 8 of 19,544 controls needed medical intervention for COVID-19 infections starting 14 days after placebo injection where the COVID-19 infection was confirmed by a central lab (reference 4, appendix table S10). There were 83 “unsolicited” and approximately 492 “solicited” serious adverse events in the vaccinated group compared to 96 “unsolicited” and approximately 157 “solicited” serious adverse events in the control group (reference 4, appendix table S7). There were 3 deaths in the treatment group and 16 in the control group (reference 4, appendix table S7).

Janssen did not collect “solicited” adverse events from the whole group at day 7 but instead collected these adverse events from a safety group comprising 3,356 vaccinated and 3,380 control patients. FDA briefing document Table 23, page 39 [7] provided the number of “solicited” Grade 3 adverse events in each group. These figures as well as the number of patients randomized were used to extrapolate the number of solicited severe adverse events in the full vaccinated and placebo group as recorded in Table 1.

Discussion

Scientific analysis of the data from pivotal clinical trials for US COVID-19 vaccines indicates the vaccines fail to show any health benefit and in fact, all the vaccines cause a decline in health in the immunized groups. Health is the sum of all medical events or lack thereof. COVID-19 vaccines are promoted as improving health while in fact there is no evidence that these vaccines actually improve health in the individual or population as a whole. The current analysis used the proper scientific endpoint of “all cause severe morbidity”, a true measure of health. By contrast, manufacturers and government officials promote the vaccines using a surrogate measure of health, severe infections with COVID-19, and the disproved philosophical argument that this surrogate endpoint equates to health. This substitution of philosophy for science is extremely dangerous and is certainly leading to a catastrophic public health event.

Review of data from the three COVID-19 vaccines marketed in the US shows complete lack of a health benefit and even an increase in severe events among vaccine recipients. The proper scientific clinical trial endpoint, “all cause severe morbidity” was created by combining all severe and or life threatening events, both infectious and non-infectious, occurring in the vaccinated and placebo control groups respectively. The data (Table 1) shows there are clearly more severe events in the vaccinated groups. The results are highly statistically significant. The use of a true scientific measure of health as an endpoint for a vaccine trial gives a contrasting result compared to the use of a non-scientific surrogate endpoint of health, severe infections with COVID-19.

Clinical trial data show there were actually few very “severe” cases of COVID-19 in either the vaccinated or the placebo group. Moderna data shows that only one of 15,166 unvaccinated patients required admission to an intensive care unit for COVID-19. Data provided by Janssen shows that only a few of the “severe” COVID-19 infections required medical intervention. Table S10 in the appendix published in the New England Journal of Medicine [4], shows only 2 of 19,514 patients immunized with the Janssen vaccine needed medical intervention for severe COVID-19 infections starting 14 days after immunization, while only 8 of 19,544 controls needed medical intervention for severe COVID-19 infections starting 14 days after placebo, where the infection was confirmed by a central lab. This benefit, reduction in 6 cases of COVID-19 requiring medical intervention, in 19,630 vaccinated patients is simply statistically insignificant in a population that has a hundred fold more severe events of any cause. The Janssen vaccinated group had 595 severe Grade 3 or 4 events in the first 28 days post immunization. Science thus does not support a health benefit with COVID-19 vaccines. All arguments for immunization are purely philosophical and based on false, discredited, assumptions.

Reductions in infection rates, hospitalization rates and even death with COVID-19 are poor surrogate markers for health and are not proper primary endpoints for a vaccine clinical trial. As discussed earlier with cancer treatments, a trial endpoint showing reduced cancer deaths is not equivalent to enhanced survival. One could apply enough radiation (or cytotoxic chemotherapy) to cancer patients to kill all their cancer cells and prevent cancer deaths but these cancer patients would die of radiation sickness (or chemotherapy induced organ failure) faster than if they died naturally of cancer. In the same manner, reducing severe COVID-19 infections does not equate to enhanced survival especially when the vaccine can cause clotting, heart disease and many other severe adverse events. Potential vaccine recipients need to know if the vaccine improves their survival in order for them to make an informed consent to be immunized. Unfortunately, the current studies with COVID-19 vaccines in fact show they cause a decline in health.

The actual health decline caused by the vaccines is probably much worse than what is depicted in Table 1 for many reasons. First manufacturers took a haphazardly approach to recording adverse events in contrast to recording a reduction in COVID-19 events. At

the time of publication, patients were only followed prospectively for approximately 7 days after immunization for “solicited” adverse events, and then relied on “unsolicited” reports of adverse events for approximately 30-60 days after immunization. Serious non-infectious events occurring after this 30-60 day period were not part of the published data. By contrast, infections with COVID-19 were followed indefinitely since the time of immunization. Both Janssen and Pfizer were specifically lax recording adverse events and only recorded “solicited” adverse events at day 7 in a safety cohort representing less than 20% of the study population. Given that some of the vaccine clinical trials recruited patients in the third world, patients with low education, and potentially even elderly with dementia the patients can not be expected to understand when they may be having an serious event that needs reporting or how to report it. For these and others reason only 5% of adverse events are generally ever reported [8].

COVID-19 vaccines were released for marketing under a EUA. Use of such a protocol should be reserved for outbreaks of life threatening epidemics. If this were, actually the case with COVID-19 then reduction in “all cause mortality” should be the primary outcome for the vaccine trials and “all cause severe morbidity” should be the secondary endpoint. However, the manufacturers show no evidence of a survival benefit. Deaths in the trials were extremely rare and of 30 deaths, out of roughly 110,000 trial participants, only about 6 deaths were confirmed to have COVID-19 at the time of death. Regrettably, the vaccines did not reduce morbidity but caused an increase in severe events. Worse, the pivotal clinical trials were never designed to show a benefit in “all-cause mortality” or reduction “in all cause severe morbidity”. The fact that the trials were never designed to show these health benefits is an admission that those developing the vaccines never expected the vaccines to result in measurable health benefits. Regrettably some manufacturers have published the false claim [6] that the vaccine have been proven to be “effective” and that its now “unethical” to withhold immunization from the control group. They advocate abolishing the control group by immunizing them. This unscientific act only further proves the pharmaceutical industry is unaccountable to any one and does not feel the need to adhere to principles of science, ethics, or public health.

The COVID-19 vaccine pivotal clinical trials were of very short duration and the question exists whether longer-term follow up will reverse the vaccine induced health decline and show a health benefit. The question is purely philosophical. Some manufactures have already threatened to destroy the randomization by immunizing the control group, as stated above, making further scientific study impossible. While it is possible that the vaccines will continue to prevent severe infectious disease long after the immunization, the reality is that immunity wanes with time and vaccine resistant variants keep developing. Another issue is that severe adverse events will continue to occur over time. Given evidence of prion genic activity by both established pathophysiology [2], animal toxicity data [9] and epidemiology data [3] one can expect an increase in adverse events in the vaccinated group for decades.

Yearly booster are unlikely to improve the health outcome with

COVID-19 vaccines. A booster may provide a small incremental benefit in preventing severe COVID-19 infections however, the boosters are likely to cause many more severe adverse events. Looking at the data on secondary injections with the Moderna vaccine (Table 1) there are approximately 3 times as many Grade 3 or 4 adverse events after the second dose than after the first dose. However, this is not the case following the second dose of placebo in the Moderna placebo group. The net is that adding a booster shot is highly unlikely to induce a favorable health benefit that was missing with the first series of immunization.

Government officials are promoting COVID-19 vaccines as a way to stop the epidemic. There is however no scientific data that the COVID-19 vaccines can improve the health of the population. In fact, the data from the clinical trials seems to point in the opposite direction. Given that the population is the sum of the individuals, and the vaccines cause a decline in health in the individuals, then mass immunization is likely to erode the health of the general population, not improve it. Immunization may even cause a selection bias for new variants. Finally, if the COVID-19 outbreak is the result of a bioweapons attack and vaccine resistant variants represent the release of different prototypes then immunization is almost certain to fail [10].

There is an old saying, fool me once shame on you, fool me twice shame on me. This saying can be applied to the COVID-19 mass immunization program. The US anthrax attack of 2001, which originated at US army is Fort Detrick, has demonstrated that there are people in the US government who desire to attack US citizens with bioweapons [10]. According to the chief FBI agent leading the investigation of the US anthrax attack, conspirators were likely not apprehended in part because the investigation was prematurely ended and prior to stopping the investigation, people at the top of the FBI deliberately tried to sabotage the investigation [11]. In the US anthrax attack of 2001, people high in the US government publicly anticipated the anthrax attack as early as 1999 [10]. Similarly with the COVID-19 attack, people high in government anticipated the COVID-19 attack [12,13] several years before the attack took place [10]. There is even data that an effort was made in 2018 to protect certain populations against COVID-19 by immunizing them with MMR vaccine [14].

In such a hostile government environment, the citizens need to individually evaluate the science of immunization with COVID-19 vaccines and not rely on philosophical arguments propagated by government officials. In this case there is no scientific evidence that the COVID-19 vaccines improve the health of the individual, much less of the population as a whole. Mass immunization with COVID-19 vaccines is certainly leading to a catastrophic public health event.

Community transmission and viral load kinetics of the SARS-CoV-2 delta (B.1.617.2) variant in vaccinated and unvaccinated individuals in the UK: a prospective, longitudinal, cohort study

Anika Singanayagam*, Seran Hakki*, Jake Dunning*, Kieran J Madon, Michael A Crone, Aleksandra Koycheva, Nieves Derqui-Fernandez, Jack L Barnett, Michael G Whitfield, Robert Varro, Andre Charlett, Rhia Kundu, Joe Fenn, Jessica Cutajar, Valerie Quinn, Emily Conibear, Wendy Barclay, Paul S Freemont, Graham P Taylor, Shazaad Ahmad, Maria Zambon, Neil M Ferguson†, Ajit Lalvani†, on behalf of the ATACCC Study Investigators‡

Summary

Background The SARS-CoV-2 delta (B.1.617.2) variant is highly transmissible and spreading globally, including in populations with high vaccination rates. We aimed to investigate transmission and viral load kinetics in vaccinated and unvaccinated individuals with mild delta variant infection in the community.

Methods Between Sept 13, 2020, and Sept 15, 2021, 602 community contacts (identified via the UK contract-tracing system) of 471 UK COVID-19 index cases were recruited to the Assessment of Transmission and Contagiousness of COVID-19 in Contacts cohort study and contributed 8145 upper respiratory tract samples from daily sampling for up to 20 days. Household and non-household exposed contacts aged 5 years or older were eligible for recruitment if they could provide informed consent and agree to self-swabbing of the upper respiratory tract. We analysed transmission risk by vaccination status for 231 contacts exposed to 162 epidemiologically linked delta variant-infected index cases. We compared viral load trajectories from fully vaccinated individuals with delta infection (n=29) with unvaccinated individuals with delta (n=16), alpha (B.1.1.7; n=39), and pre-alpha (n=49) infections. Primary outcomes for the epidemiological analysis were to assess the secondary attack rate (SAR) in household contacts stratified by contact vaccination status and the index cases' vaccination status. Primary outcomes for the viral load kinetics analysis were to detect differences in the peak viral load, viral growth rate, and viral decline rate between participants according to SARS-CoV-2 variant and vaccination status.

Findings The SAR in household contacts exposed to the delta variant was 25% (95% CI 18–33) for fully vaccinated individuals compared with 38% (24–53) in unvaccinated individuals. The median time between second vaccine dose and study recruitment in fully vaccinated contacts was longer for infected individuals (median 101 days [IQR 74–120]) than for uninfected individuals (64 days [32–97], $p=0.001$). SAR among household contacts exposed to fully vaccinated index cases was similar to household contacts exposed to unvaccinated index cases (25% [95% CI 15–35] for vaccinated vs 23% [15–31] for unvaccinated). 12 (39%) of 31 infections in fully vaccinated household contacts arose from fully vaccinated epidemiologically linked index cases, further confirmed by genomic and virological analysis in three index case–contact pairs. Although peak viral load did not differ by vaccination status or variant type, it increased modestly with age (difference of 0.39 [95% credible interval –0.03 to 0.79] in peak \log_{10} viral load per mL between those aged 10 years and 50 years). Fully vaccinated individuals with delta variant infection had a faster (posterior probability >0.84) mean rate of viral load decline (0.95 \log_{10} copies per mL per day) than did unvaccinated individuals with pre-alpha (0.69), alpha (0.82), or delta (0.79) variant infections. Within individuals, faster viral load growth was correlated with higher peak viral load (correlation 0.42 [95% credible interval 0.13 to 0.65]) and slower decline (–0.44 [–0.67 to –0.18]).

Interpretation Vaccination reduces the risk of delta variant infection and accelerates viral clearance. Nonetheless, fully vaccinated individuals with breakthrough infections have peak viral load similar to unvaccinated cases and can efficiently transmit infection in household settings, including to fully vaccinated contacts. Host–virus interactions early in infection may shape the entire viral trajectory.

Research in context

Evidence before this study

The SARS-CoV-2 delta variant is spreading globally, including in populations with high vaccination coverage. While vaccination remains highly effective at attenuating disease severity and preventing death, vaccine effectiveness against infection is reduced for delta. Determining the extent of transmission from vaccinated delta-infected individuals to their vaccinated contacts is a public health priority. Comparing the upper respiratory tract (URT) viral load kinetics of delta infections with those of other variants gives insight into potential mechanisms for its increased transmissibility. We searched PubMed and medRxiv for articles published between database inception and Sept 20, 2021, using search terms describing "SARS-CoV-2, delta variant, viral load, and transmission".

Two studies longitudinally sampled the URT in vaccinated and unvaccinated delta variant-infected individuals to compare viral load kinetics. In a retrospective study of a cohort of hospitalised patients in Singapore, more rapid viral load decline was found in vaccinated individuals than unvaccinated cases. However, the unvaccinated cases in this study had moderate-to-severe infection, which is known to be associated with prolonged shedding. The second study longitudinally sampled professional USA sports players. Again, clearance of delta viral RNA in vaccinated cases was faster than in unvaccinated cases, but only 8% of unvaccinated cases had delta variant infection, complicating interpretation. Lastly, a report of a single-source nosocomial outbreak of a distinct delta sub-lineage in Vietnamese health-care workers plotted viral load kinetics (without comparison with unvaccinated delta infections) and demonstrated transmission between fully vaccinated health-care workers in the nosocomial setting. The findings might therefore not be generalisable beyond the particular setting and distinct viral sub-lineage investigated.

Added value of this study

The majority of SARS-CoV-2 transmission occurs in households, but transmission between fully vaccinated individuals in this

setting has not been shown to date. To ascertain secondary transmission with high sensitivity, we longitudinally followed index cases and their contacts (regardless of symptoms) in the community early after exposure to the delta variant of SARS-CoV-2, performing daily quantitative RT-PCR on URT samples for 14–20 days. We found that the secondary attack rate in fully vaccinated household contacts was high at 25%, but this value was lower than that of unvaccinated contacts (38%). Risk of infection increased with time in the 2–3 months since the second dose of vaccine. The proportion of infected contacts was similar regardless of the index cases' vaccination status. We observed transmission of the delta variant between fully vaccinated index cases and their fully vaccinated contacts in several households, confirmed by whole-genome sequencing. Peak viral load did not differ by vaccination status or variant type but did increase modestly with age. Vaccinated delta cases experienced faster viral load decline than did unvaccinated alpha or delta cases. Across study participants, faster viral load growth was correlated with higher peak viral load and slower decline, suggesting that host–virus interactions early in infection shape the entire viral trajectory. Since our findings are derived from community household contacts in a real-life setting, they are probably generalisable to the general population.

Implications of all the available evidence

Although vaccines remain highly effective at preventing severe disease and deaths from COVID-19, our findings suggest that vaccination is not sufficient to prevent transmission of the delta variant in household settings with prolonged exposures. Our findings highlight the importance of community studies to characterise the epidemiological phenotype of new SARS-CoV-2 variants in increasingly highly vaccinated populations. Continued public health and social measures to curb transmission of the delta variant remain important, even in vaccinated individuals.

vaccines to protect against infection and the extent to which vaccination reduces the infectiousness of breakthrough infections.

Vaccination was found to be effective in reducing household transmission of the alpha variant (B.1.1.7) by 40–50%,¹ and infected, vaccinated individuals had lower viral load in the upper respiratory tract (URT) than infections in unvaccinated individuals,² which is indicative of reduced infectiousness.^{3,4} However, the delta variant (B.1.617.2), which is more transmissible than the alpha variant,^{5,6} is now the dominant strain worldwide. After a large outbreak in India, the UK was one of the first countries to report a sharp rise in delta variant infection. Current vaccines remain highly effective at preventing admission to hospital and death from delta infection.⁷ However, vaccine effectiveness against infection is reduced for delta, compared with alpha,^{8,9} and the delta variant

continues to cause a high burden of cases even in countries with high vaccination coverage. Data are scarce on the risk of community transmission of delta from vaccinated individuals with mild infections.

Here, we report data from a UK community-based study, the Assessment of Transmission and Contagiousness of COVID-19 in Contacts (ATACCC) study, in which ambulatory close contacts of confirmed COVID-19 cases underwent daily, longitudinal URT sampling, with collection of associated clinical and epidemiological data. We aimed to quantify household transmission of the delta variant and assess the effect of vaccination status on contacts' risk of infection and index cases' infectiousness, including (1) households with unvaccinated contacts and index cases and (2) households with fully vaccinated contacts and fully vaccinated index cases. We also compared sequentially sampled

URT viral RNA trajectories from individuals with non-severe delta, alpha, and pre-alpha SARS-CoV-2 infections to infer the effects of SARS-CoV-2 variant status—and, for delta infections, vaccination status—on transmission potential.

Methods

Study design and participants

ATACCC is an observational longitudinal cohort study of community contacts of SARS-CoV-2 cases. Contacts of symptomatic PCR-confirmed index cases notified to the UK contact-tracing system (National Health Service Test and Trace) were asked if they would be willing to be contacted by Public Health England to discuss participation in the study. All contacts notified within 5 days of index case symptom onset were selected to be contacted within our recruitment capacity. Household and non-household contacts aged 5 years or older were eligible for recruitment if they could provide written informed consent and agree to self-swabbing of the URT. Further details on URT sampling are given in the appendix (p 13).

The ATACCC study is separated into two study arms, ATACCC1 and ATACCC2, which were designed to capture different waves of the SARS-CoV-2 pandemic. In ATACCC1, which investigated alpha variant and pre-alpha cases in Greater London, only contacts were recruited between Sept 13, 2020, and March 13, 2021. ATACCC1 included a pre-alpha wave (September to November, 2020) and an alpha wave (December, 2020, to March, 2021). In ATACCC2, the study was relaunched specifically to investigate delta variant cases in Greater London and Bolton, and both index cases and contacts were recruited between May 25, and Sept 15, 2021. Early recruitment was focused in West London and Bolton because UK incidence of the delta variant was highest in these areas.¹⁰ Based on national and regional surveillance data, community transmission was moderate-to-high throughout most of our recruitment period.

This study was approved by the Health Research Authority. Written informed consent was obtained from all participants before enrolment. Parents and caregivers gave consent for children.

Data collection

Demographic information was collected by the study team on enrolment. The date of exposure for non-household contacts was obtained from Public Health England. COVID-19 vaccination history was determined from the UK National Immunisation Management System, general practitioner records, and self-reporting by study participants. We defined a participant as unvaccinated if they had not received a single dose of a COVID-19 vaccine at least 7 days before enrolment, partially vaccinated if they had received one vaccine dose at least 7 days before study enrolment, and fully vaccinated if they had received two doses of a COVID-19 vaccine at least 7 days before

study enrolment. Previous literature was used to determine the 7-day threshold for defining vaccination status.^{11–13} We also did sensitivity analyses using a 14-day threshold. The time interval between vaccination and study recruitment was calculated. We used WHO criteria¹⁴ to define symptomatic status up to the day of study recruitment. Symptomatic status for incident cases—participants who were PCR-negative at enrolment and subsequently tested positive—was defined from the day of the first PCR-positive result.

Laboratory procedures

SARS-CoV-2 quantitative RT-PCR, conversion of ORF1ab and envelope (E-gene) cycle threshold values to viral genome copies, whole-genome sequencing, and lineage assignments are described in the appendix (pp 13–14).

Outcomes

Primary outcomes for the epidemiological analysis were to assess the secondary attack rate (SAR) in household contacts stratified by contact vaccination status and the index cases' vaccination status. Primary outcomes for the viral load kinetics analysis were to detect differences in the peak viral load, viral growth rate, and viral decline rate between participants infected with pre-alpha versus alpha versus delta variants and between unvaccinated delta-infected participants and vaccinated delta-infected participants.

We assessed vaccine effectiveness and susceptibility to SARS-CoV-2 infection stratified by time elapsed since receipt of second vaccination as exploratory analyses.

Statistical analysis

To model viral kinetics, we used a simple phenomenological model of viral titre¹⁵ during disease pathogenesis. Viral kinetic parameters were estimated on a participant-specific basis using a Bayesian hierarchical model to fit this model to the entire dataset of sequential cycle threshold values measured for all participants. For the 19 participants who were non-household contacts of index cases and had a unique date of exposure, the cycle threshold data were supplemented by a pseudo-absence data point (ie, undetectable virus) on the date of exposure. Test accuracy and model misspecification were modelled with a mixture model by assuming there was a probability p of a test giving an observation drawn from a (normal) error distribution and probability $1-p$ of it being drawn from the true distribution.

The hierarchical structure was represented by grouping participants based on the infecting variant and their vaccination status. A single-group model was fitted, which implicitly assumes that viral kinetic parameters vary by individual but not by variant or vaccination status. A four-group model was also explored, where groups 1, 2, 3, and 4 represent pre-alpha, alpha, unvaccinated delta, and fully vaccinated delta, respectively. We fitted a correlation matrix between

(A) Study recruitment and variant status confirmed by whole-genome sequencing (ATACCC1 and ATACCC2 combined). (B) ATACCC2: delta-exposed contacts included in secondary attack rate calculation (table 1) and transmission assessment (table 2). NHS=National Health Service. * All index cases were from ATACCC2. † All contacts. ‡ The two earliest PCR-positive cases from the ATACCC2 cohort (one index case and one contact) were confirmed as having the alpha variant on whole-genome sequencing (recruited on May 28, 2021). This alpha variant-exposed, PCR-positive contact is excluded from figure 1B. § One PCR-negative contact had no vaccination status data available and one PCR-negative contact's index case had no vaccination data available. ¶ Vaccination data were available for 138 index cases of 163. || The contacts of these 15 index cases are included within the 232 total contacts. ** These three index cases without contacts are only included in the viral load kinetics analysis (figure 3) and are not included in tables 1 and 2.

participant-specific kinetic parameters to allow us to examine whether there is within-group correlation between peak viral titre, viral growth rate, and viral decline rate. Our initial model selection, using leave-one-out cross-validation, selected a four-group hierarchical model with fitted correlation coefficients between individual-level parameters determining peak viral load

and viral load growth and decline rates (appendix p 5). However, resulting participant-specific estimates of peak viral load (but not growth and decline rates) showed a marked and significant correlation with age in the exploratory analysis, which motivated examination of models where mean peak viral load could vary with age. The most predictive model overall allowed mean viral

load growth and decline rates to vary across the four groups, with mean peak viral load common to all groups but assumed to vary linearly with the logarithm of age (appendix p 5). We present peak viral loads for the reference age of 50 years with 95% credible intervals (95% CrIs). 50 years was chosen as the reference age as it is typical of the ages of the cases in the whole dataset and the choice of reference age made no difference in the model fits or judgment of differences between the groups.

We computed group-level population means and within-sample group means of log peak viral titre, viral growth rate, and viral decline rate. Since posterior estimates of each of these variables are correlated across groups, overlap in the credible intervals of an estimate for one group with that for another group does not necessarily indicate no significant difference between those groups. We, therefore, computed posterior probabilities, pp , that these variables were larger for one group than another. For our model, Bayes factors can be computed as $pp/(1-pp)$. We only report population (group-level) posterior probabilities greater than 0.75 (corresponding to Bayes factors >3) as indicating at least moderate evidence of a difference.

For vaccine effectiveness, we defined the estimated effectiveness at preventing infection, regardless of symptoms, with delta in the household setting as $1 - \text{SAR (fully vaccinated)} / \text{SAR (unvaccinated)}$.

Role of the funding source

The funder of the study had no role in study design, data collection, data analysis, data interpretation, or writing of the report.

Results

Between Sept 13, 2020, and Sept 15, 2021, 621 community-based participants (602 contacts and 19 index cases) from 471 index notifications were prospectively enrolled in the ATACCC1 and ATACCC2 studies, and contributed 8145 URT samples. Of these, ATACCC1 enrolled 369 contacts (arising from 308 index notifications), and ATACCC2 enrolled 233 contacts (arising from 163 index notifications) and 19 index cases. SARS-CoV-2 RNA was detected in 163 (26%) of the 621 participants. Whole-genome sequencing of PCR-positive cases confirmed that 71 participants had delta variant infection (18 index cases and 53 contacts), 42 had alpha variant infection (one index case and 41 contacts), and 50 had pre-alpha variant infection (all contacts; figure 1A).

Of 163 PCR-positive participants, 89 (55%) were female and 133 (82%) were White. Median age was 36 years (IQR 26–50). Sex, age, ethnicity, body-mass index (BMI) distribution, and the frequency of comorbidities were similar among those with delta, alpha, and pre-alpha infection, and for vaccinated and unvaccinated delta-infected participants, except for age and sex (appendix pp 2–3). There were fewer unvaccinated

	Total	PCR positive	PCR negative	SAR (95% CI)	p value
Contacts					
All	231	53	178	23 (18–29)	NA
Fully vaccinated	140	31	109	22 (16–30)	0.16
Unvaccinated	44	15	29	34 (22–49)	..
Partially vaccinated	47	7	40	15 (7–28)	NA
Household contacts					
All	205	53	152	26 (20–32)	NA
Fully vaccinated	126	31	95	25 (18–33)	0.17
Unvaccinated	40	15	25	38 (24–53)	..
Partially vaccinated	39	7	32	18 (9–33)	NA

χ^2 test was performed to calculate p values for differences in SAR between fully vaccinated and unvaccinated cases. One PCR-negative contact who withdrew from the study without vaccination status information was excluded. NA=not applicable. SAR=secondary attack rate.

Table 1: SAR in contacts of delta-exposed index cases recruited to the ATACCC2 study

females than males ($p=0.04$) and, as expected from the age-prioritisation of the UK vaccine roll-out, unvaccinated participants infected with the delta variant were significantly younger ($p<0.001$; appendix p 3). Median time between exposure to the index case and study enrolment was 4 days (IQR 4–5). All participants had non-severe ambulatory illness or were asymptomatic. The proportion of asymptomatic cases did not differ among fully vaccinated, partially vaccinated, and unvaccinated delta groups (appendix p 3).

No pre-alpha-infected and only one alpha-infected participant had received a COVID-19 vaccine before study enrolment. Of 71 delta-infected participants (of whom 18 were index cases), 23 (32%) were unvaccinated, ten (14%) were partially vaccinated, and 38 (54%) were fully vaccinated (figure 1A; appendix p 3). Of the 38 fully vaccinated delta-infected participants, 14 had received the BNT162b2 mRNA vaccine (Pfizer–BioNTech), 23 the ChAdOx1 nCoV-19 adenovirus vector vaccine (Oxford–AstraZeneca), and one the CoronaVac inactivated whole-virion vaccine (Sinovac).

It is highly probable that all but one of the 233 ATACCC2 contacts were exposed to the delta variant because they were recruited when the regional prevalence of delta was at least 90%, and mostly 95–99% (figure 1B).¹⁰ Of these, 206 (89%) were household contacts (in 127 households), and 26 (11%) were non-household contacts. Distributions of age, ethnicity, BMI, smoking status, and comorbidities were similar between PCR-positive and PCR-negative contacts (appendix p 4). The median time between second vaccine dose and study recruitment in fully vaccinated contacts with delta variant infection was 74 days (IQR 35–105; range 16–201), and this was significantly longer in PCR-positive contacts than in PCR-negative contacts (101 days [IQR 74–120] vs 64 days [32–97], respectively, $p=0.001$; appendix p 4). All 53 PCR-positive contacts were exposed in household settings and the SAR for all delta variant-exposed household contacts was 26% (95% CI 20–32). SAR was

	All household contacts (n=204)*	Fully vaccinated contacts (n=125)		Partially vaccinated contacts (n=39)		Unvaccinated contacts (n=40)	
		PCR positive (n=31)	PCR negative (n=94)	PCR positive (n=7)	PCR negative (n=32)	PCR positive (n=15)	PCR negative (n=25)
Fully vaccinated index cases (n=50)	69	12	31	1	8	4	13
Partially vaccinated index cases (n=25)	35	7	12	3	10	3	0
Unvaccinated index cases (n=63)	100	12	51	3	14	8	12

Non-household exposed contacts (n=24, all PCR negative) were excluded. One PCR-negative household contact who withdrew from the study without vaccination status information was excluded. One PCR-negative household contact who could not be linked to their index case was also excluded. *The rows below show the number of contacts exposed to each category of index case.

Table 2: Comparison of vaccination status of the 138 epidemiologically linked PCR-positive index cases for 204 delta variant-exposed household contacts

not significantly higher in unvaccinated (38%, 95% CI 24–53) than fully vaccinated (25%, 18–33) household contacts (table 1). We estimated vaccine effectiveness at preventing infection (regardless of symptoms) with delta in the household setting to be 34% (bootstrap 95% CI –15 to 60). Sensitivity analyses using a 14 day threshold for time since second vaccination to study recruitment to denote fully vaccinated did not materially affect our estimates of vaccine effectiveness or SAR (data not shown). Although precision is restricted by the small sample size, this estimate is broadly consistent with vaccine effectiveness estimates for delta variant infection based on larger datasets.^{9,16,17}

The vaccination status of 138 epidemiologically linked index cases of 204 delta variant-exposed household contacts was available (figure 1B, table 2). The SAR in household contacts exposed to fully vaccinated index cases was 25% (95% CI 15–35; 17 of 69), which is similar to the SAR in household contacts exposed to unvaccinated index cases (23% [15–31]; 23 of 100; table 2). The 53 PCR-positive contacts arose from household exposure to 39 PCR-positive index cases. Of these index cases who gave rise to secondary transmission, the proportion who were fully vaccinated (15 [38%] of 39) was similar to the proportion who were unvaccinated (16 [41%] of 39). The median number of days from the index cases' second vaccination to the day of recruitment for their respective contacts was 73 days (IQR 38–116). Time interval did not differ between index cases who transmitted infection to their contacts and those who did not (94 days [IQR 62–112] and 63 days [35–117], respectively; $p=0.43$).

18 of the 163 delta variant-infected index cases that led to contact enrolment were themselves recruited to ATACCC2 and serial URT samples were collected from them, allowing for more detailed virology and genome analyses. For 15 of these, their contacts were also recruited (13 household contacts and two non-household contacts). A corresponding PCR-positive household contact was identified for four of these 15 index cases (figure 1B). Genomic analysis showed that index–contact pairs were infected with the same delta variant sub-lineage in these instances, with one exception (figure 2A). In one household (number 4), an unvaccinated index case transmitted the delta variant to an unvaccinated contact,

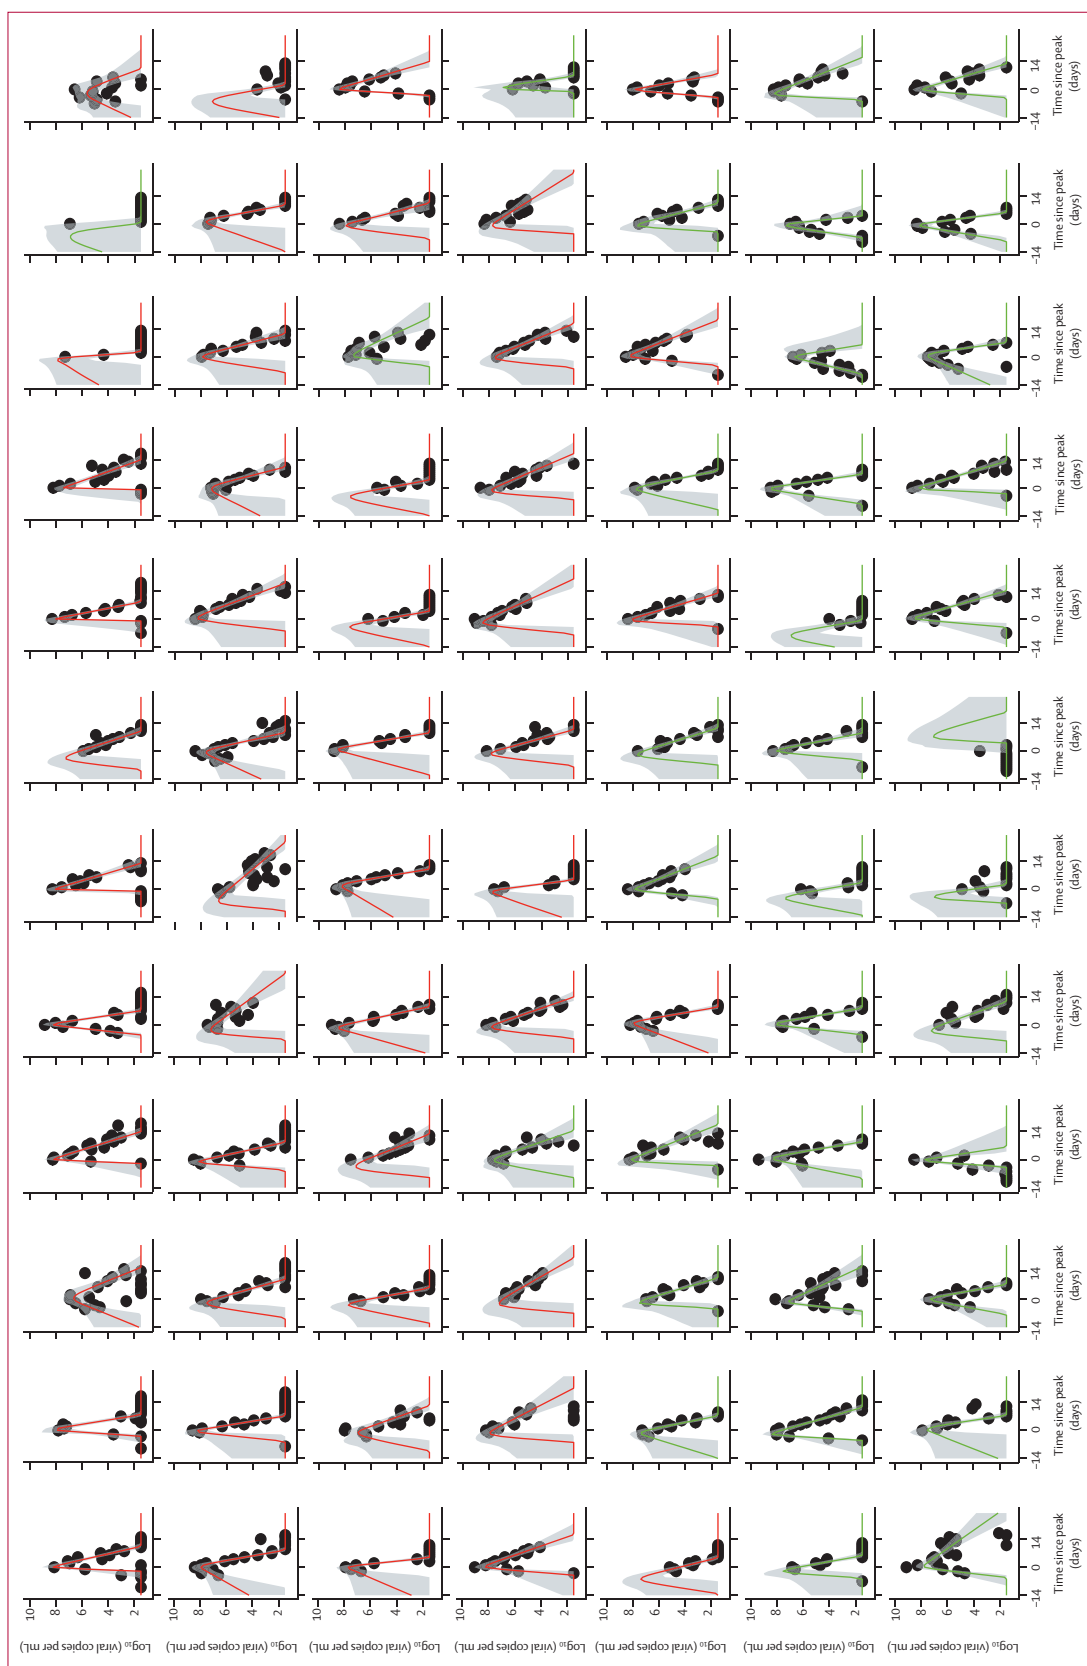

while another partially vaccinated contact was infected with a different delta sub-lineage (which was probably acquired outside the household). In the other three households (numbers 1–3), fully vaccinated index cases transmitted the delta variant to fully vaccinated household contacts, with high viral load in all cases, and temporal relationships between the viral load kinetics that were consistent with transmission from the index cases to their respective contacts (figure 2B).

Inclusion criteria for the modelling analysis selected 133 participant's viral load RNA trajectories from 163 PCR-positive participants (49 with the pre-alpha variant, 39 alpha, and 45 delta; appendix p 14). Of the 45 delta cases, 29 were fully vaccinated and 16 were unvaccinated; partially vaccinated cases were excluded. Of the 133 included cases, 29 (22%) were incident (ie, PCR negative at enrolment converting to PCR positive subsequently) and 104 (78%) were prevalent (ie, already PCR positive at enrolment). 15 of the prevalent cases had a clearly resolvable peak viral load. Figure 3 shows modelled viral RNA (ORF1ab) trajectories together with the viral RNA copy numbers measured for individual participants. The E-gene equivalent is shown in the appendix (p 2). Estimates derived from E-gene cycle threshold value data (appendix pp 5, 7, 9, 11) were similar to those for ORF1ab.

Although viral kinetics appear visually similar for all four groups of cases, we found quantitative differences in estimated viral growth rates and decline rates (tables 3, 4). Population (group-level) estimates of mean viral load decline rates based on ORF1ab cycle threshold value data varied in the range of 0.69–0.95 log₁₀ units per mL per daxes 4; appendix p 10), indicating that a typical 10-day period was required for viral load to decline from peak to undetectable. A faster decline was seen in the alpha ($pp=0.93$), unvaccinated delta ($pp=0.79$), and fully vaccinated delta ($pp=0.99$) groups than in the pre-alpha group. The mean viral load decline rate of the fully vaccinated delta group was also faster than those of the alpha group ($pp=0.84$) and the unvaccinated delta group ($pp=0.85$). The differences in decline rates translate into a difference of about 3 days in the mean duration of the decline phase between the pre-alpha and delta vaccinated groups.

grow from undetectable to peak. Our power to infer differences in growth rates between groups was more restricted than for viral decline, but there was moderate evidence ($pp=0.79$) that growth rates were lower for

(Figure 3 continues on next page)

Figure 3: ORF1ab viral load trajectories from 14 days before to 28 days after peak for 133 participants infected with pre-alpha or alpha variants (unvaccinated), or the delta variant (vaccinated and unvaccinated) variants
Black circles are measured values, with the first datapoint for each participant being taken to the day of enrolment. Plots are rooted on the day of peak viral load for each participant, denoted as day 0 on the x-axis. Curves show the model posterior median estimate, with a 95% credible interval shading. 133 infected participants, comprising 114 contacts and 19 index cases. *Index cases.

	VL growth rate (95% CrI), log ₁₀ units per day	Posterior probability estimate is less than pre-alpha	Posterior probability estimate is less than alpha	Posterior probability estimate is less than delta (unvaccinated)	Posterior probability estimate is less than delta (fully vaccinated)
Pre-alpha (n=49)	3.24 (1.78–6.14)	..	0.44	0.27	0.21
Alpha (n=39)	3.13 (1.76–5.94)	0.56	..	0.32	0.25
Delta, unvaccinated (n=16)	2.81 (1.47–5.47)	0.73	0.68	..	0.44
Delta, fully vaccinated (n=29)	2.69 (1.51–5.17)	0.79	0.75	0.56	..

VL growth rates are shown as within-sample posterior mean estimates. Remaining columns show population (group-level) posterior probabilities that the estimate on that row is less than an estimate for a different group. Posterior probabilities are derived from 20 000 posterior samples and have sampling errors of <0.01. VL=viral load. CrI=credible interval.

Table 3: Estimates of VL growth rates for pre-alpha, alpha, and delta (unvaccinated and fully vaccinated) cases, derived from ORF1ab cycle threshold data

	VL decline rate (95% CrI), log ₁₀ units per day	Posterior probability estimate is larger than pre-alpha	Posterior probability estimate is larger than alpha	Posterior probability estimate is larger than delta (unvaccinated)	Posterior probability estimate is larger than delta (fully vaccinated)
Pre-alpha (n=49)	0.69 (0.58–0.81)	..	0.07	0.21	0.01
Alpha (n=39)	0.82 (0.67–1.01)	0.93	..	0.60	0.16
Delta, unvaccinated (n=16)	0.79 (0.59–1.04)	0.79	0.40	..	0.15
Delta, fully vaccinated (n=29)	0.95 (0.76–1.18)	0.99	0.84	0.85	..

VL decline rates are shown as within-sample posterior mean estimates. Remaining columns show population (group-level) posterior probabilities that the estimate on that row is less than an estimate for a different group. Posterior probabilities are derived from 20 000 posterior samples and have sampling errors of <0.01. VL=viral load. CrI=credible interval.

Table 4: Estimates of VL decline rates for pre-alpha, alpha, and delta (unvaccinated and fully vaccinated) cases, derived from ORF1ab cycle threshold data

those in the vaccinated delta group than in the pre-alpha group.

We estimated mean peak viral load for 50-year-old adults to be 8.14 (95% CrI 7.95 to 8.32) log₁₀ copies per mL, but peak viral load did not differ by variant or vaccination status. However, we estimated that peak viral load increases with age ($pp=0.96$ that the slope of peak viral load with log[age] was >0), with an estimated slope of 0.24 (95% CrI -0.02 to 0.49) log₁₀ copies per mL per unit change in log(age). This estimate translates to a difference of 0.39 (-0.03 to 0.79) in mean peak log₁₀ copies per mL between those aged 10 years and 50 years.

Within-group individual participant estimates of viral load growth rate were positively correlated with peak viral load, with a correlation coefficient estimate of 0.42 (95% CrI 0.13 to 0.65; appendix p 8). Hence, individuals with faster viral load growth tend to have higher peak viral load. The decline rate of viral load was also negatively correlated with viral load growth rate, with a correlation coefficient estimate of -0.44 (95% CrI -0.67 to -0.18), illustrating that individuals with faster viral load growth tend to experience slower viral load decline.

Discussion

Households are the site of most SARS-CoV-2 transmission globally.¹⁹ In our cohort of densely sampled household contacts exposed to the delta variant, SAR was 38% in unvaccinated contacts and 25% in fully vaccinated contacts. This finding is consistent with the known protective effect of COVID-19 vaccination against

infection.^{8,9} Notwithstanding, these findings indicate continued risk of infection in household contacts despite vaccination. Our estimate of SAR is higher than that reported in fully vaccinated household contacts exposed before the emergence of the delta variant.^{1,20,21} The time interval between vaccination and study recruitment was significantly higher in fully vaccinated PCR-positive contacts than fully vaccinated PCR-negative contacts, suggesting that susceptibility to infection increases with time as soon as 2–3 months after vaccination—consistent with waning protective immunity. This potentially important observation is consistent with recent large-scale data and requires further investigation.¹⁷ Household SAR for delta infection, regardless of vaccination status, was 26% (95% CI 20–32), which is higher than estimates of UK national surveillance data (10.8% [10.7–10.9]).¹⁰ However, we sampled contacts daily, regardless of symptomatology, to actively identify infection with high sensitivity. By contrast, symptom-based, single-timepoint surveillance testing probably underestimates the true SAR, and potentially also overestimates vaccine effectiveness against infection.

We identified similar SAR (25%) in household contacts exposed to fully vaccinated index cases as in those exposed to unvaccinated index cases (23%). This finding indicates that breakthrough infections in fully vaccinated people can efficiently transmit infection in the household setting. We identified 12 household transmission events between fully vaccinated index case–contact pairs; for three of these, genomic sequencing confirmed that the index case and

contact were infected by the same delta variant sub-lineage, thus substantiating epidemiological data and temporal relationships of viral load kinetics to provide definitive evidence for secondary transmission. To our knowledge, one other study has reported that transmission of the delta variant between fully vaccinated people was a point-source nosocomial outbreak—a single health-care worker with a particular delta variant sub-lineage in Vietnam.²²

Daily longitudinal sampling of cases from early (median 4 days) after exposure for up to 20 days allowed us to generate high-resolution trajectories of URT viral load over the course of infection. To date, two studies have sequentially sampled community cases of mild SARS-CoV-2 infection, and these were from highly specific population groups identified through asymptomatic screening programmes (eg, for university staff and students²³ and for professional athletes²⁴).

Our most predictive model of viral load kinetics estimated mean peak log₁₀ viral load per mL of 8.14 (95% CrI 7.95–8.32) for adults aged 50 years, which is very similar to the estimate from a 2021 study using routine surveillance data.²⁵ We found no evidence of variation in peak viral load by variant or vaccination status, but we report some evidence of modest but significant ($p=0.095$) increases in peak viral load with age. Previous studies of viral load in children and adults^{4,25,26} have not used such dense sequential sampling of viral load and have, therefore, been restricted in their power to resolve age-related differences; the largest such study²⁵ reported a similar difference between children and adults to the one we estimated. We found the rate of viral load decline was faster for vaccinated individuals with delta infection than all other groups, and was faster for individuals in the alpha and unvaccinated delta groups than those with pre-alpha infection.

For all variant vaccination groups, the variation between participants seen in viral load kinetic parameter estimates was substantially larger than the variation in mean parameters estimated between groups. The modest scale of differences in viral kinetics between fully vaccinated and unvaccinated individuals with delta infection might explain the relatively high rates of transmission seen from vaccinated delta index cases in our study. We found no evidence of lower SARs from fully vaccinated delta index cases than from unvaccinated ones. However, given that index cases were identified through routine symptomatic surveillance, there might have been a selection bias towards identifying untypically symptomatic vaccine breakthrough index cases.

The differences in viral kinetics we found between the pre-alpha, alpha, and delta variant groups suggest some incremental, but potentially adaptive, changes in viral dynamics associated with the evolution of SARS-CoV-2 towards more rapid viral clearance. Our study provides the first evidence that, within each variant or vaccination group, viral growth rate is positively correlated with peak viral load, but is negatively correlated with viral decline

rate. This finding suggests that individual infections during which viral replication is initially fastest generate the highest peak viral load and see the slowest viral clearance, with the latter not just being due to the higher peak. Mechanistically, these data suggest that the host and viral factors determining the initial growth rate of SARS-CoV-2 have a fundamental effect on the trajectory throughout infection, with faster replication being more difficult (in terms of both peak viral load and the subsequent decline of viral load) for the immune response to control. Analysis of sequentially sampled immune markers during infection might give insight into the immune correlates of these early differences in infection kinetics. It is also possible that individuals with the fastest viral load growth and highest peaks contribute disproportionately to community transmission, a hypothesis that should be tested in future studies.

Several population-level, single-timepoint sampling studies using routinely available data have found no major differences in cycle threshold values between vaccinated and unvaccinated individuals with delta variant infection.^{10,27,28} However, as the timepoint of sampling in the viral trajectory is unknown, this restricts the interpretation of such results. Two other studies longitudinally sampled vaccinated and unvaccinated individuals with delta variant infection.^{23,29} A retrospective cohort of hospitalised patients in Singapore²⁹ also described a faster rate of viral decline in vaccinated versus unvaccinated individuals with delta variant, reporting somewhat larger differences in decline rates than we estimated here. However, this disparity might be accounted for by the higher severity of illness in unvaccinated individuals in the Singaporean study (almost two-thirds having pneumonia, one-third requiring COVID-19 treatment, and a fifth needing oxygen) than in our study, given that longer viral shedding has been reported in patients with more severe illness.³⁰ A longitudinal sampling study in the USA reported that pre-alpha, alpha, and delta variant infections had similar viral trajectories.²⁴ The study also compared trajectories in vaccinated and unvaccinated individuals, reporting similar proliferation phases and peak cycle threshold values, but more rapid clearance of virus in vaccinated individuals. However, this study in the USA stratified by vaccination status and variant separately, rather than jointly, meaning vaccinated individuals with delta infection were being compared with, predominantly, unvaccinated individuals with pre-alpha and alpha infection. Moreover, sampling was done as part of a professional sports player occupational health screening programme, making the results not necessarily representative of typical community infections.

Our study has limitations. First, we recruited only contacts of symptomatic index cases as our study recruitment is derived from routine contact-tracing notifications. Second, index cases were defined as the first household member to have a PCR-positive swab, but we cannot exclude the possibility that another household member might already have been infected and transmitted

to the index case. Third, recording of viral load trajectories is subject to left censoring, where the growth phase in prevalent contacts (already PCR-positive at enrolment) was missed for a proportion of participants. However, we captured 29 incident cases and 15 additional cases on the upslope of the viral trajectory, providing valuable, informative data on viral growth rates and peak viral load in a subset of participants. Fourth, owing to the age-stratified rollout of the UK vaccination programme, the age of the unvaccinated, delta variant-infected participants was lower than that of vaccinated participants. Thus, age might be a confounding factor in our results and, as discussed, peak viral load was associated with age. However, it is unlikely that the higher SAR observed in the unvaccinated contacts would have been driven by younger age rather than the absence of vaccination and, to our knowledge, there is no published evidence showing increased susceptibility to SARS-CoV-2 infection with decreasing age.³¹ Finally, although we did not perform viral culture here—which is a better proxy for infectiousness than RT-PCR—two other studies^{27,32} have shown cultivable virus from around two-thirds of vaccinated individuals infected with the delta variant, consistent with our conclusions that vaccinated individuals still have the potential to infect others, particularly early after infection when viral loads are high and most transmission is thought to occur.³⁰

Our findings help to explain how and why the delta variant is being transmitted so effectively in populations with high vaccine coverage. Although current vaccines remain effective at preventing severe disease and deaths from COVID-19, our findings suggest that vaccination alone is not sufficient to prevent all transmission of the delta variant in the household setting, where exposure is close and prolonged. Increasing population immunity via booster programmes and vaccination of teenagers will help to increase the currently limited effect of vaccination on transmission, but our analysis suggests that direct protection of individuals at risk of severe outcomes, via vaccination and non-pharmacological interventions, will remain central to containing the burden of disease caused by the delta variant.

Contributors

AS, JD, MZ, NMF, WB, and ALal conceptualised the study. AS, SH, JD, KJM, AK, JLB, MGW, ND-F, RV, RK, JF, CT, AVK, JC, VQ, EC, JSN, SH, EM, TP, HH, CL, JS, SB, JP, CA, SA, and NMF were responsible for data curation and investigation. AS, SH, KJM, JLB, AC, NMF, and ALal did the formal data analysis. MAC, AB, DJ, SM, JE, PSF, SD, and ALac did the laboratory work. RV, RK, JF, CT, AVK, JC, VQ, EC, JSN, SH, EM, and SE oversaw the project. AS, SH, JD, KJM, JLB, NMF, and ALal accessed and verified the data. JD, MZ, and ALal acquired funding. NMF sourced and oversaw the software. AS and ALal wrote the initial draft of the manuscript. AS, JD, GPT, MZ, NMF, SH, and ALal reviewed and edited the manuscript. The corresponding author had full access to all the data in the study and had final responsibility for the decision to submit for publication.

On COVID vaccines: why they cannot work, and irrefutable evidence of their causative role in deaths after vaccination

Sucharit Bhakdi, MD and Arne Burkhardt, MD

This text is a written summary of Dr. Bhakdi's and Dr. Burkhardt's presentations at the Doctors for COVID Ethics symposium that was live-streamed by [UKColumn](#) on December 10th, 2021. The two presentations can be viewed at the very beginning of [the video recording](#) of the symposium.

The authors

Dr. Bhakdi has spent his life practicing, teaching and researching medical microbiology and infectious diseases. He chaired the Institute of Medical Microbiology and Hygiene at the Johannes Gutenberg University of Mainz, Germany, from 1990 until his retirement in 2012. He has published over 300 research articles in the fields of immunology, bacteriology, virology and parasitology, and served from 1990 to 2012 as Editor-in-Chief of Medical Microbiology and Immunology, one of the first scientific journals of this field that was founded by Robert Koch in 1887.

Dr. Arne Burkhardt is a pathologist who has taught at the Universities of Hamburg, Berne and Tübingen. He was invited for visiting professorships/study visits in Japan (Nihon University), the United States (Brookhaven National Institute), Korea, Sweden, Malaysia and Turkey. He headed the Institute of Pathology in Reutlingen for 18 years. Subsequently, he worked as an independent practicing pathologist with consulting contracts with laboratories in the US. Burkhardt has published more than 150 scientific articles in German and international scientific journals as well as contributions to handbooks in German, English and Japanese. Over many years he has audited and certified institutes of pathology in Germany.

The evidence

We herewith present scientific evidence that calls for an immediate stop of the use of gene-based COVID-19 vaccines. We first lay out why the agents cannot protect against viral infection. While no positive effects can be expected, we show that the vaccines can trigger self-destructive processes that lead to debilitating illness and death.

Why the vaccines cannot protect against infection

A fundamental mistake underlying the development of the COVID-19 vaccines was to neglect the functional distinction between the two major categories of antibodies which the body produces in order to protect itself from pathogenic microbes.

The first category (secretory IgA) is produced by immune cells (lymphocytes) which are located directly underneath the mucous membranes that line the respiratory and intestinal tract. The antibodies produced by these lymphocytes are secreted through and to the surface of the mucous membranes.

These antibodies are thus on site to meet air-borne viruses, and they may be able to prevent viral binding and infection of the cells.

The second category of antibodies (IgG and circulating IgA) occur in the bloodstream. These antibodies protect the internal organs of the body from infectious agents that try to spread via the bloodstream.

Vaccines that are injected into the muscle – i.e., the interior of the body – will only induce IgG and circulating IgA, not secretory IgA. Such antibodies cannot and will not effectively protect the mucous membranes from infection by SARS-CoV-2. Thus, the currently observed “breakthrough infections” among vaccinated individuals merely confirm the fundamental design flaws of the vaccines. Measurements of antibodies in the blood can never yield any information on the true status of immunity against infection of the respiratory tract.

The inability of vaccine-induced antibodies to prevent coronavirus infections has been reported in recent scientific publications.

The vaccines can trigger self-destruction

A natural infection with SARS-CoV-2 (coronavirus) will in most individuals remain localized to the respiratory tract. In contrast, the vaccines cause cells deep inside our body to express the viral spike protein, which they were never meant to do by nature. Any cell which expresses this foreign antigen will come under attack by the immune system, which will involve both IgG antibodies and cytotoxic T-lymphocytes. This may occur in any organ. We are seeing now that the heart is affected in many young people, leading to myocarditis or even sudden cardiac arrest and death. How and why such tragedies might causally be linked to vaccination has remained a matter of conjecture because scientific evidence has been lacking. This situation has now been rectified.

Histopathologic studies: the patients

Histopathologic analyses have been performed on the organs of 15 persons who died after vaccination. The age, gender, vaccination record, and time of death after injection of each patient are listed in the table on the next page. The following points are of utmost importance:

- Prior to death, only 4 of the 15 patients had been treated in the ICU for more than 2 days. The majority were never hospitalized and died at home (5), on the street (1), at work (1), in the car (1), or in home-care facilities (1). Therefore, in most cases, therapeutic intervention is unlikely to have significantly influenced the post-mortem findings.
- Not a single death was brought into any possible association with the vaccination by the coroner or the public prosecutor; this association was only established by our autopsy findings.
- The initially performed conventional post-mortems also uncovered no obvious hints to a possible role of vaccination, since the macroscopic appearance of the organs was overall unremarkable. In most cases, “rhythmicogenic heart failure” was postulated as the cause of death.

But our subsequent histopathological analyses then brought about a complete turnaround. A summary of the fundamental findings follows.

Case #	Gender	Age (years)	Vaccine (injections)	Time of death after last injection
1	female	82	Moderna (1. and 2.)	37 days
2	male	72	Pfizer (1.)	31 days
3	female	95	Moderna (1. and 2.)	68 days
4	female	73	Pfizer (1.)	unknown
5	male	54	Janssen (1.)	65 days
6	female	55	Pfizer (1. and 2.)	11 days
7	male	56	Pfizer (1. and 2.)	8 days
8	male	80	Pfizer (1. and 2.)	37 days
9	female	89	Unknown (1. and 2.)	6 months
10	female	81	Unknown (1. and 2.)	unknown
11	male	64	AstraZeneca (1. and 2.)	7 days
12	female	71	Pfizer (1. and 2.)	20 days
13	male	28	AstraZeneca (1.), Pfizer (2.)	4 weeks
14	male	78	Pfizer (1. and 2.)	65 days
15	female	60	Pfizer (1.)	23 days

Histopathologic studies: findings

Histopathologic findings of a similar nature were detected in organs of 14 of the 15 deceased. Most frequently afflicted were the heart (14 of 15 cases) and the lung (13 of 15 cases). Pathologic alterations were furthermore observed in the liver (2 cases), thyroid gland (Hashimoto's thyroiditis, 2 cases), salivary glands (Sjögren's Syndrome; 2 cases) and brain (2 cases).

A number of salient aspects dominated in all affected tissues of all cases:

1. inflammatory events in small blood vessels (endothelitis), characterized by an abundance of T-lymphocytes and sequestered, dead endothelial cells within the vessel lumen;

2. the extensive perivascular accumulation of T-lymphocytes;
3. a massive lymphocytic infiltration of surrounding non-lymphatic organs or tissue with T-lymphocytes.

Lymphocytic infiltration occasionally occurred in combination with intense lymphocytic activation and follicle formation. Where these were present, they were usually accompanied by tissue destruction.

This combination of multifocal, T-lymphocyte-dominated pathology that clearly reflects the process of immunological self-attack is without precedent. Because vaccination was the single common denominator between all cases, there can be no doubt that it was the trigger of self-destruction in these deceased individuals.

Conclusion

Histopathologic analysis show clear evidence of vaccine-induced autoimmune-like pathology in multiple organs. That myriad adverse events deriving from such auto-attack processes must be expected to very frequently occur in all individuals, particularly following booster injections, is self-evident.

Beyond any doubt, injection of gene-based COVID-19 vaccines places lives under threat of illness and death. We note that both mRNA and vector-based vaccines are represented among these cases, as are all four major manufacturers.

Dear Washington State Board of Health Directors,

You have asked for input whether or not parents think that the Covid-19 Vaccines should be added to the list of required vaccines for school students.

I would respectfully request in light of the lack of long term scientific studies available regarding the potential side effects of the Covid 19 Vaccines that you vote against the mandate. Please do not make it mandatory in order for students to be allowed to attend in person school.

Thank you for your attention and request for input.

Best Regards,
Michael A Muglia

Mr. Daugherty,

I agree on this point, we need to know where the off-ramp is for masking. Common sense says long-term masking will have downsides for children. Superintendents have been posing this issue with the state. But that conversation is on hold during the current COVID spike.

You make a remark at the end about remote learning. I assure you, we are NOT moving in this direction. In fact, our principals and school staff are going above and beyond to keep schools open. We are operating with more than 10% of staff out this week. I have no intention of pivoting to any extended period of remote learning. And OSPI and WA DOH also support in-person learning. I can't promise we won't have disruptions, like airlines canceling a flight here and there when there is not a crew available to work. But we are committed to in-person learning barring specific outbreaks and/or severe staffing shortages.

Alan

This email originated outside of the organization and contains a Web link or attachment. Please use caution. – ASD Tech

Educators,

DOH is useless and has been since the start of this plandemic. Still trying to control a virus that is still out of control. They hopefully realize this fact.

Now, after the turn of the new year, would like to get updated guidance as to the unconstitutional/forced masking policies that you are trying to enforce. Stop this nonsense. I'll ask the simple question once again to hopefully get some answers.

- What is Washington's plan/goal as to when masks can be recommended/optional for children while at school? (Currently, mask up until we say so...)

Is anyone going to respond to my queries? Now with omicron/xi, the studies are now pointing to the uselessness of cloth masks. WSJ LINK

One more item to bring back up as you clearly haven't understood it the first time:

"If masks, mandates & lockdowns work, why aren't they working?"

Clearly you all have some deprogramming that needs to be done. Hope for some answers this year...

Currently preparing on moving our family out of state. I hope you finally get the message as more people leave this 'power-hungry' dem-led state.

Happy New Year to more restrictions! Hmm, maybe you should bring schools back to online-only. Still, no plans...

Josh Daugherty

DO NOT COMPLY.

Week 15, then already Winter/Christmas break,

Still no constructive, healthy dialogue on this question.

- What is Washington's plan/goal as to when masks can be recommended/optional for children while at school? (Currently, mask up until we say so...)

As all addressed on this continue to be complicit with 'policy', I propose in 2022, new year, new rules. Masks = Recommended for all, not mandated. I will not comply with your demands. At least begin a phased approach to mirror the restaurant half-assed policy of wearing masks walking around in the restaurant, but then when you sit down, you may take them off. Our children deserve better. Please share your thoughts on this, as you clearly do not have any other ideas. Since the beginning of the school year, you've been shrugging my concerns off or ignoring this altogether. Great job, now I'm starting to adopt some of these ideas, to ignore/disregard any & all communication coming down concerning force masking, vaccinations, etc.

You do not have control over what I do, what I wear, how I live. Our children wear the minimal 'protection' to abide by mandates only to 'not get in trouble'. They can also see that this is all theater and wearing masks for 'show' under the guise of 'keeping

everyone safe'. My underlying question all along has been, who is 'dangerous'? Certainly not our children as they have a larger chance of dying from the flu or common cold than covid. Covid is weak when it comes to them. Stop with this nonsense.

If WA DOH were TRULY trying to keep everyone 'safe' against a virus that only negatively impacts a very small portion of the public, they've been doing a BAD job at that. According to the DOH website, and due to the fact that 9,554 individuals have lost their lives to this. A whopping 1.2% of the WA population. A large majority of those are in the at risk age group and those that have had multiple health issues already. You've been failing since the beginning, and every death (including those hidden from view attributed to depression/suicide) is on you.

<PastedGraphic-2.tiff>

What I am finding even more surprising, the fact that you are pressing forward with 5-11 year old vaccinations and I highly doubt that many children in the state are medically 'at-risk' for this emergency use authorization. Shame on you all.

<PastedGraphic-3.tiff>

Additional facts to consider:

- 1) We've had viral illnesses for every single year of human history.
- 2) Covid has ~same fatality rate as a flu.
- 3) We've managed to live like normal humans until 2020.

Why are we still obsessed with covid?

Have a wonderful week and a happy holiday season,

Josh Daugherty

<joshua.daugherty.wa@gmail.com <mailto:joshua.daugherty.wa@gmail.com> > wrote:

To whom this may concern,

Is it already week 14? How can this be where the WA DOH only has the plan to see force masking our children until they say so? I believe this will fall on deaf ears as many of you are still complicit with this madness, but I will not comply.

All I'm requesting is to change from 'mandate' to 'recommended'. That would allow parents to make up their own minds as to mask their children or not. I can already expect that when masking eventually ends, common cold & flu cases will go up as masks prevent us from building our immunity to anything.

I will ask again:

- What is Washington's plan/goal as to when masks can be

recommended/optional for children while at school?

Let the children breathe. If parents are still scared for the .000007% chance that their child may be adversely affected by this virus, they can add masks if they choose. This needs to be a choice. I see that the DOH hasn't updated their page since 29 November 2021 which shows me they still have no plan. Or have you realized that you are probably getting to the end of mass vaccines? The rest of WA will not do what you tell them. Give up. Will not get to 100% vaccinated, but that still isn't the plan, right?

I would like to also point out a quick observation that Ohio Rep Jim Jordan had mentioned recently:

Summary: If masks, mandates & lockdowns work, why aren't they working?

The 'health' community has been wrong at almost every step of the way since the beginning. Their plan seems to be: 'lets try this...what about this...next we should try this...'

Quite the 'science', hmmm. If you don't have a plan, just say it. Still advocating for my previous comment, begin with a phased approach like in restaurants. Our students can remove their masks while seated. What is so wrong about this?

I am still looking forward to our comments & replies with answers. Not more of the political jargon...it doesn't work anymore.

Awaiting solutions & dialogue,

Josh Daugherty

Surprise! I have received a response from last week's request from the DOH Information email. Still no answers (not a true surprise). I look forward to the weekly, one-way communication with all involved. No one seems to be doing anything to assist in this. I hold all accountable for this non-action.

Please see below for the thread from today preceded by my latest response.:

DOH Information,

This question was asked over a week ago and just now you are getting back to me. Bottom line: My question still isn't answered. You really need to update your sources as that CDC links were updated as of November 2020 & May 2021. That is between 6 months and a year ago!

- What is Washington's plan/goal as to when masks can be recommended/optional for children while at school?

According to the WA DOH, covid doesn't spread in restaurants while diners have meals, that can take off their masks then, why not our children while seated? I have no issues with parents who wish to have their child masked all day, just do not force it on all of our children. Statistically speaking, our children have more of a risk of adverse problems with the flu and the common cold than they do against covid. No one mentioned prior to 2019/2020 wearing masks for any flu seasons. Odds are the common cold & flu cases will spike once our kids remove their masks as they all have been weakening their immune systems with this forced masking.

As of yesterday, the WA DOH covid page shows vaccination stats. I am asking the WA DOH to come up with a % as to how many people need to get vaccinated against this useless virus that only hurts the weakest in the population (immunocompromised). I guarantee that we will not get to 100%, probably never 90% but how long do we need to continue this nonsense? What is the plan? I will say this again: IF YOU FAIL TO PLAN, THEN YOU PLAN TO FAIL.

<PastedGraphic-1.png>

I look forward to your reply with answers and or a plan. Maybe begin a 'phased approach' that was tried to reopen after the government shut all the small businesses at the beginning. Quite the asinine approach at that but we at least tried that.

Concerned parent,

Josh Daugherty

REQUEST

RESPONSE FROM DOH PA THIS MORNING TO MY 23 NOVEMBER

Hello,

Thank you for contacting the Department of Health.

DOH disease experts continue to monitor COVID-19 infection, hospitalization, death rates and health system capacity closely. While disease rates are declining, they remain high and hospital occupancy is still over 90 percent. We feel cautiously optimistic now that kids age 5 and older are eligible for the vaccine; however, the majority of children are still not vaccinated. We need to continue to do everything we can to prevent the spread of COVID-19, especially in light of the highly contagious Delta variant. As we head into winter and the holiday season, when the number of social get-togethers and indoor gatherings increase, a combination of masks and vaccines remain

the best tools we have available to ensure that kids stay healthy and businesses and schools stay open.

You may view the studies below about the reduction in virus transmission and mask use:

Contacts,

Here we are at week 13, still no plan for children, the HEALTHIEST of us all, to have masks optional in school.

I will try to ask the question again, expecting someone to give any answers to the question:

- What is Washington's plan as to when masks can be recommended/optional for children while at school?

"Until we say so..." isn't science. Show me the proof that kids are dropping like flies while at school. I will restate my previous comment, our kids are much healthier and can fight off any common cold & flu (read covid) much quicker than any of us. Why is the state still providing the useless nonsense direction as to 'keep everyone safe' and 'keep masking up until we say so'.

If you are awaiting 100% covid vaccinations, even for VAST majority of children that do NOT need it, we will not reach that goal. But it seems like the DOH still doesn't have a plan...

Not to mention, no one is keeping the conversation open except for parents, so everyone else in this chain is being complicit with these mandates.

I believe I've said it before, but this sounds a lot like when I was growing up, if someone told you to jump off a bridge, many of you would. Sorry to disappoint but I think for myself and will not jump.

Still frustrated and I will talk to you again next week! Parental choice should be part of this conversation. If masks work, then let those that continue to wear them, and be afraid of this virus continue. I will not comply.

Josh Daugherty

Washington State Board of Health,

12 weeks and still no answers from anyone as to what the plan is concerning the forced masking of our children at school. Here is the question, should be simple and to the point:

- What is Washington's plan/goal as to when masks can be recommended/optional for children while at school?

Wear masks until we say so... isn't rooted in any

science that I know of. Our children already have a much lower chance of health issues even if they contract Covid. I will reiterate my previous request: "mirror the restaurant policy" so that when our children are seated at their desk in the classroom, they may take off their masks. If some children still feel scared to take their masks off, they may keep them on. This should still be about choice of the parents/students. With these false-rooted mandates, they aren't allowing us freedom of choice.

I look forward to your comments/dialogue concerning this topic. If you will not help, then step aside as your inaction shows just how deeply you care about the health of my children.

Josh Daugherty

Just in case you missed it, here's some educational reading when it comes to our children.

Washington State Board of Health,

Still awaiting an answer to my queries below. Here we are, 11 weeks into the school year and it's still the same: "do it until we say so...". If you fail to PLAN, you plan to FAIL. I see a lot of failing by those in all positions of 'office'.

I've been contacting the WA DOH without answers every week, including Cc'ing our non-action school district, principals etc. No one will assist with speaking to anyone that may have any indication as to how long should we expect to force-mask our children at school. This virus is NOT a threat to our children, as it is comparable to the flu or the common cold. They are healthy.

Would like to at least begin some conversation with relaxing these 'mandates' to at least mirror restaurants in the area. If the children are seated, they should be able to remove these face diapers. Not to mention, cloth masks don't do anything for Covid particles. This continues to show this is all for 'show'. I will not participate.

If parents still wish to mask their child, feel free to. They should have the choice.

Still a frustrated parent,

Josh Daugherty

If you would like further information, please look at

the following website. I am also open to conversation.

Subject: Revise mask mandates for children schools

□WA Board of Health,

To date, I have been requesting updates for the
forced masking in schools:

10 weeks, still nothing from the state...

How much longer to force mask our children? We
should have a choice on whether to mask or not.

I just want to know what the goal is of the force
masking! "Until we say so..." isn't ANYTHING near common sense or science.

Don't you dare start with the force vaccinations for
our children when only about .000003% may even need it.

Answers requested as to what the education plan is. I
will continue to request weekly updates until a plan shows an end in sight. Just because
"we said so" isn't right.

Maybe as a start. We could mirror the restaurant policy where if you are seated, you may take off your mask. I understand keeping children safe, but they are not in danger. If children want to continue to mask up, please have them continue. If children do not want to wear a mask, they shouldn't need to.

Where is the proof that children are all infected?

Irritated parent,
Joshua Daugherty

☐

Week 9,

Still nothing. Exactly what I expect from this school district and even nothing from the DOH. My concern/question is:

What is the end goal?

How long do our kids need to be masked in school?

they say so. So WRONG!

So far WA DOH is basically saying to wear them until

72.5% fully vaccinated.

As of today in WA, 78.6% 12+ has one dose and

85.6% in King County.

I've been requesting information from the schools, district and the DOH with no answers. How does anyone think this is the 'correct' way?

Going back to when I was young, if someone told you to jump off a bridge, would you? Too many people are just following the 'guidance' whether it makes sense or not, without question.

Just asking for the choice. Our kids should have a choice. Currently they are being taught that everyone is infected. If you want to still mask up, feel free to.

Don't you dare agree with vaccine mandates!

This is now my 9th week of requesting answers.
Unbelievable poor management at all levels. Will continue until I receive dialogue.

Joshua Daugherty

<joshua.daugherty.WA@gmail.com <mailto:joshua.daugherty.WA@gmail.com> > wrote:

□ Still waiting any information from the WA DOH.
Nothing yet and we are only 8 weeks into this. I know that many of you don't care about the safety of my child, as you just follow the same guidance pushed from 'above', without questions. This is WRONG.

From today to the WA DOH:

Another week, more nonsense. I have been requesting follow-ups to my questions and nothing has been done. Every week I am asking the same, MAIN question.

- What is WA state's end goal when it comes to children's force masking policies?

If there is no plan, then you plan to fail. This has been the case since the 'pandemic' began. The science doesn't back the policy of 'wear a mask until we say so...' I need additional information as this is WRONG and many know it. I would like to have a constructive dialogue with someone that can say when our children can opt into masks or not at school. Again, if parents choose to mask their kids, it is their choice. Please let me know what the plan is beyond, 'wear them until we say so.'

Still no answers,
Josh Daugherty

<joshua.daugherty.wa@gmail.com <mailto:joshua.daugherty.wa@gmail.com> > wrote:

Week 6,

Still trying to find out the following:

- How long do our children need to be force masked?
What is the end goal to go back to breathing fresh air?

Freedom, this is still America. If you want to stay masked, fine. Do not force it on us. Under the guise of 'public safety', keep wearing masks to 'protect everyone'. That infers that my kids are dangerous! DOH WA needs to let us know the plan, we must demand that from them, 'until we say so' is NOT science.

Oh, and mandate doesn't equal law.

So glad I'm actively teaching my children & family CRITICAL THINKING. Something that the Gov, DOH, School districts, etc have no idea what it is. Just mandate compliance. Basically continuing a 'shut up and color' attitude. We know who is at fault. Just because it's 'popular', doesn't mean that it's right. If this continues to go on for an extended period of time, expect more pushback.

Just asking to give us the choice. Why is this so hard for you to comprehend? Maybe we start dictating what you need to wear and how you need to act.

Such a relevant article to this:
<https://notthebee.com/article/covid-theater-a-personal-tale-about-the-gaslighting-of-a-nation-and-its-schoolchildren>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fnotthebee.com%2Farticle%2Fcovid-theater-a-personal-tale-about-the-gaslighting-of-a-nation-and-its-schoolchildren&data=04%7C01%7CWsBOH%40sboh.wa.gov%7C6002c55b3d824a9561e408d9cf4a9f87%7>>

Looking forward to continued dialogue as to the end of these unconstitutional mandates.

Still frustrated,
Josh Daugherty

Awaiting DOH responses too.

Week 4,

Fourth request for information:

When is the mask mandate for schools going to end? I've requested info from DOH as they need to answer to my requests. They have not and I will continue to request weekly from the DOH and the district on down to our schools. They do not stop the virus from being passed. It is just for show/theater. Otherwise the wording in the 'order' wouldn't be 'anything'.

"A cloth face covering is anything that completely covers the mouth and nose and fits securely on the sides of the face and under the chin."

It may have plenty of holes throughout the mask. This further proves that DOH doesn't care about the transmission of the virus. Just to mandate the "do it or else".

Enough of this nonsense. I'm just trying to communicate with someone other than just a 'Customer Service Specialist' that is just passing junk back. Awaiting the constructive dialogue.

Continuing on my requests for common sense and/or parent choice for masks in schools. Mandates are just asking for push back. I will continue to push back.

Josh Daugherty

<joshua.daugherty.WA@gmail.com <mailto:joshua.daugherty.WA@gmail.com> > wrote:

□ WeeR,

Finally received an email back from WA DOH with more of the same, no answers to my questions. My main question will continue until I receive answers instead of just a 'Customer Service Specialist' responding to my web query with a loosely prepared, blanket statement, that mentions 'keeping the CDC recommendations as of August 5, 2021'.

My question seems to be simple, straightforward and to the point.

- What is Washington's plan/goal concerning the mask

mandates for school-age children? There needs to be a plan besides 'wear the mask because I said so'. (aka mandate)

If they were going with the CDC recommendations, forced masking wouldn't be in our schools.

I am requesting that they at least update the guidance to 'recommended' as the current failed 'plans' make zero sense. There is NO scientific data that has been collected to warrant this abuse across the board. Especially state-wide. As of 13 September, posted on the WA DOH website it shows that 75.1% of residents have at least one dose and 68.1% are FULLY vaccinated against COVID. Of that, King County has vaccination rates of 77.7% (12+). Auburn School District is in King County.

<PastedGraphic-1.png>

The hospitalization rate for those that are school-age is so minuscule, the data you have been collecting doesn't make sense to continue with the mask mandates. How much longer do we need to live under this authoritarian 'leadership' (aka mismanagement) of state resources? I will add to this as we have already received communication from the schools that COVID/common cold/sniffles/flu has popped up in school.

Looking at anyone that I've communicated with concerning this. Fail to plan, plan to fail... Seems spot-on for this situation that we are in!

<https://www.unmaskourkidswa.com>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.unmaskourkidswa.com%2F8>

All I am asking is that we give parents the CHOICE whether to mask/unmask our children.

Looking forward to future constructive dialogue,
Josh Daugherty

To whom this may concern.

What is Washington's plan/goal concerning the mask mandates for school-age children? Is there a plan besides wear them 'because I said so' (aka mandate)? I demand that you update the guidance to still allow for those children that are scared to get sick, wear them, but change the guidance to 'recommended', not mandatory. There is NO science data that has been collected to warrant this abuse across the board. Especially state-wide.

As of 7 September, posted on the WA DOH website it shows that 73.9% of residents have at least one dose and 67% are FULLY vaccinated against COVID. The hospitalization rate for those that are school-age is so minuscule, the data you have been collecting doesn't make sense to continue with the mask mandates.

How much longer do we need to live under this authoritarian 'leadership' (aka mismanagement) of state resources?

<https://www.unmaskourkidswa.com/>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.unmaskourkidswa.com%2F8>

All I am asking is that parents should have the CHOICE whether to mask or unmask our children.

Thus far, I have spoken with the schools, school district and even email coordination with DOH with nothing but passing me nonsense with no proof that our kids are 'super-spreaders'... I look forward to your conversation on this matter.

Concerned parent,
Josh Daugherty

Subject: Public comment on Covid-19 vaccination for public schools

External Email

To the Members of the Board of Health,

I am writing in regard to the board seeking public comment on their consideration to include Covid-19 vaccination in list of required vaccinations for children in the public school system.

I am a parent of two children in Spokane Public Schools and I am admittedly opposed to mandating the Covid-19 vaccination in the schools. Contrary to recent widespread reports, I am sure you are all aware that all of the vaccines are still currently being administered under an Emergency Use Authorization. One condition of the EUA is that the choice to take the vaccine is voluntary. By definition, voluntary would indicate that one cannot be compelled or coerced into a decision. One could easily construe the withholding of public services as government coercion.

Further, the lack of studies on the long term effects of this new vaccine technology and exactly zero accountability for it's manufacturers nor for government agencies like the Board of Health who may mandate it's use, do not instill confidence in the vaccine for use on my children.

I will personally pull my children from the school system before I ever allow the government to dictate what should be a personal medical decision. I urge the board to not place myself nor the other parents of children across the state in that position.

Thank you for your consideration on this matter.

Regards,

Nicholas Scheel

Subject: Opposition to the Upcoming January 12, 2022 Covid-19 Vaccine Requirement Recommendation

External Email

To Whom it May Concern;

I am submitting this email in regards to the upcoming January 12, 2022 decision recommending the Covid-19 Vaccine for school age children.

Public education is funded by taxpayers and should not be withheld from ANY child in Washington State based on their personal or religious beliefs and preferences. Our children deserve equal access to education without discrimination. Segregating our children by forcing parents to make decisions to un-enroll their children in Public Education and find alternate means of education or in many cases, leaving the state completely, will not cure Covid-19. It will only increase childhood depression and anxiety and, as you all should know, even increase suicidal tendencies in Washington State Youth.

Washington State, in my opinion and that of numerous fellow parents I have spoken with in regards to the subject, has operated at an extremely poor level during this pandemic. It has promoted division and supported the isolation of our children by implementing online learning as opposed to in-person learning, and the requirements that have been imposed on our children when they were allowed to return to in person learning are proving to be detrimental to their mental health and well-being even now. I implore you to talk to students at all grade levels and actually see what they are thinking and how they feel being in the situations they are in with the restrictions in place. Given that Washington State has seen a withdrawal of students from their Public Education program over the past two years in excess of 55,000 students, this should be a blatantly obvious indication that the decisions being made that effect the students of Washington are not "Popular". If this becomes a requirement, the number of students pulled from Public will grow exponentially. Washington State is already disregarded across the country with the poor handling of the pandemic and the excessive restrictions that leadership has put in place, don't add any 'Fuel to the fire' by adding yet another layer to this already disgraceful situation.

The Covid-19 virus and it's continued variants are something that we are ALL going to have to live with going forward. It is abundantly clear at this point that vaccines and masking have not solved the issue. It is being reported that upwards of 70% of Omicron infected patients are all vaccinated. I personally know of several Breakthrough cases of Covid-19 in family and friends, and some of them were severe enough to end up in ICU BEING FULLY VACCINATED! The rules for masking, types of masks, etc. change so often a person could get whiplash attempting to keep up with current protocols. My family and I have all had, and recovered, from Covid-19 even with the protocols in place.

I am firmly against the requirement of the Covid-19 Vaccine for our children to attend public school. This is not something that was put forth by a vote of the People of Washington State, nor is it accommodating for all of our children. As a parent of 3 children in Public Education, I am imploring you oppose making the Covid-19 Vaccine a requirement to attend Public School in Washington State.

I thank you for your time.

To Whom It May Concern,

Attached in PDF form is my letter to Washington State Board of Health, sent directly to WSBOH along with multiple elected and official representatives for my community. Respectfully please consider points made in these large decisions coming up for our state.

Thank you,

Rachel Buck

Dear DOH and To Whom It May Concern:

I have a 16 year old daughters' bodily sovereignty I am defending with my comments. She is a straight A student, has fought to conquer the odds to stay active in her school through sports and leadership. And is on an added extracurricular board of students across the state to provide insight to the legislation as to what the students perspectives are regarding policies and proposals.

Our daughter does not want the Covid-19 vaccine. She has had Covid, and thankfully fared well throughout the illness. We are responsible citizens, quarantining over 10 plus times to be considerate of the public around us. But we stand in a legal and moral place to defend her Informed Medical Consent and right to bodily sovereignty, in all things.

I will be BCC some Representatives in my community in this email, for full disclosure.

I understand the discussion with the TAG panel is purely from a medical basis. But I would like to encourage a couple of points for considerations:

- 1) Medical involves psychological and I see this lacking in the panel, happy to be proven wrong in this though.
- 2) With only one panelist from Eastern Washington I would like to present that this is a politically skewed optic out the gate. Eastern Washington often has little voice and say, policy speaking, as to what goes on in our own state. When weighing such a massive advisory vote, one that holds much power, as a constituent of this state I would appreciate more balance on this front.

I do not say this as a personal attack on those picked for this panel. Honestly I do not assume to know your experience and expertise, or be a judge of this. I do assume each person is acting in their own best conscious.

The continued marginalization of half the landmass of this state's population is incredibly frustrating to watch over and over and over in different governing decisions. Including giving unvoted power to regulatory agencies such as the Washington State Board of Health.

An example: Seattle Public School District feels they have the right to make a vaccine mandate request for the entire state and this is then blasted via media. This one school district does not hold the place to make a request above the 295 other districts that make up the OSPI oversight.

- 3) If you do, indeed, continue to push this vaccine, while ignoring the experimental nature of its creation, onto the schools you are directly responsible for an obvious step in marginalization of a demographic with sincerely held religious beliefs.

Marginalization often hides in under the guise of "the greater good." Just look at mass incarceration. People as commodity has gone far enough, just look at the Indian Farmer's and the fight against corporate elite's attack in the last five years.

Marginalization happens in many ways.

- 4) Time will be the true measure that lets our population know if any measure is necessary and when it has to do with our children, time is what is requested. Especially looking at the risk factors

involved, complete lack of long-term studies done, and FDA decision to allow Pfizer to withhold important data in regard to their specific Covid-19 vaccine variation.

We now have evidence that the lockdown measures were not as productive as hoped. Spokane Mayor Nadine Woodward has brought this issue as well as the issue of mental health to the forefront in our community. Sadly, my own sister has been attempting a FOIA request with Spokane Regional Health District and been met with roadblocks.

Her request is the statistics involving drug overdoses and suicide rates from 2020 and 2021. As this data has not been released. So, in the name of transparency, what is this information and why is it not readily available to the public? We can count weekly Covid-19 test numbers but we cannot publicly and accurately check these stats as well? Or make them easily publicly available?

5) The hate I see in our community? Is pushed by Governor Inslee when he heavily insinuates over and over that my family, including many law-abiding citizens with not so much as a speeding ticket, are domestic terrorist. FEMA defines Terrorism as “the use of force or violence against persons or property in violation of the criminal laws of the United States for purposes of intimidation, coercion, or ransom.”

Mr. Inslee’s behavior and continued hateful rhetoric constitutes this definition much closer than mine. I have loved my community and family members boundaries incredibly intentionally throughout the pandemic. Regardless of political view or medical decisions I might add. Mr. Inslee, as the leader of Washington state, cannot in good faith claim the same.

6) If our state legislation and acting agencies decide to continue to push this line, while ignoring ALL of the scientific data, onto our children we are left with little choice but to very seriously consider removing her from the system to defend her rights as an American citizen. We as parents will know then, that the true intent is to persecute, not to act in public health.

As such, we respectfully request vaccine clinics moved OFF school property and to local community centers. This allows the families that would like to participate in the vaccination process close access for their children but respects the boundaries and the families that do not. Placing clinics on taxpayer funded property like the school ignores the mental health of our youth during a devastating time.

7) One of the most beautiful aspects of being a Constitutionalist is that my family’s community is not a specific ethnicity. It holds no line on outside optics. It does not hold people in a class, but rather works to honor each person’s life experience. It includes people from all over the world, that have fled their countries, often fleeing for their lives.

This is my culture and this I feel in my heart. This is shown in our family’s constant attempt to love those around us. To live our life by the Golden Rule. Are we perfect people? Absolutely not, nor would we ever claim to be. But have raised our daughter with these values. And we use these values to make our decision on Informed Medical Consent.

8) In conclusion, I understand it is a difficult place to be in, making these big decisions at this moment in history. But I encourage each person that reads this letter to do some research on a few topics that may seem outside the box. Read Professor Harriet Washington’s Book, Carte Blanche as well as Oneness vs. the 1% by Environmentalist Shavana Shiva and do some soul searching on the lessons

history can teach us. While we are in unprecedented times, we as a population don't need to re-write a script.

One last thing, we beg you as community members, constitutes, and people of this land. Stop searching for ways to control an uncontrollable situation. And start leading by example through bridge building, compassion, and understanding. This is what our great state truly needs. I say this in the name of equality, Love for my community regardless of beliefs, and as a citizen trying to do the same thing on a daily basis.

Sincerely,

Rachel Buck

Subject: COVID vaccine

External Email

To Whom it may Concern,
The COVID vaccine requirement for attendance at school should be left to the parents. It should be treated like the Flu vaccine and an option. Research has shown that you can get COVID with or without being vaccinated. Also, the booster is found to be not effective to "boost" immunity either. With this being said, a healthy child's own immunity will be able to fight COVID on its own without putting a vaccine in them. Kids are not the primary source for being a host of COVID and therefore shouldn't be required to take the vaccine. COVID is viral and not bacteria so vaccines can't fully prevent it. I would hope you would look at all aspects of the science and sides to COVID. In addition, I would hope you would be open minded to all parents opinions and comments around this issue. Public and Private education is a choice as well as a child's health made by the parent not some "rule/law" made by politicians. Forcing parents to get their child vaccinated for COVID to go to school is a bullying tactic for the higher ups to get paid for a vaccine that is not effective. We live in America where freedom of choice should still reign.

Forward

To Board

It is really important to understand the implications of your decisions when you are deciding to mandate an inoculation to children, who are not sick or dying from Covid-19. There is medical terminology to help guide decision making in these circumstances.

The number need to treat or in this case vaccinate (NNT or NNV) differs according to the population that is involved. However, it is also important to understand how this reduces all cause mortality. In the case of the jab, the all cause mortality is not reduced because there are injuries and deaths associated with the jab. For children, myocarditis and pericarditis are both occurring at a higher incidence, especially in boys 12-28 year old. Myocarditis and pericarditis are not benign. The injury to the heart causes scarring of the heart muscle, which worsens with time, sometimes leading to heart transplantation.

For me believing that injuries were happening was the hardest thing to accept. However, if you took the time to get to know the community that is fiercely defending the right to choose, you would start to get to know people who have lost loved ones as a consequence to being jabbed.

Please take the time to read these articles. Your political persuasion may center your thoughts one way. It took me awhile to be able to hear what others were saying. Don't let a family member having a side effect to the jab become the reason why you decide to listen.

Sincerely, Clark County Resident

The Most Important Podcast You Can Hear About COVID-19

Analysis by [Dr. Joseph Mercola](#)

✓ Fact Checked

STORY AT-A-GLANCE

- › Of the COVID-19 deaths in the U.S., none received adequate and/or early-enough treatment. At least 85% of COVID deaths were preventable
- › There are three components to SARS-CoV-2 infection: viral replication, cytokine storm and blood clotting, therefore necessitating a multidrug approach, and treatment must begin early to be effective
- › Research published in 2006 showed hydroxychloroquine reduced viral replication of SARS-CoV-1 (the original SARS virus). It also has well-established anti-inflammatory properties. These two properties help explain its usefulness against COVID-19
- › There were clear intentional efforts to prevent use of hydroxychloroquine against COVID-19, likely in an effort to make the COVID jabs appear necessary
- › You cannot get COVID-19 twice; those with natural immunity have robust, long-lasting immunity. The Pfizer COVID shot, meanwhile, has been shown to have undetectable effectiveness 201 days after the second dose and Moderna's effectiveness reaches zero around day 121

If you could only listen to one podcast to get up to speed on COVID-19, you are in luck as one of the top clinicians in the world on understanding COVID-19, Dr. Peter McCullough, finally made his way to the largest podcast in the world, Joe Rogan and, as expected, it was epic. You will do yourself a serious disservice if you don't watch the entire, nearly three-hour, interview at normal speed.

McCullough is an internist, cardiologist and epidemiologist, and in this podcast, he reviews and summarizes what we know about the COVID jabs. McCullough also discusses the importance of early treatment, which has been universally suppressed and ignored from the start.

He's convinced, and states unequivocally in this interview, that of the COVID-19 deaths in the U.S., none received adequate and/or early-enough treatment. In short, people did not, and certainly don't now, need to die from this infection, barring some serious underlying condition.

It's treatable, and later variants, such as Delta and Omicron, appear generally milder than the original virus, resulting in even easier-to-treat illness. From early on, researchers and clinicians demonstrated that early treatment, be it with hydroxychloroquine, ivermectin or steroids and anticoagulants — in some combination — resulted in far better outcomes and saved lives.

When you just let the infection run its course without treatment, most COVID-19 patients were riddled with blood clots and other complications by the time they were hospitalized. According to McCullough, we know that at least 85% of all COVID deaths could have been avoided with early treatment.

Early Treatment Is Key

In August 2020, McCullough's landmark paper "Pathophysiological Basis and Rationale for Early Outpatient Treatment of SARS-CoV-2 Infection" was published online in the American Journal of Medicine.¹

It was the first published report on how to treat COVID on an outpatient basis and described a comprehensive COVID treatment protocol for frontline doctors. Before this, there were about 4,000 papers discussing the potential benefit of various remedies, but none that actually sought to present a comprehensive protocol for treatment.

A follow-up paper, "Multifaceted Highly Targeted Sequential Multidrug Treatment of Early Ambulatory High-Risk SARS-CoV-2 Infection (COVID-19)" published in Reviews in

Cardiovascular Medicine in December 2020,² became the basis for an AAPS home treatment guide.

Importantly, McCullough and the team of collaborators he put together understood early on that there were three components to this infection: viral replication, cytokine storm and blood clotting, therefore necessitating a multidrug approach.

One drug that gained early attention was hydroxychloroquine, as research published in 2006 showed it reduced viral replication of SARS-CoV-1 (the original SARS virus). It also has well-established anti-inflammatory properties. It's been routinely used in the treatment of lupus, for example. But as explained by McCullough, there were clear intentional efforts to prevent use of the drug against COVID-19.

The U.S. government refused to release its stockpiles, and doctors were told they'd lose their medical license if they used it. The largest manufacturing plant of hydroxychloroquine even mysteriously burned down, and in South Africa, "mercenaries" were breaking into pharmacies and burning the drug.

In addition to that, a fraudulent paper was published in the journal Lancet, falsely stating that hydroxychloroquine was dangerous. "It looked like it was a step to bury hydroxychloroquine as a treatment," McCullough says. When focus shifted to ivermectin, that drug also became inaccessible and was widely vilified as "horse paste" in the mainstream media.

Treatment Was Suppressed for a Reason

Considering the overwhelming success doctors have had in treating the infection with these and other drugs, why aren't hospitals everywhere doing it? Why have health authorities fought against treatment in general, and the use of hydroxychloroquine and ivermectin in particular? In McCullough's words:

"It seems to me, early on, there was an intentional, very comprehensive suppression of early treatment in order to promote fear, suffering, isolation, hospitalization and death. And it seemed to be completely organized and

intentional in order to create acceptance for and then promote mass 'vaccination.'"

The plan to create acceptance for novel mRNA gene transfer technology in lieu of a conventional vaccine by suppressing treatment options has been explained in detail in Dr. Peter Breggin's book, "COVID-19 and the Global Predators: We Are the Prey,"³ and Pamela Popper's book, "COVID Operation: What Happened, Why It Happened and What's Next."⁴ McCullough recommends both, if you want to understand how this was coordinated and planned.

Robert Kennedy Jr.'s book, "The Real Anthony Fauci" also shows, using extensive documentation, that Moderna was working on an mRNA injection for COVID-19 well before the world even knew it existed. He reveals extensive collusion occurred to push this novel gene transfer technology on the world, with devastating effects.

When asked why more doctors aren't using these early treatment protocols, McCullough points out that of the 1 million or so doctors in the U.S., probably only 500 or so actually understand that viable treatments are being suppressed with the intent to drive uptake of the gene transfer shots. Those relatively few who do understand what's going on face censorship and the threat of having their medical license removed if they speak out about treatment.

Questions About Reinfection Linger

A widespread concern that Rogan brings up is whether or not you can actually get COVID twice. According to McCullough, the answer is a hard no. You cannot. You might think you have it twice, because you've tested positive, but we now know that the false positive rate for PCR testing is about 97%.

After intense pressure to produce evidence of reinfection, the U.S. Centers for Disease Control and Prevention finally admitted they don't have a single verified case of someone getting sick with COVID twice.

To prove reinfection, McCullough says, you'd need to have a positive PCR test at a cycle threshold below 28 (not 40 or 45, as is routinely done, which is why the false positive rate is 97%), and a positive antigen immunoassay test to show that you actually had antibodies from the first infection, and a gene sequencing test showing you in fact have the SARS-CoV-2 virus.

What's more, dozens of studies confirm that natural immunity is robust and long-lasting. "So why is there so much resistance to the idea that people have natural immunity?" Rogan asks, to which McCullough replies, "All roads lead to the 'vaccine.'"

Dr. Robert Malone disagrees with McCullough on this issue, pointing to a December 4, 2021, study showing 12% out of a sample of 1,200 individuals experienced COVID reinfection.⁵ In a Twitter post, Malone said:⁶

"I have caught it twice, as has my wife. I was asymptomatic, she was not. This is a rapidly mutating RNA virus. Just like the common cold. The symptoms will not be as severe — but yes, people catch it more than once. Even Delta ..."

Relative Versus Absolute Risk Reduction

Now, when it comes to the efficacy of these COVID shots, the manufacturers have employed a classic strategy to mislead the masses and make the shots sound far better than they actually are. That strategy is looking at relative risk reduction rather than absolute risk reduction.

While the COVID shots boasted efficacy rates between 67% and 95% at the outset, those were the relative risk reductions. The four available COVID shots in the U.S. provide an absolute risk reduction between just 0.7% and 1.3%.^{7,8}

Now, compare that to the noninstitutionalized infection fatality ratio across age groups, which is 0.26%.⁹ Since the absolute risk that needs to be overcome is lower than the absolute risk reduction these injections can provide, mass vaccination simply cannot have a favorable impact. Yet here we are, being told to get used to the idea of getting booster shots at ever-increasing intervals. It just doesn't add up.

Of course, as I've reported on several occasions, research and clinical experience clearly show that the effectiveness of these shots rapidly wanes. Six months after the second dose, your protection is nil. Meanwhile, your body continues producing toxic spike protein for at least 15 months after each dose.

Efficacy Rapidly Wanes

McCullough cites a Swedish study¹⁰ published October 25, 2021, which looked at data from 842,974 pairs, where each person who had received two COVID jabs was paired and compared against an unvaccinated individual, to see if the vaccinated had fewer symptomatic cases and hospitalizations.

Early on, the double-jabbed appeared to have good protection, but that quickly changed. The Pfizer jab went from 92% effectiveness at Day 15 through 30, to 47% at Day 121 through 180, and zero from Day 201 onward. The Moderna shot had a similar trajectory, being estimated at 59% from Day 181 onward. The AstraZeneca injection had a lower effectiveness out of the gate, waned faster than the mRNA shots, and had no detectable effectiveness as of Day 121.

All the while, millions of Americans have already had COVID¹¹ and have natural immunity that doesn't wane in this manner. Yet they are being shunned and fired for not complying with COVID jab mandates. Again, it just doesn't add up. Never before has a vaccine been required for anyone with natural immunity against a disease, and there's good reason for that. It's completely illogical.

Just like you don't need a measles vaccine if you've had measles, you don't need a COVID shot if you've had COVID. In fact, you are at increased risk of adverse events if you do take it. Remember, if you already have natural immunity, you're exposing yourself to the harms of the shot with no hope of benefit.

The Most Dangerous Injections in Medical History

As explained in this interview, the COVID shots are the most dangerous, most lethal drugs ever used — and the U.S. Food and Drug Administration and CDC knew this as early as mid-February, when the deaths reported to the U.S. Vaccine Adverse Events Reporting System (VAERS) hit 182.

Historically, any drug with five unexplained deaths gets a black box warning. At 50 unresolved deaths, it's pulled from the market altogether. None of that happened here. To this day, the FDA and CDC claim not a single death is attributable to the COVID shots, even as the reported death toll is nearing 20,000¹² (including international reports), with half of them occurring within 48 hours of the injection. Eighty percent occur within a week post-injection.

That is simply unheard of. The temporal association is stronger than anything we've seen before. McCullough also cites research concluding that in 86% of cases, there was no other explanation for the death other than the COVID shot.

McCullough points out that in any given year, an average of 150 deaths following vaccination are reported to VAERS. That's 150 deaths from an average of 278 million vaccine doses given.

Here, we had 182 deaths at a point in time when only 27 million doses had been administered. So, you cannot blame it on the volume of shots given. The same trends can be found in other countries' databases as well, such as the U.K.'s Yellow Card scheme.

What's more, vaccine side effects are notoriously underreported, so as staggering as the VAERS data are, they're just the tip of the iceberg. Historically, only 1%¹³ to 10%¹⁴ of adverse effects are reported. For the COVID shots, the underreporting factor has been calculated to be anywhere between 31 and 100. That means that to get a more accurate range, you have to multiply the VAERS number by 31 and 100.

The absolute most-conservative estimate so far is an underreporting factor of five. That estimate came from an FDA whistleblower who used Centers for Medicare and Medicaid Services data to estimate the underreporting in VAERS.¹⁵ According to that

whistleblower, the number of Americans killed by the shots was at least 45,000 as of July 9, 2021. At that time, VAERS reported 9,048 deaths following COVID injection.

Who's at Greatest Risk for COVID Jab Side Effects?

As explained by McCullough, one of the reasons for this massive death toll is the fact that the COVID shot introduces an uncontrolled dose of spike protein into your body — a far greater dose than what you get when naturally infected with the virus. And the spike protein is the most lethal part of the virus. It's responsible for the most problematic symptoms of infection.

So, the shots are killing the same people that would be in dire straits were they infected by the virus. It's also killing some who would likely fare OK with the wild virus but cannot handle the excessive spike protein load produced by the COVID shot.

Consistent Data Point to Clear and Present Danger

As noted by McCullough, we have a very clear safety signal from VAERS. We also have clear biological plausibility, meaning we can explain why and how people might be harmed by these shots. The data are also internally and externally consistent, within VAERS and databases in other countries. The same patterns are seen everywhere.

Normally association does not mean causality unless very specific criteria are met, and in the case of the COVID jabs, those criteria are indeed met. "We've fulfilled what's called the Bradford Hill criteria for causality," McCullough says. In other words, we have evidence that the injuries and deaths are not accidental. The COVID shots are indeed injuring and killing people at unprecedented rates, despite what the lying CDC states.

Myocarditis Will Likely Be Widespread

Interestingly, the shots appear to harm men and women differently. Women are having far higher rates of neurological injuries, whereas boys and young men account for some

80% of myocarditis (heart inflammation). Just how bad is the myocarditis wave?

Research published in 2017¹⁶ calculated the background rate of myocarditis in children and youth, showing it occurs at a rate of four cases per million per year. Assuming there are 60 million American children, the background rate for myocarditis would be 240 cases a year.

How many cases of myocarditis have been reported to VAERS following COVID injection so far? 16,918 as of December 3, 2021,¹⁷ and it's going up by several hundred to a couple of thousand every week. We're also seeing myocarditis in adult men.

“ My fear is, some of these kids who develop myocarditis will be in the 13% category where they have progressive left ventricle dysfunction and heart failure. ~ Dr. Peter McCullough ”

"Doctors have never seen so many cases of myocarditis," McCullough says. "It is frequent, and it is severe." Patients require heart medication, and must remain sedentary for extended periods of time. While myocarditis is typically a nonfatal adverse event, it can shave years off your life.

Research published in 2019 showed 13% of myocarditis cases ends up with progressive heart failure. Their hearts just never fully recover from the damage. In the study, another 36% improved but never fully recovered.

"My fear is, some of these kids who develop myocarditis will be in the 13% category where they have progressive left ventricle dysfunction and heart failure," McCullough says.

While we don't yet know exactly how COVID jab myocarditis compares to naturally-occurring myocarditis, the data we currently have suggest the damage incurred by the spike protein is rather severe.

According to McCullough, 86% of youth who develop myocarditis in response to the jab are sick enough to require hospitalization. Research also shows young boys are far more likely to be hospitalized with myocarditis than they are being hospitalized with COVID-19, McCullough says.

Reject Boosters

If you've taken one or two COVID jabs months ago and nothing bad happened, count your blessings. You're among the lucky ones. If you persist in taking boosters, however, your luck is probably going to run out at some point. It's really only a matter of time before the amount of spike protein in your system overwhelms it, producing noticeable damage.

Again, evidence suggests the spike protein may remain for 15 months post-injection. McCullough believes it will last at least a year after each dose. If you start getting boosters every three to six months, you're never going to get rid of that spike protein.

You'll be adding more and more with each dose, and it's the same spike protein that causes problems in COVID-19. If you fear COVID-19, you ought to be just as fearful of the COVID shots, if not more so, as you end up with far more spike protein from the shot than you do from the natural infection.

At this point in time, the evidence is clearly weighing against the COVID shots. They're causing far more harm than good, especially among children, who are not at high risk of dying from COVID-19 in the first place.

Subject: Covid-19 Vaccines for Children

External Email

As a citizen, father, and grandfather residing in this state I want to voice my objection to mandatory vaccinations of children.

I'm a retired biochemist/chemist and have done a great deal of independent research on these EAU , mRNA vaccines and booster shots which indicate they are reactive, short-term , temporary solutions which do not prevent viral infection nor prevent viral mutation.

They are a perpetual money making machine and investment for Big Pharma and its investors.

Attached is a brief summary of my research along with several colleagues individual research with references, which we present as evidence against vaccinating children.

Utilizing Repurposed Drugs to Treat COVID-19 Virus

By E.J. Ledet and Dean L. Gano

January 1, 2021

In the latest edition of The World Health Organization's [*Ongoing Living Update of Potential COVID-19 Therapeutics: Summary of Rapid Systematic Reviews*](#),¹ they say there are more than 200 therapeutic options or combinations thereof that are being investigated in more than 1,700 clinical trials treating COVID-19 infection. In this November 30, 2020 review they examined 58 of these therapeutic options. Among the therapeutics being studied are Vitamins C & D, and manmade drugs like Hydroxychloroquine, Remdesivir, and Ivermectin.

So typical of everything our trusted health care institutions do, their analysis is anything but objective or scientific. At the core of their failures is the total lack of evidenced based causal analysis, but it is much more than that. They provide declaratory statements like: "the body of evidence on hydroxychloroquine (HCQ), showed no benefit in terms of mortality reduction." But, when we look more closely at their evidence for this statement, we find they only looked at 30 studies and of those, only 6 showed that HCQ worked to prevent infection. So, given their "body of evidence," this is a valid statement.

However, had they looked at the entire body of scientific evidence, and performed a simple search for "hydroxychloroquine effective treatment for coronavirus," at the National Institute of Health (NIH) website, PubMed they would find over [800 scientific papers](#)² have been written on this subject and most of them show it works. When you find a review that says it doesn't work, you nearly always find the study patients are in the late stages of COVID-19 infection, where no antiviral drug can be expected to have much effect, and/or no Zinc was administered. As [Dr. Zelenko](#)³ has said, Hydroxychloroquine is the gun and Zinc is the bullet, yet these people don't seem to know anything about these causes.

So, given this clear observation that they cherry-picked their evidence, what's going on and where can we find the real science on this subject?

The Real Science

First and foremost, the problem here is the total failure of all the government-controlled health organizations to provide the simple causal relationships surrounding these viruses so you, the normal citizen, can make up your own mind. This is how life works! From the time we start learning about the world as small children, we observe, test, and determine the many causal relationships that guide us down the path to success. Like learning that fire is hot and will burn you if you don't avoid it. Or, that if people lie to you, you can't trust them in future interactions.

So, what are the causal relationships of a coronavirus so we can act accordingly and prevent infection? Just like we learned to avoid fire to prevent getting burned. It can't be that complicated, can it?

Indeed, it is not that complicated, but you have to be curious and look for all the causes, not just the ones that support preconceived ideas or support political propaganda. When a coronavirus enters the body, it tries to get inside a cell somewhere on the surface of the respiratory tract so it can reproduce, and we know that nose cells are likely the [key infection source for COVID-19](#).⁴ If the virus does enter a cell, it replicates, kills the cell, and spreads the newly produced viruses through breathing or coughing. When you breath in, the viruses go deeper into the lungs and the process repeats itself. As the immune system responds with too many killer T-Cells, your lungs fill with fluid and you suffocate. But this doesn't happen to healthy young people, so what's going on?

Our natural immune system defense against all viruses occurs when compounds in the foods we eat (called ionophores), from Vitamins like C, D, and E, flavonoids like Quercetin, or hormones like Melatonin create a slightly basic/alkaline environment in and around the cell. This alkaline environment disassembles the virus proteins rendering them harmless. Also, the body is made up of many [epithelial cells](#)⁵ found on the surfaces of our bodies that act like gatekeepers; keeping out environmental problems like dirt and pathogens but allowing healthy cell biology to function. One of the mechanisms these special cells use is to allow zinc to attach to a specific receptor site on the cell's surface, like a little door entrance, called an ACE-2 receptor site. (ACE stands for Angiotensin-converting enzyme which acts as a biological catalyst in normal cell biology.)

This site is used as a primary defense to prevent a virus from entering a cell, by keeping it in the alkaline environment long enough to disassemble the virus. The Zinc transporters, called ionophores, that create this alkaline environment also help Zinc get inside the cells through this "door." Once inside, the zinc acts as a backup defense mechanism to disassemble the virus if they get inside.

But this is only one way Zinc is used to protect us. As defined in this NIH study, [The Potential Impact of Zinc Supplementation on COVID-19 Pathogenesis](#),⁶ July 2020, Zinc works in nine different ways to prevent a viral infection and maintain a healthy immune system. Making sure we have enough blood serum zinc is most important in the elderly and patients with various inflammatory and autoimmune diseases. And obesity, which is present in 40% of Americans, causes Zinc deficiency and may account for why deaths are so high in the US.

So, because Zinc is so important to a healthy immune system we can see why older and unhealthy people, who are zinc deficient, are so much more likely to die. All of the COVID-19 [co-morbidity causes identified by the CDC involve Zinc-deficiencies](#).⁷ They either cause it, like obesity, or are caused by it, like old age, and their treatment involves Zinc-ionophores and Zinc supplements. Since Zinc is involved in over 300 bodily functions it should be no surprise that such a deficiency could cause so many problems.

So, in summary, the cause of death is uncontrolled virus replication, which is caused by a failure of the immune system to stop the virus from entering our lung cells. This failure

is caused by a lack of zinc and zinc ionophores, which is caused by many medical conditions, the greatest of which is old age.

When 97.5% of the COVID-19 deaths are people over 45 years old and 94% of those who die have an average of 2.6 comorbidity causes linked to zinc deficiency you know there has to be a causal connection and now you know what it is, so take action to protect yourself from this horrible disease.

Prevention

Now that we know how the immune system works to prevent infection, we know that the first line of defense is Zinc and zinc ionophores on the outside of our cells. Please note, you do not “kill” a virus, because it is not a living organism; it is just a protein molecule made of Ribonucleic acid (RNA), a basic building block of life, and by subjecting it to a low-acid environment called a “base compound” it disassembles and falls apart. This occurs when enough zinc ionophores like Vitamins C, D, and E and/or Zinc are present in the blood stream.

But there are other kinds of Zinc ionophores. In fact, there are over two billion of them and they have been identified in the [ZINC20 database](#)⁸ provided by the American Chemical Society funded by a subsidiary of NIH (National Institute of Health). When you look at this database you will find that nearly all of the proposed synthetic drug treatments for the COVID-19 virus, like Hydroxychloroquine, Chloroquine, Remdesivir, and Ivermectin and other natural substances are all listed as zinc ligand (metal transporter) ionophores. And they work by first disassembling the virus via pH modifications on the outside of the cell or if that fails, they take zinc inside the cell to stop the replication process. In effect, you have two compounds, zinc and zinc ionophores fighting both outside and inside our cells. When you are young, this all happens naturally and is why to date, [only 147 children under the age of 18](#)⁹ have died from COVID-19 in the US.

While we have heard a lot about drugs like Hydroxychloroquine and Remdesivir, we haven't heard much about Ivermectin, which is a repurposed drug normally used as a medical preparation that effectively copes with many kinds of parasites. It is a prescription drug used to treat lice, scabies, as well as onchocerciasis (river blindness) and other nematodes in humans and animals. It is applied externally in a cream and internally as a pill, depending on the disease.

Appearing as a witness on Dec. 8, 2020, before the Senate Committee on Homeland Security and Governmental Affairs—which held a hearing on “Early Outpatient Treatment: An Essential Part of a COVID-19 Solution”—Dr. Pierre Kory, President of the [Frontline COVID-19 Critical Care Alliance \(FLCCC\)](#),¹⁰ called for the government to swiftly review the already expansive and still rapidly emerging medical evidence on Ivermectin.

The data shows the ability of the drug Ivermectin to prevent COVID-19, to keep those patients with early symptoms from progressing to the hyper-inflammatory phase of the disease, and even to help critically ill patients recover. [Dr. Kory testified](#)¹¹ that Ivermectin is effectively a “miracle drug” against COVID-19 and called upon the government’s medical authorities—the NIH, CDC, and FDA—to urgently review the latest data and then issue guidelines for physicians, nurse-practitioners, and physician assistants to prescribe Ivermectin for COVID-19.

In the process of learning about Ivermectin, the Frontline COVID-19 Critical Care Alliance created, based on feedback from doctors from around the world who were treating COVID-19 patients, a protocol for treatment called MATH+ and published a paper in the Journal of Intensive Care Medicine titled: [Clinical and Scientific Rationale for the “MATH+” Hospital Treatment Protocol for COVID-19](#).¹²

MATH+” stands for Methylprednisolone, which is a corticosteroid and zinc ionophore; Ascorbic acid (Vitamin C), which is a zinc ionophore; Thiamine (Vitamin B1) also a zinc ionophore; Heparin, which is a blood thinner and zinc ligand/ionophore; and the “+” stands for hospital care and co-interventions including Ivermectin, which is a strong zinc ionophore; Vitamin D and Melatonin, which are also zinc ionophores; Zinc, and Famotidine which is an antacid and zinc ligand/ionophore.

Notice how all of these therapeutics provide the exact causal defense our natural immune system uses (Zinc and Zinc Ionophores) to effectively fight the virus when you are young and healthy! It should be no surprise then, that they are highly effective at treating and preventing COVID-19 infection in the rest of the population. However, Big Pharma does not disclose that all of these synthetic drugs are zinc ligand ionophores because they can’t make big money selling zinc or these repurposed existing drugs that have been around for decades.

Given this causal evidence that supports the use of the MATH+ protocol, it begs the question of why our trusted scientific institutions have failed to follow the science and instead provide obfuscation and non-causal narratives focused on personalities and politics. Remember how the corporate media attacked the use of Hydroxychloroquine simply because President Trump said it works after hearing the real science? Instead of following the evidenced-based science, they proceeded to sell fear and hate and killed hundreds of thousands of people in the process.

Incompetence or Planned?

In every negative analysis of these repurposed drugs, the authors totally fail to acknowledge the causal relationships between the virus and immune system like we just laid out for you. Instead, they focus on presenting a narrative about outcomes of specific studies that have nothing to do with the causes of the problem. So, the question becomes: how can you possibly provide a solution to any problem if you don’t understand and state the causal relationships of the event? You can’t, and that means they are grossly incompetent or deliberately deceiving us. This is not rocket science.

We all know, as a basic human strategy, that to solve a problem you first have to know what the causes are; and they never do this in these phony studies.

Also, given that effective problem-solving is not taught by our education system, it is possible that these people are just ill-trained incompetents, but there is another possibility and we need to explore it.

Just ask yourself, if the anti-HCQ or anti-Ivermectin papers were actually peer reviewed why didn't the peer scientists ask the same simple questions we have? Like, why did they ignore the causal relationships we have presented; that are common knowledge, supported by hundreds of studies? Why didn't they check the blood-serum Zinc level of the patients in their study? Because if they had, they would have probably found that most of those who responded well to HCQ or Ivermectin, had high blood serum Zinc levels and those who did not respond well, had low levels of Zinc.

And why didn't they question the supposed adverse effects of HCQ, when we know that not only is HCQ not dangerous, it is safer than Aspirin. A [study at Oxford University](#)¹³ of 956,000 people from all over the world showed no deleterious effects when recommended doses are used.

And why are our trusted medical journals printing false information? For example, the Journal of the American Medical Association (JAMA) [published an article](#)¹⁴ claiming HCQ didn't work and also could cause heart rate problems and should not be used without medical supervision. Problem is, they used 400mg twice a day and **did not use Zinc** in their treatment. Toxic doses that are 14 times what is recommended equals toxic results.

And once again, on May 22, 2020, *The Lancet*, a highly respected online medical journal also published a paper saying HCQ was ineffective and dangerous. Because both *The Lancet* and JAMA studies reported that HCQ is dangerous, the FDA rescinded its emergency order allowing HCQ to be prescribed for COVID-19. This also caused several state governors to issue orders to local pharmacies not to fill HCQ prescriptions ordered by many board-certified Doctors for their COVID-19 patients. Something that has never happened before and certainly resulted in more unnecessary deaths.

Also, *The Lancet* finally asked for a detailed peer review regarding the article they published on May 22, 2020 and as reported in [WebMD](#)¹⁵ they retracted the article because the authors would not provide data that could be adequately peer reviewed, and it was eventually found to be completely false; so at least someone is following scientific protocol. But it speaks volumes to how corrupt the scientific peer review process is. Let's look a little closer.

Whistle Blowers

Several Family Doctors, who have successfully treated many COVID-19 patients, came out in public to question the path our government officials have led us down. One of

them is Dr. Simone Gold, who [exposes the truth about Coronavirus and Hydroxychloroquine](#).¹⁶ These doctors fully understand the causal relationships and hence know the truth.

Also, there are over 50,000 medical professionals from all over the world who are focused on preventing deaths and they have signed the [Great Barrington Declaration](#)¹⁷ asking our government officials to wake up and focus on preventing death. Among other things they state:

Current lockdown policies are producing devastating effects on short and long-term public health. The results (to name a few) include lower childhood vaccination rates, worsening cardiovascular disease outcomes, fewer cancer screenings and deteriorating mental health – leading to greater excess mortality in years to come, with the working class and younger members of society carrying the heaviest burden. Keeping students out of school is a grave injustice.

Also, in an article by the [Alliance For Human Research Protection](#)¹⁸ on June 5, 2020, they report that Dr. Philippe Dousty-Blazy, the former French Health Minister, publicly stated that *The Lancet* and the *New England Journal of Medicine* editors admitted to being pressured by pharmaceutical companies to publish certain results.

When *The Lancet* editor Dr. Richard Horton was asked why it initially published the discredited article discussed above, he said: “*If this continues, we are not going to be able to publish any more clinical research data because pharmaceutical companies are so financially powerful; they are able to pressure us to accept papers that are apparently methodologically perfect, but their conclusion is what pharmaceutical companies want.*”

Also, Marcia Angell, former Editor-In-Chief of the NEJM writes in her 2004 book "The Truth About the Drug Companies": “*The combined profits for the ten drug companies in the Fortune 500 (\$35.9 billion) were more than the profits for all the other 490 businesses put together (\$33.7 billion) [in 2002]... Over the past two decades the pharmaceutical industry has moved very far from its original high purpose of discovering and producing useful new drugs. Now primarily a marketing machine to sell drugs of dubious benefit, this industry uses its wealth and power to co-opt every institution that might stand in its way, including the US Congress, the FDA, academic medical centers, and the medical profession itself.*”

In a recent [open letter](#)¹⁹ to Sir. Anthony Fauci, three board certified doctors made it very clear that he has grossly mishandled the pandemic response by asking him 122 very pointed questions highlighting his inconsistencies, and concluded the following:

“Americans must not continue to die unnecessarily. Adults must resume employment and our youth return to school. Locking down America while awaiting an imperfect vaccine has done far more damage to Americans than the coronavirus. We are confident that thousands of lives would be saved with early treatment of high-risk

individuals with a cocktail of hydroxychloroquine, Zinc, and azithromycin. Americans must not live in fear. As Dr. Harvey Risch's [Newsweek article](#)²⁰ declares, "The key to defeating COVID-19 already exists. We need to start using it."

More evidence to support what these leading Physicians said can be found in what the Big Pharma Company "Gilead Sciences" has done. Their magic medicine, which the very reverend Dr. Anthony Fauci wholeheartedly endorses, is Remdesivir and they have put a lot of money pressure on MDs, Medical Journals, Press, Academia, NIH, WHO, and the CDC to discredit HCQ - even though it has 65 years of safe use as a malaria drug and 40 years of safe use to treat lupus and some forms of arthritis.

[Gilead contributes big money](#)²¹ to the [income of 20% of the National Institute of Health](#)²² (NIH) Board Members and since Dr. Fauci heads the NIAID, one of 27 institutes that make up the NIH it might be hard for him to contradict them. And, oh-by-the-way, he is [not required to disclose any ties to Big Pharma](#).²³ Gilead also funds Academic Medical Research and as we learned above, cleverly influences Medical Journal Publishers.

Gilead, being focused on money not saving lives, has spent hundreds of millions of dollars in research, marketing, and propaganda, to sell its 5-day injection treatment for \$2,340 versus \$25 or less for HCQ pills that can be bought over-the-counter in most of the world.

Bottom Line

Given what we know about how simple it is to treat and prevent COVID-19 infections using off label medicines and easily available compounds that mimic how a healthy immune system works, why are our trusted leaders not telling us this? Who created and spread this virus and why? And while we don't have evidenced based causes to answer these questions, we do know one thing. We still live in a free country, for now, but if "we the people" continue to act like sheep, all of our freedoms will be taken away, so we must act now. Please do everything you can to get this simple solid science out to everyone you know and let your leaders at every level of government know we are not going to accept their phony narratives and lying anymore!

COVID-19 “ Experimental” Vaccines

You have the right to make an informed decision about your health and your future and you may be asking: Should I take this experimental vaccine? Here are a few facts you should consider to help you make an informed decision.

Facts:

1. According to the Pharmaceutical Companies themselves, these vaccines may not prevent the SARS-CoV-2 virus: Evidence:
 - a. From the [Moderna](#) and [Pfizer](#) Vaccine Fact Sheets: *The (Moderna/Pfizer) COVID-19 Vaccine is a vaccine and may prevent you from getting COVID-19. There are no FDA approved vaccines to prevent COVID-19.*
 - b. However, the [handout](#) you get when they give you the shot, says it “...has been authorized to prevent COVID-19”, so they are lying about it. They are experimental and have been approved by FDA and CDC via an Emergency Use Authorization (EUA) but have not been fully tested, so are not proven safe.
2. These vaccines are experimental compounds that use “synthetic messenger RNA (mRNA)” housed in fat cells. In 2005 an [animal study](#) was done with SARS-CoV-1 mRNA vaccines on ferrets. Because of major issues, the SARS-CoV-1 vaccine was not further developed.
3. In many previous [clinical trials since the 1960's](#) attempts to [vaccinate against Respiratory Syncytial Virus](#) (RSV) (a pneumonia type virus), [Dengue](#), SARS and MERS, the studies each failed during the animal phase. [Cats, ferrets, monkeys, and rabbits each and every time experienced Antibody Dependent Enhancement](#) (ADE), also known as pathogenic priming or a cytokine storm. This occurs when the immune system creates an uncontrolled and overwhelming inflammatory response upon being confronted with the pathogen in the real world, and the outcome, tragically, is death. The same immune system overreaction took place in a number of infants in [clinical trials who received an attempted RSV shot](#), as well as some six hundred Filipino children who died following early vaccination against Dengue Fever, so [this outcome remains a viable concern today](#).
4. Big Pharma has asked for the normally required animal studies for the CoV19 vaccine to be waived. It was waived for EUA purposes, so there have been no long-term animal studies to see if this could happen with these new mRNA vaccines. WHY?
5. Because these vaccines may or may not prevent infection, and as [some reports show](#), only reduce symptoms, why take something that does not **prevent** the infection in the first place. It is a proven fact, with [hundreds of scientific studies to prove it](#), that Zinc and Zinc ionophores can prevent or mitigate infection in the first place; take them as supplements and you are protected. [The CDC recently said that 80%](#) of all people who were infected with COVID-19 were deficient in Vitamin D, another Zinc ligand (metal binding) ionophore (transporter). And this helps explain why Sub-Saharan Africa and other countries where most people are in the sun a lot [only have marginal deaths from this virus](#).
6. Hydroxychloroquine (HCQ) is a 65-year-old drug that has been shown [to stop an infection](#) if taken within the first 2 – 7 days of getting symptoms from COVID-19. So, if you are taking your preventative Vitamins like C, D, E and Quercetin, and/or other supplements like Melatonin plus Zinc, and for some reason this doesn't prevent infection, you can stop it with Ivermectin + zinc; which is [readily available online](#).

COVID-19 “ Experimental” Vaccines

7. Other synthetic drugs like Budesonide, Dexamethasone, Ivermectin as well as natural substances (i.e., vitamins, flavonoids, amino acids, and hormones) can be found in the Pharmaceutical Zinc20 database, a database funded by a subsidiary of NIH. This database is comprised of ligands, which carry metals like Zinc, Calcium and other micronutrients present in our blood serum and transport them across cell membranes into the body of the cell (cytoplasm) to help our immune system fight infection. Like HCQ, these synthetic drugs need zinc and other micronutrient metals to work. [Dr. Zelenko](#) uses the analogy “the drug is the gun and zinc is the bullet” which is essential to stopping the viral reproduction and resulting infection.
8. Ivermectin is a proven drug for treating all three phases of the COVID-19 disease. Perhaps the best proof is found in India where one [province distributed Ivermectin](#) to most citizens and now they have very few cases and no deaths from the virus. Given such a useful therapeutic exists, it is illegal to authorize the use of vaccines, yet the psychopathic leaders do it anyway.
9. Because these “Vaccines” are unproven experimental substances, we won’t know what side effects may occur for months or years to come, but it may result in a long-term unnatural human manipulation of our DNA building blocks. Do you really want to take that risk or risk your children’s lives? Especially since:
10. There is no pandemic. The number of deaths from COVID-19, [which is highly inflated](#), is no worse than a bad flu season. And your chances of dying from it, even if you do nothing to protect yourself as defined in #5 and #6 above, are [very small according to CDC data](#). For children 17 and under they are 154 times more likely to die from something else. As of April 17, 2021, only 266 children have died with COVID-19. Not a single healthy child has died from COVID-19 alone. If you are under 64 years old, your chance of surviving is 99.99%.
11. There is not a cold or flu season, there is a vitamin D deficiency season. Colds and flues occur when the sun is low in the sky and we don’t get enough of it. Or if you live in a big city, you don’t get enough sun all the time and big cities are where most of the COVID deaths have occurred. Take your Vitamin D supplements and your immune system will thank you.
12. Since both experimental vaccines are EUA, both Pfizer and Moderna are indemnified from all legal action resulting from patients experiencing side effects; including death. Since they assume no risk, you are the one who takes all of it! And according to [Dr. Sherri Tenpenny](#) that is not a good idea.
13. According to [Dr. Richard Fleming](#), Ph.D, MD, JD, a renowned cardiologist and researcher, there is a chance that the mRNA from the vaccine can be incorporated into your human DNA by action of the [reverse transcriptase enzyme present in the vaccine](#). This may affect your auto immune system and result in various auto immune diseases. However, for all you who are taking zinc supplements + ionophores and decide to get vaccinated, Dr Fleming stated that he believes Zinc does appear to interfere with the mRNA process of the vaccines to make the spike protein. This means it will probably reduce the symptoms you can get, so make sure you are taking them.
14. The vaccine nano particles of lipid/fat composition, in which the mRNA is transported into your cells, has never been used before in human trials and long-term health effects have not been determined. These lipid nano particles bind with the normal fats in cell

COVID-19 “ Experimental” Vaccines

membranes and allow [entry of thousands of the synthetic mRNA vaccine into your muscle cells](#). Unlike the virus RNA which has to enter through the ACE-2 receptors found on cells, the nano particles create new pathways into cells. Because the ACE-2 receptor sites are where the normal entry of the virus occurs, bypassing this path means a greater amount of mRNA can enter the cell producing increased amounts of the spike protein exacerbating the immune response to the virus. This increased immune reaction can produce the very InflammoThrombotic Response (ITR) responsible for so many deaths. Again, long-term health effects are not known since long-term studies in lab animals have not been conducted. We humans have become the lab rats, and many doctors are reporting large increases in the number of cancer cases since the vaccines started.

15. The CDC [VAERS database](#) only captures about 1% of all the adverse reactions to vaccines, and so far the Pfizer vaccine has 1,218 blood clot reports, Moderna has 1,034, and J & J has 1,000. Therefore, blood clot disorders reported totals 3,272, so if the 1% is accurate, this would mean 327,200 people have had this problem from the vaccines.
16. Like real lab animals you cannot sue these pharmaceutical companies for suffering from any side effects after taking these experimental vaccines. However, companies requiring CoV19 vaccinations as a requirement for employment may be subject to legal action since it violates our civil rights. For an example of a law suit against the government go here: <https://factcheckedorg.files.wordpress.com/2021/09/joseph-jensen-lawsuit.pdf>
17. It's against the [Nuremberg code](#) to force vaccinations on a person, and [informed consent](#) overrides public policy. Federal law prohibits employers and others from using vaccines under EUA as a [condition](#) of employment.
18. For 35 more facts on the potential dangers of these vaccines, go to [No Jab For Me](#).
19. Or, for 18 more reasons not to get these Experimental Vaccines see: [18 Reasons I Won't Be Getting a Vaccine](#) by Christian Elliot.
20. The choice to take an experimental EUA COVID-19 vaccine is yours to make. Hopefully we have given you the facts to make a better-informed decision.

Good luck and good health to you all.

Dean Gano and EJ Ledet; February 19, 2021; Updated August, 2021; Updated September 22, 2021.

Depiction of Novel Corona Virus Infectious Disease 2019 (CoVid 19 aka SARS CoV 2)

Problem: CV19 Inhibits Human Body's Immune Regulatory Response/Defense System.

Where: Primary Lungs and Secondary other major organs and nervous system.

When: 2-14 days after Initial infection date.

Significance : The human body's immune defense is compromised leading to prolonged illness and high mortality in populations with previous underlying inflammatory, immunosuppressive diseases/conditions: Elderly, Afro/Native Americans ; Obesity, Smokers, Alcoholics, Addicts, HBP, Diabetes, Arthritis, Heart Disease, Arteriosclerosis, Stroke/Ischemia, Blood vessel inflammation, Cycle Cell Anemia, Cancer, Lupus, MS, AIDs, Nephritis, Kawasaki disease, etc.

Zinc is vital to promoting healthy hair, skin, and nails and is required for a proper sense of taste and smell. Zinc plays an integral role in immune function, protein synthesis, wound healing, DNA synthesis and cell division and is involved in over 300 regulatory processes. Zinc is also important for lipid, carbohydrate, and protein metabolism, as well as cell signal transduction, and reduction/oxidation (redox) regulation. In males, zinc has been shown to protect the prostate gland from infection and enlargement, which has been linked to being a risk for prostate cancer. In females, zinc can help treat menstrual problems and alleviate associated symptoms. Zinc may also protect from night blindness and prevent the development of cataracts. Children need zinc to grow, maintain a healthy body weight, fight off diseases such as pneumonia, diarrhea and diabetes, as well as shorten the length of the common cold.

Evidence: shown Zinc transported across SARS CoV 1 infected cell membranes using non protein, synthetic ionophore , carrier molecules has been to inhibit viral RNA reverse transcriptase (RT) enzyme and prevent virion reproduction in vitro.

Hypothesis: CV19 inhibits zinc transport across infected cell membranes leading to Zinc Immuno regulatory deficiencies causing initial acute exacerbation of chronic obstructive pulmonary disease and secondary acute exacerbation of heart, kidney, blood vessels, brain, large intestine, skin, joints, and nervous system exemplified by cytokine storm and inflammation.

Causes: Low blood serum zinc concentration/availability.

Inhibition of zinc zip protein carrier "ionophores" which transport zinc across cell membranes for human DNA/RNA synthesis, cellular control, and immune response.

Solutions : Increase blood serum zinc through proper diet, digestion, and gut flora; avoid phytate rich foods; eat zinc rich foods; supplement zinc.

Supplement/administer "non protein" Zinc ionophore carrier molecules:

A. Synthetic, Big Pharma Drugs like Pyrithione, Hydroxychloriquine, and/or other synthetic zinc ligand-ionophores.

B. Natural fruit and vegetable polyphenol flavenoid ionophores like Quercetin, Reseveratrol, Curcumin, ECGC.

Effective: Timely Solutions Implement Zinc plus non protein ionophores to transport zinc across infected cell membranes and inhibit viral RT, prevent virion reproduction, and restore human cell DNA and RNA synthesis, cellular control, and immune regulatory response/defense.

Subject: Public Comment Covid-19 Vaccine Requirement

External Email

To whom it may concern,

As a parent of four boys ranging in age from 8-15 and as a junior high and high school teacher I am adamantly against making the COVID-19 vaccine a requirement for public education.

If my family is required to obtain the COVID-19 vaccination in order to obtain public education/participate educational extra curricular activities or as a employment requirement then my children will be removed from public education and I will no longer be employed in public education.

Regards,
HaLee Walter

Subject: Public Comment for January 12th SOH meeting on school vaccine mandate

External Email

Dear Members of the State Board of Health,

My name is Erica Teodoro and I am a resident of Fox Island, Washington. I am writing to you today that you might consider my comment when you are meeting later this month to decide whether or not to mandate the Covid-19 vaccine for school attendance in the fall.

I would ask please that you DO NOT mandate a covid-19 vaccine for school attendance next fall.

I do not have a problem with the vaccine per say and I am certainly not anti-vax. However, I do not believe that this vaccine qualifies as a vaccine and therefore cannot be treated as such when creating requirements for school attendance.

By definition, a vaccine is: any preparation used as a preventive inoculation to confer immunity against a specific disease, usually employing an innocuous form of the disease agent, as killed or weakened bacteria or viruses, to stimulate antibody production. As we have seen in the past month and ongoing, the covid-19 vaccine has failed to confer immunity to a majority of those who have received it. If this vaccine does not do what a vaccine is supposed to do, I do not see how you can mandate that students receive it before they are allowed to go to school.

Until this point, my three children have received all of the recommended vaccines so as to participate fully and safely in the school system. When the covid-19 vaccine provides them with the same immunity to covid that the other vaccines have provided them with against diseases such as chicken pox, measles, mumps, rubella, etc., then I will consider vaccinating my children against Covid. Until then, it seems unreasonable to demand parents inject their children with a vaccine that so far has failed to offer any measurable immunity.

Considering what we know today, groups of fully vaccinated people are contracting and passing on Covid-19, even if there is to be a completely vaccinated school, teachers, students and administration, that would not prevent Covid from making its rounds through that group of people and then home to their families and then on to society.

I again request based on this fact alone, that you DO NOT mandate a covid-19 vaccine for school attendance next fall.

I feel like my request is reasonable and I would appreciate if you would consider it when you gather to discuss this soon.

Thank you for your time and consideration,

Erica Teodoro

Please do NOT vote to require a Covid vaccine for school attendance. There is too much conflicting scientific data regarding the effects of the vaccine and the side effects of the vaccine.

It has been proven that the vaccine does NOT prevent infection. The vaccine does NOT eliminate the virus.

This is unprecedented that we would require a vaccine that does not prevent the spread and contagion of the disease.

Thank you.

Thank you for the opportunity to be in on the Zoom meeting. I am encouraged that you will be open minded when making this decision and consider various sources of information. I am a concerned grandparent. I had covid (Delta) so I am aware of what it is like. Fortunately, I had early treatment information via some of the nation's top pulmonologists which made a big difference in how well I fared.

Determining whether to impose a covid vaccine mandate for children should not be a complex thing. It should be as simple (and accurate) as to simply say NO. This must be voluntary. The science, if it is followed properly, demonstrates there is no reason all

children need these vaccines. The risk benefit analysis does not warrant it and they are not spreaders. If my grandchildren are representative of how this virus typically manifests in their age group, and from what I have been able to glean from researching they are, then covid does not pose a serious threat to the average healthy child.

However, there is significant emerging evidence that these vaccines are potentially harmful to children, more harmful than their having a covid infection. Physicians who have never or rarely seen myocarditis in children are seeing significant occurrences of it in children who have received these vaccines. Many are afraid to speak out as some have lost their medical license for doing so. One of the children in the vaccine trial has significant neurological damage and that information is being covered up. The legal papers are attached.

To put a family in a position to force them to do something counter to what they might otherwise choose and chance maiming their child is unethical. The choice must remain with the parents and children should not be shut out of school for not having these vaccines. Children are not dying in significant numbers from covid, flooding the hospitals with covid infections, or contaminating others.

It is important to note that for about the first 14 days following covid vaccination a person is categorized as unvaccinated. That is the timeframe within which most adverse events following the vaccine occur. So, it follows that what is seen in FDA or CDC data is misleading and not representative of the real risk of these new vaccines. I have lost confidence in the truthfulness of their interpretation of data. In addition, that the CDC owns many vaccine patents, the NIH owns vaccine patents and often profits from products they are supposed to regulate, and the FDA receives about 45% of their budget from the pharmaceutical industry is highly suspect.

The following are links to websites, and documents are also attached, which are pertinent to this discussion. These are only a small representation of vast amounts of information available if you know where to look.

Best regards,

C. Solvie

Links here are regarding a healthy, lively 12-year-old who was severely injured by the vaccine while part of the Pfizer trial, something she wanted to do to serve her country. Her injury was not included in Pfizer's results of the trial and thus not published. The mother now knows of myriads of kids who have been injured by these vaccines whose voices are being silenced. Will you participate in mandating a potentially unsafe medical procedure and for a disease not likely life threatening to the average child?

WHO: ‘No Evidence’ Boosting Entire Population Offers Greater Protection to Healthy Individuals

By [Jack Phillips](#) | December 3, 2021 Updated: December 3, 2021

A Print

A top World Health Organization (WHO) official said there is “no evidence” to suggest that CCP virus booster doses would offer “greater protection” to healthy people.

Dr. Mike Ryan, the WHO’s emergency director, questioned the logic of some countries trying to produce more booster doses to vaccinate anyone aged 18 and older.

“Right now, there is no evidence that I’m aware of that would suggest that boosting the entire population is going to necessarily provide any greater protection for otherwise healthy individuals against hospitalization and death,” Ryan said.

“The real risk of severe disease, hospitalization, and death lies, in particularly, in at-risk and vulnerable individuals,” he said, “who do require protection against all variants of COVID-19,” the illness caused by the Chinese Communist Party (CCP) virus. Health agencies around the world generally consider older individuals, those with compromised immune systems, and people who work in high-risk settings to be vulnerable.

The United Kingdom recently announced that it secured 114 million vaccine doses for 2022 and 2023. Those doses will be provided to everyone aged 18 and older by the end of January 2022.

On Monday, President Joe Biden called on Americans aged 18 and older to get a booster shot due to the emergence of the Omicron COVID-19 variant in southern Africa that has been detected in at least five U.S. states for far.

South African health officials said in interviews this week that those who have contracted the Omicron variant, named by the WHO last week, are presenting “extremely mild” symptoms. There have been no deaths associated with the COVID-19 strain, which officials described as heavily mutated, and WHO officials cautioned is not enough data so far to determine whether it can cause more severe disease or breach the protection afforded by natural immunity or vaccination.

In some countries, it’s required to get a booster dose six months after the initial vaccination regimen in order to be considered “fully vaccinated.” Already, officials in the United States, including the governors of New Mexico and Connecticut, are claiming that one cannot be considered fully vaccinated unless they’ve obtained a

Earlier this year, Israel attached receiving the booster dose as a condition to using that country's "green pass" COVID-19 vaccine passport to enter certain businesses. Meanwhile, pharmaceutical giant Pfizer told BBC that vaccine boosters will be likely needed every year from now on.

Ryan's comments come as other WHO officials criticized the United States, European countries, Israel, and others for imposing travel bans on southern African nations due to the Omicron variant. Previously, WHO's leader, Tedros Adhanom Ghebreyesus, urged wealthier countries to provide initial vaccine doses to poorer nations, rather than focusing on giving booster doses to their own population.

BMJ INVESTIGATION

Covid-19: Researcher blows the whistle on data integrity issues in Pfizer's vaccine trial

Revelations of poor practices at a contract research company helping to carry out Pfizer's pivotal covid-19 vaccine trial raise questions about data integrity and regulatory oversight. **Paul D Thacker** reports

Paul D Thacker *investigative journalist*

In autumn 2020 Pfizer's chairman and chief executive, Albert Bourla, released an open letter to the billions of people around the world who were investing their hopes in a safe and effective covid-19 vaccine to end the pandemic. "As I've said before, we are operating at the speed of science," Bourla wrote, explaining to the public when they could expect a Pfizer vaccine to be authorised in the United States.¹

But, for researchers who were testing Pfizer's vaccine at several sites in Texas during that autumn, speed may have come at the cost of data integrity and patient safety. A regional director who was employed at the research organisation Ventavia Research Group has told *The BMJ* that the company falsified data, unblinded patients, employed inadequately trained vaccinators, and was slow to follow up on adverse events reported in Pfizer's pivotal phase III trial. Staff who conducted quality control checks were overwhelmed by the volume of problems they were finding. After repeatedly notifying Ventavia of these problems, the regional director, Brook Jackson, emailed a complaint to the US Food and Drug Administration (FDA). Ventavia fired her later the same day. Jackson has provided *The BMJ* with dozens of internal company documents, photos, audio recordings, and emails.

Poor laboratory management

On its website Ventavia calls itself the largest privately owned clinical research company in Texas and lists many awards it has won for its contract work.² But Jackson has told *The BMJ* that, during the two weeks she was employed at Ventavia in September 2020, she repeatedly informed her superiors of poor laboratory management, patient safety concerns, and data integrity issues. Jackson was a trained clinical trial auditor who previously held a director of operations position and came to Ventavia with more than 15 years' experience in clinical research coordination and management. Exasperated that Ventavia was not dealing with the problems, Jackson documented several matters late one night, taking photos on her mobile phone. One photo, provided to *The BMJ*, showed needles discarded in a plastic biohazard bag instead of a sharps container box. Another showed vaccine packaging materials with trial participants' identification numbers written on them left out in the open, potentially unblinding participants. Ventavia

executives later questioned Jackson for taking the photos.

Early and inadvertent unblinding may have occurred on a far wider scale. According to the trial's design, unblinded staff were responsible for preparing and administering the study drug (Pfizer's vaccine or a placebo). This was to be done to preserve the blinding of trial participants and all other site staff, including the principal investigator. However, at Ventavia, Jackson told *The BMJ* that drug assignment confirmation printouts were being left in participants' charts, accessible to blinded personnel. As a corrective action taken in September, two months into trial recruitment and with around 1000 participants already enrolled, quality assurance checklists were updated with instructions for staff to remove drug assignments from charts.

In a recording of a meeting in late September 2020 between Jackson and two directors a Ventavia executive can be heard explaining that the company wasn't able to quantify the types and number of errors they were finding when examining the trial paperwork for quality control. "In my mind, it's something new every day," a Ventavia executive says. "We know that it's significant."

Ventavia was not keeping up with data entry queries, shows an email sent by ICON, the contract research organisation with which Pfizer partnered on the trial. ICON reminded Ventavia in a September 2020 email: "The expectation for this study is that all queries are addressed within 24hrs." ICON then highlighted over 100 outstanding queries older than three days in yellow. Examples included two individuals for which "Subject has reported with Severe symptoms/reactions ... Per protocol, subjects experiencing Grade 3 local reactions should be contacted. Please confirm if an UNPLANNED CONTACT was made and update the corresponding form as appropriate." According to the trial protocol a telephone contact should have occurred "to ascertain further details and determine whether a site visit is clinically indicated."

Worries over FDA inspection

Documents show that problems had been going on for weeks. In a list of "action items" circulated among Ventavia leaders in early August 2020, shortly after the trial began and before Jackson's hiring, a Ventavia executive identified three site staff members with

whom to “Go over e-diary issue/falsifying data, etc.” One of them was “verbally counseled for changing data and not noting late entry,” a note indicates.

At several points during the late September meeting Jackson and the Ventavia executives discussed the possibility of the FDA showing up for an inspection (box 1). “We’re going to get some kind of letter of information at least, when the FDA gets here . . . know it,” an executive stated.

Box 1: A history of lax oversight

When it comes to the FDA and clinical trials, Elizabeth Woeckner, president of Citizens for Responsible Care and Research Incorporated (CIRCARE),³ says the agency’s oversight capacity is severely under-resourced. If the FDA receives a complaint about a clinical trial, she says the agency rarely has the staff available to show up and inspect. And sometimes oversight occurs too late.

In one example CIRCARE and the US consumer advocacy organisation Public Citizen, along with dozens of public health experts, filed a detailed complaint in July 2018 with the FDA about a clinical trial that failed to comply with regulations for the protection of human participants.⁴ Nine months later, in April 2019, an FDA investigator inspected the clinical site. In May this year the FDA sent the triallist a warning letter that substantiated many of the claims in the complaints. It said, “[I]t appears that you did not adhere to the applicable statutory requirements and FDA regulations governing the conduct of clinical investigations and the protection of human subjects.”⁵

“There’s just a complete lack of oversight of contract research organisations and independent clinical research facilities,” says Jill Fisher, professor of social medicine at the University of North Carolina School of Medicine and author of *Medical Research for Hire: The Political Economy of Pharmaceutical Clinical Trials*.

Ventavia and the FDA

A former Ventavia employee told *The BMJ* that the company was nervous and expecting a federal audit of its Pfizer vaccine trial.

“People working in clinical research are terrified of FDA audits,” Jill Fisher told *The BMJ*, but added that the agency rarely does anything other than inspect paperwork, usually months after a trial has ended. “I don’t know why they’re so afraid of them,” she said. But she said she was surprised that the agency failed to inspect Ventavia after an employee had filed a complaint. “You would think if there’s a specific and credible complaint that they would have to investigate that,” Fisher said.

In 2007 the Department of Health and Human Services’ Office of the Inspector General released a report on FDA’s oversight of clinical trials conducted between 2000 and 2005. The report found that the FDA inspected only 1% of clinical trial sites.⁶ Inspections carried out by the FDA’s vaccines and biologics branch have been decreasing in recent years, with just 50 conducted in the 2020 fiscal year.⁷

The next morning, 25 September 2020, Jackson called the FDA to warn about unsound practices in Pfizer’s clinical trial at Ventavia. She then reported her concerns in an email to the agency. In the afternoon Ventavia fired Jackson—deemed “not a good fit,” according to her separation letter.

Jackson told *The BMJ* it was the first time she had been fired in her 20 year career in research.

Concerns raised

In her 25 September email to the FDA Jackson wrote that Ventavia had enrolled more than 1000 participants at three sites. The full trial (registered under NCT04368728) enrolled around 44 000 participants across 153 sites that included numerous commercial companies and academic centres. She then listed a dozen concerns she had witnessed, including:

- Participants placed in a hallway after injection and not being monitored by clinical staff
- Lack of timely follow-up of patients who experienced adverse events
- Protocol deviations not being reported
- Vaccines not being stored at proper temperatures
- Mislabeled laboratory specimens, and
- Targeting of Ventavia staff for reporting these types of problems.

Within hours Jackson received an email from the FDA thanking her for her concerns and notifying her that the FDA could not comment on any investigation that might result. A few days later Jackson received a call from an FDA inspector to discuss her report but was told that no further information could be provided. She heard nothing further in relation to her report.

In Pfizer’s briefing document submitted to an FDA advisory committee meeting held on 10 December 2020 to discuss Pfizer’s application for emergency use authorisation of its covid-19 vaccine, the company made no mention of problems at the Ventavia site. The next day the FDA issued the authorisation of the vaccine.⁸

In August this year, after the full approval of Pfizer’s vaccine, the FDA published a summary of its inspections of the company’s pivotal trial. Nine of the trial’s 153 sites were inspected. Ventavia’s sites were not listed among the nine, and no inspections of sites where adults were recruited took place in the eight months after the December 2020 emergency authorisation. The FDA’s inspection officer noted: “The data integrity and verification portion of the BIMO [bioresearch monitoring] inspections were limited because the study was ongoing, and the data required for verification and comparison were not yet available to the IND [investigational new drug].”

Other employees’ accounts

In recent months Jackson has reconnected with several former Ventavia employees who all left or were fired from the company. One of them was one of the officials who had taken part in the late September meeting. In a text message sent in June the former official apologised, saying that “everything that you complained about was spot on.”

Two former Ventavia employees spoke to *The BMJ* anonymously for fear of reprisal and loss of job prospects in the tightly knit research community. Both confirmed broad aspects of Jackson’s complaint. One said that she had worked on over four dozen clinical trials in her career, including many large trials, but had never experienced such a “helter skelter” work environment as with Ventavia on Pfizer’s trial.

“I’ve never had to do what they were asking me to do, ever,” she told *The BMJ*. “It just seemed like something a little different from normal—the things that were allowed and expected.”

She added that during her time at Ventavia the company expected a federal audit but that this never came.

After Jackson left the company problems persisted at Ventavia, this employee said. In several cases Ventavia lacked enough employees to swab all trial participants who reported covid-like symptoms, to test for infection. Laboratory confirmed symptomatic covid-19 was the trial’s primary endpoint, the employee noted. (An FDA review memorandum released in August this year states that across the full trial swabs were not taken from 477 people with suspected cases of symptomatic covid-19.)

“I don’t think it was good clean data,” the employee said of the data Ventavia generated for the Pfizer trial. “It’s a crazy mess.”

A second employee also described an environment at Ventavia unlike any she had experienced in her 20 years doing research. She told *The BMJ* that, shortly after Ventavia fired Jackson, Pfizer was notified of problems at Ventavia with the vaccine trial and that an audit took place.

Since Jackson reported problems with Ventavia to the FDA in September 2020, Pfizer has hired Ventavia as a research subcontractor on four other vaccine clinical trials (covid-19 vaccine in children and young adults, pregnant women, and a booster dose, as well as an RSV vaccine trial; NCT04816643, NCT04754594, NCT04955626, NCT05035212). The advisory committee for the Centers for Disease Control and Prevention is set to discuss the covid-19 paediatric vaccine trial on 2 November.

Increases in COVID-19 are unrelated to levels of vaccination across 68 countries and 2947 counties in the United States

S. V. Subramanian^{1,2} · Akhil Kumar³

Received: 17 August 2021 / Accepted: 9 September 2021
© Springer Nature B.V. 2021, corrected publication 2021

Vaccines currently are the primary mitigation strategy to combat COVID-19 around the world. For instance, the narrative related to the ongoing surge of new cases in the United States (US) is argued to be driven by areas with low vaccination rates [1]. A similar narrative also has been observed in countries, such as Germany and the United Kingdom [2]. At the same time, Israel that was hailed for its swift and high rates of vaccination has also seen a substantial resurgence in COVID-19 cases [3]. We investigate the relationship between the percentage of population fully vaccinated and new COVID-19 cases across 68 countries and across 2947 counties in the US.

Methods

We used COVID-19 data provided by the Our World in Data for cross-country analysis, available as of September 3, 2021 (Supplementary Table 1) [4]. We included 68 countries that met the following criteria: had second dose vaccine data available; had COVID-19 case data available; had population data available; and the last update of data was within 3 days prior to or on September 3, 2021. For the 7 days preceding September 3, 2021 we computed the COVID-19 cases per 1 million people for each country as well as the percentage of population that is fully vaccinated.

For the county-level analysis in the US, we utilized the White House COVID-19 Team data [5], available as of September 2, 2021 (Supplementary Table 2). We excluded counties that did not report fully vaccinated population

percentage data yielding 2947 counties for the analysis. We computed the number and percentages of counties that experienced an increase in COVID-19 cases by levels of the percentage of people fully vaccinated in each county. The percentage increase in COVID-19 cases was calculated based on the difference in cases from the last 7 days and the 7 days preceding them. For example, Los Angeles county in California had 18,171 cases in the last 7 days (August 26 to September 1) and 31,616 cases in the previous 7 days (August 19–25), so this county did not experience an increase of cases in our dataset. We provide a dashboard of the metrics used in this analysis that is updated automatically as new data is made available by the White House COVID-19 Team (<https://tiny.cc/USDashboard>).

Findings

At the country-level, there appears to be no discernable relationship between percentage of population fully vaccinated and new COVID-19 cases in the last 7 days (Fig. 1). In fact, the trend line suggests a marginally positive association such that countries with higher percentage of population fully vaccinated have higher COVID-19 cases per 1 million people. Notably, Israel with over 60% of their population fully vaccinated had the highest COVID-19 cases per 1 million people in the last 7 days. The lack of a meaningful association between percentage population fully vaccinated and new COVID-19 cases is further exemplified, for instance, by comparison of Iceland and Portugal. Both countries have over 75% of their population fully vaccinated and have more COVID-19 cases per 1 million people than countries such as Vietnam and South Africa that have around 10% of their population fully vaccinated.

Across the US counties too, the median new COVID-19 cases per 100,000 people in the last 7 days is largely similar across the categories of percent population fully vaccinated (Fig. 2). Notably there is also substantial county variation in

³ Turner Fenton Secondary School, Brampton, ON, Canada

Fig. 1 Relationship between cases per 1 million people (last 7 days) and percentage of population fully vaccinated across 68 countries as of September 3, 2021 (See Table S1 for the underlying data)

new COVID-19 cases *within* categories of percentage population fully vaccinated. There also appears to be no significant signaling of COVID-19 cases decreasing with higher percentages of population fully vaccinated (Fig. 3).

Of the top 5 countries that have the highest percentage of population fully vaccinated (99.9–84.3%), the US Centers for Disease Control and Prevention (CDC) identifies 4 of them as “High” Transmission counties. Chattahoochee (Georgia), McKinley (New Mexico), and Arecibo (Puerto Rico) counties have above 90% of their population fully vaccinated with all three being classified as “High” transmission. Conversely, of the 57 counties that have been classified

as “low” transmission counties by the CDC, 26.3% (15) have percentage of population fully vaccinated below 20%.

Since full immunity from the vaccine is believed to take about 2 weeks after the second dose, we conducted sensitivity analyses by using a 1-month lag on the percentage population fully vaccinated for countries and US counties. The above findings of no discernable association between COVID-19 cases and levels of fully vaccinated was also observed when we considered a 1-month lag on the levels of fully vaccinated (Supplementary Figure 1, Supplementary Figure 2).

We should note that the COVID-19 case data is of confirmed cases, which is a function of both supply (e.g., variation in testing capacities or reporting practices) and demand-side (e.g., variation in people’s decision on when to get tested) factors.

Fig. 2 Median, interquartile range and variation in cases per 100,000 people in the last 7 days across percentage of population fully vaccinated as of September 2, 2021

Fig. 3 Percentage of counties that experienced an increase of cases between two consecutive 7-day time periods by percentage of population fully vaccinated across 2947 counties as of September 2, 2021

Interpretation

The sole reliance on vaccination as a primary strategy to mitigate COVID-19 and its adverse consequences needs to be re-examined, especially considering the Delta (B.1.617.2) variant and the likelihood of future variants. Other pharmacological and non-pharmacological interventions may need to be put in place alongside increasing

vaccination rates. Such course correction, especially with regards to the policy narrative, becomes paramount with emerging scientific evidence on real world effectiveness of the vaccines.

For instance, in a report released from the Ministry of Health in Israel, the effectiveness of 2 doses of the BNT162b2 (Pfizer-BioNTech) vaccine against preventing COVID-19 infection was reported to be 39% [6],

substantially lower than the trial efficacy of 96% [7]. It is also emerging that immunity derived from the Pfizer-BioNTech vaccine may not be as strong as immunity acquired through recovery from the COVID-19 virus [8]. A substantial decline in immunity from mRNA vaccines 6-months post immunization has also been reported [9]. Even though vaccinations offers protection to individuals against severe hospitalization and death, the CDC reported an increase from 0.01 to 9% and 0 to 15.1% (between January to May 2021) in the rates of hospitalizations and deaths, respectively, amongst the fully vaccinated [10].

In summary, even as efforts should be made to encourage populations to get vaccinated it should be done so with humility and respect. Stigmatizing populations can do more harm than good. Importantly, other non-pharmacological prevention efforts (e.g., the importance of basic public health hygiene with regards to maintaining safe distance or handwashing, promoting better frequent and cheaper forms of testing) needs to be renewed in order to strike the balance of learning to live with COVID-19 in the same manner we continue to live a 100 years later with various seasonal alterations of the 1918 Influenza virus.

Abstract

The SARS-CoV-2 Delta variant might cause high viral loads, is highly transmissible, and contains mutations that confer partial immune escape ^{1,2}. Outbreak investigations suggest that vaccinated persons can spread Delta ^{3,4}. We compared RT-PCR cycle threshold (Ct) data from 699 swab specimens collected in Wisconsin 29 June through 31 July 2021 and tested with a qualitative assay by a single contract laboratory. Specimens came from residents of 36 counties, most in southern and southeastern Wisconsin, and 81% of cases were not associated with an outbreak. During this time, estimated prevalence of Delta variants in Wisconsin increased from 69% to over 95%. Vaccination status was determined via self-reporting and state immunization records ([Supplemental Figure 1](#)).

Main text

We observed low Ct values (<25) in 212 of 310 fully vaccinated (68%; [Figure 1A](#)) and 246 of 389 (63%) unvaccinated individuals. Testing a subset of low-Ct samples revealed infectious SARS-CoV-2 in 15 of 17 specimens (88%) from unvaccinated individuals and 37 of 39 (95%) from vaccinated people ([Figure 1B](#)).

Low Ct values were detected in vaccinated people regardless of symptoms at the time of testing ([Figure 1C](#)). Ct values <25 were detected in 7 of 24 unvaccinated (29%; CI: 13-51%) and 9 of 11 fully vaccinated asymptomatic individuals (82%; CI: 48-97%), and 158 of 232 unvaccinated (68%, CI: 62-74%) and 156 of 225 fully vaccinated (69%; CI: 63-75%) symptomatic individuals. Time from symptom onset to testing did not vary by vaccination status ($p=0.40$; [Supplemental Figure 2](#)). Infectious virus was detected in the sole specimen tested from an asymptomatic fully vaccinated individual. Although few asymptomatic individuals were sampled, these results indicate that even asymptomatic, fully vaccinated people might shed infectious virus.

Combined with other studies ²⁻⁵, these data indicate that vaccinated and unvaccinated individuals infected with the Delta variant might transmit infection. Importantly, we show that infectious SARS-CoV-

2 is frequently found even in vaccinated persons when specimen Ct values are low. The inclusion of viruses from Pango lineages B.1.617.2, AY.2, and AY.3, and multiple counties without a linking outbreak, indicate that Delta-lineage SARS-CoV-2 can achieve low Ct values consistent with transmissibility in fully vaccinated individuals across a range of settings. Vaccinated and unvaccinated persons should get tested when symptomatic or after close contact with someone with suspected or confirmed COVID-19. Continued adherence to non-pharmaceutical interventions during periods of high community transmission to mitigate spread of COVID-19 remain important for both vaccinated and unvaccinated individuals.

Figure

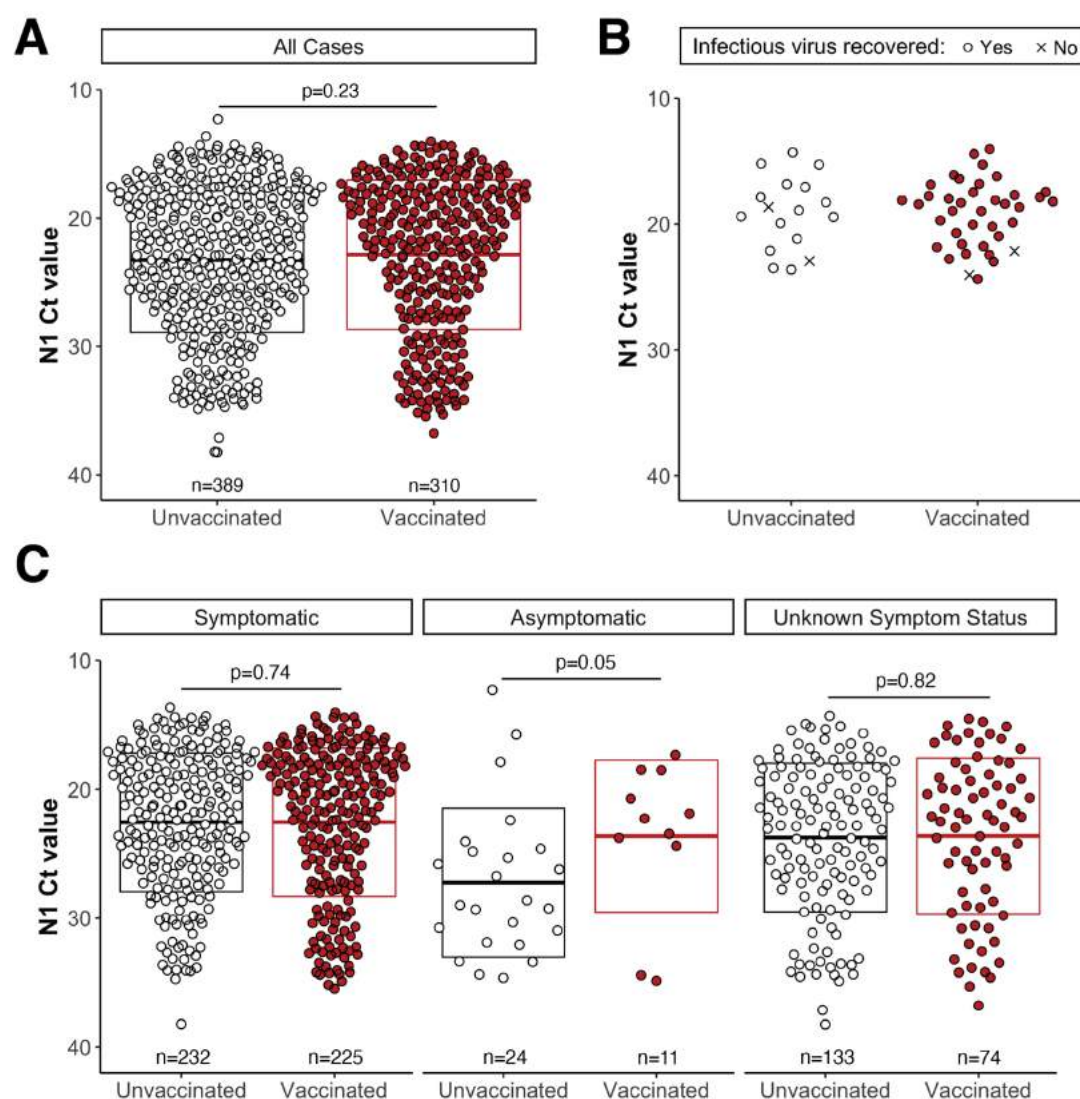

Figure 1. Individuals infected with SARS-CoV-2 despite full vaccination have low Ct values and shed infectious virus. A. Ct values for SARS-CoV-2-positive specimens grouped by vaccination status. RT-PCR was performed by Exact Sciences Corporation, responsible for over 10% of all PCR tests in Wisconsin during this period, using a qualitative diagnostic assay targeting the SARS-CoV-2 N gene (oligonucleotides identical to CDC's N1 primer and probe set) that has been authorized for emergency use by FDA (<https://www.fda.gov/media/138328/download>). **B.** Infectiousness was determined for a subset of N1 Ct-matched specimens with Ct <25 by inoculation onto Vero E6 TMPRSS2 cells and determining presence of cytopathic effects (CPE) after 5 days in culture. Specimens were selected by N1 Ct-matching between fully vaccinated and not fully vaccinated persons, then specimens from persons with unknown vaccination status were excluded from the analysis. Circles indicate presence of CPE; 'X' indicates no CPE detected. **C.** N1 Ct values for SARS-CoV-2-positive specimens grouped by vaccination status for individuals who were symptomatic or asymptomatic, or those whose symptom status was not determined, at the time of testing. In **A** and **C**,

boxplots represent mean N1 Ct values +/- one standard deviation. P-values were calculated by comparing mean Ct values by independent two-group Mann-Whitney U tests.

Supplemental materials

Supplemental figure 1

Supplemental figure 1. Concordance between self-reported vaccination status and the Wisconsin Immunization Registry (WIR) or Wisconsin Electronic Disease Surveillance System (WEDSS). For all individuals, vaccination status was determined using WIR/WEDSS electronic registries when data were available. Individuals were identified as unvaccinated at the time of testing if WIR/WEDSS data indicated receipt of a first SARS-CoV-2 vaccine dose after the test date.

Individuals were considered fully vaccinated based on WIR/WEDSS data if the registries indicated receipt of a final vaccine dose at least 14 days prior to testing. For individuals whose vaccination status could not be verified in WIR/WEDSS, self-reported data collected at the time of testing were used. Individuals were considered unvaccinated based on self-report only if there was an explicit declaration of unvaccinated status in the self-reported data. Individuals were considered fully vaccinated based on self-report if they fulfilled all of the following criteria: (1) indicated that they had received a COVID vaccine prior to testing; (2) indicated that they did not require another vaccine dose; and (3) reported a date of last vaccine dose that was at least 14 days prior to testing.

Specimens lacking data on vaccination status were excluded from the study. Specimens from partially vaccinated individuals (incomplete vaccine series, or <14 days post-final dose) were also excluded. Fully vaccinated status was determined by WIR/WEDSS for 292 specimens and by self-reported data for 18. Unvaccinated status was determined by WIR/WEDSS for 11 and by self-reported data by 378. **A.** Of the 699 specimens with vaccination status available from at least one source, 165 specimens had data available from both sources. For self-reporting, under-reporting of full vaccination status (33/157) was more common than over-reporting (0/124). **B.** N1 Ct values for SARS-CoV-2-positive specimens grouped by vaccination status for individuals whose vaccination status was determined by WIR/WEDSS or by self-reported data. Boxplots represent mean N1 Ct values +/- one standard

deviation. P-values were calculated by comparing mean Ct values by independent two-group Mann-Whitney U tests.

Supplemental figure 2

Supplemental figure 2. Density distributions of unvaccinated and vaccinated specimen collection dates by day since symptom onset. Day 0 on the x-axis denotes self-reported day of symptom onset. Negative values for days indicate specimen collection prior to symptom onset. Symptom onset data were available for n=263 unvaccinated cases and n=232 vaccinated cases.

Conflict of interest

The authors declare no conflicting interests.

Ethics statement

Per the University of Wisconsin-Madison IRB, this project qualifies as public health surveillance activities as defined in the Common Rule, 45 CFR 46.102(l)(2). As such, the project is not deemed to be research regulated under the Common Rule and therefore, does not require University of Wisconsin-Madison IRB review and oversight.

The opinions expressed by authors contributing to this journal do not necessarily reflect the opinions of the Centers for Disease Control and Prevention or the institutions with which the authors are affiliated.

Data availability

Data and processing workflows are available at <https://go.wisc.edu/p22116>. To protect potentially personally identifiable information, the publicly available dataset contains only PCR Ct values, vaccine status, symptom status, culture status, and days from symptom onset to testing for each specimen.

On a long enough timeline the survival rate for everyone drops to zero.

Protests Erupt In South Korea Over Vaccination Deaths

BY TYLER DURDEN

MONDAY, DEC 27, 2021 - 06:40 PM

Americans and Europeans aren't the only people to express skepticism of the COVID jabs produced by a handful of pharmaceutical giants, most notably Pfizer and Moderna. As reports of deaths and other 'adverse health events' suspected of being triggered by vaccines mount, South Koreans **are reportedly taking to the streets to protest their governments' refusal to acknowledge thousands of deaths** that many believe were caused by vaccines.

As we said above, **more than 10K people have died under murky circumstances shortly after being vaccinated in South Korea.** The government has only reported a connection in a handful of serious cases. But it has also moved to recognize and compensate victims: for example, a nursing assistant was recognized in August as a victim of an industrial accident and awarded government benefits after suffering paralysis in the wake of receiving AstraZeneca's COVID shot.

Back in August, the government investigated after a teenager with no underlying health conditions died following inoculation with the Pfizer-BioNTech COVID jab.

But in the absence of more concrete answers, thousands of South Koreans are taking to the streets to protest the vaccine mandate in one of the world's most heavily vaccinated countries.

According to RT, **an association called the COVID Vaccine Victims and Families Council has held rallies in several South Korean cities.** Demonstrators on Sunday marched from Busan City Hall to Busan National University of Education in a large demonstration held in the country's second city.

On a long enough timeline the survival rate for everyone drops to zero.

administration of being indifferent to damages caused by vaccines.

"I think the people have reached a point where they can't trust the government," Kim said.

The government promised to compensate victims of vaccine side effects before the first jabs arrived. But it's also responsible for determining which cases merit compensation, a fact that has rankled some purported victims, who feel they have been shafted.

Roughly 83% of South Koreans have been vaccinated against Covid-19, easily the highest rate among G20 nations.

Running Title: Cts of COVID Delta vaccine breakthroughs

Authors for Correspondence: Diane Havlir, Richard Michelmore

Alternate Corresponding Authors: Joe DeRisi, Maya Peterson

Abstract: We found no significant difference in cycle threshold values between vaccinated and unvaccinated, asymptomatic and symptomatic groups infected with SARS-CoV-2 Delta. Given the substantial proportion of asymptomatic vaccine breakthrough cases with high viral levels, interventions, including masking and testing, should be considered for all in settings with elevated COVID-19 transmission.

Background

Vaccines reduce infection, severe disease, and death from SARS-CoV-2 (COVID-19) [1], yet breakthrough cases occur [2]. Several reports show no difference in cycle threshold values (Ct-values) between vaccinated and unvaccinated individuals [2, 3, 4]; however, others have suggested that breakthrough infections, particularly among asymptomatic individuals, have a lower viral load and therefore may be less likely to result in transmission [5, 6].

Effective epidemic control requires contemporary data to guide public health mitigation measures. Here, we report on Ct-values among fully vaccinated and unvaccinated individuals, asymptomatic and symptomatic at time of testing, during a period of high transmission of the Delta variant in two distinct populations: a Unidos en Salud (UeS) community-based site in the Mission District of San Francisco and Healthy Yolo Together (HYT) asymptomatic testing through the University of California (UC), Davis.

Materials and Methods

Study Populations

Data was collected on individuals who voluntarily sought testing for SARS-CoV-2 from two demographically distinct populations in California during a two-month period from June 17 to August 31, 2021, during which Delta was the predominant variant.

HYT: As part of the response to the COVID-19 pandemic, UC Davis deployed an extensive free asymptomatic testing program that included the City of Davis and Yolo County ([Healthy Yolo Together](#)). Asymptomatic individuals over the age of 2 were eligible for testing. Asymptomatic cases were classified as individuals not reporting symptoms at the time of testing. Samples were collected through a supervised method in which individuals transferred their saliva into a barcoded tube ([COVID-19 Testing | Campus Ready](#)). Smaller numbers of symptomatic

individuals were processed using a different workflow and an antigen test; therefore, they were not included in this study.

UeS: The study population included individuals who sought SARS-CoV-2 testing at the UeS walk-up site, an ongoing academic (UC San Francisco, CZ Biohub, and UC Berkeley), community organization (Latino Task Force), and government (SFDPH) partnership. The outdoor, free BinaxNOW™ testing site was located at a public transport and commercial hub in the Mission District, a setting of ongoing transmission in San Francisco [7]. Individuals one year of age and older, with or without symptoms, were eligible for testing.

Measurements

Infections were classified as breakthrough infections if the individual was fully vaccinated (two weeks following receipt of all vaccine doses). Individuals that had had only one dose or were tested within two weeks of the second dose, in the case of Pfizer and Moderna vaccines, were not included in the analysis.

HYT: Demographic information was collected from individuals at the time of registration. Vaccination status information was obtained at the time of contact tracing and confirmed in the California Vaccine Registry. Only confirmed, fully vaccinated individuals were used in the analysis; discordant samples, self-reported as vaccinated but unconfirmed, were treated as status unknown. Saliva samples from asymptomatic individuals were tested for the presence of the N1 and N2 regions of the viral nucleocapsid (N) gene using primers and probes described in the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel, using IntelliQube high-throughput quantitative PCR instruments (LGC Biosearch Technologies). Ct-values were calculated with FastFinder software ([UgenTec](#) | [FastFinder](#)).

Genotypes of all N1/N2 positive samples were determined using RT-PCR SNP analysis at 11 loci diagnostic for variants of concern ([SARS-CoV-2 Variant ValuPanel assays | LGC Biosearch Technologies](#)). A subset of samples (39%) were also sequenced using the Illumina MiSeq sequencing platform. Consensus genomes were generated with Viralrecon2 and variants called in Pangolin version 3.1.11 and PLEARN-v1.2.66. Sequencing confirmed the variants called by genotyping.

UeS: Individuals provided demographic data and information on symptoms immediately prior to testing using BinaxNOW™ kits. COVID-19 vaccine status, including date of final shot, was obtained through the California Vaccine Registry. Anterior-nasal swab samples (iClean, Chenyang Global) collected by certified lab assistants from BinaxNOW positive individuals were placed in DNA/RNA Shield (Zymo, Inc.) and processed for qRT-PCR, genome recovery, and variant/lineage determination as previously described [8, 9]. Ct-values for the detection of N and E genes [8] were determined via the single threshold Cq-determination mode using Bio-Rad CFX Maestro v4.1 (Bio-Rad Inc). SARS-CoV-2 genomes were sequenced using the Illumina NovaSeq platform. Consensus genomes were generated via the COVID module of the IDseq pipeline (<https://idseq.net>) as described [9].

Analysis

Ct-values were plotted, stratified by site; fully vs. not vaccinated; and symptom status. Partially vaccinated samples and stratification by age and vaccine type are reported in supplementary materials. Ct-values between strata were compared using a two sided t-test.

Ethics Statement

HYT: The Genome Center laboratory that conducted COVID-19 testing was CLIA approved as an extension to the Student Health Center's laboratory. The UC Davis IRB

Administration determined that the study met criteria for public health reporting and was exempt from IRB review and approval.

UeS: The UC San Francisco Committee on Human Research determined the study met criteria for public health surveillance. All participants provided informed consent for testing.

Results

A total of 869 samples, 500 from HYT and 369 from UeS, were included in the analysis. All analyzed samples from HYT were asymptomatic at the time of collection and 75% of the positive samples were from unvaccinated individuals (N=375). Positive samples from UeS were from both symptomatic (N=237) and asymptomatic individuals (N=132). The frequency of vaccine breakthroughs among the UeS samples (171 fully vaccinated, 198 unvaccinated) was greater than among the HYT samples, reflecting the different types of populations sampled. The Delta variant was the predominant variant detected in both populations (Supplementary Table 1).

There were no statistically significant differences in mean Ct-values of vaccinated (UeS: 23.1; HYT: 25.5) vs. unvaccinated (UeS: 23.4; HYT: 25.4) samples. In both vaccinated and unvaccinated, there was great variation among individuals, with Ct-values of <15 to >30 in both UeS and HYT data (Fig. 1A, 1B). Similarly, no statistically significant differences were found in the mean Ct-values of asymptomatic (UeS: 24.3; HYT: 25.4) vs. symptomatic (UeS: 22.7) samples, overall or stratified by vaccine status (Fig. 1B). Similar Ct-values were also found among different age groups, between genders, and vaccine types (Supplemental Figure 1).

In all groups, there were individuals with low Ct-values indicative of high viral loads. A total of 69 fully vaccinated individuals had Ct-values <20. Of these, 24 were asymptomatic at the time of testing.

Discussion

In our study, mean viral loads as measured by Ct-value were similar for large numbers of asymptomatic and symptomatic individuals infected with SARS-Cov-2 during the Delta surge, regardless of vaccine status, age, or gender. This contrasts with a large ongoing UK community cohort in which the median Ct-value was higher for vaccinated individuals (27.6) than for unvaccinated individuals (23.1) [5]. Also, a study from San Francisco reported that 10 fully vaccinated asymptomatic individuals had significantly lower viral loads than 28 symptomatic, vaccinated individuals [6]. Our study is consistent with other recent reports showing similar viral loads among vaccinated and unvaccinated individuals in settings with transmission of the Delta variant. In a Wisconsin study, Ct-values were similar and culture positivity was not different in a subset of analyses between 11 vaccinated and 24 unvaccinated cases [4]. In both Massachusetts and Singapore, individuals with vaccination breakthroughs caused by the Delta variant had similar Ct-values as unvaccinated individuals [3, 10]. Our findings are supported by consistency across large sample sets using different assays from two distinct locations.

A substantial proportion of asymptomatic, fully vaccinated individuals in our study had low Ct-values, indicative of high viral loads. Given that low Ct-values are indicative of high levels of virus, culture positivity, and increased transmission [11], our detection of low Ct-values in asymptomatic, fully vaccinated individuals is consistent with the potential for transmission from breakthrough infections prior to any emergence of symptoms. Interestingly, the viral loads decreased more rapidly in vaccinated than unvaccinated individuals in Singapore [3], suggesting that vaccinated individuals may remain infectious for shorter periods of time. Also, a retrospective observational cohort study of contacts of SARS-CoV-2-infected index cases in England documented reduced transmission from vaccinated individuals [12]. In our study, over 20% of positive, vaccinated individuals had low Ct-values (<20), a third of which were

asymptomatic when tested. This highlights the need for additional studies of the immunological status of such vaccine escapes and how infectious they are. If such individuals carry high loads of active virus, asymptomatic vaccinated individuals may increasingly contribute to the ongoing pandemic as the proportion of vaccinated individuals grows.

Ct-values in some children under 12 who are not yet eligible for vaccination were also low. Twenty out of 109 (18.3%) children under 12 years of age had Ct-values <20 , of which 14 were asymptomatic at the time of testing. Low Ct indicates that the children had high viral loads and were likely infectious. This emphasizes the value of regular, rapid testing for school children to detect infection early and block chains of transmission in settings where the Delta variant is circulating.

While vaccination remains the best protection against becoming infected and severe disease [12], the data gathered in this study during the surge of the Delta variant strongly support the notion that neither vaccine status nor the presence or absence of symptoms should influence the recommendation and implementation of good public health practices, including mask wearing, testing, social distancing, and other measures, designed to mitigate the spread of SARS-CoV-2.

Author Contribution Statement:

JD, RWM, DH, and MP conceived the project. DC, CM, SR, DH, and GP helped collect the data. CA, AM, CYW, and JL helped perform the tests, genotyping, and sequencing. CA, JH, LS, JD, AM, CYW, JS, and JL prepared the data for publication. RM, EG, DH, MP, DC, JS, and JD contributed to the writing of the manuscript. All authors read and approved the final manuscript.

Funding: This work was supported by the Chan Zuckerberg Biohub, Healthy Yolo Together, the University of California, San Francisco, the Chan Zuckerberg Initiative and The University of California, Davis.

Acknowledgements: Many people were responsible for collecting the samples, running the tests, performing the genotyping and sequencing, and processing the data as listed in Supplementary Table 2.

Re: *COVID-19 vaccination in pediatric populations*

Dear Mr. Becerra, Dr. Walensky, Dr. Woodcock, Dr. Marks, and Dr. Shimabukuro:

We write on behalf of Mr. Patrick de Garay, Mrs. Stephanie de Garay, and Maddie de Garay (“**the de Garay family**”) regarding one of the most important issues in this country right now: COVID-19 vaccination in pediatric populations. To date, Pfizer’s Comirnaty is approved for children ages 16 and 17 and authorized for emergency use in children 12 through 15, with authorization expected shortly for children 5 through 11. Before any additional authorizations or approvals for children are granted, it is imperative that you properly account for what occurred to Mr. and Mrs. de Garay’s 12-year-old daughter, Maddie, in Pfizer’s clinical trial.

The only rigorous way to ensure safety and efficacy is via appropriate clinical trials which do not ignore serious adverse events occurring in those trials. Pfizer’s clinical trial for children aged 12-15 included 2,260 participants, half of who received the vaccine and half who received a placebo. Meaning, only 1,131 children were vaccinated and at least one of those children, Maddie de Garay, suffered a devastating, life-altering injury which, despite incontrovertible proof and the

cries of both the victim and her parents, has not been acknowledged by the sponsor (“Pfizer”) or the Food and Drug Administration (“FDA”).

For a virus for which children have a 99.998% chance of surviving, the FDA must ensure there is an even more remote chance of a serious adverse event from any vaccine intended to prevent harm from the virus.¹ Therefore, we implore you to carefully consider the following information.

A. COVID-19 in Children

A research team at Johns Hopkins analyzed approximately 48,000 children under 18 years old diagnosed with COVID-19 and found a **mortality rate of zero** among children who did not have a pre-existing medical condition such as leukemia.² Neither the FDA nor the CDC have put forth data to dispute this.³

Despite what appears to be a continued effort to inflate COVID-19 numbers and induce fear among parents,⁴ according to one study, the infection fatality rate for those aged 5 to 9 is less

¹ See <https://pubmed.ncbi.nlm.nih.gov/33137809/>.

³ According to the Centers for Disease Control and Prevention (“CDC”), 605 children (under 19 years old) have died with a COVID-19 diagnosis (186 ages 0 through 4 years old, 419 ages 5 through 18 years old) in a 21.5-month period. See <https://data.cdc.gov/NCHS/Provisional-COVID-19-Deaths-Focus-on-Ages-0-18-Yea/nr4s-juj3>. There has been no data released by the CDC showing whether these children died *from* COVID-19 or *with* COVID-19 or if these children had any pre-existing conditions. The data are for “deaths involving COVID-19.” There is also no further age stratification and no understanding of how many of the children that died were 18 years old vs how many were 5 years old.

⁴ CDC Director Walensky made the claim that vaccinating one million adolescents for COVID-19 would prevent 200 hospitalizations and 1 death over a four-month period. However, the hospitalization report relied upon for this analysis, just like the death count, does not distinguish whether the child hospitalizations are *for* COVID-19 or *with*

than 0.001 percent.⁵ A large new study from the U.K. examining the fatality rate among all those under 18 found it to be similarly incredibly rare — 0.005 percent.⁶ Based on data following the Delta variant, “[i]n states where data was available, less than 2% of all child COVID-19 cases required hospitalization and 0.00% to 0.03% were fatal.”⁷ This is not a severe or deadly pandemic for children as the data has clearly and consistently shown.

B. Potential Risks in Vaccinating Children for COVID-19

Since it is exceedingly rare for a child to have a permanent injury from being infected with SARS-CoV-2, it must be determined that the vaccine presents even less risk.

1. Maddie de Garay

Maddie de Garay was a typical 12-year-old little girl: full of energy, spunk, gymnastic moves, and TikTok dances. Maddie, along with her two brothers, took part in Pfizer’s pediatric clinical trial for the COVID-19 vaccine. Since the day she received the second dose of the vaccine, the vibrant girl Maddie’s parents once knew has disappeared, replaced with a girl who lives her life in agony.

Within 24 hours of arriving at the trial site with her dad and receiving her second shot, Maddie developed crippling, scream-inducing pain that landed her in the emergency room. She was experiencing abdominal, muscle, and nerve pain, described as the feeling of someone “ripping [her] heart out through [her] neck.”

Over the next three months, Maddie was admitted to the hospital three times, visited doctors and emergency rooms more than that, and developed additional life-changing symptoms including: gastroparesis, erratic blood pressure, erratic heart rate, memory loss, brain fog, dizziness, fainting, seizures, verbal tics, motor tics, loss of feeling from her waist through her toes, muscle weakness, drastic and adverse changes in her vision, urinary retention, loss of bladder control, and the start of and severely irregular menstrual cycles. Maddie currently has an NG tube and uses a wheelchair for assistance.

The list of “post-vaccination symptoms” that her mother has detailed and tracked in an effort to help her daughter is over 23 pages long (through only August 2021) and is heartbreaking

COVID-19. In other words, if a child gets hurt in an accident and brought to the hospital and is tested as part of hospital protocol and tests positive, that child may be counted as a child COVID-19 hospitalization even though the hospitalization could not be prevented regardless of how many people are vaccinated. Evidencing this issue with Walensky’s claims is the June 11, 2021 Morbidity and Mortality Weekly Report of that analysis which revealed that 45.7% of the admissions had to be analyzed separately “because their primary reason for admission might not have been directly COVID-19-related. See https://www.cdc.gov/mmwr/volumes/70/wr/mm7023e1.htm?s_cid=mm7023e1_w.

⁵ See <https://www.nature.com/articles/s41586-020-2918-0>.

⁶ See <https://www.wsj.com/articles/in-children-risk-of-covid-19-death-or-serious-illness-remain-extremely-low-new-studies-find-11625785260>.

⁷ <https://www.npr.org/sections/coronavirus-live-updates/2021/08/10/1026375608/nearly-94-000-kids-got-covid-19-last-week-they-were-15-of-all-new-infections>; see also <https://www.aap.org/en/pages/2019-novel-coronavirus-covid-19-infections/children-and-covid-19-state-level-data-report/>.

to read. It tells the story of a 12-year-old girl's life being drastically altered by worsening symptoms that, at times, had her saying she "couldn't do this anymore" and that she "wanted to give up."

Pfizer, on the other hand, reported this in its trial documents to the FDA as follows:

"One participant experienced an SAE reported as generalized neuralgia, and also reported 3 concurrent non-serious AEs (abdominal pain, abscess, gastritis) and 1 concurrent SAE (constipation) within the same week. The participant was eventually diagnosed with functional abdominal pain. The event was reported as ongoing at the time of the cutoff date."⁸

The juxtaposition of Ms. de Garay's careful and tragic recording of her child's experience post-vaccination and Pfizer's description of same is shocking to the conscience. To equate Maddie's life-altering ailments that leave her unable to eat by mouth or to walk herself to the kitchen as "functional abdominal pain" is at best dishonest. To regulators, it should be criminal.

In fact, at least one doctor at the National Institutes of Health, Dr. Avindra Nath, is aware of Maddie's experience. When learning of her post-vaccination adverse events, he replied to Mrs. de Garay, **"We have certainly heard of a lot of cases of neurological complications form [sic] the vaccine** and will be glad to share our experience with them."⁹

Despite a May 24, 2021 letter sent to Dr. Marks, Dr. Woodcock, and Dr. Walensky (and others) from COVID-19 vaccine injured individuals pleading for acknowledgement and help,¹⁰ and Dr. Nash's knowledge, *we will assume that, until this point, you have not been aware of Maddie's story and of Pfizer's "reporting" of same.* We make this assumption, despite evidence to the contrary, because it appears unthinkable that you would not have taken action or contacted the family had you actually been aware of her devastating injury. Either way, you are now on notice. Maddie's journey has been documented and is ongoing. All relevant medical records are being provided by email through a secure link. If Pfizer has not disclosed the truth, it is your responsibility as regulators to ensure that this is remedied forthwith.

Clinical trials are meant to identify and report incidents just like Maddie's in order to help determine the safety and efficacy of vaccines. It is troubling, to say the least, that this has happened and that this vaccine has been authorized without a reliable clinical trial – a trial that reported a life-altering injury as "functional abdominal pain" is plainly an unreliable trial. If Pfizer hid this serious adverse event, it calls into question all of the safety reporting from this trial.

⁸ <https://www.fda.gov/media/148542/download> at 30.

⁹ See appended May 2021 email exchange with Mrs. de Garay and Dr. Nash.

¹⁰ https://www.c19vaxreactions.com/uploads/1/3/7/7/137732232/letter_initials_2.pdf. Communications with Dr. Woodcock following this letter included discussions about Maddie. In addition, Mrs. de Garay exchanged emails with the NIH about Maddie and other individuals communicated with the FDA and with VRBPAC about Maddie's story.

Every parent offered the Pfizer Covid-19 vaccine should be informed of Maddie's experience prior to giving or withholding consent on behalf of their child. Indeed, without a true picture of the benefits and risks of this product, no parent's consent can be truly informed. On a larger scale, regulators and their advisors should be informed of Maddie's experience prior to being asked to provide any further approval or recommendation of this product. They indeed should be asked to reconsider current authorizations and approvals of this product for children.

We are not naïve to the reality that after the FDA has fanatically promoted Pfizer's Covid-19 vaccine to the American people – which began before the FDA even approved the product – asking it to now admit it made a mistake as to this product and children is akin to asking the FDA's leadership to cut their own throats. It would take an incredible amount of selflessness to admit such a mistake. Hence, at the least, before even considering authorizing or licensing this product for any further age span of children, a thorough investigation of the clinical trial conduct and data for children is demanded, as well as an expanded trial in order to gather sufficient data to confirm safety.

Given that the actual severe harm to Maddie was not disclosed by Pfizer to the FDA, it must ask what other serious adverse events have been hidden from your view and ignored by regulators?

2. Identified Risks from Clinical Trials and Post-Authorization Use

Unfortunately, even putting aside the misrepresentations related to Maddie's serious harm, the Phase II/III clinical trial for Pfizer's vaccine in 12-15-year-olds¹¹ which led to the FDA's emergency use authorization of this product on May 10, 2021 was underpowered and inadequate to properly test efficacy or safety for the following reasons:

- The trial was not intended to make findings regarding the vaccine's ability to prevent disease or hospitalization. Instead, it was limited to assessing antibody levels and comparing those levels to adult levels.¹²
- The trial was underpowered. It included only 2,260 participants, half of who received the vaccine and half who received a placebo. Meaning, only 1,131 children were vaccinated. This is inadequate to identify any potential adverse events that may occur, nor the statistical significance of same. Without a clinical trial of sufficient size that reviews all potential serious adverse events, such as that experienced by Maddie, for a sufficient duration, this potentially catastrophic result will not be identified prior to licensure.

¹¹ See https://www.nejm.org/doi/10.1056/NEJMoa2107456?url_ver=Z39.88-2003&rft_id=ori:rid:crossref.org&rft_dat=cr_pub%20%20pubmed.

¹² As Dr. Woodcock and Dr. Marks have explained: "It's important that the public recognize that, because young children are still growing and developing, it's critical that thorough and robust clinical trials of adequate size are completed to evaluate the safety and the immune response to a COVID-19 vaccine in this population. Children are not small adults." <https://www.fda.gov/news-events/press-announcements/fda-will-follow-science-covid-19-vaccines-young-children>.

- The trial was not representative of most American children. It only included “healthy participants” and excluded those who previously were infected with SARS-CoV-2.¹³ This results in excluding a large proportion of American children since at least 37% of children are estimated by the CDC to have been infected with SARS-CoV-2 as of May 2021¹⁴ and 43% are estimated to have chronic health condition.¹⁵ Moreover, the 12-15-year-olds in the trial were approximately 86% White and 12% Hispanic or Latinx, and only 567 boys were vaccinated in the trial.
- The trial did “not determine whether [the Pfizer] vaccination prevents asymptomatic infection or transmission of SARS-CoV-2.”
- Safety data has only been collected for a few months and “data on longer-term safety and the duration of efficacy and antibody responses in children are not yet available.”¹⁶ From the limited data available, 6% of the participants reported adverse events within the trial, aside from reactogenicity. One participant discontinued vaccination because of a vaccine-related adverse event. Pfizer reported that “few participants in any cohort had serious adverse events, and none were considered by the [Pfizer] investigators to have been vaccine-related.” That the trial was inadequate to detect adverse events was evidenced on June 23, 2021, when the CDC reported the alarming numbers of reported myocarditis and pericarditis cases occurring after COVID-19 vaccination.¹⁷ This adverse event was not picked up in the clinical trial.

As Dr. Woodcock and Dr. Marks have stated:

because young children are still growing and developing, **it’s critical that thorough and robust clinical trials of adequate size are completed to evaluate the safety** and the immune response to a COVID-19 vaccine in this population. **Children are not small adults** – and issues that may be addressed in pediatric vaccine trials can include whether there is a need for different doses or different strength formulations of vaccines already used for adults.¹⁸

Moreover, taking into account the FDA’s guidance that clinical trials should “reflect the product and target condition,”¹⁹ and a 2019 review, authored by researchers at the FDA and Duke University, which found that short-term pediatric studies may not provide complete safety data

¹³ Also excluded were those with “other medical conditions that may make the participant inappropriate for the study,” and those who have had a severe adverse reaction to any other vaccine.

¹⁴ <https://www.cdc.gov/coronavirus/2019-ncov/cases-updates/burden.html>.

¹⁵ <https://pubmed.ncbi.nlm.nih.gov/21570014/>.

¹⁶ <https://www.nejm.org/doi/10.1056/NEJMoa2107456>.

¹⁷ <https://www.cdc.gov/vaccines/acip/meetings/downloads/slides-2021-06/03-COVID-Shimabukuro-508.pdf> at p. 27.

¹⁸ <https://www.fda.gov/news-events/press-announcements/fda-will-follow-science-covid-19-vaccines-young-children>.

¹⁹ <https://www.fda.gov/media/102332/download>.

across all critical periods of growth and development,²⁰ the time frame for the safety review should be longer for minors. The FDA and Duke authors explained that, compared to licensing a drug for adults, “data on drug efficacy and safety in children may require an additional 6 years.”²¹ Since children have not been seriously affected by this virus, the risk of any vaccine must be fully understood in order to weigh it against any potential benefit.

Evidencing the need for longer trials, public health agencies have, over time, identified certain serious, and sometimes fatal, adverse events that are likely caused by COVID-19 vaccines that have not been identified in the trials. To date, these adverse events include anaphylaxis, TTS, and myocarditis. Myocarditis has been seen most frequently in younger people, more frequently in males, and following the second dose. The long-term effects of myocarditis are not fully understood but can be very serious.

And, while not yet acknowledged by the agencies, numerous additional serious side effects are being reported in alarming numbers in the Vaccine Adverse Events Reporting System (“VAERS”) and by healthcare workers across the country with firsthand observations of same, including:

deep vein thrombosis, pulmonary embolisms, new stroke, bleed, autoimmune hepatitis, sudden bilateral pneumonia or COVID-19 infection, syncope with head injury, STEMI, new arrhythmias, new seizure disorders, new chorea movement disorder, return of and new cancers, acute myeloid leukemia, appendicitis, tinnitus, death, and more.

Even if the risks from the COVID-19 vaccines are truly small, there is no reason to expose someone to any risk when their risk of the disease itself is negligible. These known and potential adverse events further demonstrate the inadequacy of the clinical trials.

Perhaps most alarming is Maddie’s “adverse event” that, to date, does not appear at all in Pfizer’s reported trial data. In this small cohort of just over 1,000 children vaccinated, and despite a complete lack of acknowledgement of same in the data, there was at least one severe adverse event to the vaccine. **If this has happened even once in such a small cohort, it is imperative that the manufacturer and the health agencies determine whether there are other similar cases and whether and how often this may happen again to other children.**

²⁰ <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6526087/>.

²¹ *Id.*

C. Conclusion

Since children are at extremely low risk of harm from SARS-CoV-2, and getting the infection actually provides sterilizing immunity, while the vaccine does not,²² children in our country do not need a COVID-19 vaccine. Vaccinating them will not contribute to herd immunity since the vaccine, as you know, does not prevent infection and transmission of the virus.

To the extent a vaccine *is* authorized or approved for children, it must be properly tested and evaluated in a clinical trial that is adequate to determine safety and efficacy. It must further be mandated that those clinical trials accurately report, with full transparency and disclosure, any adverse events observed following vaccination. Vaccine manufacturers must not be allowed to get away with disguising serious adverse events like Maddie's.

The de Garay family ask that you properly respond forthwith to the data and concerns addressed above. In your response, please confirm whether you and your agencies acknowledge Maddie's vaccine injuries and whether you will properly address them both with the de Garay family and with Pfizer. If you deny that Maddie's ailments are injuries from Pfizer's COVID-19 vaccine, please provide your justification. If you admit that Maddie's ailments are vaccine injuries, then we implore you to neither authorize nor approve this vaccine for children until you can properly address all issues and concerns raised by this letter.

If you do not provide a fulsome response that address all concerns raised above by close of business on Monday, October 25, 2021, we have been authorized to file a petition on behalf of the de Garay family regarding any contemplated authorization or licensure of the Pfizer vaccine and to withdraw any existing authorization or licensure of this vaccine for children.

Sincerely Yours,

Aaron Siri, Esq.

Elizabeth A. Brehm, Esq.

CC: Patrick and Stephanie de Garay

²² The clinical trial's primary endpoint for the Covid-19 vaccines is measuring effectiveness against disease – not against infection. <https://pubmed.ncbi.nlm.nih.gov/33332292/>. Once used in the real world, as Dr. Walensky has acknowledged, they do not “prevent transmission.” <https://twitter.com/CNNSitRoom/status/1423422301882748929> This is also confirmed by various studies, including, *inter alia*: <https://pubmed.ncbi.nlm.nih.gov/34351882/>; https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3897733; <https://pubmed.ncbi.nlm.nih.gov/34176436/>; <https://pubmed.ncbi.nlm.nih.gov/34596015/>; <https://www.medrxiv.org/content/10.1101/2021.07.31.21261387v4.full.pdf>; https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1012240/Weekly_Flu_and_COVID-19_report_w33.pdf at 17-18; https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1014926/Technical_Briefing_22_21_09_02.pdf at 21.

This article has an expression of concern 

Expression of Concern: Abstract 10712: Mrna COVID Vaccines Dramatically Increase Endothelial Inflammatory Markers and ACS Risk as Measured by the PULS Cardiac Test: a Warning

Abstract

Our group has been using the PLUS Cardiac Test (GD Biosciences, Inc, Irvine, CA) a clinically validated measurement of multiple protein biomarkers which generates a score predicting the 5 yr risk (percentage chance) of a new Acute Coronary Syndrome (ACS). The score is based on changes from the norm of multiple protein biomarkers including IL-16, a proinflammatory cytokine, soluble Fas, an inducer of apoptosis, and Hepatocyte Growth Factor (HGF) which serves as a marker for chemotaxis of T-cells into epithelium and cardiac tissue, among other markers. Elevation above the norm increases the PULS score, while decreases below the norm lowers the PULS score. The score has been measured every 3-6 months in our patient population for 8 years. Recently, with the advent of the mRNA COVID 19 vaccines (vac) by Moderna and Pfizer, dramatic changes in the PULS score became apparent in most patients. This report summarizes those results. A total of 566 pts, aged 28 to 97, M:F ratio 1:1 seen in a preventive cardiology practice had a new PULS test drawn from 2 to 10 weeks following the 2nd COVID shot and was compared to the

previous PULS score drawn 3 to 5 months previously pre- shot. Baseline IL-16 increased from 35 \pm 20 above the norm to 82 \pm 75 above the norm post-vac; sFas increased from 22 \pm 15 above the norm to 46 \pm 24 above the norm post-vac; HGF increased from 42 \pm 12 above the norm to 86 \pm 31 above the norm post-vac. These changes resulted in an increase of the PULS score from 11% 5 yr ACS risk to 25% 5 yr ACS risk. At the time of this report, these changes persist for at least 2.5 months post second dose of vac. We conclude that the mRNA vacs dramatically increase inflammation on the endothelium and T cell infiltration of cardiac muscle and may account for the observations of increased thrombosis, cardiomyopathy, and other vascular events following vaccination.

Transmissibility of SARS-CoV-2 among fully vaccinated individuals

Vaccine effectiveness studies have conclusively demonstrated the benefit of COVID-19 vaccines in reducing individual symptomatic and severe disease, resulting in reduced hospitalisations and intensive care unit admissions.¹ However, the impact of vaccination on transmissibility of SARS-CoV-2 needs to be elucidated. A prospective cohort study in the UK by Anika Singanayagam and colleagues² regarding community transmission of SARS-CoV-2 among unvaccinated and vaccinated individuals provides important information that needs to be considered in reassessing vaccination policies. This study showed that the impact of vaccination on community transmission of circulating variants of SARS-CoV-2 appeared to be not significantly different from the impact among unvaccinated people.^{2,3} The scientific rationale for mandatory vaccination in the USA relies on the premise that vaccination prevents transmission to others, resulting in a “pandemic of the unvaccinated”.⁴ Yet, the demonstration of COVID-19 breakthrough infections among fully vaccinated health-care workers (HCW) in Israel, who in turn may transmit this infection to their patients,⁵ requires a reassessment of compulsory vaccination policies leading to the job dismissal of unvaccinated HCW in the USA. Indeed, there is growing evidence that peak viral titres in the upper airways of the lungs and culturable virus are similar in vaccinated and unvaccinated individuals.^{2,3,5-7} A recent investigation by the US Centers for Disease Control and Prevention of an outbreak of COVID-19 in a prison in Texas showed the equal presence of infectious virus in the nasopharynx of vaccinated and unvaccinated individuals.⁶ Similarly, researchers in California observed no major differences between vaccinated and unvaccinated individuals in

terms of SARS-CoV-2 viral loads in the nasopharynx, even in those with proven asymptomatic infection.⁷ Thus, the current evidence suggests that current mandatory vaccination policies might need to be reconsidered, and that vaccination status should not replace mitigation practices such as mask wearing, physical distancing, and contact-tracing investigations, even within highly vaccinated populations.

I declare no competing interests.

With interest we read the paper by Anika Singanayagam and colleagues¹ assessing the secondary attack rate (SAR) of SARS-CoV-2 in 204 vaccinated and unvaccinated household contacts exposed to

138 vaccinated and unvaccinated index cases. Here, we want to point out the importance of adjusting for age when comparing vaccinated and unvaccinated individuals.

The authors report a similar SAR among household contacts exposed to fully vaccinated and unvaccinated index cases (25% and 23%). Although not explicitly stated by the authors, this finding hints towards no effect of vaccination on transmission and was reported as such by the media in the UK and the Netherlands—and possibly other countries.^{2,3} However, age is a confounding factor in this observation if age is associated with both vaccination status and the risk of transmitting SARS-CoV-2. Indeed, the study indicates a higher peak viral load with increasing age, consistent with lower infectiousness in children. In addition, although the age distribution of all included index cases and contacts is not presented, table S2 in the appendix to the Article provides data for a subset of participants testing positive for SARS-CoV-2, showing that a large proportion (78%) of unvaccinated participants were younger than 18 years, whereas none of the vaccinated participants were. These findings together suggest that the infectiousness of the included unvaccinated index cases was lower than that of the included vaccinated participants because of younger age. Therefore, the presumed lack of vaccine effect on transmission might be largely due to confounding by age, which the authors did not address. In our analysis of vaccine effectiveness against transmission in the Netherlands, adjustment for age of index cases and contacts indeed had a large effect on vaccine effectiveness estimates.⁴ Therefore, vaccine effectiveness against transmission reported by Singanayagam and colleagues is probably an underestimate.

Also, the reported vaccine effectiveness against SARS-CoV-2 infection (34%) is likely confounded

by age, as vaccination status is associated with age, and younger age is associated with reduced susceptibility to acquiring SARS-CoV-2 infection.⁵

In these times, when evidence-based confidence in vaccines is crucial to reduce the impact of the COVID-19 pandemic on mortality and morbidity, data on effects of vaccination should be adequately and unambiguously reported by the scientific community in order to avoid misinterpretation of the data by the public and the media.

The important analysis by Anika Singanayagam and colleagues¹ demonstrated that individuals fully vaccinated against SARS-CoV-2 with breakthrough infections have similar peak viral loads to unvaccinated people and might infect other fully vaccinated individuals within the same household. Of particular concern, vaccines that permit transmission do not confer sterilising

immunity, thus potentially resulting in accumulation of large viral loads and increased risk of immune escape.² By mainly targeting the SARS-CoV-2 spike protein, vaccines can favour propagation of variants with immune-escape mutations.³ Single point mutations in the receptor-binding domain of the viral spike protein are sufficient to facilitate the immune escape and transmission of resistant viruses.² By further examining the unpublished whole-genome sequencing data of vaccinated and unvaccinated participants in the study by Singanayagam and colleagues,¹ invaluable information could be gleaned about whether the current first-generation COVID-19 vaccines potentially exerted selective pressure for resistant SARS-CoV-2 variants.

Tracing the whole-genome sequencing data of all unvaccinated participants chronologically from the pre-alpha-variant (B.1.1.7) phase (September–November, 2020), to the alpha-variant phase (December, 2020, to March, 2021), and to the delta-variant (B.1.617.2) period (May 25–Sept 15, 2021) would likely reveal a trend of increasing number of mutations that converge towards the resultant whole-genome sequence aligned with delta lineage-defining mutations presented in figure 2 of the Article.¹ To determine if vaccines possibly contributed to this genetic drift, the whole-genome sequencing data from patients who tested PCR positive (vaccinated and unvaccinated) can be compared with data from their respective contacts over time from the pre-alpha to the delta phases.

Identical whole-genome sequences between PCR-positive participants and their respective contacts demonstrates direct viral transmission without mutation. Clearly distinct whole-genome sequences between both groups indicate cross-infection of contacts by a different viral lineage. Slight variations in whole-genome sequences between both groups

show mutation has occurred, in which case the vaccination status of the contact should be examined. If mutation occurred predominantly among vaccinated contacts but not within unvaccinated contacts, it suggests vaccine-induced mutation has developed. Because the sample size in the research by Singanayagam and colleagues¹ is relatively small, it will be worrisome if a fair number of vaccinated contacts of PCR-positive participants are identified with mutations, especially with the amino acid mutations summarised in the appendix.

The earliest detection of the delta variant was in India on Oct 14, 2020,⁴ before India's vaccination commencement on Jan 16, 2021.⁵ However, with fastidious propagation of these variants over time by non-sterilising vaccines targeting the spike protein, it is still reasonably plausible that selective pressure could have contributed to the current dominance of the delta variant.

It would be much appreciated if Singanayagam and colleagues would consider analysing their unpublished whole-genome sequencing data as suggested above. If theoretical risk of evolutionary escape from the existing COVID-19 vaccines² translates into real-life evidence, which could be verified via whole-genome sequencing data from this study,¹ then it will be prudent to expedite resources towards second-generation COVID-19 vaccines that exert sterilising immunity, in addition to non-pharmacological interventions.

I declare no competing interests.

Re: Underreporting to VAERS & Violation of COVID-19 Vaccine EUAs

Dear Mr. Becerra, Dr. Walensky, Dr. Woodcock, Dr. Marks, and Dr. Shimabukuro:

We write with urgency to provide a first-hand report from Ms. Deborah Conrad, a Physician Assistant at a regional New York hospital, of serious injuries from COVID-19 vaccines and her hospital system's failure to report to VAERS.

Ms. Conrad's hospital serves a community in which less than 50% of individuals have received the COVID-19 vaccine yet approximately 90% of individuals admitted to her hospital are documented to have received the COVID-19 vaccine. Even more troubling is the fact that many individuals being admitted are presenting with complication months after vaccination and the hospital has more admitted patients now on average than it had last year during the pandemic. Even worse is that Ms. Conrad attests that even injuries occurring directly after COVID-19 vaccination are *not* being reported to the CDC and FDA's Vaccine Adverse Events Reporting System ("VAERS").

In fact, after she began assisting doctors and nurses in her hospital with submission of VAERS reports, she was prohibited by the hospital from doing so for a majority of the reports. Ms. Conrad's first-hand experience reinforces the serious concerns previously raised that there is

an incredible level of underreporting to VAERS of adverse events following the COVID-19 vaccine. Please advise forthwith what steps you intend to take to (1) inform all health care providers that all serious adverse events they observe after COVID-19 vaccination should be reported to VAERS and (2) punish hospitals and health care professionals that fail to file VAERS reports.

I. Underreporting to VAERS

As you are aware, an AHRQ-funded study by Harvard Medical School of 715,000 patients tracked reporting to VAERS over a three-year period at Harvard Pilgrim Health Care. It concluded that “fewer than 1% of vaccine adverse events are reported.”¹

This disturbingly low rate is confirmed by the rate at which anaphylaxis after COVID-19 vaccine is reported to VAERS. The CDC Director claims that “Anaphylaxis after COVID-19 vaccination is **rare** and occurred in approximately **2 to 5 people per million** vaccinated in the United States based on events reported to VAERS.”² That claim is contradicted by a recent study at Mass General Brigham that assessed anaphylaxis in a clinical setting after the administration of COVID-19 vaccines and found “severe reactions consistent with anaphylaxis occurred at a rate of **2.47 per 10,000 vaccinations**.”³ This is equivalent to 50 to 120 times more cases than what VAERS and the CDC are reporting.

The underreporting of anaphylaxis by the CDC and VAERS is particularly troubling because it is mandatory for medical providers to report anaphylaxis after any COVID-19 vaccine to VAERS,⁴ most of these reactions occur within 30 minutes of vaccination,⁵ and there has been an intense campaign by health authorities to inform medical providers that they need to report anaphylaxis after COVID-19 vaccination to VAERS. Nonetheless, the rate of reporting still appears to be only around 0.8 to 2 percent of all cases of anaphylaxis.

This raises serious concerns regarding the underreporting of adverse events following COVID-19 vaccination to VAERS, especially for adverse events that do not occur immediately after vaccination and where health care providers have not been specifically directed to report such adverse events to VAERS.

II. Confirmation from the Front Line

The first-hand observation of Deborah Conrad, a Physician Assistant from a New York regional hospital (“**Hospital**”), confirms this concerning and dangerous underreporting to VAERS. Her direct daily observation over the last two years of hospital admissions and vaccination status

¹ <https://healthit.ahrq.gov/sites/default/files/docs/publication/r18hs017045-lazarus-final-report-2011.pdf>. See also a U.S. House Report similarly stated: “Former FDA Commissioner David A. Kessler has estimated that VAERS reports currently represent only a fraction of the serious adverse events.” <https://www.congress.gov/106/crpt/hrpt977/CRPT-106hrpt977.pdf>.

³ <https://jamanetwork.com/journals/jama/fullarticle/2777417>

⁴ See, e.g., <https://www.fda.gov/media/144413/download>.

⁵ See <https://www.cdc.gov/coronavirus/2019-ncov/vaccines/safety/adverse-events.html>; see also <https://jamanetwork.com/journals/jama/fullarticle/2777417> (mean time to reaction is 17 minutes post-vaccination).

also confirm that the COVID-19 vaccine has caused a surge of admissions to her hospital exceeding even that which occurred at the height of the pandemic.

Ms. Conrad raised these concerns to her superiors at the Hospital. After they failed to act, she reached out Dr. Shimabukuro on March 26, 2021 and to the Food and Drug Administration (“FDA”) via email on April 15, 2021, April 30, 2021, and May 24, 2021 explaining that she was seeing concerning adverse events that were not being reported to VAERS, including pericarditis. These messages were never acknowledged. Ms. Conrad also raised the issue with the New York State Department of Health (“NYSDOH”) and with the Office of Professional Medical Conduct. She has, to date, not received satisfactory answers nor has she seen any steps taken by the Hospital to remediate the issues.

i. Ms. Conrad Assists Hospital Staff to File VAERS Reports

Ms. Conrad is in constant communication with patients, patients’ families, and other hospital staff and has knowledge of numerous serious post-COVID-19 vaccine adverse events, including breakthrough cases and deaths, as well as other adverse events on the CDC’s “adverse events of special interest” list⁶ that have not been reported to either VAERS or the NYSDOH. Among other serious conditions following COVID-19 vaccination, Ms. Conrad has observed: clotting events, myocarditis cases, type one diabetes new onset, Acute myelogenous leukemia, breakthrough COVID-19 cases, death, and more.

For the past few months, on her own time, Ms. Conrad has been assisting doctors and other medical professionals at the hospital to report such events to VAERS. Instead of praising her efforts, numerous individuals at the Hospital ordered Ms. Conrad to stop reporting to VAERS altogether unless she was submitting a report for her direct patient. Since being given this order, Ms. Conrad has knowledge of dozens of patients whose conditions necessitate a VAERS report and whose treating nurses and doctors have not filed a VAERS report. This was entirely predictable as Ms. Conrad was, to her knowledge, the only health care provider at the Hospital submitting reports.

ii. Requirement to Submit VAERS Reports

Health care workers are mandated by federal law to report certain medical events arising after vaccination to VAERS. Pursuant to 42 U.S.C. § 300aa-25:

Each health care provider and vaccine manufacturer **shall report** to the Secretary—

- (A) the occurrence of any event set forth in the Vaccine Injury Table, including the events set forth in section 300aa-14(b) of this title which occur within 7 days of the administration of any vaccine set forth in the Table or within such longer period as is specified in the Table or section,

⁶ See <https://www.bestinitiative.org/wp-content/uploads/2021/02/C19-Vaccine-Safety-AESI-Background-Rate-Protocol-FINAL-2020.pdf> at 12-13.

- (B) the occurrence of any contraindicating reaction to a vaccine which is specified in the manufacturer's package insert, and
- (C) such other matters as the Secretary may by regulation require.⁷

Additionally, pursuant to the FDA and its emergency use authorizations (“EUA”), all vaccine and health care providers “must report the following information associated with the administration of ... COVID-19 Vaccine of which they become aware to VAERS in accordance with the Fact Sheet for Healthcare Providers Administering Vaccine (Vaccination Providers⁸):

- Vaccine administration errors whether or not associated with an adverse event
- Serious adverse events (irrespective of attribution to vaccination)
- Cases of Multisystem Inflammatory Syndrome in children and adults
- Cases of COVID-19 that result in hospitalization or death.”⁹

“Serious adverse events” are defined by the FDA to include:

- Death;
- A life-threatening adverse event;
- Inpatient hospitalization or prolongation of existing hospitalization;
- A persistent or significant incapacity or substantial disruption of the ability to conduct normal life functions;
- A congenital anomaly/birth defect;
- An important medical event that based on appropriate medical judgement may jeopardize the individual and may require medical or surgical intervention to prevent one of the outcomes listed above.¹⁰

Health care providers are also strongly encouraged to report to VAERS “*any adverse event that occurs after the administration of a vaccine* licensed in the United States, whether it is or is not clear that a vaccine caused the adverse event.”¹¹ The importance of filing VAERS reports is acute with regard to COVID-19 vaccines which were developed based on novel technology and which have only been granted emergency use authorization.

¹⁰ <https://www.cdc.gov/vaccinesafety/ensuringsafety/monitoring/vaers/reportingaes.html>.

¹¹ <https://www.cdc.gov/vaccinesafety/ensuringsafety/monitoring/vaers/reportingaes.html> (emphasis added).

iii. Hospital Prevents Ms. Conrad From Filing VAERS Reports

When Ms. Conrad observed that serious adverse events occurring directly after COVID-19 vaccination were not being reported to VAERS, she volunteered to submit the necessary reports to VAERS on her and her colleagues' behalf. Ms. Conrad was doing so after her paid shifts ended because she understands the critical importance of the task. In response, the Hospital told Ms. Conrad they were going to audit the VAERS reports that Ms. Conrad submitted because, "in [her] clinical role and as a leader in the organization," she was to "support [the Hospital's] approach to the vaccine," and submitting reports to VAERS apparently is contrary to its "approach to the vaccine."

It is alarming that the Hospital's "approach to the vaccines" does not and has not included educating health care providers about VAERS and encouraging them to efficiently and consistently file reports. Instead, its apparent approach is to actively deter them from doing so.

As Ms. Conrad told the Hospital, she has personally treated at least five patients that presented with new, unprovoked deep vein thrombosis or pulmonary embolisms within 6 weeks of COVID-19 vaccination. She has also seen patients who, after receipt of COVID-19 vaccination, presented with a new stroke, bleed, autoimmune hepatitis, sudden bilateral pneumonia or COVID-19 infection, as well as syncope with head injury, STEMI, new arrhythmias, new seizure disorders, new chorea movement disorder, and more. In one day alone, Ms. Conrad had four patients with sudden bilateral pneumonia within a week of their COVID-19 vaccination. Ms. Conrad understands that it is not her responsibility to determine any causation but that it is her duty to report these instances to VAERS so that the FDA and CDC have adequate data by which to detect potential safety signals. The Hospital has prohibited Ms. Conrad from filing a VAERS reports for any of these serious events after COVID-19 vaccination unless she directly treats the patient.

In auditing the VAERS reports submitted by Ms. Conrad for a four-week period – totaling 50 adverse event reports, which includes 4 deaths – the Hospital's Chief Quality Officer stated that she has "not heard this level of reporting from anywhere else and didn't hear similar reports from [another hospital in the system]." This is Ms. Conrad's precise concern: if she is not submitting the VAERS reports, they are not being submitted. The Hospital did not take issue with the reports themselves, which were all valid, but rather that unlike other hospitals, Ms. Conrad is actually causing the Hospital to submit reports to VAERS. The Hospital told Ms. Conrad: "we need to make sure we are providing a consistent message to our team and we need to make sure that that is also in alignment with what our health system is asking us to do."

The Hospital's conclusion was therefore, quizzically, that Ms. Conrad only be permitted to report to VAERS for her own patients:

From what our risk team is telling us, really you can only be reporting on the patients that you are providing direct care for and so you cannot, and I know you've been volunteering and trying to be helpful, but we need you to try to kind of dial it back and focus on the patients that you are directly responsible for ...

Ms. Conrad reiterated that the reason she took this task on is because no one else wants to do it nor are they doing it. However, the Hospital dismissed that with the statement that:

The approach has been that this is the responsibility of the individual provider who believes they have identified a potential adverse event and that has been our approach... You can't control, and I know this is frustrating, but you can't control whether someone else is putting the report in... and we do need to follow how the system is approaching this currently.

When Ms. Conrad again explained why she has the concerns she has about underreporting, she was called an anti-vaxxer by the Hospital:

I don't want us to go down any kind of rabbit hole here but the thing I think we need to be clear about and I am just going to be frank with you ...in reading the few emails you sent me and reading the email that went out to the provider, it does come across a bit...uh very vaccine...ugh I won't say very but it comes out quite, it comes out quite almost anti-vaxxy, right, and you know, clearly as an organization, as a health system, right and as ... an organization that is working on following CDC guidelines and following the guidance of the department of health, we are very much advocating for patients to receive the vaccine. And we are very much working on the ... effort to work to try and reduce vaccine hesitancy... We want people to understand that on the whole this is a very safe vaccine and that the science supports that.

Of course, the assessment of "safe" is based on reports of adverse reactions and if such reports are not being made, this conclusion could be false.

Ms. Conrad voiced additional concerns of adverse events following the emergency use vaccines and was told:

Yes, just like other vaccines, there are folks that are going to be negatively impacted but, on the whole, we have seen a tremendous benefit to the vaccine ... you and I are not individual providers, we're employee providers and we do on some level need to kind of .. for lack of a better way of saying it, we tow the company line. That is part of our responsibility is to be supporting the mission of the organization.

"Towing the company line" does not relieve the Hospital of its obligations.

Ms. Conrad's voiced concern that the Hospital was not even bothering to inform its personnel about VAERS and filing reports was, incredible, to state that "the providers should

educate *themselves* when they are dealing with patients related to COVID vaccination. That information is out there, it is available.”

We reached out to the Hospital and asked it to please forthwith confirm that the Hospital’s mission is consistent with taking all necessary steps to fulfill its legal and ethical obligations to report the mandated medical events following COVID-19 vaccination to VAERS pursuant to federal law, including: (i) educating the staff about their responsibility to report to VAERS, (ii) creating internal policies and procedures ensuring that VAERS reports will be made and establishing the process for doing so, and (iii) allowing Ms. Conrad and any other health care professional employees to submit VAERS reports without repercussions or hostility. We have received no response.

iv. Hospital Admissions Increase Dramatically & Approximately 90% of All Admitted Patients Have Received the COVID-19 Vaccine Even Though Less than 50% of the Community the Hospital Serves is Vaccinated

Ms. Conrad notes that hospital admissions are higher now than they were during the pandemic and are increasing every day. Despite the fact that the county served by the Hospital has less than a 50% vaccination rate, approximately 90% of the patients in the hospital have received the COVID-19 vaccine. What makes this particularly troubling is that many of these patients are considerably young, often in their 30s, 40s, and 50s and hence are from an age group where the vaccination rate is far lower than 50 percent in the community served by the Hospital.

The only reason that the Hospital even has this data is because Ms. Conrad insisted repeatedly that the Hospital note the COVID-19 vaccination status of each new patient. This provided the Hospital and Ms. Conrad a unique insight into the reason that hospital admissions were surging beyond the level seen during the pandemic.

The purpose of deploying the COVID-19 vaccine is to improve overall public health. The first-hand daily observation of Ms. Conrad over the last two years, including the last six months that the COVID-19 vaccine has been deployed, does not support that these products are improving the overall health of those in her community, at least with regard to hospital admissions for serious health issues.

III. Conclusion

If nothing else, the first-hand account of Ms. Conrad reflects that the reporting requirements of the EUAs for the COVID-19 vaccines are not being adhered to. Without robust post-authorization and post-licensure safety monitoring, many Americans may end up being harmed by improperly tested products. To avoid this potentially calamitous outcome, and to address any issues that arise as quickly as possible, health care facilities must be educated and held responsible to track and report all adverse events following vaccination, including breakthrough

cases. The above also contradicts Dr. Fauci and Dr. Walensky's repeated, but still unsupported, claim that "over 97 percent of people who are entering the hospital right now are unvaccinated."¹²

This should seriously concern HHS, CDC, and FDA but, given the response to our previous letters addressing this topic, it does not appear there is any concern. There are serious safety signals that are likely being missed and for the ones that are identified, such as anaphylaxis, CVST in conjunction with thrombocytopenia, myocarditis, and Guillain-Barre Syndrome, the actual rate seen in VAERS may be only the tip of the iceberg. Ignoring and casting aside these issues in the drive to vaccinate and promote vaccine confidence may eventually be the undoing of the very confidence you seek to instill.

As explained before, unless and until underreporting to VAERS is addressed, underreporting to a passive signal detection system will continue to blind health agencies, medical professionals, and patients from what is really occurring in the clinic and will render true informed consent impossible. With the drive to vaccinate every single American with COVID-19 vaccines, the safety of all Americans, literally, depends on this broken system. Fix it.

The first step to fix it is, at the least, to automate hospital and clinical medical records to automatically send VAERS reports for all clinically significant events occurring within a window of time after vaccination. This already exists for other purposes. It can be done for vaccines as well, which is clear from the CDC's own publications on this topic and pages 31 to 34 of a letter exchange with HHS on this issue available here: <https://icandecide.org/hhs/vaccines-safety-12-31-18.pdf>. Additionally, the FDA should be enforcing its EUAs to the fullest extent of the law.

Please confirm that you will fulfill your duties as public servants and implement these simple but critical corrections needed to convert VAERS from a passive, broken system to an active, useful system that generates data that can quickly and confidentially identify and address safety issues. In the end, the more robust the system, the more it will increase vaccine confidence.

Very truly yours,

Subject: Public Comment - Jan 12th meeting

External Email

In regards to considering the COVID-19 vaccine for inclusion in chapter 246-105 WAC in the meeting on Jan 12th, I am in full agreeance with Michael Cannon, Mead School Board Director, and have copied his statement below as well as made my own comments throughout and at the end of this email.

A Covid-19 vaccine mandate clearly does not pass the 9 criteria required when Reviewing Antigens for Potential Inclusion in WAC 246-105-030. My lack of support for a mandate stems from the following criteria not being met under sections II and III on the list of criteria:

II. Disease Burden Criteria

5. The vaccine containing this antigen prevents disease(s) that has significant morbidity and/or mortality in at least some sub-set of the population.

- The vaccine has been directly available to every vulnerable sub-set of the population for some time.

In addition to the bullet above from Michael Cannon, I would like to point out that the shot (vaccine) does not prevent the □disease just as it does not prevent the spreading of the disease in item number 6 below. Those who have gotten the shot and the available boosters are still getting sick with COVID-19. Studies are showing that those with the shot (vaccine) are less likely to be hospitalized but the disease is not fully preventable with the shot (vaccine).

6. Vaccinating against this disease reduces the risk of person-to-person transmission, with transmission in a school or child care setting or activity being given the highest priority.

- It is widely proven that vaccinated individuals can and do continue to transmit the virus. We know this because this was the science used to justify mask mandates. Masks are mandated in schools already, regardless of vaccination status, to prevent the vaccinated from transmitting the virus.

III. Implementation of the Criteria

7. The vaccine containing this antigen is acceptable to the medical community and the public.

While the vaccine may be acceptable to the medical community (although we will note that even within the medical community, the vaccine adoption rate was not acceptable enough to preclude a forced mandate), we cannot gloss over the fact that public acceptance does not even represent a strong majority.

- Under 51% of Spokane County residents are vaccinated. (srdc.org

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ffacebook.com%2F.php%3Fu%3kKppLbXuO5k_ZuKCPGy1RLaW9vKbiPojoxmTZiagXnOnKVcF3Nlt5Zfrkz2DPLwnavPCSuz7A9Ebrd2pAxaT0f8VUK-R%26c%5B0%5D%3DAT28w2BMNiLaFrziM1f2Na0yK85-HR-ULVOiQ-cvwWOREQsYZiuu_2V4HlyR4yO3-xtD-pGXBf8JqJWuN1Kz5z04UqoPd8n-Kb5LEpfPpckqogD2QNZeqlTOIPoUF8HJsD0BVXfQEE-rQYRpCyFDefDURv4BbNF5N5j4Kb_k1csNgA&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C93dd8747eb9>)

- Less than 40% of kids 12-17 are vaccinated. (srdc.org

<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ffacebook.com%2F.php%3Fu%3sYLNgm6_zxgO_A5Yf3tZANImJRBmbWJ0kYMJNxxk%26h%3DAT23N5KTBHxPILUQSImpz8jgTMIUC-kKppLbXuO5k_ZuKCPGy1RLaW9vKbiPojoxmTZiagXnOnKVcF3Nlt5Zfrkz2DPLwnavPCSuz7A9Ebrd2pAxaT0f8VUK-R%26c%5B0%5D%3DAT28w2BMNiLaFrziM1f2Na0yK85-HR-ULVOiQ->

- Only 36% of the entire black community in Spokane County is vaccinated, and it is reasonable to assume this number is far lower among ages 12-17. A vaccine mandate in schools would disproportionately affect students of color in our community. (srdc.org <https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Ffacebook.com%2F.php%3Fu%3kKppLbXuO5k_ZuKCPGy1RLaW9vKbiPOjoxmTZiagXnOnKVcF3Nlt5Zfrkz2DPLwnavPCSuz7A9Ebrd2pAxaT0f8VUK-R%26c%5B0%5D%3DAT28w2BMNiLaFrziM1f2Na0yK85-HR-ULVOiQ-cvwWOREqsYZiuu_2V4HlyR4yO3-xtd-pGXBf8JqJWuN1Kz5z04UqoPd8n-Kb5LEpfPpckqogD2QNZeqlTOIPoUF8HJsD0BVXfQEE-rQYRpCyFDefDURv4BbNF5N5j4Kb_k1csNgA&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C93dd8747eb9>)

8. The administrative burdens of delivery and tracking of vaccine containing this antigen are reasonable.

- Our administrators and nurses have already given feedback that a vaccine mandate would create an unreasonable and insurmountable administrative burden involving tracking.

9. The burden of compliance for the vaccine containing this antigen is reasonable for the parent/caregiver.

- As stated in the above vaccination statistics, parents are choosing not to vaccinate their children. Forcing them to do so (as with other segments of our society who were coerced under the threat of losing their jobs and livelihoods) does not fall within a reasonable burden of compliance. It does not seem logical to vaccinate a group (ages 0-19) with such a low, even insignificant, rate of hospitalization or death, while claiming that will protect a more vulnerable group (ages 50-90) with a dramatically higher rate of vaccination (between 62%-82% based on age). Thusly, our state would propose forcing vaccination on those who do not need it, to protect those who already have it and/or could easily get it.

The vaccine is widely available to any age group now. Vaccination rates reflect individual health choices that must be protected. We have to acknowledge that individuals can make their own health decisions for themselves and their families. There simply is not a case to be made for forcing someone to get vaccinated to protect someone else who can easily get vaccinated themselves.

□

For my own comments, I would like to add that while I am not a medical professional, I have done my own research on the subject and feel that regardless of what the government and medical community are calling this shot, it is not a vaccine. It is more similar to the Flu Shot in that it actually does not prevent a person from getting the disease, nor does it prevent a person from spreading the disease - hence all the mask mandates. Also, regardless of the FDA approval, this shot has not been researched and tested long enough to know what side effects could still come from obtaining it that might be worse than contracting the disease itself, especially in an age group that has been proven to have a low risk of morbidity and mortality as school age children have.

I do not support making mandatory the COVID-19 shot for children or adults for that matter.

Regards,
Jennifer Thomas

As a citizen, father, and grandfather residing in this state I want to voice my objection to mandatory vaccinations of children.

I'm a retired biochemist/chemist and have done a great deal of independent research on these EAU , mRNA vaccines and booster shots which indicate they are reactive, short-term , temporary solutions which do not prevent viral infection nor prevent viral mutation.

They are a perpetual money making machine and investment for Big Pharma and its investors.

Attached is a brief summary of my research along with several colleagues individual research with references, which we present as evidence against vaccinating children.

Respectfully,
EJ Ledet

Utilizing Repurposed Drugs to Treat COVID-19 Virus

By E.J. Ledet and Dean L. Gano

January 1, 2021

In the latest edition of The World Health Organization's [*Ongoing Living Update of Potential COVID-19 Therapeutics: Summary of Rapid Systematic Reviews*](#),¹ they say there are more than 200 therapeutic options or combinations thereof that are being investigated in more than 1,700 clinical trials treating COVID-19 infection. In this November 30, 2020 review they examined 58 of these therapeutic options. Among the therapeutics being studied are Vitamins C & D, and manmade drugs like Hydroxychloroquine, Remdesivir, and Ivermectin.

So typical of everything our trusted health care institutions do, their analysis is anything but objective or scientific. At the core of their failures is the total lack of evidenced based causal analysis, but it is much more than that. They provide declaratory statements like: "the body of evidence on hydroxychloroquine (HCQ), showed no benefit in terms of mortality reduction." But, when we look more closely at their evidence for this statement, we find they only looked at 30 studies and of those, only 6 showed that HCQ worked to prevent infection. So, given their "body of evidence," this is a valid statement.

However, had they looked at the entire body of scientific evidence, and performed a simple search for "hydroxychloroquine effective treatment for coronavirus," at the National Institute of Health (NIH) website, PubMed they would find over [800 scientific papers](#)² have been written on this subject and most of them show it works. When you find a review that says it doesn't work, you nearly always find the study patients are in the late stages of COVID-19 infection, where no antiviral drug can be expected to have much effect, and/or no Zinc was administered. As [Dr. Zelenko](#)³ has said, Hydroxychloroquine is the gun and Zinc is the bullet, yet these people don't seem to know anything about these causes.

So, given this clear observation that they cherry-picked their evidence, what's going on and where can we find the real science on this subject?

The Real Science

First and foremost, the problem here is the total failure of all the government-controlled health organizations to provide the simple causal relationships surrounding these viruses so you, the normal citizen, can make up your own mind. This is how life works! From the time we start learning about the world as small children, we observe, test, and determine the many causal relationships that guide us down the path to success. Like learning that fire is hot and will burn you if you don't avoid it. Or, that if people lie to you, you can't trust them in future interactions.

So, what are the causal relationships of a coronavirus so we can act accordingly and prevent infection? Just like we learned to avoid fire to prevent getting burned. It can't be that complicated, can it?

Indeed, it is not that complicated, but you have to be curious and look for all the causes, not just the ones that support preconceived ideas or support political propaganda. When a coronavirus enters the body, it tries to get inside a cell somewhere on the surface of the respiratory tract so it can reproduce, and we know that nose cells are likely the [key infection source for COVID-19](#).⁴ If the virus does enter a cell, it replicates, kills the cell, and spreads the newly produced viruses through breathing or coughing. When you breath in, the viruses go deeper into the lungs and the process repeats itself. As the immune system responds with too many killer T-Cells, your lungs fill with fluid and you suffocate. But this doesn't happen to healthy young people, so what's going on?

Our natural immune system defense against all viruses occurs when compounds in the foods we eat (called ionophores), from Vitamins like C, D, and E, flavonoids like Quercetin, or hormones like Melatonin create a slightly basic/alkaline environment in and around the cell. This alkaline environment disassembles the virus proteins rendering them harmless. Also, the body is made up of many [epithelial cells](#)⁵ found on the surfaces of our bodies that act like gatekeepers; keeping out environmental problems like dirt and pathogens but allowing healthy cell biology to function. One of the mechanisms these special cells use is to allow zinc to attach to a specific receptor site on the cell's surface, like a little door entrance, called an ACE-2 receptor site. (ACE stands for Angiotensin-converting enzyme which acts as a biological catalyst in normal cell biology.)

This site is used as a primary defense to prevent a virus from entering a cell, by keeping it in the alkaline environment long enough to disassemble the virus. The Zinc transporters, called ionophores, that create this alkaline environment also help Zinc get inside the cells through this "door." Once inside, the zinc acts as a backup defense mechanism to disassemble the virus if they get inside.

But this is only one way Zinc is used to protect us. As defined in this NIH study, [The Potential Impact of Zinc Supplementation on COVID-19 Pathogenesis](#),⁶ July 2020, Zinc works in nine different ways to prevent a viral infection and maintain a healthy immune system. Making sure we have enough blood serum zinc is most important in the elderly and patients with various inflammatory and autoimmune diseases. And obesity, which is present in 40% of Americans, causes Zinc deficiency and may account for why deaths are so high in the US.

So, because Zinc is so important to a healthy immune system we can see why older and unhealthy people, who are zinc deficient, are so much more likely to die. All of the COVID-19 [co-morbidity causes identified by the CDC involve Zinc-deficiencies](#).⁷ They either cause it, like obesity, or are caused by it, like old age, and their treatment involves Zinc-ionophores and Zinc supplements. Since Zinc is involved in over 300 bodily functions it should be no surprise that such a deficiency could cause so many problems.

So, in summary, the cause of death is uncontrolled virus replication, which is caused by a failure of the immune system to stop the virus from entering our lung cells. This failure

is caused by a lack of zinc and zinc ionophores, which is caused by many medical conditions, the greatest of which is old age.

When 97.5% of the COVID-19 deaths are people over 45 years old and 94% of those who die have an average of 2.6 comorbidity causes linked to zinc deficiency you know there has to be a causal connection and now you know what it is, so take action to protect yourself from this horrible disease.

Prevention

Now that we know how the immune system works to prevent infection, we know that the first line of defense is Zinc and zinc ionophores on the outside of our cells. Please note, you do not “kill” a virus, because it is not a living organism; it is just a protein molecule made of Ribonucleic acid (RNA), a basic building block of life, and by subjecting it to a low-acid environment called a “base compound” it disassembles and falls apart. This occurs when enough zinc ionophores like Vitamins C, D, and E and/or Zinc are present in the blood stream.

But there are other kinds of Zinc ionophores. In fact, there are over two billion of them and they have been identified in the [ZINC20 database](#)⁸ provided by the American Chemical Society funded by a subsidiary of NIH (National Institute of Health). When you look at this database you will find that nearly all of the proposed synthetic drug treatments for the COVID-19 virus, like Hydroxychloroquine, Chloroquine, Remdesivir, and Ivermectin and other natural substances are all listed as zinc ligand (metal transporter) ionophores. And they work by first disassembling the virus via pH modifications on the outside of the cell or if that fails, they take zinc inside the cell to stop the replication process. In effect, you have two compounds, zinc and zinc ionophores fighting both outside and inside our cells. When you are young, this all happens naturally and is why to date, [only 147 children under the age of 18](#)⁹ have died from COVID-19 in the US.

While we have heard a lot about drugs like Hydroxychloroquine and Remdesivir, we haven't heard much about Ivermectin, which is a repurposed drug normally used as a medical preparation that effectively copes with many kinds of parasites. It is a prescription drug used to treat lice, scabies, as well as onchocerciasis (river blindness) and other nematodes in humans and animals. It is applied externally in a cream and internally as a pill, depending on the disease.

Appearing as a witness on Dec. 8, 2020, before the Senate Committee on Homeland Security and Governmental Affairs—which held a hearing on “Early Outpatient Treatment: An Essential Part of a COVID-19 Solution”—Dr. Pierre Kory, President of the [Frontline COVID-19 Critical Care Alliance \(FLCCC\)](#),¹⁰ called for the government to swiftly review the already expansive and still rapidly emerging medical evidence on Ivermectin.

The data shows the ability of the drug Ivermectin to prevent COVID-19, to keep those patients with early symptoms from progressing to the hyper-inflammatory phase of the disease, and even to help critically ill patients recover. [Dr. Kory testified](#)¹¹ that Ivermectin is effectively a “miracle drug” against COVID-19 and called upon the government’s medical authorities—the NIH, CDC, and FDA—to urgently review the latest data and then issue guidelines for physicians, nurse-practitioners, and physician assistants to prescribe Ivermectin for COVID-19.

In the process of learning about Ivermectin, the Frontline COVID-19 Critical Care Alliance created, based on feedback from doctors from around the world who were treating COVID-19 patients, a protocol for treatment called MATH+ and published a paper in the Journal of Intensive Care Medicine titled: [Clinical and Scientific Rationale for the “MATH+” Hospital Treatment Protocol for COVID-19](#).¹²

MATH+” stands for Methylprednisolone, which is a corticosteroid and zinc ionophore; Ascorbic acid (Vitamin C), which is a zinc ionophore; Thiamine (Vitamin B1) also a zinc ionophore; Heparin, which is a blood thinner and zinc ligand/ionophore; and the “+” stands for hospital care and co-interventions including Ivermectin, which is a strong zinc ionophore; Vitamin D and Melatonin, which are also zinc ionophores; Zinc, and Famotidine which is an antacid and zinc ligand/ionophore.

Notice how all of these therapeutics provide the exact causal defense our natural immune system uses (Zinc and Zinc Ionophores) to effectively fight the virus when you are young and healthy! It should be no surprise then, that they are highly effective at treating and preventing COVID-19 infection in the rest of the population. However, Big Pharma does not disclose that all of these synthetic drugs are zinc ligand ionophores because they can’t make big money selling zinc or these repurposed existing drugs that have been around for decades.

Given this causal evidence that supports the use of the MATH+ protocol, it begs the question of why our trusted scientific institutions have failed to follow the science and instead provide obfuscation and non-causal narratives focused on personalities and politics. Remember how the corporate media attacked the use of Hydroxychloroquine simply because President Trump said it works after hearing the real science? Instead of following the evidenced-based science, they proceeded to sell fear and hate and killed hundreds of thousands of people in the process.

Incompetence or Planned?

In every negative analysis of these repurposed drugs, the authors totally fail to acknowledge the causal relationships between the virus and immune system like we just laid out for you. Instead, they focus on presenting a narrative about outcomes of specific studies that have nothing to do with the causes of the problem. So, the question becomes: how can you possibly provide a solution to any problem if you don’t understand and state the causal relationships of the event? You can’t, and that means they are grossly incompetent or deliberately deceiving us. This is not rocket science.

We all know, as a basic human strategy, that to solve a problem you first have to know what the causes are; and they never do this in these phony studies.

Also, given that effective problem-solving is not taught by our education system, it is possible that these people are just ill-trained incompetents, but there is another possibility and we need to explore it.

Just ask yourself, if the anti-HCQ or anti-Ivermectin papers were actually peer reviewed why didn't the peer scientists ask the same simple questions we have? Like, why did they ignore the causal relationships we have presented; that are common knowledge, supported by hundreds of studies? Why didn't they check the blood-serum Zinc level of the patients in their study? Because if they had, they would have probably found that most of those who responded well to HCQ or Ivermectin, had high blood serum Zinc levels and those who did not respond well, had low levels of Zinc.

And why didn't they question the supposed adverse effects of HCQ, when we know that not only is HCQ not dangerous, it is safer than Aspirin. A [study at Oxford University](#)¹³ of 956,000 people from all over the world showed no deleterious effects when recommended doses are used.

And why are our trusted medical journals printing false information? For example, the Journal of the American Medical Association (JAMA) [published an article](#)¹⁴ claiming HCQ didn't work and also could cause heart rate problems and should not be used without medical supervision. Problem is, they used 400mg twice a day and **did not use Zinc** in their treatment. Toxic doses that are 14 times what is recommended equals toxic results.

And once again, on May 22, 2020, *The Lancet*, a highly respected online medical journal also published a paper saying HCQ was ineffective and dangerous. Because both *The Lancet* and JAMA studies reported that HCQ is dangerous, the FDA rescinded its emergency order allowing HCQ to be prescribed for COVID-19. This also caused several state governors to issue orders to local pharmacies not to fill HCQ prescriptions ordered by many board-certified Doctors for their COVID-19 patients. Something that has never happened before and certainly resulted in more unnecessary deaths.

Also, *The Lancet* finally asked for a detailed peer review regarding the article they published on May 22, 2020 and as reported in [WebMD](#)¹⁵ they retracted the article because the authors would not provide data that could be adequately peer reviewed, and it was eventually found to be completely false; so at least someone is following scientific protocol. But it speaks volumes to how corrupt the scientific peer review process is. Let's look a little closer.

Whistle Blowers

Several Family Doctors, who have successfully treated many COVID-19 patients, came out in public to question the path our government officials have led us down. One of

them is Dr. Simone Gold, who [exposes the truth about Coronavirus and Hydroxychloroquine](#).¹⁶ These doctors fully understand the causal relationships and hence know the truth.

Also, there are over 50,000 medical professionals from all over the world who are focused on preventing deaths and they have signed the [Great Barrington Declaration](#)¹⁷ asking our government officials to wake up and focus on preventing death. Among other things they state:

Current lockdown policies are producing devastating effects on short and long-term public health. The results (to name a few) include lower childhood vaccination rates, worsening cardiovascular disease outcomes, fewer cancer screenings and deteriorating mental health – leading to greater excess mortality in years to come, with the working class and younger members of society carrying the heaviest burden. Keeping students out of school is a grave injustice.

Also, in an article by the [Alliance For Human Research Protection](#)¹⁸ on June 5, 2020, they report that Dr. Philippe Dousty-Blazy, the former French Health Minister, publicly stated that *The Lancet* and the *New England Journal of Medicine* editors admitted to being pressured by pharmaceutical companies to publish certain results.

When *The Lancet* editor Dr. Richard Horton was asked why it initially published the discredited article discussed above, he said: “*If this continues, we are not going to be able to publish any more clinical research data because pharmaceutical companies are so financially powerful; they are able to pressure us to accept papers that are apparently methodologically perfect, but their conclusion is what pharmaceutical companies want.*”

Also, Marcia Angell, former Editor-In-Chief of the NEJM writes in her 2004 book "The Truth About the Drug Companies": “*The combined profits for the ten drug companies in the Fortune 500 (\$35.9 billion) were more than the profits for all the other 490 businesses put together (\$33.7 billion) [in 2002]... Over the past two decades the pharmaceutical industry has moved very far from its original high purpose of discovering and producing useful new drugs. Now primarily a marketing machine to sell drugs of dubious benefit, this industry uses its wealth and power to co-opt every institution that might stand in its way, including the US Congress, the FDA, academic medical centers, and the medical profession itself.*”

In a recent [open letter](#)¹⁹ to Sir. Anthony Fauci, three board certified doctors made it very clear that he has grossly mishandled the pandemic response by asking him 122 very pointed questions highlighting his inconsistencies, and concluded the following:

“Americans must not continue to die unnecessarily. Adults must resume employment and our youth return to school. Locking down America while awaiting an imperfect vaccine has done far more damage to Americans than the coronavirus. We are confident that thousands of lives would be saved with early treatment of high-risk

individuals with a cocktail of hydroxychloroquine, Zinc, and azithromycin. Americans must not live in fear. As Dr. Harvey Risch's [Newsweek article](#)²⁰ declares, "The key to defeating COVID-19 already exists. We need to start using it."

More evidence to support what these leading Physicians said can be found in what the Big Pharma Company "Gilead Sciences" has done. Their magic medicine, which the very reverend Dr. Anthony Fauci wholeheartedly endorses, is Remdesivir and they have put a lot of money pressure on MDs, Medical Journals, Press, Academia, NIH, WHO, and the CDC to discredit HCQ - even though it has 65 years of safe use as a malaria drug and 40 years of safe use to treat lupus and some forms of arthritis.

[Gilead contributes big money](#)²¹ to the [income of 20% of the National Institute of Health](#)²² (NIH) Board Members and since Dr. Fauci heads the NIAID, one of 27 institutes that make up the NIH it might be hard for him to contradict them. And, oh-by-the-way, he is [not required to disclose any ties to Big Pharma](#).²³ Gilead also funds Academic Medical Research and as we learned above, cleverly influences Medical Journal Publishers.

Gilead, being focused on money not saving lives, has spent hundreds of millions of dollars in research, marketing, and propaganda, to sell its 5-day injection treatment for \$2,340 versus \$25 or less for HCQ pills that can be bought over-the-counter in most of the world.

Bottom Line

Given what we know about how simple it is to treat and prevent COVID-19 infections using off label medicines and easily available compounds that mimic how a healthy immune system works, why are our trusted leaders not telling us this? Who created and spread this virus and why? And while we don't have evidenced based causes to answer these questions, we do know one thing. We still live in a free country, for now, but if "we the people" continue to act like sheep, all of our freedoms will be taken away, so we must act now. Please do everything you can to get this simple solid science out to everyone you know and let your leaders at every level of government know we are not going to accept their phony narratives and lying anymore!

Depiction of Novel Corona Virus Infectious Disease 2019 (CoVid 19 aka SARS CoV 2)

Problem: CV19 Inhibits Human Body's Immune Regulatory Response/Defense System.

Where: Primary Lungs and Secondary other major organs and nervous system.

When: 2-14 days after Initial infection date.

Significance : The human body's immune defense is compromised leading to prolonged illness and high mortality in populations with previous underlying inflammatory, immunosuppressive diseases/conditions: Elderly, Afro/Native Americans ; Obesity, Smokers, Alcoholics, Addicts, HBP, Diabetes, Arthritis, Heart Disease, Arteriosclerosis, Stroke/Ischemia, Blood vessel inflammation, Cycle Cell Anemia, Cancer, Lupus, MS, AIDs, Nephritis, Kawasaki disease, etc.

Zinc is vital to promoting healthy hair, skin, and nails and is required for a proper sense of taste and smell. Zinc plays an integral role in immune function, protein synthesis, wound healing, DNA synthesis and cell division and is involved in over 300 regulatory processes. Zinc is also important for lipid, carbohydrate, and protein metabolism, as well as cell signal transduction, and reduction/oxidation (redox) regulation. In males, zinc has been shown to protect the prostate gland from infection and enlargement, which has been linked to being a risk for prostate cancer. In females, zinc can help treat menstrual problems and alleviate associated symptoms. Zinc may also protect from night blindness and prevent the development of cataracts. Children need zinc to grow, maintain a healthy body weight, fight off diseases such as pneumonia, diarrhea and diabetes, as well as shorten the length of the common cold.

Evidence: shown Zinc transported across SARS CoV 1 infected cell membranes using non protein, synthetic ionophore , carrier molecules has been to inhibit viral RNA reverse transcriptase (RT) enzyme and prevent virion reproduction in vitro.

Hypothesis: CV19 inhibits zinc transport across infected cell membranes leading to Zinc Immuno regulatory deficiencies causing initial acute exacerbation of chronic obstructive pulmonary disease and secondary acute exacerbation of heart, kidney, blood vessels, brain, large intestine, skin, joints, and nervous system exemplified by cytokine storm and inflammation.

Causes: Low blood serum zinc concentration/availability.

Inhibition of zinc zip protein carrier "ionophores" which transport zinc across cell membranes for human DNA/RNA synthesis, cellular control, and immune response.

Solutions : Increase blood serum zinc through proper diet, digestion, and gut flora; avoid phytate rich foods; eat zinc rich foods; supplement zinc.

Supplement/administer "non protein" Zinc ionophore carrier molecules:

A. Synthetic, Big Pharma Drugs like Pyrithione, Hydroxychloriquine, and/or other synthetic zinc ligand-ionophores.

B. Natural fruit and vegetable polyphenol flavenoid ionophores like Quercetin, Reseveratrol, Curcumin, ECGC.

Effective: Timely Solutions Implement Zinc plus non protein ionophores to transport zinc across infected cell membranes and inhibit viral RT, prevent virion reproduction, and restore human cell DNA and RNA synthesis, cellular control, and immune regulatory response/defense.

COVID-19 “ Experimental” Vaccines

You have the right to make an informed decision about your health and your future and you may be asking: Should I take this experimental vaccine? Here are a few facts you should consider to help you make an informed decision.

Facts:

1. According to the Pharmaceutical Companies themselves, these vaccines may not prevent the SARS-CoV-2 virus: Evidence:
 - a. From the [Moderna](#) and [Pfizer](#) Vaccine Fact Sheets: *The (Moderna/Pfizer) COVID-19 Vaccine is a vaccine and may prevent you from getting COVID-19. There are no FDA approved vaccines to prevent COVID-19.*
 - b. However, the [handout](#) you get when they give you the shot, says it “...has been authorized to prevent COVID-19”, so they are lying about it. They are experimental and have been approved by FDA and CDC via an Emergency Use Authorization (EUA) but have not been fully tested, so are not proven safe.
2. These vaccines are experimental compounds that use “synthetic messenger RNA (mRNA)” housed in fat cells. In 2005 an [animal study](#) was done with SARS-CoV-1 mRNA vaccines on ferrets. Because of major issues, the SARS-CoV-1 vaccine was not further developed.
3. In many previous [clinical trials since the 1960's](#) attempts to [vaccinate against Respiratory Syncytial Virus](#) (RSV) (a pneumonia type virus), [Dengue](#), SARS and MERS, the studies each failed during the animal phase. [Cats, ferrets, monkeys, and rabbits each and every time experienced Antibody Dependent Enhancement](#) (ADE), also known as pathogenic priming or a cytokine storm. This occurs when the immune system creates an uncontrolled and overwhelming inflammatory response upon being confronted with the pathogen in the real world, and the outcome, tragically, is death. The same immune system overreaction took place in a number of infants in [clinical trials who received an attempted RSV shot](#), as well as some six hundred Filipino children who died following early vaccination against Dengue Fever, so [this outcome remains a viable concern today](#).
4. Big Pharma has asked for the normally required animal studies for the CoV19 vaccine to be waived. It was waived for EUA purposes, so there have been no long-term animal studies to see if this could happen with these new mRNA vaccines. WHY?
5. Because these vaccines may or may not prevent infection, and as [some reports show](#), only reduce symptoms, why take something that does not **prevent** the infection in the first place. It is a proven fact, with [hundreds of scientific studies to prove it](#), that Zinc and Zinc ionophores can prevent or mitigate infection in the first place; take them as supplements and you are protected. [The CDC recently said that 80%](#) of all people who were infected with COVID-19 were deficient in Vitamin D, another Zinc ligand (metal binding) ionophore (transporter). And this helps explain why Sub-Saharan Africa and other countries where most people are in the sun a lot [only have marginal deaths from this virus](#).
6. Hydroxychloroquine (HCQ) is a 65-year-old drug that has been shown [to stop an infection](#) if taken within the first 2 – 7 days of getting symptoms from COVID-19. So, if you are taking your preventative Vitamins like C, D, E and Quercetin, and/or other supplements like Melatonin plus Zinc, and for some reason this doesn't prevent infection, you can stop it with Ivermectin + zinc; which is [readily available online](#).

COVID-19 “ Experimental” Vaccines

7. Other synthetic drugs like Budesonide, Dexamethasone, Ivermectin as well as natural substances (i.e., vitamins, flavonoids, amino acids, and hormones) can be found in the Pharmaceutical Zinc20 database, a database funded by a subsidiary of NIH. This database is comprised of ligands, which carry metals like Zinc, Calcium and other micronutrients present in our blood serum and transport them across cell membranes into the body of the cell (cytoplasm) to help our immune system fight infection. Like HCQ, these synthetic drugs need zinc and other micronutrient metals to work. [Dr. Zelenko](#) uses the analogy “the drug is the gun and zinc is the bullet” which is essential to stopping the viral reproduction and resulting infection.
8. Ivermectin is a proven drug for treating all three phases of the COVID-19 disease. Perhaps the best proof is found in India where one [province distributed Ivermectin](#) to most citizens and now they have very few cases and no deaths from the virus. Given such a useful therapeutic exists, it is illegal to authorize the use of vaccines, yet the psychopathic leaders do it anyway.
9. Because these “Vaccines” are unproven experimental substances, we won’t know what side effects may occur for months or years to come, but it may result in a long-term unnatural human manipulation of our DNA building blocks. Do you really want to take that risk or risk your children’s lives? Especially since:
10. There is no pandemic. The number of deaths from COVID-19, [which is highly inflated](#), is no worse than a bad flu season. And your chances of dying from it, even if you do nothing to protect yourself as defined in #5 and #6 above, are [very small according to CDC data](#). For children 17 and under they are 154 times more likely to die from something else. As of April 17, 2021, only 266 children have died with COVID-19. Not a single healthy child has died from COVID-19 alone. If you are under 64 years old, your chance of surviving is 99.99%.
11. There is not a cold or flu season, there is a vitamin D deficiency season. Colds and flues occur when the sun is low in the sky and we don’t get enough of it. Or if you live in a big city, you don’t get enough sun all the time and big cities are where most of the COVID deaths have occurred. Take your Vitamin D supplements and your immune system will thank you.
12. Since both experimental vaccines are EUA, both Pfizer and Moderna are indemnified from all legal action resulting from patients experiencing side effects; including death. Since they assume no risk, you are the one who takes all of it! And according to [Dr. Sherri Tenpenny](#) that is not a good idea.
13. According to [Dr. Richard Fleming](#), Ph.D, MD, JD, a renowned cardiologist and researcher, there is a chance that the mRNA from the vaccine can be incorporated into your human DNA by action of the [reverse transcriptase enzyme present in the vaccine](#). This may affect your auto immune system and result in various auto immune diseases. However, for all you who are taking zinc supplements + ionophores and decide to get vaccinated, Dr Fleming stated that he believes Zinc does appear to interfere with the mRNA process of the vaccines to make the spike protein. This means it will probably reduce the symptoms you can get, so make sure you are taking them.
14. The vaccine nano particles of lipid/fat composition, in which the mRNA is transported into your cells, has never been used before in human trials and long-term health effects have not been determined. These lipid nano particles bind with the normal fats in cell

COVID-19 “ Experimental” Vaccines

membranes and allow [entry of thousands of the synthetic mRNA vaccine into your muscle cells](#). Unlike the virus RNA which has to enter through the ACE-2 receptors found on cells, the nano particles create new pathways into cells. Because the ACE-2 receptor sites are where the normal entry of the virus occurs, bypassing this path means a greater amount of mRNA can enter the cell producing increased amounts of the spike protein exacerbating the immune response to the virus. This increased immune reaction can produce the very InflammoThrombotic Response (ITR) responsible for so many deaths. Again, long-term health effects are not known since long-term studies in lab animals have not been conducted. We humans have become the lab rats, and many doctors are reporting large increases in the number of cancer cases since the vaccines started.

15. The CDC [VAERS database](#) only captures about 1% of all the adverse reactions to vaccines, and so far the Pfizer vaccine has 1,218 blood clot reports, Moderna has 1,034, and J & J has 1,000. Therefore, blood clot disorders reported totals 3,272, so if the 1% is accurate, this would mean 327,200 people have had this problem from the vaccines.
16. Like real lab animals you cannot sue these pharmaceutical companies for suffering from any side effects after taking these experimental vaccines. However, companies requiring CoV19 vaccinations as a requirement for employment may be subject to legal action since it violates our civil rights. For an example of a law suit against the government go here: <https://factcheckedorg.files.wordpress.com/2021/09/joseph-jensen-lawsuit.pdf>
17. It's against the [Nuremberg code](#) to force vaccinations on a person, and [informed consent](#) overrides public policy. Federal law prohibits employers and others from using vaccines under EUA as a [condition](#) of employment.
18. For 35 more facts on the potential dangers of these vaccines, go to [No Jab For Me](#).
19. Or, for 18 more reasons not to get these Experimental Vaccines see: [18 Reasons I Won't Be Getting a Vaccine](#) by Christian Elliot.
20. The choice to take an experimental EUA COVID-19 vaccine is yours to make. Hopefully we have given you the facts to make a better-informed decision.

Good luck and good health to you all.

Subject: Public Comment on covid vaccine mandates

External Email

* Latest study out of Germany makes it very clear our kids are extremely safe from covid. 15 month study 10 million youth ZERO deaths.

* Yale school of medicine found that almost 1/3 of the drugs approved between 2001-2010 had major safety issues after they were made available. It took 4.2 years after approval before the safety concerns surfaced with issues more common in drugs that were granted "accelerated approval".

* History is replete with the times our government and medical authorities were wrong. Here is a few examples:

1. Lead paint
2. Asbestos
3. Heroin
4. Cigarettes. The US govt was the worlds biggest buyer of cigarettes. How did that work out for us?

* According to the CDC the vaccine can cause serious heart issues among 12-15 year old's especially males. I have two that fall into that range.

Based on the actual science and data if this state attempts to force this vaccine onto my children we will move out of the state. We care to much about the health of our sons.

I am a parent, I'm vaccinated as are my children. My strongly held position on state mandated COVID-19 shots for school children is that parent who no more of their children's personal health are best suited to know if a vaccination shot is appropriate for their child. I strongly disagree with a state mandate To vaccinate school age children. Almost all recent studies show that school age children are not at serious risk of long-term or short-term harm due to catching Covid. I particularly dislike the us and them underpinnings of this ideology. Please take action to prevent the state from mandating vaccinations of school age children. Paul Stenson, Lynnwood Washington

Hello

I am writing to comment on the agenda for the January 12 meeting regarding implementation of COVID vaccine for school and daycare admission

For several reasons, my child will not be getting this vaccine and you will be forcing us and numerous other families to leave

We own a large business here in Tumwater that currently employees 95 people; we will be moving out of this state if this happens

Thanks,

Jamie Nickel

Subject: Constructive Notice & Warning

attachments\C7B3AC8106C945D0_constructive-notice.pdf

External Email

Members of TAG,

Perhaps you heard in the news that Boeing received significant pushback from employees after imposing its vaccine mandate and was caught in a difficult spot trying to comply with Biden's mandate. Here's the article that speaks to those details:

<https://www.foxbusiness.com/politics/boeing-suspends-vaccine-requirement-for-employees>
<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.foxbusiness.com%2Fpolitics%2Fboeing-suspends-vaccine-requirement-for-employees&data=04%7C01%7Cwsboh%40sboh.wa.gov%7C5e334b714d4500ea4608d9cbb432e8%7C11>>

What this article is not telling you is that over a thousand Boeing employees submitted the Constructive Notice and Warning (attached below) to Boeing HR, and the law cited in that notice was so strong that they brought in an outside consulting firm to address their concerns. That firm told Boeing that they were at risk of a class-action lawsuit from their employees if they followed-through with the mandate. This advice should be strongly considered by every employer, service provider, and yourselves

I want to also mention that the same legal team that created the Constructive Notice and Warning reviewed the letter that State Superintendent Chris Reykdal sent to Washington State school superintendents and board members in August 2021, telling them that state funds would be withheld if they didn't comply with mandates. They indicated that the OSPI has used his authority to coerce compliance through bribery - extortion - and he will be held accountable to the full extent of the law.

As you review the Constructive Notice & Warning (attached below) which clearly outlines the RCWs, you will discover that you are also subject to the same charges being brought against other employers, the governor, and Chief Medical Officer. I urge you to follow Boeing's example and other local businesses who are choosing not to comply to the mandates any longer and heed the cautionary content of this notice.

It's time to stop following the political agenda of these "leaders" and return to the rule of law that allows each person to freely choose their own medical treatment (mask or vax), if at all with the aide of their own medical professionals. The law is clear: you are under no legal obligation, nor do you have the authority to require employees or students to wear a mask, be vaccinated, or tested for C-19 or future variants. Any employees that have been released from their position(s) may file suit for damages and may likely win. Any child negatively affected as a result of your overreach will have cause to file damages and may likely win. I strongly encourage you to consider remaining neutral on the topic of additional medical treatment requirements, especially those that are under "Emergency Use Authorization" status only and stop any further action on this topic.

I am hopeful that you will receive this information and take action based on its merit alone. Our community deserves to have their medical freedom restored; that is within your power.

I look forward to hearing from you about what you decide to do with this new information. Thank you for your time and kind consideration.

God Bless America,
Beth

**CONSTRUCTIVE NOTICE AND WARNING TO ALL WASHINGTON STATE
EMPLOYERS, NOTICE TO PRINCIPAL IS NOTICE TO ALL AGENT(S), AND
NOTICE TO AGENT IS NOTICE TO ALL PRINCIPAL(S)**

To all Employers, and all Business Owners, and/or to whom it may concern, this legal informational flyer is meant to provide you advance constructive and actual “legal notice” that I am under no legal obligation to wear a mask or be Vaccinated for the Covid-19 Virus or PCR-Tested in your place of business which is a place of “Public Accommodation” under both Federal Laws (28 CFR § 36.202) and Washington State Law as codified at RCW 49.60.030 and RCW 49.60.215. It is undisputed that there is no statute or law in existence that requires me to be vaccinated, tested or masked or that allows any Employer in the State of Washington to grant or deny the continued employment or new employment of any person based upon whether or NOT they have received a Covid-19 Vaccination or PCR Test. I have a “vested” Constitutional Right to my continued employment under the common law pursuant to RCW 4.04.010; RCW 9A.04.060; CrR 1.1; 1 Sutherland Statutory Construction (3d ed.), p 525, § 2043.

Washington State Governor Jay Inslee, and the Chief Medical Officer Dr. Kathy Lofy only have the power granted by statute. Hoppe v. King County, 95 Wn.2d 332, 337, 622 P.2d 845 (1980); 63 Am. Jur. 2d, Public Officers and Employees, section 263 (1972); Neither officer can make laws on their own motion without violating “The Separation of Powers Doctrine.” State v. Osloond, 60 Wash. App. 584, at 587, 805 P(2d) 263 (1991); Myers v. United States, 272 U.S. 52, 47 S.Ct. 21, 71 L.Ed. 160 (1926). Only the legislature can make laws. “A flat prohibition against regulation of a matter in one direction does not give Congress power to regulate the matter in another direction.” Powe vs United States, 109 F.2d 140 (1940). **Neither officer can re-delegate any authority or power to Employers to hire or fire any employee for refusal to be vaccinated or masked in their work place without violating “The Non-Delegation Doctrine.”** Noe v. Edmonds Sch. Dist. 15, 83 Wn.2d 97, 515 P.2d 977 (1973); Ledgering v. State, 63 Wn.2d 94, 385 P.2d 522 (1963). What the Legislature is forbidden to do directly, certainly [the Governor and Chief Medical Officer] cannot [illegally solicit or recruit Employers] to do indirectly.” The City of Seattle v. Filson, 98 Wn.2d 66 (Nov. 1982).

Any Employer who gives False Legal advice is subject to being charged with and prosecuted for “unauthorized practice of law” pursuant to RCW 2.48.180 et seq, or “practicing medicine without a license” in violation of RCW 18.130.190. This notice is also to inform you that “forced vaccinations or forced masking” violates my Constitutional Rights under both Constitutions, State and Federal, the laws of the State, the laws of the United States, and the 1964 Civil Rights Act, which are

enforceable via Title 42, Section 1983.

It is undisputed pursuant to CR 8(d), that the Social Security Act as codified in Federal law at Title 42, Chapter 7, Subchapter XIX, Section 1396 (f), cited hereafter as “42 U.S.C. § 1396f”, which provides a **“religious exemption”** from all unwanted vaccinations and provides that no one is required by law to undergo any medical screening, examination, diagnosis, or treatment or to accept any other health care or services provided under such plan for any purpose if such person objects (or, in case such person is a child, his parent or guardian objects) thereto on religious grounds.

Washington law at RCW 7.70.050; RCW 7.70.030; RCW 7.70.040, and W. PROSSER, LAW OF TORTS 165 (4th ed. 1971), indicates that the Chief Medical Officer of this State Dr. Kathy Lofy has a duty to disclose that 21 U.S.C. § 360bbb-3, requires that all Doctors and Employers are to provide the appropriate conditions designed to ensure that individuals to whom the Covid-19 Vaccine or PCR Test is administered are informed . . . **“of the option to accept or refuse administration of the [medical] product, of the consequences, if any, of refusing administration of the product, and of the alternatives to the product that are available and of their benefit and risks”** as clearly stated in subsection (e)(1)(A)(ii)(III) of 21 U.S.C. § 360bbb-3, and as required by the **“Doctrine of Informed Consent”** whose main purpose is to protect the patient from being given “Unauthorized Treatments or PCR Tests” without the patients knowledgeable permission. If any physician performs any treatments or tests on any patient without fully informing the patient of his or her “option to accept or refuse administration” of any “Emergency Use Authorization” of any PCR Test and/or any Covid-19 Vaccination under 21 U.S.C. § 360bbb-3 (e)(1)(A)(ii)(III), he has committed an **assault and battery** against that patient for failure to obtain the patients knowledgeable permission. All vaccine-mandating employers could be sued. Holt v. Nelson, 11 Wn.App. 230 (1974); Miller v. Kennedy, 11 Wn.App. 272 (1974); Miller v. Kennedy, 85 Wn.2d 151 (1975); Gates v. Jenson, 92 Wn.2d 246 (1979); ZeBarth v. Swedish Hosp. Med. Center, 81 Wn.2d 12 (1972); Harris v. Groth, 99 Wn.2d 438 (1983); Smith v. Shannon, 100 Wn.2d 26 (1983); Watkins v. Parpala, 2 Wn.App. 484 (1970); Canterbury v. Spence, 464 F.2d 772 (D.C.Cir.), cert. denied, 409 U.S. 1064 (1972).

Dear Board of Health Members,

I am providing comment on agenda item #11 - Rulemaking Petition – Chapter 246-105 WAC, Immunization Criteria, Child Care and School Entry.

I am an educator in Central Kitsap School District and as an educator I am fully vaccinated and I have survived the actual COVID-19 virus, so please do not toss aside my remarks as those of an extremist. I work with an average of 25 students each day ranging from Kindergarten to 5th grade. The students in my school have been amazing at complying with the restrictions and mandates in order to attend in person school again. Some of these mandates (like mask wearing) interfere with teaching and learning by reducing voice transmissions and blocking facial expressions while others (like hand washing and sanitizing) reduce germs and increase personal cleanliness habits. As we have acted on each of the requirements we have had the opportunity to see which ones make a positive difference and which ones do not.

I recognize that the public concern over transmission of the COVID-19 virus, and its varieties, has caused public officials and law makers to create restrictions and mandates to show the public that their government leaders are working for the health and safety of the public. While I appreciate those efforts I do not appreciate having my choice removed when it pertains to my health and the health of my family.

Please do not create a mandate requiring a COVID-19 vaccine for school or childcare entry. Viruses change all the time, as we know from the annual flu virus. Requiring a vaccine for a virus will increase costs in many areas for example: new vaccines will have to be created and purchased annually to administer to the entire student and childcare populations to keep everyone updated. I believe that the COVID-19 vaccine should be made a yearly option, like the flu vaccine, to decrease a person's likelihood of catching the virus or suffering from extreme effects of it. As public officials you can continue to educate the population about good health and sanitation and keep them informed about their options without taking away their freedom of choice. People should not blame the government for their personal choices and the government should not cater to fixing everyone's personal problems.

Thank you for taking the time to read and consider my comments on not creating a mandate for or requiring a COVID-19 vaccine for school or childcare entry.

Sincerely,
Ruth Perkins

DO NOT require the covid vaxx for our children (which isn't really a vaccine because it prevents nothing).

Enough is enough! Get your hands off our children! Let US parent for once and make schools TEACH!

Subject: Attention: Please do not add Covid19 vaccine to "required" list of child vaccination

attachments\3C99FA40DC5C4FBA_VaersDataDec21.png

External Email

Dear WA DOH officials:

I am a WA resident. I am writing to express my serious concerns regarding your consideration to add Covid-19 vaccine as "required" vaccine to children. In the past 2 years, we have enough data to learn Covid-19 vaccines not only have serious adverse effects, but have led to a large number of deaths, which are many times more than the death caused by ALL vaccines in the past 30 years.

Here is the latest data from CDC official VAERS (which represents less than 1% adverse cases).

As of Dec 17, VAERS reported the following ☐ <https://openvaers.com/coviddata>

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fopenvaers.com%2Fcoviddata&data=04%7C01%7CNathaniel.Thai%40sboh.wa.gov%7C5a5e8a63820e46d6b6e508d9ca9e38be%7C>

☐ see attachment ☐

983,756 Adverse Events

108,572 Hospitalizations

107,860 Urgent Care

12,317 Bell's Palsy

10,429 Heart Attacks

20,560 Myocarditis

34,615 Permanently Disabled

20,622 Deaths

Such number is not only alarming, but scary. We have learned many real adverse cases from Senator Ron Johnson's hearing on Covid19 vaccine. The little girl who volunteered to test vaccine has suffered serious adverse effect-permantely disabled. Since the EAU was executed for teenagers (12-17), the media has reported amnay deaths caused by Covid 19 vaccine. For example:

16 year old girl, 9 days after Pfizer injection:

Besides, the media has reported over 382 adverse cases happened to athletes, as of mid Dec 21. 222 athlete died after Covid19 vaccine shots. Please see this report:

https://globalcovidsummit.org/news/live-stream-event-physicians-alerting-parents
<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fglobalcovidsummit.org%2Fnews%2Fstream-event-physicians-alerting-parents&data=04%7C01%7CNathaniel.Thai%40sboh.wa.gov%7C5a5e8a63820e46d6b6e508d9ca9e38be%

Robert Malone, the inventor of mRNA vaccine technology, physician and scientist, wrote a testimony regarding child Covid vaccinations. He said: the mRNA vaccine has irreversible and permanent damage in children's critical organs, including brain/nervous system, heart and blood vessels, reproductive systems, and even triggering fundamental changes to their immune system. Such damages are irreparable. (
<https://globalcovidsummit.org/news/live-stream-event-physicians-alerting-parents>
 <<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fglobalcovidsummit.org%2Fnews%2Fstream-event-physicians-alerting-parents&data=04%7C01%7CNathaniel.Thai%40sboh.wa.gov%7C5a5e8a63820e46d6b6e508d9ca9e38be%2F>
)

We have learned enough data about vaccine after two year's of accumulated cases. Please do not add this "vaccine" (viral gene product) to our children's vaccine list. Without healthy children, our country does not have a bright future.

Please stand up for Children's health, do not push evil special interest group controlled government. So that someday, when any of you leave this world, you will not regret what you have done to harm thousands of children.

We know what Covid19 vaccine is, you know, everybody know. God is watching what you will do with it to our children. Follow your heart, not political agenda. The latter will be condemned by history and her people.

Regards,

Rudolph West

We should not require COVID vaccines for children to attend school. Not only is the vaccine not working and is ineffective in stopping the spread, but the children are not at risk. They should not be forced to inject a foreign substance in their bodies in order to attend school. Putting these restrictions will affect the livelihood and emotional well-being of the children us parents are here to protect. The division and discrimination happening in our country and even in our state is detrimental and only causing economical collapse and the inability to move forward. Furthermore parents will take their children out of school if this happens. Is this what we want? What good are we doing for the kids? We cannot get stuck in the mind set that vaccines are the answer because they obviously are not. Haven't we seen enough? This needs to stop now and we need to leave the kids alone!

My children attend the Moses Lake School District & I'm in opposition to requiring children to get the COVID jab. Children are at a very low risk from COVID & the jabs do not prevent catching or transmitting the virus. Plus, with the many reports of myocarditis in young boys I believe that the risk outweighs any potential benefits. If it is mandated, we will be pulling our children from the government school system & enrolling them in private school.

Subject: Public comment : NO COVID mandated vaccines for school children

External Email

The action of mandating a vaccine to the least impacted age group is unconscionable! There are side effects from these shots, making them much more dangerous for children than the illness. There are also many unknowns regarding long term effects, including possible sterilization.

You are going to CRIPPLE the already failing public schools. So many parents are already ready to Home School their kids and this will send them over the top. THINK about who you are helping..... Your own egos or the kids. You cannot say you have the kids in mind when you talk of mandating vaccines for a virus that is becoming more like the flu every day and impacts kids 0-19 the least, if at all! Follow the data!

Please end this conversation NOW.

Subject: Public Comment- mandatory Covid 19 vaccination for children

External Email

To whom it may concern,,

I am writing to express my concern over the discussion of mandating the Covid 19 vaccination for school children.

While I do believe in vaccinations, this particular vaccine is still experimental and has no longitudinal (or even short term) evidence to suggest it is truly effective and preventing the spread of any of the Covid variants in children or adults. Furthermore, there is no solid evidence that this new, experimental type of vaccine is safe and will not pose unforeseen long term health effects.

It is for these reasons and also because I believe in medical freedom and medical choice that I am expressing my concern over the consideration of mandating school children to have this vaccination as part of their vaccination records. I will be extremely disappointed in our state if this becomes a mandate.

Thank you,
Nicole Horgan

Washington State Board of Health – Technical Advisory Group
PO Box 47990
Olympia, WA 98507-7990
wsboh@sboh.wa.gov

Dear Washington State Board of Health Board - Technical Advisory Group Members:

I am writing this letter in strong opposition to adding Covid-19 to the list of state required immunizations for school entry.

It was just on October 29th that the Covid-19 vaccine, by a single manufacturer, received emergency use authorization only for the 5–11-year-old age group. The trials for this drug were minimal at best including approximately 3,000 children and lasting only two months. There is no FDA approved vaccine for children ages 5-11 and it could be argued that the “approved” vaccine for those 12 and older is not specifically approved either. Requiring a Covid-19 immunization for school entry would be catastrophic and tragic for school age children.

Children have not had significant issues with Covid-19. Typically their symptoms are mild, and they recover quickly. There is no significant mortality among these age groups. In fact, mortality is less than one percent. For the past two years, parents and schools have navigated Covid-19 and have been successful without a mandatory immunization. There are established protocols within schools to keep students with fevers, runny noses, etc. at home. These actions along with social distancing and cleaning procedures have proven successful. The CDC has concluded that asymptomatic cases are unlikely to contribute substantially to the spread of Covid. Those who are not sick cannot make others sick. There are many other things that pose a far greater risk to the health of children. The most recent strain – Omicron – has been found to be far less severe, with symptoms similar to the common cold – and could greatly increase natural immunity amongst all age groups, particularly in younger populations.

Part of the criteria you use in the review process is vaccine effectiveness, safety and an acceptable level of side effects.

- We continue to hear daily about the ineffectiveness of these vaccines, with efficacy diminishing after only months. Those who have had Covid-19 vaccinations are coming down with Covid-19, 100's of thousands of individuals.
- Safety is and should be a huge concern for you as decision makers as well as for parents. There are so many unknowns in vaccinating children for Covid-19. The trial was too small and the outcomes and effects on this age group very unknown. Information on Covid -19 vaccine impacts has been skewed and censored. Prior vaccines adhered to a very high threshold of safety, one that would have resulted in the Covid-19 vaccine being discontinued months ago if followed. The Swine Flu vaccine was withdrawn after 25 deaths were reported.

- There are many side effects with this vaccination and a lot of information still not known. The FDA has stated that myocarditis is a concern, particularly for young men. There are questions regarding its impact on fertility, hypertension and many other health issues. Research shows the risk to children is far less in having Covid-19 vs. receiving the immunization.

Disease Burden is another criterion used in your review.

- Covid-19, particularly among school aged children, does not have significant morbidity. The chance of death is less than one percent.
- Because of the many break-through cases amongst the vaccinated, vaccination is not a key factor in reducing person to person transmission. As stated earlier, protocols around health monitoring, extra cleaning and distancing have proven effective in reducing transmission.

Implementation is also considered.

- The Covid-19 vaccine is acceptable to some in the medical community and the public, but definitely not to all.
- Mandating this for school age children will place a huge burden on parents as it will force them to have to make very difficult decisions about the health of their children and an education for those children. Just as adults have been forced out of their jobs for making a personal decision regarding taking the vaccine, requiring a Covid-19 vaccination for children at school will force kids out of school. Consider the devastating impacts of a year plus of on-line school on students. Suicide is already the 2nd leading cause of death in those ages 10-18. If your decision is based on what is best for children, it will be against any forced requirement for the Covid-19 vaccine.

Education is a great equalizer and a right for all children. A decision to require a Covid-19 immunization for school entry will be catastrophic and, in my opinion, both inhumane and unethical. I implore you to not include the Covid-19 vaccine among those required for school attendance.

Running Title: Cts of COVID Delta vaccine breakthroughs

Authors for Correspondence: Diane Havlir, Richard Michelmore

Alternate Corresponding Authors: Joe DeRisi, Maya Peterson

Abstract: We found no significant difference in cycle threshold values between vaccinated and unvaccinated, asymptomatic and symptomatic groups infected with SARS-CoV-2 Delta. Given the substantial proportion of asymptomatic vaccine breakthrough cases with high viral levels, interventions, including masking and testing, should be considered for all in settings with elevated COVID-19 transmission.

Background

Vaccines reduce infection, severe disease, and death from SARS-CoV-2 (COVID-19) [1], yet breakthrough cases occur [2]. Several reports show no difference in cycle threshold values (Ct-values) between vaccinated and unvaccinated individuals [2, 3, 4]; however, others have suggested that breakthrough infections, particularly among asymptomatic individuals, have a lower viral load and therefore may be less likely to result in transmission [5, 6].

Effective epidemic control requires contemporary data to guide public health mitigation measures. Here, we report on Ct-values among fully vaccinated and unvaccinated individuals, asymptomatic and symptomatic at time of testing, during a period of high transmission of the Delta variant in two distinct populations: a Unidos en Salud (UeS) community-based site in the Mission District of San Francisco and Healthy Yolo Together (HYT) asymptomatic testing through the University of California (UC), Davis.

Materials and Methods

Study Populations

Data was collected on individuals who voluntarily sought testing for SARS-CoV-2 from two demographically distinct populations in California during a two-month period from June 17 to August 31, 2021, during which Delta was the predominant variant.

HYT: As part of the response to the COVID-19 pandemic, UC Davis deployed an extensive free asymptomatic testing program that included the City of Davis and Yolo County ([Healthy Yolo Together](#)). Asymptomatic individuals over the age of 2 were eligible for testing. Asymptomatic cases were classified as individuals not reporting symptoms at the time of testing. Samples were collected through a supervised method in which individuals transferred their saliva into a barcoded tube ([COVID-19 Testing | Campus Ready](#)). Smaller numbers of symptomatic

individuals were processed using a different workflow and an antigen test; therefore, they were not included in this study.

UeS: The study population included individuals who sought SARS-CoV-2 testing at the UeS walk-up site, an ongoing academic (UC San Francisco, CZ Biohub, and UC Berkeley), community organization (Latino Task Force), and government (SFDPH) partnership. The outdoor, free BinaxNOW™ testing site was located at a public transport and commercial hub in the Mission District, a setting of ongoing transmission in San Francisco [7]. Individuals one year of age and older, with or without symptoms, were eligible for testing.

Measurements

Infections were classified as breakthrough infections if the individual was fully vaccinated (two weeks following receipt of all vaccine doses). Individuals that had had only one dose or were tested within two weeks of the second dose, in the case of Pfizer and Moderna vaccines, were not included in the analysis.

HYT: Demographic information was collected from individuals at the time of registration. Vaccination status information was obtained at the time of contact tracing and confirmed in the California Vaccine Registry. Only confirmed, fully vaccinated individuals were used in the analysis; discordant samples, self-reported as vaccinated but unconfirmed, were treated as status unknown. Saliva samples from asymptomatic individuals were tested for the presence of the N1 and N2 regions of the viral nucleocapsid (N) gene using primers and probes described in the CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel, using IntelliQube high-throughput quantitative PCR instruments (LGC Biosearch Technologies). Ct-values were calculated with FastFinder software ([UgenTec](#) | [FastFinder](#)).

Genotypes of all N1/N2 positive samples were determined using RT-PCR SNP analysis at 11 loci diagnostic for variants of concern ([SARS-CoV-2 Variant ValuPanel assays | LGC Biosearch Technologies](#)). A subset of samples (39%) were also sequenced using the Illumina MiSeq sequencing platform. Consensus genomes were generated with Viralrecon2 and variants called in Pangolin version 3.1.11 and PLEARN-v1.2.66. Sequencing confirmed the variants called by genotyping.

UeS: Individuals provided demographic data and information on symptoms immediately prior to testing using BinaxNOW™ kits. COVID-19 vaccine status, including date of final shot, was obtained through the California Vaccine Registry. Anterior-nasal swab samples (iClean, Chenyang Global) collected by certified lab assistants from BinaxNOW positive individuals were placed in DNA/RNA Shield (Zymo, Inc.) and processed for qRT-PCR, genome recovery, and variant/lineage determination as previously described [8, 9]. Ct-values for the detection of N and E genes [8] were determined via the single threshold Cq-determination mode using Bio-Rad CFX Maestro v4.1 (Bio-Rad Inc). SARS-CoV-2 genomes were sequenced using the Illumina NovaSeq platform. Consensus genomes were generated via the COVID module of the IDseq pipeline (<https://idseq.net>) as described [9].

Analysis

Ct-values were plotted, stratified by site; fully vs. not vaccinated; and symptom status. Partially vaccinated samples and stratification by age and vaccine type are reported in supplementary materials. Ct-values between strata were compared using a two sided t-test.

Ethics Statement

HYT: The Genome Center laboratory that conducted COVID-19 testing was CLIA approved as an extension to the Student Health Center's laboratory. The UC Davis IRB

Administration determined that the study met criteria for public health reporting and was exempt from IRB review and approval.

UeS: The UC San Francisco Committee on Human Research determined the study met criteria for public health surveillance. All participants provided informed consent for testing.

Results

A total of 869 samples, 500 from HYT and 369 from UeS, were included in the analysis. All analyzed samples from HYT were asymptomatic at the time of collection and 75% of the positive samples were from unvaccinated individuals (N=375). Positive samples from UeS were from both symptomatic (N=237) and asymptomatic individuals (N=132). The frequency of vaccine breakthroughs among the UeS samples (171 fully vaccinated, 198 unvaccinated) was greater than among the HYT samples, reflecting the different types of populations sampled. The Delta variant was the predominant variant detected in both populations (Supplementary Table 1).

There were no statistically significant differences in mean Ct-values of vaccinated (UeS: 23.1; HYT: 25.5) vs. unvaccinated (UeS: 23.4; HYT: 25.4) samples. In both vaccinated and unvaccinated, there was great variation among individuals, with Ct-values of <15 to >30 in both UeS and HYT data (Fig. 1A, 1B). Similarly, no statistically significant differences were found in the mean Ct-values of asymptomatic (UeS: 24.3; HYT: 25.4) vs. symptomatic (UeS: 22.7) samples, overall or stratified by vaccine status (Fig. 1B). Similar Ct-values were also found among different age groups, between genders, and vaccine types (Supplemental Figure 1).

In all groups, there were individuals with low Ct-values indicative of high viral loads. A total of 69 fully vaccinated individuals had Ct-values <20. Of these, 24 were asymptomatic at the time of testing.

Discussion

In our study, mean viral loads as measured by Ct-value were similar for large numbers of asymptomatic and symptomatic individuals infected with SARS-Cov-2 during the Delta surge, regardless of vaccine status, age, or gender. This contrasts with a large ongoing UK community cohort in which the median Ct-value was higher for vaccinated individuals (27.6) than for unvaccinated individuals (23.1) [5]. Also, a study from San Francisco reported that 10 fully vaccinated asymptomatic individuals had significantly lower viral loads than 28 symptomatic, vaccinated individuals [6]. Our study is consistent with other recent reports showing similar viral loads among vaccinated and unvaccinated individuals in settings with transmission of the Delta variant. In a Wisconsin study, Ct-values were similar and culture positivity was not different in a subset of analyses between 11 vaccinated and 24 unvaccinated cases [4]. In both Massachusetts and Singapore, individuals with vaccination breakthroughs caused by the Delta variant had similar Ct-values as unvaccinated individuals [3, 10]. Our findings are supported by consistency across large sample sets using different assays from two distinct locations.

A substantial proportion of asymptomatic, fully vaccinated individuals in our study had low Ct-values, indicative of high viral loads. Given that low Ct-values are indicative of high levels of virus, culture positivity, and increased transmission [11], our detection of low Ct-values in asymptomatic, fully vaccinated individuals is consistent with the potential for transmission from breakthrough infections prior to any emergence of symptoms. Interestingly, the viral loads decreased more rapidly in vaccinated than unvaccinated individuals in Singapore [3], suggesting that vaccinated individuals may remain infectious for shorter periods of time. Also, a retrospective observational cohort study of contacts of SARS-CoV-2-infected index cases in England documented reduced transmission from vaccinated individuals [12]. In our study, over 20% of positive, vaccinated individuals had low Ct-values (<20), a third of which were

asymptomatic when tested. This highlights the need for additional studies of the immunological status of such vaccine escapes and how infectious they are. If such individuals carry high loads of active virus, asymptomatic vaccinated individuals may increasingly contribute to the ongoing pandemic as the proportion of vaccinated individuals grows.

Ct-values in some children under 12 who are not yet eligible for vaccination were also low. Twenty out of 109 (18.3%) children under 12 years of age had Ct-values <20 , of which 14 were asymptomatic at the time of testing. Low Ct indicates that the children had high viral loads and were likely infectious. This emphasizes the value of regular, rapid testing for school children to detect infection early and block chains of transmission in settings where the Delta variant is circulating.

While vaccination remains the best protection against becoming infected and severe disease [12], the data gathered in this study during the surge of the Delta variant strongly support the notion that neither vaccine status nor the presence or absence of symptoms should influence the recommendation and implementation of good public health practices, including mask wearing, testing, social distancing, and other measures, designed to mitigate the spread of SARS-CoV-2.

Author Contribution Statement:

JD, RWM, DH, and MP conceived the project. DC, CM, SR, DH, and GP helped collect the data. CA, AM, CYW, and JL helped perform the tests, genotyping, and sequencing. CA, JH, LS, JD, AM, CYW, JS, and JL prepared the data for publication. RM, EG, DH, MP, DC, JS, and JD contributed to the writing of the manuscript. All authors read and approved the final manuscript.

Funding: This work was supported by the Chan Zuckerberg Biohub, Healthy Yolo Together, the University of California, San Francisco, the Chan Zuckerberg Initiative and The University of California, Davis.

Acknowledgements: Many people were responsible for collecting the samples, running the tests, performing the genotyping and sequencing, and processing the data as listed in Supplementary Table 2.

Conflict of Interest: Dr. DeRisi reports being a scientific advisor to the Public Health Co. and a scientific advisor to Allen & Co. Dr. Havlir reports non-financial support from Abbott outside of the submitted work. The other authors declare no competing interests.

Summary

Background The SARS-CoV-2 delta (B.1.617.2) variant is highly transmissible and spreading globally, including in populations with high vaccination rates. We aimed to investigate transmission and viral load kinetics in vaccinated and unvaccinated individuals with mild delta variant infection in the community.

Methods Between Sept 13, 2020, and Sept 15, 2021, 602 community contacts (identified via the UK contract-tracing system) of 471 UK COVID-19 index cases were recruited to the Assessment of Transmission and Contagiousness of COVID-19 in Contacts cohort study and contributed 8145 upper respiratory tract samples from daily sampling for up to 20 days. Household and non-household exposed contacts aged 5 years or older were eligible for recruitment if they could provide informed consent and agree to self-swabbing of the upper respiratory tract. We analysed transmission risk by vaccination status for 231 contacts exposed to 162 epidemiologically linked delta variant-infected index cases. We compared viral load trajectories from fully vaccinated individuals with delta infection (n=29) with unvaccinated individuals with delta (n=16), alpha (B.1.1.7; n=39), and pre-alpha (n=49) infections. Primary outcomes for the epidemiological analysis were to assess the secondary attack rate (SAR) in household contacts stratified by contact vaccination status and the index cases' vaccination status. Primary outcomes for the viral load kinetics analysis were to detect differences in the peak viral load, viral growth rate, and viral decline rate between participants according to SARS-CoV-2 variant and vaccination status.

Findings The SAR in household contacts exposed to the delta variant was 25% (95% CI 18–33) for fully vaccinated individuals compared with 38% (24–53) in unvaccinated individuals. The median time between second vaccine dose and study recruitment in fully vaccinated contacts was longer for infected individuals (median 101 days [IQR 74–120]) than for uninfected individuals (64 days [32–97], $p=0.001$). SAR among household contacts exposed to fully vaccinated index cases was similar to household contacts exposed to unvaccinated index cases (25% [95% CI 15–35] for vaccinated vs 23% [15–31] for unvaccinated). 12 (39%) of 31 infections in fully vaccinated household contacts arose from fully vaccinated epidemiologically linked index cases, further confirmed by genomic and virological analysis in three index case–contact pairs. Although peak viral load did not differ by vaccination status or variant type, it increased modestly with age (difference of 0.39 [95% credible interval –0.03 to 0.79] in peak \log_{10} viral load per mL between those aged 10 years and 50 years). Fully vaccinated individuals with delta variant infection had a faster (posterior probability >0.84) mean rate of viral load decline (0.95 \log_{10} copies per mL per day) than did unvaccinated individuals with pre-alpha (0.69), alpha (0.82), or delta (0.79) variant infections. Within individuals, faster viral load growth was correlated with higher peak viral load (correlation 0.42 [95% credible interval 0.13 to 0.65]) and slower decline (–0.44 [–0.67 to –0.18]).

Interpretation Vaccination reduces the risk of delta variant infection and accelerates viral clearance. Nonetheless, fully vaccinated individuals with breakthrough infections have peak viral load similar to unvaccinated cases and can efficiently transmit infection in household settings, including to fully vaccinated contacts. Host–virus interactions early in infection may shape the entire viral trajectory.

Research in context

Evidence before this study

The SARS-CoV-2 delta variant is spreading globally, including in populations with high vaccination coverage. While vaccination remains highly effective at attenuating disease severity and preventing death, vaccine effectiveness against infection is reduced for delta. Determining the extent of transmission from vaccinated delta-infected individuals to their vaccinated contacts is a public health priority. Comparing the upper respiratory tract (URT) viral load kinetics of delta infections with those of other variants gives insight into potential mechanisms for its increased transmissibility. We searched PubMed and medRxiv for articles published between database inception and Sept 20, 2021, using search terms describing "SARS-CoV-2, delta variant, viral load, and transmission".

Two studies longitudinally sampled the URT in vaccinated and unvaccinated delta variant-infected individuals to compare viral load kinetics. In a retrospective study of a cohort of hospitalised patients in Singapore, more rapid viral load decline was found in vaccinated individuals than unvaccinated cases. However, the unvaccinated cases in this study had moderate-to-severe infection, which is known to be associated with prolonged shedding. The second study longitudinally sampled professional USA sports players. Again, clearance of delta viral RNA in vaccinated cases was faster than in unvaccinated cases, but only 8% of unvaccinated cases had delta variant infection, complicating interpretation. Lastly, a report of a single-source nosocomial outbreak of a distinct delta sub-lineage in Vietnamese health-care workers plotted viral load kinetics (without comparison with unvaccinated delta infections) and demonstrated transmission between fully vaccinated health-care workers in the nosocomial setting. The findings might therefore not be generalisable beyond the particular setting and distinct viral sub-lineage investigated.

Added value of this study

The majority of SARS-CoV-2 transmission occurs in households, but transmission between fully vaccinated individuals in this

setting has not been shown to date. To ascertain secondary transmission with high sensitivity, we longitudinally followed index cases and their contacts (regardless of symptoms) in the community early after exposure to the delta variant of SARS-CoV-2, performing daily quantitative RT-PCR on URT samples for 14–20 days. We found that the secondary attack rate in fully vaccinated household contacts was high at 25%, but this value was lower than that of unvaccinated contacts (38%). Risk of infection increased with time in the 2–3 months since the second dose of vaccine. The proportion of infected contacts was similar regardless of the index cases' vaccination status. We observed transmission of the delta variant between fully vaccinated index cases and their fully vaccinated contacts in several households, confirmed by whole-genome sequencing. Peak viral load did not differ by vaccination status or variant type but did increase modestly with age. Vaccinated delta cases experienced faster viral load decline than did unvaccinated alpha or delta cases. Across study participants, faster viral load growth was correlated with higher peak viral load and slower decline, suggesting that host–virus interactions early in infection shape the entire viral trajectory. Since our findings are derived from community household contacts in a real-life setting, they are probably generalisable to the general population.

Implications of all the available evidence

Although vaccines remain highly effective at preventing severe disease and deaths from COVID-19, our findings suggest that vaccination is not sufficient to prevent transmission of the delta variant in household settings with prolonged exposures. Our findings highlight the importance of community studies to characterise the epidemiological phenotype of new SARS-CoV-2 variants in increasingly highly vaccinated populations. Continued public health and social measures to curb transmission of the delta variant remain important, even in vaccinated individuals.

vaccines to protect against infection and the extent to which vaccination reduces the infectiousness of breakthrough infections.

Vaccination was found to be effective in reducing household transmission of the alpha variant (B.1.1.7) by 40–50%,¹ and infected, vaccinated individuals had lower viral load in the upper respiratory tract (URT) than infections in unvaccinated individuals,² which is indicative of reduced infectiousness.^{3,4} However, the delta variant (B.1.617.2), which is more transmissible than the alpha variant,^{5,6} is now the dominant strain worldwide. After a large outbreak in India, the UK was one of the first countries to report a sharp rise in delta variant infection. Current vaccines remain highly effective at preventing admission to hospital and death from delta infection.⁷ However, vaccine effectiveness against infection is reduced for delta, compared with alpha,^{8,9} and the delta variant

continues to cause a high burden of cases even in countries with high vaccination coverage. Data are scarce on the risk of community transmission of delta from vaccinated individuals with mild infections.

Here, we report data from a UK community-based study, the Assessment of Transmission and Contagiousness of COVID-19 in Contacts (ATACCC) study, in which ambulatory close contacts of confirmed COVID-19 cases underwent daily, longitudinal URT sampling, with collection of associated clinical and epidemiological data. We aimed to quantify household transmission of the delta variant and assess the effect of vaccination status on contacts' risk of infection and index cases' infectiousness, including (1) households with unvaccinated contacts and index cases and (2) households with fully vaccinated contacts and fully vaccinated index cases. We also compared sequentially sampled

URT viral RNA trajectories from individuals with non-severe delta, alpha, and pre-alpha SARS-CoV-2 infections to infer the effects of SARS-CoV-2 variant status—and, for delta infections, vaccination status—on transmission potential.

Methods

Study design and participants

ATACCC is an observational longitudinal cohort study of community contacts of SARS-CoV-2 cases. Contacts of symptomatic PCR-confirmed index cases notified to the UK contact-tracing system (National Health Service Test and Trace) were asked if they would be willing to be contacted by Public Health England to discuss participation in the study. All contacts notified within 5 days of index case symptom onset were selected to be contacted within our recruitment capacity. Household and non-household contacts aged 5 years or older were eligible for recruitment if they could provide written informed consent and agree to self-swabbing of the URT. Further details on URT sampling are given in the appendix (p 13).

The ATACCC study is separated into two study arms, ATACCC1 and ATACCC2, which were designed to capture different waves of the SARS-CoV-2 pandemic. In ATACCC1, which investigated alpha variant and pre-alpha cases in Greater London, only contacts were recruited between Sept 13, 2020, and March 13, 2021. ATACCC1 included a pre-alpha wave (September to November, 2020) and an alpha wave (December, 2020, to March, 2021). In ATACCC2, the study was relaunched specifically to investigate delta variant cases in Greater London and Bolton, and both index cases and contacts were recruited between May 25, and Sept 15, 2021. Early recruitment was focused in West London and Bolton because UK incidence of the delta variant was highest in these areas.¹⁰ Based on national and regional surveillance data, community transmission was moderate-to-high throughout most of our recruitment period.

This study was approved by the Health Research Authority. Written informed consent was obtained from all participants before enrolment. Parents and caregivers gave consent for children.

Data collection

Demographic information was collected by the study team on enrolment. The date of exposure for non-household contacts was obtained from Public Health England. COVID-19 vaccination history was determined from the UK National Immunisation Management System, general practitioner records, and self-reporting by study participants. We defined a participant as unvaccinated if they had not received a single dose of a COVID-19 vaccine at least 7 days before enrolment, partially vaccinated if they had received one vaccine dose at least 7 days before study enrolment, and fully vaccinated if they had received two doses of a COVID-19 vaccine at least 7 days before

study enrolment. Previous literature was used to determine the 7-day threshold for defining vaccination status.^{11–13} We also did sensitivity analyses using a 14-day threshold. The time interval between vaccination and study recruitment was calculated. We used WHO criteria¹⁴ to define symptomatic status up to the day of study recruitment. Symptomatic status for incident cases—participants who were PCR-negative at enrolment and subsequently tested positive—was defined from the day of the first PCR-positive result.

Laboratory procedures

SARS-CoV-2 quantitative RT-PCR, conversion of ORF1ab and envelope (E-gene) cycle threshold values to viral genome copies, whole-genome sequencing, and lineage assignments are described in the appendix (pp 13–14).

Outcomes

Primary outcomes for the epidemiological analysis were to assess the secondary attack rate (SAR) in household contacts stratified by contact vaccination status and the index cases' vaccination status. Primary outcomes for the viral load kinetics analysis were to detect differences in the peak viral load, viral growth rate, and viral decline rate between participants infected with pre-alpha versus alpha versus delta variants and between unvaccinated delta-infected participants and vaccinated delta-infected participants.

We assessed vaccine effectiveness and susceptibility to SARS-CoV-2 infection stratified by time elapsed since receipt of second vaccination as exploratory analyses.

Statistical analysis

To model viral kinetics, we used a simple phenomenological model of viral titre¹⁵ during disease pathogenesis. Viral kinetic parameters were estimated on a participant-specific basis using a Bayesian hierarchical model to fit this model to the entire dataset of sequential cycle threshold values measured for all participants. For the 19 participants who were non-household contacts of index cases and had a unique date of exposure, the cycle threshold data were supplemented by a pseudo-absence data point (ie, undetectable virus) on the date of exposure. Test accuracy and model misspecification were modelled with a mixture model by assuming there was a probability p of a test giving an observation drawn from a (normal) error distribution and probability $1-p$ of it being drawn from the true distribution.

The hierarchical structure was represented by grouping participants based on the infecting variant and their vaccination status. A single-group model was fitted, which implicitly assumes that viral kinetic parameters vary by individual but not by variant or vaccination status. A four-group model was also explored, where groups 1, 2, 3, and 4 represent pre-alpha, alpha, unvaccinated delta, and fully vaccinated delta, respectively. We fitted a correlation matrix between

(A) Study recruitment and variant status confirmed by whole-genome sequencing (ATACCC1 and ATACCC2 combined). (B) ATACCC2: delta-exposed contacts included in secondary attack rate calculation (table 1) and transmission assessment (table 2). NHS=National Health Service. * All index cases were from ATACCC2. † All contacts. ‡ The two earliest PCR-positive cases from the ATACCC2 cohort (one index case and one contact) were confirmed as having the alpha variant on whole-genome sequencing (recruited on May 28, 2021). This alpha variant-exposed, PCR-positive contact is excluded from figure 1B. § One PCR-negative contact had no vaccination status data available and one PCR-negative contact's index case had no vaccination data available. ¶ Vaccination data were available for 138 index cases of 163. || The contacts of these 15 index cases are included within the 232 total contacts. ** These three index cases without contacts are only included in the viral load kinetics analysis (figure 3) and are not included in tables 1 and 2.

participant-specific kinetic parameters to allow us to examine whether there is within-group correlation between peak viral titre, viral growth rate, and viral decline rate. Our initial model selection, using leave-one-out cross-validation, selected a four-group hierarchical model with fitted correlation coefficients between individual-level parameters determining peak viral load

and viral load growth and decline rates (appendix p 5). However, resulting participant-specific estimates of peak viral load (but not growth and decline rates) showed a marked and significant correlation with age in the exploratory analysis, which motivated examination of models where mean peak viral load could vary with age. The most predictive model overall allowed mean viral

load growth and decline rates to vary across the four groups, with mean peak viral load common to all groups but assumed to vary linearly with the logarithm of age (appendix p 5). We present peak viral loads for the reference age of 50 years with 95% credible intervals (95% CrIs). 50 years was chosen as the reference age as it is typical of the ages of the cases in the whole dataset and the choice of reference age made no difference in the model fits or judgment of differences between the groups.

We computed group-level population means and within-sample group means of log peak viral titre, viral growth rate, and viral decline rate. Since posterior estimates of each of these variables are correlated across groups, overlap in the credible intervals of an estimate for one group with that for another group does not necessarily indicate no significant difference between those groups. We, therefore, computed posterior probabilities, pp , that these variables were larger for one group than another. For our model, Bayes factors can be computed as $pp/(1-pp)$. We only report population (group-level) posterior probabilities greater than 0.75 (corresponding to Bayes factors >3) as indicating at least moderate evidence of a difference.

For vaccine effectiveness, we defined the estimated effectiveness at preventing infection, regardless of symptoms, with delta in the household setting as $1 - \text{SAR (fully vaccinated)} / \text{SAR (unvaccinated)}$.

Role of the funding source

The funder of the study had no role in study design, data collection, data analysis, data interpretation, or writing of the report.

Results

Between Sept 13, 2020, and Sept 15, 2021, 621 community-based participants (602 contacts and 19 index cases) from 471 index notifications were prospectively enrolled in the ATACCC1 and ATACCC2 studies, and contributed 8145 URT samples. Of these, ATACCC1 enrolled 369 contacts (arising from 308 index notifications), and ATACCC2 enrolled 233 contacts (arising from 163 index notifications) and 19 index cases. SARS-CoV-2 RNA was detected in 163 (26%) of the 621 participants. Whole-genome sequencing of PCR-positive cases confirmed that 71 participants had delta variant infection (18 index cases and 53 contacts), 42 had alpha variant infection (one index case and 41 contacts), and 50 had pre-alpha variant infection (all contacts; figure 1A).

Of 163 PCR-positive participants, 89 (55%) were female and 133 (82%) were White. Median age was 36 years (IQR 26–50). Sex, age, ethnicity, body-mass index (BMI) distribution, and the frequency of comorbidities were similar among those with delta, alpha, and pre-alpha infection, and for vaccinated and unvaccinated delta-infected participants, except for age and sex (appendix pp 2–3). There were fewer unvaccinated

	Total	PCR positive	PCR negative	SAR (95% CI)	p value
Contacts					
All	231	53	178	23 (18–29)	NA
Fully vaccinated	140	31	109	22 (16–30)	0.16
Unvaccinated	44	15	29	34 (22–49)	..
Partially vaccinated	47	7	40	15 (7–28)	NA
Household contacts					
All	205	53	152	26 (20–32)	NA
Fully vaccinated	126	31	95	25 (18–33)	0.17
Unvaccinated	40	15	25	38 (24–53)	..
Partially vaccinated	39	7	32	18 (9–33)	NA

χ^2 test was performed to calculate p values for differences in SAR between fully vaccinated and unvaccinated cases. One PCR-negative contact who withdrew from the study without vaccination status information was excluded. NA=not applicable. SAR=secondary attack rate.

Table 1: SAR in contacts of delta-exposed index cases recruited to the ATACCC2 study

females than males ($p=0.04$) and, as expected from the age-prioritisation of the UK vaccine roll-out, unvaccinated participants infected with the delta variant were significantly younger ($p<0.001$; appendix p 3). Median time between exposure to the index case and study enrolment was 4 days (IQR 4–5). All participants had non-severe ambulatory illness or were asymptomatic. The proportion of asymptomatic cases did not differ among fully vaccinated, partially vaccinated, and unvaccinated delta groups (appendix p 3).

No pre-alpha-infected and only one alpha-infected participant had received a COVID-19 vaccine before study enrolment. Of 71 delta-infected participants (of whom 18 were index cases), 23 (32%) were unvaccinated, ten (14%) were partially vaccinated, and 38 (54%) were fully vaccinated (figure 1A; appendix p 3). Of the 38 fully vaccinated delta-infected participants, 14 had received the BNT162b2 mRNA vaccine (Pfizer–BioNTech), 23 the ChAdOx1 nCoV-19 adenovirus vector vaccine (Oxford–AstraZeneca), and one the CoronaVac inactivated whole-virion vaccine (Sinovac).

It is highly probable that all but one of the 233 ATACCC2 contacts were exposed to the delta variant because they were recruited when the regional prevalence of delta was at least 90%, and mostly 95–99% (figure 1B).¹⁰ Of these, 206 (89%) were household contacts (in 127 households), and 26 (11%) were non-household contacts. Distributions of age, ethnicity, BMI, smoking status, and comorbidities were similar between PCR-positive and PCR-negative contacts (appendix p 4). The median time between second vaccine dose and study recruitment in fully vaccinated contacts with delta variant infection was 74 days (IQR 35–105; range 16–201), and this was significantly longer in PCR-positive contacts than in PCR-negative contacts (101 days [IQR 74–120] vs 64 days [32–97], respectively, $p=0.001$; appendix p 4). All 53 PCR-positive contacts were exposed in household settings and the SAR for all delta variant-exposed household contacts was 26% (95% CI 20–32). SAR was

	All household contacts (n=204)*	Fully vaccinated contacts (n=125)		Partially vaccinated contacts (n=39)		Unvaccinated contacts (n=40)	
		PCR positive (n=31)	PCR negative (n=94)	PCR positive (n=7)	PCR negative (n=32)	PCR positive (n=15)	PCR negative (n=25)
Fully vaccinated index cases (n=50)	69	12	31	1	8	4	13
Partially vaccinated index cases (n=25)	35	7	12	3	10	3	0
Unvaccinated index cases (n=63)	100	12	51	3	14	8	12

Non-household exposed contacts (n=24, all PCR negative) were excluded. One PCR-negative household contact who withdrew from the study without vaccination status information was excluded. One PCR-negative household contact who could not be linked to their index case was also excluded. *The rows below show the number of contacts exposed to each category of index case.

Table 2: Comparison of vaccination status of the 138 epidemiologically linked PCR-positive index cases for 204 delta variant-exposed household contacts

not significantly higher in unvaccinated (38%, 95% CI 24–53) than fully vaccinated (25%, 18–33) household contacts (table 1). We estimated vaccine effectiveness at preventing infection (regardless of symptoms) with delta in the household setting to be 34% (bootstrap 95% CI –15 to 60). Sensitivity analyses using a 14 day threshold for time since second vaccination to study recruitment to denote fully vaccinated did not materially affect our estimates of vaccine effectiveness or SAR (data not shown). Although precision is restricted by the small sample size, this estimate is broadly consistent with vaccine effectiveness estimates for delta variant infection based on larger datasets.^{9,16,17}

The vaccination status of 138 epidemiologically linked index cases of 204 delta variant-exposed household contacts was available (figure 1B, table 2). The SAR in household contacts exposed to fully vaccinated index cases was 25% (95% CI 15–35; 17 of 69), which is similar to the SAR in household contacts exposed to unvaccinated index cases (23% [15–31]; 23 of 100; table 2). The 53 PCR-positive contacts arose from household exposure to 39 PCR-positive index cases. Of these index cases who gave rise to secondary transmission, the proportion who were fully vaccinated (15 [38%] of 39) was similar to the proportion who were unvaccinated (16 [41%] of 39). The median number of days from the index cases' second vaccination to the day of recruitment for their respective contacts was 73 days (IQR 38–116). Time interval did not differ between index cases who transmitted infection to their contacts and those who did not (94 days [IQR 62–112] and 63 days [35–117], respectively; $p=0.43$).

18 of the 163 delta variant-infected index cases that led to contact enrolment were themselves recruited to ATACCC2 and serial URT samples were collected from them, allowing for more detailed virology and genome analyses. For 15 of these, their contacts were also recruited (13 household contacts and two non-household contacts). A corresponding PCR-positive household contact was identified for four of these 15 index cases (figure 1B). Genomic analysis showed that index–contact pairs were infected with the same delta variant sub-lineage in these instances, with one exception (figure 2A). In one household (number 4), an unvaccinated index case transmitted the delta variant to an unvaccinated contact,

while another partially vaccinated contact was infected with a different delta sub-lineage (which was probably acquired outside the household). In the other three households (numbers 1–3), fully vaccinated index cases transmitted the delta variant to fully vaccinated household contacts, with high viral load in all cases, and temporal relationships between the viral load kinetics that were consistent with transmission from the index cases to their respective contacts (figure 2B).

Inclusion criteria for the modelling analysis selected 133 participant's viral load RNA trajectories from 163 PCR-positive participants (49 with the pre-alpha variant, 39 alpha, and 45 delta; appendix p 14). Of the 45 delta cases, 29 were fully vaccinated and 16 were unvaccinated; partially vaccinated cases were excluded. Of the 133 included cases, 29 (22%) were incident (ie, PCR negative at enrolment converting to PCR positive subsequently) and 104 (78%) were prevalent (ie, already PCR positive at enrolment). 15 of the prevalent cases had a clearly resolvable peak viral load. Figure 3 shows modelled viral RNA (ORF1ab) trajectories together with the viral RNA copy numbers measured for individual participants. The E-gene equivalent is shown in the appendix (p 2). Estimates derived from E-gene cycle threshold value data (appendix pp 5, 7, 9, 11) were similar to those for ORF1ab.

Although viral kinetics appear visually similar for all four groups of cases, we found quantitative differences in estimated viral growth rates and decline rates (tables 3, 4). Population (group-level) estimates of mean viral load decline rates based on ORF1ab cycle threshold value data varied in the range of 0.69–0.95 log₁₀ units per mL per daxes 4; appendix p 10), indicating that a typical 10-day period was required for viral load to decline from peak to undetectable. A faster decline was seen in the alpha ($pp=0.93$), unvaccinated delta ($pp=0.79$), and fully vaccinated delta ($pp=0.99$) groups than in the pre-alpha group. The mean viral load decline rate of the fully vaccinated delta group was also faster than those of the alpha group ($pp=0.84$) and the unvaccinated delta group ($pp=0.85$). The differences in decline rates translate into a difference of about 3 days in the mean duration of the decline phase between the pre-alpha and delta vaccinated groups.

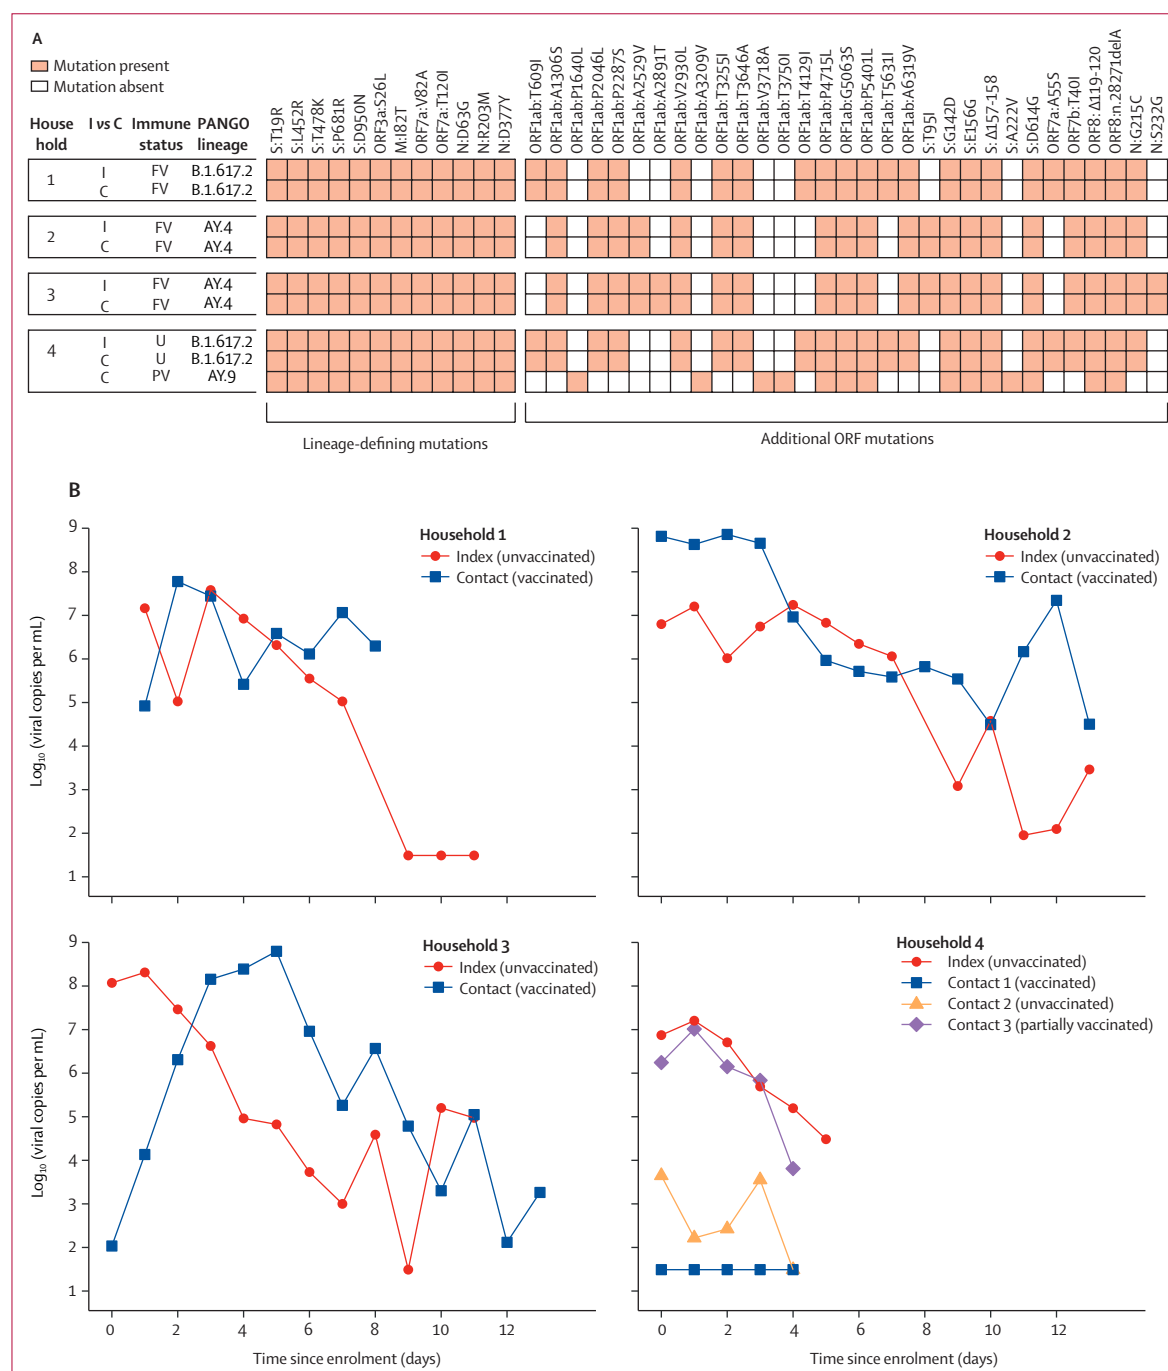

Figure 2: Virological, epidemiological, and genomic evidence for transmission of the SARS-CoV-2 delta variant (B.1.617.2) in households

(A) Genomic analysis of the four households with lineage-defining mutations for delta¹⁸ and additional mutations within ORFs displayed to give insight into whether strains from individuals within the household are closely related. Lineages AY.4 and AY.9 are sub-lineages of delta. (B) Viral trajectories and vaccination status of the four index cases infected with the delta variant for whom infection was detected in their epidemiologically linked household contacts. All individuals had non-severe disease. Each plot shows an index case and their household contacts. Undetectable viral load measurements are plotted at the limit of detection (10^{-1.49}). C=contact. I=index case. FV=fully vaccinated. ORF=open reading frame. PV=partially vaccinated. U=unvaccinated.

Viral load growth rates were substantially faster than decline rates, varying in the range of 2.69–3.24 log₁₀ units per mL per day between groups, indicating that a typical 3-day period was required for viral load to

grow from undetectable to peak. Our power to infer differences in growth rates between groups was more restricted than for viral decline, but there was moderate evidence ($pp=0.79$) that growth rates were lower for

(Figure 3 continues on next page)

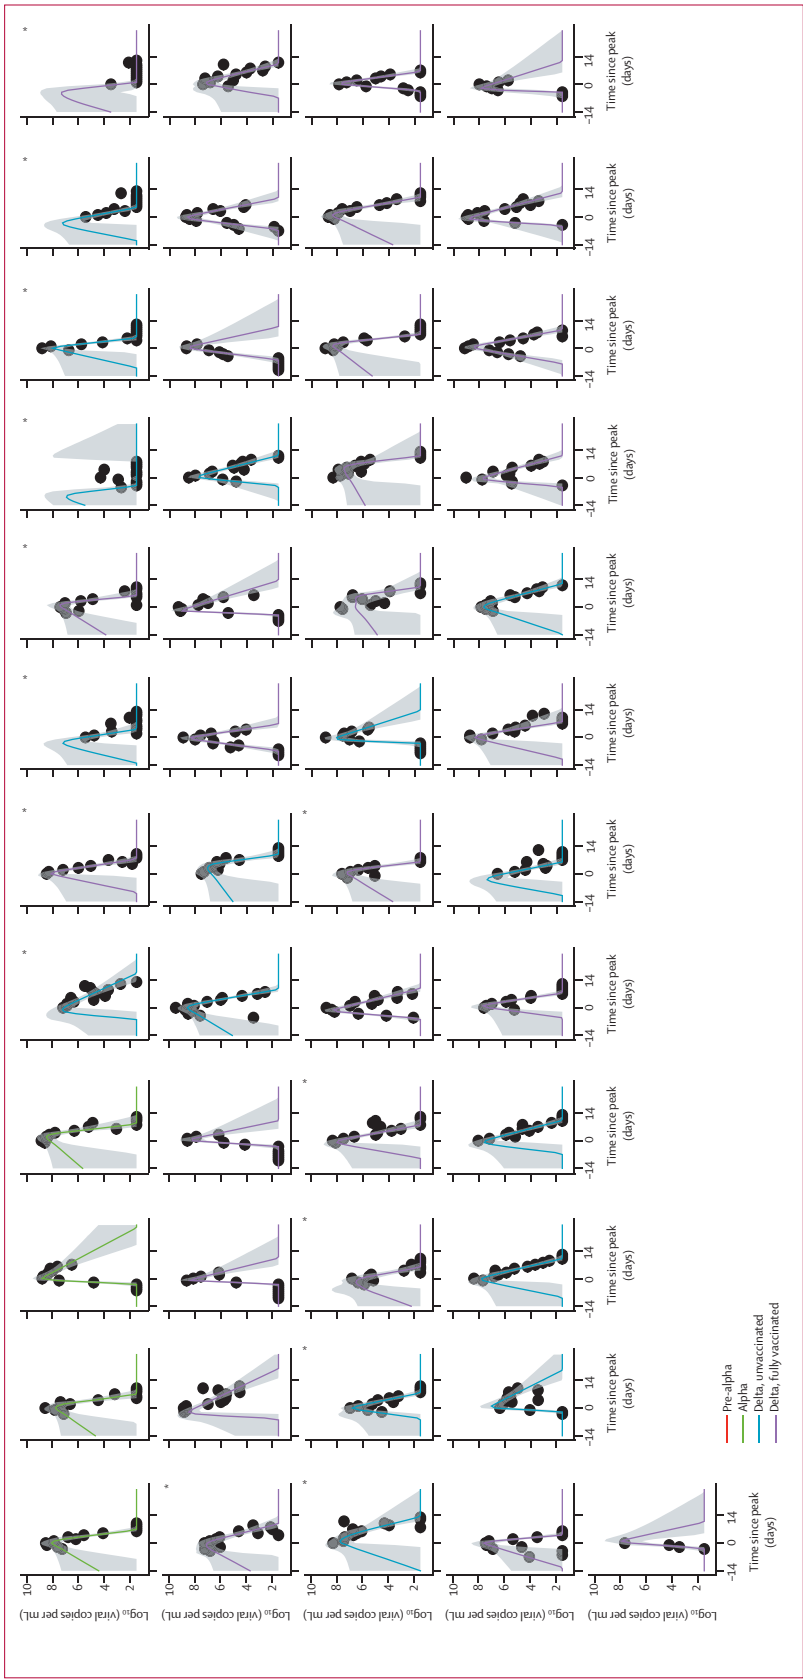

Figure 3: ORF1ab viral load trajectories from 14 days before to 28 days after peak for 133 participants infected with pre-alpha or alpha variants (unvaccinated), or the delta variant (vaccinated and unvaccinated) variants
Black circles are measured values, with the first datapoint for each participant being taken to the day of enrolment. Plots are rooted on the day of peak viral load for each participant, denoted as day 0 on the x-axis. Curves show the model posterior median estimate, with a 95% credible interval shading. 133 infected participants, comprising 114 contacts and 19 index cases. *Index cases.

	VL growth rate (95% CrI), log ₁₀ units per day	Posterior probability estimate is less than pre-alpha	Posterior probability estimate is less than alpha	Posterior probability estimate is less than delta (unvaccinated)	Posterior probability estimate is less than delta (fully vaccinated)
Pre-alpha (n=49)	3.24 (1.78–6.14)	..	0.44	0.27	0.21
Alpha (n=39)	3.13 (1.76–5.94)	0.56	..	0.32	0.25
Delta, unvaccinated (n=16)	2.81 (1.47–5.47)	0.73	0.68	..	0.44
Delta, fully vaccinated (n=29)	2.69 (1.51–5.17)	0.79	0.75	0.56	..

VL growth rates are shown as within-sample posterior mean estimates. Remaining columns show population (group-level) posterior probabilities that the estimate on that row is less than an estimate for a different group. Posterior probabilities are derived from 20 000 posterior samples and have sampling errors of <0.01. VL=viral load. CrI=credible interval.

Table 3: Estimates of VL growth rates for pre-alpha, alpha, and delta (unvaccinated and fully vaccinated) cases, derived from ORF1ab cycle threshold data

	VL decline rate (95% CrI), log ₁₀ units per day	Posterior probability estimate is larger than pre-alpha	Posterior probability estimate is larger than alpha	Posterior probability estimate is larger than delta (unvaccinated)	Posterior probability estimate is larger than delta (fully vaccinated)
Pre-alpha (n=49)	0.69 (0.58–0.81)	..	0.07	0.21	0.01
Alpha (n=39)	0.82 (0.67–1.01)	0.93	..	0.60	0.16
Delta, unvaccinated (n=16)	0.79 (0.59–1.04)	0.79	0.40	..	0.15
Delta, fully vaccinated (n=29)	0.95 (0.76–1.18)	0.99	0.84	0.85	..

VL decline rates are shown as within-sample posterior mean estimates. Remaining columns show population (group-level) posterior probabilities that the estimate on that row is less than an estimate for a different group. Posterior probabilities are derived from 20 000 posterior samples and have sampling errors of <0.01. VL=viral load. CrI=credible interval.

Table 4: Estimates of VL decline rates for pre-alpha, alpha, and delta (unvaccinated and fully vaccinated) cases, derived from ORF1ab cycle threshold data

those in the vaccinated delta group than in the pre-alpha group.

We estimated mean peak viral load for 50-year-old adults to be 8.14 (95% CrI 7.95 to 8.32) log₁₀ copies per mL, but peak viral load did not differ by variant or vaccination status. However, we estimated that peak viral load increases with age ($pp=0.96$ that the slope of peak viral load with log[age] was >0), with an estimated slope of 0.24 (95% CrI −0.02 to 0.49) log₁₀ copies per mL per unit change in log(age). This estimate translates to a difference of 0.39 (−0.03 to 0.79) in mean peak log₁₀ copies per mL between those aged 10 years and 50 years.

Within-group individual participant estimates of viral load growth rate were positively correlated with peak viral load, with a correlation coefficient estimate of 0.42 (95% CrI 0.13 to 0.65; appendix p 8). Hence, individuals with faster viral load growth tend to have higher peak viral load. The decline rate of viral load was also negatively correlated with viral load growth rate, with a correlation coefficient estimate of −0.44 (95% CrI −0.67 to −0.18), illustrating that individuals with faster viral load growth tend to experience slower viral load decline.

Discussion

Households are the site of most SARS-CoV-2 transmission globally.¹⁹ In our cohort of densely sampled household contacts exposed to the delta variant, SAR was 38% in unvaccinated contacts and 25% in fully vaccinated contacts. This finding is consistent with the known protective effect of COVID-19 vaccination against

infection.^{8,9} Notwithstanding, these findings indicate continued risk of infection in household contacts despite vaccination. Our estimate of SAR is higher than that reported in fully vaccinated household contacts exposed before the emergence of the delta variant.^{1,20,21} The time interval between vaccination and study recruitment was significantly higher in fully vaccinated PCR-positive contacts than fully vaccinated PCR-negative contacts, suggesting that susceptibility to infection increases with time as soon as 2–3 months after vaccination—consistent with waning protective immunity. This potentially important observation is consistent with recent large-scale data and requires further investigation.¹⁷ Household SAR for delta infection, regardless of vaccination status, was 26% (95% CI 20–32), which is higher than estimates of UK national surveillance data (10.8% [10.7–10.9]).¹⁰ However, we sampled contacts daily, regardless of symptomatology, to actively identify infection with high sensitivity. By contrast, symptom-based, single-timepoint surveillance testing probably underestimates the true SAR, and potentially also overestimates vaccine effectiveness against infection.

We identified similar SAR (25%) in household contacts exposed to fully vaccinated index cases as in those exposed to unvaccinated index cases (23%). This finding indicates that breakthrough infections in fully vaccinated people can efficiently transmit infection in the household setting. We identified 12 household transmission events between fully vaccinated index case–contact pairs; for three of these, genomic sequencing confirmed that the index case and

contact were infected by the same delta variant sub-lineage, thus substantiating epidemiological data and temporal relationships of viral load kinetics to provide definitive evidence for secondary transmission. To our knowledge, one other study has reported that transmission of the delta variant between fully vaccinated people was a point-source nosocomial outbreak—a single health-care worker with a particular delta variant sub-lineage in Vietnam.²²

Daily longitudinal sampling of cases from early (median 4 days) after exposure for up to 20 days allowed us to generate high-resolution trajectories of URT viral load over the course of infection. To date, two studies have sequentially sampled community cases of mild SARS-CoV-2 infection, and these were from highly specific population groups identified through asymptomatic screening programmes (eg, for university staff and students²³ and for professional athletes²⁴).

Our most predictive model of viral load kinetics estimated mean peak log₁₀ viral load per mL of 8.14 (95% CrI 7.95–8.32) for adults aged 50 years, which is very similar to the estimate from a 2021 study using routine surveillance data.²⁵ We found no evidence of variation in peak viral load by variant or vaccination status, but we report some evidence of modest but significant ($p=0.095$) increases in peak viral load with age. Previous studies of viral load in children and adults^{4,25,26} have not used such dense sequential sampling of viral load and have, therefore, been restricted in their power to resolve age-related differences; the largest such study²⁵ reported a similar difference between children and adults to the one we estimated. We found the rate of viral load decline was faster for vaccinated individuals with delta infection than all other groups, and was faster for individuals in the alpha and unvaccinated delta groups than those with pre-alpha infection.

For all variant vaccination groups, the variation between participants seen in viral load kinetic parameter estimates was substantially larger than the variation in mean parameters estimated between groups. The modest scale of differences in viral kinetics between fully vaccinated and unvaccinated individuals with delta infection might explain the relatively high rates of transmission seen from vaccinated delta index cases in our study. We found no evidence of lower SARs from fully vaccinated delta index cases than from unvaccinated ones. However, given that index cases were identified through routine symptomatic surveillance, there might have been a selection bias towards identifying untypically symptomatic vaccine breakthrough index cases.

The differences in viral kinetics we found between the pre-alpha, alpha, and delta variant groups suggest some incremental, but potentially adaptive, changes in viral dynamics associated with the evolution of SARS-CoV-2 towards more rapid viral clearance. Our study provides the first evidence that, within each variant or vaccination group, viral growth rate is positively correlated with peak viral load, but is negatively correlated with viral decline

rate. This finding suggests that individual infections during which viral replication is initially fastest generate the highest peak viral load and see the slowest viral clearance, with the latter not just being due to the higher peak. Mechanistically, these data suggest that the host and viral factors determining the initial growth rate of SARS-CoV-2 have a fundamental effect on the trajectory throughout infection, with faster replication being more difficult (in terms of both peak viral load and the subsequent decline of viral load) for the immune response to control. Analysis of sequentially sampled immune markers during infection might give insight into the immune correlates of these early differences in infection kinetics. It is also possible that individuals with the fastest viral load growth and highest peaks contribute disproportionately to community transmission, a hypothesis that should be tested in future studies.

Several population-level, single-timepoint sampling studies using routinely available data have found no major differences in cycle threshold values between vaccinated and unvaccinated individuals with delta variant infection.^{10,27,28} However, as the timepoint of sampling in the viral trajectory is unknown, this restricts the interpretation of such results. Two other studies longitudinally sampled vaccinated and unvaccinated individuals with delta variant infection.^{23,29} A retrospective cohort of hospitalised patients in Singapore²⁹ also described a faster rate of viral decline in vaccinated versus unvaccinated individuals with delta variant, reporting somewhat larger differences in decline rates than we estimated here. However, this disparity might be accounted for by the higher severity of illness in unvaccinated individuals in the Singaporean study (almost two-thirds having pneumonia, one-third requiring COVID-19 treatment, and a fifth needing oxygen) than in our study, given that longer viral shedding has been reported in patients with more severe illness.³⁰ A longitudinal sampling study in the USA reported that pre-alpha, alpha, and delta variant infections had similar viral trajectories.²⁴ The study also compared trajectories in vaccinated and unvaccinated individuals, reporting similar proliferation phases and peak cycle threshold values, but more rapid clearance of virus in vaccinated individuals. However, this study in the USA stratified by vaccination status and variant separately, rather than jointly, meaning vaccinated individuals with delta infection were being compared with, predominantly, unvaccinated individuals with pre-alpha and alpha infection. Moreover, sampling was done as part of a professional sports player occupational health screening programme, making the results not necessarily representative of typical community infections.

Our study has limitations. First, we recruited only contacts of symptomatic index cases as our study recruitment is derived from routine contact-tracing notifications. Second, index cases were defined as the first household member to have a PCR-positive swab, but we cannot exclude the possibility that another household member might already have been infected and transmitted

to the index case. Third, recording of viral load trajectories is subject to left censoring, where the growth phase in prevalent contacts (already PCR-positive at enrolment) was missed for a proportion of participants. However, we captured 29 incident cases and 15 additional cases on the upslope of the viral trajectory, providing valuable, informative data on viral growth rates and peak viral load in a subset of participants. Fourth, owing to the age-stratified rollout of the UK vaccination programme, the age of the unvaccinated, delta variant-infected participants was lower than that of vaccinated participants. Thus, age might be a confounding factor in our results and, as discussed, peak viral load was associated with age. However, it is unlikely that the higher SAR observed in the unvaccinated contacts would have been driven by younger age rather than the absence of vaccination and, to our knowledge, there is no published evidence showing increased susceptibility to SARS-CoV-2 infection with decreasing age.³¹ Finally, although we did not perform viral culture here—which is a better proxy for infectiousness than RT-PCR—two other studies^{27,32} have shown cultivable virus from around two-thirds of vaccinated individuals infected with the delta variant, consistent with our conclusions that vaccinated individuals still have the potential to infect others, particularly early after infection when viral loads are high and most transmission is thought to occur.³⁰

Our findings help to explain how and why the delta variant is being transmitted so effectively in populations with high vaccine coverage. Although current vaccines remain effective at preventing severe disease and deaths from COVID-19, our findings suggest that vaccination alone is not sufficient to prevent all transmission of the delta variant in the household setting, where exposure is close and prolonged. Increasing population immunity via booster programmes and vaccination of teenagers will help to increase the currently limited effect of vaccination on transmission, but our analysis suggests that direct protection of individuals at risk of severe outcomes, via vaccination and non-pharmacological interventions, will remain central to containing the burden of disease caused by the delta variant.

Contributors

AS, JD, MZ, NMF, WB, and ALal conceptualised the study. AS, SH, JD, KJM, AK, JLB, MGW, ND-F, RV, RK, JF, CT, AVK, JC, VQ, EC, JSN, SH, EM, TP, HH, CL, JS, SB, JP, CA, SA, and NMF were responsible for data curation and investigation. AS, SH, KJM, JLB, AC, NMF, and ALal did the formal data analysis. MAC, AB, DJ, SM, JE, PSF, SD, and ALac did the laboratory work. RV, RK, JF, CT, AVK, JC, VQ, EC, JSN, SH, EM, and SE oversaw the project. AS, SH, JD, KJM, JLB, NMF, and ALal accessed and verified the data. JD, MZ, and ALal acquired funding. NMF sourced and oversaw the software. AS and ALal wrote the initial draft of the manuscript. AS, JD, GPT, MZ, NMF, SH, and ALal reviewed and edited the manuscript. The corresponding author had full access to all the data in the study and had final responsibility for the decision to submit for publication.

Depiction of Novel Corona Virus Infectious Disease 2019 (CoVid 19 aka SARS CoV 2)

Problem: CV19 Inhibits Human Body's Immune Regulatory Response/Defense System.

Where: Primary Lungs and Secondary other major organs and nervous system.

When: 2-14 days after Initial infection date.

Significance : The human body's immune defense is compromised leading to prolonged illness and high mortality in populations with previous underlying inflammatory, immunosuppressive diseases/conditions: Elderly, Afro/Native Americans ; Obesity, Smokers, Alcoholics, Addicts, HBP, Diabetes, Arthritis, Heart Disease, Arteriosclerosis, Stroke/Ischemia, Blood vessel inflammation, Cycle Cell Anemia, Cancer, Lupus, MS, AIDs, Nephritis, Kawasaki disease, etc.

Zinc is vital to promoting healthy hair, skin, and nails and is required for a proper sense of taste and smell. Zinc plays an integral role in immune function, protein synthesis, wound healing, DNA synthesis and cell division and is involved in over 300 regulatory processes. Zinc is also important for lipid, carbohydrate, and protein metabolism, as well as cell signal transduction, and reduction/oxidation (redox) regulation. In males, zinc has been shown to protect the prostate gland from infection and enlargement, which has been linked to being a risk for prostate cancer. In females, zinc can help treat menstrual problems and alleviate associated symptoms. Zinc may also protect from night blindness and prevent the development of cataracts. Children need zinc to grow, maintain a healthy body weight, fight off diseases such as pneumonia, diarrhea and diabetes, as well as shorten the length of the common cold.

Evidence: shown Zinc transported across SARS CoV 1 infected cell membranes using non protein, synthetic ionophore , carrier molecules has been to inhibit viral RNA reverse transcriptase (RT) enzyme and prevent virion reproduction in vitro.

Hypothesis: CV19 inhibits zinc transport across infected cell membranes leading to Zinc Immuno regulatory deficiencies causing initial acute exacerbation of chronic obstructive pulmonary disease and secondary acute exacerbation of heart, kidney, blood vessels, brain, large intestine, skin, joints, and nervous system exemplified by cytokine storm and inflammation.

Causes: Low blood serum zinc concentration/availability.

Inhibition of zinc zip protein carrier "ionophores" which transport zinc across cell membranes for human DNA/RNA synthesis, cellular control, and immune response.

Solutions : Increase blood serum zinc through proper diet, digestion, and gut flora; avoid phytate rich foods; eat zinc rich foods; supplement zinc.

Supplement/administer "non protein" Zinc ionophore carrier molecules:

A. Synthetic, Big Pharma Drugs like Pyrithione, Hydroxychloriquine, and/or other synthetic zinc ligand-ionophores.

B. Natural fruit and vegetable polyphenol flavenoid ionophores like Quercetin, Reseveratrol, Curcumin, ECGC.

Effective: Timely Solutions Implement Zinc plus non protein ionophores to transport zinc across infected cell membranes and inhibit viral RT, prevent virion reproduction, and restore human cell DNA and RNA synthesis, cellular control, and immune regulatory response/defense.

RE: Comments for the Immunizations Technical Advisory Group

To the Washington State Board of Health, Technical Advisory Group on Covid vaccines for schoolchildren.

People across the state have hoped that COVID-19 vaccines would work as a...well, as a vaccine. Vaccines are supposed to prevent infection and transmission.

Yet, the makers of the shots can't say they prevent infection or transmission. The CDC Director Walensky is quoted a few months ago as saying the same thing.

On Wednesday December 15th, the New England Journal of Medicine published an editorial Perspective by three authors, including one Anthony Fauci. They make a case for better, different vaccines while admitting: "As important as these vaccines are, however, their protective efficacy wanes over time, necessitating booster doses. Vaccination has also been unable to prevent "breakthrough" infections, *allowing subsequent transmission to other people ...*" [emphasis added] <https://www.nejm.org/doi/pdf/10.1056/NEJMp2118468>

If a product doesn't do what was intended, how can it be mandated? Let alone approved? Now people's intelligence is further insulted as many agencies are changing the definition of a vaccine to sound more like a typical medicine that reduces symptoms. The shots are hardly worth mandating on a school entry list when it doesn't work as a vaccine. You might as well mandate Dayquil for Kids - it reduces symptoms of the common cold and allows transmission of the cold viruses too.

Many other states have gone so far as to make mandates illegal.

There are now a lot of safety and effectiveness data on the one-size-fits-all solution being forced on everyone. Public comments made to the Board of Health during the pandemic are not misinformation. It is the missing information - factual information supported by hundreds, if not thousands of scientific studies and doctors and PhDs proving the products do not work as advertised. What is indisputable about the COVID shots? Risk. The chance of significant personal or child harm, coupled with the ineffectiveness of the products, does not warrant

mandates. Policy not backed by sound rationale is arbitrary and amounts to punishment for many.

The argument against including COVID shots on the WA school mandate list can be summed up concisely:

- Children and adolescents are not at measurable risk from bad infections, so they don't need the shot.
- The shots don't prevent transmission, so the argument to have the kids take the shots to protect older people doesn't hold water.
- The shots have only been in children for about 12 months. The virus will be endemic before any long-term effects of the shots are understood in the young.

To consider this shot for schoolchildren while the products are waning in efficacy and remain under Emergency Use Authorization is only more proof you are being manipulated by a narrative that's myopically focused on a one-size-fits-all approach since the beginning of the pandemic.

If you recommend that COVID shots be added to the school schedule, the Public Health agencies will lose what little credibility remains and no one will listen when a truly bad health emergency arises.

Sincerely,

Robert Runnells

Vancouver, WA

COVID - MODERNA - CONSENT V1.7

* indicates required fields

COVID-19 MODERNA - CONSENT

MODERNA COVID-19 VACCINE is a vaccine developed by Moderna to prevent disease caused by COVID-19. This vaccine has been authorized by the US Food & Drug Administration (FDA) for use under an Emergency Use Authorization (EUA). There is no FDA approved vaccine to prevent COVID-19. The purpose of this form is to obtain your consent to receive this vaccine.

EXCLUSION QUESTIONS: ANSWERING YES TO ANY OF THESE QUESTIONS EXCLUDES YOU FROM RECEIVING THE VACCINE.

Do you have a known history of a severe allergic reaction (e.g., anaphylaxis) to any component of the Moderna COVID-19 Vaccine: SM-102, polyethylene glycol [PEG], 2000 dimyristoyl glycerol [DMG], cholesterol, and 1,2-distearoyl-sn-glycero-3-phosphocholine [DSPC]), tromethamine, tromethamine hydrochloride, acetic acid, sodium acetate, and sucrose.

Have you had an immediate allergic reaction of ANY severity to a previous dose of an mRNA COVID-19 vaccine or any of its components, including polyethylene glycol (PEG)?

Are you younger than 18 years of age?

ANSWERING "YES" TO THIS QUESTION EXCLUDES YOU FROM RECEIVING THE VACCINE AT THIS TIME

SCREENING QUESTIONS:

Immunizer: If patient answers "yes" to any of the below, provide patient counseling or instruct them to consult with their provider prior to receiving the vaccine.

Are you feeling sick today?

Have you ever received a dose of COVID-19 vaccine?

- If yes, which vaccine product did you receive?

If other, please provide name of vaccine

Have you had a new onset of fever, chills, cough, shortness of breath, difficulty breathing, fatigue, muscle or body aches, headache, new loss of taste or smell, sore throat, nausea, vomiting or diarrhea?

In the past two weeks have you tested positive for COVID-19?

In the past 90 days have you received passive antibody therapy (i.e. convalescent plasma or a monoclonal antibody) as part of COVID-19 treatment?

Are you pregnant or breastfeeding or do you plan to become pregnant?*

*** PREGNANT WOMEN AND BREASTFEEDING WOMEN HAVE NOT BEEN INCLUDED IN ANY COVID VACCINE CLINICAL TRIALS TO DATE, SO THERE IS CURRENTLY NO SAFETY DATA SPECIFIC FOR THIS POPULATION. IF YOU ARE PREGNANT, PLAN TO BECOME PREGNANT, OR ARE BREASTFEEDING, WE STRONGLY RECOMMEND YOU SPEAK TO YOUR CARE PROVIDER BEFORE GETTING THE VACCINE**

Are you immune compromised or on a medicine that affects your immune system?

Do you have a bleeding disorder or are you on a blood thinner?

Do you have a weakened immune system caused by something such as HIV infection or cancer or do you take immunosuppressive drugs or therapies?

Do you have a known polysorbate allergy?

Do you have history of myocarditis (inflammation of the heart muscle) or pericarditis (inflammation of the lining outside the heart)?

Do you have a history of severe allergic reaction (e.g. anaphylaxis) to another vaccine or injectable medication?

- If yes, what vaccine or injectable medication:

If yes to any of the above, I attest that I have discussed my condition with my provider and vaccination is recommended or I acknowledge that there may be risks and consent to proceed with vaccination

*Vaccinator: if patient answers yes to question concerning blood thinner, instruct patient to monitor injection site for bruising and swelling. If develops, patient may use compression and ice to relieve symptoms.

Caregiver safety is our number one priority. By receiving this COVID-19 vaccine you are agreeing to our safety protocol, which requires caregivers remain in the vaccination area for at least 15 minutes following their vaccination. This additional time is for caregiver safety and allows the vaccine team to monitor caregivers in the event of a reaction.

I KNOW THAT IF I HAVE A SEVERE ALLERGIC REACTION, INCLUDING DIFFICULTY BREATHING, SWELLING OF MY FACE AND/OR THROAT, A FAST HEARTBEAT, A BAD RASH ALL OVER MY BODY OR DIZZINESS AND WEAKNESS I SHOULD CALL 9-1-1 OR GO TO THE NEAREST HOSPITAL. I KNOW I CAN CALL MY HEALTH CARE PROVIDER IF I HAVE ANY SIDE EFFECTS THAT BOTHER ME OR DO NOT GO AWAY.

ACKNOWLEDGEMENT AND CONSENT TO RECEIVE VACCINATION

The following has been discussed with me or I have been provided information about:

1. The FDA has authorized the emergency use of Moderna COVID-19 Vaccine, which is not FDA approved in this population, for vaccination against COVID-19.
2. The option to accept or refuse vaccination and alternative options.
3. Information on available alternative vaccines and the risks and benefits of those alternatives.
4. Significant and potential risks and benefits of vaccination, and the extent to which they may occur, is not known at this time.

I HAVE BEEN PROVIDED A COPY AND/OR OPPORTUNITY TO REVIEW THE EUA FACT SHEET

- FDA Fact Sheet for Patients/Patients/Caregivers
- I have been provided a vaccination card with the timeframe for when I need to return for the second dose of Moderna COVID-19 Vaccine.

I understand and agree that this consent form and records relating to my vaccination will be maintained in designated records, including, if applicable, my medical record and/or my occupational health record.

I consent to the release of my information to state or federal health authorities (e.g. state immunization registries) for the purpose of tracking immunizations during the public health emergency.

I was provided information on the V-SAFE program. The program does health checks on the people who get the COVID-19 vaccine.

I confirm that I have been told about the pros and cons of this vaccine and have been able to ask any questions. I consent to receive this vaccine injection.

By selecting the check box below, you certify that (i) you are the individual completing the form; (ii) all information entered on this form is true and accurate to the best of your knowledge; (iii) you agree with all terms and conditions as listed on this form; and (iv) you consent to using the check box as the means of providing your signature electronically and that such electronic signature is valid.

☐ I consent to receive the Moderna COVID-19 vaccine.*

COVID - PFIZER - CONSENT V1.7

* indicates required fields

COVID-19 PFIZER VACCINE CONSENT

BNT162B2 is a vaccine developed by Pfizer-BioNtech to prevent disease caused by COVID-19. This vaccine has been authorized by the US Food & Drug Administration (FDA) for use under an Emergency Use Authorization (EUA). The purpose of this form is to obtain your consent to receive this vaccine.

EXCLUSION QUESTIONS: ANSWERING YES TO ANY OF THESE QUESTIONS EXCLUDES YOU FROM RECEIVING THE VACCINE.

1. Do you have a known history of a severe allergic reaction (e.g. anaphylaxis) to any components of the Pfizer BioNTech COVID-19 vaccine: mRNA, lipids ((4- hydroxybutyl)azanediyl)bis(hexane-6,1-diyl)bis(2-hexyldecanoate), 2 [(polyethylene glycol)- 2000]-N,N-ditetradecylacetamide, 1,2-Distearoyl-sn-glycero-3-phosphocholine, and cholesterol), potassium chloride, monobasic potassium phosphate, sodium chloride, dibasic sodium phosphate dihydrate, and sucrose?

2. Have you had an immediate allergic reaction of ANY severity to a previous dose of an mRNA COVID-19 vaccine or any of its components, including polyethylene glycol (PEG)?

3. Are you under the age of 12 years?

SCREENING QUESTIONS: IMMUNIZER: IF PATIENT ANSWERS "YES" TO ANY OF THE BELOW, PROVIDE PATIENT COUNSELING OR INSTRUCT THEM TO CONSULT WITH THEIR PROVIDER PRIOR TO RECEIVING THE VACCINE.

4. Are you feeling sick today?

5. Have you ever received a dose of COVID-19 vaccine?

• If yes, which vaccine product did you receive?

If other, please provide name of vaccine:

6. In the past two weeks have you tested positive for COVID-19?

7. In the past 90 days have you received passive antibody therapy (i.e. convalescent plasma or a monoclonal antibody) as part of COVID-19 treatment?

8. Are you pregnant or breastfeeding or do you plan to become pregnant? *

* PREGNANT WOMEN AND BREASTFEEDING WOMEN HAVE NOT BEEN INCLUDED IN ANY COVID VACCINE CLINICAL TRIALS TO DATE, SO NO SAFETY DATA SPECIFIC FOR THIS POPULATION. IF YOU ARE PREGNANT, PLAN TO BECOME PREGNANT, OR ARE BREASTFEEDING, YOU MAY WANT TO SPEAK TO YOUR CARE PROVIDER BEFORE GETTING THE VACCINE.

9. Are you immune compromised or on a medicine that affects your immune system?

10. Do you have a bleeding disorder or are you on a blood thinner?

11. Do you have a weakened immune system caused by something such as HIV infection or cancer or do you take immunosuppressive drugs or therapies?

12. Do you have a known polysorbate allergy?

13. Do you have a history of myocarditis (inflammation of the heart muscle) or pericarditis (inflammation of the lining outside the heart)?

14. Do you have a history of severe allergic reaction (e.g. anaphylaxis) to another vaccine or injectable medication?

- If yes, what vaccine or injectable medication:

15. If yes to any of the above, I attest that I have discussed my condition with my provider and vaccination is recommended or I acknowledge that there may be risks and consent to proceed with the vaccination.

Caregiver safety is our number one priority. By receiving this COVID-19 vaccine you are agreeing to our safety protocol, which requires caregivers remain in the vaccination area for at least 15 minutes following their vaccination. This additional time is for caregiver safety and allows the vaccine team to monitor caregivers in the event of a reaction.

I KNOW THAT IF I HAVE A SEVERE ALLERGIC REACTION, INCLUDING DIFFICULTY BREATHING, SWELLING OF MY FACE AND/OR THROAT, A FAST HEARTBEAT, A BAD RASH ALL OVER MY BODY OR DIZZINESS AND WEAKNESS I SHOULD CALL 9-1-1 OR GO TO THE NEAREST HOSPITAL. I KNOW I CAN CALL MY HEALTH CARE PROVIDER IF I HAVE ANY SIDE EFFECTS THAT BOTHER ME OR DO NOT GO AWAY.

ACKNOWLEDGEMENT AND CONSENT TO RECEIVE VACCINATION

The following has been communicated with me: • The FDA has authorized the emergency use of Pfizer-BioNTech COVID-19 Vaccine (also known as BNT162b2), which is not FDA approved in this population, for vaccination against COVID-19. • The option to accept or refuse vaccination and alternative options. • Information on available alternative vaccines and the risks and benefits of those alternatives. • Significant and potential risks and benefits of vaccination, and the extent to which they may occur, is not known at this time. I have been provided a copy and/or opportunity to review the EUA Fact Sheet

I was provided a vaccination card with the date when the recipient needs to return for the second dose of Pfizer-BioNTech COVID-19 Vaccine

I was provided information on the V-SAFE program. The program does health checks on the people who get the COVID-19 vaccine.

I understand and agree that this consent form and records relating to my vaccination will be maintained in designated records, including, if applicable, my medical record and/or my occupational health record.

I consent to the release of my information to state or federal health authorities (e.g. state immunization registries) for the purpose of tracking immunizations during the public health emergency.

Therefore, I attest that I understand the nature of administering Pfizer-BioNTech Covid-19 Vaccine the relative known risks and benefits, available alternatives, and have received information and answers to questions. I am consenting to being vaccinated under the EUA until such a time as I have completed the vaccination schedule of two doses, I substantially decompensate or show a significant adverse reaction to the vaccine, or my goals of care have changed. I understand that I am free to withdraw consent and stop treatment prior to the second dose. I understand that stopping the vaccination series will not impact other medical care and treatment options.

By selecting the check box below, you certify that (i) you are the individual completing the form; (ii) all information entered on this form is true and accurate to the best of your knowledge; (iii) you agree with

all terms and conditions as listed on this form; and (iv) you consent to using the check box as the means of providing your signature electronically and that such electronic signature is valid.

☐ I consent to receive the Pfizer COVID-19 vaccine.*

COVID-19 - JANSSEN - CONSENT V1.5

* indicates required fields

COVID-19 JANSSEN VACCINE CONSENT

Janssen COVID-19 VACCINE is a vaccine developed by Johnson & Johnson to prevent disease caused by COVID-19. This vaccine has been authorized by the US Food & Drug Administration (FDA) for use under an Emergency Use Authorization (EUA). There is no FDA approved vaccine to prevent COVID-19. The purpose of this form is to obtain your consent to receive this vaccine.

EXCLUSION QUESTIONS: ANSWERING YES TO ANY OF THESE QUESTIONS EXCLUDES YOU FROM RECEIVING THE VACCINE.

Do you have a known history of a severe allergic reaction (e.g., anaphylaxis) to any component of the Janssen COVID-19 vaccine: citric acid monohydrate (0.14 mg), trisodium citrate dihydrate (2.02 mg), ethanol (2.04 mg), 2-hydroxypropyl- β -cyclodextrin (HBCD) (25.50 mg), polysorbate-80 (0.16 mg), sodium chloride (2.19 mg)?

Are you younger than 18 years of age?

SCREENING QUESTIONS:

Vaccinator: If patient answers "yes" to any of the below, consult with provider prior to proceeding with administration.

Are you feeling sick today?

Have you ever received a dose of COVID-19 vaccine?

• If yes, which vaccine product did you receive?

If other, please provide name of vaccine

In the past two weeks have you tested positive for COVID-19?

In the past 90 days have you received passive antibody therapy (i.e. convalescent plasma or a monoclonal antibody) as part of COVID-19 treatment?

Are you pregnant or breastfeeding or do you plan to become pregnant? *

* Pregnant women and breastfeeding women have not been included in any COVID vaccine clinical trials to date, so there is currently no safety data specific for this population. If you are pregnant, plan to become pregnant, or are breastfeeding, we strongly recommend you speak to your care provider before getting the vaccine.

Are you immune compromised or on a medicine that affects your immune system?

Do you have a bleeding disorder or are you on a blood thinner? *

*If patient answers yes to question concerning blood thinner, instruct patient to monitor injection site for bruising and swelling. If develops, patient may use compression and ice to relieve symptoms.

Do you have a weakened immune system caused by something such as HIV infection or cancer or do you take immunosuppressive drugs or therapies?

Do you have a history of severe allergic reaction (e.g. anaphylaxis) to another vaccine or injectable medication?

If yes, what vaccine or injectable medication:

Note: must remain in observation area for 30 minutes post vaccination

If yes to any of the above, I attest that I have discussed my condition with my provider and vaccination is recommended or I acknowledge that there may be risks and consent to proceed with vaccination

POTENTIAL ADVERSE EFFECTS

I understand that blood clots involving blood vessels in the brain, abdomen, and legs along with low levels of platelets (blood cells that help your body stop bleeding), have occurred in some people who have received the Janssen COVID-19 Vaccine. In people who developed these blood clots and low levels of platelets, symptoms began approximately one to two-weeks

following vaccination. Most people who developed these blood clots and low levels of platelets were females ages 18 through 49 years. The chance of having this occur is remote.

I know that I should seek medical attention right away if I have any of the following symptoms after receiving Janssen COVID-19 Vaccine: • Shortness of breath • Chest pain • Leg swelling • Persistent abdominal pain • Severe or persistent headaches or blurred vision • Easy bruising or tiny blood spots under the skin beyond the site of the injection

I understand that Guillain Barré syndrome (a neurological disorder in which the body's immune system damages nerve cells, causing muscle weakness and sometimes paralysis) has occurred in some people who have received the Janssen COVID-19 Vaccine. In most of these people, symptoms began within 42 days following receipt of the Janssen COVID-19 Vaccine. The chance of having this occur is very low.

I know that I should seek medical attention right away if I develop any of the following symptoms after receiving the Janssen COVID-19 Vaccine: • Weakness or tingling sensations, especially in the legs or arms, that's worsening and spreading to other parts of the body • Difficulty walking • Difficulty with facial movements, including speaking, chewing, or swallowing • Double vision or inability to move eyes • Difficulty with bladder control or bowel function I understand there are other COVID-19 vaccines available for which these risks have not been seen.

I also know that if I have a severe allergic reaction, including difficulty breathing, swelling of my face and/or throat, a fast heartbeat, a bad rash all over my body, or dizziness and weakness, I should call 9-1-1 or go to the nearest hospital. I know I can call my health care provider if I have any side effects that bother me or do not go away.

ACKNOWLEDGEMENT AND CONSENT TO RECEIVE VACCINATION

The following has been discussed with me or I have been provided information about: • The FDA has authorized the emergency use of Janssen (Johnson & Johnson) COVID-19 Vaccine, which is not FDA approved in this population, for vaccination against COVID-19. • The option to accept or refuse vaccination and alternative options. • Information on available alternative vaccines and the risks and benefits of those alternatives. • Additional significant and potential risks and benefits of vaccination, and the extent to which they may occur, is not known at this time.

I have been provided a copy and/or opportunity to review the EUA Fact Sheet. • FDA Fact Sheet for Patients/Patients/Caregivers

I have been provided a vaccination card. I consent to the release of my information to state or federal health authorities (e.g. state immunization registries) for the purpose of tracking immunizations. I was provided information on the V-SAFE program. The program does health checks on the people who get the COVID- 19 vaccine. (<https://www.cdc.gov/coronavirus/2019-ncov/vaccines/safety/vsafe.html>) I confirm that I have been told about the pros and cons of this vaccine and have been able to ask any questions. I consent to receive this vaccine injection.

Recipient printed name:

By selecting the check box below, you certify that (i) you are the individual completing the form; (ii) all information entered on this form is true and accurate to the best of your knowledge; (iii) you agree with

all terms and conditions as listed on this form; and (iv) you consent to using the check box as the means of providing your signature electronically and that such electronic signature is valid.

☐ I consent to receive the Janssen (Johnson & Johnson) COVID-19 vaccine.*

On COVID vaccines: why they cannot work, and irrefutable evidence of their causative role in deaths after vaccination

Sucharit Bhakdi, MD and Arne Burkhardt, MD

This text is a written summary of Dr. Bhakdi's and Dr. Burkhardt's presentations at the Doctors for COVID Ethics symposium that was live-streamed by [UKColumn](#) on December 10th, 2021. The two presentations can be viewed at the very beginning of [the video recording](#) of the symposium.

The authors

Dr. Bhakdi has spent his life practicing, teaching and researching medical microbiology and infectious diseases. He chaired the Institute of Medical Microbiology and Hygiene at the Johannes Gutenberg University of Mainz, Germany, from 1990 until his retirement in 2012. He has published over 300 research articles in the fields of immunology, bacteriology, virology and parasitology, and served from 1990 to 2012 as Editor-in-Chief of Medical Microbiology and Immunology, one of the first scientific journals of this field that was founded by Robert Koch in 1887.

Dr. Arne Burkhardt is a pathologist who has taught at the Universities of Hamburg, Berne and Tübingen. He was invited for visiting professorships/study visits in Japan (Nihon University), the United States (Brookhaven National Institute), Korea, Sweden, Malaysia and Turkey. He headed the Institute of Pathology in Reutlingen for 18 years. Subsequently, he worked as an independent practicing pathologist with consulting contracts with laboratories in the US. Burkhardt has published more than 150 scientific articles in German and international scientific journals as well as contributions to handbooks in German, English and Japanese. Over many years he has audited and certified institutes of pathology in Germany.

The evidence

We herewith present scientific evidence that calls for an immediate stop of the use of gene-based COVID-19 vaccines. We first lay out why the agents cannot protect against viral infection. While no positive effects can be expected, we show that the vaccines can trigger self-destructive processes that lead to debilitating illness and death.

Why the vaccines cannot protect against infection

A fundamental mistake underlying the development of the COVID-19 vaccines was to neglect the functional distinction between the two major categories of antibodies which the body produces in order to protect itself from pathogenic microbes.

The first category (secretory IgA) is produced by immune cells (lymphocytes) which are located directly underneath the mucous membranes that line the respiratory and intestinal tract. The antibodies produced by these lymphocytes are secreted through and to the surface of the mucous membranes.

These antibodies are thus on site to meet air-borne viruses, and they may be able to prevent viral binding and infection of the cells.

The second category of antibodies (IgG and circulating IgA) occur in the bloodstream. These antibodies protect the internal organs of the body from infectious agents that try to spread via the bloodstream.

Vaccines that are injected into the muscle – i.e., the interior of the body – will only induce IgG and circulating IgA, not secretory IgA. Such antibodies cannot and will not effectively protect the mucous membranes from infection by SARS-CoV-2. Thus, the currently observed “breakthrough infections” among vaccinated individuals merely confirm the fundamental design flaws of the vaccines. Measurements of antibodies in the blood can never yield any information on the true status of immunity against infection of the respiratory tract.

The inability of vaccine-induced antibodies to prevent coronavirus infections has been reported in recent scientific publications.

The vaccines can trigger self-destruction

A natural infection with SARS-CoV-2 (coronavirus) will in most individuals remain localized to the respiratory tract. In contrast, the vaccines cause cells deep inside our body to express the viral spike protein, which they were never meant to do by nature. Any cell which expresses this foreign antigen will come under attack by the immune system, which will involve both IgG antibodies and cytotoxic T-lymphocytes. This may occur in any organ. We are seeing now that the heart is affected in many young people, leading to myocarditis or even sudden cardiac arrest and death. How and why such tragedies might causally be linked to vaccination has remained a matter of conjecture because scientific evidence has been lacking. This situation has now been rectified.

Histopathologic studies: the patients

Histopathologic analyses have been performed on the organs of 15 persons who died after vaccination. The age, gender, vaccination record, and time of death after injection of each patient are listed in the table on the next page. The following points are of utmost importance:

- Prior to death, only 4 of the 15 patients had been treated in the ICU for more than 2 days. The majority were never hospitalized and died at home (5), on the street (1), at work (1), in the car (1), or in home-care facilities (1). Therefore, in most cases, therapeutic intervention is unlikely to have significantly influenced the post-mortem findings.
- Not a single death was brought into any possible association with the vaccination by the coroner or the public prosecutor; this association was only established by our autopsy findings.
- The initially performed conventional post-mortems also uncovered no obvious hints to a possible role of vaccination, since the macroscopic appearance of the organs was overall unremarkable. In most cases, “rhythmic heart failure” was postulated as the cause of death.

But our subsequent histopathological analyses then brought about a complete turnaround. A summary of the fundamental findings follows.

Case #	Gender	Age (years)	Vaccine (injections)	Time of death after last injection
1	female	82	Moderna (1. and 2.)	37 days
2	male	72	Pfizer (1.)	31 days
3	female	95	Moderna (1. and 2.)	68 days
4	female	73	Pfizer (1.)	unknown
5	male	54	Janssen (1.)	65 days
6	female	55	Pfizer (1. and 2.)	11 days
7	male	56	Pfizer (1. and 2.)	8 days
8	male	80	Pfizer (1. and 2.)	37 days
9	female	89	Unknown (1. and 2.)	6 months
10	female	81	Unknown (1. and 2.)	unknown
11	male	64	AstraZeneca (1. and 2.)	7 days
12	female	71	Pfizer (1. and 2.)	20 days
13	male	28	AstraZeneca (1.), Pfizer (2.)	4 weeks
14	male	78	Pfizer (1. and 2.)	65 days
15	female	60	Pfizer (1.)	23 days

Histopathologic studies: findings

Histopathologic findings of a similar nature were detected in organs of 14 of the 15 deceased. Most frequently afflicted were the heart (14 of 15 cases) and the lung (13 of 15 cases). Pathologic alterations were furthermore observed in the liver (2 cases), thyroid gland (Hashimoto's thyroiditis, 2 cases), salivary glands (Sjögren's Syndrome; 2 cases) and brain (2 cases).

A number of salient aspects dominated in all affected tissues of all cases:

1. inflammatory events in small blood vessels (endothelitis), characterized by an abundance of T-lymphocytes and sequestered, dead endothelial cells within the vessel lumen;

2. the extensive perivascular accumulation of T-lymphocytes;
3. a massive lymphocytic infiltration of surrounding non-lymphatic organs or tissue with T-lymphocytes.

Lymphocytic infiltration occasionally occurred in combination with intense lymphocytic activation and follicle formation. Where these were present, they were usually accompanied by tissue destruction.

This combination of multifocal, T-lymphocyte-dominated pathology that clearly reflects the process of immunological self-attack is without precedent. Because vaccination was the single common denominator between all cases, there can be no doubt that it was the trigger of self-destruction in these deceased individuals.

Conclusion

Histopathologic analysis show clear evidence of vaccine-induced autoimmune-like pathology in multiple organs. That myriad adverse events deriving from such auto-attack processes must be expected to very frequently occur in all individuals, particularly following booster injections, is self-evident.

Beyond any doubt, injection of gene-based COVID-19 vaccines places lives under threat of illness and death. We note that both mRNA and vector-based vaccines are represented among these cases, as are all four major manufacturers.

Re: *Underreporting to VAERS and NYSDOH of post-COVID-19 vaccine adverse events at Rochester Regional Health*

Dear Doctors Mayo, Gellasch, and Janes, and Mr. Ireland:

We write on behalf of our client, Deborah Conrad, a Physician Assistant at United Memorial Medical Center, a hospital within the Rochester Regional Health system (the “**Hospital**”). Ms. Conrad is in constant communication with patients and other hospital staff and has knowledge of numerous serious post-COVID-19 vaccine adverse events, including breakthrough cases and deaths, that have not been reported to either the Vaccine Adverse Events Reporting System (“**VAERS**”) or the New York State Department of Health (“**NYSDOH**”). For the past few months, on her own time, Ms. Conrad has been assisting doctors and other medical professionals at the hospital to report such events to VAERS. Instead of praising her efforts, numerous individuals at the Hospital, including Tara Gellasch and Peter Janes, ordered Ms. Conrad to stop reporting to VAERS altogether unless the patient she was reporting on was her patient. Since being given this order, Ms. Conrad has knowledge of dozens of patients whose conditions necessitate a VAERS report and whose treating nurses and doctors have not filed a VAERS report.

As you are likely aware, healthcare workers are mandated by federal law to report certain medical events arising after vaccination to VAERS. Pursuant to 42 U.S.C. § 300aa-25:

Each health care provider and vaccine manufacturer **shall report to**
the Secretary—

- (A) the occurrence of any event set forth in the Vaccine Injury Table, including the events set forth in section 300aa–14(b) of this title which occur within 7 days of the administration of any vaccine set forth in the Table or within such longer period as is specified in the Table or section,
- (B) the occurrence of any contraindicating reaction to a vaccine which is specified in the manufacturer’s package insert, and
- (C) such other matters as the Secretary may by regulation require.¹

Additionally, pursuant to the Food and Drug Administration (“FDA”), all vaccine and healthcare providers “must report the following information associated with the administration of Pfizer-BioNTech COVID-19 Vaccine of which they become aware to VAERS in accordance with the Fact Sheet for Healthcare Providers Administering Vaccine (Vaccination Providers):

- Vaccine administration errors whether or not associated with an adverse event
- Serious adverse events (irrespective of attribution to vaccination)
- Cases of Multisystem Inflammatory Syndrome in children and adults
- Cases of COVID-19 that result in hospitalization or death.”²

“Serious adverse events” are defined by the FDA to include:

- Death;
- A life-threatening adverse event;
- Inpatient hospitalization or prolongation of existing hospitalization;
- A persistent or significant incapacity or substantial disruption of the ability to conduct normal life functions;
- A congenital anomaly/birth defect;
- An important medical event that based on appropriate medical judgement may jeopardize the individual and may require medical or surgical intervention to prevent one of the outcomes listed above.³

In addition to these mandated reports, healthcare providers are strongly encouraged to report to VAERS “*any adverse event that occurs after the administration of a vaccine licensed in*

¹ <https://www.law.cornell.edu/uscode/text/42/300aa-25> (emphasis added).

² <https://www.fda.gov/media/144412/download>; see also <https://www.fda.gov/media/144636/download> (same for Moderna), <https://www.fda.gov/media/146303/download> (same for Johnson & Johnson); <https://www.cdc.gov/vaccinesafety/ensuringsafety/monitoring/vaers/reportingaes.html>.

³ <https://www.cdc.gov/vaccinesafety/ensuringsafety/monitoring/vaers/reportingaes.html>.

the United States, whether it is or is not clear that a vaccine caused the adverse event.”⁴ In the case of vaccines that are not yet FDA licensed and approved and are only in use whilst their clinical trials progress, pursuant to emergency use authorization, certainly as healthcare providers, you understand the importance of reporting all adverse events presenting to a hospital following vaccination.

When Ms. Conrad observed that serious adverse events directly following initial use of COVID-19 vaccinations were not being reported to VAERS, she volunteered to submit the necessary reports to VAERS on her colleagues’ behalf. Ms. Conrad was doing so after her paid shifts ended because she understands the critical importance of the task. In response, the Hospital told Ms. Conrad they were going to audit the VAERS reports that Ms. Conrad submitted and that “in [her] clinical role and as a leader in the organization” she was to “support [the Hospital’s] approach to the vaccine.” Submitting VAERS reports for adverse events following vaccination should not be contrary to any “approach to the vaccine.” It should be part of the Hospital’s approach. It is alarming that the Hospital’s “approach to the vaccines” has not included educating healthcare providers about VAERS and encouraging them to efficiently and consistently make reports. Contrary to this, healthcare providers at the Hospital are not being directed to ask patients about recent vaccination nor are they able to efficiently submit or track VAERS reports within the Hospital’s electronic system. And it now appears they are being deterred from doing so.

As Ms. Conrad told the Hospital, she has personally treated five patients that presented with new, unprovoked deep vein thrombosis or pulmonary embolisms within 6 weeks of COVID-19 vaccination. She has also seen patients that, after receipt of COVID-19 vaccination, presented with a new stroke, bleed, autoimmune hepatitis, sudden bilateral pneumonia or COVID-19 infection, as well as syncope with head injury, STEMI, new arrhythmias, new seizure disorders, new chorea movement disorder, and more. In one day alone, Ms. Conrad had four patients with sudden bilateral pneumonia within a week of their COVID-19 vaccination. Ms. Conrad understands that it is not her responsibility to determine any causation but that it is her duty to report these instances to VAERS so that the FDA and CDC have adequate data by which to detect potential safety signals. The Hospital has prohibited Ms. Conrad from filing a VAERS reports for any of these serious events after COVID-19 vaccination unless she directly treats the patient.

In auditing the VAERS reports submitted by Ms. Conrad for a four-week period – totaling 50 adverse event reports, which includes 4 deaths – the Hospital’s Chief Quality Officer, Hiloni Bhavsar stated that she has “not heard this level of reporting from anywhere else and didn’t hear similar reports from URM.”

This is Ms. Conrad’s precise concern: if she is not submitting the VAERS reports, they are not being submitted. The Hospital, through Ms. Gellasch, told Ms. Conrad: “we need to make sure we are providing a consistent message to our team and we need to make sure that that is also in alignment with what our health system is asking us to do.”

⁴ <https://www.cdc.gov/vaccinesafety/ensuringsafety/monitoring/vaers/reportingaes.html> (emphasis added).

The Hospital's conclusion was therefore, quizzically, that Ms. Conrad only be permitted to report to VAERS for her own patients:

From what our risk team is telling us, really you can only be reporting on the patients that you are providing direct care for and so you cannot, and I know you've been volunteering and trying to be helpful, but we need you to try to kind of dial it back and focus on the patients that you are directly responsible for ...

Ms. Conrad reiterated that the reason she took this task on is because no one else wants to do it nor are they doing it. However, Ms. Gellasch dismissed that with the statement that:

The approach has been that this is the responsibility of the individual provider who believes they have identified a potential adverse event and that has been our approach... You can't control, and I know this is frustrating, but you can't control whether someone else is putting the report in... and we do need to follow how the system is approaching this currently.

When Ms. Conrad again explained why she has the concerns she has about underreporting, she was called an anti-vaxxer by Ms. Gellasch:

I don't want us to go down any kind of rabbit hole here but the thing I think we need to be clear about and I am just going to be frank with you ...in reading the few emails you sent me and reading the email that went out to the provider, it does come across a bit...uh very vaccine...ugh I won't say very but it comes out quite, it comes out quite almost anti-vaxxy, right, and you know, clearly as an organization, as a health system, right and as ... an organization that is working on following CDC guidelines and following the guidance of the department of health, we are very much advocating for patients to receive the vaccine. And we are very much working on the...effort to work to try and reduce vaccine hesitancy... We want people to understand that on the whole this is a very safe vaccine and that the science supports that.

Ms. Conrad voiced additional concerns of adverse events following the emergency use vaccines and was told:

Yes, just like other vaccines, there are folks that are going to be negatively impacted but, on the whole, we have seen a tremendous benefit to the vaccine ... you and I are not individual providers, we're employee providers and we do on some level need to kind of .. for lack of a better way of saying it, we tow the company line. That is part of our responsibility is to be supporting the mission of the organization.

“Towing the company line” does not relieve the Hospital of its obligations. Please forthwith confirm that the Hospital’s mission is consistent with taking all necessary steps to fulfill its legal and ethical obligations to report the mandated medical events following COVID-19 vaccination to VAERS pursuant to federal law, including: (i) educating the staff about their responsibility to report to VAERS, (ii) creating internal policies and procedures ensuring that VAERS reports will be made and establishing the process for doing so, and (iii) allowing Ms. Conrad and any other healthcare professional employees to submit VAERS reports without repercussions or hostility.

Very truly yours,

Dear Ms. Brehm:

This letter responds to your written communication dated June 28, 2021 and addresses the serious allegations you have made against Rochester Regional Health and its healthcare providers relative to reporting adverse events following COVID-19 vaccinations to the Vaccine Adverse Event Reporting System (VAERS). As an initial matter, Rochester Regional Health ("RRH") takes its obligations to report adverse events related to the COVID-19 vaccination very seriously. RRH has developed and distributed robust educational and training tools to assist its healthcare providers in complying with their responsibility to report adverse events related to COVID-19 vaccinations, has issued multiple written communications outlining the requirements of its healthcare providers to report to VAERS specific adverse reactions to the COVID-19 vaccine, and has encouraged healthcare providers to ask questions and confer with their clinical leaders about their reporting obligations. RRH's senior leadership, Incident Command Team, and counsel's office are in routine communication with their Medical and Dental Staff members about reporting and have worked diligently to ensure that healthcare providers are educated on their reporting obligations. RRH has distributed educational materials published by the CDC outlining how and what to report, has encouraged use of the CDC's smartphone-based tool to report adverse events, has reminded providers to access RRH's internal COVID-19 toolkit resources, and has urged providers to ask questions about their reporting obligations. The education process has been continuous and robust.

RRH has similarly advised its healthcare providers to report adverse events after COVID-19 vaccines that have been brought to their attention by their patients. Ms. Conrad is responsible for reporting her patients' adverse events to VAERS and she has been encouraged to comply with her legal and ethical obligation to do so, as has every provider affiliated with RRH. RRH has never discouraged one of its healthcare providers from reporting any adverse events experienced by one of their patients, whether related or unrelated to a COVID-19 vaccine.

Please contact me directly with any further questions.

Sincerely,

Erin W.S. Heintz
Deputy General Counsel

Re: *Underreporting to VAERS at Rochester Regional Health*

Dear Erin:

We write again on behalf of our client, Deborah Conrad, a Physician Assistant at United Memorial Medical Center (the “Hospital”), in response to your July 21, 2021 reply letter.

Our client strenuously disputes the steps you claim were taken to advise health care workers at the Hospital of the existence of VAERS, what they should report to VAERS, and their legal obligation to do so. Her communications from and with the Hospital clearly reflect that the Hospital is not only failing to take the steps laid out in your letter, but also actively sought to prevent reports being submitted to VAERS. This includes a recent conversation with Daniel Ireland, President of the Hospital, who told Ms. Conrad in response to her complaint that the Hospital was not educating its staff regarding VAERS that “the providers should educate *themselves* when they are dealing with patients related to COVID vaccination. That information is out there, it is available.”

Your letter is tellingly silent regarding the fact that the Hospital is aware that its healthcare providers, aside from Ms. Conrad, are not reporting legally required adverse events to VAERS.

She is confident that the evidentiary record on these points will unquestionably support the Hospital’s serious shortcomings laid out in our opening letter.

Very truly yours,

Aaron Siri, Esq.
Elizabeth A. Brehm, Esq.

Utilizing Repurposed Drugs to Treat COVID-19 Virus

By E.J. Ledet and Dean L. Gano

January 1, 2021

In the latest edition of The World Health Organization's [*Ongoing Living Update of Potential COVID-19 Therapeutics: Summary of Rapid Systematic Reviews*](#),¹ they say there are more than 200 therapeutic options or combinations thereof that are being investigated in more than 1,700 clinical trials treating COVID-19 infection. In this November 30, 2020 review they examined 58 of these therapeutic options. Among the therapeutics being studied are Vitamins C & D, and manmade drugs like Hydroxychloroquine, Remdesivir, and Ivermectin.

So typical of everything our trusted health care institutions do, their analysis is anything but objective or scientific. At the core of their failures is the total lack of evidenced based causal analysis, but it is much more than that. They provide declaratory statements like: "the body of evidence on hydroxychloroquine (HCQ), showed no benefit in terms of mortality reduction." But, when we look more closely at their evidence for this statement, we find they only looked at 30 studies and of those, only 6 showed that HCQ worked to prevent infection. So, given their "body of evidence," this is a valid statement.

However, had they looked at the entire body of scientific evidence, and performed a simple search for "hydroxychloroquine effective treatment for coronavirus," at the National Institute of Health (NIH) website, PubMed they would find over [800 scientific papers](#)² have been written on this subject and most of them show it works. When you find a review that says it doesn't work, you nearly always find the study patients are in the late stages of COVID-19 infection, where no antiviral drug can be expected to have much effect, and/or no Zinc was administered. As [Dr. Zelenko](#)³ has said, Hydroxychloroquine is the gun and Zinc is the bullet, yet these people don't seem to know anything about these causes.

So, given this clear observation that they cherry-picked their evidence, what's going on and where can we find the real science on this subject?

The Real Science

First and foremost, the problem here is the total failure of all the government-controlled health organizations to provide the simple causal relationships surrounding these viruses so you, the normal citizen, can make up your own mind. This is how life works! From the time we start learning about the world as small children, we observe, test, and determine the many causal relationships that guide us down the path to success. Like learning that fire is hot and will burn you if you don't avoid it. Or, that if people lie to you, you can't trust them in future interactions.

So, what are the causal relationships of a coronavirus so we can act accordingly and prevent infection? Just like we learned to avoid fire to prevent getting burned. It can't be that complicated, can it?

Indeed, it is not that complicated, but you have to be curious and look for all the causes, not just the ones that support preconceived ideas or support political propaganda. When a coronavirus enters the body, it tries to get inside a cell somewhere on the surface of the respiratory tract so it can reproduce, and we know that nose cells are likely the [key infection source for COVID-19](#).⁴ If the virus does enter a cell, it replicates, kills the cell, and spreads the newly produced viruses through breathing or coughing. When you breath in, the viruses go deeper into the lungs and the process repeats itself. As the immune system responds with too many killer T-Cells, your lungs fill with fluid and you suffocate. But this doesn't happen to healthy young people, so what's going on?

Our natural immune system defense against all viruses occurs when compounds in the foods we eat (called ionophores), from Vitamins like C, D, and E, flavonoids like Quercetin, or hormones like Melatonin create a slightly basic/alkaline environment in and around the cell. This alkaline environment disassembles the virus proteins rendering them harmless. Also, the body is made up of many [epithelial cells](#)⁵ found on the surfaces of our bodies that act like gatekeepers; keeping out environmental problems like dirt and pathogens but allowing healthy cell biology to function. One of the mechanisms these special cells use is to allow zinc to attach to a specific receptor site on the cell's surface, like a little door entrance, called an ACE-2 receptor site. (ACE stands for Angiotensin-converting enzyme which acts as a biological catalyst in normal cell biology.)

This site is used as a primary defense to prevent a virus from entering a cell, by keeping it in the alkaline environment long enough to disassemble the virus. The Zinc transporters, called ionophores, that create this alkaline environment also help Zinc get inside the cells through this "door." Once inside, the zinc acts as a backup defense mechanism to disassemble the virus if they get inside.

But this is only one way Zinc is used to protect us. As defined in this NIH study, [The Potential Impact of Zinc Supplementation on COVID-19 Pathogenesis](#),⁶ July 2020, Zinc works in nine different ways to prevent a viral infection and maintain a healthy immune system. Making sure we have enough blood serum zinc is most important in the elderly and patients with various inflammatory and autoimmune diseases. And obesity, which is present in 40% of Americans, causes Zinc deficiency and may account for why deaths are so high in the US.

So, because Zinc is so important to a healthy immune system we can see why older and unhealthy people, who are zinc deficient, are so much more likely to die. All of the COVID-19 [co-morbidity causes identified by the CDC involve Zinc-deficiencies](#).⁷ They either cause it, like obesity, or are caused by it, like old age, and their treatment involves Zinc-ionophores and Zinc supplements. Since Zinc is involved in over 300 bodily functions it should be no surprise that such a deficiency could cause so many problems.

So, in summary, the cause of death is uncontrolled virus replication, which is caused by a failure of the immune system to stop the virus from entering our lung cells. This failure

is caused by a lack of zinc and zinc ionophores, which is caused by many medical conditions, the greatest of which is old age.

When 97.5% of the COVID-19 deaths are people over 45 years old and 94% of those who die have an average of 2.6 comorbidity causes linked to zinc deficiency you know there has to be a causal connection and now you know what it is, so take action to protect yourself from this horrible disease.

Prevention

Now that we know how the immune system works to prevent infection, we know that the first line of defense is Zinc and zinc ionophores on the outside of our cells. Please note, you do not “kill” a virus, because it is not a living organism; it is just a protein molecule made of Ribonucleic acid (RNA), a basic building block of life, and by subjecting it to a low-acid environment called a “base compound” it disassembles and falls apart. This occurs when enough zinc ionophores like Vitamins C, D, and E and/or Zinc are present in the blood stream.

But there are other kinds of Zinc ionophores. In fact, there are over two billion of them and they have been identified in the [ZINC20 database](#)⁸ provided by the American Chemical Society funded by a subsidiary of NIH (National Institute of Health). When you look at this database you will find that nearly all of the proposed synthetic drug treatments for the COVID-19 virus, like Hydroxychloroquine, Chloroquine, Remdesivir, and Ivermectin and other natural substances are all listed as zinc ligand (metal transporter) ionophores. And they work by first disassembling the virus via pH modifications on the outside of the cell or if that fails, they take zinc inside the cell to stop the replication process. In effect, you have two compounds, zinc and zinc ionophores fighting both outside and inside our cells. When you are young, this all happens naturally and is why to date, [only 147 children under the age of 18](#)⁹ have died from COVID-19 in the US.

While we have heard a lot about drugs like Hydroxychloroquine and Remdesivir, we haven't heard much about Ivermectin, which is a repurposed drug normally used as a medical preparation that effectively copes with many kinds of parasites. It is a prescription drug used to treat lice, scabies, as well as onchocerciasis (river blindness) and other nematodes in humans and animals. It is applied externally in a cream and internally as a pill, depending on the disease.

Appearing as a witness on Dec. 8, 2020, before the Senate Committee on Homeland Security and Governmental Affairs—which held a hearing on “Early Outpatient Treatment: An Essential Part of a COVID-19 Solution”—Dr. Pierre Kory, President of the [Frontline COVID-19 Critical Care Alliance \(FLCCC\)](#),¹⁰ called for the government to swiftly review the already expansive and still rapidly emerging medical evidence on Ivermectin.

The data shows the ability of the drug Ivermectin to prevent COVID-19, to keep those patients with early symptoms from progressing to the hyper-inflammatory phase of the disease, and even to help critically ill patients recover. [Dr. Kory testified](#)¹¹ that Ivermectin is effectively a “miracle drug” against COVID-19 and called upon the government’s medical authorities—the NIH, CDC, and FDA—to urgently review the latest data and then issue guidelines for physicians, nurse-practitioners, and physician assistants to prescribe Ivermectin for COVID-19.

In the process of learning about Ivermectin, the Frontline COVID-19 Critical Care Alliance created, based on feedback from doctors from around the world who were treating COVID-19 patients, a protocol for treatment called MATH+ and published a paper in the Journal of Intensive Care Medicine titled: [Clinical and Scientific Rationale for the “MATH+” Hospital Treatment Protocol for COVID-19](#).¹²

MATH+” stands for Methylprednisolone, which is a corticosteroid and zinc ionophore; Ascorbic acid (Vitamin C), which is a zinc ionophore; Thiamine (Vitamin B1) also a zinc ionophore; Heparin, which is a blood thinner and zinc ligand/ionophore; and the “+” stands for hospital care and co-interventions including Ivermectin, which is a strong zinc ionophore; Vitamin D and Melatonin, which are also zinc ionophores; Zinc, and Famotidine which is an antacid and zinc ligand/ionophore.

Notice how all of these therapeutics provide the exact causal defense our natural immune system uses (Zinc and Zinc Ionophores) to effectively fight the virus when you are young and healthy! It should be no surprise then, that they are highly effective at treating and preventing COVID-19 infection in the rest of the population. However, Big Pharma does not disclose that all of these synthetic drugs are zinc ligand ionophores because they can’t make big money selling zinc or these repurposed existing drugs that have been around for decades.

Given this causal evidence that supports the use of the MATH+ protocol, it begs the question of why our trusted scientific institutions have failed to follow the science and instead provide obfuscation and non-causal narratives focused on personalities and politics. Remember how the corporate media attacked the use of Hydroxychloroquine simply because President Trump said it works after hearing the real science? Instead of following the evidenced-based science, they proceeded to sell fear and hate and killed hundreds of thousands of people in the process.

Incompetence or Planned?

In every negative analysis of these repurposed drugs, the authors totally fail to acknowledge the causal relationships between the virus and immune system like we just laid out for you. Instead, they focus on presenting a narrative about outcomes of specific studies that have nothing to do with the causes of the problem. So, the question becomes: how can you possibly provide a solution to any problem if you don’t understand and state the causal relationships of the event? You can’t, and that means they are grossly incompetent or deliberately deceiving us. This is not rocket science.

We all know, as a basic human strategy, that to solve a problem you first have to know what the causes are; and they never do this in these phony studies.

Also, given that effective problem-solving is not taught by our education system, it is possible that these people are just ill-trained incompetents, but there is another possibility and we need to explore it.

Just ask yourself, if the anti-HCQ or anti-Ivermectin papers were actually peer reviewed why didn't the peer scientists ask the same simple questions we have? Like, why did they ignore the causal relationships we have presented; that are common knowledge, supported by hundreds of studies? Why didn't they check the blood-serum Zinc level of the patients in their study? Because if they had, they would have probably found that most of those who responded well to HCQ or Ivermectin, had high blood serum Zinc levels and those who did not respond well, had low levels of Zinc.

And why didn't they question the supposed adverse effects of HCQ, when we know that not only is HCQ not dangerous, it is safer than Aspirin. A [study at Oxford University](#)¹³ of 956,000 people from all over the world showed no deleterious effects when recommended doses are used.

And why are our trusted medical journals printing false information? For example, the Journal of the American Medical Association (JAMA) [published an article](#)¹⁴ claiming HCQ didn't work and also could cause heart rate problems and should not be used without medical supervision. Problem is, they used 400mg twice a day and **did not use Zinc** in their treatment. Toxic doses that are 14 times what is recommended equals toxic results.

And once again, on May 22, 2020, *The Lancet*, a highly respected online medical journal also published a paper saying HCQ was ineffective and dangerous. Because both *The Lancet* and JAMA studies reported that HCQ is dangerous, the FDA rescinded its emergency order allowing HCQ to be prescribed for COVID-19. This also caused several state governors to issue orders to local pharmacies not to fill HCQ prescriptions ordered by many board-certified Doctors for their COVID-19 patients. Something that has never happened before and certainly resulted in more unnecessary deaths.

Also, *The Lancet* finally asked for a detailed peer review regarding the article they published on May 22, 2020 and as reported in [WebMD](#)¹⁵ they retracted the article because the authors would not provide data that could be adequately peer reviewed, and it was eventually found to be completely false; so at least someone is following scientific protocol. But it speaks volumes to how corrupt the scientific peer review process is. Let's look a little closer.

Whistle Blowers

Several Family Doctors, who have successfully treated many COVID-19 patients, came out in public to question the path our government officials have led us down. One of

them is Dr. Simone Gold, who [exposes the truth about Coronavirus and Hydroxychloroquine](#).¹⁶ These doctors fully understand the causal relationships and hence know the truth.

Also, there are over 50,000 medical professionals from all over the world who are focused on preventing deaths and they have signed the [Great Barrington Declaration](#)¹⁷ asking our government officials to wake up and focus on preventing death. Among other things they state:

Current lockdown policies are producing devastating effects on short and long-term public health. The results (to name a few) include lower childhood vaccination rates, worsening cardiovascular disease outcomes, fewer cancer screenings and deteriorating mental health – leading to greater excess mortality in years to come, with the working class and younger members of society carrying the heaviest burden. Keeping students out of school is a grave injustice.

Also, in an article by the [Alliance For Human Research Protection](#)¹⁸ on June 5, 2020, they report that Dr. Philippe Dousty-Blazy, the former French Health Minister, publicly stated that *The Lancet* and the *New England Journal of Medicine* editors admitted to being pressured by pharmaceutical companies to publish certain results.

When *The Lancet* editor Dr. Richard Horton was asked why it initially published the discredited article discussed above, he said: “*If this continues, we are not going to be able to publish any more clinical research data because pharmaceutical companies are so financially powerful; they are able to pressure us to accept papers that are apparently methodologically perfect, but their conclusion is what pharmaceutical companies want.*”

Also, Marcia Angell, former Editor-In-Chief of the NEJM writes in her 2004 book "The Truth About the Drug Companies": “*The combined profits for the ten drug companies in the Fortune 500 (\$35.9 billion) were more than the profits for all the other 490 businesses put together (\$33.7 billion) [in 2002]... Over the past two decades the pharmaceutical industry has moved very far from its original high purpose of discovering and producing useful new drugs. Now primarily a marketing machine to sell drugs of dubious benefit, this industry uses its wealth and power to co-opt every institution that might stand in its way, including the US Congress, the FDA, academic medical centers, and the medical profession itself.*”

In a recent [open letter](#)¹⁹ to Sir. Anthony Fauci, three board certified doctors made it very clear that he has grossly mishandled the pandemic response by asking him 122 very pointed questions highlighting his inconsistencies, and concluded the following:

“Americans must not continue to die unnecessarily. Adults must resume employment and our youth return to school. Locking down America while awaiting an imperfect vaccine has done far more damage to Americans than the coronavirus. We are confident that thousands of lives would be saved with early treatment of high-risk

individuals with a cocktail of hydroxychloroquine, Zinc, and azithromycin. Americans must not live in fear. As Dr. Harvey Risch's [Newsweek article](#)²⁰ declares, "The key to defeating COVID-19 already exists. We need to start using it."

More evidence to support what these leading Physicians said can be found in what the Big Pharma Company "Gilead Sciences" has done. Their magic medicine, which the very reverend Dr. Anthony Fauci wholeheartedly endorses, is Remdesivir and they have put a lot of money pressure on MDs, Medical Journals, Press, Academia, NIH, WHO, and the CDC to discredit HCQ - even though it has 65 years of safe use as a malaria drug and 40 years of safe use to treat lupus and some forms of arthritis.

[Gilead contributes big money](#)²¹ to the [income of 20% of the National Institute of Health](#)²² (NIH) Board Members and since Dr. Fauci heads the NIAID, one of 27 institutes that make up the NIH it might be hard for him to contradict them. And, oh-by-the-way, he is [not required to disclose any ties to Big Pharma](#).²³ Gilead also funds Academic Medical Research and as we learned above, cleverly influences Medical Journal Publishers.

Gilead, being focused on money not saving lives, has spent hundreds of millions of dollars in research, marketing, and propaganda, to sell its 5-day injection treatment for \$2,340 versus \$25 or less for HCQ pills that can be bought over-the-counter in most of the world.

Bottom Line

Given what we know about how simple it is to treat and prevent COVID-19 infections using off label medicines and easily available compounds that mimic how a healthy immune system works, why are our trusted leaders not telling us this? Who created and spread this virus and why? And while we don't have evidenced based causes to answer these questions, we do know one thing. We still live in a free country, for now, but if "we the people" continue to act like sheep, all of our freedoms will be taken away, so we must act now. Please do everything you can to get this simple solid science out to everyone you know and let your leaders at every level of government know we are not going to accept their phony narratives and lying anymore!

Abstract:

mRNA-based vaccines provide effective protection against most common SARS-CoV-2 variants. However, identifying likely breakthrough variants is critical for future vaccine development. Here, we found that the Delta variant completely escaped from anti-N-terminal domain (NTD) neutralizing antibodies, while increasing responsiveness to anti-NTD infectivity-enhancing antibodies. Although Pfizer-BioNTech BNT162b2-immune sera neutralized the Delta variant, when four common mutations were introduced into the receptor binding domain (RBD) of the Delta variant (Delta 4+), some BNT162b2-immune sera lost neutralizing activity and enhanced the infectivity. Unique mutations in the Delta NTD were involved in the enhanced infectivity by the BNT162b2-immune sera. Sera of mice immunized by Delta spike, but not wild-type spike, consistently neutralized the Delta 4+ variant without enhancing infectivity. Given the fact that a Delta variant with three similar RBD mutations has already emerged according to the GISAID database, it is necessary to develop vaccines that protect against such complete breakthrough variants.

Introduction

Newly developed mRNA-based vaccines for SARS-CoV-2 have proven to be quite effective in preventing infection as well as severe COVID-19 (Jackson et al., 2020; Polack et al., 2020). However, new SARS-CoV-2 variants have repeatedly appeared and spread within the human population. Recent variants have acquired numerous mutations throughout the genome and are highly infectious compared to the original SARS-CoV-2. Although the spike protein used in currently approved mRNA-based vaccines consists of the original spike protein without mutations, these vaccines are nonetheless effective against variants of concern (VOC) (Collier et al., 2021; McCallum et al., 2021; Muik et al., 2021; Wang et al., 2021b). The receptor binding domain (RBD) of the spike protein binds to the host cell receptor ACE2, and the interaction mediates membrane fusion during SARS-CoV-2 infection (Hoffmann et al., 2020). Neutralizing antibodies against SARS-CoV-2 are mainly directed to the RBD and block the interaction between the RBD and ACE2. Most SARS-CoV-2 variants have acquired mutations in the neutralizing antibody epitopes of the RBD, resulting in escape from neutralizing antibodies (Cele et al., 2021; Collier et al., 2021; Davies et al., 2021; Madhi et al., 2021; Planas et al., 2021a; Tegally et al., 2021; Wang et al., 2021a). However, mutations in the RBD also tend to affect binding to ACE2. Therefore, there is a tradeoff in the evolution of the RBD between mutations that maintain ACE2 binding while escaping the recognition by neutralizing antibodies. In addition, mRNA vaccine-immune sera contain various neutralizing antibodies that recognize epitopes in different parts of the spike protein. It is an important to ascertain whether SARS-CoV-2 variants are likely to emerge that are completely resistant to immunity induced by the current mRNA-based vaccines. Vigilance against such resistant variants is essential for development of next-generation vaccines.

The SARS-CoV-2 Delta variant (B.1.617.2) is highly contagious and is rapidly spreading (Callaway, 2021). The neutralizing activity of sera from vaccinated individuals as well as convalescent COVID-19 patients decreases for the Delta variant compared to the wild-type (Liu et al., 2021a; Planas et al., 2021b). The Delta variant has several mutations in both the N-terminal domain (NTD) and RBD. The L452R and T478K mutations in the RBD of the Delta variant are also observed in other variants that are not as infectious as the Delta variant. Therefore, mutations in the RBD alone do not explain the high infectivity of the Delta variant. In contrast, among Delta mutations, several substitutions or deletions in the NTD—T19R, G142D, E156G, F157del and R158del—have not been observed in other major variants. This suggests that mutations in the NTD may play a key role in the high infectivity of the Delta variant. Although anti-RBD antibodies are thought to play a dominant role in vaccine-induced immunity against SARS-CoV-2 (Robbiani et

al., 2020), neutralizing antibodies directed against the NTD are also important for SARS-CoV-2 neutralization (Chi et al., 2020; Li et al., 2021; Liu et al., 2020; Suryadevara et al., 2021; Voss et al., 2021). Moreover, we and others have recently demonstrated that antibodies against a specific site on the NTD can enhance the infectivity of SARS-CoV-2 by inducing the open form of the RBD (Li et al., 2021; Liu et al., 2021b). Therefore, it is important to elucidate the function of both the neutralizing and enhancing antibodies in order to understand the pathogenicity of the emerging SARS-CoV-2 variants. In this study, in order to understand the mechanism of the Delta variant's high infectivity, we systematically examined Delta variant mutations in the NTD and RBD and suggest an evolutionary pathway by which the Delta variant could achieve complete escape from vaccine-induced immunity, which provides important information for the design of next-generation vaccines.

Results

Neutralizing activity of anti-NTD and anti-RBD monoclonal antibodies from COVID-19 patients against the Delta variant.

In order to understand the mechanism underlying the increased infectivity of the SARS-CoV-2 Delta variant, we analyzed the binding of various types of anti-spike monoclonal antibodies obtained from COVID-19 patients to the Delta spike protein (**Figure 1A**). Because these monoclonal antibodies were obtained from patients infected in mid-2020, at a time when the SARS-CoV-2 variants had not yet emerged, it is likely that they were elicited by the same wild-type spike protein as is used in current vaccines (Brouwer et al., 2020; Chi et al., 2020; Li et al., 2021; Robbiani et al., 2020; Suryadevara et al., 2021; Zost et al., 2020). Most neutralizing antibodies are directed against the RBD, and the Delta variant has two mutations in this domain, L452R and T478K. L452R has been reported to be an epitope for some, but not most, neutralizing antibodies (McCallum et al., 2021; Wang et al., 2021b). T478K is located in the ACE2 binding site and appears to be mainly involved in increased ACE2 binding affinity (Xu et al., 2021). In our analysis of various anti-RBD antibodies, we found that only a few of the neutralizing antibodies failed to recognize the Delta spike, while most anti-RBD neutralizing antibodies bound to Delta spike at levels comparable to wild-type spike (**Figure 1A**).

The Delta variant possesses several unique mutations in the NTD—T19R, G142D, E156G, F157del and R158del—suggesting the possibility that binding of some anti-NTD neutralizing antibodies elicited by wild-type spike could be disrupted. In addition to the 13 published anti-NTD neutralizing antibodies (Chi et al., 2020; Li et al., 2021; Liu et al., 2020; Suryadevara et al., 2021; Voss et al., 2021), we found that COV2-2016, COV2-2026 and COV2-2150 are also anti-NTD neutralizing antibodies for wild-type spike (**Figure 1B**). We analyzed these 16 anti-NTD neutralizing antibodies, and found that none of the anti-NTD neutralizing antibodies could recognize Delta spike (**Figure 1A**). In contrast, when we analyzed the binding of the anti-NTD infectivity-enhancing antibodies (Li et al., 2021; Liu et al., 2021b), eight out of ten anti-NTD enhancing antibodies bound to Delta spike at levels comparable with wild-type spike (**Figure 1A**). Some of the anti-NTD antibodies that were not well characterized as either neutralizing/enhancing antibodies showed partial or complete reduction in binding to Delta spike compared to wild-type spike, while others showed strong binding. The high frequency of reduced or enhanced recognition by anti-NTD antibodies against the Delta variant suggests that the antigenicity of the NTD has been greatly affected by mutations in the NTD.

Next, we analyzed the function of the enhancing and neutralizing antibodies on the Delta variants using pseudovirus bearing either the Delta spike protein (Delta pseudovirus) or wild-type spike (wild-type pseudovirus) (**Figure 1B-1D**). The viral titer of each pseudovirus was checked by its infectivity to HEK293T cells transfected with ACE2 (**Figure S1**). Anti-RBD neutralizing antibodies that bound to the Delta spike completely neutralized the infection of either Delta or

wild-type pseudovirus (**Figure 1C**). All anti-NTD neutralizing antibodies we tested failed to recognize the Delta spike protein (**Figure 1A**). As expected, these anti-NTD antibodies did not neutralize infection by the Delta pseudovirus, whereas they decreased the infectivity of the wild-type pseudovirus (**Figure 1B**). The neutralizing efficiency of anti-NTD neutralizing antibodies against the wild-type pseudovirus was lower than that of anti-RBD neutralizing antibodies, as previously reported (Chi et al., 2020; Li et al., 2021; Liu et al., 2020; Suryadevara et al., 2021; Voss et al., 2021). Enhancing antibodies increase the infectivity of SARS-CoV-2 by inducing the open form of the RBD (Liu et al., 2021b). As described above, the recognition by most of the enhancing antibodies was well conserved in the Delta variant (**Figure 1A**). When the effect of the enhancing antibodies was analyzed, the infectivity enhancement of the Delta pseudovirus by some of the enhancing antibodies was more than that of the wild-type pseudovirus (**Figure 1D**). These data suggested that the Delta variant completely escaped from anti-NTD neutralizing antibodies while maintaining functional enhancing antibody epitopes. Because the enhancing antibodies decrease the effect of anti-RBD neutralizing antibodies (Li et al., 2021; Liu et al., 2021b), there is a possibility that the Delta variant maintains the infectivity in the presence of anti-RBD neutralizing antibodies as a result of enhancing antibodies.

Neutralizing activity of BNT162b2-immune sera against Delta variants.

We next analyzed the neutralizing activity of twenty sera from healthy individuals fully immunized with Pfizer-BioNTech BNT162b2 mRNA vaccine against the Delta pseudovirus (**Figure 2A**). Although most of BNT162b2-immune sera completely blocked the infection of the Delta pseudovirus at high concentration, the neutralizing titer of BNT162b2-immune sera against Delta pseudovirus decreased significantly compared to wild-type pseudovirus (**Figure 2B**), similar to a previous report (Liu et al., 2021a; Planas et al., 2021b). Because none of the anti-NTD neutralizing antibodies were effective against the Delta variant (**Figure 1A and 1B**), it is likely that anti-RBD neutralizing antibodies play a major role in the neutralizing activity of BNT162b2-immune sera against the Delta variant.

To elucidate the contribution of the NTD and RBD in the resistance of the BNT162b2-immune sera against the Delta variant, we generated chimeric spike proteins in which the NTD, RBD or S2 subunit was encoded by either the wild-type (W) or Delta (D) variant (**Figure 3A**). Anti-NTD enhancing antibody, COV2-2490, binds to both the wild-type and Delta NTD, whereas anti-NTD neutralizing antibody, 4A8, binds to the wild-type NTD but not Delta NTD. Similarly, Anti-RBD neutralizing antibody, C144, binds to both the wild-type and Delta RBD, whereas anti-RBD neutralizing antibody, C002, binds to the wild-type RBD but not Delta RBD. As expected, C002 bound well to spike with the wild-type RBD (WWD or DWD) but weakly to spike with Delta RBD (DDD or WDD) (**Figure S2**). Similarly, anti-NTD neutralizing antibody, 4A8, bound to spike with the wild-type NTD (WWD or WDD) but failed to bind to spike with the Delta NTD (DDD or DWD). COV2-2490 and C144 bound to all of the chimeric spike proteins. These data suggest that each domain of the chimeric spike proteins retains its original antigenicity.

We next generated pseudovirus containing these recombinant spike proteins and analyzed the effect of BNT162b2-immune sera. The neutralizing activity of the BNT162b2-immune sera against WWD pseudovirus decreased slightly compared to that of wild-type pseudovirus (WWW), suggesting that mutations in the S2 domain are involved in the resistance of the Delta variant (**Figure 3B and 3C**). When infectivity of DWD pseudovirus, in which wild-type NTD was substituted to the Delta NTD, was compared with WWD pseudovirus, the neutralizing activity of BNT162b2-immune sera significantly decreased further. The neutralizing activity of the BNT162b2 immune sera was reduced against WDD pseudovirus, in which wild-type RBD was replaced by Delta RBD, compared to DWD pseudovirus. The neutralizing activity of the BNT162b2-immune sera decreased further against Delta pseudovirus (DDD). These data suggest

that both NTD and RBD mutations in the Delta spike are involved in the resistance of the BNT162b2-immune sera against the Delta variant.

Cryo-EM analysis of the Delta spike

All anti-NTD monoclonal neutralizing antibodies from COVID-19 patients failed to bind to Delta spike whereas most of the enhancing antibodies maintained reactivity to Delta spike (**Figure 1A**). Although there are several mutations in the NTD of Delta spike, known epitopes for anti-NTD neutralizing antibodies are conserved in the Delta variant. To evaluate the effect of mutations in the Delta variant on anti-NTD neutralizing antibody epitope structure, single particle cryo-EM analysis was employed. Data were analyzed by heterogenous refinement and *ab-initio* reconstruction followed by non-uniform refinement. As a result, a density map of the spike protein was obtained at 3.1 Å resolution (**Figure S3 and Table S1**). To build an atomic model of the spike, we predicted the structures of the Delta variant NTD using AlphaFold2 (Jumper et al., 2021). The predicted NTD model of the Delta variant was used as an initial model for fitting into the obtained map. The statistics of the model of the Delta variant spike are summarized in **Table S1**. When the NTD models of Delta variant and wild-type spike were compared, the major epitope residues for the enhancing antibody—H64, W66, V213 and R214—were structurally well conserved (**Figure 4**). In contrast, a large conformational change was observed in the residues of anti-NTD neutralizing antibody epitopes (**Figure 4**). The maximum interatomic distance between the Delta variant and the wild-type was more than 9 Å (**Figure 4B**). In the NTD of the Delta variant, the β strands containing four epitope residues—Y144, K147, K150 and W152—were shortened and shifted significantly compared to the wild-type (**Figure 4A**). These structural changes were most likely caused by deletion of F157 and R158. As a result, these four residues were quite different from the wild type. R246 and W258 showed large changes compared to the wild-type (**Figure 4**), and the loop connecting these two residues appeared to be highly flexible. These data suggest that dramatic changes in the structure of the anti-NTD neutralizing antibody epitope residues are responsible for the complete loss of reactivity to anti-NTD neutralizing antibodies against the Delta spike.

Prediction of possible future mutations of the Delta variant

The Delta variant became completely resistant to anti-NTD neutralizing antibodies in the BNT162b2 immune serum by acquiring mutations in the NTD, and thus anti-RBD neutralizing antibodies seem to be mainly responsible for the neutralizing activity in the BNT162b2 immune sera (**Figure 1, Figure 2 and Figure 3**). These results suggest that the Delta variant may acquire full resistance to BNT162b2 immune sera by acquiring additional mutations in the RBD that disrupt recognition of anti-RBD neutralizing antibodies. Indeed, a Delta variant that has acquired the K417N mutation in the RBD, known as AY.1 (Delta plus), has already emerged and its frequency in the general population is increasing (Gupta et al., 2021). To investigate the potential occurrence of additional mutations, we analyzed the additive effects of mutations acquired by the Delta variant in the GISAID database (**Figure S4**). The Delta variant has already acquired large numbers of additional mutations in the RBD, some of which occur in epitopes for anti-RBD neutralizing antibodies (Greaney et al., 2021a; Greaney et al., 2021b; Greaney et al., 2021c; Wang et al., 2021b; Weisblum et al., 2020). In addition to the K417N mutation, Delta variants with E484K, F490 or N501Y mutations—observed in the Alpha, Beta, Gamma and/or Lambda variants—are also increasing (**Figure 5A**). Considering the very rapid increase in the population of people infected with the Delta variant, the Delta variant is likely to acquire further mutations in infected people, and those with further increased infectivity will be selected. Indeed, the Delta variant with multiple mutations in anti-RBD neutralizing antibody epitopes have already emerged according to the GISAID database (**Figure 5B**). In particular, EPI_ISL_2958474 possesses three additional

mutations in anti-RBD neutralizing antibody epitopes, although the NTD sequence is not identical to the representative Delta variant. Accordingly, we analyzed the effect of major mutations observed in SARS-CoV-2 variants on the RBD of the Delta variant (**Figure 5C**). Because the Delta variant contains the T478K mutation and neighboring residues may show similar effects, the S477N mutation was excluded. Accordingly, we introduced four mutations in the Delta spike (Delta 4+)—K417N, N439K, E484K and N501Y—and analyzed the effect of these mutations (**Figure 5D**).

Enhanced infectivity of the Delta 4+ pseudovirus by some BNT162b2-immune sera.

We analyzed the binding of several anti-RBD neutralizing antibodies to the Delta spike with a single additional mutation or multiple mutations in the RBD (**Figure 6A**). Most anti-RBD antibodies recognized Delta spike with a single additional mutation, but not the Delta 4+ spike protein. The C135 anti-RBD neutralizing antibody, whose major epitopes are R346 and N440 (Greaney et al., 2021b; Weisblum et al., 2020), still recognized the Delta 4+ spike. We then generated pseudovirus bearing mutant spike proteins. The Delta pseudovirus with additional single RBD mutations was slightly more resistant to BNT162b2-immune sera (**Figure 6B**). The effects of the single additional mutations were slightly different depending on the individuals, although infection was completely blocked at the highest concentration of the serum. Next, we analyzed the Delta 4+ pseudovirus with four additional RBD mutations (**Figure 6C**). Surprisingly, most BNT162b2-immune sera enhanced infectivity of the Delta 4+ pseudovirus in a dose-dependent manner at relatively low concentrations of BNT162b2-immune sera, but showed weak neutralization only at the highest concentration of the sera (**Figure 6D and 6E**). Especially, PFZ7 greatly enhanced the infectivity at relatively low serum concentration. Some sera, such as PFZ13 and PFZ14, did not show neutralizing activity even at the highest concentration of the sera. The neutralizing titers of PFZ13 and PFZ14 against wild-type or Delta variant were apparently lower than others (**Figure 2A**). On the other hand, PFZ15 effectively neutralized the Delta 4+ pseudovirus, but the neutralizing titers of PFZ15 against the wild type and Delta variant were not particularly high compared to the others. Because most neutralizing antibodies against either NTD or RBD do not work for the Delta 4+ pseudovirus, while most enhancing antibodies remain functional for the Delta 4+ pseudovirus, the increased infectivity in the presence of BNT162b2-immune sera appears to be mediated by anti-NTD enhancing antibodies.

In order to analyze the contribution of Delta NTD to the enhanced infectivity, we generated pseudovirus bearing spike protein with wild-type NTD and Delta 4+ RBD (**Figure 6C**). Although some BNT162b2-immune sera enhanced infectivity of the Delta 4+ pseudovirus, the Delta 4+ virus with wild-type NTD did not show enhanced infectivity by BNT162b2-immune sera (**Figure 6D and 6E**). These data suggested that mutations in the NTD of the Delta variant made the virus more susceptible than the wild-type to anti-NTD enhancing antibodies in BNT162b2-immune sera, and thus reduced the neutralizing effect of anti-RBD neutralizing antibodies.

Sera from the Delta spike immunized mice do not show enhanced infectivity against Delta 4+ pseudovirus.

Because wild-type spike was used for BNT162b2 mRNA vaccine, the enhanced infectivity of the Delta 4+ pseudovirus by some BNT162b2-immune sera appears to be caused by the decreased neutralizing antibody titer of anti-NTD and anti-RBD neutralizing antibodies against Delta 4+ pseudovirus. Therefore, neutralizing antibody titers against the Delta variants may be relatively high compared to enhancing antibodies when immunizing with the Delta spike, even though the enhancing antibody epitopes are conserved in the Delta spike protein. To test the effect of immunization by Delta spike, we immunized mice with B16F10 mouse melanoma cells transiently transfected with wild-type or Delta spike protein (**Figure 7A**). We used B16F10 cells because the

immunogenicity of B16F10 melanoma cell line is quite low (Priem et al., 2020). In addition, the conformation of spike protein expressed on transfectants is likely to be similar to that of spike protein expressed by mRNA vaccines. All mice effectively produced antibodies against spike protein (**Figure S5**). The wild-type spike immunized sera neutralized wild-type pseudovirus well, whereas the neutralizing effect against the Delta pseudovirus decreased, similar to BNT162b2-immune sera (**Figure 7B and 7C**). In contrast, Delta spike immunized sera neutralized both wild-type and Delta pseudovirus well. Just one mouse produced antibodies that neutralize the Delta pseudovirus better than wild-type pseudovirus. When we analyzed the Delta-4+ pseudovirus, some sera from wild-type spike immunized mice showed enhanced infectivity in a dose dependent manner at relatively low concentrations of sera similar to some BNT162b2-immune sera (**Figure 7D and 7E**). Especially, #w1 mouse serum showed enhanced infectivity at any concentration, although the same serum neutralized the wild-type pseudovirus well. In contrast, the enhanced infectivity by immunized sera was not observed when the Delta spike was used for immunization. Sera from the Delta-spike immunized mice did not exhibit enhanced infectivity at any concentration of sera. These data suggest that vaccines containing the Delta, but not wild-type, spike might be required to control the Delta subvariant that may emerge in the future.

Discussion

The Delta variant is highly contagious and breakthrough infection to fully vaccinated individuals is often observed (Lopez Bernal et al., 2021), suggesting that neutralizing antibodies in fully vaccinated individuals are not sufficient to protect against infection by the Delta variant. Anti-RBD antibodies are thought to play a major role in protection against SARS-CoV-2 infection. The Delta variant has L452R and T478K mutations in the RBD, and L452 has been shown to be an epitope for some neutralizing antibodies (McCallum et al., 2021; Wang et al., 2021b). However, most neutralizing antibodies bound to the Delta RBD and neutralized the infection. Therefore, mutations in the RBD alone may not explain the decreased neutralizing titers of the BNT162b2-immune sera against the Delta variant.

The Delta variant has multiple mutations in the NTD: T19R, G142D, E156G, F157del and R158del. All anti-NTD neutralizing antibodies failed to recognize the Delta spike, indicating that the Delta variant is completely resistant to anti-NTD neutralizing antibodies elicited by wild-type spike protein, which is the antigenic component of widely used mRNA vaccines. In contrast, most anti-NTD enhancing antibodies recognized Delta spike at the same level as wild-type spike, and some anti-NTD enhancing antibodies exhibited increased infectivity enhancement by Delta pseudovirus compared to wild-type pseudovirus. Consistent with this observation, the structures of enhancing anti-NTD antibody epitopes were well conserved with the wild type. Because enhancing antibodies reduced neutralizing activity of anti-RBD neutralizing antibodies (Li et al., 2021; Liu et al., 2021b), mutations in the NTD may play an important role in the resistance of the Delta variant to the BNT162b2-immune sera. Indeed, a Delta pseudovirus with wild-type NTD was more susceptible to neutralization by BNT162b2-immune sera than full Delta pseudovirus. The effect of the Delta NTD was more obvious for the Delta 4+ pseudovirus. These data indicated that mutations in the NTD are involved in the escape of SARS-CoV-2 from neutralizing antibodies. It is likely that the mutations in the NTD that abrogate neutralizing antibody binding while retaining enhancing antibody binding are beneficial to the virus. These mutations in the Delta variant may suggest adaptation to the presence of enhancing antibodies while maintaining evasion of anti-NTD and anti-RBD neutralizing antibodies in immunized or previously infected hosts.

Not only Delta, but also other VOCs such as Alpha (B.1.1.7), Beta (B.1.135), and Gamma (P.1) show more mutations in the NTD than in the RBD. Because the NTD is involved in the regulation of the conformation of the RBD but not in direct binding to the host receptor ACE2 (Liu et al., 2021b), it can tolerate many mutations. As with the Delta variant, most anti-NTD neutralizing

antibodies have been reported not to bind to the Alpha and Beta variants (Voss et al., 2021; Wang et al., 2021a). Recently, L-SIGN has been reported to be an entry receptor for SARS-CoV-2 (Amraei et al., 2021; Kondo et al., 2021; Soh et al., 2020; Thepaut et al., 2021). L-SIGN specifically bound to NTD but not RBD of SARS-CoV-2 spike protein and mediated SARS-CoV-2 infection of non-ACE2 expressing cells by inducing membrane fusion (Soh et al., 2020). Furthermore, anti-NTD neutralizing antibodies efficiently blocked SARS-CoV-2 infection of L-SIGN-expressing cells compared to that of ACE2-expressing cells. Considering the fact that most VOCs have completely escaped from anti-NTD neutralizing antibodies regardless of the fact that the neutralizing efficiency is quite low compared to anti-RBD neutralizing antibodies *in vitro*, SARS-CoV-2 infection mediated by the NTD through L-SIGN or other unknown receptors may play a more important role *in vivo* than *in vitro*. Further analyses of function of NTD as well as anti-NTD neutralizing antibodies are required to elucidate the pathogenicity of SARS-CoV-2.

The enhancing antibodies bind to a specific site on the NTD, inducing the open form of the RBD, which increases the affinity of spike protein to ACE2 (Liu et al., 2021b). Recently, it has been reported that the enhancing antibodies do not increase the infectivity *in vivo* (Li et al., 2021). However, only one human IgG1 monoclonal enhancing antibody, among 11 known enhancing antibodies, has been tested *in vivo*. The affinities and epitopes of enhancing antibodies to the NTD, as well as the IgG subclass of enhancing antibodies, may affect their *in vivo* function. Recently, it has been reported that binding of neutralizing antibodies to Fc receptors is required for their neutralizing activity *in vivo* (Schafer et al., 2021; Suryadevara et al., 2021; Winkler et al., 2021). Indeed, IgG1, which is the most frequently used antibody subclass in *in vivo* studies, has the strongest affinity for Fc receptors and shows strong effector function; whereas, IgG2 and IgG4 weakly bind to Fc receptors (Nimmerjahn and Ravetch, 2008). Therefore, it is likely that the *in vivo* function of anti-NTD enhancing antibodies will vary depending on the antibody subclass, the specific variable region sequence, or both. Given the fact that the Delta variant maintained enhancing antibody epitopes and is more sensitive to enhancing antibodies, it is likely that the enhancing antibodies are involved in augmentation of the SARS-CoV-2 infectivity *in vivo*.

Several BNT162b2 immune sera showed neutralizing activity against the Delta 4+ pseudovirus at a 1:10 dilution, but conversely increased infectivity at 1:30 dilution. In general, the activity of neutralizing antibodies does not change so drastically with a three-fold difference in concentration. Therefore, the effect of the BNT162b2 immune sera against the Delta 4+ pseudovirus cannot be explained simply by the concentration of neutralizing antibodies. The BNT162b2 immune sera did not show enhanced infectivity against the Delta 4+ pseudovirus with wild-type NTD at any serum concentration. Since the effect of anti-NTD infectivity-enhancing monoclonal antibodies is affected by the concentration of anti-RBD neutralizing antibodies (Li et al., 2021; Liu et al., 2021b), the effect of infectivity-enhancing antibodies in BNT162b2 immune sera is likely to be more pronounced when the concentration of anti-RBD neutralizing antibodies falls below a certain threshold. Indeed, the BNT162b2 immune sera with low neutralizing titers against the Delta pseudovirus showed enhancement against the Delta 4+ pseudovirus even at high serum concentration. Although the neutralizing antibody titer is the highest three weeks after the second immunization, it gradually decreases (Doria-Rose et al., 2021; Widge et al., 2021). As in the case of diluted sera, it is possible that the effect of infectivity-enhancing antibodies may become more evident some time after immunization, even if the neutralizing and enhancing antibody titers decrease equally. In addition, neutralizing antibody titers induced by adenovirus vaccines and inactivated vaccines are lower than those induced by mRNA vaccines (Lim et al., 2021; Shrotri et al., 2021). Therefore, there is a possibility that the enhancing effect might be more pronounced against the Delta 4+ pseudovirus with immune sera of adenovirus vaccines or inactivated vaccines, similar to BNT162b2 immune sera with low neutralizing titers. On the other hand, some BNT162b2 immune sera did not enhance infection of Delta 4+ pseudovirus at any serum concentration and

neutralized well. Similarly, despite the use of inbred mice, the effect of sera on the infectivity of Delta 4+ pseudovirus varied greatly among individual mice immunized with the wild-type spike. The sera of some mice showed enhancement of the Delta 4+ pseudovirus infection, while others showed neutralization at any serum concentration. The delicate balance of antibody titer, affinity, or epitope between neutralizing and enhancing antibodies might affect the effect of sera on the infectivity. It is important to further analyze the characteristics of neutralizing and enhancing antibodies produced after immunization.

SARS-CoV-2 has acquired a number of mutations to date, which have arisen within infected individuals. Therefore, new variants are likely to emerge more frequently in situations where many people are infected. Because the Delta variant is spreading so explosively, it has already acquired numerous additional mutations in the spike protein coding region, suggesting that the Delta variant will continue to acquire further mutations. Some mutations observed in the RBD of the Delta variant have been reported to be epitopes for anti-RBD neutralizing antibodies (Greaney et al., 2021a; Greaney et al., 2021b; Wang et al., 2021b). Newly emerged variants that adapt to the environment of their host's immune system will be selected and expand. The Delta variant with 4 additional mutations in the RBD were not neutralized by most BNT162b2-immune sera because of unique mutations in the NTD. More importantly, infectivity of the Delta 4+ was enhanced by some BNT162b2-immune sera. Furthermore, of the four additional mutations, a Delta variant with three mutations has already been registered in the GISAID database; it is likely that a Delta variant that has acquired five mutations in the RBD in total will acquire additional mutations in the near future. Although we have selected K417N, N439K, E484K, and N501Y as additional mutations for the Delta variant, other combinations of anti-RBD neutralizing epitopes can be expected to have similar or stronger effects than the Delta 4+ variant. Indeed, the Delta 4+ still possess R346, one of major epitope residues for anti-RBD neutralizing antibodies such as C135. Given the current high mutation rate of SARS-CoV-2, predicting emerging spike mutations is very important to develop effective vaccines against emerging SARS-CoV-2 variants. Immunization by dangerous spike protein variants that are likely to emerge in the future may be effective in preventing the emergence of such variants.

A third round of booster immunization with the SARS-CoV-2 vaccine is currently under consideration. Our data suggest that repeated immunization with the wild-type spike may not be effective in controlling the newly emerging Delta variants. We demonstrated that immunization by Delta spike induces antibodies that neutralize not only the Delta variant but also wild-type and the Delta 4+ variant without enhancing the infectivity. Although mRNA vaccination may yield different results from our animal model, development of mRNA vaccine expressing the Delta spike might be effective for controlling the emerging Delta variant. However, epitopes of the enhancing antibodies, not neutralizing antibodies, are well conserved in most SARS-CoV-2 variants, including the Delta variant. Therefore, additional immunization of the spike protein derived from SARS-CoV-2 variants may boost enhancing antibodies more than the neutralizing antibodies in individuals who were previously infected with wild-type SARS-CoV-2 or immunized with vaccines composed of wild-type spike protein. Immunization using the RBD alone, which will not induce anti-NTD enhancing antibodies, could be a strategy for a vaccination. However, anti-NTD neutralizing antibodies that protect against SARS-CoV-2 infection similar to anti-RBD-neutralizing antibodies are not induced by immunization by RBD alone (Chi et al., 2020; Li et al., 2021 ; Liu et al., 2020; Suryadevara et al., 2021; Voss et al., 2021). Whole spike protein containing RBD mutations observed in major variants but lacking the enhancing antibody epitopes may need to be considered as a booster vaccine.

Acknowledgments

This work was supported by JSPS KAKENHI under Grant Numbers JP18H05279 and JP19H03478, MEXT KAKENHI under Grant Number JP19H04808, Japan Agency for Medical Research and Development (AMED) under Grant Numbers, JP20fk0108542 (HA), JP20nf0101623 (HN, HA), 20fk0108403h (HA), JP20am0101108 (DMS), JP21am0101072 (TK, AN, BINDS support number 2630) and Japan Science and Technology Agency (JST) (Moonshot R&D) JPMJMS2025 (YM), and Panasonic Corporation (HA, YM).

Author contributions

Y.L., Y.M., D.M.S., T.K., M.O., M.F., H.A. designed the experiments. Y.L., J.K., M.H., A.T., S.M., A.A., K.A., C.O., H.J., K.K., W.N., performed the experiments. N.A., A.K., H.N., Y.Y., M.F. collected vaccine sera. J.K., S.L., D.M.S., T.K., H.A. constructed a model of NTD spike. Y.L., N.A., J.K., M.K., D.M.S., H.A. wrote the manuscript. All authors read, edited, and approved the manuscript.

Declaration of interests

Osaka University has filed a patent application for the enhancing antibodies. HA and YL are listed as inventors. HA is a stockholder of HuLA immune Inc.

Methods

Data and code availability

Cryo-EM density maps for the SARS-CoV-2 Delta spike protein were deposited at the EMDB under accession code EMD-31731. A molecular model of the SARS-CoV-2 Delta spike protein fitted to Cryo-EM data were deposited to PDB under accession code 7V5W. The data that support the findings of this study are available from the Lead Contact on request.

Cell lines

HEK293T cells (RIKEN Cell Bank) and B16F10 melanoma cells (National Institute of Biomedical Innovation) were cultured in DMEM (Nacalai, Japan) supplemented with 10% FBS (Biological Industries, USA), penicillin (100 U/mL), and streptomycin (100 µg/mL) (Nacalai, Japan) and cultured at 37°C in 5% CO₂. The Expi293 cells (Thermo) were cultured with the Expi293 medium. The cells were routinely checked for mycoplasma contamination. ACE2-stably transfected HEK293 cells (HEK293T-ACE2-transfectants) were reported previously (Liu et al., 2021b).

Human samples

The collection and use of BNT162b2-immune sera were approved by Osaka University Hospital (20522-3). Written informed consent was obtained from the participants according to the relevant guidelines of the institutional review board. All sera were collected from 26-65 years old healthy individuals three weeks after immunization with two cycles of 30 µg of BNT162b2 mRNA vaccine.

Plasmid construction

The SARS-CoV-2 spike gene (NC_045512.2) was prepared by gene synthesis (IDT). The sequences encoding the spike protein lacking the C-terminal 19 amino acids (amino acids 1–1254) were cloned into the pME18S expression vector. NTD (amino acids 14–333) and RBD (amino acids 335–587) were separately cloned into a pME18S expression vector containing a SLAM signal sequence and a PILRα transmembrane domain (Saito et al., 2017). A series of mutants and the Delta variants (T19R, G142D, E156G, del_157, del_158, L452R, T478K, D614G, P681R, D950N)

were prepared from wild-type SARS-CoV-2 spike using the QuickChange Lighting Multi Site-directed Mutagenesis kit (Agilent). Additional RBD mutations were introduced into the Delta spike also using the QuickChange Lighting Multi Site-directed Mutagenesis kit (Agilent). The primers for mutagenesis were designed on Agilent's website (<https://www.agilent.com/store/primerDesignProgram.jsp>). For Cryo-EM analysis, the sequence encoding the spike protein's extracellular domain with a foldon and His-tag at the C-terminus (Cai et al., 2020) was cloned into a pcDNA3.4 expression vector containing the SLAM signal sequence. Also, mutations D614G, R686G R687S R689G, K986P, and V987P were introduced using a Quick change multi-mutagenesis kit (Agilent) for stabilization of recombinant spike protein (Yurkovetskiy et al., 2020). The DNA sequences of these constructs were confirmed by sequencing (ABI3130xl).

Transfection

A pME18S expression plasmid containing the full-length or subunit spike protein was transiently transfected into HEK293T cells using PEI max (Polysciences); the pMx-GFP expression plasmid was used as the marker of transfected cells.

Anti-spike monoclonal antibodies from COVID-19 patients

The variable regions of anti-SARS-CoV-2 spike antibodies from COVID-19 patients were synthesized according to the published sequence (IDT) (Brouwer et al., 2020; Chi et al., 2020; Li et al., 2021; Robbiani et al., 2020; Suryadevara et al., 2021; Zost et al., 2020). Variable region sequences of some antibodies were obtained from the CoV-AbDab database (<http://opig.stats.ox.ac.uk/webapps/covabdab/>). The cDNA of the variable regions of the heavy chain and light chain were cloned into a pCAGGS vector containing sequences that encode the human IgG1 or kappa constant region. The pCAGGS vectors containing sequences encoding the immunoglobulin heavy chain and light chain were co-transfected into Expi293 (Thermo) cells, and the cell culture supernatants were collected according to the manufacturer's protocols. Recombinant IgG was purified from the culture supernatants using protein A Sepharose (GE healthcare). The concentration of purified IgG was measured at OD280.

Antibodies and recombinant proteins

Allophycocyanin (APC)-conjugated donkey anti-mouse IgG Fc fragment antibody and APC-conjugated anti-human IgG Fc fragment specific antibody (Jackson ImmunoResearch, USA) were used. The pcDNA3.4 expression vector containing the sequence that encodes the His-tagged extracellular domain of the spike protein was transfected into Expi293 cells and the His-tagged spike protein produced in the culture supernatants was then purified with a Talon resin (Clontech).

Immunization of mice

B16F10 cells were transfected with WT spike protein or Delta spike protein by PEI as described above. 48 hours later, B16F10 cells were washed twice with PBS, and then the cells were collected and frozen and thawed. Balb/c female mice (7-weeks-old females) were purchased from SLC. Two groups of five mice ($n = 5$) were subcutaneously immunized with 1×10^7 B16F10 transfectants in the presence of complete Freund's adjuvant (CFA). Serum samples were collected three weeks after the immunization.

Flow cytometric analysis of antibodies

Plasmids expressing the full-length SARS-CoV-2 spike protein, Flag-NTD-PILR-TM and Flag-RBD-PILR-TM were co-transfected with the GFP vector into HEK293T cells. The transfectants were incubated with the mAbs, followed by APC-conjugated anti-human IgG Ab. The antibodies

bound to the stained cells were then analyzed using a flow cytometer (Attune™, Thermo; FACSCelesta BD bioscience). Antibodies binding to the GFP-positive cells were shown in the figures using FlowJo software (BD bioscience).

SARS-CoV-2 spike-pseudotyped virus infection assay

The HEK293T cells were transiently transfected with expression plasmids for the SARS-CoV-2 spike protein lacking the C-terminal 19 amino acids (Hu et al., 2020; Johnson et al., 2020). At 24 hours post-transfection, VSV-G-deficient VSV carrying a Luciferase gene complemented in *trans* with the VSV-G protein was added for incubation for 2 hours. The cells were then carefully washed with DMEM media without FBS and incubated with DMEM with FBS at 37°C in 5% CO₂ for 48 hours. The supernatant containing the pseudotyped SARS-CoV-2 virions was harvested and aliquoted before storage at -80°C. To determine the virus titers of the pseudovirus, 1×10^4 HEK293T-ACE2-transfectants were mixed with the pseudovirus for 20 hours at 37 °C in 5% CO₂ in a 384-well plate (Greiner, Germany). Luciferase activity was measured using a ONE-Glo™ luciferase assay (Promega, USA) according to the manufacturer's instructions. The signals were measured by a luminescence plate reader (TriStar LB94, Berthold Technologies, Germany) (**Figure S1**). For the neutralization assay, 5 µl pseudovirus was mixed with equal volume of sera or monoclonal antibodies at the concentrations indicated in the figure. The mixture was added to 20 µl of 1×10^4 HEK293T-ACE2-transfectants. To calculate % neutralization, the relative luminescence units of the virus control wells (pseudovirus only) were subtracted from those of the sample wells, and the subtracted values were divided by those of the virus control wells. The PRNT50 neutralization titers for vaccinated sera were determined using 3-parameter nonlinear regression curve (GraphPad Prism). If the PRNT50 titer was less than 1:10, it was defined as 0.

Structure prediction by AlphaFold2

The NTD and RBD structures of the wild type and Delta variant were predicted by AlphaFold2 (Jumper et al., 2021). The structure of the NTD was predicted in CASP14 mode without template. The structure of the RBD was predicted in CASP14 mode, using the template of 2020-05-14. The highest ranked prediction results were used.

Cryo-EM data collection

A 2.5 µl protein solution of the spike protein (2.2 mg/ml) was applied onto the cryo-grid and frozen in liquid ethane using a Vitrobot IV (Thermo Fisher Scientific, USA, 4°C and 100% humidity). Quantifoil Au R0.6/1.0 holey carbon grids were used for the grid preparation. Data collection of the sample was carried out on a Titan Krios (Thermo Fisher Scientific, USA) equipped with a thermal field emission electron gun operated at 300 kV, an energy filter with a 20 eV slit width and a bioquantum K3 direct electron detection camera (Gatan, USA) (Figure S4). For automated data acquisition, SerialEM software was used to collect cryo-EM image data. Movie frames were recorded using the K3 camera at a calibrated magnification of $\times 81,000$ corresponding to a pixel size of 0.88 Å with a setting defocus range from -0.8 to -2.0 µm. The data were collected with a total exposure of 3 s fractionated into 62 frames, with a total dose of ~ 60 electrons Å² in counting mode. A total number of movies were collected; 15,000 for the spike protein.

Image processing and 3D reconstruction

All of image processes were carried out on cryoSPARC software (Punjani et al., 2017). After motion correction of movies and CTF parameter estimation, the particles were automatically picked using Topaz software (Bepler et al., 2019). The detailed information is summarized in Table S1. The picked particles were extracted into a box of 360×360 pixels. After particle extraction, the particles were applied to two rounds of heterogenous refinement with C1 symmetry. The

selected particles (735,623 particles) were applied to two rounds of *ab-initio* reconstruction into three classes with C1 symmetry. In the first and second rounds of *ab-initio* reconstruction, the class similarity parameter, 0.1 and 0.8, was used, respectively. After that, the selected 147,497 particles were further used as non-uniform refinement with optimizing per-particle defocus. As the result, the density map for the spike protein was obtained at 3.16 Å resolution. Local resolution of the obtained maps were estimated by Local resolution estimation job on cryoSPARC.

Model building and refinement

To generate the atomic model for the spike protein, the structure of NTD of Delta variant was predicted using AlphaFold2 (Jumper et al., 2021). For other domains, the model from previous study (PDBID; 7JJI) was used. These structures were fitted into the density map as rigid body using UCSF chimera (Pettersen et al., 2004). The initial model was extensively manually corrected residue by residue in COOT (Emsley et al., 2010) in terms of especially side-chain conformations. The corrected model was refined by the phenix.real_space_refine program (Liebschner et al., 2019) with secondary structure and Ramachandran restraints, then the resulting model was manually checked by COOT. This iterative process was performed for several rounds to correct remaining errors until the model was in good agreement with geometry, as reflected by the MolProbity score of 2.07 (Williams et al., 2018). For model validation against over-fitting, the built models were used for calculation of FSC curves against the final density map used for model building by phenix.refine program. The statistics of the obtained maps and the atomic model were summarized in Supplemental Table S1.

Data and statistical analysis

FlowJo version 10.7 (BD Biosciences, USA) was used to analyze the flow cytometry data, and Graphpad Prism version 7.0e was used for graph generation and statistical analysis.

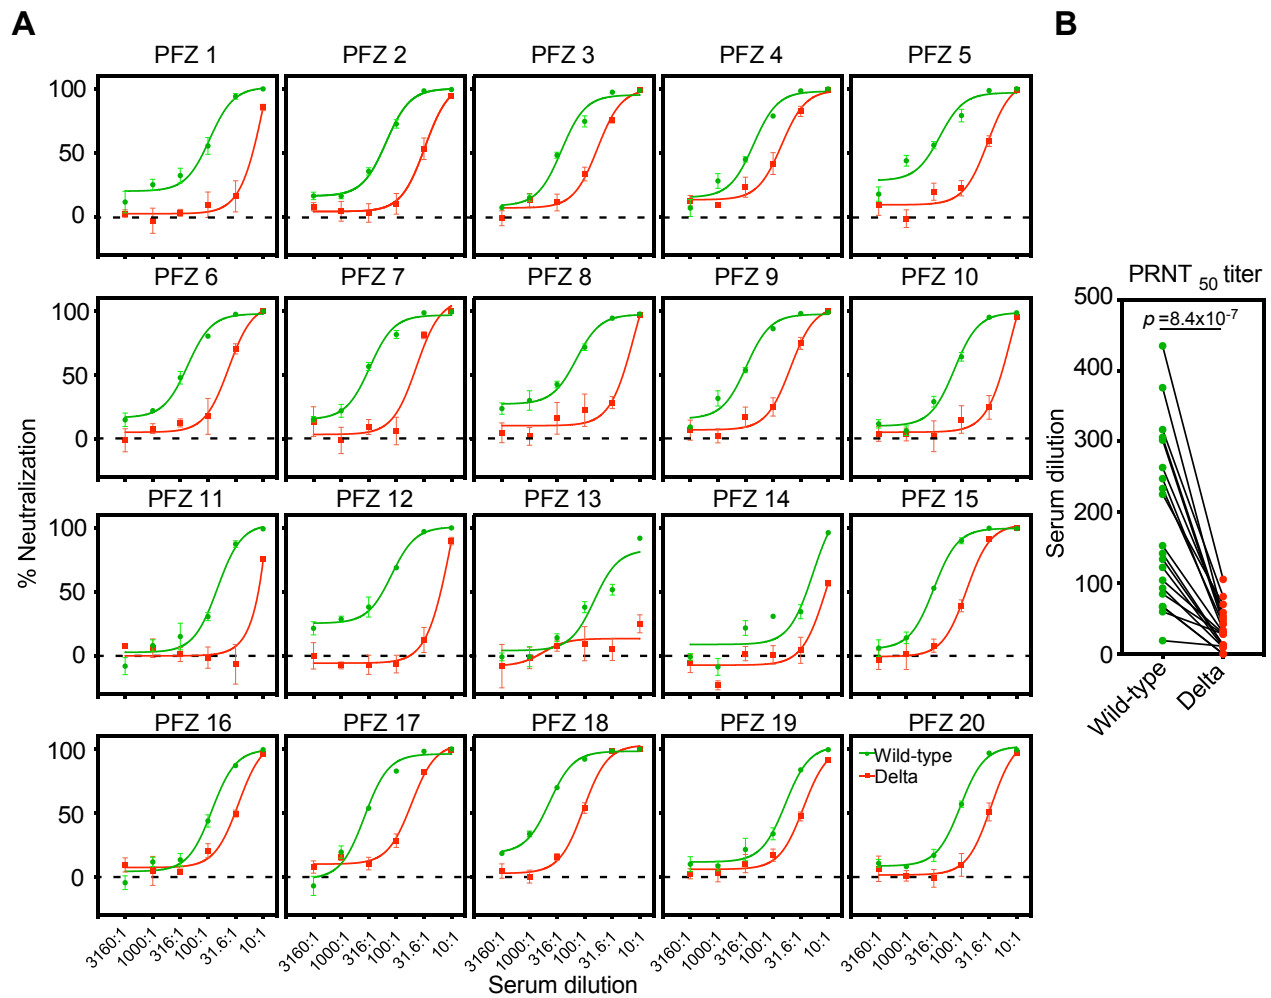

Figure 1. Neutralizing and enhancing effects against the wild-type and Delta spike pseudovirus by anti-spike monoclonal antibodies from COVID-19-patients.

(A) The HEK293 cells transfected with the wild-type or the Delta spike were stained with anti-NTD enhancing antibodies (red), anti-NTD neutralizing antibodies (green), anti-NTD non-enhancing, non-neutralizing antibodies (black), anti-RBD neutralizing antibodies (blue) and anti-S2 antibodies (gray) (1 μg/ml). The stained cells were analyzed by flow cytometer. The relative mean fluorescence intensities (MFI) of antibodies binding to the Delta spike were compared with that for the wild-type spike.

(B-D) The ACE2-expressing HEK293 cells were infected with the wild-type (upper) or the Delta (lower) pseudovirus in the presence of the anti-NTD neutralizing antibodies (B), anti-RBD neutralizing antibodies (C) and anti-NTD enhancing antibodies (D). A negative value for % neutralization indicates enhanced infectivity. The data from quadruplicates are presented as mean ± SEM. The representative data from three independent experiments are shown. See also Figure S1.

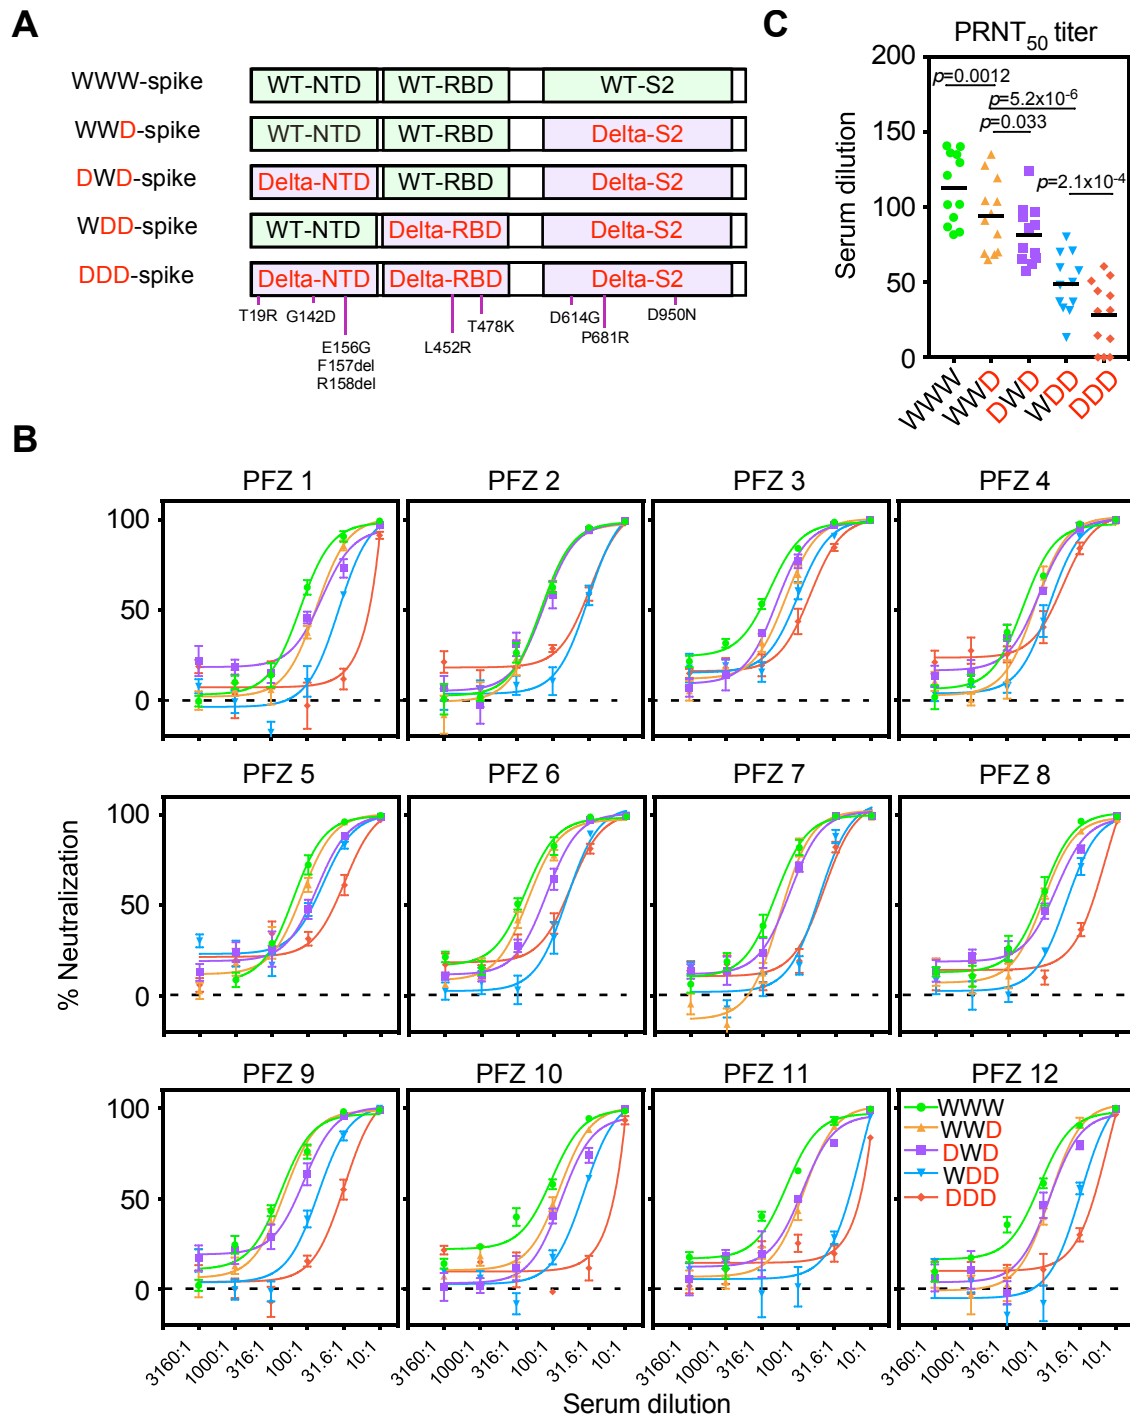

Figure 3. Neutralizing activity of BNT162b2-immune sera against the pseudovirus with chimeric spike protein of the wild-type and Delta variants.

(A) The chimeric spike proteins between the wild-type (W) and Delta variant (D). Mutations of the Delta spike are indicated.

(B) Neutralizing activity of BNT162b2-immune sera against the pseudoviruses with chimeric spike proteins. The data from quadruplicates are presented as mean \pm SEM.

(C) PRNT50 titers of BNT162b2-immune sera against the pseudoviruses with chimeric spike proteins. *p* values determined by paired t-test were indicated. The representative data from 2 independent experiments are shown. See also Figure S1 and S2.

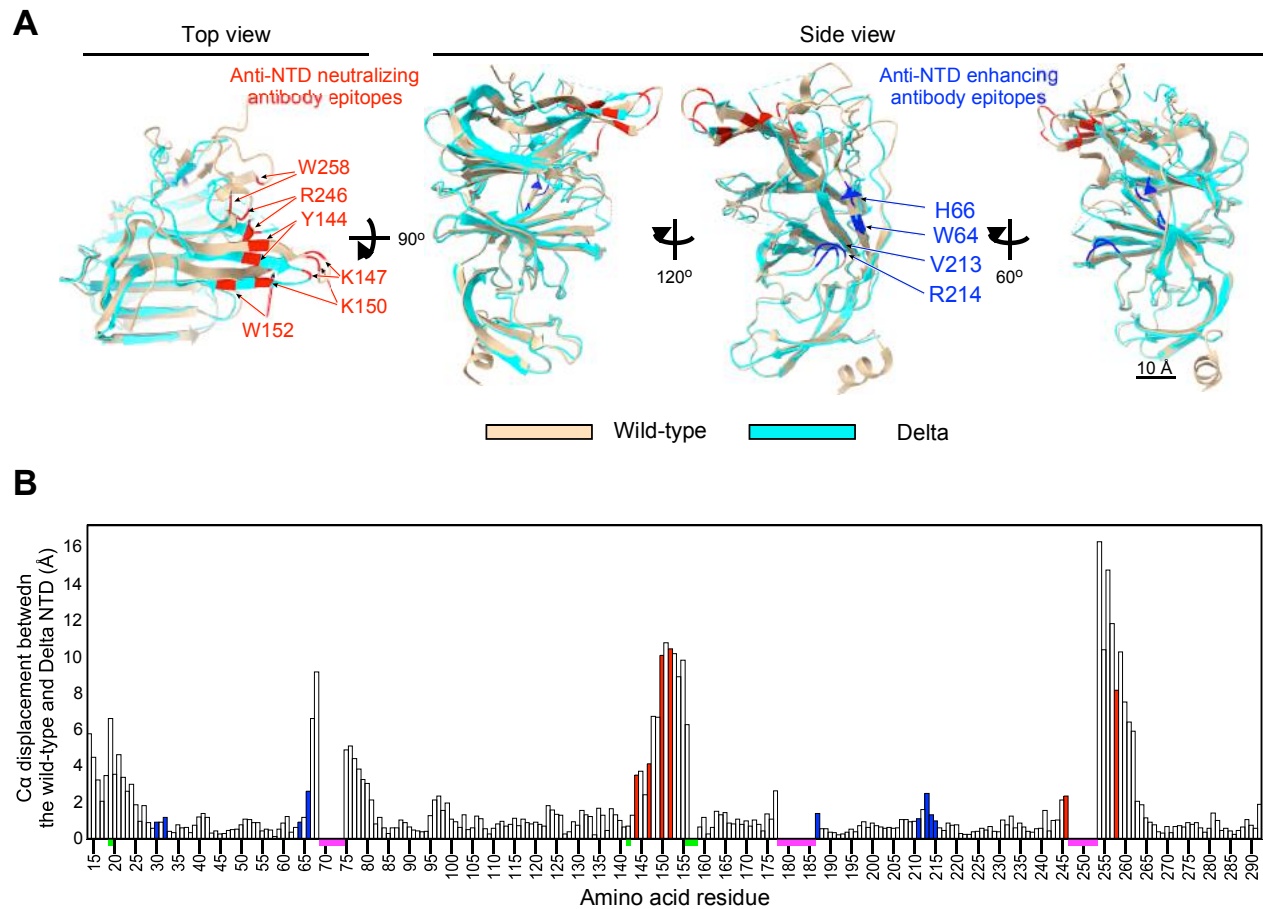

Figure 4. Cryo-EM analysis of the Delta NTD

(A) Structure of the Delta NTD (light blue) analyzed by the Cryo-EM were superimposed with the wild-type NTD (light brown, PDB: 7LY3). Major anti-NTD enhancing antibody epitopes (blue) and anti-NTD neutralizing antibody epitopes (red) were indicated in the figure.

(B) Cα displacement between the wild-type and the Delta NTD was shown. The value was calculated by UCSF chimera. All known anti-NTD enhancing antibody epitopes (blue) and anti-NTD neutralizing antibody epitopes (red) were indicated. The regions where structures of wild-type or Delta NTD were not determined (magenta), and mutations in the Delta NTD (green) are indicated on the axis. See also Figure S3 and Table S1.

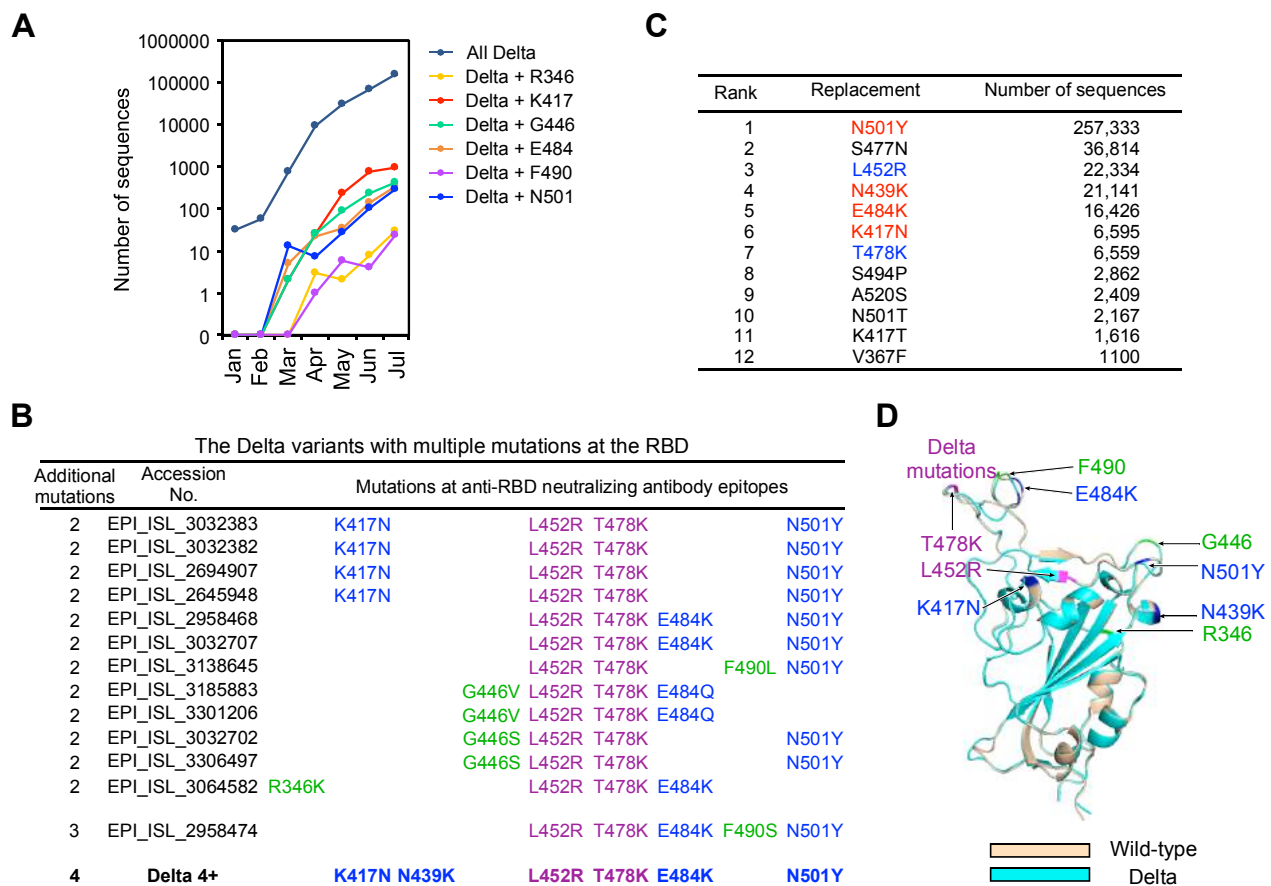

Figure 5. Possible mutations that may be acquired by the Delta variant

(A) Number of the Delta variants with additional mutations at the RBD registered in the GISAID database in each month from January, 2021 to July, 2021. The data registered at July are not enough and will be increased later.

(B) The Delta variants with additional mutations at multiple epitopes of the anti-RBD neutralizing antibodies. L452R and T478K mutations are observed in all the Delta variants (purple). Anti-RBD neutralizing antibody epitopes introduced into the Delta 4+ (blue), and anti-RBD neutralizing antibody epitopes observed in the natural Delta variants but not introduced into the Delta 4+ (green) are shown with the respective GISAID accession number.

(C) Number of the major RBD mutations acquired by all SARS-CoV-2 variants. L452R and T478K are mutations observed for the representative Delta variant (blue). N501Y, N439K, E484K and K417N were selected to generate the Delta 4+ variant (red).

(D) Location of additional mutations introduced into the Delta RBD. Structures of the RBD of the wild-type (light brown) and the Delta variant (light blue) predicted by AlphaFold2 were superimposed. Mutations of the Delta variant (purple), anti-RBD neutralizing antibody epitopes to generate the Delta 4+ (blue), and anti-RBD neutralizing antibody epitopes observed in the natural Delta variants but not introduced into the Delta 4+ (shown in C; green) are indicated in the figure. See also Figure S4.

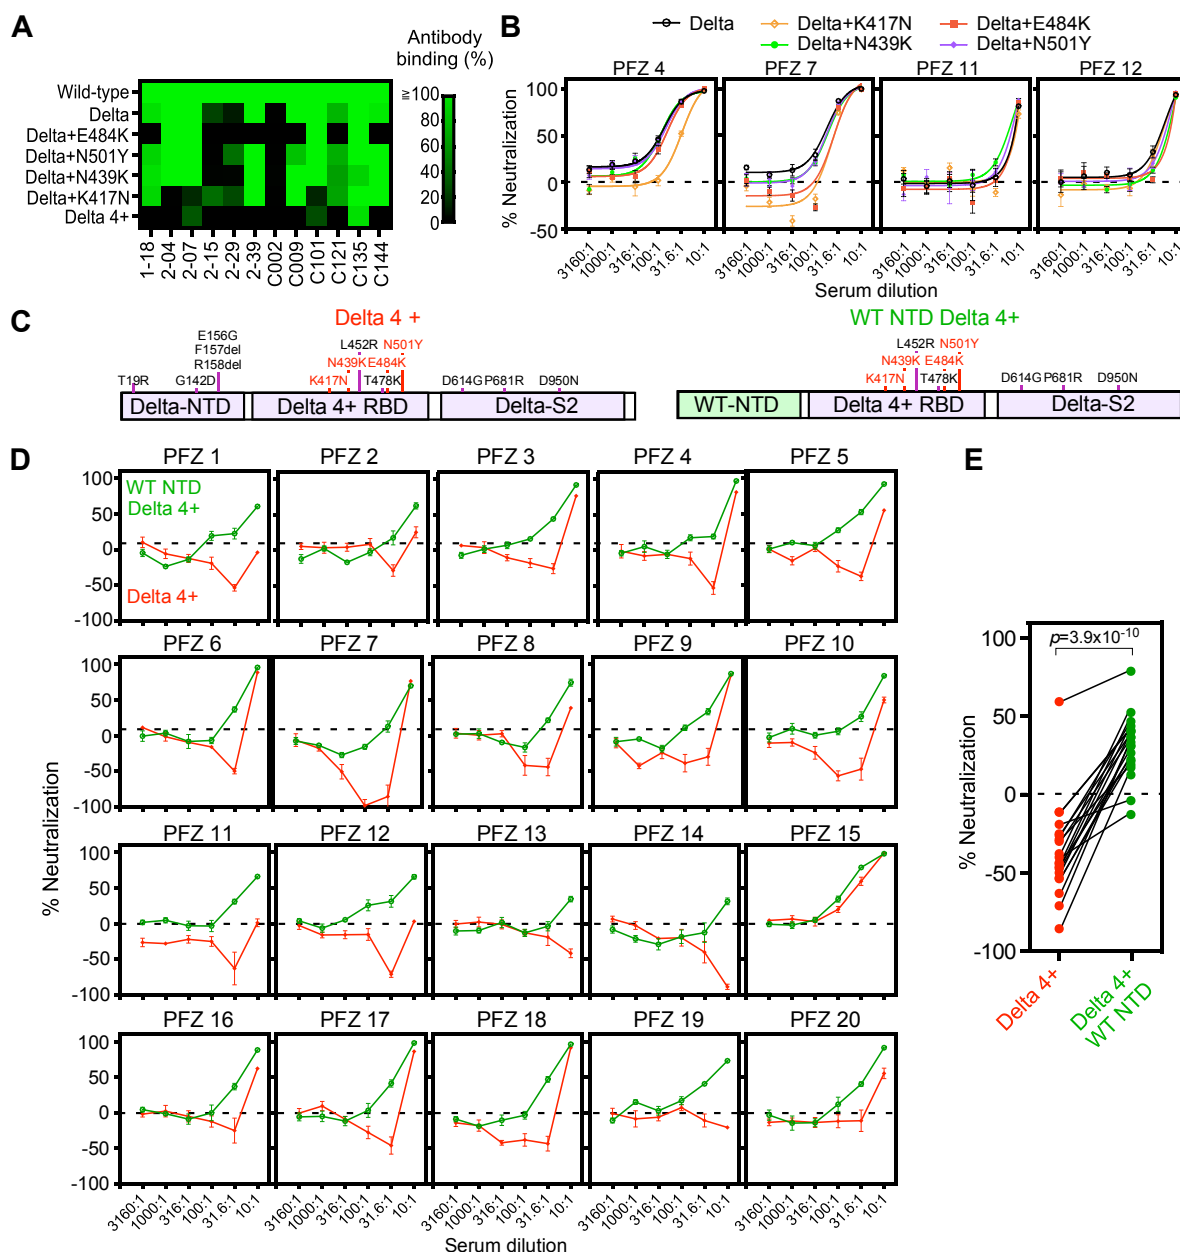

Figure 6. Enhanced infectivity of the Delta 4+ pseudovirus by the BNT162b2-immune sera
(A) Anti-RBD antibody binding to the Delta spike with additional mutations at the RBD. Anti-RBD mAb binding (1 μ g/ml) to the mutant spike was compared to that of the wild-type spike. The Delta 4+ spike contains additional mutations of K417N, N439K, E484K and N501Y.
(B) Neutralizing activity of BNT162b2-immune sera against the Delta pseudoviruses with a single additional mutation at the RBD as indicated in the figure. The data from quadruplicates are presented as mean \pm SEM.
(C) The construct of the Delta 4+ and Delta 4+ with wild-type (WT) NTD. Mutations in the original Delta variant (black) and the four mutations added to the Delta RBD (red) were shown.
(D) Neutralizing activity of BNT162b2-immune sera against the pseudovirus with Delta 4+ spike (red) and Delta 4+ spike with wild-type NTD (green).
(E) Neutralizing activity of 31.6 times diluted BNT162b2-immune sera. p value determined by paired t-test were indicated. Negative values for % neutralization indicates enhanced infectivity (B, D, E). The data from quadruplicates are presented as mean \pm SEM. The representative data from three independent experiments are shown.

Figure 7. Sera from delta spike-immunized mice do not show enhanced infectivity

(A) Freeze and thawed wild-type and Delta spike-B16 transfectants were immunized to the mice with complete Freund's adjuvant (CFA).

(B) Neutralizing activity against the wild-type (green) or Delta (red) pseudovirus (PV) by sera from the wild-type spike (upper column) or Delta spike (lower column) spike-immunized mice.

(C) Neutralizing activity against the wild-type and Delta pseudovirus by 31.6 times-diluted sera from wild-type (light blue line) or Delta (orange line) spike-immunized mice.

(D) Neutralizing activity against the Delta 4+ pseudovirus by sera from the wild-type spike (upper column, blue) or Delta spike (lower column, red) immunized mice.

(E) Neutralizing activity against the Delta 4+ pseudovirus by the 31.6 times-diluted sera from the wild-type spike (blue) or Delta spike (red) immunized mice. n.s.: not statistical significance, p value was determined by t-test. A negative values for % neutralization indicates enhanced infectivity. All data from quadruplicates are presented as mean \pm SEM. See also Figure S1 and S5.

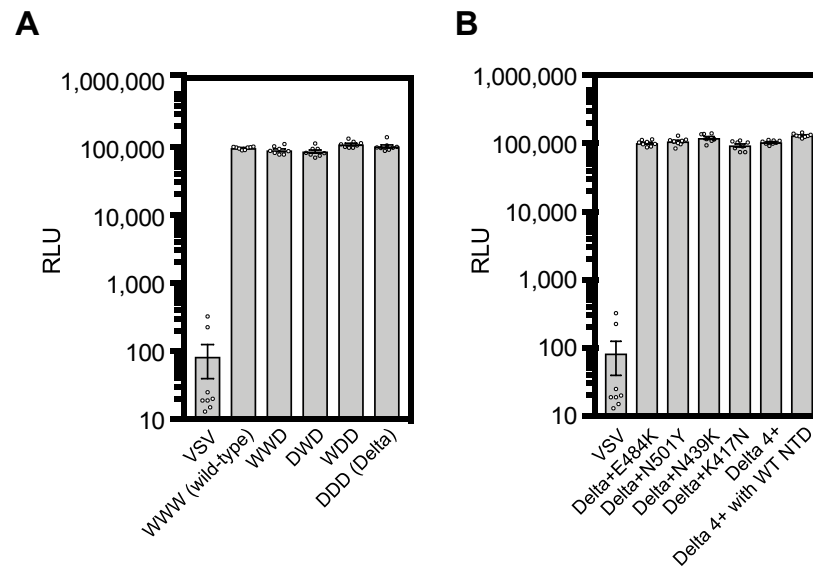

Figure S1. Viral titers of pseudotyped viruses, related to Figure 1, 2, 3, 6 and 7.

The viral titer for each pseudovirus was measured by infection of ACE2-transfected HEK293T cells as described in Methods.

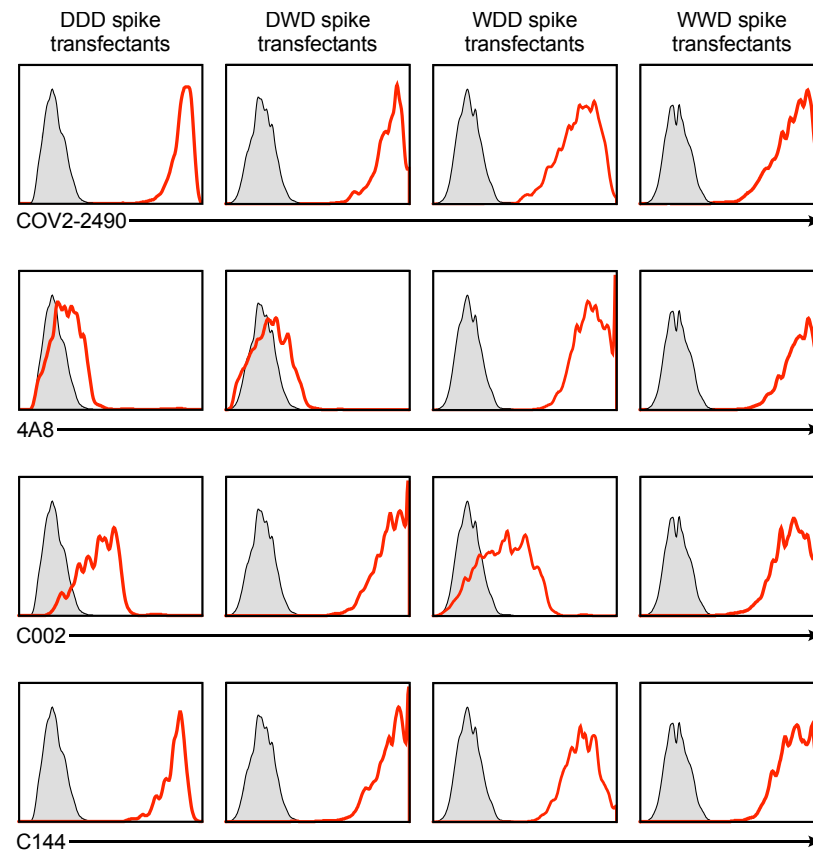

Figure S2 Anti-spike monoclonal antibody binding to the chimeric spike proteins, related to Figure 3.

Chimeric spike proteins DDD, DWD, WDD and WWD were transfected with GFP to HEK293T cells and the transfectants were stained with 1 μ g/ml COV2-2490, 4A8, C002, and C144 antibodies. Antibody bound to the GFP positive cells are shown (red histogram). Control staining: shaded histogram.

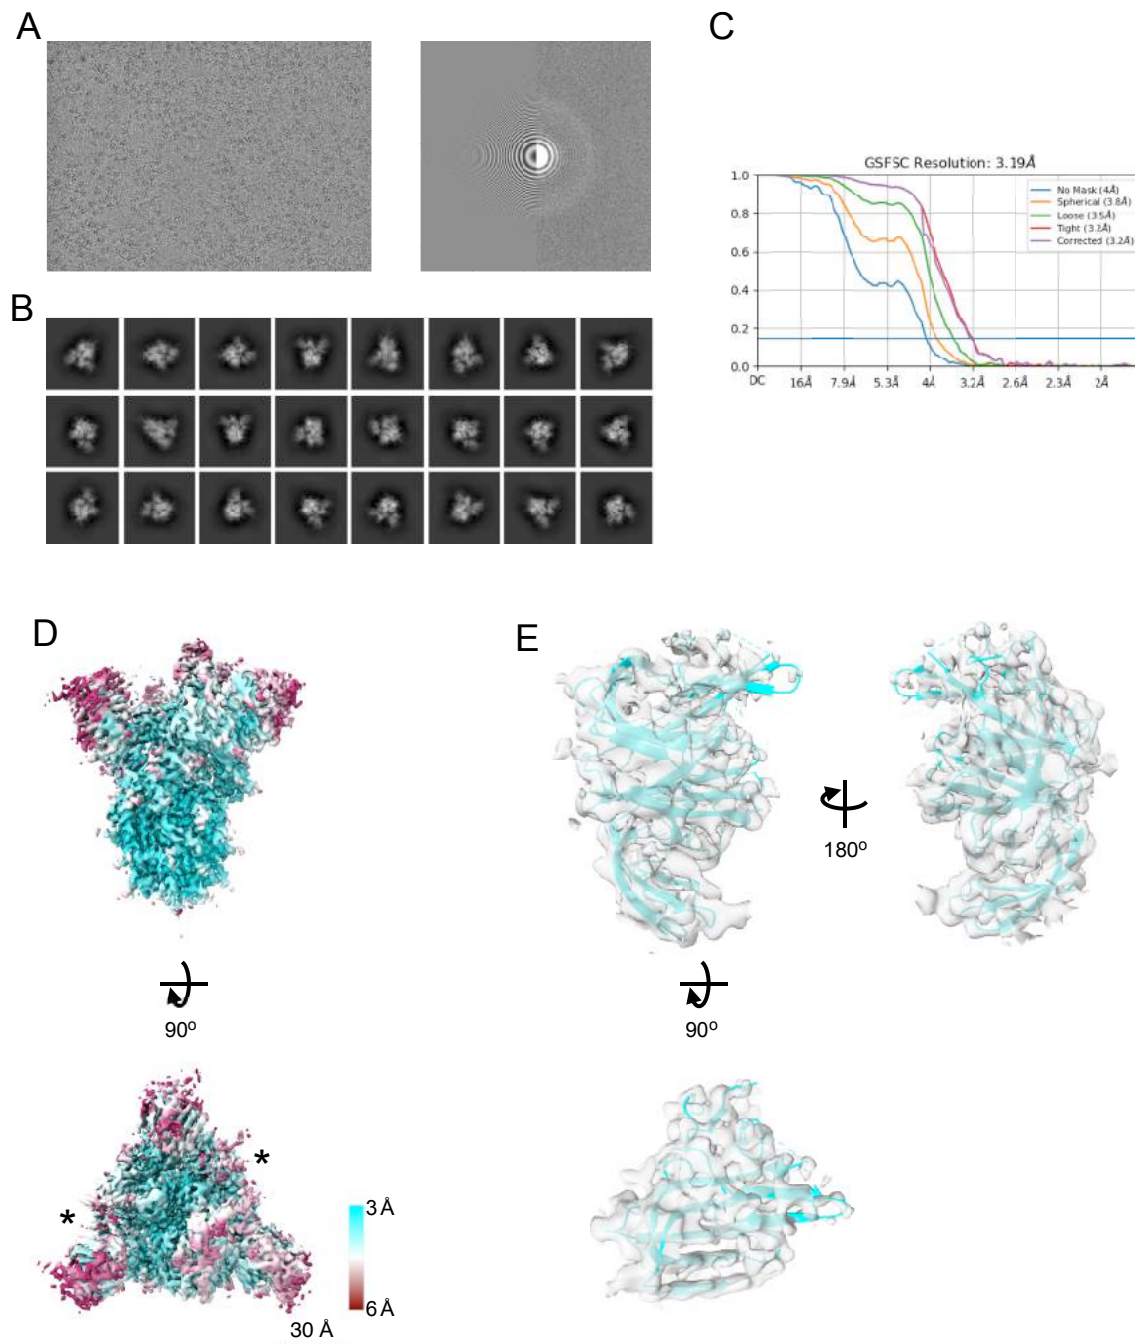

Figure S3. Cryo-EM density map of spike of SARS-CoV-2 Delta variant, related to Figure 4.

(A) A representative micrographs (left), CTF estimation of a micrograph on left panel (right).

(B) Typical 2D class averages.

(C) The GS-FSC curves for the obtained map from cryoSPARC software are shown. Blue flat line indicates FSC=0.143 criteria.

(D) The density map of spike protein from Delta strain (EMDBID: 31731). The map is colored with local resolution. Asterisks indicate the up form of RBDs. Scale bars are 30 Å.

(E) The structure of NTD from spike protein of Delta variant. The density map and the model are shown as semi-transparent surface and cartoon, respectively (PDBID: 7V5W).

Figure S4. RBD mutations acquired by the Delta variant, related to Figure 5.

Number of RBD mutations acquired by the Delta variant. The numbers of mutations at each residue registered in the GISAID database are shown. L452 and T478 mutations included in all the Delta variant were excluded. The red bars indicate the known epitopes for anti-RBD neutralizing antibodies.

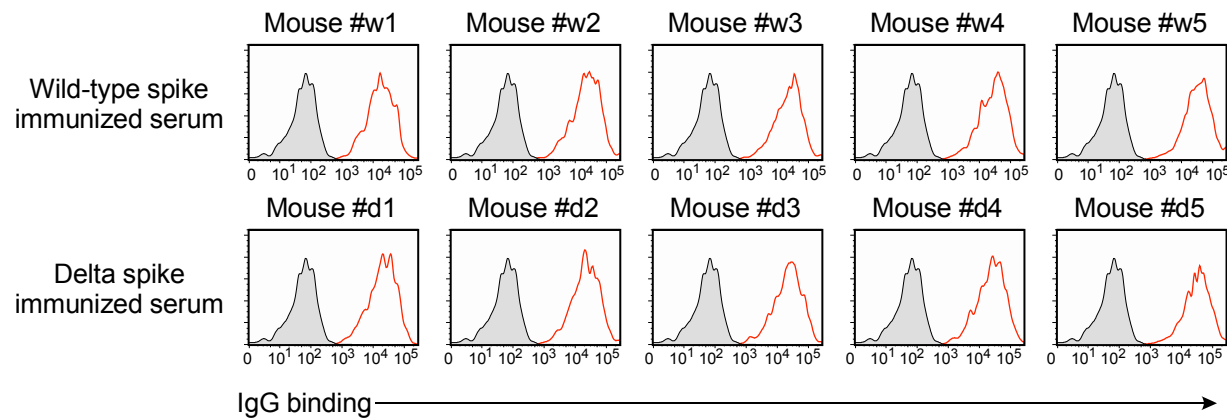

Figure S5 Anti-spike antibodies of the wild-type and delta spike-immunized mice, related to Figure 7.

IgG antibody binding of the 100 times diluted spike-immunized mouse sera to the wild-type spike transfectants were analyzed by flow cytometer. Red: IgG binding. Gray: Control staining.

RESEARCH LETTER

Experimental Assessment of Carbon Dioxide Content in Inhaled Air With or Without Face Masks in Healthy Children: A Randomized Clinical Trial

Many governments have made nose and mouth covering or face masks compulsory for schoolchildren. The evidence base for this is weak.^{1,2} The question whether nose and mouth covering increases carbon dioxide in inhaled air is crucial. A large-scale survey³ in Germany of adverse effects in parents and children using data of 25 930 children has shown that 68% of the participating children had problems when wearing nose and mouth coverings.

The normal content of carbon dioxide in the open is about 0.04% by volume (ie, 400 ppm). A level of 0.2% by volume or 2000 ppm is the limit for closed rooms according to the German Federal Environmental Office, and everything beyond this level is unacceptable.⁴

Methods | We measured carbon dioxide content in inhaled air with and without 2 types of nose and mouth coverings in a well-controlled, counterbalanced, short-term experimental study in volunteer children in good health (details are in the eMethods in [Supplement 1](#)). The study was conducted according to the Declaration of Helsinki and submitted to the ethics committee of the University Witten/Herdecke. All children gave written informed consent, and parents also gave written informed consent for children younger than 16 years. A 3-minute continuous measurement was taken for baseline carbon dioxide levels without a face mask. A 9-minute measurement for each type of mask was allowed: 3 minutes for measuring the carbon dioxide content in joint inhaled and exhaled air, 3 minutes for measuring the carbon dioxide content during inhalation, and 3 minutes for measuring the carbon dioxide content during exhalation. The carbon dioxide content of ambient air was always kept well under 0.1% by volume through multiple ventilations. The sequence of masks was randomized, and randomization was blinded and stratified by age of children. We analyzed data using a linear model for repeated measurements with $P < .05$ as the significance threshold. The measurement protocol (trial protocol in [Supplement 2](#)) is available online.⁵ Data were collected on April 9 and 10, 2021, and analyzed using Statistica version 13.3 (TIBCO).

Results | The mean (SD) age of the children was 10.7 (2.6) years (range, 6-17 years), and there were 20 girls and 25 boys. Measurement results are presented in the **Table**. We checked potential associations with outcome. Only age was associated with carbon dioxide content in inhaled air ($y = 1.9867 - 0.0555 \times x$; $r = -0.39$; $P = .008$; **Figure**). Hence, we added age as a continuous covariate to the model. This revealed an association (partial $\eta^2 = 0.43$; $P < .001$). Contrasts showed that this was attributable to the difference between the baseline value and the values of both masks jointly. Contrasts between the 2 types of masks were not significant. We measured means (SDs) between 13 120 (384) and 13 910 (374) ppm of carbon dioxide in inhaled air under surgical and filtering facepiece 2 (FFP2) masks, which is higher than what is already deemed unacceptable by the German Federal Environmental Office by a factor of 6. This was a value reached after 3 minutes of measurement. Children under normal conditions in schools wear such masks for a mean of 270 (interquartile range, 120-390) minutes.³ The **Figure** shows that the value of the child with the lowest carbon dioxide level was 3-fold greater than the limit of 0.2 % by volume.⁴ The youngest children had the highest values, with one 7-year-old child's carbon dioxide level measured at 25 000 ppm.

Table. Carbon Dioxide Values Under Various Conditions

Measurement	Participants, No.	Carbon dioxide, % by volume	
		Mean (SD) [95% CI]	Range
Baseline			
Pretest	45	0.268 (0.108) [0.235-0.300]	0.100-0.628
Posttest ^a	39	0.281 (0.105) [0.247-0.316]	0.100-0.525
Main outcome			
Inhaled air with surgical mask	45	1.312 (0.384) [1.197-1.427]	0.577-2.554
Inhaled air with FFP2 mask	45	1.391 (0.374) [1.279-1.504]	0.600-2.475
Additional outcome			
Joint exhaled and inhaled air with surgical mask	45	2.650 (0.486) [2.504-2.796]	1.33-3.41
Exhaled air with surgical mask	44	3.847 (0.678) [3.641-4.053]	1.783-4.754
Joint inhaled and exhaled air with FFP2 mask	45	2.677 (0.386) [2.561-2.793]	1.660-3.418
Exhaled air with FFP2	45	3.846 (0.547) [3.682-4.011]	2.592-5.24
Carbon dioxide content in ambient air	NA	0.074 (0.003) [0.073-0.075]	0.067-0.083

Abbreviations: FFP, filtering facepiece; NA, not applicable.

^a Posttest scores were missing in 6 children because they stopped the measurement after wearing the masks.

This article has been retracted

Figure. Scatterplot of Carbon Dioxide Content in Inhaled Air Under Filtering Facepiece Mask by Age

Linear regression line with locally weighted scatterplot smoothing.

Discussion | The limitations of the study were its short-term nature in a laboratory-like setting and the fact that children were not occupied during measurements and might have been apprehensive. Most of the complaints reported by children³ can be understood as consequences of elevated carbon dioxide levels in inhaled air. This is because of the dead-space volume of the masks, which collects exhaled carbon dioxide quickly after a short time. This carbon dioxide mixes with fresh air and elevates the carbon dioxide content of inhaled air under the mask, and this was more pronounced in this study for younger children.

This leads in turn to impairments attributable to hypercapnia. A recent review⁶ concluded that there was ample evidence for adverse effects of wearing such masks. We suggest that decision-makers weigh the hard evidence produced by these experimental measurements accordingly, which suggest that children should not be forced to wear face masks.

Expression of Concern: Abstract 10712: Mrna COVID Vaccines Dramatically Increase Endothelial Inflammatory Markers and ACS Risk as Measured by the PULS Cardiac Test: a Warning

Abstract

Our group has been using the PLUS Cardiac Test (GD Biosciences, Inc, Irvine, CA) a clinically validated measurement of multiple protein biomarkers which generates a score predicting the 5 yr risk (percentage chance) of a new Acute Coronary Syndrome (ACS). The score is based on changes from the norm of multiple protein biomarkers including IL-16, a proinflammatory cytokine, soluble Fas, an inducer of apoptosis, and Hepatocyte Growth Factor (HGF) which serves as a marker for chemotaxis of T-cells into epithelium and cardiac tissue, among other markers. Elevation above the norm increases the PULS score, while decreases below the norm lowers the PULS score. The score has been measured every 3-6 months in our patient population for 8 years. Recently, with the advent of the mRNA COVID 19 vaccines (vac) by Moderna and Pfizer, dramatic changes in the PULS score became apparent in most patients. This report summarizes those results. A total of 566 pts, aged 28 to 97, M:F ratio 1:1 seen in a preventive cardiology practice had a new PULS test drawn from 2 to 10 weeks following the 2nd COVID shot and was compared to the

previous PULS score drawn 3 to 5 months previously pre- shot. Baseline IL-16 increased from 35 \pm 20 above the norm to 82 \pm 75 above the norm post-vac; sFas increased from 22 \pm 15 above the norm to 46 \pm 24 above the norm post-vac; HGF increased from 42 \pm 12 above the norm to 86 \pm 31 above the norm post-vac. These changes resulted in an increase of the PULS score from 11% 5 yr ACS risk to 25% 5 yr ACS risk. At the time of this report, these changes persist for at least 2.5 months post second dose of vac. We conclude that the mRNA vacs dramatically increase inflammation on the endothelium and T cell infiltration of cardiac muscle and may account for the observations of increased thrombosis, cardiomyopathy, and other vascular events following vaccination.

Depiction of Novel Corona Virus Infectious Disease 2019 (CoVid 19 aka SARS CoV 2)

Problem: CV19 Inhibits Human Body's Immune Regulatory Response/Defense System.

Where: Primary Lungs and Secondary other major organs and nervous system.

When: 2-14 days after Initial infection date.

Significance : The human body's immune defense is compromised leading to prolonged illness and high mortality in populations with previous underlying inflammatory, immunosuppressive diseases/conditions: Elderly, Afro/Native Americans ; Obesity, Smokers, Alcoholics, Addicts, HBP, Diabetes, Arthritis, Heart Disease, Arteriosclerosis, Stroke/Ischemia, Blood vessel inflammation, Cycle Cell Anemia, Cancer, Lupus, MS, AIDs, Nephritis, Kawasaki disease, etc.

Zinc is vital to promoting healthy hair, skin, and nails and is required for a proper sense of taste and smell. Zinc plays an integral role in immune function, protein synthesis, wound healing, DNA synthesis and cell division and is involved in over 300 regulatory processes. Zinc is also important for lipid, carbohydrate, and protein metabolism, as well as cell signal transduction, and reduction/oxidation (redox) regulation. In males, zinc has been shown to protect the prostate gland from infection and enlargement, which has been linked to being a risk for prostate cancer. In females, zinc can help treat menstrual problems and alleviate associated symptoms. Zinc may also protect from night blindness and prevent the development of cataracts. Children need zinc to grow, maintain a healthy body weight, fight off diseases such as pneumonia, diarrhea and diabetes, as well as shorten the length of the common cold.

Evidence: shown Zinc transported across SARS CoV 1 infected cell membranes using non protein, synthetic ionophore , carrier molecules has been to inhibit viral RNA reverse transcriptase (RT) enzyme and prevent virion reproduction in vitro.

Hypothesis: CV19 inhibits zinc transport across infected cell membranes leading to Zinc Immuno regulatory deficiencies causing initial acute exacerbation of chronic obstructive pulmonary disease and secondary acute exacerbation of heart, kidney, blood vessels, brain, large intestine, skin, joints, and nervous system exemplified by cytokine storm and inflammation.

Causes: Low blood serum zinc concentration/availability.

Inhibition of zinc zip protein carrier "ionophores" which transport zinc across cell membranes for human DNA/RNA synthesis, cellular control, and immune response.

Solutions : Increase blood serum zinc through proper diet, digestion, and gut flora; avoid phytate rich foods; eat zinc rich foods; supplement zinc.

Supplement/administer "non protein" Zinc ionophore carrier molecules:

A. Synthetic, Big Pharma Drugs like Pyrithione, Hydroxychloriquine, and/or other synthetic zinc ligand-ionophores.

B. Natural fruit and vegetable polyphenol flavenoid ionophores like Quercetin, Reseveratrol, Curcumin, ECGC.

Effective: Timely Solutions Implement Zinc plus non protein ionophores to transport zinc across infected cell membranes and inhibit viral RT, prevent virion reproduction, and restore human cell DNA and RNA synthesis, cellular control, and immune regulatory response/defense.

Re: Underreporting to VAERS & Violation of COVID-19 Vaccine EUAs

Dear Mr. Becerra, Dr. Walensky, Dr. Woodcock, Dr. Marks, and Dr. Shimabukuro:

We write with urgency to provide a first-hand report from Ms. Deborah Conrad, a Physician Assistant at a regional New York hospital, of serious injuries from COVID-19 vaccines and her hospital system's failure to report to VAERS.

Ms. Conrad's hospital serves a community in which less than 50% of individuals have received the COVID-19 vaccine yet approximately 90% of individuals admitted to her hospital are documented to have received the COVID-19 vaccine. Even more troubling is the fact that many individuals being admitted are presenting with complication months after vaccination and the hospital has more admitted patients now on average than it had last year during the pandemic. Even worse is that Ms. Conrad attests that even injuries occurring directly after COVID-19 vaccination are *not* being reported to the CDC and FDA's Vaccine Adverse Events Reporting System ("VAERS").

In fact, after she began assisting doctors and nurses in her hospital with submission of VAERS reports, she was prohibited by the hospital from doing so for a majority of the reports. Ms. Conrad's first-hand experience reinforces the serious concerns previously raised that there is

an incredible level of underreporting to VAERS of adverse events following the COVID-19 vaccine. Please advise forthwith what steps you intend to take to (1) inform all health care providers that all serious adverse events they observe after COVID-19 vaccination should be reported to VAERS and (2) punish hospitals and health care professionals that fail to file VAERS reports.

I. Underreporting to VAERS

As you are aware, an AHRQ-funded study by Harvard Medical School of 715,000 patients tracked reporting to VAERS over a three-year period at Harvard Pilgrim Health Care. It concluded that “fewer than 1% of vaccine adverse events are reported.”¹

This disturbingly low rate is confirmed by the rate at which anaphylaxis after COVID-19 vaccine is reported to VAERS. The CDC Director claims that “Anaphylaxis after COVID-19 vaccination is **rare** and occurred in approximately **2 to 5 people per million** vaccinated in the United States based on events reported to VAERS.”² That claim is contradicted by a recent study at Mass General Brigham that assessed anaphylaxis in a clinical setting after the administration of COVID-19 vaccines and found “severe reactions consistent with anaphylaxis occurred at a rate of **2.47 per 10,000 vaccinations**.”³ This is equivalent to 50 to 120 times more cases than what VAERS and the CDC are reporting.

The underreporting of anaphylaxis by the CDC and VAERS is particularly troubling because it is mandatory for medical providers to report anaphylaxis after any COVID-19 vaccine to VAERS,⁴ most of these reactions occur within 30 minutes of vaccination,⁵ and there has been an intense campaign by health authorities to inform medical providers that they need to report anaphylaxis after COVID-19 vaccination to VAERS. Nonetheless, the rate of reporting still appears to be only around 0.8 to 2 percent of all cases of anaphylaxis.

This raises serious concerns regarding the underreporting of adverse events following COVID-19 vaccination to VAERS, especially for adverse events that do not occur immediately after vaccination and where health care providers have not been specifically directed to report such adverse events to VAERS.

II. Confirmation from the Front Line

The first-hand observation of Deborah Conrad, a Physician Assistant from a New York regional hospital (“**Hospital**”), confirms this concerning and dangerous underreporting to VAERS. Her direct daily observation over the last two years of hospital admissions and vaccination status

¹ <https://healthit.ahrq.gov/sites/default/files/docs/publication/r18hs017045-lazarus-final-report-2011.pdf>. See also a U.S. House Report similarly stated: “Former FDA Commissioner David A. Kessler has estimated that VAERS reports currently represent only a fraction of the serious adverse events.” <https://www.congress.gov/106/crpt/hrpt977/CRPT-106hrpt977.pdf>.

² <https://www.cdc.gov/coronavirus/2019-ncov/vaccines/safety/adverse-events.html>

³ <https://jamanetwork.com/journals/jama/fullarticle/2777417>

⁴ See, e.g., <https://www.fda.gov/media/144413/download>.

⁵ See <https://www.cdc.gov/coronavirus/2019-ncov/vaccines/safety/adverse-events.html>; see also <https://jamanetwork.com/journals/jama/fullarticle/2777417> (mean time to reaction is 17 minutes post-vaccination).

also confirm that the COVID-19 vaccine has caused a surge of admissions to her hospital exceeding even that which occurred at the height of the pandemic.

Ms. Conrad raised these concerns to her superiors at the Hospital. After they failed to act, she reached out Dr. Shimabukuro on March 26, 2021 and to the Food and Drug Administration (“FDA”) via email on April 15, 2021, April 30, 2021, and May 24, 2021 explaining that she was seeing concerning adverse events that were not being reported to VAERS, including pericarditis. These messages were never acknowledged. Ms. Conrad also raised the issue with the New York State Department of Health (“NYSDOH”) and with the Office of Professional Medical Conduct. She has, to date, not received satisfactory answers nor has she seen any steps taken by the Hospital to remediate the issues.

i. Ms. Conrad Assists Hospital Staff to File VAERS Reports

Ms. Conrad is in constant communication with patients, patients’ families, and other hospital staff and has knowledge of numerous serious post-COVID-19 vaccine adverse events, including breakthrough cases and deaths, as well as other adverse events on the CDC’s “adverse events of special interest” list⁶ that have not been reported to either VAERS or the NYSDOH. Among other serious conditions following COVID-19 vaccination, Ms. Conrad has observed: clotting events, myocarditis cases, type one diabetes new onset, Acute myelogenous leukemia, breakthrough COVID-19 cases, death, and more.

For the past few months, on her own time, Ms. Conrad has been assisting doctors and other medical professionals at the hospital to report such events to VAERS. Instead of praising her efforts, numerous individuals at the Hospital ordered Ms. Conrad to stop reporting to VAERS altogether unless she was submitting a report for her direct patient. Since being given this order, Ms. Conrad has knowledge of dozens of patients whose conditions necessitate a VAERS report and whose treating nurses and doctors have not filed a VAERS report. This was entirely predictable as Ms. Conrad was, to her knowledge, the only health care provider at the Hospital submitting reports.

ii. Requirement to Submit VAERS Reports

Health care workers are mandated by federal law to report certain medical events arising after vaccination to VAERS. Pursuant to 42 U.S.C. § 300aa-25:

Each health care provider and vaccine manufacturer **shall report** to the Secretary—

- (A) the occurrence of any event set forth in the Vaccine Injury Table, including the events set forth in section 300aa-14(b) of this title which occur within 7 days of the administration of any vaccine set forth in the Table or within such longer period as is specified in the Table or section,

⁶ See <https://www.bestinitiative.org/wp-content/uploads/2021/02/C19-Vaccine-Safety-AESI-Background-Rate-Protocol-FINAL-2020.pdf> at 12-13.

- (B) the occurrence of any contraindicating reaction to a vaccine which is specified in the manufacturer's package insert, and
- (C) such other matters as the Secretary may by regulation require.⁷

Additionally, pursuant to the FDA and its emergency use authorizations (“EUA”), all vaccine and health care providers “must report the following information associated with the administration of ... COVID-19 Vaccine of which they become aware to VAERS in accordance with the Fact Sheet for Healthcare Providers Administering Vaccine (Vaccination Providers)⁸:

- Vaccine administration errors whether or not associated with an adverse event
- Serious adverse events (irrespective of attribution to vaccination)
- Cases of Multisystem Inflammatory Syndrome in children and adults
- Cases of COVID-19 that result in hospitalization or death.”⁹

“Serious adverse events” are defined by the FDA to include:

- Death;
- A life-threatening adverse event;
- Inpatient hospitalization or prolongation of existing hospitalization;
- A persistent or significant incapacity or substantial disruption of the ability to conduct normal life functions;
- A congenital anomaly/birth defect;
- An important medical event that based on appropriate medical judgement may jeopardize the individual and may require medical or surgical intervention to prevent one of the outcomes listed above.¹⁰

Health care providers are also strongly encouraged to report to VAERS “*any adverse event that occurs after the administration of a vaccine* licensed in the United States, whether it is or is not clear that a vaccine caused the adverse event.”¹¹ The importance of filing VAERS reports is acute with regard to COVID-19 vaccines which were developed based on novel technology and which have only been granted emergency use authorization.

¹¹ <https://www.cdc.gov/vaccinesafety/ensuringsafety/monitoring/vaers/reportingaes.html> (emphasis added).

iii. Hospital Prevents Ms. Conrad From Filing VAERS Reports

When Ms. Conrad observed that serious adverse events occurring directly after COVID-19 vaccination were not being reported to VAERS, she volunteered to submit the necessary reports to VAERS on her and her colleagues' behalf. Ms. Conrad was doing so after her paid shifts ended because she understands the critical importance of the task. In response, the Hospital told Ms. Conrad they were going to audit the VAERS reports that Ms. Conrad submitted because, "in [her] clinical role and as a leader in the organization," she was to "support [the Hospital's] approach to the vaccine," and submitting reports to VAERS apparently is contrary to its "approach to the vaccine."

It is alarming that the Hospital's "approach to the vaccines" does not and has not included educating health care providers about VAERS and encouraging them to efficiently and consistently file reports. Instead, its apparent approach is to actively deter them from doing so.

As Ms. Conrad told the Hospital, she has personally treated at least five patients that presented with new, unprovoked deep vein thrombosis or pulmonary embolisms within 6 weeks of COVID-19 vaccination. She has also seen patients who, after receipt of COVID-19 vaccination, presented with a new stroke, bleed, autoimmune hepatitis, sudden bilateral pneumonia or COVID-19 infection, as well as syncope with head injury, STEMI, new arrhythmias, new seizure disorders, new chorea movement disorder, and more. In one day alone, Ms. Conrad had four patients with sudden bilateral pneumonia within a week of their COVID-19 vaccination. Ms. Conrad understands that it is not her responsibility to determine any causation but that it is her duty to report these instances to VAERS so that the FDA and CDC have adequate data by which to detect potential safety signals. The Hospital has prohibited Ms. Conrad from filing a VAERS reports for any of these serious events after COVID-19 vaccination unless she directly treats the patient.

In auditing the VAERS reports submitted by Ms. Conrad for a four-week period – totaling 50 adverse event reports, which includes 4 deaths – the Hospital's Chief Quality Officer stated that she has "not heard this level of reporting from anywhere else and didn't hear similar reports from [another hospital in the system]." This is Ms. Conrad's precise concern: if she is not submitting the VAERS reports, they are not being submitted. The Hospital did not take issue with the reports themselves, which were all valid, but rather that unlike other hospitals, Ms. Conrad is actually causing the Hospital to submit reports to VAERS. The Hospital told Ms. Conrad: "we need to make sure we are providing a consistent message to our team and we need to make sure that that is also in alignment with what our health system is asking us to do."

The Hospital's conclusion was therefore, quizzically, that Ms. Conrad only be permitted to report to VAERS for her own patients:

From what our risk team is telling us, really you can only be reporting on the patients that you are providing direct care for and so you cannot, and I know you've been volunteering and trying to be helpful, but we need you to try to kind of dial it back and focus on the patients that you are directly responsible for ...

Ms. Conrad reiterated that the reason she took this task on is because no one else wants to do it nor are they doing it. However, the Hospital dismissed that with the statement that:

The approach has been that this is the responsibility of the individual provider who believes they have identified a potential adverse event and that has been our approach... You can't control, and I know this is frustrating, but you can't control whether someone else is putting the report in... and we do need to follow how the system is approaching this currently.

When Ms. Conrad again explained why she has the concerns she has about underreporting, she was called an anti-vaxxer by the Hospital:

I don't want us to go down any kind of rabbit hole here but the thing I think we need to be clear about and I am just going to be frank with you ...in reading the few emails you sent me and reading the email that went out to the provider, it does come across a bit...uh very vaccine...ugh I won't say very but it comes out quite, it comes out quite almost anti-vaxxy, right, and you know, clearly as an organization, as a health system, right and as ... an organization that is working on following CDC guidelines and following the guidance of the department of health, we are very much advocating for patients to receive the vaccine. And we are very much working on the ... effort to work to try and reduce vaccine hesitancy... We want people to understand that on the whole this is a very safe vaccine and that the science supports that.

Of course, the assessment of "safe" is based on reports of adverse reactions and if such reports are not being made, this conclusion could be false.

Ms. Conrad voiced additional concerns of adverse events following the emergency use vaccines and was told:

Yes, just like other vaccines, there are folks that are going to be negatively impacted but, on the whole, we have seen a tremendous benefit to the vaccine ... you and I are not individual providers, we're employee providers and we do on some level need to kind of .. for lack of a better way of saying it, we tow the company line. That is part of our responsibility is to be supporting the mission of the organization.

"Towing the company line" does not relieve the Hospital of its obligations.

Ms. Conrad's voiced concern that the Hospital was not even bothering to inform its personnel about VAERS and filing reports was, incredible, to state that "the providers should

educate *themselves* when they are dealing with patients related to COVID vaccination. That information is out there, it is available.”

We reached out to the Hospital and asked it to please forthwith confirm that the Hospital’s mission is consistent with taking all necessary steps to fulfill its legal and ethical obligations to report the mandated medical events following COVID-19 vaccination to VAERS pursuant to federal law, including: (i) educating the staff about their responsibility to report to VAERS, (ii) creating internal policies and procedures ensuring that VAERS reports will be made and establishing the process for doing so, and (iii) allowing Ms. Conrad and any other health care professional employees to submit VAERS reports without repercussions or hostility. We have received no response.

iv. Hospital Admissions Increase Dramatically & Approximately 90% of All Admitted Patients Have Received the COVID-19 Vaccine Even Though Less than 50% of the Community the Hospital Serves is Vaccinated

Ms. Conrad notes that hospital admissions are higher now than they were during the pandemic and are increasing every day. Despite the fact that the county served by the Hospital has less than a 50% vaccination rate, approximately 90% of the patients in the hospital have received the COVID-19 vaccine. What makes this particularly troubling is that many of these patients are considerably young, often in their 30s, 40s, and 50s and hence are from an age group where the vaccination rate is far lower than 50 percent in the community served by the Hospital.

The only reason that the Hospital even has this data is because Ms. Conrad insisted repeatedly that the Hospital note the COVID-19 vaccination status of each new patient. This provided the Hospital and Ms. Conrad a unique insight into the reason that hospital admissions were surging beyond the level seen during the pandemic.

The purpose of deploying the COVID-19 vaccine is to improve overall public health. The first-hand daily observation of Ms. Conrad over the last two years, including the last six months that the COVID-19 vaccine has been deployed, does not support that these products are improving the overall health of those in her community, at least with regard to hospital admissions for serious health issues.

III. Conclusion

If nothing else, the first-hand account of Ms. Conrad reflects that the reporting requirements of the EUAs for the COVID-19 vaccines are not being adhered to. Without robust post-authorization and post-licensure safety monitoring, many Americans may end up being harmed by improperly tested products. To avoid this potentially calamitous outcome, and to address any issues that arise as quickly as possible, health care facilities must be educated and held responsible to track and report all adverse events following vaccination, including breakthrough

cases. The above also contradicts Dr. Fauci and Dr. Walensky's repeated, but still unsupported, claim that "over 97 percent of people who are entering the hospital right now are unvaccinated."¹²

This should seriously concern HHS, CDC, and FDA but, given the response to our previous letters addressing this topic, it does not appear there is any concern. There are serious safety signals that are likely being missed and for the ones that are identified, such as anaphylaxis, CVST in conjunction with thrombocytopenia, myocarditis, and Guillain-Barre Syndrome, the actual rate seen in VAERS may be only the tip of the iceberg. Ignoring and casting aside these issues in the drive to vaccinate and promote vaccine confidence may eventually be the undoing of the very confidence you seek to instill.

As explained before, unless and until underreporting to VAERS is addressed, underreporting to a passive signal detection system will continue to blind health agencies, medical professionals, and patients from what is really occurring in the clinic and will render true informed consent impossible. With the drive to vaccinate every single American with COVID-19 vaccines, the safety of all Americans, literally, depends on this broken system. Fix it.

The first step to fix it is, at the least, to automate hospital and clinical medical records to automatically send VAERS reports for all clinically significant events occurring within a window of time after vaccination. This already exists for other purposes. It can be done for vaccines as well, which is clear from the CDC's own publications on this topic and pages 31 to 34 of a letter exchange with HHS on this issue available here: <https://icandecide.org/hhs/vaccines-safety-12-31-18.pdf>. Additionally, the FDA should be enforcing its EUAs to the fullest extent of the law.

Please confirm that you will fulfill your duties as public servants and implement these simple but critical corrections needed to convert VAERS from a passive, broken system to an active, useful system that generates data that can quickly and confidentially identify and address safety issues. In the end, the more robust the system, the more it will increase vaccine confidence.

Very truly yours,
/s/ Aaron Siri

THE NUREMBERG CODE

1. The voluntary consent of the human subject is absolutely essential.

This means that the person involved should have legal capacity to give consent; should be so situated as to be able to exercise free power of choice, without the intervention of any element of force, fraud, deceit, duress, over-reaching, or other ulterior form of constraint or coercion; and should have sufficient knowledge and comprehension of the elements of the subject matter involved, as to enable him to make an understanding and enlightened decision. This latter element requires that, before the acceptance of an affirmative decision by the experimental subject, there should be made known to him the nature, duration, and purpose of the experiment; the method and means by which it is to be conducted; all inconveniences and hazards reasonably to be expected; and the effects upon his health or person, which may possibly come from his participation in the experiment.

The duty and responsibility for ascertaining the quality of the consent rests upon each individual who initiates, directs or engages in the experiment. It is a personal duty and responsibility which may not be delegated to another with impunity.

2. The experiment should be such as to yield fruitful results for the good of society, unprocurable by other methods or means of study, and not random and unnecessary in nature.
3. The experiment should be so designed and based on the results of animal experimentation and a knowledge of the natural history of the disease or other problem under study, that the anticipated results will justify the performance of the experiment.
4. The experiment should be so conducted as to avoid all unnecessary physical and mental suffering and injury.
5. No experiment should be conducted, where there is an a priori reason to believe that death or disabling injury will occur; except, perhaps, in those experiments where the experimental physicians also serve as subjects.
6. The degree of risk to be taken should never exceed that determined by the humanitarian importance of the problem to be solved by the experiment.
7. Proper preparations should be made and adequate facilities provided to protect the experimental subject against even remote possibilities of injury, disability, or death.
8. The experiment should be conducted only by scientifically qualified persons. The highest degree of skill and care should be required through all stages of the experiment of those who conduct or engage in the experiment.
9. During the course of the experiment, the human subject should be at liberty to bring the experiment to an end, if he has reached the physical or mental state, where continuation of the experiment seemed to him to be impossible.
10. During the course of the experiment, the scientist in charge must be prepared to terminate the experiment at any stage, if he has probable cause to believe, in the exercise of the good faith, superior skill and careful judgement required of him, that a continuation of the experiment is likely to result in injury, disability, or death to the experimental subject.

Members: Washington State Board of Health

Re: "Overview – Immunization Criteria"

Date: December 29, 2020 virtual meeting

I am one of the 732 members of the public that attended the virtual meeting and would like to thank you for giving me this opportunity to comment regarding possible vaccine mandates for school age children.

I have diligently been following and researching Covid-19 for the past two years discovering more about viruses than I ever wanted to, but nevertheless I believe I am well informed enough to have some serious concerns about mandating this particular vaccine for children.

One of my consistent sources for information is from the CDC's VAERS website. Given the adverse effects for children that are publicly recorded, I am alarmed that the vaccine was ever approved by the FDA . The following is copied from the CDC's VAERS website:

U.S. VAERS data from Dec. 14, 2020, to Dec. 3, 2021 for 5- to 11-year-olds show:

- 3,301 adverse events, including 58 rated as serious and 2 reported deaths. One death occurred in an 11-year-old girl from Georgia vaccinated Sept. 14, 2021 prior to the authorization of Pfizer's COVID vaccine in the 5 to 11 age group.

The second death (VAERS I.D. 1890705) occurred in a 5-year-old girl who died four days after receiving her first dose of Pfizer.

U.S. VAERS data from Dec. 14, 2020, to Dec. 3, 2021 for 12- to 17-year-olds show:

- 24,359 adverse events, including 1,474 rated as serious and 33 reported deaths.

The most recent deaths involve a 13-year-old girl from Texas (VAERS I.D. 1913198) who died 31 days after receiving her COVID vaccine. According to her VAERS report, the girl received her first dose of Pfizer on Aug. 1, 2021. Two weeks later, she complained of vague upper back pain and was diagnosed with a rare soft tissue cancer located on her heart despite having no previous medical history. Parents requested a VAERS report be filed in case her cancer was related to the vaccine. Her cancer and heart condition rapidly and progressively worsened and she died Dec 1, 2021.

The second death involves a 17-year-old girl from Minnesota (VAERS I.D. 1912785) who experienced cardiac arrest and died at home after receiving her first dose of Pfizer's COVID vaccine.

- 60 reports of anaphylaxis among 12- to 17-year-olds where the reaction was life-threatening, required treatment or resulted in death — with 96% of cases attributed to Pfizer's vaccine.

- 567 reports of myocarditis and pericarditis (heart inflammation) with 557 cases attributed to Pfizer's vaccine.
- 141 reports of blood clotting disorders, with all cases attributed to Pfizer.

One more important point I wish to bring to your attention, in case you were unable to watch the U.S. Senate hearings (Nov. 4 & Nov. 7, 2021), Doctor Walensky (CDC Director) was asked by one of the Senators why the majority of her staff (75%) were working remotely? She could not answer. He then pressed her about the number of lab workers who were not in the labs although they have the best safety accommodations available to them. Again, she could not answer. At the Nov. 7 Senate hearing, Walensky was asked how many of her staff were vaccinated. She said she didn't know for sure because of the Heppa laws. Dr. Fauci was asked the same question and stated that about 50% of his staff had been vaccinated. The obvious question one should be asking is WHY?

Given the above facts, this should raise serious considerations by anyone who is truly interested in truthful science, not "scientific-politics. Pause and consider the possibility of terrible outcomes for our children who are not being given the choice about their health. They are being used as a scientific experiment. Are you willing to accept liability for any adverse health effects of the children you are requiring to get vaccinated?

My own personal experience with the Covid vaccine relates to a recent family function in which all attendees were fully vaccinated, including the teenagers. However, only one person was not vaccinated, a 5 year old who had had Covid a year before. We discovered the next day that two people at this function had tested positive for Covid despite being fully vaccinated.

The vaccines are not working for everyone despite what the "experts" are promising and in too many cases they are causing great harm and even death. What is obvious is the treatment (vaccines) is worse than the virus for healthy children (and adults).

As unbiased health care workers, you should be willing to acknowledge that.

Sincerely,

Constance Borgomainerio

Transmissibility of SARS-CoV-2 among fully vaccinated individuals

Vaccine effectiveness studies have conclusively demonstrated the benefit of COVID-19 vaccines in reducing individual symptomatic and severe disease, resulting in reduced hospitalisations and intensive care unit admissions.¹ However, the impact of vaccination on transmissibility of SARS-CoV-2 needs to be elucidated. A prospective cohort study in the UK by Anika Singanayagam and colleagues² regarding community transmission of SARS-CoV-2 among unvaccinated and vaccinated individuals provides important information that needs to be considered in reassessing vaccination policies. This study showed that the impact of vaccination on community transmission of circulating variants of SARS-CoV-2 appeared to be not significantly different from the impact among unvaccinated people.^{2,3} The scientific rationale for mandatory vaccination in the USA relies on the premise that vaccination prevents transmission to others, resulting in a “pandemic of the unvaccinated”.⁴ Yet, the demonstration of COVID-19 breakthrough infections among fully vaccinated health-care workers (HCW) in Israel, who in turn may transmit this infection to their patients,⁵ requires a reassessment of compulsory vaccination policies leading to the job dismissal of unvaccinated HCW in the USA. Indeed, there is growing evidence that peak viral titres in the upper airways of the lungs and culturable virus are similar in vaccinated and unvaccinated individuals.^{2,3,5-7} A recent investigation by the US Centers for Disease Control and Prevention of an outbreak of COVID-19 in a prison in Texas showed the equal presence of infectious virus in the nasopharynx of vaccinated and unvaccinated individuals.⁶ Similarly, researchers in California observed no major differences between vaccinated and unvaccinated individuals in

terms of SARS-CoV-2 viral loads in the nasopharynx, even in those with proven asymptomatic infection.⁷ Thus, the current evidence suggests that current mandatory vaccination policies might need to be reconsidered, and that vaccination status should not replace mitigation practices such as mask wearing, physical distancing, and contact-tracing investigations, even within highly vaccinated populations.

I declare no competing interests.

With interest we read the paper by Anika Singanayagam and colleagues¹ assessing the secondary attack rate (SAR) of SARS-CoV-2 in 204 vaccinated and unvaccinated household contacts exposed to

138 vaccinated and unvaccinated index cases. Here, we want to point out the importance of adjusting for age when comparing vaccinated and unvaccinated individuals.

The authors report a similar SAR among household contacts exposed to fully vaccinated and unvaccinated index cases (25% and 23%). Although not explicitly stated by the authors, this finding hints towards no effect of vaccination on transmission and was reported as such by the media in the UK and the Netherlands—and possibly other countries.^{2,3} However, age is a confounding factor in this observation if age is associated with both vaccination status and the risk of transmitting SARS-CoV-2. Indeed, the study indicates a higher peak viral load with increasing age, consistent with lower infectiousness in children. In addition, although the age distribution of all included index cases and contacts is not presented, table S2 in the appendix to the Article provides data for a subset of participants testing positive for SARS-CoV-2, showing that a large proportion (78%) of unvaccinated participants were younger than 18 years, whereas none of the vaccinated participants were. These findings together suggest that the infectiousness of the included unvaccinated index cases was lower than that of the included vaccinated participants because of younger age. Therefore, the presumed lack of vaccine effect on transmission might be largely due to confounding by age, which the authors did not address. In our analysis of vaccine effectiveness against transmission in the Netherlands, adjustment for age of index cases and contacts indeed had a large effect on vaccine effectiveness estimates.⁴ Therefore, vaccine effectiveness against transmission reported by Singanayagam and colleagues is probably an underestimate.

Also, the reported vaccine effectiveness against SARS-CoV-2 infection (34%) is likely confounded

by age, as vaccination status is associated with age, and younger age is associated with reduced susceptibility to acquiring SARS-CoV-2 infection.⁵

In these times, when evidence-based confidence in vaccines is crucial to reduce the impact of the COVID-19 pandemic on mortality and morbidity, data on effects of vaccination should be adequately and unambiguously reported by the scientific community in order to avoid misinterpretation of the data by the public and the media.

The important analysis by Anika Singanayagam and colleagues¹ demonstrated that individuals fully vaccinated against SARS-CoV-2 with breakthrough infections have similar peak viral loads to unvaccinated people and might infect other fully vaccinated individuals within the same household. Of particular concern, vaccines that permit transmission do not confer sterilising

immunity, thus potentially resulting in accumulation of large viral loads and increased risk of immune escape.² By mainly targeting the SARS-CoV-2 spike protein, vaccines can favour propagation of variants with immune-escape mutations.³ Single point mutations in the receptor-binding domain of the viral spike protein are sufficient to facilitate the immune escape and transmission of resistant viruses.² By further examining the unpublished whole-genome sequencing data of vaccinated and unvaccinated participants in the study by Singanayagam and colleagues,¹ invaluable information could be gleaned about whether the current first-generation COVID-19 vaccines potentially exerted selective pressure for resistant SARS-CoV-2 variants.

Tracing the whole-genome sequencing data of all unvaccinated participants chronologically from the pre-alpha-variant (B.1.1.7) phase (September–November, 2020), to the alpha-variant phase (December, 2020, to March, 2021), and to the delta-variant (B.1.617.2) period (May 25–Sept 15, 2021) would likely reveal a trend of increasing number of mutations that converge towards the resultant whole-genome sequence aligned with delta lineage-defining mutations presented in figure 2 of the Article.¹ To determine if vaccines possibly contributed to this genetic drift, the whole-genome sequencing data from patients who tested PCR positive (vaccinated and unvaccinated) can be compared with data from their respective contacts over time from the pre-alpha to the delta phases.

Identical whole-genome sequences between PCR-positive participants and their respective contacts demonstrates direct viral transmission without mutation. Clearly distinct whole-genome sequences between both groups indicate cross-infection of contacts by a different viral lineage. Slight variations in whole-genome sequences between both groups

show mutation has occurred, in which case the vaccination status of the contact should be examined. If mutation occurred predominantly among vaccinated contacts but not within unvaccinated contacts, it suggests vaccine-induced mutation has developed. Because the sample size in the research by Singanayagam and colleagues¹ is relatively small, it will be worrisome if a fair number of vaccinated contacts of PCR-positive participants are identified with mutations, especially with the amino acid mutations summarised in the appendix.

The earliest detection of the delta variant was in India on Oct 14, 2020,⁴ before India's vaccination commencement on Jan 16, 2021.⁵ However, with fastidious propagation of these variants over time by non-sterilising vaccines targeting the spike protein, it is still reasonably plausible that selective pressure could have contributed to the current dominance of the delta variant.

It would be much appreciated if Singanayagam and colleagues would consider analysing their unpublished whole-genome sequencing data as suggested above. If theoretical risk of evolutionary escape from the existing COVID-19 vaccines² translates into real-life evidence, which could be verified via whole-genome sequencing data from this study,¹ then it will be prudent to expedite resources towards second-generation COVID-19 vaccines that exert sterilising immunity, in addition to non-pharmacological interventions.

I declare no competing interests.

WHO: ‘No Evidence’ Boosting Entire Population Offers Greater Protection to Healthy Individuals

By [Jack Phillips](#) | December 3, 2021 Updated: December 3, 2021

A⁺  Print

A top World Health Organization (WHO) official said there is “no evidence” to suggest that CCP virus booster doses would offer “greater protection” to healthy people.

Dr. Mike Ryan, the WHO’s emergency director, questioned the logic of some countries trying to produce more booster doses to vaccinate anyone aged 18 and older.

“Right now, there is no evidence that I’m aware of that would suggest that boosting the entire population is going to necessarily provide any greater protection for otherwise healthy individuals against hospitalization and death,” Ryan said.

“The real risk of severe disease, hospitalization, and death lies, in particularly, in at-risk and vulnerable individuals,” he said, “who do require protection against all variants of COVID-19,” the illness caused by the Chinese Communist Party (CCP) virus. Health agencies around the world generally consider older individuals, those with compromised immune systems, and people who work in high-risk settings to be vulnerable.

The United Kingdom recently announced that it secured 114 million vaccine doses for 2022 and 2023. Those doses will be provided to everyone aged 18 and older by the end of January 2022.

On Monday, President Joe Biden called on Americans aged 18 and older to get a booster shot due to the emergence of the Omicron COVID-19 variant in southern Africa that has been detected in at least five U.S. states for far.

South African health officials said in interviews this week that those who have contracted the Omicron variant, named by the WHO last week, are presenting “extremely mild” symptoms. There have been no deaths associated with the COVID-19 strain, which officials described as heavily mutated, and WHO officials cautioned is not enough data so far to determine whether it can cause more severe disease or breach the protection afforded by natural immunity or vaccination.

In some countries, it’s required to get a booster dose six months after the initial vaccination regimen in order to be considered “fully vaccinated.” Already, officials in the United States, including the governors of New Mexico and Connecticut, are claiming that one cannot be considered fully vaccinated unless they’ve obtained a

Earlier this year, Israel attached receiving the booster dose as a condition to using that country's "green pass" COVID-19 vaccine passport to enter certain businesses. Meanwhile, pharmaceutical giant Pfizer told BBC that vaccine boosters will be likely needed every year from now on.

Ryan's comments come as other WHO officials criticized the United States, European countries, Israel, and others for imposing travel bans on southern African nations due to the Omicron variant. Previously, WHO's leader, Tedros Adhanom Ghebreyesus, urged wealthier countries to provide initial vaccine doses to poorer nations, rather than focusing on giving booster doses to their own population.

Utilizing Repurposed Drugs to Treat COVID-19 Virus

By E.J. Ledet and Dean L. Gano

January 1, 2021

In the latest edition of The World Health Organization's [*Ongoing Living Update of Potential COVID-19 Therapeutics: Summary of Rapid Systematic Reviews*](#),¹ they say there are more than 200 therapeutic options or combinations thereof that are being investigated in more than 1,700 clinical trials treating COVID-19 infection. In this November 30, 2020 review they examined 58 of these therapeutic options. Among the therapeutics being studied are Vitamins C & D, and manmade drugs like Hydroxychloroquine, Remdesivir, and Ivermectin.

So typical of everything our trusted health care institutions do, their analysis is anything but objective or scientific. At the core of their failures is the total lack of evidenced based causal analysis, but it is much more than that. They provide declaratory statements like: "the body of evidence on hydroxychloroquine (HCQ), showed no benefit in terms of mortality reduction." But, when we look more closely at their evidence for this statement, we find they only looked at 30 studies and of those, only 6 showed that HCQ worked to prevent infection. So, given their "body of evidence," this is a valid statement.

However, had they looked at the entire body of scientific evidence, and performed a simple search for "hydroxychloroquine effective treatment for coronavirus," at the National Institute of Health (NIH) website, PubMed they would find over [800 scientific papers](#)² have been written on this subject and most of them show it works. When you find a review that says it doesn't work, you nearly always find the study patients are in the late stages of COVID-19 infection, where no antiviral drug can be expected to have much effect, and/or no Zinc was administered. As [Dr. Zelenko](#)³ has said, Hydroxychloroquine is the gun and Zinc is the bullet, yet these people don't seem to know anything about these causes.

So, given this clear observation that they cherry-picked their evidence, what's going on and where can we find the real science on this subject?

The Real Science

First and foremost, the problem here is the total failure of all the government-controlled health organizations to provide the simple causal relationships surrounding these viruses so you, the normal citizen, can make up your own mind. This is how life works! From the time we start learning about the world as small children, we observe, test, and determine the many causal relationships that guide us down the path to success. Like learning that fire is hot and will burn you if you don't avoid it. Or, that if people lie to you, you can't trust them in future interactions.

So, what are the causal relationships of a coronavirus so we can act accordingly and prevent infection? Just like we learned to avoid fire to prevent getting burned. It can't be that complicated, can it?

Indeed, it is not that complicated, but you have to be curious and look for all the causes, not just the ones that support preconceived ideas or support political propaganda. When a coronavirus enters the body, it tries to get inside a cell somewhere on the surface of the respiratory tract so it can reproduce, and we know that nose cells are likely the [key infection source for COVID-19](#).⁴ If the virus does enter a cell, it replicates, kills the cell, and spreads the newly produced viruses through breathing or coughing. When you breath in, the viruses go deeper into the lungs and the process repeats itself. As the immune system responds with too many killer T-Cells, your lungs fill with fluid and you suffocate. But this doesn't happen to healthy young people, so what's going on?

Our natural immune system defense against all viruses occurs when compounds in the foods we eat (called ionophores), from Vitamins like C, D, and E, flavonoids like Quercetin, or hormones like Melatonin create a slightly basic/alkaline environment in and around the cell. This alkaline environment disassembles the virus proteins rendering them harmless. Also, the body is made up of many [epithelial cells](#)⁵ found on the surfaces of our bodies that act like gatekeepers; keeping out environmental problems like dirt and pathogens but allowing healthy cell biology to function. One of the mechanisms these special cells use is to allow zinc to attach to a specific receptor site on the cell's surface, like a little door entrance, called an ACE-2 receptor site. (ACE stands for Angiotensin-converting enzyme which acts as a biological catalyst in normal cell biology.)

This site is used as a primary defense to prevent a virus from entering a cell, by keeping it in the alkaline environment long enough to disassemble the virus. The Zinc transporters, called ionophores, that create this alkaline environment also help Zinc get inside the cells through this "door." Once inside, the zinc acts as a backup defense mechanism to disassemble the virus if they get inside.

But this is only one way Zinc is used to protect us. As defined in this NIH study, [The Potential Impact of Zinc Supplementation on COVID-19 Pathogenesis](#),⁶ July 2020, Zinc works in nine different ways to prevent a viral infection and maintain a healthy immune system. Making sure we have enough blood serum zinc is most important in the elderly and patients with various inflammatory and autoimmune diseases. And obesity, which is present in 40% of Americans, causes Zinc deficiency and may account for why deaths are so high in the US.

So, because Zinc is so important to a healthy immune system we can see why older and unhealthy people, who are zinc deficient, are so much more likely to die. All of the COVID-19 [co-morbidity causes identified by the CDC involve Zinc-deficiencies](#).⁷ They either cause it, like obesity, or are caused by it, like old age, and their treatment involves Zinc-ionophores and Zinc supplements. Since Zinc is involved in over 300 bodily functions it should be no surprise that such a deficiency could cause so many problems.

So, in summary, the cause of death is uncontrolled virus replication, which is caused by a failure of the immune system to stop the virus from entering our lung cells. This failure

is caused by a lack of zinc and zinc ionophores, which is caused by many medical conditions, the greatest of which is old age.

When 97.5% of the COVID-19 deaths are people over 45 years old and 94% of those who die have an average of 2.6 comorbidity causes linked to zinc deficiency you know there has to be a causal connection and now you know what it is, so take action to protect yourself from this horrible disease.

Prevention

Now that we know how the immune system works to prevent infection, we know that the first line of defense is Zinc and zinc ionophores on the outside of our cells. Please note, you do not “kill” a virus, because it is not a living organism; it is just a protein molecule made of Ribonucleic acid (RNA), a basic building block of life, and by subjecting it to a low-acid environment called a “base compound” it disassembles and falls apart. This occurs when enough zinc ionophores like Vitamins C, D, and E and/or Zinc are present in the blood stream.

But there are other kinds of Zinc ionophores. In fact, there are over two billion of them and they have been identified in the [ZINC20 database](#)⁸ provided by the American Chemical Society funded by a subsidiary of NIH (National Institute of Health). When you look at this database you will find that nearly all of the proposed synthetic drug treatments for the COVID-19 virus, like Hydroxychloroquine, Chloroquine, Remdesivir, and Ivermectin and other natural substances are all listed as zinc ligand (metal transporter) ionophores. And they work by first disassembling the virus via pH modifications on the outside of the cell or if that fails, they take zinc inside the cell to stop the replication process. In effect, you have two compounds, zinc and zinc ionophores fighting both outside and inside our cells. When you are young, this all happens naturally and is why to date, [only 147 children under the age of 18](#)⁹ have died from COVID-19 in the US.

While we have heard a lot about drugs like Hydroxychloroquine and Remdesivir, we haven't heard much about Ivermectin, which is a repurposed drug normally used as a medical preparation that effectively copes with many kinds of parasites. It is a prescription drug used to treat lice, scabies, as well as onchocerciasis (river blindness) and other nematodes in humans and animals. It is applied externally in a cream and internally as a pill, depending on the disease.

Appearing as a witness on Dec. 8, 2020, before the Senate Committee on Homeland Security and Governmental Affairs—which held a hearing on “Early Outpatient Treatment: An Essential Part of a COVID-19 Solution”—Dr. Pierre Kory, President of the [Frontline COVID-19 Critical Care Alliance \(FLCCC\)](#),¹⁰ called for the government to swiftly review the already expansive and still rapidly emerging medical evidence on Ivermectin.

The data shows the ability of the drug Ivermectin to prevent COVID-19, to keep those patients with early symptoms from progressing to the hyper-inflammatory phase of the disease, and even to help critically ill patients recover. [Dr. Kory testified](#) ¹¹ that Ivermectin is effectively a “miracle drug” against COVID-19 and called upon the government’s medical authorities—the NIH, CDC, and FDA—to urgently review the latest data and then issue guidelines for physicians, nurse-practitioners, and physician assistants to prescribe Ivermectin for COVID-19.

In the process of learning about Ivermectin, the Frontline COVID-19 Critical Care Alliance created, based on feedback from doctors from around the world who were treating COVID-19 patients, a protocol for treatment called MATH+ and published a paper in the Journal of Intensive Care Medicine titled: [Clinical and Scientific Rationale for the “MATH+” Hospital Treatment Protocol for COVID-19](#). ¹²

MATH+” stands for Methylprednisolone, which is a corticosteroid and zinc ionophore; Ascorbic acid (Vitamin C), which is a zinc ionophore; Thiamine (Vitamin B1) also a zinc ionophore; Heparin, which is a blood thinner and zinc ligand/ionophore; and the “+” stands for hospital care and co-interventions including Ivermectin, which is a strong zinc ionophore; Vitamin D and Melatonin, which are also zinc ionophores; Zinc, and Famotidine which is an antacid and zinc ligand/ionophore.

Notice how all of these therapeutics provide the exact causal defense our natural immune system uses (Zinc and Zinc Ionophores) to effectively fight the virus when you are young and healthy! It should be no surprise then, that they are highly effective at treating and preventing COVID-19 infection in the rest of the population. However, Big Pharma does not disclose that all of these synthetic drugs are zinc ligand ionophores because they can’t make big money selling zinc or these repurposed existing drugs that have been around for decades.

Given this causal evidence that supports the use of the MATH+ protocol, it begs the question of why our trusted scientific institutions have failed to follow the science and instead provide obfuscation and non-causal narratives focused on personalities and politics. Remember how the corporate media attacked the use of Hydroxychloroquine simply because President Trump said it works after hearing the real science? Instead of following the evidenced-based science, they proceeded to sell fear and hate and killed hundreds of thousands of people in the process.

Incompetence or Planned?

In every negative analysis of these repurposed drugs, the authors totally fail to acknowledge the causal relationships between the virus and immune system like we just laid out for you. Instead, they focus on presenting a narrative about outcomes of specific studies that have nothing to do with the causes of the problem. So, the question becomes: how can you possibly provide a solution to any problem if you don’t understand and state the causal relationships of the event? You can’t, and that means they are grossly incompetent or deliberately deceiving us. This is not rocket science.

We all know, as a basic human strategy, that to solve a problem you first have to know what the causes are; and they never do this in these phony studies.

Also, given that effective problem-solving is not taught by our education system, it is possible that these people are just ill-trained incompetents, but there is another possibility and we need to explore it.

Just ask yourself, if the anti-HCQ or anti-Ivermectin papers were actually peer reviewed why didn't the peer scientists ask the same simple questions we have? Like, why did they ignore the causal relationships we have presented; that are common knowledge, supported by hundreds of studies? Why didn't they check the blood-serum Zinc level of the patients in their study? Because if they had, they would have probably found that most of those who responded well to HCQ or Ivermectin, had high blood serum Zinc levels and those who did not respond well, had low levels of Zinc.

And why didn't they question the supposed adverse effects of HCQ, when we know that not only is HCQ not dangerous, it is safer than Aspirin. A [study at Oxford University](#) ¹³ of 956,000 people from all over the world showed no deleterious effects when recommended doses are used.

And why are our trusted medical journals printing false information? For example, the Journal of the American Medical Association (JAMA) [published an article](#) ¹⁴ claiming HCQ didn't work and also could cause heart rate problems and should not be used without medical supervision. Problem is, they used 400mg twice a day and **did not use Zinc** in their treatment. Toxic doses that are 14 times what is recommended equals toxic results.

And once again, on May 22, 2020, *The Lancet*, a highly respected online medical journal also published a paper saying HCQ was ineffective and dangerous. Because both *The Lancet* and JAMA studies reported that HCQ is dangerous, the FDA rescinded its emergency order allowing HCQ to be prescribed for COVID-19. This also caused several state governors to issue orders to local pharmacies not to fill HCQ prescriptions ordered by many board-certified Doctors for their COVID-19 patients. Something that has never happened before and certainly resulted in more unnecessary deaths.

Also, *The Lancet* finally asked for a detailed peer review regarding the article they published on May 22, 2020 and as reported in [WebMD](#) ¹⁵ they retracted the article because the authors would not provide data that could be adequately peer reviewed, and it was eventually found to be completely false; so at least someone is following scientific protocol. But it speaks volumes to how corrupt the scientific peer review process is. Let's look a little closer.

Whistle Blowers

Several Family Doctors, who have successfully treated many COVID-19 patients, came out in public to question the path our government officials have led us down. One of

them is Dr. Simone Gold, who [exposes the truth about Coronavirus and Hydroxychloroquine](#).¹⁶ These doctors fully understand the causal relationships and hence know the truth.

Also, there are over 50,000 medical professionals from all over the world who are focused on preventing deaths and they have signed the [Great Barrington Declaration](#)¹⁷ asking our government officials to wake up and focus on preventing death. Among other things they state:

Current lockdown policies are producing devastating effects on short and long-term public health. The results (to name a few) include lower childhood vaccination rates, worsening cardiovascular disease outcomes, fewer cancer screenings and deteriorating mental health – leading to greater excess mortality in years to come, with the working class and younger members of society carrying the heaviest burden. Keeping students out of school is a grave injustice.

Also, in an article by the [Alliance For Human Research Protection](#)¹⁸ on June 5, 2020, they report that Dr. Philippe Dousty-Blazy, the former French Health Minister, publicly stated that *The Lancet* and the *New England Journal of Medicine* editors admitted to being pressured by pharmaceutical companies to publish certain results.

When *The Lancet* editor Dr. Richard Horton was asked why it initially published the discredited article discussed above, he said: “*If this continues, we are not going to be able to publish any more clinical research data because pharmaceutical companies are so financially powerful; they are able to pressure us to accept papers that are apparently methodologically perfect, but their conclusion is what pharmaceutical companies want.*”

Also, Marcia Angell, former Editor-In-Chief of the NEJM writes in her 2004 book "The Truth About the Drug Companies": “*The combined profits for the ten drug companies in the Fortune 500 (\$35.9 billion) were more than the profits for all the other 490 businesses put together (\$33.7 billion) [in 2002]... Over the past two decades the pharmaceutical industry has moved very far from its original high purpose of discovering and producing useful new drugs. Now primarily a marketing machine to sell drugs of dubious benefit, this industry uses its wealth and power to co-opt every institution that might stand in its way, including the US Congress, the FDA, academic medical centers, and the medical profession itself.*”

In a recent [open letter](#)¹⁹ to Sir. Anthony Fauci, three board certified doctors made it very clear that he has grossly mishandled the pandemic response by asking him 122 very pointed questions highlighting his inconsistencies, and concluded the following:

“Americans must not continue to die unnecessarily. Adults must resume employment and our youth return to school. Locking down America while awaiting an imperfect vaccine has done far more damage to Americans than the coronavirus. We are confident that thousands of lives would be saved with early treatment of high-risk

individuals with a cocktail of hydroxychloroquine, Zinc, and azithromycin. Americans must not live in fear. As Dr. Harvey Risch's [Newsweek article](#)²⁰ declares, "The key to defeating COVID-19 already exists. We need to start using it."

More evidence to support what these leading Physicians said can be found in what the Big Pharma Company "Gilead Sciences" has done. Their magic medicine, which the very reverend Dr. Anthony Fauci wholeheartedly endorses, is Remdesivir and they have put a lot of money pressure on MDs, Medical Journals, Press, Academia, NIH, WHO, and the CDC to discredit HCQ - even though it has 65 years of safe use as a malaria drug and 40 years of safe use to treat lupus and some forms of arthritis.

[Gilead contributes big money](#)²¹ to the [income of 20% of the National Institute of Health](#)²² (NIH) Board Members and since Dr. Fauci heads the NIAID, one of 27 institutes that make up the NIH it might be hard for him to contradict them. And, oh-by-the-way, he is [not required to disclose any ties to Big Pharma](#).²³ Gilead also funds Academic Medical Research and as we learned above, cleverly influences Medical Journal Publishers.

Gilead, being focused on money not saving lives, has spent hundreds of millions of dollars in research, marketing, and propaganda, to sell its 5-day injection treatment for \$2,340 versus \$25 or less for HCQ pills that can be bought over-the-counter in most of the world.

Bottom Line

Given what we know about how simple it is to treat and prevent COVID-19 infections using off label medicines and easily available compounds that mimic how a healthy immune system works, why are our trusted leaders not telling us this? Who created and spread this virus and why? And while we don't have evidenced based causes to answer these questions, we do know one thing. We still live in a free country, for now, but if "we the people" continue to act like sheep, all of our freedoms will be taken away, so we must act now. Please do everything you can to get this simple solid science out to everyone you know and let your leaders at every level of government know we are not going to accept their phony narratives and lying anymore!

I, **Dr. Jane Ruby**, being duly sworn, depose and state as follows:

1. I make this affidavit in support of the above-referenced MOTION as expert testimony in support thereof. I understand that I am swearing or affirming under oath to the truthfulness of the claims made in this affidavit under penalties of perjury. I have read these statements in this affidavit, these statements are my understanding of the facts and my opinion provided is based upon a reasonable degree of medical and pharmaceutical industry processes certainty. I am providing this affidavit as I have serious, grave concerns for the United States military and the public-at-large.

2. The expert opinions expressed here are my own and arrived at from my personal, professional and educational experiences taken in context, where appropriate, by scientific data, publications, treatises, opinions, documents, reports and other information relevant to the subject matter.

Experience & Credentials

3. I am competent to testify to the facts and matters set forth herein. A true and accurate copy of my *curriculum vitae* is attached hereto as **Exhibit A**.

4. I have personal knowledge and understanding of these matters and I make this affidavit in support of the truth of the contents contained herein.

5. After receiving a bachelor's degree from Alfred University, I completed my master's degree as a Sigma Theta Tau, cum laude graduate from the University of Rochester, Rochester, NY. I went on to complete my nurse practitioner residency at the University of Rochester, Internal Medicine, with a sub-specialty in Medical and Surgical Cardiology. My clinical experiences include being on the staffs of Rochester General Hospital and the University of Rochester Medical Center.

6. I taught undergraduate and graduate nursing curricula at Nazareth College of Rochester. I served on the faculty of the Margaret Warner Graduate School of Education and Human Development of the University of Rochester where I taught doctoral research methods. I hold a second master's degree in International Health Economics and Pharmacoeconomics from Universitat Pompeu Fabra in Barcelona, Spain. I have two earned doctorates, an EdD and a PhD.

7. I was the managing Director of the Scharf Institute for Neuroscience and Sleep Research in Rochester, New York. In that capacity I managed all personnel including medical doctors, psychologists, medical technicians, polysomnographers, and nurses. My main role was to oversee the execution of multicenter pharmaceutical Phase 2 and Phase 3 human research studies with approved protocols and to follow a patient informed consent process as directed by any number of Institutional Review Boards (IRB), some of which were privately based and others that

were situated in universities and colleges, both certified by the federal government. I also created and wrote original research protocols and informed consent documents for industry and IRB review and approval, as I am highly trained in the requisite elements of a human study protocol. I am also familiar with human subjects' safety during clinical trials.

8. I have over twenty years of experience in pharmaceutical drug development and medical affairs, including the prior experience described as a principal investigator for multi-center randomized, placebo-controlled trials in the United States and ROW. My experience extends to interfacing with FDA guidance documents, regulations, and submission reviews. My experience in the pharmaceutical industry extends to medical affairs functions, regulatory functions, animal and human subjects research study methodology and health economic and patient outcomes research.

Opinion

9. Since the outset of the pandemic, I have been an advocate of good health and health practices and evaluated the health effects of these products that I believe have been authorized and approved prematurely. I believe within a reasonable degree of medical certainty that the COVID-19 vaccines available and under mandate in the United States are not safe generally; and particularly dangerous for military personnel. It is my belief, based upon a reasonable degree of medical certainty, that the injection could cause serious and permanent injury and the deaths of military personnel in the course of their duties to protect the American people, the American homeland and the U.S. Constitution.

10. I believe within a reasonable degree of medical certainty that the data upon which Department of Defense has based its mandate is flawed and/or inaccurate; and imposing these injections is dangerous and could cause harm to military members.

11. It is my opinion that the processes undertaken for all of the Emergency Use Authorizations and specifically for the recent FDA approval of the Comirnaty (including the Pfizer-BioNTech Covid 19 Vaccine injections deemed by both the FDA and the Pfizer Inc., to be "the same formulation" and "interchangeable," – please see <https://www.fda.gov/vaccines-blood-biologics/qa-comirnaty-covid-19-vaccine-mrna> and <https://www.pfizer.ca/COMIRNATY-Now-Health-Canada-Approved>) are incomplete and missing key standard study data, FDA required data to establish safety and efficacy, and all safety surveillance and pharmacovigilance processes.

**COVID-19 Vaccine Research and Development – Inherent Dangers and Omission of
Standard Safety Structures for Investigational Trials**

12. In the Pfizer COMIRNATY and Pfizer-BioNTech Covid 19 Vaccination Series package insert, (See Exhibit B), the label states that on December 11, 2020, during the randomized, placebo-controlled pivotal trial (the research design required for FDA approval), “participants were “unblinded to offer placebo participants COMIRNATY,” which in my expert opinion, immediately transformed the study (as the company itself indicated in its registry on ClinicalTrials.gov, NCT04368728) into **a modified-open label, observational, variable dose trial with no informed consent** as to the status change, the exact dosage, or full disclosure of ingredients and completely compromised the requisite data for license application and that should render the study data insufficient and inappropriate to file for or be considered for review for FDA approval. What resulted was the distribution of an incomplete marketing label out to the public. In my expert opinion this is an egregious and fraudulent misrepresentation of the **Safe and Effective** statements made to the public.

13. The COVID-19 genetic modification injections (Pfizer, Moderna, J&J) failed to test for standard parameters in human studies. The areas missing critical study results include genotoxicity, mutagenicity, teratogenicity, and oncogenicity. In other words, it is not certain if these products will permanently change human genetic material, cause birth defects, reduce fertility, or cause cancer. Pfizer and Moderna claim to use similar mRNA technology and Moderna has stated that the mRNA does indeed intermingle and modify the recipient’s genetic code, characterizing it as the patient’s “operating system,” (see <https://www.modernatx.com/mrna-technology/mrna-platform-enabling-drug-discovery-development>). Of concern, the manufacturer publicly declares on their website that the mechanism of action of their mRNA is as follows: “[g]enerally, the only thing that changes from one potential mRNA medicine to another is the coding region – the actual genetic code that instructs ribosomes to make protein. Utilizing these instruction sets gives our investigational mRNA medicines a software-like quality. We also have the ability to combine different mRNA sequences encoding for different proteins in a single mRNA investigational medicine.” (Source: <https://www.modernatx.com/mrna-technology/mrna-platform-enabling-drug-discovery-development>). To my knowledge, there is no informed consent, nor anything stamped with the approval of a human subjects’ review board, to the public advising that they are submitting to a permanent change in their native genetic sequencing or any of their natural genetic material.

14. When compared to other, standard package inserts/labeling of FDA approved drugs, biologics, and medical devices, there is also an absence of a description of the molecular structure of the biologic. This is a further failure to disclose to medical prescribers, the formula and molecular weight. These disclosures are critical because they determines the fate of a

compound regarding molecular interactions in the body generally and in the presence of concomitant medication therapy.

15. In the human trial for Comirnaty / Pfizer-BioNTech Covid-19, the protocol lists a significant number of exclusions whereby subpopulations of people and those with certain medical comorbidity or conditions could not enter the trial; this results in the absence of controlled trial data for both safety and efficacy. In my expert opinion, this should render any mandates for those populations as **contraindications**. These populations or conditions are missing from the final Approval label (See **Exhibit B**). Taken from the Pfizer protocol for Comirnaty / Pfizer-BioNTech Covid Vaccine protocol (Clinicaltrials.gov, see Study NCT04368728) are as follows:

- a. Medical or psychiatric condition including recent (within the past year) or active suicidal ideation/behavior or laboratory abnormality that may increase the risk of study participation or, in the investigator's judgment, make the participant inappropriate for the study.
- b. Known infection with human immunodeficiency virus (HIV), hepatitis C virus (HCV), or hepatitis B virus (HBV).
- c. History of severe adverse reaction associated with a vaccine and/or severe allergic reaction (e.g., anaphylaxis) to any component of the study intervention(s).
- d. Receipt of medications intended to prevent COVID 19.
- e. Previous clinical (based on COVID-19 symptoms/signs alone, if a SARS-CoV-2 NAAT result was not available) or microbiological (based on COVID-19 symptoms/signs and a positive SARS-CoV-2 NAAT result) diagnosis of COVID 19.
- f. Individuals at high risk for severe COVID-19, including those with any of the following risk factors:
 - i. Hypertension
 - ii. Diabetes mellitus
 - iii. Chronic pulmonary disease
 - iv. Asthma
 - v. Current vaping or smoking
 - vi. History of chronic smoking within the prior year
 - vii. BMI >30 kg/m²
- g. Anticipating the need for immunosuppressive treatment within the next 6 months.
- h. Individuals currently working in occupations with high risk of exposure to SARS-CoV-2 (e.g., healthcare worker, emergency response personnel).
- i. Immunocompromised individuals with known or suspected immunodeficiency, as determined by history and/or laboratory/physical examination.

- j. Individuals with a history of autoimmune disease or an active autoimmune disease requiring therapeutic intervention.
- k. Bleeding diathesis or condition associated with prolonged bleeding that would, in the opinion of the investigator, contraindicate intramuscular injection.
- l. **Women who are pregnant or breastfeeding.**
- m. Previous vaccination with any coronavirus vaccine. *(These did not exist at the time).*
- n. Individuals who receive treatment with immunosuppressive therapy, including cytotoxic agents or systemic corticosteroids, e.g., for cancer or an autoimmune disease, or planned receipt throughout the study.
- o. Regular receipt of inhaled/nebulized corticosteroids.
- p. Receipt of blood/plasma products or immunoglobulin, from 60 days before study intervention administration or planned receipt throughout the study.
- q. Participation in other studies involving study intervention within 28 days prior to study entry through and including 6 months after the last dose of study intervention, with the exception of non-Pfizer interventional studies for prevention of COVID 19, which are prohibited throughout study participation.
- r. Previous participation in other studies involving study intervention containing lipid nanoparticles.
- s. Positive serological test for SARS-CoV-2 IgM and/or IgG antibodies at the screening visit.
- t. Any screening hematology and/or blood chemistry laboratory value that meets the definition of a \geq Grade 1 abnormality.
- u. Positive test for HIV, hepatitis B surface antigen (HBsAg), hepatitis B core antibodies (HBc Abs), or hepatitis C virus antibodies (HCV Abs) at the screening visit.
- v. SARS-CoV-2 NAAT-positive nasal swab within 24 hours before receipt of study intervention.
- w. Less than 12 years of age. *this is particularly significant because Pfizer-BioNTech companies have requested EUA for <12 years of age, including 2-11 year olds with no randomized, controlled study data and no proof of Human Subjects Review Board evaluation and approval.*

16. The COVID-19 genetic modification vaccines (Pfizer, Moderna, J&J) failed to disclose or conduct and/or include any study results for standard pre-licensing safety that would adequately and at a minimum, inform prescribers and patients of serious considerations. These findings are, by good standard practices, included in the Prescriber's Information / Package Insert, commonly referred to as the Label. The missing studies and results include key information such as:

- a. Pharmacokinetics – studies on the fate of the drug after administration:
 - i. Drug Half Life
 - ii. Drug-Drug Interactions (against standard metric drugs)
 - iii. Absorption
 - iv. Elimination
 - v. Receptor Affinity
 - vi. Tissue and Body Fluid Mass and Volume
 - vii. Drug Metabolism
 - viii. Maximum Drug Concentration
 - ix. Time to Concentration
 - x. CYP450 Isoenzyme Impact on Liver and Drug: Identification of the microsomes in this system that are affected by this biologic and how that may interfere with or enhance effect on liver function. Interaction with this human enzyme system of concern can increase or decrease the mechanism of action of other medications or endogenous hormones and enzymes.
- b. Pharmacodynamics – the entity's actions on the body
 - i. Receptor Binding – a critical component for drug-drug interactions and safety issues related to mechanism of action.
 - ii. Drug Effect at Receptor Binding, *particularly Angiotensin Converting Enzyme-2 Receptors, the key receptor for the resulting Subunit 1 pathogen, the Spike Protein resulting from the Pfizer, Moderna, and J&J self-proclaimed mechanism of action (MOA).*
 - iii. Concentration of the Drug at the Receptor Sites

17. There are four phases to human trials in drug development and Phase 3 is most critical as it comprises the last phase of testing to be completed before the drug's details and clinical trial results are submitted to the regulatory authorities for approval of the drug's release on the open market. See Exhibit C, Phases of Human Trials). While Phase 1 focuses on tolerability and safety in a small number of healthy subjects and Phase 2 establishes efficacy and optimal dosing regimen, Phase 3 should demonstrate and confirm the preliminary evidence gathered in the previous trials that the entity is, a safe, beneficial and effective treatment for the intended indication. The absence of findings from this part of the study as well as from the missing elements enumerated in Sections 15 and 16 violate FDA Guidance Expectations for proper review submission and approval.

18. The COVID-19 genetic vaccines (Pfizer, Moderna, J&J) are currently conducting Phases 1, 2 & 3 simultaneously which is dangerous and unprecedented in drug development. My expert position is that this departure from standard human trial phases conduct whereby FDA is allowing Phases 1/2/3 of human trials to run consecutively,

(without Subjects' Informed Consent), is a serious departure from standard human trial phases, which should run *consecutively*, because each Phase must incorporate the results in order to inform the subsequent Phase on next steps for safety and efficacy. See Exhibit C, Phases of Clinical Drug Trials)

19. The COVID-19 genetic vaccines (Pfizer, Moderna, J&J) failed to study the following standard good practice subpopulations for the effects enumerated in the exclusion criteria sufficiently with a placebo control arm:

- a. Age
- b. Gender
- c. Race
- d. Liver Impairment
- e. Kidney/Renal Impairment

20. The COVID-19 genetic vaccines (Pfizer) claim in the labeling (See **Exhibit B**, page 6, section 6.1) that “because clinical trials are conducted under widely varying conditions, adverse reaction rates observed in the clinical trials of a vaccine cannot be directly compared to rates in the clinical trials of another vaccine and may not reflect the rates observed in practice.” The manufacturer uses this unorthodox proclamation to justify failure to conduct safety evaluation that it had planned to do in the manufacturer’s own protocol and in its Pharmacovigilance Plan, both submitted to the FDA and that currently sits on ClinicalTrials.gov, the U.S. government website repository for trial registration. (<https://clinicaltrials.gov/ct2/show/NCT04368728?cond=NCT04368728&draw=2&rank=1>).

- a. Prior to COMIRNATY’s full FDA approval, the FDA issued a Warning regarding the rates of heart inflammation and heart failure in teenagers; but that Warning did not translate equally to the product labeling, no Black Box Warning transferred to the Label, and in fact did not even translate to Contraindications Section for these products.
- b. It is good standard practice to include studies for any entity administered concomitantly with monoamine oxidase inhibitors (MAOIs) and/or include a contraindication for simultaneous use.
- c. Prescribers and medical providers are not only not discouraged, but they are affirmatively encouraged, to proceed with injecting this series into populations that were either excluded in the study or who subsequently reported serious life-threatening adverse events as reported by the federal government’s tracking sites Vaccine Adverse Reporting System (VAERS) and V-Safe.
- d. In direct contradiction to the FDA/CDC Safety meeting in October 2020, prior to the vaccination roll out program, there are no warning or precautions included in the Label relative to the FDA’s known and prior warnings.

- e. The Serious Adverse Event Section in the Label is devoid of data already known to the public through the VAERS and V-SAFE reporting systems, both the only sources for the public to be informed of risks. This raises the question as to why the reported rates of cardiac injury, sudden cardiac death, blood clot caused strokes, teen heart attacks, paralysis and serious permanent motor impairment and blood dyscrasias (as demonstrated by numerous scientists including UK physician Dr. Philippe VanWelbergen, Dr. Barbel Ghitalla, and Dr. Robert Young among others) are absent from the Label. Dr. Robert Young has provided recent evidence that vials of Pfizer, Moderna, Johnson & Johnson, & AstraZeneca properly constituted for individual use per the manufacturers' instructions yielded visual microscopy evidence of lethal parasites, stainless steel aggregations, graphene oxide, and "nanoparticles of bismuth, titanium, vanadium, iron, copper, silicon, aluminum embedded in Pfizer vials." (See **Exhibit D**, Blood smears, Dr. VWB & Dr. BG); Source: <https://www.drrobertyoung.com/post/transmission-electron-microscopy-reveals-graphene-oxide-in-cov-19-vaccines>
- f. Teratogenicity is a primary concern in all experimental medical interventions and drugs under review, and unless it is studied (after human subjects' review board approval), it is a de facto contraindication to give, much less mandate, any medical intervention to a woman of child bearing years, a pregnant woman, or newborn baby. In fact, the reason there is no guidance in the Label for use in pregnant women is because pregnant women were not studied. Women of child-bearing age were also excluded; therefore, no safety data is included in the Label and the Label only indicates that "Available data on COMIRNATY administered to pregnant women is insufficient to inform vaccine-associated risks in pregnancy." If the data is insufficient by the Companies' and the P-B Label, then it should be contraindicated in that population.
 - i. Similarly, the Label states, "It is not known whether COMIRNATY is excreted in human milk." Pursuant to good and standard clinical research practices this would constitute a de facto contraindication.
- g. There is no information or data to guide prescribers on whether to use this and what the degree of safety would be for use in those with concomitant illnesses, otherwise known as medical comorbidity.
- h. There is no information on how to consider dose adjustment for special populations and those already medically compromised.
- i. The Label is missing data and guidance information on Carcinogenesis, Mutagenesis, and Impairment on Fertility – despite the disclosure by Pfizer that researchers during the trial were warned to avoid contact between people of child-bearing age and those who have gotten this entity. (See **Exhibit E**, Pfizer Protocol, page 132).

21. The COMIRNATY product that has been deemed (<https://www.pfizer.com/news/press-release/press-release-detail/pfizer-biontech-covid-19-vaccine-COMIRNATYr-receives-full>) to “have the same formulation [as the Pfizer-BioNTech Covid-19 Vaccine] and can be used interchangeably to provide the Covid-19 vaccination series,” was granted full FDA approval, licensed, and labeled with the Indication “to prevent Covid-19 in individuals 16 years of age and older.” This is in contrast to the a priori primary endpoint in the study protocol (See **Exhibit E**). The primary endpoint is the measure used to validate the entity’s separation from placebo which indicates the degree of efficacy and if the entity statistically separates from placebo, this constitutes the basis for the FDA approved indication or otherwise known as the legal marketing authorization. In the Pfizer protocol NCT04368728 on Clinicaltrials.gov, the primary endpoint was less severe symptoms and lower rates of hospitalizations. Upon FDA approval on August 23, 2021, both the company and the FDA announced the approval of Comirnaty/ Pfizer-BioNTech Covid 19 Vaccine for the indication “to prevent Covid 19.” See Label Exhibit B)

22. The companies declare that the COMIRNATY product, while the same formulation, is currently “unavailable,” in direct contradiction to Pfizer’s statement that COMIRNATY was used in over 20,000 people in 2021. (See **Exhibit B**, Pfizer Package Insert).

23. The FDA approval letter for COMIRNATY, dated August 23, 2021, from RADM Denise Hinton to Pfizer that has been used by the Department of Defense to claim that there is now a “fully licensed vaccine”, constitutes a “deceptive or misleading statement” about a product as that term is used in regards to marketing or labeling a drug or vaccine. Until a vaccine has shown the requisite safety, efficacy, and potency requirements by rigorous scientific studies designed according to FDA’s established standard criteria, the vaccine, in my expert opinion has not been shown to meet the FDA’s own standards for FDA approval.

24. The FDA’s approval letter clearly states that a different vaccine, manufactured by BioNTech Manufacturing GmbH in Germany and known as COMIRNATY, is being approved as a fully licensed vaccine. In this same letter, RADM Hinton also extends the Emergency Use Authorization for the Pfizer BioNtech vaccine. Later in the same letter, RADM Hinton states that the BioNtech vaccine is the equivalent to the COMIRNATY vaccine, while they are “legally distinct”, that no safety or efficacy concerns are present, and that because of the lack of availability of the COMIRNATY vaccine that the Pfizer BioNtech is allowed to be substituted in place of the approved COMIRNATY vaccine. This is all done without any evidence as to how the BioNtech vaccine can be declared safe or effective when it has not even completed a successful Phase III trial. (See Exhibit F for FDA Guidance Document on requirements for Phase 3 trials; <https://www.fda.gov/media/87621/download>. Furthermore, in the Pfizer protocol (See Exhibit E) three formulations are enumerated, with no disclosures on the distinctions:

a. BNT 162b1

- b. BNT 162b2
- c. BNT 162SA
- d. The protocol indicates that injectees will randomly be injected with any one of at least 8 doses including one dose 100mcg, which is essentially >3 times the approved dose, 30 mcg in Comirnaty.

25. The COVID-19 genetic vaccine companies (Pfizer, Moderna, J&J) have not provided complete FDA or the public disclosure on their vaccine boxes, package inserts or labels for all of the ingredients within these injection vials. Vis a vis fundamental human rights, governed by International Law and the Nuremberg Code of 1947, the vaccine-specific ingredient information is critical, required and necessary to know so that any human can make an informed decision whether or not to consent to inoculation.

26. The Pfizer, Moderna, and J&J vaccines are considered “genetic vaccines”, or vaccines produced from gene therapy molecular platforms which, according to US FDA regulatory guidance, are classified as gene delivery therapies and should be under a **fifteen-year** regulatory cycle with annual visits for safety evaluation by the research sponsors. (*Long Term Follow-up After Administration of Human Gene Therapy Products. Guidance for Industry.* FDA-2018-D-2173. 2020. Accessed July 13, 2021, at <https://www.fda.gov/regulatory-information/search-fda-guidance-documents/long-term-follow-after-administration-human-gene-therapy-products>.

27. The FDA has “advised sponsors to observe subjects for delayed adverse events for as long as fifteen years following exposure to the investigational gene therapy product, specifying that the long-term follow-up observation should include a minimum of five years of annual examinations, followed by ten years of annual queries of study subjects, either in person or by questionnaire.” (emphasis added). Thus, the administration of the Moderna, Pfizer, and J&J vaccines should not be undertaken without the proper consent and arrangements for long-term follow-up which are currently not offered in the US. (See, EUA briefing documents for commitments as to follow up: Moderna, Pfizer, J&J).

28. Because the US FDA and CDC have offered no methods of risk mitigation or proof of continued safety surveillance for these serious adverse effects which can lead to permanent disability or death, no one should be pressured, coerced, receive the threat or reprisal, or be mandated to receive one of these investigational products against their will.

29. It is never good, nor standard, nor reasonable research practice to perform a large-scale clinical investigation without the necessary structures in place to ensure the safety and protection of human subjects. These structures include a critical event committee, data safety monitoring board and human ethics committee. These groups in large studies work to objectively assess the safety of the investigational product and research integrity. The goal is to mitigate risk

and protect human subjects. It is my understanding that the COVID-19 vaccine program sponsored by the CDC and FDA has implemented none of these crucial safety structures which, to my knowledge, have never before been omitted from any large-scale clinical investigation, not to mention that the subject clinical investigation is of far greater and unprecedented magnitude and complexity than any of its predecessors. It is my assessment that the COVID-19 clinical investigation has provided no meaningful risk mitigation for subjects (restricting groups, a special assessment of side effects, or follow-up visits) to ensure or improve the safety of the program.

30. According to expert medical opinion, there are emerging trends demonstrating that any Covid-19 vaccine is especially risky for those in the 12 – 29 year-old demographic, with resulting complications in the cardiovascular, neurological, hematologic, and immune systems. (See, Rose J, et al). Increasingly, the medical community is acknowledging the possible risks and side effects inclusive of myocarditis, Bell's Palsy, Pulmonary Embolus, Pulmonary Immunopathology and severe allergic reaction causing anaphylactic shock. See Chien-Te Tseng, Elena Sbrana, Naoko Iwata-Yoshikawa, Patrick C Newman, Tania Garron, Robert L Atmar, Clarence J Peters, Robert B Couch, *Immunization with SARS coronavirus vaccines leads to pulmonary immunopathology on challenge with the SARS virus*, <https://pubmed.ncbi.nlm.nih.gov/22536382/> (last visited June 21, 2021); Centers for Disease Control and Prevention, *Allergic Reactions Including Anaphylaxis After Receipt of the First Dose of Pfizer-BioNTech COVID-19 Vaccine*—United States, December 14–23, 2020 (Jan 15, 2021), <https://www.cdc.gov/mmwr/volumes/70/wr/mm7002e1.htm> (last visited June 26, 2021).

31. The Centers for Disease Control has held emergency meetings on this issue and the medical community is responding to the crisis. It is known that myocarditis causes injury to heart muscle cells and may result in permanent heart damage culminating in heart failure, arrhythmias, and cardiac death. These conditions could call for a lifetime need for multiple medications, implantable cardio defibrillators, and heart transplantation. Heart failure has a five-year 50% survival and would markedly reduce the lifespan of a child or young adult who develops this complication after vaccine-induced myocarditis (McCullough PA, Philbin EF, Spertus JA, Kaatz S, Sandberg KR, Weaver WD; Resource Utilization Among Congestive Heart Failure (REACH) Study. Confirmation of a heart failure epidemic: findings from the Resource Utilization Among Congestive Heart Failure (REACH) study. *J Am Coll Cardiol*. 2002 Jan 2;39(1):60-9. doi: 10.1016/s0735-1097(01)01700-4.

32. COVID-19 vaccine-induced myocarditis has a predilection for young males below age 30 years, a substantial demographic of the US military. The Centers for Disease Control has held emergency meetings on this issue, the medical community is responding to the crisis, and the US FDA has issued a warnings on the Pfizer and Moderna vaccines “Fact Sheet for Patients and Caregivers,” the apparent substitute for an official, and comprehensive Informed Consent

document, for myocarditis. Given the prevalence of this event in younger males, no individual under age 30 under any set of circumstances should feel obliged to take this risk with the current genetic vaccines, particularly the Pfizer and Moderna products. <https://www.fda.gov/news-events/press-announcements/coronavirus-COVID-19-update-june-25-2021>.

33. Multiple recent studies and news reports detail young adults, ages 18-29, dying from myocarditis after receiving the COVID-19 vaccine. According to the CDC, 475 cases of pericarditis and myocarditis have been identified in vaccinated citizens aged 30 and younger. See FDA, *Vaccines and Related Biological Products Advisory Committee June 10, 2021, Meeting Presentation*, <https://www.fda.gov/media/150054/download#page=17> (last visited June 21, 2021).

34. The FDA found that young people ages 12-24 account for 8.8% of the vaccines administered; yet this demographic comprises 52% of the cases of myocarditis and pericarditis reported through May 31, 2021. *Id.*

Table 5: VAERS Report

Preliminary myocarditis/pericarditis reports to VAERS following dose 2 mRNA vaccination, Exp. vs. Obs. (data thru May 31, 2021)

Age groups	Doses admin	Crude reporting rate*	Expected†,‡ Myocarditis/pericarditis cases	Observed† Myocarditis/pericarditis reports
12–15 yrs	134,041	22.4	0–1	2
16–17 yrs	2,258,932	35.0	2–19	79
18–24 yrs	9,776,719	20.6	8–83	196

50–64 yrs	36,951,538	1.3	31–314	39
65+ yrs	42,124,078	0.9	36–358	26
NR	—	—	—	11

8.8% of doses admin { 12–15 yrs, 16–17 yrs, 18–24 yrs } n=277 reports 52.5% of total reports

* Per million doses administered; † Assumes a 31-day post-vaccination observation window; ‡ 528 reports with symptom onset within 30 days of vaccination shown; † Based on Gubernot et al. U.S. Population-Based background incidence rates of medical conditions for use in safety assessment of COVID-19 vaccines. Vaccine. 2021 May 14;39(20):3788-3798.

35. Furthermore, the CDC announced on June 24, 2021, that the vaccine is “likely linked” to myocarditis. “Advisory Board, CDC panel reports ‘likely association’ of heart inflammation and mRNA COVID-19 vaccines in young people,” (June 24, 2021) <https://www.advisory.com/daily-briefing/2021/06/24/heart-inflammation>.

36. On July 12, 2021 the US FDA sent out an additional warning for Guillain-Barre Syndrome or ascending paralysis for the J&J vaccine which is not predictable and, when it occurs, can result in ascending paralysis, respiratory failure, the need for critical care and death. Not all

cases completely resolve, and some vaccine victims may require long term mechanical ventilation, or become quadra- or paraplegics. Prolonged neurological rehabilitation is commonly required, and this will call for time away from school and studies for those children injured from the J&J vaccine with Guillain-Barre Syndrome. <https://www.fda.gov/media/150723/download>

Risks of COVID-19 Vaccines for Those Recovered from COVID-19

37. There is recent research demonstrating that the COVID-19 vaccine is dangerous for those who have already had COVID-19 and recovered with inferred robust, complete, and durable immunity. These patients were excluded from the FDA-approved clinical trials performed by Pfizer, Moderna, and J&J. From these trials the safety profile was unknown when the products were approved for Emergency Use Authorization in 2020. There has been no study demonstrating clinical benefit with COVID-19 vaccination in those who have well documented or even suspected prior COVID-19 illness.

38. To my knowledge, there are no studies that demonstrate the clinical benefit of COVID-19 vaccination in COVID-19 survivors or those with suspected COVID-19 illness or subclinical disease who have laboratory evidence of prior infection.

Conclusion

I have reviewed the Complaint For Declaratory and Injunctive Relief which delineates the aforementioned significant departures from standard procedures, protocols and safety measures and conclude as follows:

39. It is my expert medical opinion that it is not good, nor standard, nor reasonable professional research or clinical practice to widely utilize these never-before-tested-in-human beings, biologic therapy (mRNA, adenoviral DNA COVID-19 vaccines) in populations where there is no information generated from fully completed, controlled registrational trials with the FDA, specifically COVID-19 survivors, suspected COVID-19-recovered, pregnant or women who could become pregnant at any time after investigational vaccines; and especially our military.

40. In my expert opinion, the risks associated with the investigational COVID-19 vaccines far outweigh any theoretical benefits, are not minor or unserious, and many of those risks are unknown and have not been adequately quantified; nor the duration of their consequences evaluated or shown to be calculable. Therefore, in my expert medical opinion, the Emergency Use Authorization and FDA Approval for the administration of COVID-19 vaccines creates an unethical, unreasonable, clinically unjustified, unsafe, and unnecessary risk to the military of the United States of America.

41. The gross deviations in conducting adequate safety and efficacy studies, the lack of disclosure on product content, the absence of informative trial data in good clinical research practices for basic categories and conditions, the absence of Human Subjects Review (HSRB)

oversight, the absence of Good Manufacturing Practices oversight created by the FDA, the lack of a full human subjects' review board approval stamped, informed consent for replaced only by an abbreviated patient one-page checklist, and the deviations and omissions from protocol to Label are of great concern to me. In my expert opinion, the foregoing constitutes a lack of scientific justification for the Approval, all Emergency Use Authorizations, and any mandated administration of both the COMIRNATY and Pfizer-BioNTech vaccine formulations, both of which have been declared by the companies as one and the same.

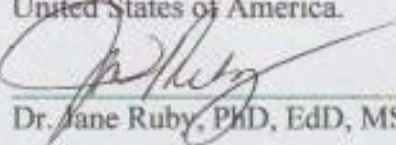

State of Florida

County of Palm Beach

The undersigned, being duly sworn, deposes and says:

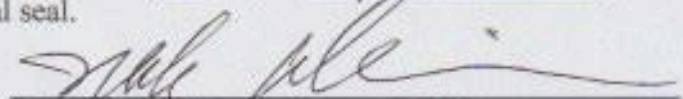

I, Jane Ruby, declare under the penalty of perjury of the laws of the United States of America, and state upon personal knowledge that:

I am an adult of sound mind, over 21 years old, and declare that the information herein is true, correct and complete and that I have voluntarily affirmed this affidavit based upon my own personal knowledge, education, and experience, and under the penalty of perjury of the laws of the United States of America.

Dr. Jane Ruby, PhD, EdD, MS, MS Economics, NP

SUBSCRIBED AND SWORN TO BEFORE ME on the 27 day of September 2021,
to certify which witness my hand and official seal.

Re: *COVID-19 vaccination in pediatric populations*

Dear Mr. Becerra, Dr. Walensky, Dr. Woodcock, Dr. Marks, and Dr. Shimabukuro:

We write on behalf of Mr. Patrick de Garay, Mrs. Stephanie de Garay, and Maddie de Garay (“**the de Garay family**”) regarding one of the most important issues in this country right now: COVID-19 vaccination in pediatric populations. To date, Pfizer’s Comirnaty is approved for children ages 16 and 17 and authorized for emergency use in children 12 through 15, with authorization expected shortly for children 5 through 11. Before any additional authorizations or approvals for children are granted, it is imperative that you properly account for what occurred to Mr. and Mrs. de Garay’s 12-year-old daughter, Maddie, in Pfizer’s clinical trial.

The only rigorous way to ensure safety and efficacy is via appropriate clinical trials which do not ignore serious adverse events occurring in those trials. Pfizer’s clinical trial for children aged 12-15 included 2,260 participants, half of who received the vaccine and half who received a placebo. Meaning, only 1,131 children were vaccinated and at least one of those children, Maddie de Garay, suffered a devastating, life-altering injury which, despite incontrovertible proof and the

cries of both the victim and her parents, has not been acknowledged by the sponsor (“Pfizer”) or the Food and Drug Administration (“FDA”).

For a virus for which children have a 99.998% chance of surviving, the FDA must ensure there is an even more remote chance of a serious adverse event from any vaccine intended to prevent harm from the virus.¹ Therefore, we implore you to carefully consider the following information.

A. COVID-19 in Children

A research team at Johns Hopkins analyzed approximately 48,000 children under 18 years old diagnosed with COVID-19 and found a **mortality rate of zero** among children who did not have a pre-existing medical condition such as leukemia.² Neither the FDA nor the CDC have put forth data to dispute this.³

Despite what appears to be a continued effort to inflate COVID-19 numbers and induce fear among parents,⁴ according to one study, the infection fatality rate for those aged 5 to 9 is less

¹ See <https://pubmed.ncbi.nlm.nih.gov/33137809/>.

Age Group	Male Median% (95%CrI) [Individual serostudy range]	Female Median% (95%CrI) [Individual serostudy range]	Mean Median% (95%CrI) [Individual serostudy range]
0-4	0.003 (0.002-0.004) [0.001-0.006]	0.003 (0.002-0.003) [0.001-0.005]	0.003 (0.002-0.003) [0.001-0.006]
5-9	0.001 (0.000-0.001) [0.000-0.001]	0.001 (0.000-0.001) [0.000-0.001]	0.001 (0.000-0.001) [0.000-0.001]
10-14	0.001 (0.001-0.002) [0.000-0.002]	0.001 (0.000-0.001) [0.000-0.001]	0.001 (0.001-0.001) [0.000-0.002]
15-19	0.003 (0.002-0.003) [0.001-0.005]	0.002 (0.002-0.003) [0.001-0.005]	0.003 (0.002-0.003) [0.001-0.005]

Table S3. Ensemble model age- and sex-specific infection fatality ratio estimates and the respective ranges suggested by individual national-level seroprevalence surveys.

² <https://s3.amazonaws.com/media2.fairhealth.org/whitepaper/asset/Risk%20Factors%20for%20COVID-19%20Mortality%20among%20Privately%20Insured%20Patients%20-%20A%20Claims%20Data%20Analysis%20-%20A%20FAIR%20Health%20White%20Paper.pdf>.

³ According to the Centers for Disease Control and Prevention (“CDC”), 605 children (under 19 years old) have died with a COVID-19 diagnosis (186 ages 0 through 4 years old, 419 ages 5 through 18 years old) in a 21.5-month period. See <https://data.cdc.gov/NCHS/Provisional-COVID-19-Deaths-Focus-on-Ages-0-18-Yea/nr4s-juj3>. There has been no data released by the CDC showing whether these children died *from* COVID-19 or *with* COVID-19 or if these children had any pre-existing conditions. The data are for “deaths involving COVID-19.” There is also no further age stratification and no understanding of how many of the children that died were 18 years old vs how many were 5 years old.

⁴ CDC Director Walensky made the claim that vaccinating one million adolescents for COVID-19 would prevent 200 hospitalizations and 1 death over a four-month period. However, the hospitalization report relied upon for this analysis, just like the death count, does not distinguish whether the child hospitalizations are *for* COVID-19 or *with*

than 0.001 percent.⁵ A large new study from the U.K. examining the fatality rate among all those under 18 found it to be similarly incredibly rare — 0.005 percent.⁶ Based on data following the Delta variant, “[i]n states where data was available, less than 2% of all child COVID-19 cases required hospitalization and 0.00% to 0.03% were fatal.”⁷ This is not a severe or deadly pandemic for children as the data has clearly and consistently shown.

B. Potential Risks in Vaccinating Children for COVID-19

Since it is exceedingly rare for a child to have a permanent injury from being infected with SARS-CoV-2, it must be determined that the vaccine presents even less risk.

1. Maddie de Garay

Maddie de Garay was a typical 12-year-old little girl: full of energy, spunk, gymnastic moves, and TikTok dances. Maddie, along with her two brothers, took part in Pfizer’s pediatric clinical trial for the COVID-19 vaccine. Since the day she received the second dose of the vaccine, the vibrant girl Maddie’s parents once knew has disappeared, replaced with a girl who lives her life in agony.

Within 24 hours of arriving at the trial site with her dad and receiving her second shot, Maddie developed crippling, scream-inducing pain that landed her in the emergency room. She was experiencing abdominal, muscle, and nerve pain, described as the feeling of someone “ripping [her] heart out through [her] neck.”

Over the next three months, Maddie was admitted to the hospital three times, visited doctors and emergency rooms more than that, and developed additional life-changing symptoms including: gastroparesis, erratic blood pressure, erratic heart rate, memory loss, brain fog, dizziness, fainting, seizures, verbal tics, motor tics, loss of feeling from her waist through her toes, muscle weakness, drastic and adverse changes in her vision, urinary retention, loss of bladder control, and the start of and severely irregular menstrual cycles. Maddie currently has an NG tube and uses a wheelchair for assistance.

The list of “post-vaccination symptoms” that her mother has detailed and tracked in an effort to help her daughter is over 23 pages long (through only August 2021) and is heartbreaking

COVID-19. In other words, if a child gets hurt in an accident and brought to the hospital and is tested as part of hospital protocol and tests positive, that child may be counted as a child COVID-19 hospitalization even though the hospitalization could not be prevented regardless of how many people are vaccinated. Evidencing this issue with Walensky’s claims is the June 11, 2021 Morbidity and Mortality Weekly Report of that analysis which revealed that 45.7% of the admissions had to be analyzed separately “because their primary reason for admission might not have been directly COVID-19-related. See https://www.cdc.gov/mmwr/volumes/70/wr/mm7023e1.htm?s_cid=mm7023e1_w.

to read. It tells the story of a 12-year-old girl's life being drastically altered by worsening symptoms that, at times, had her saying she "couldn't do this anymore" and that she "wanted to give up."

Pfizer, on the other hand, reported this in its trial documents to the FDA as follows:

"One participant experienced an SAE reported as generalized neuralgia, and also reported 3 concurrent non-serious AEs (abdominal pain, abscess, gastritis) and 1 concurrent SAE (constipation) within the same week. The participant was eventually diagnosed with functional abdominal pain. The event was reported as ongoing at the time of the cutoff date."⁸

The juxtaposition of Ms. de Garay's careful and tragic recording of her child's experience post-vaccination and Pfizer's description of same is shocking to the conscience. To equate Maddie's life-altering ailments that leave her unable to eat by mouth or to walk herself to the kitchen as "functional abdominal pain" is at best dishonest. To regulators, it should be criminal.

In fact, at least one doctor at the National Institutes of Health, Dr. Avindra Nath, is aware of Maddie's experience. When learning of her post-vaccination adverse events, he replied to Mrs. de Garay, **"We have certainly heard of a lot of cases of neurological complications form [sic] the vaccine** and will be glad to share our experience with them."⁹

Despite a May 24, 2021 letter sent to Dr. Marks, Dr. Woodcock, and Dr. Walensky (and others) from COVID-19 vaccine injured individuals pleading for acknowledgement and help,¹⁰ and Dr. Nash's knowledge, *we will assume that, until this point, you have not been aware of Maddie's story and of Pfizer's "reporting" of same.* We make this assumption, despite evidence to the contrary, because it appears unthinkable that you would not have taken action or contacted the family had you actually been aware of her devastating injury. Either way, you are now on notice. Maddie's journey has been documented and is ongoing. All relevant medical records are being provided by email through a secure link. If Pfizer has not disclosed the truth, it is your responsibility as regulators to ensure that this is remedied forthwith.

Clinical trials are meant to identify and report incidents just like Maddie's in order to help determine the safety and efficacy of vaccines. It is troubling, to say the least, that this has happened and that this vaccine has been authorized without a reliable clinical trial – a trial that reported a life-altering injury as "functional abdominal pain" is plainly an unreliable trial. If Pfizer hid this serious adverse event, it calls into question all of the safety reporting from this trial.

⁸ <https://www.fda.gov/media/148542/download> at 30.

⁹ See appended May 2021 email exchange with Mrs. de Garay and Dr. Nash.

¹⁰ https://www.c19vaxreactions.com/uploads/1/3/7/7/137732232/letter_initials_2.pdf. Communications with Dr. Woodcock following this letter included discussions about Maddie. In addition, Mrs. de Garay exchanged emails with the NIH about Maddie and other individuals communicated with the FDA and with VRBPAC about Maddie's story.

Every parent offered the Pfizer Covid-19 vaccine should be informed of Maddie's experience prior to giving or withholding consent on behalf of their child. Indeed, without a true picture of the benefits and risks of this product, no parent's consent can be truly informed. On a larger scale, regulators and their advisors should be informed of Maddie's experience prior to being asked to provide any further approval or recommendation of this product. They indeed should be asked to reconsider current authorizations and approvals of this product for children.

We are not naïve to the reality that after the FDA has fanatically promoted Pfizer's Covid-19 vaccine to the American people – which began before the FDA even approved the product – asking it to now admit it made a mistake as to this product and children is akin to asking the FDA's leadership to cut their own throats. It would take an incredible amount of selflessness to admit such a mistake. Hence, at the least, before even considering authorizing or licensing this product for any further age span of children, a thorough investigation of the clinical trial conduct and data for children is demanded, as well as an expanded trial in order to gather sufficient data to confirm safety.

Given that the actual severe harm to Maddie was not disclosed by Pfizer to the FDA, it must ask what other serious adverse events have been hidden from your view and ignored by regulators?

2. Identified Risks from Clinical Trials and Post-Authorization Use

Unfortunately, even putting aside the misrepresentations related to Maddie's serious harm, the Phase II/III clinical trial for Pfizer's vaccine in 12-15-year-olds¹¹ which led to the FDA's emergency use authorization of this product on May 10, 2021 was underpowered and inadequate to properly test efficacy or safety for the following reasons:

- The trial was not intended to make findings regarding the vaccine's ability to prevent disease or hospitalization. Instead, it was limited to assessing antibody levels and comparing those levels to adult levels.¹²
- The trial was underpowered. It included only 2,260 participants, half of who received the vaccine and half who received a placebo. Meaning, only 1,131 children were vaccinated. This is inadequate to identify any potential adverse events that may occur, nor the statistical significance of same. Without a clinical trial of sufficient size that reviews all potential serious adverse events, such as that experienced by Maddie, for a sufficient duration, this potentially catastrophic result will not be identified prior to licensure.

¹¹ See https://www.nejm.org/doi/10.1056/NEJMoa2107456?url_ver=Z39.88-2003&rfr_id=ori:rid:crossref.org&rfr_dat=cr_pub%20%20pubmed.

¹² As Dr. Woodcock and Dr. Marks have explained: "It's important that the public recognize that, because young children are still growing and developing, it's critical that thorough and robust clinical trials of adequate size are completed to evaluate the safety and the immune response to a COVID-19 vaccine in this population. Children are not small adults." <https://www.fda.gov/news-events/press-announcements/fda-will-follow-science-covid-19-vaccines-young-children>.

- The trial was not representative of most American children. It only included “healthy participants” and excluded those who previously were infected with SARS-CoV-2.¹³ This results in excluding a large proportion of American children since at least 37% of children are estimated by the CDC to have been infected with SARS-CoV-2 as of May 2021¹⁴ and 43% are estimated to have chronic health condition.¹⁵ Moreover, the 12-15-year-olds in the trial were approximately 86% White and 12% Hispanic or Latinx, and only 567 boys were vaccinated in the trial.
- The trial did “not determine whether [the Pfizer] vaccination prevents asymptomatic infection or transmission of SARS-CoV-2.”
- Safety data has only been collected for a few months and “data on longer-term safety and the duration of efficacy and antibody responses in children are not yet available.”¹⁶ From the limited data available, 6% of the participants reported adverse events within the trial, aside from reactogenicity. One participant discontinued vaccination because of a vaccine-related adverse event. Pfizer reported that “few participants in any cohort had serious adverse events, and none were considered by the [Pfizer] investigators to have been vaccine-related.” That the trial was inadequate to detect adverse events was evidenced on June 23, 2021, when the CDC reported the alarming numbers of reported myocarditis and pericarditis cases occurring after COVID-19 vaccination.¹⁷ This adverse event was not picked up in the clinical trial.

As Dr. Woodcock and Dr. Marks have stated:

because young children are still growing and developing, **it’s critical that thorough and robust clinical trials of adequate size are completed to evaluate the safety** and the immune response to a COVID-19 vaccine in this population. **Children are not small adults** – and issues that may be addressed in pediatric vaccine trials can include whether there is a need for different doses or different strength formulations of vaccines already used for adults.¹⁸

Moreover, taking into account the FDA’s guidance that clinical trials should “reflect the product and target condition,”¹⁹ and a 2019 review, authored by researchers at the FDA and Duke University, which found that short-term pediatric studies may not provide complete safety data

¹³ Also excluded were those with “other medical conditions that may make the participant inappropriate for the study,” and those who have had a severe adverse reaction to any other vaccine.

¹⁴ <https://www.cdc.gov/coronavirus/2019-ncov/cases-updates/burden.html>.

¹⁵ <https://pubmed.ncbi.nlm.nih.gov/21570014/>.

¹⁹ <https://www.fda.gov/media/102332/download>.

across all critical periods of growth and development,²⁰ the time frame for the safety review should be longer for minors. The FDA and Duke authors explained that, compared to licensing a drug for adults, “data on drug efficacy and safety in children may require an additional 6 years.”²¹ Since children have not been seriously affected by this virus, the risk of any vaccine must be fully understood in order to weigh it against any potential benefit.

Evidencing the need for longer trials, public health agencies have, over time, identified certain serious, and sometimes fatal, adverse events that are likely caused by COVID-19 vaccines that have not been identified in the trials. To date, these adverse events include anaphylaxis, TTS, and myocarditis. Myocarditis has been seen most frequently in younger people, more frequently in males, and following the second dose. The long-term effects of myocarditis are not fully understood but can be very serious.

And, while not yet acknowledged by the agencies, numerous additional serious side effects are being reported in alarming numbers in the Vaccine Adverse Events Reporting System (“VAERS”) and by healthcare workers across the country with firsthand observations of same, including:

deep vein thrombosis, pulmonary embolisms, new stroke, bleed, autoimmune hepatitis, sudden bilateral pneumonia or COVID-19 infection, syncope with head injury, STEMI, new arrhythmias, new seizure disorders, new chorea movement disorder, return of and new cancers, acute myeloid leukemia, appendicitis, tinnitus, death, and more.

Even if the risks from the COVID-19 vaccines are truly small, there is no reason to expose someone to any risk when their risk of the disease itself is negligible. These known and potential adverse events further demonstrate the inadequacy of the clinical trials.

Perhaps most alarming is Maddie’s “adverse event” that, to date, does not appear at all in Pfizer’s reported trial data. In this small cohort of just over 1,000 children vaccinated, and despite a complete lack of acknowledgement of same in the data, there was at least one severe adverse event to the vaccine. **If this has happened even once in such a small cohort, it is imperative that the manufacturer and the health agencies determine whether there are other similar cases and whether and how often this may happen again to other children.**

²⁰ <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6526087/>.

²¹ *Id.*

C. Conclusion

Since children are at extremely low risk of harm from SARS-CoV-2, and getting the infection actually provides sterilizing immunity, while the vaccine does not,²² children in our country do not need a COVID-19 vaccine. Vaccinating them will not contribute to herd immunity since the vaccine, as you know, does not prevent infection and transmission of the virus.

To the extent a vaccine *is* authorized or approved for children, it must be properly tested and evaluated in a clinical trial that is adequate to determine safety and efficacy. It must further be mandated that those clinical trials accurately report, with full transparency and disclosure, any adverse events observed following vaccination. Vaccine manufacturers must not be allowed to get away with disguising serious adverse events like Maddie's.

The de Garay family ask that you properly respond forthwith to the data and concerns addressed above. In your response, please confirm whether you and your agencies acknowledge Maddie's vaccine injuries and whether you will properly address them both with the de Garay family and with Pfizer. If you deny that Maddie's ailments are injuries from Pfizer's COVID-19 vaccine, please provide your justification. If you admit that Maddie's ailments are vaccine injuries, then we implore you to neither authorize nor approve this vaccine for children until you can properly address all issues and concerns raised by this letter.

If you do not provide a fulsome response that address all concerns raised above by close of business on Monday, October 25, 2021, we have been authorized to file a petition on behalf of the de Garay family regarding any contemplated authorization or licensure of the Pfizer vaccine and to withdraw any existing authorization or licensure of this vaccine for children.

Sincerely Yours,

Aaron Siri, Esq.

Elizabeth A. Brehm, Esq.

CC: Patrick and Stephanie de Garay

²² The clinical trial's primary endpoint for the Covid-19 vaccines is measuring effectiveness against disease – not against infection. <https://pubmed.ncbi.nlm.nih.gov/33332292/>. Once used in the real world, as Dr. Walensky has acknowledged, they do not “prevent transmission.” <https://twitter.com/CNNSitRoom/status/1423422301882748929> This is also confirmed by various studies, including, *inter alia*: <https://pubmed.ncbi.nlm.nih.gov/34351882/>; https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3897733; <https://pubmed.ncbi.nlm.nih.gov/34176436/>; <https://pubmed.ncbi.nlm.nih.gov/34596015/>; <https://www.medrxiv.org/content/10.1101/2021.07.31.21261387v4.full.pdf>; https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1012240/Weekly_Flu_and_COVID-19_report_w33.pdf at 17-18; https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1014926/Technical_Briefing_22_21_09_02.pdf at 21.

VAERS Summary for COVID-19 Vaccines through 11/19/2021

© DEC 1, 2021

Download as PDF

All charts and tables below reflect the data release on 11/29/2021 from the VAERS website, which includes U.S. and foreign data, and is updated through: 11/19/2021

High-Level Summary	COVID19 vaccines (Dec'2020 – present)	All other vaccines 1990-present	US Data Only COVID19 vaccines (Dec'2020 – present)	US Data Only All other vaccines 1990-present
Number of Adverse Reactions	913,268	857,017	664,745	747,775
Number of Life-Threatening Events	21,582	14,113	10,223	9,848
Number of Hospitalizations	97,561	81,699	41,501	38,608
Number of Deaths	19,249*	9,286	8,898	5,199
# of Permanent Disabilities after vaccination	30,967	20,387	10,232	12,702
Number of Office Visits	143,275	47,797	128,111	45,912
# of Emergency Room/Department Visits	101,315	211,713	83,101	202,367
# of Birth Defects after vaccination	671	172	391	98

*Note that the total number of deaths associated with the COVID-19 vaccines is more than double the number of deaths associated with all other vaccines combined since the year 1990.

The Most Important Podcast You Can Hear About COVID-19

Analysis by [Dr. Joseph Mercola](#)

✓ Fact Checked

STORY AT-A-GLANCE

- › Of the COVID-19 deaths in the U.S., none received adequate and/or early-enough treatment. At least 85% of COVID deaths were preventable
- › There are three components to SARS-CoV-2 infection: viral replication, cytokine storm and blood clotting, therefore necessitating a multidrug approach, and treatment must begin early to be effective
- › Research published in 2006 showed hydroxychloroquine reduced viral replication of SARS-CoV-1 (the original SARS virus). It also has well-established anti-inflammatory properties. These two properties help explain its usefulness against COVID-19
- › There were clear intentional efforts to prevent use of hydroxychloroquine against COVID-19, likely in an effort to make the COVID jabs appear necessary
- › You cannot get COVID-19 twice; those with natural immunity have robust, long-lasting immunity. The Pfizer COVID shot, meanwhile, has been shown to have undetectable effectiveness 201 days after the second dose and Moderna's effectiveness reaches zero around day 121

If you could only listen to one podcast to get up to speed on COVID-19, you are in luck as one of the top clinicians in the world on understanding COVID-19, Dr. Peter McCullough, finally made his way to the largest podcast in the world, Joe Rogan and, as expected, it was epic. You will do yourself a serious disservice if you don't watch the entire, nearly three-hour, interview at normal speed.

McCullough is an internist, cardiologist and epidemiologist, and in this podcast, he reviews and summarizes what we know about the COVID jabs. McCullough also discusses the importance of early treatment, which has been universally suppressed and ignored from the start.

He's convinced, and states unequivocally in this interview, that of the COVID-19 deaths in the U.S., none received adequate and/or early-enough treatment. In short, people did not, and certainly don't now, need to die from this infection, barring some serious underlying condition.

It's treatable, and later variants, such as Delta and Omicron, appear generally milder than the original virus, resulting in even easier-to-treat illness. From early on, researchers and clinicians demonstrated that early treatment, be it with hydroxychloroquine, ivermectin or steroids and anticoagulants — in some combination — resulted in far better outcomes and saved lives.

When you just let the infection run its course without treatment, most COVID-19 patients were riddled with blood clots and other complications by the time they were hospitalized. According to McCullough, we know that at least 85% of all COVID deaths could have been avoided with early treatment.

Early Treatment Is Key

In August 2020, McCullough's landmark paper "Pathophysiological Basis and Rationale for Early Outpatient Treatment of SARS-CoV-2 Infection" was published online in the American Journal of Medicine.¹

It was the first published report on how to treat COVID on an outpatient basis and described a comprehensive COVID treatment protocol for frontline doctors. Before this, there were about 4,000 papers discussing the potential benefit of various remedies, but none that actually sought to present a comprehensive protocol for treatment.

A follow-up paper, "Multifaceted Highly Targeted Sequential Multidrug Treatment of Early Ambulatory High-Risk SARS-CoV-2 Infection (COVID-19)" published in Reviews in

Cardiovascular Medicine in December 2020,² became the basis for an AAPS home treatment guide.

Importantly, McCullough and the team of collaborators he put together understood early on that there were three components to this infection: viral replication, cytokine storm and blood clotting, therefore necessitating a multidrug approach.

One drug that gained early attention was hydroxychloroquine, as research published in 2006 showed it reduced viral replication of SARS-CoV-1 (the original SARS virus). It also has well-established anti-inflammatory properties. It's been routinely used in the treatment of lupus, for example. But as explained by McCullough, there were clear intentional efforts to prevent use of the drug against COVID-19.

The U.S. government refused to release its stockpiles, and doctors were told they'd lose their medical license if they used it. The largest manufacturing plant of hydroxychloroquine even mysteriously burned down, and in South Africa, "mercenaries" were breaking into pharmacies and burning the drug.

In addition to that, a fraudulent paper was published in the journal Lancet, falsely stating that hydroxychloroquine was dangerous. "It looked like it was a step to bury hydroxychloroquine as a treatment," McCullough says. When focus shifted to ivermectin, that drug also became inaccessible and was widely vilified as "horse paste" in the mainstream media.

Treatment Was Suppressed for a Reason

Considering the overwhelming success doctors have had in treating the infection with these and other drugs, why aren't hospitals everywhere doing it? Why have health authorities fought against treatment in general, and the use of hydroxychloroquine and ivermectin in particular? In McCullough's words:

"It seems to me, early on, there was an intentional, very comprehensive suppression of early treatment in order to promote fear, suffering, isolation, hospitalization and death. And it seemed to be completely organized and

intentional in order to create acceptance for and then promote mass 'vaccination.'"

The plan to create acceptance for novel mRNA gene transfer technology in lieu of a conventional vaccine by suppressing treatment options has been explained in detail in Dr. Peter Breggin's book, "COVID-19 and the Global Predators: We Are the Prey,"³ and Pamela Popper's book, "COVID Operation: What Happened, Why It Happened and What's Next."⁴ McCullough recommends both, if you want to understand how this was coordinated and planned.

Robert Kennedy Jr.'s book, "The Real Anthony Fauci" also shows, using extensive documentation, that Moderna was working on an mRNA injection for COVID-19 well before the world even knew it existed. He reveals extensive collusion occurred to push this novel gene transfer technology on the world, with devastating effects.

When asked why more doctors aren't using these early treatment protocols, McCullough points out that of the 1 million or so doctors in the U.S., probably only 500 or so actually understand that viable treatments are being suppressed with the intent to drive uptake of the gene transfer shots. Those relatively few who do understand what's going on face censorship and the threat of having their medical license removed if they speak out about treatment.

Questions About Reinfection Linger

A widespread concern that Rogan brings up is whether or not you can actually get COVID twice. According to McCullough, the answer is a hard no. You cannot. You might think you have it twice, because you've tested positive, but we now know that the false positive rate for PCR testing is about 97%.

After intense pressure to produce evidence of reinfection, the U.S. Centers for Disease Control and Prevention finally admitted they don't have a single verified case of someone getting sick with COVID twice.

To prove reinfection, McCullough says, you'd need to have a positive PCR test at a cycle threshold below 28 (not 40 or 45, as is routinely done, which is why the false positive rate is 97%), and a positive antigen immunoassay test to show that you actually had antibodies from the first infection, and a gene sequencing test showing you in fact have the SARS-CoV-2 virus.

What's more, dozens of studies confirm that natural immunity is robust and long-lasting. "So why is there so much resistance to the idea that people have natural immunity?" Rogan asks, to which McCullough replies, "All roads lead to the 'vaccine.'"

Dr. Robert Malone disagrees with McCullough on this issue, pointing to a December 4, 2021, study showing 12% out of a sample of 1,200 individuals experienced COVID reinfection.⁵ In a Twitter post, Malone said:⁶

"I have caught it twice, as has my wife. I was asymptomatic, she was not. This is a rapidly mutating RNA virus. Just like the common cold. The symptoms will not be as severe — but yes, people catch it more than once. Even Delta ..."

Relative Versus Absolute Risk Reduction

Now, when it comes to the efficacy of these COVID shots, the manufacturers have employed a classic strategy to mislead the masses and make the shots sound far better than they actually are. That strategy is looking at relative risk reduction rather than absolute risk reduction.

While the COVID shots boasted efficacy rates between 67% and 95% at the outset, those were the relative risk reductions. The four available COVID shots in the U.S. provide an absolute risk reduction between just 0.7% and 1.3%.^{7,8}

Now, compare that to the noninstitutionalized infection fatality ratio across age groups, which is 0.26%.⁹ Since the absolute risk that needs to be overcome is lower than the absolute risk reduction these injections can provide, mass vaccination simply cannot have a favorable impact. Yet here we are, being told to get used to the idea of getting booster shots at ever-increasing intervals. It just doesn't add up.

Of course, as I've reported on several occasions, research and clinical experience clearly show that the effectiveness of these shots rapidly wanes. Six months after the second dose, your protection is nil. Meanwhile, your body continues producing toxic spike protein for at least 15 months after each dose.

Efficacy Rapidly Wanes

McCullough cites a Swedish study¹⁰ published October 25, 2021, which looked at data from 842,974 pairs, where each person who had received two COVID jabs was paired and compared against an unvaccinated individual, to see if the vaccinated had fewer symptomatic cases and hospitalizations.

Early on, the double-jabbed appeared to have good protection, but that quickly changed. The Pfizer jab went from 92% effectiveness at Day 15 through 30, to 47% at Day 121 through 180, and zero from Day 201 onward. The Moderna shot had a similar trajectory, being estimated at 59% from Day 181 onward. The AstraZeneca injection had a lower effectiveness out of the gate, waned faster than the mRNA shots, and had no detectable effectiveness as of Day 121.

All the while, millions of Americans have already had COVID¹¹ and have natural immunity that doesn't wane in this manner. Yet they are being shunned and fired for not complying with COVID jab mandates. Again, it just doesn't add up. Never before has a vaccine been required for anyone with natural immunity against a disease, and there's good reason for that. It's completely illogical.

Just like you don't need a measles vaccine if you've had measles, you don't need a COVID shot if you've had COVID. In fact, you are at increased risk of adverse events if you do take it. Remember, if you already have natural immunity, you're exposing yourself to the harms of the shot with no hope of benefit.

The Most Dangerous Injections in Medical History

As explained in this interview, the COVID shots are the most dangerous, most lethal drugs ever used — and the U.S. Food and Drug Administration and CDC knew this as early as mid-February, when the deaths reported to the U.S. Vaccine Adverse Events Reporting System (VAERS) hit 182.

Historically, any drug with five unexplained deaths gets a black box warning. At 50 unresolved deaths, it's pulled from the market altogether. None of that happened here. To this day, the FDA and CDC claim not a single death is attributable to the COVID shots, even as the reported death toll is nearing 20,000¹² (including international reports), with half of them occurring within 48 hours of the injection. Eighty percent occur within a week post-injection.

That is simply unheard of. The temporal association is stronger than anything we've seen before. McCullough also cites research concluding that in 86% of cases, there was no other explanation for the death other than the COVID shot.

McCullough points out that in any given year, an average of 150 deaths following vaccination are reported to VAERS. That's 150 deaths from an average of 278 million vaccine doses given.

Here, we had 182 deaths at a point in time when only 27 million doses had been administered. So, you cannot blame it on the volume of shots given. The same trends can be found in other countries' databases as well, such as the U.K.'s Yellow Card scheme.

What's more, vaccine side effects are notoriously underreported, so as staggering as the VAERS data are, they're just the tip of the iceberg. Historically, only 1%¹³ to 10%¹⁴ of adverse effects are reported. For the COVID shots, the underreporting factor has been calculated to be anywhere between 31 and 100. That means that to get a more accurate range, you have to multiply the VAERS number by 31 and 100.

The absolute most-conservative estimate so far is an underreporting factor of five. That estimate came from an FDA whistleblower who used Centers for Medicare and Medicaid Services data to estimate the underreporting in VAERS.¹⁵ According to that

whistleblower, the number of Americans killed by the shots was at least 45,000 as of July 9, 2021. At that time, VAERS reported 9,048 deaths following COVID injection.

Who's at Greatest Risk for COVID Jab Side Effects?

As explained by McCullough, one of the reasons for this massive death toll is the fact that the COVID shot introduces an uncontrolled dose of spike protein into your body — a far greater dose than what you get when naturally infected with the virus. And the spike protein is the most lethal part of the virus. It's responsible for the most problematic symptoms of infection.

So, the shots are killing the same people that would be in dire straits were they infected by the virus. It's also killing some who would likely fare OK with the wild virus but cannot handle the excessive spike protein load produced by the COVID shot.

Consistent Data Point to Clear and Present Danger

As noted by McCullough, we have a very clear safety signal from VAERS. We also have clear biological plausibility, meaning we can explain why and how people might be harmed by these shots. The data are also internally and externally consistent, within VAERS and databases in other countries. The same patterns are seen everywhere.

Normally association does not mean causality unless very specific criteria are met, and in the case of the COVID jabs, those criteria are indeed met. "We've fulfilled what's called the Bradford Hill criteria for causality," McCullough says. In other words, we have evidence that the injuries and deaths are not accidental. The COVID shots are indeed injuring and killing people at unprecedented rates, despite what the lying CDC states.

Myocarditis Will Likely Be Widespread

Interestingly, the shots appear to harm men and women differently. Women are having far higher rates of neurological injuries, whereas boys and young men account for some

80% of myocarditis (heart inflammation). Just how bad is the myocarditis wave?

Research published in 2017¹⁶ calculated the background rate of myocarditis in children and youth, showing it occurs at a rate of four cases per million per year. Assuming there are 60 million American children, the background rate for myocarditis would be 240 cases a year.

How many cases of myocarditis have been reported to VAERS following COVID injection so far? 16,918 as of December 3, 2021,¹⁷ and it's going up by several hundred to a couple of thousand every week. We're also seeing myocarditis in adult men.

“ My fear is, some of these kids who develop myocarditis will be in the 13% category where they have progressive left ventricle dysfunction and heart failure. ~ Dr. Peter McCullough ”

"Doctors have never seen so many cases of myocarditis," McCullough says. "It is frequent, and it is severe." Patients require heart medication, and must remain sedentary for extended periods of time. While myocarditis is typically a nonfatal adverse event, it can shave years off your life.

Research published in 2019 showed 13% of myocarditis cases ends up with progressive heart failure. Their hearts just never fully recover from the damage. In the study, another 36% improved but never fully recovered.

"My fear is, some of these kids who develop myocarditis will be in the 13% category where they have progressive left ventricle dysfunction and heart failure," McCullough says.

While we don't yet know exactly how COVID jab myocarditis compares to naturally-occurring myocarditis, the data we currently have suggest the damage incurred by the spike protein is rather severe.

According to McCullough, 86% of youth who develop myocarditis in response to the jab are sick enough to require hospitalization. Research also shows young boys are far more likely to be hospitalized with myocarditis than they are being hospitalized with COVID-19, McCullough says.

Reject Boosters

If you've taken one or two COVID jabs months ago and nothing bad happened, count your blessings. You're among the lucky ones. If you persist in taking boosters, however, your luck is probably going to run out at some point. It's really only a matter of time before the amount of spike protein in your system overwhelms it, producing noticeable damage.

Again, evidence suggests the spike protein may remain for 15 months post-injection. McCullough believes it will last at least a year after each dose. If you start getting boosters every three to six months, you're never going to get rid of that spike protein.

You'll be adding more and more with each dose, and it's the same spike protein that causes problems in COVID-19. If you fear COVID-19, you ought to be just as fearful of the COVID shots, if not more so, as you end up with far more spike protein from the shot than you do from the natural infection.

At this point in time, the evidence is clearly weighing against the COVID shots. They're causing far more harm than good, especially among children, who are not at high risk of dying from COVID-19 in the first place.

I, **Dr. Jane Ruby**, being duly sworn, depose and state as follows:

1. I make this affidavit in support of the above-referenced MOTION as expert testimony in support thereof. I understand that I am swearing or affirming under oath to the truthfulness of the claims made in this affidavit under penalties of perjury. I have read these statements in this affidavit, these statements are my understanding of the facts and my opinion provided is based upon a reasonable degree of medical and pharmaceutical industry processes certainty. I am providing this affidavit as I have serious, grave concerns for the United States military and the public-at-large.

2. The expert opinions expressed here are my own and arrived at from my personal, professional and educational experiences taken in context, where appropriate, by scientific data, publications, treatises, opinions, documents, reports and other information relevant to the subject matter.

Experience & Credentials

3. I am competent to testify to the facts and matters set forth herein. A true and accurate copy of my *curriculum vitae* is attached hereto as **Exhibit A**.

4. I have personal knowledge and understanding of these matters and I make this affidavit in support of the truth of the contents contained herein.

5. After receiving a bachelor's degree from Alfred University, I completed my master's degree as a Sigma Theta Tau, cum laude graduate from the University of Rochester, Rochester, NY. I went on to complete my nurse practitioner residency at the University of Rochester, Internal Medicine, with a sub-specialty in Medical and Surgical Cardiology. My clinical experiences include being on the staffs of Rochester General Hospital and the University of Rochester Medical Center.

6. I taught undergraduate and graduate nursing curricula at Nazareth College of Rochester. I served on the faculty of the Margaret Warner Graduate School of Education and Human Development of the University of Rochester where I taught doctoral research methods. I hold a second master's degree in International Health Economics and Pharmacoeconomics from Universitat Pompeu Fabra in Barcelona, Spain. I have two earned doctorates, an EdD and a PhD.

7. I was the managing Director of the Scharf Institute for Neuroscience and Sleep Research in Rochester, New York. In that capacity I managed all personnel including medical doctors, psychologists, medical technicians, polysomnographers, and nurses. My main role was to oversee the execution of multicenter pharmaceutical Phase 2 and Phase 3 human research studies with approved protocols and to follow a patient informed consent process as directed by any number of Institutional Review Boards (IRB), some of which were privately based and others that

were situated in universities and colleges, both certified by the federal government. I also created and wrote original research protocols and informed consent documents for industry and IRB review and approval, as I am highly trained in the requisite elements of a human study protocol. I am also familiar with human subjects' safety during clinical trials.

8. I have over twenty years of experience in pharmaceutical drug development and medical affairs, including the prior experience described as a principal investigator for multi-center randomized, placebo-controlled trials in the United States and ROW. My experience extends to interfacing with FDA guidance documents, regulations, and submission reviews. My experience in the pharmaceutical industry extends to medical affairs functions, regulatory functions, animal and human subjects research study methodology and health economic and patient outcomes research.

Opinion

9. Since the outset of the pandemic, I have been an advocate of good health and health practices and evaluated the health effects of these products that I believe have been authorized and approved prematurely. I believe within a reasonable degree of medical certainty that the COVID-19 vaccines available and under mandate in the United States are not safe generally; and particularly dangerous for military personnel. It is my belief, based upon a reasonable degree of medical certainty, that the injection could cause serious and permanent injury and the deaths of military personnel in the course of their duties to protect the American people, the American homeland and the U.S. Constitution.

10. I believe within a reasonable degree of medical certainty that the data upon which Department of Defense has based its mandate is flawed and/or inaccurate; and imposing these injections is dangerous and could cause harm to military members.

11. It is my opinion that the processes undertaken for all of the Emergency Use Authorizations and specifically for the recent FDA approval of the Comirnaty (including the Pfizer-BioNTech Covid 19 Vaccine injections deemed by both the FDA and the Pfizer Inc., to be "the same formulation" and "interchangeable," – please see <https://www.fda.gov/vaccines-blood-biologics/qa-comirnaty-covid-19-vaccine-mrna> and <https://www.pfizer.ca/COMIRNATY-Now-Health-Canada-Approved>) are incomplete and missing key standard study data, FDA required data to establish safety and efficacy, and all safety surveillance and pharmacovigilance processes.

**COVID-19 Vaccine Research and Development – Inherent Dangers and Omission of
Standard Safety Structures for Investigational Trials**

12. In the Pfizer COMIRNATY and Pfizer-BioNTech Covid 19 Vaccination Series package insert, (See Exhibit B), the label states that on December 11, 2020, during the randomized, placebo-controlled pivotal trial (the research design required for FDA approval), “participants were “unblinded to offer placebo participants COMIRNATY,” which in my expert opinion, immediately transformed the study (as the company itself indicated in its registry on ClinicalTrials.gov, NCT04368728) into **a modified-open label, observational, variable dose trial with no informed consent** as to the status change, the exact dosage, or full disclosure of ingredients and completely compromised the requisite data for license application and that should render the study data insufficient and inappropriate to file for or be considered for review for FDA approval. What resulted was the distribution of an incomplete marketing label out to the public. In my expert opinion this is an egregious and fraudulent misrepresentation of the **Safe and Effective** statements made to the public.

13. The COVID-19 genetic modification injections (Pfizer, Moderna, J&J) failed to test for standard parameters in human studies. The areas missing critical study results include genotoxicity, mutagenicity, teratogenicity, and oncogenicity. In other words, it is not certain if these products will permanently change human genetic material, cause birth defects, reduce fertility, or cause cancer. Pfizer and Moderna claim to use similar mRNA technology and Moderna has stated that the mRNA does indeed intermingle and modify the recipient’s genetic code, characterizing it as the patient’s “operating system,” (see <https://www.modernatx.com/mrna-technology/mrna-platform-enabling-drug-discovery-development>). Of concern, the manufacturer publicly declares on their website that the mechanism of action of their mRNA is as follows: “[g]enerally, the only thing that changes from one potential mRNA medicine to another is the coding region – the actual genetic code that instructs ribosomes to make protein. Utilizing these instruction sets gives our investigational mRNA medicines a software-like quality. We also have the ability to combine different mRNA sequences encoding for different proteins in a single mRNA investigational medicine.” (Source: <https://www.modernatx.com/mrna-technology/mrna-platform-enabling-drug-discovery-development>). To my knowledge, there is no informed consent, nor anything stamped with the approval of a human subjects’ review board, to the public advising that they are submitting to a permanent change in their native genetic sequencing or any of their natural genetic material.

14. When compared to other, standard package inserts/labeling of FDA approved drugs, biologics, and medical devices, there is also an absence of a description of the molecular structure of the biologic. This is a further failure to disclose to medical prescribers, the formula and molecular weight. These disclosures are critical because they determines the fate of a

compound regarding molecular interactions in the body generally and in the presence of concomitant medication therapy.

15. In the human trial for Comirnaty / Pfizer-BioNTech Covid-19, the protocol lists a significant number of exclusions whereby subpopulations of people and those with certain medical comorbidity or conditions could not enter the trial; this results in the absence of controlled trial data for both safety and efficacy. In my expert opinion, this should render any mandates for those populations as **contraindications**. These populations or conditions are missing from the final Approval label (See **Exhibit B**). Taken from the Pfizer protocol for Comirnaty / Pfizer-BioNTech Covid Vaccine protocol (Clinicaltrials.gov, see Study NCT04368728) are as follows:

- a. Medical or psychiatric condition including recent (within the past year) or active suicidal ideation/behavior or laboratory abnormality that may increase the risk of study participation or, in the investigator's judgment, make the participant inappropriate for the study.
- b. Known infection with human immunodeficiency virus (HIV), hepatitis C virus (HCV), or hepatitis B virus (HBV).
- c. History of severe adverse reaction associated with a vaccine and/or severe allergic reaction (e.g., anaphylaxis) to any component of the study intervention(s).
- d. Receipt of medications intended to prevent COVID 19.
- e. Previous clinical (based on COVID-19 symptoms/signs alone, if a SARS-CoV-2 NAAT result was not available) or microbiological (based on COVID-19 symptoms/signs and a positive SARS-CoV-2 NAAT result) diagnosis of COVID 19.
- f. Individuals at high risk for severe COVID-19, including those with any of the following risk factors:
 - i. Hypertension
 - ii. Diabetes mellitus
 - iii. Chronic pulmonary disease
 - iv. Asthma
 - v. Current vaping or smoking
 - vi. History of chronic smoking within the prior year
 - vii. BMI >30 kg/m²
- g. Anticipating the need for immunosuppressive treatment within the next 6 months.
- h. Individuals currently working in occupations with high risk of exposure to SARS-CoV-2 (e.g., healthcare worker, emergency response personnel).
- i. Immunocompromised individuals with known or suspected immunodeficiency, as determined by history and/or laboratory/physical examination.

- j. Individuals with a history of autoimmune disease or an active autoimmune disease requiring therapeutic intervention.
- k. Bleeding diathesis or condition associated with prolonged bleeding that would, in the opinion of the investigator, contraindicate intramuscular injection.
- l. **Women who are pregnant or breastfeeding.**
- m. Previous vaccination with any coronavirus vaccine. *(These did not exist at the time).*
- n. Individuals who receive treatment with immunosuppressive therapy, including cytotoxic agents or systemic corticosteroids, e.g., for cancer or an autoimmune disease, or planned receipt throughout the study.
- o. Regular receipt of inhaled/nebulized corticosteroids.
- p. Receipt of blood/plasma products or immunoglobulin, from 60 days before study intervention administration or planned receipt throughout the study.
- q. Participation in other studies involving study intervention within 28 days prior to study entry through and including 6 months after the last dose of study intervention, with the exception of non-Pfizer interventional studies for prevention of COVID 19, which are prohibited throughout study participation.
- r. Previous participation in other studies involving study intervention containing lipid nanoparticles.
- s. Positive serological test for SARS-CoV-2 IgM and/or IgG antibodies at the screening visit.
- t. Any screening hematology and/or blood chemistry laboratory value that meets the definition of a \geq Grade 1 abnormality.
- u. Positive test for HIV, hepatitis B surface antigen (HBsAg), hepatitis B core antibodies (HBc Abs), or hepatitis C virus antibodies (HCV Abs) at the screening visit.
- v. SARS-CoV-2 NAAT-positive nasal swab within 24 hours before receipt of study intervention.
- w. Less than 12 years of age. *this is particularly significant because Pfizer-BioNTech companies have requested EUA for <12 years of age, including 2-11 year olds with no randomized, controlled study data and no proof of Human Subjects Review Board evaluation and approval.*

16. The COVID-19 genetic modification vaccines (Pfizer, Moderna, J&J) failed to disclose or conduct and/or include any study results for standard pre-licensing safety that would adequately and at a minimum, inform prescribers and patients of serious considerations. These findings are, by good standard practices, included in the Prescriber's Information / Package Insert, commonly referred to as the Label. The missing studies and results include key information such as:

- a. Pharmacokinetics – studies on the fate of the drug after administration:
 - i. Drug Half Life
 - ii. Drug-Drug Interactions (against standard metric drugs)
 - iii. Absorption
 - iv. Elimination
 - v. Receptor Affinity
 - vi. Tissue and Body Fluid Mass and Volume
 - vii. Drug Metabolism
 - viii. Maximum Drug Concentration
 - ix. Time to Concentration
 - x. CYP450 Isoenzyme Impact on Liver and Drug: Identification of the microsomes in this system that are affected by this biologic and how that may interfere with or enhance effect on liver function. Interaction with this human enzyme system of concern can increase or decrease the mechanism of action of other medications or endogenous hormones and enzymes.
- b. Pharmacodynamics – the entity's actions on the body
 - i. Receptor Binding – a critical component for drug-drug interactions and safety issues related to mechanism of action.
 - ii. Drug Effect at Receptor Binding, *particularly Angiotensin Converting Enzyme-2 Receptors, the key receptor for the resulting Subunit 1 pathogen, the Spike Protein resulting from the Pfizer, Moderna, and J&J self-proclaimed mechanism of action (MOA).*
 - iii. Concentration of the Drug at the Receptor Sites

17. There are four phases to human trials in drug development and Phase 3 is most critical as it comprises the last phase of testing to be completed before the drug's details and clinical trial results are submitted to the regulatory authorities for approval of the drug's release on the open market. See Exhibit C, Phases of Human Trials). While Phase 1 focuses on tolerability and safety in a small number of healthy subjects and Phase 2 establishes efficacy and optimal dosing regimen, Phase 3 should demonstrate and confirm the preliminary evidence gathered in the previous trials that the entity is, a safe, beneficial and effective treatment for the intended indication. The absence of findings from this part of the study as well as from the missing elements enumerated in Sections 15 and 16 violate FDA Guidance Expectations for proper review submission and approval.

18. The COVID-19 genetic vaccines (Pfizer, Moderna, J&J) are currently conducting Phases 1, 2 & 3 simultaneously which is dangerous and unprecedented in drug development. My expert position is that this departure from standard human trial phases conduct whereby FDA is allowing Phases 1/2/3 of human trials to run consecutively,

(without Subjects' Informed Consent), is a serious departure from standard human trial phases, which should run *consecutively*, because each Phase must incorporate the results in order to inform the subsequent Phase on next steps for safety and efficacy. See Exhibit C, Phases of Clinical Drug Trials)

19. The COVID-19 genetic vaccines (Pfizer, Moderna, J&J) failed to study the following standard good practice subpopulations for the effects enumerated in the exclusion criteria sufficiently with a placebo control arm:

- a. Age
- b. Gender
- c. Race
- d. Liver Impairment
- e. Kidney/Renal Impairment

20. The COVID-19 genetic vaccines (Pfizer) claim in the labeling (See **Exhibit B**, page 6, section 6.1) that “because clinical trials are conducted under widely varying conditions, adverse reaction rates observed in the clinical trials of a vaccine cannot be directly compared to rates in the clinical trials of another vaccine and may not reflect the rates observed in practice.” The manufacturer uses this unorthodox proclamation to justify failure to conduct safety evaluation that it had planned to do in the manufacturer’s own protocol and in its Pharmacovigilance Plan, both submitted to the FDA and that currently sits on ClinicalTrials.gov, the U.S. government website repository for trial registration. (<https://clinicaltrials.gov/ct2/show/NCT04368728?cond=NCT04368728&draw=2&rank=1>).

- a. Prior to COMIRNATY’s full FDA approval, the FDA issued a Warning regarding the rates of heart inflammation and heart failure in teenagers; but that Warning did not translate equally to the product labeling, no Black Box Warning transferred to the Label, and in fact did not even translate to Contraindications Section for these products.
- b. It is good standard practice to include studies for any entity administered concomitantly with monoamine oxidase inhibitors (MAOIs) and/or include a contraindication for simultaneous use.
- c. Prescribers and medical providers are not only not discouraged, but they are affirmatively encouraged, to proceed with injecting this series into populations that were either excluded in the study or who subsequently reported serious life-threatening adverse events as reported by the federal government’s tracking sites Vaccine Adverse Reporting System (VAERS) and V-Safe.
- d. In direct contradiction to the FDA/CDC Safety meeting in October 2020, prior to the vaccination roll out program, there are no warning or precautions included in the Label relative to the FDA’s known and prior warnings.

- e. The Serious Adverse Event Section in the Label is devoid of data already known to the public through the VAERS and V-SAFE reporting systems, both the only sources for the public to be informed of risks. This raises the question as to why the reported rates of cardiac injury, sudden cardiac death, blood clot caused strokes, teen heart attacks, paralysis and serious permanent motor impairment and blood dyscrasias (as demonstrated by numerous scientists including UK physician Dr. Philippe VanWelbergen, Dr. Barbel Ghitalla, and Dr. Robert Young among others) are absent from the Label. Dr. Robert Young has provided recent evidence that vials of Pfizer, Moderna, Johnson & Johnson, & AstraZeneca properly constituted for individual use per the manufacturers' instructions yielded visual microscopy evidence of lethal parasites, stainless steel aggregations, graphene oxide, and "nanoparticles of bismuth, titanium, vanadium, iron, copper, silicon, aluminum embedded in Pfizer vials." (See **Exhibit D**, Blood smears, Dr. VWB & Dr. BG); Source: <https://www.drrobertyoung.com/post/transmission-electron-microscopy-reveals-graphene-oxide-in-cov-19-vaccines>
- f. Teratogenicity is a primary concern in all experimental medical interventions and drugs under review, and unless it is studied (after human subjects' review board approval), it is a de facto contraindication to give, much less mandate, any medical intervention to a woman of child bearing years, a pregnant woman, or newborn baby. In fact, the reason there is no guidance in the Label for use in pregnant women is because pregnant women were not studied. Women of child-bearing age were also excluded; therefore, no safety data is included in the Label and the Label only indicates that "Available data on COMIRNATY administered to pregnant women is insufficient to inform vaccine-associated risks in pregnancy." If the data is insufficient by the Companies' and the P-B Label, then it should be contraindicated in that population.
 - i. Similarly, the Label states, "It is not known whether COMIRNATY is excreted in human milk." Pursuant to good and standard clinical research practices this would constitute a de facto contraindication.
- g. There is no information or data to guide prescribers on whether to use this and what the degree of safety would be for use in those with concomitant illnesses, otherwise known as medical comorbidity.
- h. There is no information on how to consider dose adjustment for special populations and those already medically compromised.
- i. The Label is missing data and guidance information on Carcinogenesis, Mutagenesis, and Impairment on Fertility – despite the disclosure by Pfizer that researchers during the trial were warned to avoid contact between people of child-bearing age and those who have gotten this entity. (See **Exhibit E**, Pfizer Protocol, page 132).

21. The COMIRNATY product that has been deemed (<https://www.pfizer.com/news/press-release/press-release-detail/pfizer-biontech-covid-19-vaccine-COMIRNATYr-receives-full>) to “have the same formulation [as the Pfizer-BioNTech Covid-19 Vaccine] and can be used interchangeably to provide the Covid-19 vaccination series,” was granted full FDA approval, licensed, and labeled with the Indication “to prevent Covid-19 in individuals 16 years of age and older.” This is in contrast to the a priori primary endpoint in the study protocol (See **Exhibit E**). The primary endpoint is the measure used to validate the entity’s separation from placebo which indicates the degree of efficacy and if the entity statistically separates from placebo, this constitutes the basis for the FDA approved indication or otherwise known as the legal marketing authorization. In the Pfizer protocol NCT04368728 on Clinicaltrials.gov, the primary endpoint was less severe symptoms and lower rates of hospitalizations. Upon FDA approval on August 23, 2021, both the company and the FDA announced the approval of Comirnaty/ Pfizer-BioNTech Covid 19 Vaccine for the indication “to prevent Covid 19.” See Label Exhibit B)

22. The companies declare that the COMIRNATY product, while the same formulation, is currently “unavailable,” in direct contradiction to Pfizer’s statement that COMIRNATY was used in over 20,000 people in 2021. (See **Exhibit B**, Pfizer Package Insert).

23. The FDA approval letter for COMIRNATY, dated August 23, 2021, from RADM Denise Hinton to Pfizer that has been used by the Department of Defense to claim that there is now a “fully licensed vaccine”, constitutes a “deceptive or misleading statement” about a product as that term is used in regards to marketing or labeling a drug or vaccine. Until a vaccine has shown the requisite safety, efficacy, and potency requirements by rigorous scientific studies designed according to FDA’s established standard criteria, the vaccine, in my expert opinion has not been shown to meet the FDA’s own standards for FDA approval.

24. The FDA’s approval letter clearly states that a different vaccine, manufactured by BioNTech Manufacturing GmbH in Germany and known as COMIRNATY, is being approved as a fully licensed vaccine. In this same letter, RADM Hinton also extends the Emergency Use Authorization for the Pfizer BioNtech vaccine. Later in the same letter, RADM Hinton states that the BioNtech vaccine is the equivalent to the COMIRNATY vaccine, while they are “legally distinct”, that no safety or efficacy concerns are present, and that because of the lack of availability of the COMIRNATY vaccine that the Pfizer BioNtech is allowed to be substituted in place of the approved COMIRNATY vaccine. This is all done without any evidence as to how the BioNtech vaccine can be declared safe or effective when it has not even completed a successful Phase III trial. (See Exhibit F for FDA Guidance Document on requirements for Phase 3 trials; <https://www.fda.gov/media/87621/download>. Furthermore, in the Pfizer protocol (See Exhibit E) three formulations are enumerated, with no disclosures on the distinctions:

a. BNT 162b1

- b. BNT 162b2
- c. BNT 162SA
- d. The protocol indicates that injectees will randomly be injected with any one of at least 8 doses including one dose 100mcg, which is essentially >3 times the approved dose, 30 mcg in Comirnaty.

25. The COVID-19 genetic vaccine companies (Pfizer, Moderna, J&J) have not provided complete FDA or the public disclosure on their vaccine boxes, package inserts or labels for all of the ingredients within these injection vials. Vis a vis fundamental human rights, governed by International Law and the Nuremberg Code of 1947, the vaccine-specific ingredient information is critical, required and necessary to know so that any human can make an informed decision whether or not to consent to inoculation.

26. The Pfizer, Moderna, and J&J vaccines are considered “genetic vaccines”, or vaccines produced from gene therapy molecular platforms which, according to US FDA regulatory guidance, are classified as gene delivery therapies and should be under a **fifteen-year** regulatory cycle with annual visits for safety evaluation by the research sponsors. (*Long Term Follow-up After Administration of Human Gene Therapy Products. Guidance for Industry.* FDA-2018-D-2173. 2020. Accessed July 13, 2021, at <https://www.fda.gov/regulatory-information/search-fda-guidance-documents/long-term-follow-after-administration-human-gene-therapy-products>.

27. The FDA has “advised sponsors to observe subjects for delayed adverse events for as long as fifteen years following exposure to the investigational gene therapy product, specifying that the long-term follow-up observation should include a minimum of five years of annual examinations, followed by ten years of annual queries of study subjects, either in person or by questionnaire.” (emphasis added). Thus, the administration of the Moderna, Pfizer, and J&J vaccines should not be undertaken without the proper consent and arrangements for long-term follow-up which are currently not offered in the US. (See, EUA briefing documents for commitments as to follow up: Moderna, Pfizer, J&J).

28. Because the US FDA and CDC have offered no methods of risk mitigation or proof of continued safety surveillance for these serious adverse effects which can lead to permanent disability or death, no one should be pressured, coerced, receive the threat or reprisal, or be mandated to receive one of these investigational products against their will.

29. It is never good, nor standard, nor reasonable research practice to perform a large-scale clinical investigation without the necessary structures in place to ensure the safety and protection of human subjects. These structures include a critical event committee, data safety monitoring board and human ethics committee. These groups in large studies work to objectively assess the safety of the investigational product and research integrity. The goal is to mitigate risk

and protect human subjects. It is my understanding that the COVID-19 vaccine program sponsored by the CDC and FDA has implemented none of these crucial safety structures which, to my knowledge, have never before been omitted from any large-scale clinical investigation, not to mention that the subject clinical investigation is of far greater and unprecedented magnitude and complexity than any of its predecessors. It is my assessment that the COVID-19 clinical investigation has provided no meaningful risk mitigation for subjects (restricting groups, a special assessment of side effects, or follow-up visits) to ensure or improve the safety of the program.

30. According to expert medical opinion, there are emerging trends demonstrating that any Covid-19 vaccine is especially risky for those in the 12 – 29 year-old demographic, with resulting complications in the cardiovascular, neurological, hematologic, and immune systems. (See, Rose J, et al). Increasingly, the medical community is acknowledging the possible risks and side effects inclusive of myocarditis, Bell's Palsy, Pulmonary Embolus, Pulmonary Immunopathology and severe allergic reaction causing anaphylactic shock. See Chien-Te Tseng, Elena Sbrana, Naoko Iwata-Yoshikawa, Patrick C Newman, Tania Garron, Robert L Atmar, Clarence J Peters, Robert B Couch, *Immunization with SARS coronavirus vaccines leads to pulmonary immunopathology on challenge with the SARS virus*, <https://pubmed.ncbi.nlm.nih.gov/22536382/> (last visited June 21, 2021); Centers for Disease Control and Prevention, *Allergic Reactions Including Anaphylaxis After Receipt of the First Dose of Pfizer-BioNTech COVID-19 Vaccine*—United States, December 14–23, 2020 (Jan 15, 2021), <https://www.cdc.gov/mmwr/volumes/70/wr/mm7002e1.htm> (last visited June 26, 2021).

31. The Centers for Disease Control has held emergency meetings on this issue and the medical community is responding to the crisis. It is known that myocarditis causes injury to heart muscle cells and may result in permanent heart damage culminating in heart failure, arrhythmias, and cardiac death. These conditions could call for a lifetime need for multiple medications, implantable cardio defibrillators, and heart transplantation. Heart failure has a five-year 50% survival and would markedly reduce the lifespan of a child or young adult who develops this complication after vaccine-induced myocarditis (McCullough PA, Philbin EF, Spertus JA, Kaatz S, Sandberg KR, Weaver WD; Resource Utilization Among Congestive Heart Failure (REACH) Study. Confirmation of a heart failure epidemic: findings from the Resource Utilization Among Congestive Heart Failure (REACH) study. *J Am Coll Cardiol*. 2002 Jan 2;39(1):60-9. doi: 10.1016/s0735-1097(01)01700-4.

32. COVID-19 vaccine-induced myocarditis has a predilection for young males below age 30 years, a substantial demographic of the US military. The Centers for Disease Control has held emergency meetings on this issue, the medical community is responding to the crisis, and the US FDA has issued a warnings on the Pfizer and Moderna vaccines “Fact Sheet for Patients and Caregivers,” the apparent substitute for an official, and comprehensive Informed Consent

document, for myocarditis. Given the prevalence of this event in younger males, no individual under age 30 under any set of circumstances should feel obliged to take this risk with the current genetic vaccines, particularly the Pfizer and Moderna products. <https://www.fda.gov/news-events/press-announcements/coronavirus-COVID-19-update-june-25-2021>.

33. Multiple recent studies and news reports detail young adults, ages 18-29, dying from myocarditis after receiving the COVID-19 vaccine. According to the CDC, 475 cases of pericarditis and myocarditis have been identified in vaccinated citizens aged 30 and younger. See FDA, *Vaccines and Related Biological Products Advisory Committee June 10, 2021, Meeting Presentation*, <https://www.fda.gov/media/150054/download#page=17> (last visited June 21, 2021).

34. The FDA found that young people ages 12-24 account for 8.8% of the vaccines administered; yet this demographic comprises 52% of the cases of myocarditis and pericarditis reported through May 31, 2021. *Id.*

Table 5: VAERS Report

Preliminary myocarditis/pericarditis reports to VAERS following dose 2 mRNA vaccination, Exp. vs. Obs. (data thru May 31, 2021)

Age groups	Doses admin	Crude reporting rate*	Expected†,‡ Myocarditis/pericarditis cases	Observed† Myocarditis/pericarditis reports

8.8% of doses admin { 12–15 yrs, 16–17 yrs, 18–24 yrs } n=277 reports 52.5% of total reports

 * Per million doses administered; † Assumes a 31-day post-vaccination observation window; ‡ 528 reports with symptom onset within 30 days of vaccination shown; † Based on Gubernot et al. U.S. Population-Based background incidence rates of medical conditions for use in safety assessment of COVID-19 vaccines. Vaccine. 2021 May 14;39(20):3788–98.

35. Furthermore, the CDC announced on June 24, 2021, that the vaccine is “likely linked” to myocarditis. “Advisory Board, CDC panel reports ‘likely association’ of heart inflammation and mRNA COVID-19 vaccines in young people,” (June 24, 2021) <https://www.advisory.com/daily-briefing/2021/06/24/heart-inflammation>.

36. On July 12, 2021 the US FDA sent out an additional warning for Guillain-Barre Syndrome or ascending paralysis for the J&J vaccine which is not predictable and, when it occurs, can result in ascending paralysis, respiratory failure, the need for critical care and death. Not all

cases completely resolve, and some vaccine victims may require long term mechanical ventilation, or become quadra- or paraplegics. Prolonged neurological rehabilitation is commonly required, and this will call for time away from school and studies for those children injured from the J&J vaccine with Guillain-Barre Syndrome. <https://www.fda.gov/media/150723/download>

Risks of COVID-19 Vaccines for Those Recovered from COVID-19

37. There is recent research demonstrating that the COVID-19 vaccine is dangerous for those who have already had COVID-19 and recovered with inferred robust, complete, and durable immunity. These patients were excluded from the FDA-approved clinical trials performed by Pfizer, Moderna, and J&J. From these trials the safety profile was unknown when the products were approved for Emergency Use Authorization in 2020. There has been no study demonstrating clinical benefit with COVID-19 vaccination in those who have well documented or even suspected prior COVID-19 illness.

38. To my knowledge, there are no studies that demonstrate the clinical benefit of COVID-19 vaccination in COVID-19 survivors or those with suspected COVID-19 illness or subclinical disease who have laboratory evidence of prior infection.

Conclusion

I have reviewed the Complaint For Declaratory and Injunctive Relief which delineates the aforementioned significant departures from standard procedures, protocols and safety measures and conclude as follows:

39. It is my expert medical opinion that it is not good, nor standard, nor reasonable professional research or clinical practice to widely utilize these never-before-tested-in-human beings, biologic therapy (mRNA, adenoviral DNA COVID-19 vaccines) in populations where there is no information generated from fully completed, controlled registrational trials with the FDA, specifically COVID-19 survivors, suspected COVID-19-recovered, pregnant or women who could become pregnant at any time after investigational vaccines; and especially our military.

40. In my expert opinion, the risks associated with the investigational COVID-19 vaccines far outweigh any theoretical benefits, are not minor or unserious, and many of those risks are unknown and have not been adequately quantified; nor the duration of their consequences evaluated or shown to be calculable. Therefore, in my expert medical opinion, the Emergency Use Authorization and FDA Approval for the administration of COVID-19 vaccines creates an unethical, unreasonable, clinically unjustified, unsafe, and unnecessary risk to the military of the United States of America.

41. The gross deviations in conducting adequate safety and efficacy studies, the lack of disclosure on product content, the absence of informative trial data in good clinical research practices for basic categories and conditions, the absence of Human Subjects Review (HSRB)

oversight, the absence of Good Manufacturing Practices oversight created by the FDA, the lack of a full human subjects' review board approval stamped, informed consent for replaced only by an abbreviated patient one-page checklist, and the deviations and omissions from protocol to Label are of great concern to me. In my expert opinion, the foregoing constitutes a lack of scientific justification for the Approval, all Emergency Use Authorizations, and any mandated administration of both the COMIRNATY and Pfizer-BioNTech vaccine formulations, both of which have been declared by the companies as one and the same.

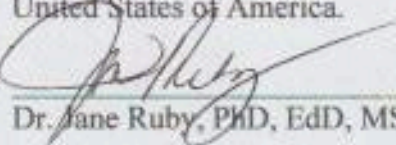

State of Florida

County of Palm Beach

The undersigned, being duly sworn, deposes and says:

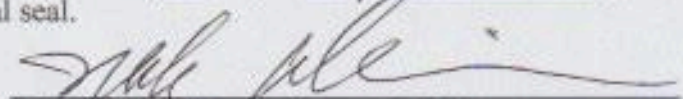

I, Jane Ruby, declare under the penalty of perjury of the laws of the United States of America, and state upon personal knowledge that:

I am an adult of sound mind, over 21 years old, and declare that the information herein is true, correct and complete and that I have voluntarily affirmed this affidavit based upon my own personal knowledge, education, and experience, and under the penalty of perjury of the laws of the United States of America.

Dr. Jane Ruby, PhD, EdD, MS, MS Economics, NP

SUBSCRIBED AND SWORN TO BEFORE ME on the 27 day of September 2021,
to certify which witness my hand and official seal.

COVID-19 “ Experimental” Vaccines

You have the right to make an informed decision about your health and your future and you may be asking: Should I take this experimental vaccine? Here are a few facts you should consider to help you make an informed decision.

Facts:

1. According to the Pharmaceutical Companies themselves, these vaccines may not prevent the SARS-CoV-2 virus: Evidence:
 - a. From the [Moderna](#) and [Pfizer](#) Vaccine Fact Sheets: *The (Moderna/Pfizer) COVID-19 Vaccine is a vaccine and may prevent you from getting COVID-19. There are no FDA approved vaccines to prevent COVID-19.*
 - b. However, the [handout](#) you get when they give you the shot, says it “...has been authorized to prevent COVID-19”, so they are lying about it. They are experimental and have been approved by FDA and CDC via an Emergency Use Authorization (EUA) but have not been fully tested, so are not proven safe.
2. These vaccines are experimental compounds that use “synthetic messenger RNA (mRNA)” housed in fat cells. In 2005 an [animal study](#) was done with SARS-CoV-1 mRNA vaccines on ferrets. Because of major issues, the SARS-CoV-1 vaccine was not further developed.
3. In many previous [clinical trials since the 1960's](#) attempts to [vaccinate against Respiratory Syncytial Virus](#) (RSV) (a pneumonia type virus), [Dengue](#), SARS and MERS, the studies each failed during the animal phase. [Cats, ferrets, monkeys, and rabbits each and every time experienced Antibody Dependent Enhancement](#) (ADE), also known as pathogenic priming or a cytokine storm. This occurs when the immune system creates an uncontrolled and overwhelming inflammatory response upon being confronted with the pathogen in the real world, and the outcome, tragically, is death. The same immune system overreaction took place in a number of infants in [clinical trials who received an attempted RSV shot](#), as well as some six hundred Filipino children who died following early vaccination against Dengue Fever, so [this outcome remains a viable concern today](#).
4. Big Pharma has asked for the normally required animal studies for the CoV19 vaccine to be waived. It was waived for EUA purposes, so there have been no long-term animal studies to see if this could happen with these new mRNA vaccines. WHY?
5. Because these vaccines may or may not prevent infection, and as [some reports show](#), only reduce symptoms, why take something that does not **prevent** the infection in the first place. It is a proven fact, with [hundreds of scientific studies to prove it](#), that Zinc and Zinc ionophores can prevent or mitigate infection in the first place; take them as supplements and you are protected. [The CDC recently said that 80%](#) of all people who were infected with COVID-19 were deficient in Vitamin D, another Zinc ligand (metal binding) ionophore (transporter). And this helps explain why Sub-Saharan Africa and other countries where most people are in the sun a lot [only have marginal deaths from this virus](#).
6. Hydroxychloroquine (HCQ) is a 65-year-old drug that has been shown [to stop an infection](#) if taken within the first 2 – 7 days of getting symptoms from COVID-19. So, if you are taking your preventative Vitamins like C, D, E and Quercetin, and/or other supplements like Melatonin plus Zinc, and for some reason this doesn't prevent infection, you can stop it with Ivermectin + zinc; which is [readily available online](#).

COVID-19 “ Experimental” Vaccines

7. Other synthetic drugs like Budesonide, Dexamethasone, Ivermectin as well as natural substances (i.e., vitamins, flavonoids, amino acids, and hormones) can be found in the Pharmaceutical Zinc20 database, a database funded by a subsidiary of NIH. This database is comprised of ligands, which carry metals like Zinc, Calcium and other micronutrients present in our blood serum and transport them across cell membranes into the body of the cell (cytoplasm) to help our immune system fight infection. Like HCQ, these synthetic drugs need zinc and other micronutrient metals to work. [Dr. Zelenko](#) uses the analogy “the drug is the gun and zinc is the bullet” which is essential to stopping the viral reproduction and resulting infection.
8. Ivermectin is a proven drug for treating all three phases of the COVID-19 disease. Perhaps the best proof is found in India where one [province distributed Ivermectin](#) to most citizens and now they have very few cases and no deaths from the virus. Given such a useful therapeutic exists, it is illegal to authorize the use of vaccines, yet the psychopathic leaders do it anyway.
9. Because these “Vaccines” are unproven experimental substances, we won’t know what side effects may occur for months or years to come, but it may result in a long-term unnatural human manipulation of our DNA building blocks. Do you really want to take that risk or risk your children’s lives? Especially since:
10. There is no pandemic. The number of deaths from COVID-19, [which is highly inflated](#), is no worse than a bad flu season. And your chances of dying from it, even if you do nothing to protect yourself as defined in #5 and #6 above, are [very small according to CDC data](#). For children 17 and under they are 154 times more likely to die from something else. As of April 17, 2021, only 266 children have died with COVID-19. Not a single healthy child has died from COVID-19 alone. If you are under 64 years old, your chance of surviving is 99.99%.
11. There is not a cold or flu season, there is a vitamin D deficiency season. Colds and flues occur when the sun is low in the sky and we don’t get enough of it. Or if you live in a big city, you don’t get enough sun all the time and big cities are where most of the COVID deaths have occurred. Take your Vitamin D supplements and your immune system will thank you.
12. Since both experimental vaccines are EUA, both Pfizer and Moderna are indemnified from all legal action resulting from patients experiencing side effects; including death. Since they assume no risk, you are the one who takes all of it! And according to [Dr. Sherri Tenpenny](#) that is not a good idea.
13. According to [Dr. Richard Fleming](#), Ph.D, MD, JD, a renowned cardiologist and researcher, there is a chance that the mRNA from the vaccine can be incorporated into your human DNA by action of the [reverse transcriptase enzyme present in the vaccine](#). This may affect your auto immune system and result in various auto immune diseases. However, for all you who are taking zinc supplements + ionophores and decide to get vaccinated, Dr Fleming stated that he believes Zinc does appear to interfere with the mRNA process of the vaccines to make the spike protein. This means it will probably reduce the symptoms you can get, so make sure you are taking them.
14. The vaccine nano particles of lipid/fat composition, in which the mRNA is transported into your cells, has never been used before in human trials and long-term health effects have not been determined. These lipid nano particles bind with the normal fats in cell

COVID-19 “ Experimental” Vaccines

membranes and allow [entry of thousands of the synthetic mRNA vaccine into your muscle cells](#). Unlike the virus RNA which has to enter through the ACE-2 receptors found on cells, the nano particles create new pathways into cells. Because the ACE-2 receptor sites are where the normal entry of the virus occurs, bypassing this path means a greater amount of mRNA can enter the cell producing increased amounts of the spike protein exacerbating the immune response to the virus. This increased immune reaction can produce the very InflammoThrombotic Response (ITR) responsible for so many deaths. Again, long-term health effects are not known since long-term studies in lab animals have not been conducted. We humans have become the lab rats, and many doctors are reporting large increases in the number of cancer cases since the vaccines started.

15. The CDC [VAERS database](#) only captures about 1% of all the adverse reactions to vaccines, and so far the Pfizer vaccine has 1,218 blood clot reports, Moderna has 1,034, and J & J has 1,000. Therefore, blood clot disorders reported totals 3,272, so if the 1% is accurate, this would mean 327,200 people have had this problem from the vaccines.
16. Like real lab animals you cannot sue these pharmaceutical companies for suffering from any side effects after taking these experimental vaccines. However, companies requiring CoV19 vaccinations as a requirement for employment may be subject to legal action since it violates our civil rights. For an example of a law suit against the government go here: <https://factcheckedorg.files.wordpress.com/2021/09/joseph-jensen-lawsuit.pdf>
17. It's against the [Nuremberg code](#) to force vaccinations on a person, and [informed consent](#) overrides public policy. Federal law prohibits employers and others from using vaccines under EUA as a [condition](#) of employment.
18. For 35 more facts on the potential dangers of these vaccines, go to [No Jab For Me](#).
19. Or, for 18 more reasons not to get these Experimental Vaccines see: [18 Reasons I Won't Be Getting a Vaccine](#) by Christian Elliot.
20. The choice to take an experimental EUA COVID-19 vaccine is yours to make. Hopefully we have given you the facts to make a better-informed decision.

Good luck and good health to you all.

On COVID vaccines: why they cannot work, and irrefutable evidence of their causative role in deaths after vaccination

Sucharit Bhakdi, MD and Arne Burkhardt, MD

This text is a written summary of Dr. Bhakdi's and Dr. Burkhardt's presentations at the Doctors for COVID Ethics symposium that was live-streamed by [UKColumn](#) on December 10th, 2021. The two presentations can be viewed at the very beginning of [the video recording](#) of the symposium.

The authors

Dr. Bhakdi has spent his life practicing, teaching and researching medical microbiology and infectious diseases. He chaired the Institute of Medical Microbiology and Hygiene at the Johannes Gutenberg University of Mainz, Germany, from 1990 until his retirement in 2012. He has published over 300 research articles in the fields of immunology, bacteriology, virology and parasitology, and served from 1990 to 2012 as Editor-in-Chief of Medical Microbiology and Immunology, one of the first scientific journals of this field that was founded by Robert Koch in 1887.

Dr. Arne Burkhardt is a pathologist who has taught at the Universities of Hamburg, Berne and Tübingen. He was invited for visiting professorships/study visits in Japan (Nihon University), the United States (Brookhaven National Institute), Korea, Sweden, Malaysia and Turkey. He headed the Institute of Pathology in Reutlingen for 18 years. Subsequently, he worked as an independent practicing pathologist with consulting contracts with laboratories in the US. Burkhardt has published more than 150 scientific articles in German and international scientific journals as well as contributions to handbooks in German, English and Japanese. Over many years he has audited and certified institutes of pathology in Germany.

The evidence

We herewith present scientific evidence that calls for an immediate stop of the use of gene-based COVID-19 vaccines. We first lay out why the agents cannot protect against viral infection. While no positive effects can be expected, we show that the vaccines can trigger self-destructive processes that lead to debilitating illness and death.

Why the vaccines cannot protect against infection

A fundamental mistake underlying the development of the COVID-19 vaccines was to neglect the functional distinction between the two major categories of antibodies which the body produces in order to protect itself from pathogenic microbes.

The first category (secretory IgA) is produced by immune cells (lymphocytes) which are located directly underneath the mucous membranes that line the respiratory and intestinal tract. The antibodies produced by these lymphocytes are secreted through and to the surface of the mucous membranes.

These antibodies are thus on site to meet air-borne viruses, and they may be able to prevent viral binding and infection of the cells.

The second category of antibodies (IgG and circulating IgA) occur in the bloodstream. These antibodies protect the internal organs of the body from infectious agents that try to spread via the bloodstream.

Vaccines that are injected into the muscle – i.e., the interior of the body – will only induce IgG and circulating IgA, not secretory IgA. Such antibodies cannot and will not effectively protect the mucous membranes from infection by SARS-CoV-2. Thus, the currently observed “breakthrough infections” among vaccinated individuals merely confirm the fundamental design flaws of the vaccines. Measurements of antibodies in the blood can never yield any information on the true status of immunity against infection of the respiratory tract.

The inability of vaccine-induced antibodies to prevent coronavirus infections has been reported in recent scientific publications.

The vaccines can trigger self-destruction

A natural infection with SARS-CoV-2 (coronavirus) will in most individuals remain localized to the respiratory tract. In contrast, the vaccines cause cells deep inside our body to express the viral spike protein, which they were never meant to do by nature. Any cell which expresses this foreign antigen will come under attack by the immune system, which will involve both IgG antibodies and cytotoxic T-lymphocytes. This may occur in any organ. We are seeing now that the heart is affected in many young people, leading to myocarditis or even sudden cardiac arrest and death. How and why such tragedies might causally be linked to vaccination has remained a matter of conjecture because scientific evidence has been lacking. This situation has now been rectified.

Histopathologic studies: the patients

Histopathologic analyses have been performed on the organs of 15 persons who died after vaccination. The age, gender, vaccination record, and time of death after injection of each patient are listed in the table on the next page. The following points are of utmost importance:

- Prior to death, only 4 of the 15 patients had been treated in the ICU for more than 2 days. The majority were never hospitalized and died at home (5), on the street (1), at work (1), in the car (1), or in home-care facilities (1). Therefore, in most cases, therapeutic intervention is unlikely to have significantly influenced the post-mortem findings.
- Not a single death was brought into any possible association with the vaccination by the coroner or the public prosecutor; this association was only established by our autopsy findings.
- The initially performed conventional post-mortems also uncovered no obvious hints to a possible role of vaccination, since the macroscopic appearance of the organs was overall unremarkable. In most cases, “rhythmicogenic heart failure” was postulated as the cause of death.

But our subsequent histopathological analyses then brought about a complete turnaround. A summary of the fundamental findings follows.

Case #	Gender	Age (years)	Vaccine (injections)	Time of death after last injection
1	female	82	Moderna (1. and 2.)	37 days
2	male	72	Pfizer (1.)	31 days
3	female	95	Moderna (1. and 2.)	68 days
4	female	73	Pfizer (1.)	unknown
5	male	54	Janssen (1.)	65 days
6	female	55	Pfizer (1. and 2.)	11 days
7	male	56	Pfizer (1. and 2.)	8 days
8	male	80	Pfizer (1. and 2.)	37 days
9	female	89	Unknown (1. and 2.)	6 months
10	female	81	Unknown (1. and 2.)	unknown
11	male	64	AstraZeneca (1. and 2.)	7 days
12	female	71	Pfizer (1. and 2.)	20 days
13	male	28	AstraZeneca (1.), Pfizer (2.)	4 weeks
14	male	78	Pfizer (1. and 2.)	65 days
15	female	60	Pfizer (1.)	23 days

Histopathologic studies: findings

Histopathologic findings of a similar nature were detected in organs of 14 of the 15 deceased. Most frequently afflicted were the heart (14 of 15 cases) and the lung (13 of 15 cases). Pathologic alterations were furthermore observed in the liver (2 cases), thyroid gland (Hashimoto's thyroiditis, 2 cases), salivary glands (Sjögren's Syndrome; 2 cases) and brain (2 cases).

A number of salient aspects dominated in all affected tissues of all cases:

1. inflammatory events in small blood vessels (endothelitis), characterized by an abundance of T-lymphocytes and sequestered, dead endothelial cells within the vessel lumen;

2. the extensive perivascular accumulation of T-lymphocytes;
3. a massive lymphocytic infiltration of surrounding non-lymphatic organs or tissue with T-lymphocytes.

Lymphocytic infiltration occasionally occurred in combination with intense lymphocytic activation and follicle formation. Where these were present, they were usually accompanied by tissue destruction.

This combination of multifocal, T-lymphocyte-dominated pathology that clearly reflects the process of immunological self-attack is without precedent. Because vaccination was the single common denominator between all cases, there can be no doubt that it was the trigger of self-destruction in these deceased individuals.

Conclusion

Histopathologic analysis show clear evidence of vaccine-induced autoimmune-like pathology in multiple organs. That myriad adverse events deriving from such auto-attack processes must be expected to very frequently occur in all individuals, particularly following booster injections, is self-evident.

Beyond any doubt, injection of gene-based COVID-19 vaccines places lives under threat of illness and death. We note that both mRNA and vector-based vaccines are represented among these cases, as are all four major manufacturers.

Referenced Data for Parents Concerning the Pfizer COVID-19 Vaccination for Children Aged 5 through 11 Years

Steven J. Hatfill, M.D.

On Oct 29, 2021, the Food and Drug Association (FDA) extended its Emergency Use Authorization (EUA) for the Pfizer-BioNTech “vaccine” to be given to reduce serious COVID-19 infections in children aged 5 through 11 years. The FDA provided little evidence for its decision except for a minimal sized “immunobridging” study, which incorrectly considered blood antibody levels to be the same thing as immunity to the SARS-CoV-2 virus, the cause of COVID-19. It is not—especially when using an mRNA “vaccine” that is demonstrably no longer working in the older age groups.

The Pfizer COVID-19 mRNA vaccine is not really a “vaccine” in the true sense of the word. It does not provide long-term immunity like the existing vaccines for measles, polio, chickenpox, and smallpox. Rather, it is an experimental nucleic acid preparation that is associated with rare but catastrophic side effects in individuals aged 12 and older. The administration of the Pfizer-BioNTech and other mRNA “vaccines” for children aged 5–11 should be a decision between physicians and parents. Alternatively, successful early drug treatments for COVID-19 are available.

The Mass COVID-19 Vaccination of Children Ages 5–11 and Younger Is Not a Safe or Rational Policy

Unlike Adults, Children Are Naturally Resistant to Serious COVID-19 Infection

For a variety of infectious diseases, children respond differently than adults. In the 5–11 age group COVID-19 is generally considered to be a self-limiting infection of the upper airway with only mild symptoms of infection, or no symptoms at all.¹

With respect to fatal outcomes, the infection fatality rate (IFR) of COVID-19 in children is an almost infinitesimal 0.001% to 0.002% in those aged 5–9 years, with a mean increase in the IFR of 0.59% with each five-year increase in age past 10 years.² Overwhelmingly, childhood COVID-19 deaths in the 5–11 age group are due to serious pre-existing comorbidities.

Reasons for the resistance of children to severe COVID-19 include a low number of SARS-CoV-2 virus receptor proteins in the nose and mouth and the fact that this age group demonstrates a robust cross-reactive innate immunity to a variety of RNA viral infections.^{3,4}

Children are not significant transmitters of the SARS-CoV-2 virus to adults or to each other, further adding to the minimal role they have played in the COVID-19 pandemic.^{5,6}

There are currently more than 79 international high-quality research papers demonstrating that convalescing COVID-19 patients develop a natural, robust, cross-reactive, and long-lasting immunity superior to that of individuals given the Pfizer COVID mRNA “vaccine.”⁷ This is how a “herd

immunity” develops. It is by triggering an immune response to multiple viral proteins that may be cross-reactive against future “quasi-species” of the COVID-19 virus. It is not created by triggering an immune response to a single, fast-mutating viral protein such as the “spike protein,” which forms the basis of all the mRNA COVID-19 vaccines.

In addition, there is evidence that convalescent COVID-recovered individuals with new natural immunity **may actually be at a higher risk of adverse vaccine effects if they are then given the Pfizer mRNA “vaccine,”** when compared to naïve individuals not previously infected.⁸⁻¹⁰ **The FDA has absolutely no idea whether this would also be the case for a COVID-recovered and then vaccinated child).**

It would be a formidable task to test all 5–11-year-old American children for a previous COVID-19 infection before administering one of the current mRNA vaccines to them. With the growing unreliability of the mRNA vaccine efficacy in adults and the limited benefit over potential risk of childhood vaccination, this does not appear to be a rational cost-effective public health measure.

As will be discussed, why would we inject an experimental “vaccine” into young children when it does not reliably protect them from infection by the current dominant COVID-19 clades, may make them more prone to hospitalization when they get infected, and is already associated with rare but catastrophic side effects in children 12 and older?

It is important to recognize that a small number of children aged 5–11 with mild or asymptomatic COVID-19 virus exposures may develop a serious generalized inflammatory state a few weeks later. This is termed the multisystem inflammatory syndrome in children (MIS-C). Some scientists are concerned that the Pfizer COVID-19 mRNA “vaccine” may itself trigger MIS-C.¹¹⁻¹²

To complicate the matter, the FDA has recently acknowledged, in its approval letter for Comirnaty (the parallel European version of the Pfizer vaccine), that it was *incapable of accurately monitoring serious adverse side-effects* associated with “vaccination” using the experimental Pfizer-BioNTech COVID-19 mRNA preparation.^{13, p6} Therefore, any tally of the true incidence of MIS-C or other serious side effects linked to the administration of the Pfizer or other mRNA “vaccines” will almost certainly represent a gross undercount with a lack of transparency to parents.

The Pfizer COVID-19 Injection Is Experimental

The FDA classifies the Pfizer-BioNTech COVID-19 mRNA preparation as a *Biologic Product* created to reduce the severity of COVID-19 once an individual is infected. It is an experimental treatment, which seems to provide roughly a six-month period of whatever protection it gives against the early strains of the COVID-19 virus.¹⁴

The mRNA COVID-19 Biological Product Is Not Working as Promised

Unfortunately, the original strains of SARS-CoV-2 are now essentially extinct, having now mutated into other dominant strains such as the widespread Delta variant and its viral quasi-species that are vaccine resistant. Consequently, when considering a childhood vaccination decision, parents should be aware of these related facts:

The Pfizer injection does not reliably protect against COVID-19. Fully vaccinated persons can still be infected with the Delta strain of SARS-CoV-2.¹⁵⁻¹⁷ These fully vaccinated but newly infected persons can transfer their COVID-19 infection to both unvaccinated as well as other fully vaccinated individuals.¹⁸ An Israeli study of 2.5 million patients found that fully vaccinated persons were 6 to 13 times more likely to later become infected with the Delta variant than those who developed natural immunity from a previous COVID-19 infection.¹⁹

Additionally, full mRNA “vaccination” did not reliably protect against more severe disease. In the Israeli study, the risk of developing symptomatic COVID-19 was significantly increased among the fully vaccinated, and their risk of hospitalization was eight times higher compared to persons with naturally developed immunity.

This Israeli data is confirmed by Public Health England data published on Sept 3, 2021, which shows that from Feb 1, 2021, to Aug 29, 2021, there were 1,798 deaths within 28 days of a positive test for the Delta Covid-19 variant. The fully vaccinated population accounted for 1,091 of those deaths, with just 536 deaths occurring among the unvaccinated population.²⁰⁻²¹

Because the Pfizer mRNA COVID-19 Biological Product can no longer reliably prevent infection, re-infection, viral transmission, or death from COVID-19, it is a failed “vaccine.” This was reaffirmed on Aug 6, 2021, when Rochelle Walensky, M.D., director of the Centers for Disease Control and Prevention (CDC), stated that there is “concerning evidence of waning vaccine effectiveness over time against the Delta variant.” The CDC then inaccurately tried to affirm the remaining efficacy of the mRNA vaccines when it published an earlier deeply flawed and statistically small study claiming that the COVID-19 “vaccines” provide greater protection against reinfection than natural immunity. *To reiterate, there are more than 79 international, peer-reviewed, high-quality studies, which demonstrate that naturally acquired immunity is far superior to that provided by COVID-19 mRNA “vaccination.”*

The Pfizer Injection Is Associated with Rare but Severe, Crippling Side Effects and Death

In 1990, the FDA and CDC created the Vaccine Adverse Event Reporting System (VAERS) to receive reports about suspected vaccine side effects. This system is grossly antiquated and characterized by the shocking under-reporting of adverse vaccine events. Yet this is the major surveillance system now in use by the FDA and CDC to monitor the safety of the experimental mRNA COVID “vaccines.” Despite the under-reporting by VAERS, some scientists were calling for a halt to the use of all the mRNA “vaccines” as early as February 2021. At present, the mRNA “vaccines” have accumulated more deaths and adverse events in VAERS than all other types of vaccines combined over the previous decade.²²

Irrespective of the undercounted serious adverse effects being reported, the number of deaths per million administered COVID-19 vaccine doses has increased more than 10-fold when compared to all other vaccines together, as seen in Figure 1.²²

Figure 1. Total VAERS Reports and Reported Deaths

Just as alarming as the deaths are the serious injuries and hospitalizations associated with the mRNA and DNA vaccines. These include vaccine-induced heart damage in young males, precipitation of heart attacks, strokes, and limb amputations due to abnormal blood clotting; a possible phenomenon called antibody-dependent enhancement (ADE); and a spectrum of serious neurological complications including partial paralysis and blindness.²³

We do not know how to predict who will suffer a deadly vaccine side effect and who will not. All we know is that receiving a second dose of one of the mRNA vaccines seems to be a factor. In addition, the long-term effects caused by the rapid dissemination of mRNA “vaccine” nanoparticles moving from the injection site and deposited in distant tissues remains unknown, as does the likelihood of lethal autoimmune diseases months to years later.²³

Despite the continuing, repeated calls for caution made by scientists outside government, the dangers of the current COVID-19 mass “vaccination” program have been minimized by

senior personnel at the FDA, CDC, and the National Institutes of Health (NIH), who have failed to act on the side of caution.²¹⁻²³

On Sept 22, 2021, FDA amended its authorization for the now unreliable Pfizer-BioNTech COVID-19 “vaccine” to allow the use of a booster dose.²⁴ Safety concerns over this decision caused a serious conflict between the FDA leadership under Janet Woodcock and two senior FDA scientists who promptly resigned.²⁵

This decision is made even more troublesome because of the now overwhelming clinical evidence showing that COVID-19 is a treatable condition, and that early outpatient multidrug-therapy for high-risk infections can cause up to an 85 percent reduction in COVID-19 hospitalizations and death.²⁶ This involves using the existing FDA-approved drugs that were incorrectly suppressed by Dr. Anthony Fauci at NIH and by Dr. Stephen Hahn and Dr. Janet Woodcock at FDA.²⁶ (Dr. Woodcock was appointed acting FDA Commissioner after previously recusing herself from all vaccine decisions because of her conflicts of interest.)

Countries and U.S. States Are Opting-Out of Mass-Vaccination Mandates

Recognizing that their vaccination programs are not working, Britain and Israel are considering dropping vaccine passports and halting the practice of business checks of vaccine status. The U.S. state of Florida has dropped its vaccine mandate as well.

In the first week of October 2021, all the Scandinavian countries simultaneously halted or discouraged the use of Moderna’s COVID-19 mRNA vaccine for males under the age of 30. In Denmark this was for everyone younger than 18. This was due to an unacceptably high rate of potentially fatal vaccine-induced inflammation of the heart and/or the pericardium (the membrane surrounding the heart).²⁷

In an unexpected move, on Nov 13, 2021, a three-judge panel on the U.S. Court of Appeals for the Fifth Circuit, sitting in New Orleans, La., issued a ruling temporarily blocking the OSHA requirement for large companies to mandate COVID-19 vaccines for employees or to carry out weekly testing starting in January 2022. The states of Texas, Louisiana, Mississippi, and South Carolina are in the jurisdiction of the Fifth Circuit Court.²⁸

Mass Vaccinations for the Pandemic Control of COVID-19 Is a Failed Doctrine

With all of the approved mRNA “vaccines” now showing clear signs of unreliability,²⁹ FDA has reversed its previous ban on administering a mRNA booster dose that is different from the type of mRNA vaccine used for the individual’s primary vaccination. The FDA justification for this is a recent NIH review of the data from a small volunteer cohort, which is purported to show that the “mix and match” strategy can lead to a stronger immune response.²⁴ This rushed study for a previously banned procedure suggests a desperate effort by NIH, FDA, and CDC, to broaden the generated antibody epitopes against the COVID “spike protein” in the booster recipients. Some scientists are concerned that might conceivably lead to adverse antibody-dependent-enhancement upon later exposure to future possible COVID-19 viral clades.

Completely ignored is the fact that early outpatient drug treatments continue to show overwhelming evidence

for efficacy, cardiac safety, and for their operational use in controlling COVID-19 community spread. In contrast, the nations with the highest COVID-19 “vaccination” rates, along with the U.S. counties with the highest vaccination rates, are showing the greatest increases in COVID-19 cases.²⁸ It appears to be the infected vaccinated members of the community who are now driving the pandemic, not the unvaccinated children or adults.

Nevertheless, in October 2021, the FDA vaccine advisory panel voted unanimously 17-0 in favor of vaccinating children aged 5–11 with Pfizer’s experimental biological product. In an apparent callous disregard for its potential harm in this age group, one FDA panelist, Dr. Eric Ruben, stated “we’re never going to learn about how safe this vaccine is unless we start giving it.”³⁰ The implication is that the FDA has no idea of the short and long-term risks of this “vaccine” in this young age group.

It is time for FDA, NIH, and CDC to face the truth. Mass vaccinations cannot control a pandemic involving a fast-mutating RNA virus. Neither can population “lockdowns.” Using drugs like remdesivir for exclusive in-hospital treatments will not control a pandemic either.

The only demonstrated method for control of the COVID-19 pandemic is the early use of outpatient drug treatments with the short-term quarantine of infected individuals. This is the precise doctrine that was banned in April 2020 by the efforts of Dr. Janet Woodcock (FDA) and Dr. Anthony Fauci (NIH).

With the present mRNA vaccines, there is no positive benefit-to-risk ratio for vaccinating children aged 5–11 against COVID-19 infection. The unknowns are still too great. There is no way to know whether a vaccinated child with comorbidities will have a higher risk for adverse events if later infected. These comorbidities are expected to include obesity, diabetes, chronic lung disease, sickle cell disease, and immunosuppression. Pediatricians and parents should be making these decisions, not state governors, school boards, or federal bureaucrats and politicians.

Accountability for This Failed Mass Vaccination Policy Is Necessary

It is past time for the Government Accountability Office as well as a specially designated Senate Committee with a panel of outside advisors to investigate the decisions made from January 2020 to date by Anthony Fauci, M.D., at the National Institute of Allergy and Infectious Diseases (NIAID); 2020 FDA Commissioner Stephen Hahn, M.D.; and Janet Woodcock, M.D., current acting FDA commissioner. All three of these officials, in addition to Rick Bright, Ph.D., formerly at the Biomedical Advanced Research and Development Authority (BARDA), played a fundamental major role in blocking early at-home, safe prescription drug treatments for COVID-19.

In addition, the conflict-of-interest-ridden CDC Advisory Committee on Immunization Practices (ACIP) and some of the 20 members of the FDA Vaccines and Related Biological Products Advisory Committee (FDA/VRBPAC) need a close examination.

The subversion of proven safe, cheap, and effective early outpatient treatments for COVID-19 was intentional. The replacement of the drug treatment doctrine with an ill-advised

mass vaccination program involving highly experimental mRNA and DNA Biological Products *was also intentional*.

A formal investigation is almost a legal mandate now, following the recent release of a paper in the *British Medical Journal* indicating that falsified data may have been used in Pfizer's pivotal phase III trial. This included unblinded patients, inadequately trained vaccinators, and the slow follow-up of adverse vaccination events.³¹

Thousands of Americans have been permanently injured or killed by the experimental mRNA mass vaccination program, and young children are now being placed at risk. Responsible persons must be identified and held accountable.

Steven J. Hatfill, M.D., is a specialist physician and virologist, and a senior fellow at the London Center for Policy Analysis. From February 2020 until the 2021 transition, he served daily as an outside medical/scientific advisor for COVID-19 to the Executive Office of the President of the United States.

Increases in COVID-19 are unrelated to levels of vaccination across 68 countries and 2947 counties in the United States

S. V. Subramanian^{1,2} · Akhil Kumar³

Vaccines currently are the primary mitigation strategy to combat COVID-19 around the world. For instance, the narrative related to the ongoing surge of new cases in the United States (US) is argued to be driven by areas with low vaccination rates [1]. A similar narrative also has been observed in countries, such as Germany and the United Kingdom [2]. At the same time, Israel that was hailed for its swift and high rates of vaccination has also seen a substantial resurgence in COVID-19 cases [3]. We investigate the relationship between the percentage of population fully vaccinated and new COVID-19 cases across 68 countries and across 2947 counties in the US.

Methods

We used COVID-19 data provided by the Our World in Data for cross-country analysis, available as of September 3, 2021 (Supplementary Table 1) [4]. We included 68 countries that met the following criteria: had second dose vaccine data available; had COVID-19 case data available; had population data available; and the last update of data was within 3 days prior to or on September 3, 2021. For the 7 days preceding September 3, 2021 we computed the COVID-19 cases per 1 million people for each country as well as the percentage of population that is fully vaccinated.

For the county-level analysis in the US, we utilized the White House COVID-19 Team data [5], available as of September 2, 2021 (Supplementary Table 2). We excluded counties that did not report fully vaccinated population

percentage data yielding 2947 counties for the analysis. We computed the number and percentages of counties that experienced an increase in COVID-19 cases by levels of the percentage of people fully vaccinated in each county. The percentage increase in COVID-19 cases was calculated based on the difference in cases from the last 7 days and the 7 days preceding them. For example, Los Angeles county in California had 18,171 cases in the last 7 days (August 26 to September 1) and 31,616 cases in the previous 7 days (August 19–25), so this county did not experience an increase of cases in our dataset. We provide a dashboard of the metrics used in this analysis that is updated automatically as new data is made available by the White House COVID-19 Team (<https://tiny.cc/USDashboard>).

Findings

At the country-level, there appears to be no discernable relationship between percentage of population fully vaccinated and new COVID-19 cases in the last 7 days (Fig. 1). In fact, the trend line suggests a marginally positive association such that countries with higher percentage of population fully vaccinated have higher COVID-19 cases per 1 million people. Notably, Israel with over 60% of their population fully vaccinated had the highest COVID-19 cases per 1 million people in the last 7 days. The lack of a meaningful association between percentage population fully vaccinated and new COVID-19 cases is further exemplified, for instance, by comparison of Iceland and Portugal. Both countries have over 75% of their population fully vaccinated and have more COVID-19 cases per 1 million people than countries such as Vietnam and South Africa that have around 10% of their population fully vaccinated.

Across the US counties too, the median new COVID-19 cases per 100,000 people in the last 7 days is largely similar across the categories of percent population fully vaccinated (Fig. 2). Notably there is also substantial county variation in

Fig. 1 Relationship between cases per 1 million people (last 7 days) and percentage of population fully vaccinated across 68 countries as of September 3, 2021 (See Table S1 for the underlying data)

new COVID-19 cases *within* categories of percentage population fully vaccinated. There also appears to be no significant signaling of COVID-19 cases decreasing with higher percentages of population fully vaccinated (Fig. 3).

Of the top 5 countries that have the highest percentage of population fully vaccinated (99.9–84.3%), the US Centers for Disease Control and Prevention (CDC) identifies 4 of them as “High” Transmission countries. Chattahoochee (Georgia), McKinley (New Mexico), and Arecibo (Puerto Rico) counties have above 90% of their population fully vaccinated with all three being classified as “High” transmission. Conversely, of the 57 countries that have been classified

as “low” transmission counties by the CDC, 26.3% (15) have percentage of population fully vaccinated below 20%.

Since full immunity from the vaccine is believed to take about 2 weeks after the second dose, we conducted sensitivity analyses by using a 1-month lag on the percentage population fully vaccinated for countries and US counties. The above findings of no discernable association between COVID-19 cases and levels of fully vaccinated was also observed when we considered a 1-month lag on the levels of fully vaccinated (Supplementary Figure 1, Supplementary Figure 2).

We should note that the COVID-19 case data is of confirmed cases, which is a function of both supply (e.g., variation in testing capacities or reporting practices) and demand-side (e.g., variation in people’s decision on when to get tested) factors.

Fig. 2 Median, interquartile range and variation in cases per 100,000 people in the last 7 days across percentage of population fully vaccinated as of September 2, 2021

Fig. 3 Percentage of counties that experienced an increase of cases between two consecutive 7-day time periods by percentage of population fully vaccinated across 2947 counties as of September 2, 2021

Interpretation

The sole reliance on vaccination as a primary strategy to mitigate COVID-19 and its adverse consequences needs to be re-examined, especially considering the Delta (B.1.617.2) variant and the likelihood of future variants. Other pharmacological and non-pharmacological interventions may need to be put in place alongside increasing

vaccination rates. Such course correction, especially with regards to the policy narrative, becomes paramount with emerging scientific evidence on real world effectiveness of the vaccines.

For instance, in a report released from the Ministry of Health in Israel, the effectiveness of 2 doses of the BNT162b2 (Pfizer-BioNTech) vaccine against preventing COVID-19 infection was reported to be 39% [6],

substantially lower than the trial efficacy of 96% [7]. It is also emerging that immunity derived from the Pfizer-BioNTech vaccine may not be as strong as immunity acquired through recovery from the COVID-19 virus [8]. A substantial decline in immunity from mRNA vaccines 6-months post immunization has also been reported [9]. Even though vaccinations offers protection to individuals against severe hospitalization and death, the CDC reported an increase from 0.01 to 9% and 0 to 15.1% (between January to May 2021) in the rates of hospitalizations and deaths, respectively, amongst the fully vaccinated [10].

In summary, even as efforts should be made to encourage populations to get vaccinated it should be done so with humility and respect. Stigmatizing populations can do more harm than good. Importantly, other non-pharmacological prevention efforts (e.g., the importance of basic public health hygiene with regards to maintaining safe distance or handwashing, promoting better frequent and cheaper forms of testing) needs to be renewed in order to strike the balance of learning to live with COVID-19 in the same manner we continue to live a 100 years later with various seasonal alterations of the 1918 Influenza virus.

Citation: Classen B. US COVID-19 Vaccines Proven to Cause More Harm than Good Based on Pivotal Clinical Trial Data Analyzed Using the Proper Scientific Endpoint, “All Cause Severe Morbidity”. Trends Int Med. 2021; 1(1): 1-6.

ABSTRACT

Three COVID-19 vaccines in the US have been released for sale by the FDA under Emergency Use Authorization (EUA) based on a clinical trial design employing a surrogate primary endpoint for health, severe infections with COVID-19. This clinical trial design has been proven dangerously misleading. Many fields of medicine, oncology for example, have abandoned the use of disease specific endpoints for the primary endpoint of pivotal clinical trials (cancer deaths for example) and have adopted “all cause mortality or morbidity” as the proper scientific endpoint of a clinical trial. Pivotal clinical trial data from the 3 marketed COVID-19 vaccines was reanalyzed using “all cause severe morbidity”, a scientific measure of health, as the primary endpoint. “All cause severe morbidity” in the treatment group and control group was calculated by adding all severe events reported in the clinical trials. Severe events included both severe infections with COVID-19 and all other severe adverse events in the treatment arm and control arm respectively. This analysis gives reduction in severe COVID-19 infections the same weight as adverse events of equivalent severity. Results prove that none of the vaccines provide a health benefit and all pivotal trials show a statically significant increase in “all cause severe morbidity” in the vaccinated group compared to the placebo group. The Moderna immunized group suffered 3,042 more severe events than the control group ($p=0.00001$). The Pfizer data was grossly incomplete but data provided showed the vaccination group suffered 90 more severe events than the control group ($p=0.000014$), when only including “unsolicited” adverse events. The Janssen immunized group suffered 264 more severe events than the control group ($p=0.00001$). These findings contrast the manufacturers’ inappropriate surrogate endpoints: Janssen claims that their vaccine prevents 6 cases of severe COVID-19 requiring medical attention out of 19,630 immunized; Pfizer claims their vaccine prevents 8 cases of severe COVID-19 out of 21,720 immunized; Moderna claims its vaccine prevents 30 cases of severe COVID-19 out of 15,210 immunized. Based on this data it is all but a certainty that mass COVID-19 immunization is hurting the health of the population in general. Scientific principles dictate that the mass immunization with COVID-19 vaccines must be halted immediately because we face a looming vaccine induced public health catastrophe.

Keywords

Clinical trial, Vaccines, COVID-19.

Introduction

For decades, true scientists have warned that pivotal clinical trial designs for vaccines are dangerously flawed and outdated

[1]. Vaccines have been promoted and widely utilized under the false claim they have been shown to improve health. However, this claim is only a philosophical argument and not science based. In a true scientific fashion to show a health benefit one would need to show fewer overall deaths during an extended period in the vaccinated group compared to a control group. Less stringent

indicators of a health benefit would include fewer severe events of all kinds, fewer days hospitalized for any reason, lower health care expenses of all types, fewer missed days from work for any health reason. No pivotal clinical trial for a vaccine preventing an infectious disease has ever demonstrated an improvement in health using these scientific measurements of health as a primary endpoint. Instead, vaccine clinical trials have relied on misleading surrogate endpoints of health such as infection rates with a specific infectious agent. Manufacturers and government agents have made the scientifically disproved and dangerous philosophical argument that these surrogate endpoints equate to a health benefit.

True medical scientists, outside the vaccine fields, have embraced the use of true health measurements as the proven proper scientific endpoint of clinical trials. Decades ago, a pharmaceutical manufacturer would only need to show that a chemotherapeutic agent shrank a tumor or reduce cancer deaths to obtain FDA approval. Manufacturers would market their products under the fraudulent philosophical argument that shrinking tumors or reducing cancer deaths equates to improved survival. However, many of the toxic chemotherapeutic agents would destroy vital organs and actually reduce survival while decreasing cancer deaths at the same time. The FDA and comparable agencies around the world switched to “all cause mortality” as the primary endpoint for pivotal cancer drug trials. The gold standard for marketing approval is to show that those receiving a cancer drug actually live longer than those who do not. Typically, new “miracle” anticancer drugs only prolong survival about 2 months but this added time may be spent severely ill suffering from adverse events caused by the chemotherapy. Application of true scientific principles often severely deflates the hype promoting pharmaceutical products.

All previous vaccine trials have suffered not only from lacking a proper primary clinical endpoint but also from insufficient perspective follow up of adverse events. The trials have failed to account for the well-established toxicity data and epidemiology data that vaccines are associated with chronic immune mediated disorders that may not develop for years after immunization. These adverse events, for example type 1 diabetes, are quite common, develop 3 or more years after immunization, and can exceed the reduction in infectious complications induced by the vaccine as was shown with a hemophilus vaccine [1]. Pivotal trials for the recombinant hepatitis B vaccine prospectively recorded adverse events for about 7 days after immunization and newer vaccines typically prospectively follow patients 6 months for adverse events.

Use of “all cause morbidity or mortality” as the primary endpoint is warranted in vaccine trials for several reasons. First, the recipients are generally healthy (relative to patients with terminal cancer for example) and the risk of severe morbidity from the target infection is low so even rare adverse events can result in an unfavorable risk benefit. Second, stimulating the immune system with a vaccine can lead to almost any type of adverse event including increasing the incidence or severity of diseases already present in the population. One needs a trial design with a primary endpoint that captures both a decline in infectious complications as well as small rises in hundreds of different immune modified disorders of similar or worse severity as the infectious complications.

Three COVID-19 vaccines are approved by the US FDA under Emergency Use Authorization (EUA). These vaccines have been developed by Pfizer-BioNTech, Moderna, and Janssen. Since marketing has begun multiple reports of potential, adverse events have been recorded. These reports include prion disease [2,3], clotting disorders [4], myocarditis, reproductive issues, death and many more. A clear difference in frequency of adverse events between different COVID-19 vaccines has been published [3]. The clinical trial designs of the pivotal trials and the resulting data was evaluated to determine if scientifically the results support mass immunization with the vaccines for COVID-19. The published data from the manufacturers’ own clinical trials was re analyzed using the proper scientific endpoint “all cause severe morbidity”.

Method

Data from all three US COVID-19 vaccines was published in the New England Journal of Medicine [4-6]. Data from these three publications and the accompanying published appendixes provided the bulk of the information analyzed. On rare occasions supplemental data was found on the FDA’s website (<https://www.fda.gov/advisory-committees/advisory-committee-calendar>) in briefing documents pertaining to FDA advisory panel committees for COVID-19 vaccines from Pfizer-BioNTech, Moderna, and Janssen. The scientific primary endpoint, “all severe events”, in the treatment group and controls was calculated by adding all severe or life threatening events reported in the clinical trials by the manufacturers. Severe events included both severe cases of COVID-19 and all other severe events in the treatment arm and control arm respectively.

A Chi square analysis using a 2x2 table was used to calculate statistical p values. An online statistical chi square calculator (<https://www.socscistatistics.com/tests/chisquare>) was used. Statistical calculations ignored small differences in total subject number between efficacy and adverse event populations. The randomized number, shown in Table 1, was used as the study population for statistical calculations. In general, the population for adverse events was slightly higher than that for efficacy. Given the statistical significant p, values generated (see Table 1), these small differences do not appear to be material.

The FDA document entitled Guidance for Industry Toxicity Grading Scale for Healthy Adult and Adolescent Volunteers Enrolled in Preventive Vaccine Clinical Trials, 2007, provided the following definitions for adverse events.

Grades 3, Severe: Prevents daily activity and requires medical intervention.

Grades 4, Potentially life threatening: ER visit or hospitalization.

Results

Moderna

The Moderna pivotal Phase III trial results and protocol are published in the New England Journal of Medicine (NEJM) [5]. The primary endpoint was COVID-19 illness starting 14 days after the second dose of vaccine however the trial had a secondary endpoint

which was patients developing severe COVID-19 symptoms. This later endpoint allowed for a direct comparison to severe adverse events. The study randomized 30,420 individuals, 15,210 were randomized to receive injections with Moderna's mRNA-1273 vaccine and 15,210 were randomized to receive injections with placebo. Two shots were administered 28 days apart. "Solicited" adverse events were collected 7 days after immunization and "unsolicited" adverse events were reported up to 28 days after administration of each vaccine or approximately 56 days after the first dose according to protocol. Because of dropouts, adverse events were recorded on 15,185 vaccinated patients and 15,166 placebo patients (reference 5, appendix table S8). The treatment group had 11 cases of symptomatic COVID-19 infections and 0 cases severe COVID-19 infections (reference 5, appendix table S13). There were 234 cases of severe "unsolicited" adverse events in the treatment group (reference 5, appendix table S8), and an additional 3,751 "solicited" severe or life threatening (Grade 3 or Grade 4) adverse events (reference 5, appendix table S3 and S4). By contrast, the control group had 185 cases of symptomatic COVID-19 infections and 30 cases of severe COVID-19 infections. However, only one of these case of COVID-19 out of 15,166 controls required admission to an intensive care unit (see reference 5, appendix table S13). There were 202 cases of severe "unsolicited" adverse events in the placebo group and an additional 711 "solicited" severe or life threatening (Grade 3 or Grade 4) adverse events. There were 3 deaths in the placebo group and 2 in the vaccinated group (reference 5, appendix table S8).

Pfizer-BioNTech

The Pfizer-BioNTech (Pfizer) pivotal Phase III trial results are published in the New England Journal of Medicine [6]. The Pfizer trial was classified as a Phase 1/2/3 trial. Two shots were administered 21 days apart. The primary endpoint was confirmed COVID-19 infections 7 days after the second dose. A post hoc analysis of severe COVID-19 infections was included in the appendix published by the NEJM. The study randomized 43,548 individuals of which 100 did not receive injections, 21,720 received injections with the vaccine and 21,728 received injections with placebo. "Solicited" adverse events were collected 7 days after immunization and "unsolicited" severe adverse events were reported up to 14 weeks after administration of the second dose. However, median safety follow up for "unsolicited" events was only approximately 2 months after the second dose at the time of publication in the NEJM. In the treatment arm there was 1 case of severe Covid-19 (reference 6, appendix table S5), 240 "unsolicited" severe adverse events and 21 "unsolicited" life threatening adverse events (reference 6, appendix table S3). In the placebo arm, there were 9 cases of severe COVID-19, 139 "unsolicited" severe adverse events and 24 "unsolicited" life threatening adverse events. Pfizer used a safety subset of approximately 8,183 (both vaccinated and unvaccinated) to record "solicited" adverse events at 7 days. These data that are not shown in Table 1 in part because the data was depicted graphically in the NEJM manuscript. However, graphical data in the NEJM strongly

Table 1: All Cause Severe Morbidity

	Moderna		Control		Difference	P value
Randomized	15,210		15,210			
Days of Safety Follow Up	56		56			
# Severe COVID-19 Cases	0		30			
# Unsolicited Severe Adverse Events	234		202			
# Solicited Grade 3 AE, Shot 1	848		361			
# Solicited Grade 4 AE, Shot 1	5		6			
# Solicited Grade 3 AE, Shot 2	2884		341			
# Solicited Grade 4 AE, Shot 2	14		3			
# Total Severe Events	3985		943		3042	p=0.00001
#Deaths	2		3			
	Pfizer		Control		Difference	P value
Randomized	21,720		21,728			
Days of Safety Follow Up	81		81			
# Severe COVID-19 Cases	1		9			
# Unsolicited Severe Adverse Events	240		139			
# Unsolicited Life Threatening Adverse Events	21		24			
# Total Severe Events	262		172		90	p=0.000014
#Deaths	2		4			
	Jansen	Jansen	Control	Control	Difference	P value
Randomized	19,630		19,691			
Safety Subset		3,356		3,386		
Days of Safety Follow Up	28		28			
# Severe COVID-19 Cases	21		78			
# Solicited Grade 3 Adverse Events						
Local (extrapolated)	135	23	35	6		
Systemic (extrapolated)	357	61	122	21		
# Unsolicited Grade 3-4 Adverse Events	83		96			
# Total Severe Events	595		331		264	p=0.00001
# Deaths	3		16			

indicates the vaccinated group has more “solicited” adverse events of all grade levels than the control group.

Janssen

The Janssen pivotal Phase III trial design and trial results are published in the New England Journal of Medicine [4]. The primary endpoint was prevention of molecularly confirmed, moderate to severe–critical COVID-19 14 days post vaccination however a secondary endpoint was prevention of molecularly confirmed, severe–critical COVID-19 14 days post vaccination. This later endpoint allowed for a direct comparison to severe adverse events. The study randomized 19,630 to receive a single injection with Janssen’s adenovirus COVID-19 vaccine and randomized 19,691 to receive a single injection with placebo. “Solicited” adverse events were collected 7 days after immunization and “unsolicited” adverse events were reported up to 28 days after administration of the single dose of vaccine. The treatment group had 21 cases of severe or critical COVID-19 infections while the placebo control group had 78 (reference 4, appendix table S9). Further analysis shows that only 2 of 19,514 immunized patients needed medical intervention for COVID-19 infections starting 14 days after immunization, while only 8 of 19,544 controls needed medical intervention for COVID-19 infections starting 14 days after placebo injection where the COVID-19 infection was confirmed by a central lab (reference 4, appendix table S10). There were 83 “unsolicited” and approximately 492 “solicited” serious adverse events in the vaccinated group compared to 96 “unsolicited” and approximately 157 “solicited” serious adverse events in the control group (reference 4, appendix table S7). There were 3 deaths in the treatment group and 16 in the control group (reference 4, appendix table S7).

Janssen did not collect “solicited” adverse events from the whole group at day 7 but instead collected these adverse events from a safety group comprising 3,356 vaccinated and 3,380 control patients. FDA briefing document Table 23, page 39 [7] provided the number of “solicited” Grade 3 adverse events in each group. These figures as well as the number of patients randomized were used to extrapolate the number of solicited severe adverse events in the full vaccinated and placebo group as recorded in Table 1.

Discussion

Scientific analysis of the data from pivotal clinical trials for US COVID-19 vaccines indicates the vaccines fail to show any health benefit and in fact, all the vaccines cause a decline in health in the immunized groups. Health is the sum of all medical events or lack thereof. COVID-19 vaccines are promoted as improving health while in fact there is no evidence that these vaccines actually improve health in the individual or population as a whole. The current analysis used the proper scientific endpoint of “all cause severe morbidity”, a true measure of health. By contrast, manufacturers and government officials promote the vaccines using a surrogate measure of health, severe infections with COVID-19, and the disproved philosophical argument that this surrogate endpoint equates to health. This substitution of philosophy for science is extremely dangerous and is certainly leading to a catastrophic public health event.

Review of data from the three COVID-19 vaccines marketed in the US shows complete lack of a health benefit and even an increase in severe events among vaccine recipients. The proper scientific clinical trial endpoint, “all cause severe morbidity” was created by combining all severe and/or life threatening events, both infectious and non-infectious, occurring in the vaccinated and placebo control groups respectively. The data (Table 1) shows there are clearly more severe events in the vaccinated groups. The results are highly statistically significant. The use of a true scientific measure of health as an endpoint for a vaccine trial gives a contrasting result compared to the use of a non-scientific surrogate endpoint of health, severe infections with COVID-19.

Clinical trial data show there were actually few very “severe” cases of COVID-19 in either the vaccinated or the placebo group. Moderna data shows that only one of 15,166 unvaccinated patients required admission to an intensive care unit for COVID-19. Data provided by Janssen shows that only a few of the “severe” COVID-19 infections required medical intervention. Table S10 in the appendix published in the New England Journal of Medicine [4], shows only 2 of 19,514 patients immunized with the Janssen vaccine needed medical intervention for severe COVID-19 infections starting 14 days after immunization, while only 8 of 19,544 controls needed medical intervention for severe COVID-19 infections starting 14 days after placebo, where the infection was confirmed by a central lab. This benefit, reduction in 6 cases of COVID-19 requiring medical intervention, in 19,630 vaccinated patients is simply statistically insignificant in a population that has a hundred fold more severe events of any cause. The Janssen vaccinated group had 595 severe Grade 3 or 4 events in the first 28 days post immunization. Science thus does not support a health benefit with COVID-19 vaccines. All arguments for immunization are purely philosophical and based on false, discredited, assumptions.

Reductions in infection rates, hospitalization rates and even death with COVID-19 are poor surrogate markers for health and are not proper primary endpoints for a vaccine clinical trial. As discussed earlier with cancer treatments, a trial endpoint showing reduced cancer deaths is not equivalent to enhanced survival. One could apply enough radiation (or cytotoxic chemotherapy) to cancer patients to kill all their cancer cells and prevent cancer deaths but these cancer patients would die of radiation sickness (or chemotherapy induced organ failure) faster than if they died naturally of cancer. In the same manner, reducing severe COVID-19 infections does not equate to enhanced survival especially when the vaccine can cause clotting, heart disease and many other severe adverse events. Potential vaccine recipients need to know if the vaccine improves their survival in order for them to make an informed consent to be immunized. Unfortunately, the current studies with COVID-19 vaccines in fact show they cause a decline in health.

The actual health decline caused by the vaccines is probably much worse than what is depicted in Table 1 for many reasons. First manufacturers took a haphazardly approach to recording adverse events in contrast to recording a reduction in COVID-19 events. At

the time of publication, patients were only followed prospectively for approximately 7 days after immunization for “solicited” adverse events, and then relied on “unsolicited” reports of adverse events for approximately 30-60 days after immunization. Serious non-infectious events occurring after this 30-60 day period were not part of the published data. By contrast, infections with COVID-19 were followed indefinitely since the time of immunization. Both Janssen and Pfizer were specifically lax recording adverse events and only recorded “solicited” adverse events at day 7 in a safety cohort representing less than 20% of the study population. Given that some of the vaccine clinical trials recruited patients in the third world, patients with low education, and potentially even elderly with dementia the patients can not be expected to understand when they may be having an serious event that needs reporting or how to report it. For these and others reason only 5% of adverse events are generally ever reported [8].

COVID-19 vaccines were released for marketing under a EUA. Use of such a protocol should be reserved for outbreaks of life threatening epidemics. If this were, actually the case with COVID-19 then reduction in “all cause mortality” should be the primary outcome for the vaccine trials and “all cause severe morbidity” should be the secondary endpoint. However, the manufacturers show no evidence of a survival benefit. Deaths in the trials were extremely rare and of 30 deaths, out of roughly 110,000 trial participants, only about 6 deaths were confirmed to have COVID-19 at the time of death. Regrettably, the vaccines did not reduce morbidity but caused an increase in severe events. Worse, the pivotal clinical trials were never designed to show a benefit in “all-cause mortality” or reduction “in all cause severe morbidity”. The fact that the trials were never designed to show these health benefits is an admission that those developing the vaccines never expected the vaccines to result in measurable health benefits. Regrettably some manufacturers have published the false claim [6] that the vaccine have been proven to be “effective” and that its now “unethical” to withhold immunization from the control group. They advocate abolishing the control group by immunizing them. This unscientific act only further proves the pharmaceutical industry is unaccountable to any one and does not feel the need to adhere to principles of science, ethics, or public health.

The COVID-19 vaccine pivotal clinical trials were of very short duration and the question exists whether longer-term follow up will reverse the vaccine induced health decline and show a health benefit. The question is purely philosophical. Some manufactures have already threatened to destroy the randomization by immunizing the control group, as stated above, making further scientific study impossible. While it is possible that the vaccines will continue to prevent severe infectious disease long after the immunization, the reality is that immunity wanes with time and vaccine resistant variants keep developing. Another issue is that severe adverse events will continue to occur over time. Given evidence of prion genic activity by both established pathophysiology [2], animal toxicity data [9] and epidemiology data [3] one can expect an increase in adverse events in the vaccinated group for decades.

Yearly booster are unlikely to improve the health outcome with

COVID-19 vaccines. A booster may provide a small incremental benefit in preventing severe COVID-19 infections however, the boosters are likely to cause many more severe adverse events. Looking at the data on secondary injections with the Moderna vaccine (Table 1) there are approximately 3 times as many Grade 3 or 4 adverse events after the second dose than after the first dose. However, this is not the case following the second dose of placebo in the Moderna placebo group. The net is that adding a booster shot is highly unlikely to induce a favorable health benefit that was missing with the first series of immunization.

Government officials are promoting COVID-19 vaccines as a way to stop the epidemic. There is however no scientific data that the COVID-19 vaccines can improve the health of the population. In fact, the data from the clinical trials seems to point in the opposite direction. Given that the population is the sum of the individuals, and the vaccines cause a decline in health in the individuals, then mass immunization is likely to erode the health of the general population, not improve it. Immunization may even cause a selection bias for new variants. Finally, if the COVID-19 outbreak is the result of a bioweapons attack and vaccine resistant variants represent the release of different prototypes then immunization is almost certain to fail [10].

There is an old saying, fool me once shame on you, fool me twice shame on me. This saying can be applied to the COVID-19 mass immunization program. The US anthrax attack of 2001, which originated at US army is Fort Detrick, has demonstrated that there are people in the US government who desire to attack US citizens with bioweapons [10]. According to the chief FBI agent leading the investigation of the US anthrax attack, conspirators were likely not apprehended in part because the investigation was prematurely ended and prior to stopping the investigation, people at the top of the FBI deliberately tried to sabotage the investigation [11]. In the US anthrax attack of 2001, people high in the US government publicly anticipated the anthrax attack as early as 1999 [10]. Similarly with the COVID-19 attack, people high in government anticipated the COVID-19 attack [12,13] several years before the attack took place [10]. There is even data that an effort was made in 2018 to protect certain populations against COVID-19 by immunizing them with MMR vaccine [14].

In such a hostile government environment, the citizens need to individually evaluate the science of immunization with COVID-19 vaccines and not rely on philosophical arguments propagated by government officials. In this case there is no scientific evidence that the COVID-19 vaccines improve the health of the individual, much less of the population as a whole. Mass immunization with COVID-19 vaccines is certainly leading to a catastrophic public health event.

**CONSTRUCTIVE NOTICE AND WARNING TO ALL WASHINGTON STATE
EMPLOYERS, NOTICE TO PRINCIPAL IS NOTICE TO ALL AGENT(S), AND
NOTICE TO AGENT IS NOTICE TO ALL PRINCIPAL(S)**

To all Employers, and all Business Owners, and/or to whom it may concern, this legal informational flyer is meant to provide you advance constructive and actual “legal notice” that I am under no legal obligation to wear a mask or be Vaccinated for the Covid-19 Virus or PCR-Tested in your place of business which is a place of “Public Accommodation” under both Federal Laws (28 CFR § 36.202) and Washington State Law as codified at RCW 49.60.030 and RCW 49.60.215. It is undisputed that there is no statute or law in existence that requires me to be vaccinated, tested or masked or that allows any Employer in the State of Washington to grant or deny the continued employment or new employment of any person based upon whether or NOT they have received a Covid-19 Vaccination or PCR Test. I have a “vested” Constitutional Right to my continued employment under the common law pursuant to RCW 4.04.010; RCW 9A.04.060; CrR 1.1; 1 Sutherland Statutory Construction (3d ed.), p 525, § 2043.

Washington State Governor Jay Inslee, and the Chief Medical Officer Dr. Kathy Lofy only have the power granted by statute. Hoppe v. King County, 95 Wn.2d 332, 337, 622 P.2d 845 (1980); 63 Am. Jur. 2d, Public Officers and Employees, section 263 (1972); Neither officer can make laws on their own motion without violating “The Separation of Powers Doctrine.” State v. Osloond, 60 Wash. App. 584, at 587, 805 P(2d) 263 (1991); Myers v. United States, 272 U.S. 52, 47 S.Ct. 21, 71 L.Ed. 160 (1926). Only the legislature can make laws. “A flat prohibition against regulation of a matter in one direction does not give Congress power to regulate the matter in another direction.” Powe vs United States, 109 F.2d 140 (1940). **Neither officer can re-delegate any authority or power to Employers to hire or fire any employee for refusal to be vaccinated or masked in their work place without violating “The Non-Delegation Doctrine.”** Noe v. Edmonds Sch. Dist. 15, 83 Wn.2d 97, 515 P.2d 977 (1973); Ledgering v. State, 63 Wn.2d 94, 385 P.2d 522 (1963). What the Legislature is forbidden to do directly, certainly [the Governor and Chief Medical Officer] cannot [illegally solicit or recruit Employers] to do indirectly.” The City of Seattle v. Filson, 98 Wn.2d 66 (Nov. 1982).

Any Employer who gives False Legal advice is subject to being charged with and prosecuted for “unauthorized practice of law” pursuant to RCW 2.48.180 et seq, or “practicing medicine without a license” in violation of RCW 18.130.190. This notice is also to inform you that “forced vaccinations or forced masking” violates my Constitutional Rights under both Constitutions, State and Federal, the laws of the State, the laws of the United States, and the 1964 Civil Rights Act, which are

enforceable via Title 42, Section 1983.

It is undisputed pursuant to CR 8(d), that the Social Security Act as codified in Federal law at Title 42, Chapter 7, Subchapter XIX, Section 1396 (f), cited hereafter as “42 U.S.C. § 1396f”, which provides a **“religious exemption”** from all unwanted vaccinations and provides that no one is required by law to undergo any medical screening, examination, diagnosis, or treatment or to accept any other health care or services provided under such plan for any purpose if such person objects (or, in case such person is a child, his parent or guardian objects) thereto on religious grounds.

Washington law at RCW 7.70.050; RCW 7.70.030; RCW 7.70.040, and W. PROSSER, LAW OF TORTS 165 (4th ed. 1971), indicates that the Chief Medical Officer of this State Dr. Kathy Lofy has a duty to disclose that 21 U.S.C. § 360bbb-3, requires that all Doctors and Employers are to provide the appropriate conditions designed to ensure that individuals to whom the Covid-19 Vaccine or PCR Test is administered are informed . . . **“of the option to accept or refuse administration of the [medical] product, of the consequences, if any, of refusing administration of the product, and of the alternatives to the product that are available and of their benefit and risks”** as clearly stated in subsection (e)(1)(A)(ii)(III) of 21 U.S.C. § 360bbb-3, and as required by the **“Doctrine of Informed Consent”** whose main purpose is to protect the patient from being given “Unauthorized Treatments or PCR Tests” without the patients knowledgeable permission. If any physician performs any treatments or tests on any patient without fully informing the patient of his or her “option to accept or refuse administration” of any “Emergency Use Authorization” of any PCR Test and/or any Covid-19 Vaccination under 21 U.S.C. § 360bbb-3 (e)(1)(A)(ii)(III), he has committed an **assault and battery** against that patient for failure to obtain the patients knowledgeable permission. All vaccine-mandating employers could be sued. Holt v. Nelson, 11 Wn.App. 230 (1974); Miller v. Kennedy, 11 Wn.App. 272 (1974); Miller v. Kennedy, 85 Wn.2d 151 (1975); Gates v. Jenson, 92 Wn.2d 246 (1979); ZeBarth v. Swedish Hosp. Med. Center, 81 Wn.2d 12 (1972); Harris v. Groth, 99 Wn.2d 438 (1983); Smith v. Shannon, 100 Wn.2d 26 (1983); Watkins v. COVID-19 “ Experimental” Vaccines

You have the right to make an informed decision about your health and your future and you may be asking: Should I take this experimental vaccine? Here are a few facts you should consider to help you make an informed decision.

Facts:

1. According to the Pharmaceutical Companies themselves, these vaccines may not prevent the SARS-CoV-2 virus: Evidence:
 - a. From the [Moderna](#) and [Pfizer](#) Vaccine Fact Sheets: *The (Moderna/Pfizer) COVID-19 Vaccine is a vaccine and may prevent you from getting COVID-19. There are no FDA approved vaccines to prevent COVID-19.*
 - b. However, the [handout](#) you get when they give you the shot, says it “...has been authorized to prevent COVID-19”, so they are lying about it. They are experimental and have been approved by FDA and CDC via an Emergency Use Authorization (EUA) but have not been fully tested, so are not proven safe.
2. These vaccines are experimental compounds that use “synthetic messenger RNA (mRNA)” housed in fat cells. In 2005 an [animal study](#) was done with SARS-CoV-1 mRNA vaccines on ferrets. Because of major issues, the SARS-CoV-1 vaccine was not further developed.
3. In many previous [clinical trials since the 1960's](#) attempts to [vaccinate against Respiratory Syncytial Virus](#) (RSV) (a pneumonia type virus), [Dengue](#), SARS and MERS, the studies each failed during the animal phase. [Cats, ferrets, monkeys, and rabbits each and every time experienced Antibody Dependent Enhancement](#) (ADE), also known as pathogenic priming or a cytokine storm. This occurs when the immune system creates an uncontrolled and overwhelming inflammatory response upon being confronted with the pathogen in the real world, and the outcome, tragically, is death. The same immune system overreaction took place in a number of infants in [clinical trials who received an attempted RSV shot](#), as well as some six hundred Filipino children who died following early vaccination against Dengue Fever, so [this outcome remains a viable concern today](#).
4. Big Pharma has asked for the normally required animal studies for the CoV19 vaccine to be waived. It was waived for EUA purposes, so there have been no long-term animal studies to see if this could happen with these new mRNA vaccines. WHY?
5. Because these vaccines may or may not prevent infection, and as [some reports show](#), only reduce symptoms, why take something that does not **prevent** the infection in the first place. It is a proven fact, with [hundreds of scientific studies to prove it](#), that Zinc and Zinc ionophores can prevent or mitigate infection in the first place; take them as supplements and you are protected. [The CDC recently said that 80%](#) of all people who were infected with COVID-19 were deficient in Vitamin D, another Zinc ligand (metal binding) ionophore (transporter). And this helps explain why Sub-Saharan Africa and other countries where most people are in the sun a lot [only have marginal deaths from this virus](#).
6. Hydroxychloroquine (HCQ) is a 65-year-old drug that has been shown [to stop an infection](#) if taken within the first 2 – 7 days of getting symptoms from COVID-19. So, if you are taking your preventative Vitamins like C, D, E and Quercetin, and/or other supplements like Melatonin plus Zinc, and for some reason this doesn't prevent infection, you can stop it with Ivermectin + zinc; which is [readily available online](#).

COVID-19 “ Experimental” Vaccines

7. Other synthetic drugs like Budesonide, Dexamethasone, Ivermectin as well as natural substances (i.e., vitamins, flavonoids, amino acids, and hormones) can be found in the Pharmaceutical Zinc20 database, a database funded by a subsidiary of NIH. This database is comprised of ligands, which carry metals like Zinc, Calcium and other micronutrients present in our blood serum and transport them across cell membranes into the body of the cell (cytoplasm) to help our immune system fight infection. Like HCQ, these synthetic drugs need zinc and other micronutrient metals to work. [Dr. Zelenko](#) uses the analogy “the drug is the gun and zinc is the bullet” which is essential to stopping the viral reproduction and resulting infection.
8. Ivermectin is a proven drug for treating all three phases of the COVID-19 disease. Perhaps the best proof is found in India where one [province distributed Ivermectin](#) to most citizens and now they have very few cases and no deaths from the virus. Given such a useful therapeutic exists, it is illegal to authorize the use of vaccines, yet the psychopathic leaders do it anyway.
9. Because these “Vaccines” are unproven experimental substances, we won’t know what side effects may occur for months or years to come, but it may result in a long-term unnatural human manipulation of our DNA building blocks. Do you really want to take that risk or risk your children’s lives? Especially since:
10. There is no pandemic. The number of deaths from COVID-19, [which is highly inflated](#), is no worse than a bad flu season. And your chances of dying from it, even if you do nothing to protect yourself as defined in #5 and #6 above, are [very small according to CDC data](#). For children 17 and under they are 154 times more likely to die from something else. As of April 17, 2021, only 266 children have died with COVID-19. Not a single healthy child has died from COVID-19 alone. If you are under 64 years old, your chance of surviving is 99.99%.
11. There is not a cold or flu season, there is a vitamin D deficiency season. Colds and flues occur when the sun is low in the sky and we don’t get enough of it. Or if you live in a big city, you don’t get enough sun all the time and big cities are where most of the COVID deaths have occurred. Take your Vitamin D supplements and your immune system will thank you.
12. Since both experimental vaccines are EUA, both Pfizer and Moderna are indemnified from all legal action resulting from patients experiencing side effects; including death. Since they assume no risk, you are the one who takes all of it! And according to [Dr. Sherri Tenpenny](#) that is not a good idea.
13. According to [Dr. Richard Fleming](#), Ph.D, MD, JD, a renowned cardiologist and researcher, there is a chance that the mRNA from the vaccine can be incorporated into your human DNA by action of the [reverse transcriptase enzyme present in the vaccine](#). This may affect your auto immune system and result in various auto immune diseases. However, for all you who are taking zinc supplements + ionophores and decide to get vaccinated, Dr Fleming stated that he believes Zinc does appear to interfere with the mRNA process of the vaccines to make the spike protein. This means it will probably reduce the symptoms you can get, so make sure you are taking them.
14. The vaccine nano particles of lipid/fat composition, in which the mRNA is transported into your cells, has never been used before in human trials and long-term health effects have not been determined. These lipid nano particles bind with the normal fats in cell

COVID-19 “ Experimental” Vaccines

membranes and allow [entry of thousands of the synthetic mRNA vaccine into your muscle cells](#). Unlike the virus RNA which has to enter through the ACE-2 receptors found on cells, the nano particles create new pathways into cells. Because the ACE-2 receptor sites are where the normal entry of the virus occurs, bypassing this path means a greater amount of mRNA can enter the cell producing increased amounts of the spike protein exacerbating the immune response to the virus. This increased immune reaction can produce the very InflammoThrombotic Response (ITR) responsible for so many deaths. Again, long-term health effects are not known since long-term studies in lab animals have not been conducted. We humans have become the lab rats, and many doctors are reporting large increases in the number of cancer cases since the vaccines started.

15. The CDC [VAERS database](#) only captures about 1% of all the adverse reactions to vaccines, and so far the Pfizer vaccine has 1,218 blood clot reports, Moderna has 1,034, and J & J has 1,000. Therefore, blood clot disorders reported totals 3,272, so if the 1% is accurate, this would mean 327,200 people have had this problem from the vaccines.
16. Like real lab animals you cannot sue these pharmaceutical companies for suffering from any side effects after taking these experimental vaccines. However, companies requiring CoV19 vaccinations as a requirement for employment may be subject to legal action since it violates our civil rights. For an example of a law suit against the government go here: <https://factcheckedorg.files.wordpress.com/2021/09/joseph-jensen-lawsuit.pdf>
17. It's against the [Nuremberg code](#) to force vaccinations on a person, and [informed consent](#) overrides public policy. Federal law prohibits employers and others from using vaccines under EUA as a [condition](#) of employment.
18. For 35 more facts on the potential dangers of these vaccines, go to [No Jab For Me](#).
19. Or, for 18 more reasons not to get these Experimental Vaccines see: [18 Reasons I Won't Be Getting a Vaccine](#) by Christian Elliot.
20. The choice to take an experimental EUA COVID-19 vaccine is yours to make. Hopefully we have given you the facts to make a better-informed decision.

Good luck and good health to you all.

Myocarditis Following Immunization With mRNA COVID-19 Vaccines in Members of the US Military

Jay Montgomery, MD; Margaret Ryan, MD, MPH; Renata Engler, MD; Donna Hoffman, MSN; Bruce McClenathan, MD; Limone Collins, MD; David Loran, DNP; David Hrcir, MD; Kelsie Herring, MD; Michael Platzer, MD; Nehkonti Adams, MD; Aliye Sanou, MD; Leslie T. Cooper Jr, MD

IMPORTANCE Myocarditis has been reported with COVID-19 but is not clearly recognized as a possible adverse event following COVID-19 vaccination.

OBJECTIVE To describe myocarditis presenting after COVID-19 vaccination within the Military Health System.

DESIGN, SETTING, AND PARTICIPANTS This retrospective case series studied patients within the US Military Health System who experienced myocarditis after COVID-19 vaccination between January and April 2021. Patients who sought care for chest pain following COVID-19 vaccination and were subsequently diagnosed with clinical myocarditis were included.

EXPOSURE Receipt of a messenger RNA (mRNA) COVID-19 vaccine between January 1 and April 30, 2021.

MAIN OUTCOMES AND MEASURES Clinical diagnosis of myocarditis after COVID-19 vaccination in the absence of other identified causes.

RESULTS A total of 23 male patients (22 currently serving in the military and 1 retiree; median [range] age, 25 [20-51] years) presented with acute onset of marked chest pain within 4 days after receipt of an mRNA COVID-19 vaccine. All military members were previously healthy with a high level of fitness. Seven received the BNT162b2-mRNA vaccine and 16 received the mRNA-1273 vaccine. A total of 20 patients had symptom onset following the second dose of an appropriately spaced 2-dose series. All patients had significantly elevated cardiac troponin levels. Among 8 patients who underwent cardiac magnetic resonance imaging within the acute phase of illness, all had findings consistent with the clinical diagnosis of myocarditis. Additional testing did not identify other etiologies for myocarditis, including acute COVID-19 and other infections, ischemic injury, or underlying autoimmune conditions. All patients received brief supportive care and were recovered or recovering at the time of this report. The military administered more than 2.8 million doses of mRNA COVID-19 vaccine in this period. While the observed number of myocarditis cases was small, the number was higher than expected among male military members after a second vaccine dose.

CONCLUSIONS AND RELEVANCE In this case series, myocarditis occurred in previously healthy military patients with similar clinical presentations following receipt of an mRNA COVID-19 vaccine. Further surveillance and evaluation of this adverse event following immunization is warranted. Potential for rare vaccine-related adverse events must be considered in the context of the well-established risk of morbidity, including cardiac injury, following COVID-19 infection.

Myocarditis is a heterogeneous disease with diverse clinical patterns, etiologies, and therapeutic responses, reflecting inflammatory injury to myocardial tissue in the absence of ischemia.¹ While viral infections, now including SARS-CoV-2, are the most common triggers of the disease, some myocarditis cases are associated with certain drugs and vaccine exposures.¹ With the exception of cases following live-attenuated smallpox vaccine in the military population,² myocarditis as an adverse event following immunization is described in rare published case reports and infrequent submissions to the Vaccine Adverse Events Reporting System (VAERS).^{3,4}

Serious adverse events associated with receipt of new vaccines targeting COVID-19 are of high interest to the public and to public health vaccine safety surveillance. We describe a series of 23 individuals who developed probable hypersensitivity myocarditis in temporal association with COVID-19 messenger RNA (mRNA) vaccination.

Methods

The US military initiated COVID-19 vaccination following US Centers for Disease Control and Prevention (CDC)-defined phased distribution in December 2020. Adverse events following immunizations were identified from referrals to Defense Health Agency clinical specialists and through review of VAERS reports. Retrospective review of cases was conducted in accordance with the Walter Reed National Military Medical Center Institutional Review Board-approved protocol, "Adverse Events Following Immunization: Case Definitions and Outcomes Retrospective Review," and exempt from formal consent procedures.

Results

A total of 23 male patients (22 currently serving in the military and 1 retiree; median [range] age, 25 [20-51] years) were evaluated between January and April 2021 for acute-onset chest pain following mRNA COVID-19 vaccination. Care was provided in 15 distinct geographic locations globally with varying diagnostic evaluations. Each patient had a final diagnosis of myocarditis without infectious, ischemic, or autoimmune

Key Points

Question Should myocarditis be considered a potential adverse event following immunization with messenger RNA (mRNA) COVID-19 vaccines?

Findings In this case series of 23 male patients, including 22 previously healthy military members, myocarditis was identified within 4 days of receipt of a COVID-19 vaccine. For most patients (n = 20), the diagnosis was made after the second dose of mRNA COVID-19 vaccine; these episodes occurred against the backdrop of 2.8 million doses of mRNA COVID-19 vaccines administered.

Meaning Vigilance for rare adverse events, including myocarditis, after COVID-19 vaccination is warranted but should not diminish overall confidence in vaccination during the current pandemic.

etiologies identified. Diagnoses were reviewed by an adjudication process and met the CDC case definition criteria for probable myocarditis (Table 1). A total of 8 patients had cardiac magnetic resonance imaging (cMRI) with T2 weighting showing subepicardial late gadolinium enhancement and/or focal myocardial edema, consistent with Lake Louise criteria for myocarditis.¹ The eFigure in the Supplement exemplifies cMRI findings for one of these patients.

The demographic and clinical characteristics of patients are summarized in Table 2. All military service members were physically fit by military standards and lacking any known history of cardiac disease, significant cardiac risk factors, or exposure to cardiotoxic agents. All patients presented with acute chest pain and significantly elevated cardiac troponin levels (10-fold to 400-fold the upper limits of their respective reference ranges). Their symptoms began within 12 to 96 hours following immunization with an mRNA COVID-19 vaccine. Sixteen had received the mRNA-1273 vaccine (Moderna), and 7 had received the BNT162b2-mRNA vaccine (Pfizer-BioNTech). For all but 3 patients, the second dose of vaccine preceded their myocarditis presentations. Among the 3 patients presenting after an initial vaccine dose, all had confirmed COVID-19 infection more than 2 months prior to vaccination.

All patients underwent electrocardiography and echocardiography (Table 2). Abnormal electrocardiography findings were recorded in 19 patients (83%); findings included ST-segment elevations, T-wave inversions, and nonspecific ST

Table 1. Case Definition Criteria for Myocarditis Following Immunization^a

Suspected case	Probable case	Confirmed case
Dyspnea, palpitations, or chest pain of probable cardiac origin, with either one of the following: A. ECG abnormalities beyond normal variants, not documented previously, including: • ST-segment/T-wave abnormalities • Paroxysmal or sustained atrial or ventricular arrhythmias • AV nodal conduction delays or intraventricular conduction defects • Continuous ambulatory ECG monitoring that detects frequent atrial or ventricular ectopy B. Focal or diffuse depressed LV function of indeterminate age identified by an imaging study	Meets criteria for suspected myocarditis, in the absence of other likely cause of symptoms, in addition to one of the following: A. Elevated cardiac enzymes (troponin-I, troponin-T, or creatine kinase-MB) B. New-onset or increased degree of severity of focal or diffuse depressed LV function by imaging C. Abnormal imaging findings indicating myocardial inflammation (cardiac MRI with gadolinium, gallium-67 scanning, antimyosin antibody scanning)	Histopathologic evidence of myocarditis by endomyocardial biopsy or autopsy

Abbreviations: ECG, electrocardiography; LV, left ventricular; MRI, magnetic resonance imaging.

^a This definition was originally developed to evaluate cardiac events after smallpox vaccine. The definition is currently being reviewed by the international Brighton Collaboration for application to COVID-19 vaccine.

Negative	20 (87)

Abbreviations: LVEF, left ventricular ejection fraction; MRI, magnetic resonance imaging; mRNA, messenger RNA; PCR, polymerase chain reaction.

^a Inconsistencies in troponin types and laboratory sensitivity of testing preclude reporting combined quantified results.

^b Electrocardiogram findings included ST elevations, T-wave inversions, and nonspecific ST changes.

^c Echocardiogram findings are reported as LVEF; no structural abnormalities were noted in any patients.

^d All abnormal cardiac MRIs reportedly met current Lake Louise criteria for myocarditis, with subepicardial late gadolinium enhancement and/or focal myocardial edema.

^e Testing for other acute viral infections varied in each case; panels included some or all of these pathogens: coxsackie viruses, cytomegalovirus, Epstein-Barr virus, hepatitis A virus, hepatitis B virus, hepatitis C virus, herpes simplex virus, human herpesvirus 6, HIV, influenza viruses, and parvoviruses.

Table 3. Expected vs Observed Cases of Myocarditis in Military Health System Patients Based on Number of Messenger RNA (mRNA) COVID-19 Vaccine Doses Administered

Doses of mRNA COVID-19 vaccine (through April 30, 2021)	No. of myocarditis cases
	Expected ^a Observed
2 810 000 Total doses	2 to 52 23
1 065 000 Second doses	1 to 20 20
544 000 Second doses to military members	0 to 10 19
436 000 Second doses to male military members	0 to 8 19

^a Expected number is based on an expected annual incidence ranging from 1 per 100 000 person-years to 22 per 100 000 person-years^{5,6} presenting within a 30-day period after vaccination.

changes. Echocardiography in 4 patients (17%) demonstrated reduced left ventricular ejection fractions (40% to 50%). No structural abnormalities were noted on any echocardiograms. A total of 16 patients underwent coronary artery imaging (11 had cardiac catheterization and 5 had coronary computed tomography angiography); none showed evidence of coronary artery disease.

Nineteen patients had respiratory specimens tested for SARS-CoV-2 by polymerase chain reaction at the time of presentation; none had evidence of acute SARS-CoV-2 infection. There were no positive findings among 13 patients who were tested for other infections, nor among 9 patients who were tested for autoimmune diseases.

Cardiac symptoms resolved within 1 week of onset for 16 patients. Seven patients continued to have chest discomfort at the time of this report; follow-up is ongoing.

The number of doses of mRNA COVID-19 vaccine administered by the Military Health System through April 30, 2021, is shown in Table 3. Overall, 2 810 000 doses were administered; 1 065 000 second doses were administered; 544 000 second doses were administered to military service members; and 436 000 second doses were administered to male military service members. The expected number of myocarditis cases occurring in a 30-day period after vaccination may be estimated using an international incidence of 22 cases per 100 000 person-years⁵ or a US incidence of 1 to 10 cases per 100 000 person-years.⁶ Observed numbers of myocarditis in the Military Health System were higher than some estimates of expected numbers, especially when considering the subset of the population who were military service members who received second doses of an mRNA COVID-19 vaccine (Table 3).

Discussion

In this case series, we describe 23 patients with clinical evidence of myocarditis following mRNA COVID-19 vaccination and meeting the CDC case definition for probable myocarditis. Eight patients had cMRI findings consistent with myocarditis. All patients in this series reflect substantial similarities in demographic characteristics, proximate vaccine dose, onset interval, and character of vaccine-associated myocarditis. The consistent pattern of clinical presentation, rapid recovery, and absence of evidence of

other causes support the diagnosis of hypersensitivity myocarditis. Without myocardial biopsy, histology cannot be defined, but the clinical course suggests eosinophilic hypersensitivity myocarditis as described in the context of other drug-associated and vaccine-associated myocarditis.¹⁻³ Presentation after second vaccine dose or, in 3 patients, when vaccination followed SARS-CoV-2 infection, suggests that prior exposure was relevant in the hypersensitivity response.

With the exception of the smallpox vaccine, immunizations are rarely associated with hypersensitivity myocarditis. The spectrum of clinical presentation and reliance on patients seeking health care and on health care professionals recognizing a rare vaccine-associated adverse event limits determination of the true incidence of this condition.⁷ In contrast to passive case finding, Engler et al² reported a significantly higher incidence of myocarditis and pericarditis after smallpox vaccination through active prospective follow-up of vaccinated participants. They noted that 60% of these patients would not have sought medical care for symptoms outside of the study protocol.² Recognition of vaccine-associated myocarditis is clinically important since diagnosis impacts management, recommendations for exercise, and monitoring for cardiomyopathy.⁸

Notably, myocarditis cases were not reported following vaccination in clinical trials of current COVID-19 vaccines.^{9,10} Adverse cardiac events of any kind were reported in less than 0.1% of trial participants, and rates were not higher in recipients of vaccine compared with placebo. The inability to identify rare adverse events is understandable in preauthorization testing since fewer than 20 000 participants received a vaccine in each trial.

Background rates of myocarditis in the general population are variable and may be challenging to determine. As noted, a global estimate of incidence is 22 cases per 100 000 person-years.⁵ More recent estimates of US incidence are lower (1 to 10 cases per 100 000 person-years) and may be more appropriate for estimating expected rates of diagnoses in evaluations of immunization safety.⁶ Applying both the US and global background incidence to the population vaccinated by the US military yields a range of expected numbers of cases of myocarditis in this period (Table 3). The observed number of male military members who experienced myocarditis after their second dose of mRNA vaccine, while relatively small, is substantially higher than the expected number.

Finally, it is important to frame concerns about potential vaccine-associated myocarditis within the context of the cur-

rent pandemic. Infection with SARS-CoV-2 is a clear cause of serious cardiac injury in many patients.¹¹ The mechanism of injury may be direct infection, an immune-mediated response, or a combination of direct or indirect effects. Prevalence of cardiac injury may be as high as 60% in seriously ill patients. Notably, nearly 1% of highly fit athletes with mild COVID-19 infection have evidence of myocarditis on cMRI.^{12,13} Given that COVID-19 vaccines are remarkably effective at preventing infection, any risk of rare adverse events following immunization must be carefully weighed against the very substantial benefit of vaccination.

Limitations

Important limitations to this case series should be considered. Passive surveillance, even when stimulated by global attention on vaccine safety, may not identify all cases. The patients described in this report were identified in a brief period of observation after vaccine implementation from a cohort of essential workers who are not necessarily representative of the general population. Clinical evaluations varied and did not include complete testing in some patients who received care in different hospitals and in different countries. In particular, consistent application of cMRI and thorough viral testing would have strengthened clinical conclusions. This early report is also unable to describe longer-term outcomes among these patients. Despite limitations of this review, it is notable that the clinical presentations of these 23 patients appear consistent with other recent case reports of myocarditis after second doses of mRNA COVID-19 vaccines.^{14,15}

Conclusions

We report a case series of probable hypersensitivity myocarditis with consistent temporal association to receipt of an mRNA COVID-19 vaccine. While the true incidence of this adverse event is unknown at this time, the presentation pattern and clinical course suggest an association with an inflammatory response to vaccination. Increased attention to myocarditis as a potential adverse event following immunization is warranted. Recognition of the substantial morbidity associated with COVID-19 infection, including risk of cardiac injury, and the strong effectiveness of immunization in preventing infection provide important context for this topic. Concerns about rare adverse events following immunization should not diminish overall confidence in the value of vaccination.

Patients With Acute Myocarditis Following mRNA COVID-19 Vaccination

Han W. Kim, MD; Elizabeth R. Jenista, PhD; David C. Wendell, PhD; Clerio F. Azevedo, MD; Michael J. Campbell, MD; Stephen N. Darty, BS; Michele A. Parker, MS; Raymond J. Kim, MD

IMPORTANCE Vaccine-associated myocarditis is an unusual entity that has been described for the smallpox vaccine, but only anecdotal case reports have been described for other vaccines. Whether COVID-19 vaccination may be linked to the occurrence of myocarditis is unknown.

OBJECTIVE To describe a group of 7 patients with acute myocarditis over 3 months, 4 of whom had recent messenger RNA (mRNA) COVID-19 vaccination.

DESIGN, SETTING, AND PARTICIPANTS All patients referred for cardiovascular magnetic resonance imaging at Duke University Medical Center were asked to participate in a prospective outcomes registry. Two searches of the registry database were performed: first, to identify patients with acute myocarditis for the 3-month period between February 1 and April 30 for 2017 through 2021, and second, to identify all patients with possible vaccine-associated myocarditis for the past 20 years. Once patients with possible vaccine-associated myocarditis were identified, data available in the registry were supplemented by additional data collection from the electronic health record and a telephone interview.

EXPOSURES mRNA COVID-19 vaccine.

MAIN OUTCOMES AND MEASURES Occurrence of acute myocarditis by cardiovascular magnetic resonance imaging.

RESULTS In the 3-month period between February 1 and April 30, 2021, 7 patients with acute myocarditis were identified, of which 4 occurred within 5 days of COVID-19 vaccination. Three were younger male individuals (age, 23-36 years) and 1 was a 70-year-old female individual. All 4 had received the second dose of an mRNA vaccine (2 received mRNA-1273 [Moderna], and 2 received BNT162b2 [Pfizer]). All presented with severe chest pain, had biomarker evidence of myocardial injury, and were hospitalized. Coincident testing for COVID-19 and respiratory viruses provided no alternative explanation. Cardiac magnetic resonance imaging findings were typical for myocarditis, including regional dysfunction, late gadolinium enhancement, and elevated native T1 and T2.

CONCLUSIONS AND RELEVANCE In this study, magnetic resonance imaging findings were found to be consistent with acute myocarditis in 7 patients; 4 of whom had preceding COVID-19 vaccination. Further investigation is needed to determine associations of COVID-19 vaccination and myocarditis.

Vaccine-associated myocarditis is an unusual entity that has been described for the smallpox vaccine,¹ but otherwise only anecdotal case reports have been described for other vaccines. Among 416 629 adults receiving live measles, mumps, and rubella; varicella; oral polio; or yellow fever viral vaccinations in the Vaccine Safety Datalink, there were no patients with myocarditis in the 42 days following vaccination.² There are a few case reports of myocarditis following the seasonal influenza vaccine in otherwise healthy adults,^{3,4} but a causal relationship is difficult to establish and the case reports could have been due to chance.

In late December 2020, COVID-19 vaccination began in the US, and on April 7, 2021, vaccination was opened to all adults 16 years or older in North Carolina. Here, we report cardiac magnetic resonance (CMR) imaging findings in 4 patients consistent with acute myocarditis at our institution; all 4 had recent vaccination for COVID-19. All presented with severe chest pain associated with biomarker evidence of myocardial injury and were hospitalized. Included are data on clinical presentation and results from in-hospital testing. To provide context, we also report the prevalence of acute myocarditis by CMR imaging at our institution during the same 3-month period for each of the past 5 years.

Methods

All patients referred for CMR imaging at Duke University Medical Center are asked to participate in a prospective CMR imaging outcomes registry, which contains clinical data, finalized clinical CMR imaging reports, and full Digital Imaging and Communications in Medicine image data sets.⁵ The registry has been approved by the institutional review board at Duke University Medical Center, and all patients sign informed consent prior to participating.

We performed 2 searches of the registry. First, to identify patients with acute myocarditis for February, March, and April of 2017 through 2021, a search for the term *myocarditis* was performed within the report summary and limited to the relevant time period. Second, to identify all patients with possible vaccine-associated myocarditis for the past 20 years, we searched for the terms *vaccine* or *vaccination* in the report

Key Points

Question Is COVID-19 vaccination linked to the occurrence of myocarditis?

Findings In this study of 7 patients with acute myocarditis, 4 occurred within 5 days of COVID-19 vaccination between February 1 and April 30, 2021. All 4 patients had received the second dose of a messenger RNA (mRNA) vaccine, presented with severe chest pain, had biomarker evidence of myocardial injury, were hospitalized, and had cardiac magnetic resonance imaging findings typical of myocarditis.

Meaning Although causality cannot be established, the findings raise the possibility of an association between mRNA COVID-19 vaccination and acute myocarditis.

summary and the history fields without limitation in the time period. A second independent reviewer performed the same searches and confirmed the counts. Once patients with possible vaccine-associated myocarditis were identified, data available in the registry were supplemented with information from the electronic health record and telephone interview.

CMR imaging was performed on 1.5-T or 3-T scanners. A standard protocol for myocarditis was used, which included cine, T1 and T2 mapping, and late gadolinium enhancement (LGE).^{6,7} Native T1 and T2 times were measured on pixelwise maps with regions drawn to match areas with and without LGE. Cutoffs for abnormally elevated T1 and T2 were based on 2 SDs above the respective means in a healthy population imaged on the same scanners.

Results

In the 3-month period between February 1 and April 30, 2021, we identified 7 patients with acute myocarditis of whom 4 had recent COVID-19 vaccination (**Figure 1**). A search of the entire registry identified a single additional patient with myocarditis diagnosed by CMR imaging within days following quadrivalent influenza vaccination. The patient was a member of the military, and

Figure 1. Patients With Cardiac Magnetic Resonance Imaging Findings Consistent With Acute Myocarditis

The total number of patients with acute myocarditis is highest for 2021 with 4 associated with recent COVID-19 vaccination. Only 1 patient had myocarditis associated with acute COVID-19 infection.

Table. Characteristics of Patients Who Received COVID-19 Vaccination

(continued)

this was his second episode; he had documented myocarditis associated with smallpox vaccination 4 years earlier.

The clinical characteristics of the 4 patients with myocarditis following COVID-19 vaccination are shown in the **Table**. Data on race and ethnicity were not available. Three were younger male individuals (age, 23-36 years) and 1 was a 70-year-old female individual. All 4 had received the second dose of a messenger RNA (mRNA) vaccine (2 received mRNA-1273 [Moderna], and 2 received BNT162b2 [Pfizer-BioNTech]) between 1 and 5 days before hospitalization. None had a viral prodrome or prior COVID-19 infection. COVID-19 and respiratory virus polymerase chain reaction test results were negative in 3 and 2 patients, respectively, who underwent testing. None had acute pulmonary disease on chest radiograph.

All 4 patients had abnormal electrocardiogram results and elevated troponin levels. The older female individual underwent coronary angiography, which revealed no atherosclerosis. CMR imaging was performed between 3 and 5 days after vaccination. All had regional wall motion abnormalities on cine imaging, and ejection fraction ranged between 40% and 59%. LGE was present in a nonischemic pattern consistent with

myocarditis in all 4 patients (**Figure 2**). Both native T1 and T2 were elevated in the regions with LGE, consistent with acute injury, except in 1 patient who did not have a T2 map acquired at a slice location that included an area with LGE. Pericardial thickness was normal in all, and no patients had pericardial LGE.

The hospital courses for all 4 were uneventful without evidence of arrhythmias or heart failure, and treatment was conservative with nonsteroidal anti-inflammatory drug and colchicine, with 1 receiving corticosteroids. All were discharged within 2 to 4 days of hospitalization.

Discussion

We identified at our institution 4 patients with acute myocarditis occurring within days of mRNA COVID-19 vaccination. Although a causal relationship cannot be established, we note that none had a viral prodrome or had coincident testing (including COVID-19 polymerase chain reaction and respiratory virus polymerase chain reaction) that revealed an alter-

Abbreviations: CAD, coronary artery disease; CRP, C-reactive protein; CT, computed tomography; ESR, erythrocyte sedimentation rate; hs-Tn, high-sensitivity troponin; LGE, late gadolinium enhancement; LVEF, left ventricular ejection fraction; MI, myocardial infarction; MRI, magnetic resonance imaging; NP, not performed; NSAIDs, nonsteroidal anti-inflammatory drugs; PCR, polymerase chain reaction; PE, pulmonary emboli; proBNP, pro-brain-type natriuretic peptide; WBC, white blood cell count.

SI conversion factors: To convert CRP to milligrams per liter, multiply by 10; ESR to millimeters per hour, multiply by 1; troponin to micrograms per liter, multiply by 1; WBC to $\times 10^9$ per liter, multiply by 0.001.

^a Upper respiratory tract symptoms, fever, muscle aches.

^b Performed within 2 days after the onset of chest pain in those who underwent testing.

^c Isothermal COVID-19 test was performed (Abbott ID Now; lower detection limit of 125 genome equivalent/mL).

^d Real-time PCR COVID-19 test was performed (Cepheid Xpert Xpress SARS-CoV-2; lower detection limit of 131 copies/mL).

^e Influenza A, influenza B, respiratory syncytial virus.

native explanation. None had COVID-19 infection in the prior year, suggesting that myocarditis from subsequent multisystem inflammatory syndrome is also unlikely.⁸ Additionally, the diagnosis of acute myocarditis was straightforward. The presenting symptom was acute onset of severe chest pain, and myocardial injury was detected by elevated troponin levels in all patients. CMR imaging abnormalities were observed across multiple techniques (regions with wall motion abnormalities on cine imaging–matched regions with LGE and regions with abnormal native T1 and T2) and cannot be attributed to image artifacts. Moreover, the concordant findings were typical for

acute myocarditis. Hence, it is possible that these 4 cases of acute myocarditis represent a rare, potential adverse event linked to mRNA COVID-19 vaccination.

On January 7, 2021, the first patients at our institution began receiving COVID-19 vaccines, and vaccination was opened to all people 16 years and older on April 7, 2021. The first patient at our institution with myocarditis following COVID-19 vaccination was observed in the middle of February 2021, in line with the timing of the second vaccination dose. As of April 30, 2021, there were 561 197 individuals in North Carolina living in the 6 counties surrounding our institution who had been fully vaccinated against

Figure 2. Cardiac Magnetic Resonance Imaging in Patients With Acute Myocarditis Following COVID-19 Vaccination

Late gadolinium enhancement (LGE) images and T1 maps are shown in 4 patients who recently received COVID-19 vaccine. Patients 1, 2, and 4 demonstrate epicardial LGE, and patient 3 demonstrates patchy, diffuse LGE

(pink arrowheads), which are consistent with myocarditis. T1 maps demonstrate abnormal (elevated) native T1 in the regions with LGE (blue arrowheads).

COVID-19 infection, representing 33% of the population (state-wide, 99.1% received an mRNA vaccine).⁹ Since we have identified 4 patients with myocarditis following vaccination, this indicates that if COVID-19 vaccination is associated with myocarditis, it is quite rare. Nonetheless, these 4 patients represent the majority of patients with acute myocarditis identified in the past 3 months at our institution, and this led to the highest total number of patients with acute myocarditis compared with the same 3-month period for the past 5 years (Figure 1). Additionally, we identified only those patients with severe unremitting chest pain who sought medical attention. Those with mild or moderate chest pain might not seek medical attention, and it is possible that sub-clinical myocarditis may occur and could be detected by active surveillance, as has been described with smallpox vaccination.¹⁰

Fortunately, the hospital courses of the 4 patients with myocarditis following COVID-19 vaccination were unevent-

ful, and they were discharged within 2 to 4 days. In brief follow-up, none required rehospitalization (1 was seen in the emergency department for chest pain with negative troponin and pro-brain-type natriuretic peptide levels and was discharged), suggesting that the early prognosis could be benign. This is consistent with the study by Ammirati et al¹¹ that showed that the cardiac mortality plus transplant rate was 0% at 5 years in patients with an uncomplicated presentation of acute myocarditis. Conversely, patients with a complicated presentation (left ventricular ejection fraction, <50% with sustained ventricular arrhythmias or a low cardiac output syndrome requiring inotropes or mechanical circulatory support) had a cardiac mortality plus transplant rate of 14.7% at 5 years. Further study is needed to determine the range of clinical presentations and outcomes for patients with myocarditis following mRNA vaccines.

Limitations

Several caveats should be considered. First, there is no control group, and it is not possible to compare rates of acute myocarditis between those randomly assigned to receive vaccination vs no vaccination. Second, given the media attention, there could be recall or referral bias after COVID-19 vaccination compared with other vaccine exposures, and any temporal link between vaccination and myocarditis could just be due to chance. Third, although tests for COVID-19 infection and respiratory viruses were undertaken in some of the patients, these tests are neither foolproof nor comprehensive. Finally, there is no serological data, which could provide evidence of an excessive response to vaccination or prior subclinical COVID-19 infection (as determined by antinucleocapsid antibodies).

Conclusions

The findings from the present report raise the possibility of an association between mRNA COVID-19 vaccination and acute myocarditis. Since most individuals in North Carolina have received mRNA vaccines, it remains unknown if acute myocarditis will be observed following non-mRNA vaccines. Additionally, whether patients who experience acute myocarditis following COVID-19 vaccination should receive subsequent booster vaccinations for COVID-19 variants (or annual vaccinations for prophylaxis, if needed) is an open question, and the risk vs benefit profile will have to be considered carefully.

Abstract

The SARS-CoV-2 Delta variant might cause high viral loads, is highly transmissible, and contains mutations that confer partial immune escape ^{1,2}. Outbreak investigations suggest that vaccinated persons can spread Delta ^{3,4}. We compared RT-PCR cycle threshold (Ct) data from 699 swab specimens collected in Wisconsin 29 June through 31 July 2021 and tested with a qualitative assay by a single contract laboratory. Specimens came from residents of 36 counties, most in southern and southeastern Wisconsin, and 81% of cases were not associated with an outbreak. During this time, estimated prevalence of Delta variants in Wisconsin increased from 69% to over 95%. Vaccination status was determined via self-reporting and state immunization records ([Supplemental Figure 1](#)).

Main text

We observed low Ct values (<25) in 212 of 310 fully vaccinated (68%; [Figure 1A](#)) and 246 of 389 (63%) unvaccinated individuals. Testing a subset of low-Ct samples revealed infectious SARS-CoV-2 in 15 of 17 specimens (88%) from unvaccinated individuals and 37 of 39 (95%) from vaccinated people ([Figure 1B](#)).

Low Ct values were detected in vaccinated people regardless of symptoms at the time of testing ([Figure 1C](#)). Ct values <25 were detected in 7 of 24 unvaccinated (29%; CI: 13-51%) and 9 of 11 fully vaccinated asymptomatic individuals (82%; CI: 48-97%), and 158 of 232 unvaccinated (68%, CI: 62-74%) and 156 of 225 fully vaccinated (69%; CI: 63-75%) symptomatic individuals. Time from symptom onset to testing did not vary by vaccination status ($p=0.40$; [Supplemental Figure 2](#)). Infectious virus was detected in the sole specimen tested from an asymptomatic fully vaccinated individual. Although few asymptomatic individuals were sampled, these results indicate that even asymptomatic, fully vaccinated people might shed infectious virus.

Combined with other studies ²⁻⁵, these data indicate that vaccinated and unvaccinated individuals infected with the Delta variant might transmit infection. Importantly, we show that infectious SARS-CoV-

2 is frequently found even in vaccinated persons when specimen Ct values are low. The inclusion of viruses from Pango lineages B.1.617.2, AY.2, and AY.3, and multiple counties without a linking outbreak, indicate that Delta-lineage SARS-CoV-2 can achieve low Ct values consistent with transmissibility in fully vaccinated individuals across a range of settings. Vaccinated and unvaccinated persons should get tested when symptomatic or after close contact with someone with suspected or confirmed COVID-19. Continued adherence to non-pharmaceutical interventions during periods of high community transmission to mitigate spread of COVID-19 remain important for both vaccinated and unvaccinated individuals.

Figure

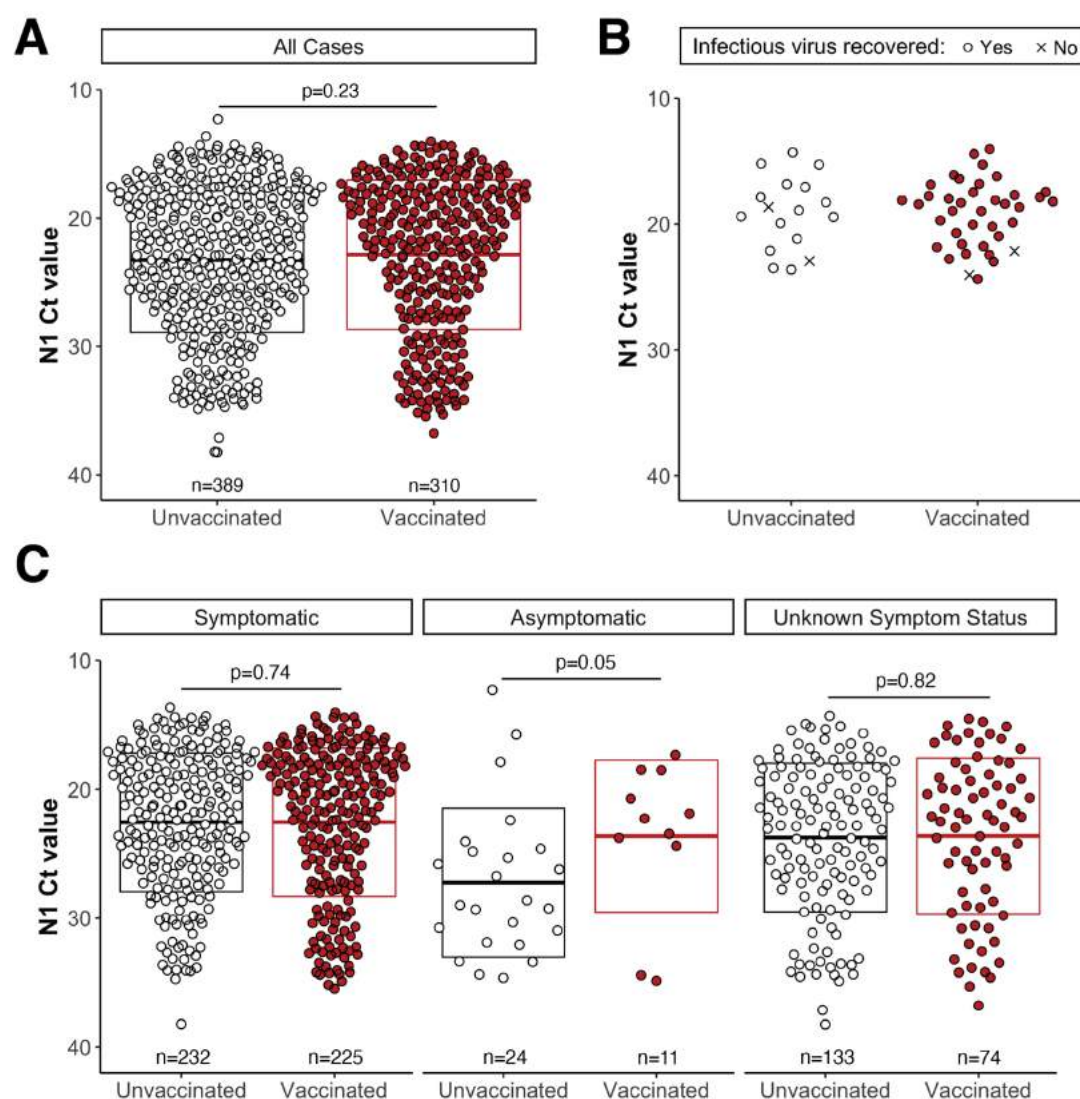

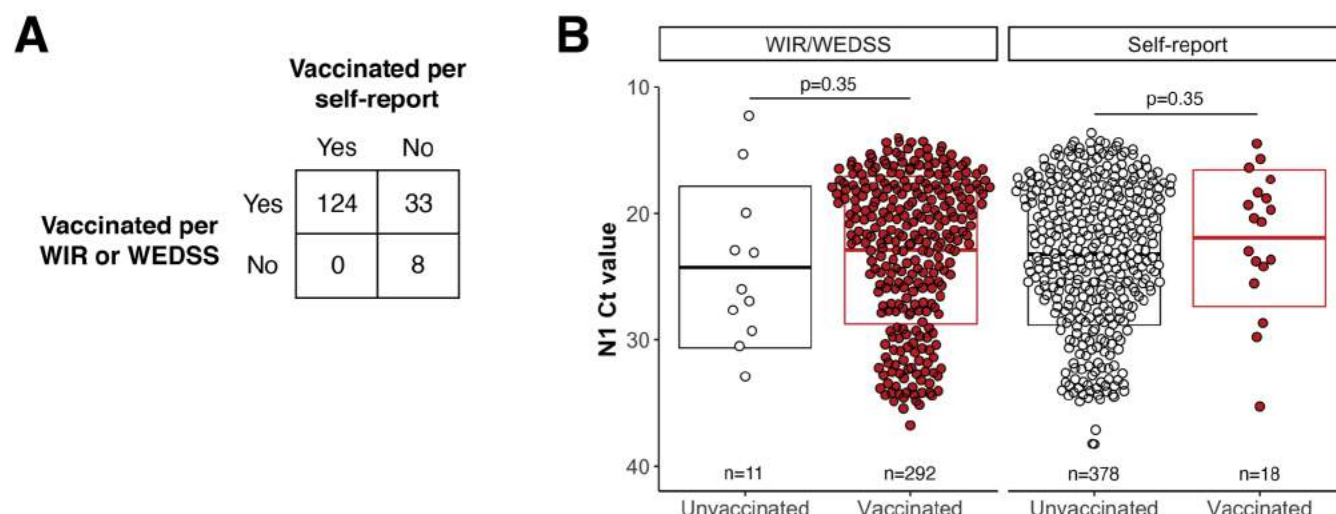

Figure 1. Individuals infected with SARS-CoV-2 despite full vaccination have low Ct values and shed infectious virus. A. Ct values for SARS-CoV-2-positive specimens grouped by vaccination status. RT-PCR was performed by Exact Sciences Corporation, responsible for over 10% of all PCR tests in Wisconsin during this period, using a qualitative diagnostic assay targeting the SARS-CoV-2 N gene (oligonucleotides identical to CDC's N1 primer and probe set) that has been authorized for emergency use by FDA (<https://www.fda.gov/media/138328/download>). **B.** Infectiousness was determined for a subset of N1 Ct-matched specimens with Ct <25 by inoculation onto Vero E6 TMPRSS2 cells and determining presence of cytopathic effects (CPE) after 5 days in culture. Specimens were selected by N1 Ct-matching between fully vaccinated and not fully vaccinated persons, then specimens from persons with unknown vaccination status were excluded from the analysis. Circles indicate presence of CPE; 'X' indicates no CPE detected. **C.** N1 Ct values for SARS-CoV-2-positive specimens grouped by vaccination status for individuals who were symptomatic or asymptomatic, or those whose symptom status was not determined, at the time of testing. In **A** and **C**,

boxplots represent mean N1 Ct values +/- one standard deviation. P-values were calculated by comparing mean Ct values by independent two-group Mann-Whitney U tests.

Supplemental materials

Supplemental figure 1

Supplemental figure 1. Concordance between self-reported vaccination status and the Wisconsin Immunization Registry (WIR) or Wisconsin Electronic Disease Surveillance System (WEDSS). For all individuals, vaccination status was determined using WIR/WEDSS electronic registries when data were available. Individuals were identified as unvaccinated at the time of testing if WIR/WEDSS data indicated receipt of a first SARS-CoV-2 vaccine dose after the test date.

Individuals were considered fully vaccinated based on WIR/WEDSS data if the registries indicated receipt of a final vaccine dose at least 14 days prior to testing. For individuals whose vaccination status could not be verified in WIR/WEDSS, self-reported data collected at the time of testing were used. Individuals were considered unvaccinated based on self-report only if there was an explicit declaration of unvaccinated status in the self-reported data. Individuals were considered fully vaccinated based on self-report if they fulfilled all of the following criteria: (1) indicated that they had received a COVID vaccine prior to testing; (2) indicated that they did not require another vaccine dose; and (3) reported a date of last vaccine dose that was at least 14 days prior to testing.

Specimens lacking data on vaccination status were excluded from the study. Specimens from partially vaccinated individuals (incomplete vaccine series, or <14 days post-final dose) were also excluded. Fully vaccinated status was determined by WIR/WEDSS for 292 specimens and by self-reported data for 18. Unvaccinated status was determined by WIR/WEDSS for 11 and by self-reported data by 378. **A.** Of the 699 specimens with vaccination status available from at least one source, 165 specimens had data available from both sources. For self-reporting, under-reporting of full vaccination status (33/157) was more common than over-reporting (0/124). **B.** N1 Ct values for SARS-CoV-2-positive specimens grouped by vaccination status for individuals whose vaccination status was determined by WIR/WEDSS or by self-reported data. Boxplots represent mean N1 Ct values +/- one standard

deviation. P-values were calculated by comparing mean Ct values by independent two-group Mann-Whitney U tests.

Supplemental figure 2

Supplemental figure 2. Density distributions of unvaccinated and vaccinated specimen collection dates by day since symptom onset. Day 0 on the x-axis denotes self-reported day of symptom onset. Negative values for days indicate specimen collection prior to symptom onset. Symptom onset data were available for n=263 unvaccinated cases and n=232 vaccinated cases.

Conflict of interest

The authors declare no conflicting interests.

Ethics statement

Per the University of Wisconsin-Madison IRB, this project qualifies as public health surveillance activities as defined in the Common Rule, 45 CFR 46.102(l)(2). As such, the project is not deemed to be research regulated under the Common Rule and therefore, does not require University of Wisconsin-Madison IRB review and oversight.

SARS-CoV-2 mRNA Vaccination-Associated Myocarditis in Children Ages 12-17: A Stratified National Database Analysis

ABSTRACT

Objectives: Establishing the rate of post-vaccination cardiac myocarditis in the 12-15 and 16-17-year-old population in the context of their COVID-19 hospitalization risk is critical for developing a vaccination recommendation framework that balances harms with benefits for this patient demographic.

Design, Setting and Participants: Using the Vaccine Adverse Event Reporting System (VAERS), this retrospective epidemiological assessment reviewed reports filed between January 1, 2021, and June 18, 2021, among adolescents ages 12-17 who received mRNA vaccination against COVID-19. Symptom search criteria included the words chest pain, myocarditis, pericarditis and myopericarditis to identify children with evidence of cardiac injury. The word troponin was a required element in the laboratory findings. Inclusion criteria were aligned with the CDC working case definition for probable myocarditis. Stratified cardiac adverse event (CAE) rates were reported for age, sex and vaccination dose number. A harm-benefit analysis was conducted using existing literature on COVID-19-related hospitalization risks in this demographic.

Main outcome measures: 1) Stratified rates of mRNA vaccine-related myocarditis in adolescents age 12-15 and 16-17; and 2) harm-benefit analysis of vaccine-related CAEs in relation to COVID-19 hospitalization risk.

Results: A total of 257 CAEs were identified. Rates per million following dose 2 among males were 162.2 (ages 12-15) and 94.0 (ages 16-17); among females, rates were 13.0 and 13.4 per

million, respectively. For boys 12-15 without medical comorbidities receiving their second mRNA vaccination dose, the rate of CAE is 3.7 to 6.1 times higher than their 120-day COVID-19 hospitalization risk as of August 21, 2021 (7-day hospitalizations 1.5/100k population) and 2.6-4.3-fold higher at times of high weekly hospitalization risk (7-day hospitalizations 2.1/100k), such as during January 2021. For boys 16-17 without medical comorbidities, the rate of CAE is currently 2.1 to 3.5 times higher than their 120-day COVID-19 hospitalization risk, and 1.5 to 2.5 times higher at times of high weekly COVID-19 hospitalization.

Conclusions: Post-vaccination CAE rate was highest in young boys aged 12-15 following dose two. For boys 12-17 without medical comorbidities, the likelihood of post vaccination dose two CAE is 162.2 and 94.0/million respectively. This incidence exceeds their expected 120-day COVID-19 hospitalization rate at both moderate (August 21, 2021 rates) and high COVID-19 hospitalization incidence. Further research into the severity and long-term sequelae of post-vaccination CAE is warranted. Quantification of the benefits of the second vaccination dose and vaccination in addition to natural immunity in this demographic may be indicated to minimize harm.

INTRODUCTION

Pfizer-BioNTech BNT162b2 and Moderna mRNA-1273 vaccines for SARS-CoV-2 have demonstrated exceptional safety and real-world effectiveness in preventing severe disease and death from COVID-19. Concerns about vaccination-related myocarditis in young men were initially raised in Israel with rates between $\frac{1}{3000}$ - $\frac{1}{6000}$. [1] In the United States, the initial Centers for Disease Control and Prevention (CDC) report [2,3] identified a rate of approximately

12.6 per million (1/80,000) second doses administered in ages 12-39, but approximately 1/15,000 for males 12-17 and 1/19,000 for males 18-24.[2,3]

Although the CDC analyses [2,3] identified a higher rate of myocarditis in boys than young men, further stratification by adolescent age group (e.g., 12-15 and 16-17 years) was not provided. A second potential limitation was the sensitivity of the CDC symptom search inclusion criteria, which may have failed to identify cases of cardiac adverse events (CAEs), consistent with myocarditis, with objective evidence of cardiac injury following vaccination.

On August 23rd, the Federal Drug Administration (FDA) released a Pfizer-BioNTech vaccine report[4] which outlines “an excess risk [of myocarditis] approaching 200 cases/million” or 1/5000 in 16–17-year-old boys, which was three times higher than reported by the CDC [2,3]. In their harm-benefit analysis, the most likely scenario was the benefits of vaccination would outweigh harms in 16-17-year-old males, but “predicted excess cases of vaccine-associated myocarditis/pericarditis would exceed COVID-19 hospitalizations and deaths under the ‘worst case’ scenario” [4].

Post-vaccination myocarditis rates for the 12-15-year-old age group had not yet been reported beyond the initial trial with 1131 vaccination recipients [5], until August 30th, 2021, when the CDC reported [6] the following rates for boys ages 12-15 and 16-17 within seven days of their second dose of Pfizer-BioNTech at 42.6 and 71.5 per million, respectively. For females, rates were 4.3 and 8.1 per million, respectively. A harm-benefit analysis of vaccination in the pediatric age group has not yet been performed based on presence of absence of underlying medical

conditions. While medical comorbidities confer higher risk for severe COVID-19, this is not known to be the case for post-vaccination myocarditis.

The CDC [2,6] reported a 94-96% hospitalization rate for VAERS-identified myocarditis. The CDC used a 120-day COVID-19 hospitalization rate as a meaningful comparator to vaccination-related harms, and we have chosen to use this same comparison for our study.

Our primary aim was to stratify post-mRNA vaccination myocarditis by age and vaccination dose within the 12–17-year-old population. Our secondary aim was to provide an updated estimate to complement the CDC’s [2,3,6] and FDA’s [4] findings. Our final aim was to perform a harm-benefit analysis of mRNA COVID-19 vaccination myocarditis with that of COVID-19 hospitalization for children with and without one or more comorbidity at low, moderate, and high 120-day COVID-19 hospitalization rates.

METHODS

We searched the Vaccine Adverse Event Reporting System (VAERS) data for females and males ages 12-17 in reports processed from 1/1/2021 through 6/18/2021 with diagnoses of “myocarditis,” “pericarditis,” “myopericarditis” or “chest pain” in the symptom notes and required the term “troponin” in the laboratory data. We defined a CAE using the CDC working case definition for a probable case.[2] Specifically, the symptom of “chest pain” required at least one of the following: diagnosis of myocarditis, peri- or myopericarditis, acute myocardial infarction; elevated troponin; abnormal electrocardiogram (EKG), abnormal echocardiogram (ECHO), or cardiac MRI (cMRI) findings consistent with myocarditis (as defined in Supplement

1). Cases and hospitalizations with an unknown dose number were assigned to dose 1 or dose 2 in the same proportion as the known doses: 15% occurred following dose 1 and 85% occurred following dose 2.

To compute crude rates per million for doses 1 and 2, our denominators included all children with at least 1 dose of any vaccination and all fully vaccinated children, respectively, as of 6/11/2021[6] to accommodate both reporting lag and a pre-defined 7-day risk window, consistent with the CDC's analysis. 95% Poisson confidence intervals were calculated for these rates.

To perform a harm-benefit analysis, pediatric hospitalization rates for COVID-19 were obtained from the CDC's COVID-NET.[7] COVID-19 hospitalization rates among children with and without one or more medical comorbidities were calculated based on hospitalization rates at times of low (June 2021), moderate (August 2021) and high (January 2021) incidence.[8] Children with at least one medical comorbidity were considered to have 4.7 times the likelihood of COVID-19 hospitalization as those without comorbidities based on 70% of children hospitalized for COVID-19 having one or more medical comorbidity.[9] We estimate 33% of children in this age group have one or more comorbidity based upon current data[10] suggesting 21.2% of children 12-19 have obesity and around 8.4% have asthma.[11] These comorbidities are also found in the summary of underlying conditions for pediatric COVID-19 hospitalizations reported to COVID-NET.[8] The two most common underlying conditions among pediatric hospitalizations are obesity (33.8%) and asthma (14.8%).[8] Other relevant comorbidities such as diabetes[11] or the medically complex children[12] appear to make up <5% of this demographic.[11] The estimated ratio of expected hospitalizations for children by presence or

absence of comorbidity must therefore account for the relative proportions of children with and without comorbidities in the population, and among those admitted for COVID-19. The computation is as follows: $[(0.67/0.33) / (0.3/0.7) = (0.67*0.7) / (0.33*0.3) = 0.469 / 0.099 = 4.7]$, in other words a 4.7-fold difference in hospitalization risk for children with and without medical comorbidities.

We provided an additional rate which adjusted for the reported approximate 40% of pediatric hospitalizations for COVID-19 being incidental positive tests on admission.[9,13,14] Finally, the risk of post-vaccination CAE post-dose two in 12–15-year-old-boys was compared with their overall risk of hospitalization from COVID-19 according to presence or absence of comorbidities and adjusted for the 40% hospitalization overestimate as well as the asymptomatic fraction of pediatric cases.

Data were analyzed using Microsoft PowerBI, Stata and Microsoft Excel

RESULTS

A total of 276 reports met our initial search criteria; of these, 18 were excluded because they had no objective evidence of elevated troponins or abnormal findings on ECG/EKG or ECHO, or we could not exclude the possibility of viral myocarditis or concomitant pneumonia. Of the 18 excluded cases, eight were hospitalized. Nine were 12-15 and nine were 16-17 years old. Sixteen of the excluded cases were coded “chest pain” in the symptom notes and the remaining two females were coded as “myocarditis” but no troponin values nor EKG/ECG findings were

included. Of the remaining 258 cases, we excluded from sex-specific rates one case with “unknown” sex, leaving 257 cardiac adverse event reports for full analysis (25 females and 232 males). Of these, 211 cases had peak troponin values available for analysis (Supplement 2); 37 reports did not include the vaccine dose number. Of the 257 included cases, 256 had received Pfizer-BioNTech mRNA vaccination, one had received Moderna mRNA vaccination (only Pfizer-BioNTech was approved for vaccination of children <18 at the time of our database search).

The CAE rates by age and sex and vaccination dose are shown in Figure 1 and Table 1.

(Interactive data visualizations and full VAERS case notes available at this link:

<https://bit.ly/CAEmRNA>). Our post-second-dose-vaccination rates of CAE among adolescent boys aged 12-15 was 162.2/million which exceeded the rates reported by the CDC[2,6] by 143-280% (2.4-3.8 times). Among boys age 16-17, our estimate was 94.0/million, 31.5-41% higher than the CDC estimate. For girls 12-15 years old, our rate was 13.0/million, which was 43-100% higher than the CDC’s estimate.[2,6] Among girls 16-17, our estimate was 13.4/million, which was 47-65% higher than the CDC’s estimate.

Rates per million following dose 1 among males were: 12.0 per million (ages 12-15) and 8.2 per million (ages 16-17). Rates per million following dose 1 among females were 0 (ages 12-15) and 2.0 (ages 16-17). With respect to dose 1 and compared to CDC findings, 12–15-year-old boys were 22-150% higher than the CDC, while girls this age had zero CAEs in our analysis. Among adolescents ages 16-17, our rates were 16% lower to 58% higher for boys and 82% higher for

girls [2] and in the updated CDC report [6] the reported rate for girls 16-17 post-dose one was 0.0 per million.

The CAE cases in our investigation occurred a median of 2 days following vaccination, and 91.9% occurred within 5 days. The reported CAE hospitalization rate for our study group was 222/257 (86.4%); 112/130 (86.2%) in the 12–15-year-old cohort and 110/127 (86.6%) in the 16–17-year-old cohort (Figure 2). Specific hospitalization rates for boys were 106/122 (86.9%) for the 12–15-year-old boys and 96/110 (87.3%) for the 16–17-year-old boys (Figure 2).

The median peak troponin T/I (Figure 3) (normal <0.1 ng/mL) was 5.2 ng/mL in boys ages 12-15 and 11.6 ng/mL in boys ages 16-17; for girls, the medians were 0.8 ng/mL and 7.3 ng/mL, respectively. Peak troponin values exceeded 2 ng/mL for 71% of cases age 12-15 and 82% of cases age 16-17. Figure 4 shows the time course of troponin increases after vaccination: 183/211 (86.7%) measured as elevated within 4 days. For the 221 cases for which the dose number was available, 32 (15%) occurred after dose 1 and 189 (85%) occurred after dose 2. The 37 cases with an unknown dose number were assigned proportionately to the overall distribution among the cases with a known dose number: 5 were assigned to dose one and 32 were assigned to dose two.

COVID-19 hospitalization vs. vaccination harms

In the seven-month period of January 2021-July 2021, the rate of COVID-19 hospitalization among adolescents (ages 12-17) has ranged from a low of ≤ 4 per million weekly (July 2021) to moderate level (15 per million per week in mid-August 2021) and high (21 per million per week in January 2021) (Figure 6).[8,9] A healthy adolescent might expect a COVID-19 hospitalization

risk of 44.4 per million over the next 120 days, assuming disease-related hospitalization prevalence stays at moderate levels (Figure 6, Figure 7). A child with at least one comorbidity might expect a disease-associated hospitalization rate of 210.5 per million per 120 days during times of moderate hospitalization, with a peak hospitalization risk of 294.7 per million per 120-days if rates surge to the same high level as January 2021.

At times of low adolescent COVID-19 hospitalization rates, such as in June 2021, a CAE from the second dose of an mRNA vaccine in a healthy 12–15-year-old boy was 13.7-fold more likely, at 162.2 per million, than the 120-day risk of COVID-19 hospitalization. The rate of post-vaccination CAE for boys 12-15 years without comorbidities (162.2/million) receiving their second vaccination dose exceeds their current 120-day COVID-19 hospitalization risk (44.4/million) by 3.7 times. In 16–17-year-old boys without comorbidities, the risk of post-dose two vaccination CAE exceeds their current 120-day hospitalization risk by 2.1 times (94.0/million vs. 44.4/million per 120-days). Our estimated risk of post-second vaccination dose CAE hospitalization for boys 12-15 without medical comorbidities (141/million; based on 86.9% hospitalization rate) also exceeds that of their 120-day COVID-19 hospitalization risk even at high hospitalization rates (Figures 6 and 7). For 12–17-year-old-boys with at least one medical comorbidity (Figure 6 and 7) their risk of post-vaccination CAE only exceeds their 120-day COVID-19 hospitalization risk at times of low hospitalization rates.

We also performed an adjusted analysis based on 40% of COVID-19 hospitalizations being due to another cause with incidental positive COVID-19 test during the hospitalization [8,12,13]. At current moderate incidence, the 120-day hospitalization risk for COVID-19 for a healthy child

may be as low as 26.7 per million (Figure 6 in italics), twice the risk of a CAE after vaccine dose 1 in boys without comorbidities and after dose 2 in girls without comorbidities (Table 1). The risk for boys aged 12-15 with no comorbidities of CAE after dose two would be 22.8 times higher than their COVID-19 hospitalization risk at the adjusted low (7.1/million), 6.1 times higher for moderate (26.7/million) and 4.3 times higher at high (37.3/million) 120-day hospitalization rates (Figures 6 and 7). The risk for boys 16-17 with no comorbidities of CAE after dose 2 would be and 13.2 times higher than their COVID-19 hospitalization risk at the adjusted low (7.1/million), 3.5 times higher at moderate (26.7/million) and 2.5 times higher at high (37.3/million) 120-day adjusted hospitalization rates (Figures 6 and 7). For 12–15-year-old boys with one or more comorbidity, the vaccine-associated CAE risk following dose two is less than the adjusted COVID-19 hospitalization risk at times of high COVID-19 incidence. For 16–17-year-old boys with one or more comorbidity, the CAE rate was below that of the adjusted COVID-19 hospitalization risks at both current (moderate) and high disease prevalence (Figure 7; Table 1).

DISCUSSION

Principal findings

The main finding of this study was the cardiac adverse event (CAE) rates of 162/million and 94/million post- Pfizer-BioNTech BNT162b2 vaccination dose two for the 12-15- and 16–17-year-old boys, respectively. Approximately 86% of these resulted in hospitalization for both age groups. We included a case-finding method in VAERS which utilized the symptom “chest pain” to identify adolescents for review of troponins, EKG/ECG and ECHO findings. We otherwise maintained the specificity of our analysis by requiring the same objective findings of cardiac

injury used by the CDC to identify probable cases (Supplement 1) and excluded cases without sufficient objective evidence of cardiac-specific injury.

Using these broader search and inclusion criteria, we found post-vaccination rates of CAEs among adolescents aged 12-17 that exceeded the rates previously reported by the CDC[2] by 2.5 times in boys aged 12-15 and by 1.7 x in 16-17-year-old boys. Our results show the risk of myocarditis depends heavily on sex and age, as it appears that young boys 12-15 have a greater than 12 times higher rate than girls. Due to a markedly increased risk for the youngest boys, prospective safety analyses would be most useful if stratified by ages 12-15 years and 16-17 years.

The highest troponin elevations were seen in the 16–17-year-old boys and girls. In the setting of cardiac symptoms, children with elevated troponin levels have a high likelihood of cardiac disease.[17, 18] Of note, the threshold for normal levels in children may be even lower than the 0.1 ng/mL used in adults.[17]

To contextualize the benefits of vaccination for adolescents, we chose, as the CDC did [2,3] to provide a benefit-harm analysis based on varying levels of COVID-19 hospitalization rates.[19] Our analysis not only considered circulating disease levels but also the presence of individual risk factors for severe disease. A weakness of our analysis was not being able to stratify hospitalization risks for children with and without natural immunity. The CDC estimated that on May 29th, 2021, that 36.2% [15] of all children had already been infected with SARS-CoV-2. This estimate was made 16 months into the pandemic, thus adjusting for the current time (19 months), the current estimate would be $(19/16) \times 36.2\% = 42.9\%$ of children previously infected.

Absolute infection-hospitalization rates for children with and without medical comorbidities and with and without history of infection have yet to be established.

In a recent report[20] of 15 patients aged 12-18 hospitalized with post-vaccination myocarditis, the clinical course was reported to be relatively benign, but 1/15 had abnormal echocardiogram on follow-up and 4/15 had ongoing symptoms post-discharge. The CDC reported [2] that 218 of the 323 (67.5%) cases of myo/pericarditis in vaccine recipients <30 years were known to have had resolution of symptoms. Another study[21] found 16/23 (70%) males with vaccination-associated myocarditis to have had resolution of symptoms within a week. Long-term sequelae of myocarditis is unknown; follow-up of this vaccine-associated condition is warranted.

COVID-19 has also been found to result in symptomatic myocarditis in 0.3% of collegiate athletes,[22] but its rate in children post-COVID-19 infection has not been well described. The one existing study[23] is limited by an inappropriately small denominator due to apparent underestimate of COVID-19 disease incidence during the study period. The study[23] reported only six post-COVID myocarditis cases in boys ages 12-17 over the course of a year in a 60-million patient catchment area. Children have in general been spared from the worst effects of COVID-19. The reported mortality rate in England has so far been 2/million children [24,25], which may translate to around 6/million infections based on a prior infection rate of 1/3.[15] In the US, there have been 4404 multisystem-inflammatory syndrome in children (MIS-C) cases in a population of 74 million.[26] Long-duration of symptoms post-COVID-19 also appears less frequent in children than initially feared, with 1.8% of children with symptomatic COVID-19 experiencing at least one symptom two months after infection compared with 0.9% of negatively

tested controls after one month.[27] A thorough understanding of vaccine safety is thus crucial in this age group, especially for children without known risk factors for severe COVID-19 and those with history of infection. This report only outlines rates associated with the Pfizer-BioNTech. A recent report from Canada [28] suggests a greater than 2-fold higher rate of post-vaccination myocarditis from the Moderna mRNA vaccine compared to the Pfizer-BioNTech mRNA vaccine. The most recent CDC update [6] also found Moderna to have higher rates of post-vaccination myocarditis than Pfizer-BioNTech in all male age groups except those 16-17 years and those 65 and older.

A concern about using VAERS for our data analysis is the risk of over-ascertainment of a safety signal due to the open access system. To address this concern, we aligned our inclusion criteria with the CDC's case definition for probable myocarditis. Our rate of myocarditis post-vaccination of 94.0/million was more than two times lower than that reported by the FDA (200/million) [2] and yet 31.5% higher than the CDC. This suggests that both VAERS and CDC are providing an underestimate of the true incidence of this condition. Furthermore, the reports in VAERS reviewed for this study were of children with myocarditis *with* cardiac symptoms and not cases of incidental cardiac inflammation noted on imaging. It is thus unclear how large of an underestimate of CAE incidence this report provides.

We, like the CDC, used a 120-day COVID-19 hospitalization rate as a meaningful comparator to vaccination-related harms, but this type of harm-benefit analysis does not take into account any benefits the vaccine provides against transmission to others, long-term COVID-19 disease risk or protection from non-severe COVID-19 symptoms. With this in mind, the risk of CAE for a boy

receiving his second dose of the vaccine is 2 to 6 times higher than the 120-day risk of hospitalization in boys 12-17 without underlying medical conditions. For boys with medical comorbidities, the 120-day COVID hospitalization rates are slightly higher than their rate of CAE if not adjusting for possible 40% overestimate of hospitalization rates [9,13,14], in which case the rate of CAE would be slightly higher than 120-day hospitalization [Figures 6 and 7].

As of the last week of August 2021, hospitalization rates for children ages 12-17 in the United States continued to approximate the moderate rate shown in Figures 6 and 7.[8] Current pediatric hospitalization rates are also a product of increasing natural infection and vaccination rates. Overall pediatric case hospitalization rate from COVID-19 has been estimated by the CDC [15] and American Academy of Pediatrics [19] to be 0.8-0.9%, irrespective of comorbidities and not adjusting for possible 40% overestimate of hospitalization rates [9,13,14]. This rate has remained consistent through August of 2021.

Given the nearly fivefold disparity in risk of hospitalization for adolescents with and without comorbidities, it is important that the benefits of vaccination be clearly weighed and conveyed in the context of the unique health risks of the individual and the household. The benefits of vaccination in previously-infected children should be further studied and a harm-benefit analysis performed. A history of SARS-CoV-2 infection may be found to provide similar or superior immunity to vaccination [29]. A recent study [30] found a 4-fold increased risk of post-vaccination myocarditis in those who had previously been infected with SARS-CoV-2.

In light of the vaccine-associated cardiac harms described in this report, further research as well as transparency about possible vaccine-related harms in relation to an individual child's COVID-19 risks is indicated. Alternate vaccination types, dosing or strategies, such as those that take a history of infection into consideration, may eventually be found to be more appropriate in this age group.

Conclusion

Our report found post-vaccination CAE rates following dose two of 162.2 and 94.0/million for boys 12-15 and 16-17, respectively. For boys with no underlying health conditions, the chance of either CAE, or hospitalization for CAE, after their second dose of mRNA vaccination are considerably higher than their 120-day risk of COVID-19 hospitalization, even at times of peak disease prevalence. The long-term consequences of this vaccine-associated cardiac inflammation are not yet fully defined and should be studied. In lieu of pediatric vaccination mandates, the US may: 1) consider gathering data on previous infection in this age group and/or 2) follow the example of Germany,[31] Sweden [32], Norway [33] and the WHO[34] and hold off on definitively recommending vaccination of low-risk children against COVID-19, or 3) offer one dose to adolescents as the UK has just announced [35] while more information about risks, benefits, harms and alternative dosing or vaccination strategies are studied and considered.

On a long enough timeline the survival rate for everyone drops to zero.

Protests Erupt In South Korea Over Vaccination Deaths

BY TYLER DURDEN

MONDAY, DEC 27, 2021 - 06:40 PM

Americans and Europeans aren't the only people to express skepticism of the COVID jabs produced by a handful of pharmaceutical giants, most notably Pfizer and Moderna. As reports of deaths and other 'adverse health events' suspected of being triggered by vaccines mount, South Koreans **are reportedly taking to the streets to protest their governments' refusal to acknowledge thousands of deaths** that many believe were caused by vaccines.

As we said above, **more than 10K people have died under murky circumstances shortly after being vaccinated in South Korea.** The government has only reported a connection in a handful of serious cases. But it has also moved to recognize and compensate victims: for example, a nursing assistant was recognized in August as a victim of an industrial accident and awarded government benefits after suffering paralysis in the wake of receiving AstraZeneca's COVID shot.

Back in August, the government investigated after a teenager with no underlying health conditions died following inoculation with the Pfizer-BioNTech COVID jab.

But in the absence of more concrete answers, thousands of South Koreans are taking to the streets to protest the vaccine mandate in one of the world's most heavily vaccinated countries.

According to RT, **an association called the COVID Vaccine Victims and Families Council has held rallies in several South Korean cities.** Demonstrators on Sunday marched from Busan City Hall to Busan National University of Education in a large demonstration held in the country's second city.

On a long enough timeline the survival rate for everyone drops to zero.

administration of being indifferent to damages caused by vaccines.

"I think the people have reached a point where they can't trust the government," Kim said.

The government promised to compensate victims of vaccine side effects before the first jabs arrived. But it's also responsible for determining which cases merit compensation, a fact that has rankled some purported victims, who feel they have been shafted.

Roughly 83% of South Koreans have been vaccinated against Covid-19, easily the highest rate among G20 nations.

Dear DOH and To Whom It May Concern:

I have a 16 year old daughters' bodily sovereignty I am defending with my comments. She is a straight A student, has fought to conquer the odds to stay active in her school through sports and leadership. And is on an added extracurricular board of students across the state to provide insight to the legislation as to what the students perspectives are regarding policies and proposals.

Our daughter does not want the Covid-19 vaccine. She has had Covid, and thankfully fared well throughout the illness. We are responsible citizens, quarantining over 10 plus times to be considerate of the public around us. But we stand in a legal and moral place to defend her Informed Medical Consent and right to bodily sovereignty, in all things.

I will be BCC some Representatives in my community in this email, for full disclosure.

I understand the discussion with the TAG panel is purely from a medical basis. But I would like to encourage a couple of points for considerations:

- 1) Medical involves psychological and I see this lacking in the panel, happy to be proven wrong in this though.
- 2) With only one panelist from Eastern Washington I would like to present that this is a politically skewed optic out the gate. Eastern Washington often has little voice and say, policy speaking, as to what goes on in our own state. When weighing such a massive advisory vote, one that holds much power, as a constituent of this state I would appreciate more balance on this front.

I do not say this as a personal attack on those picked for this panel. Honestly I do not assume to know your experience and expertise, or be a judge of this. I do assume each person is acting in their own best conscious.

The continued marginalization of half the landmass of this state's population is incredibly frustrating to watch over and over and over in different governing decisions. Including giving unvoted power to regulatory agencies such as the Washington State Board of Health.

An example: Seattle Public School District feels they have the right to make a vaccine mandate request for the entire state and this is then blasted via media. This one school district does not hold the place to make a request above the 295 other districts that make up the OSPI oversight.

- 3) If you do, indeed, continue to push this vaccine, while ignoring the experimental nature of its creation, onto the schools you are directly responsible for an obvious step in marginalization of a demographic with sincerely held religious beliefs.

Marginalization often hides in under the guise of "the greater good." Just look at mass incarceration. People as commodity has gone far enough, just look at the Indian Farmer's and the fight against corporate elite's attack in the last five years.

Marginalization happens in many ways.

- 4) Time will be the true measure that lets our population know if any measure is necessary and when it has to do with our children, time is what is requested. Especially looking at the risk factors

involved, complete lack of long-term studies done, and FDA decision to allow Pfizer to withhold important data in regard to their specific Covid-19 vaccine variation.

We now have evidence that the lockdown measures were not as productive as hoped. Spokane Mayor Nadine Woodward has brought this issue as well as the issue of mental health to the forefront in our community. Sadly, my own sister has been attempting a FOIA request with Spokane Regional Health District and been met with roadblocks.

Her request is the statistics involving drug overdoses and suicide rates from 2020 and 2021. As this data has not been released. So, in the name of transparency, what is this information and why is it not readily available to the public? We can count weekly Covid-19 test numbers but we cannot publicly and accurately check these stats as well? Or make them easily publicly available?

5) The hate I see in our community? Is pushed by Governor Inslee when he heavily insinuates over and over that my family, including many law-abiding citizens with not so much as a speeding ticket, are domestic terrorist. FEMA defines Terrorism as “the use of force or violence against persons or property in violation of the criminal laws of the United States for purposes of intimidation, coercion, or ransom.”

Mr. Inslee’s behavior and continued hateful rhetoric constitutes this definition much closer than mine. I have loved my community and family members boundaries incredibly intentionally throughout the pandemic. Regardless of political view or medical decisions I might add. Mr. Inslee, as the leader of Washington state, cannot in good faith claim the same.

6) If our state legislation and acting agencies decide to continue to push this line, while ignoring ALL of the scientific data, onto our children we are left with little choice but to very seriously consider removing her from the system to defend her rights as an American citizen. We as parents will know then, that the true intent is to persecute, not to act in public health.

As such, we respectfully request vaccine clinics moved OFF school property and to local community centers. This allows the families that would like to participate in the vaccination process close access for their children but respects the boundaries and the families that do not. Placing clinics on taxpayer funded property like the school ignores the mental health of our youth during a devastating time.

7) One of the most beautiful aspects of being a Constitutionalist is that my family’s community is not a specific ethnicity. It holds no line on outside optics. It does not hold people in a class, but rather works to honor each person’s life experience. It includes people from all over the world, that have fled their countries, often fleeing for their lives.

This is my culture and this I feel in my heart. This is shown in our family’s constant attempt to love those around us. To live our life by the Golden Rule. Are we perfect people? Absolutely not, nor would we ever claim to be. But have raised our daughter with these values. And we use these values to make our decision on Informed Medical Consent.

8) In conclusion, I understand it is a difficult place to be in, making these big decisions at this moment in history. But I encourage each person that reads this letter to do some research on a few topics that may seem outside the box. Read Professor Harriet Washington’s Book, Carte Blanche as well as Oneness vs. the 1% by Environmentalist Shavana Shiva and do some soul searching on the lessons

history can teach us. While we are in unprecedented times, we as a population don't need to re-write a script.

One last thing, we beg you as community members, constitutes, and people of this land. Stop searching for ways to control an uncontrollable situation. And start leading by example through bridge building, compassion, and understanding. This is what our great state truly needs. I say this in the name of equality, Love for my community regardless of beliefs, and as a citizen trying to do the same thing on a daily basis.

Sincerely,

Rachel Buck

Born and Raised Citizen of Spokane County

BMJ INVESTIGATION

Covid-19: Researcher blows the whistle on data integrity issues in Pfizer's vaccine trial

Revelations of poor practices at a contract research company helping to carry out Pfizer's pivotal covid-19 vaccine trial raise questions about data integrity and regulatory oversight. **Paul D Thacker** reports

Paul D Thacker *investigative journalist*

In autumn 2020 Pfizer's chairman and chief executive, Albert Bourla, released an open letter to the billions of people around the world who were investing their hopes in a safe and effective covid-19 vaccine to end the pandemic. "As I've said before, we are operating at the speed of science," Bourla wrote, explaining to the public when they could expect a Pfizer vaccine to be authorised in the United States.¹

But, for researchers who were testing Pfizer's vaccine at several sites in Texas during that autumn, speed may have come at the cost of data integrity and patient safety. A regional director who was employed at the research organisation Ventavia Research Group has told *The BMJ* that the company falsified data, unblinded patients, employed inadequately trained vaccinators, and was slow to follow up on adverse events reported in Pfizer's pivotal phase III trial. Staff who conducted quality control checks were overwhelmed by the volume of problems they were finding. After repeatedly notifying Ventavia of these problems, the regional director, Brook Jackson, emailed a complaint to the US Food and Drug Administration (FDA). Ventavia fired her later the same day. Jackson has provided *The BMJ* with dozens of internal company documents, photos, audio recordings, and emails.

Poor laboratory management

On its website Ventavia calls itself the largest privately owned clinical research company in Texas and lists many awards it has won for its contract work.² But Jackson has told *The BMJ* that, during the two weeks she was employed at Ventavia in September 2020, she repeatedly informed her superiors of poor laboratory management, patient safety concerns, and data integrity issues. Jackson was a trained clinical trial auditor who previously held a director of operations position and came to Ventavia with more than 15 years' experience in clinical research coordination and management. Exasperated that Ventavia was not dealing with the problems, Jackson documented several matters late one night, taking photos on her mobile phone. One photo, provided to *The BMJ*, showed needles discarded in a plastic biohazard bag instead of a sharps container box. Another showed vaccine packaging materials with trial participants' identification numbers written on them left out in the open, potentially unblinding participants. Ventavia

executives later questioned Jackson for taking the photos.

Early and inadvertent unblinding may have occurred on a far wider scale. According to the trial's design, unblinded staff were responsible for preparing and administering the study drug (Pfizer's vaccine or a placebo). This was to be done to preserve the blinding of trial participants and all other site staff, including the principal investigator. However, at Ventavia, Jackson told *The BMJ* that drug assignment confirmation printouts were being left in participants' charts, accessible to blinded personnel. As a corrective action taken in September, two months into trial recruitment and with around 1000 participants already enrolled, quality assurance checklists were updated with instructions for staff to remove drug assignments from charts.

In a recording of a meeting in late September 2020 between Jackson and two directors a Ventavia executive can be heard explaining that the company wasn't able to quantify the types and number of errors they were finding when examining the trial paperwork for quality control. "In my mind, it's something new every day," a Ventavia executive says. "We know that it's significant."

Ventavia was not keeping up with data entry queries, shows an email sent by ICON, the contract research organisation with which Pfizer partnered on the trial. ICON reminded Ventavia in a September 2020 email: "The expectation for this study is that all queries are addressed within 24hrs." ICON then highlighted over 100 outstanding queries older than three days in yellow. Examples included two individuals for which "Subject has reported with Severe symptoms/reactions ... Per protocol, subjects experiencing Grade 3 local reactions should be contacted. Please confirm if an UNPLANNED CONTACT was made and update the corresponding form as appropriate." According to the trial protocol a telephone contact should have occurred "to ascertain further details and determine whether a site visit is clinically indicated."

Worries over FDA inspection

Documents show that problems had been going on for weeks. In a list of "action items" circulated among Ventavia leaders in early August 2020, shortly after the trial began and before Jackson's hiring, a Ventavia executive identified three site staff members with

whom to “Go over e-diary issue/falsifying data, etc.” One of them was “verbally counseled for changing data and not noting late entry,” a note indicates.

At several points during the late September meeting Jackson and the Ventavia executives discussed the possibility of the FDA showing up for an inspection (box 1). “We’re going to get some kind of letter of information at least, when the FDA gets here . . . know it,” an executive stated.

Box 1: A history of lax oversight

When it comes to the FDA and clinical trials, Elizabeth Woeckner, president of Citizens for Responsible Care and Research Incorporated (CIRCARE),³ says the agency’s oversight capacity is severely under-resourced. If the FDA receives a complaint about a clinical trial, she says the agency rarely has the staff available to show up and inspect. And sometimes oversight occurs too late.

In one example CIRCARE and the US consumer advocacy organisation Public Citizen, along with dozens of public health experts, filed a detailed complaint in July 2018 with the FDA about a clinical trial that failed to comply with regulations for the protection of human participants.⁴ Nine months later, in April 2019, an FDA investigator inspected the clinical site. In May this year the FDA sent the triallist a warning letter that substantiated many of the claims in the complaints. It said, “[I]t appears that you did not adhere to the applicable statutory requirements and FDA regulations governing the conduct of clinical investigations and the protection of human subjects.”⁵

“There’s just a complete lack of oversight of contract research organisations and independent clinical research facilities,” says Jill Fisher, professor of social medicine at the University of North Carolina School of Medicine and author of *Medical Research for Hire: The Political Economy of Pharmaceutical Clinical Trials*.

Ventavia and the FDA

A former Ventavia employee told *The BMJ* that the company was nervous and expecting a federal audit of its Pfizer vaccine trial.

“People working in clinical research are terrified of FDA audits,” Jill Fisher told *The BMJ*, but added that the agency rarely does anything other than inspect paperwork, usually months after a trial has ended. “I don’t know why they’re so afraid of them,” she said. But she said she was surprised that the agency failed to inspect Ventavia after an employee had filed a complaint. “You would think if there’s a specific and credible complaint that they would have to investigate that,” Fisher said.

In 2007 the Department of Health and Human Services’ Office of the Inspector General released a report on FDA’s oversight of clinical trials conducted between 2000 and 2005. The report found that the FDA inspected only 1% of clinical trial sites.⁶ Inspections carried out by the FDA’s vaccines and biologics branch have been decreasing in recent years, with just 50 conducted in the 2020 fiscal year.⁷

The next morning, 25 September 2020, Jackson called the FDA to warn about unsound practices in Pfizer’s clinical trial at Ventavia. She then reported her concerns in an email to the agency. In the afternoon Ventavia fired Jackson—deemed “not a good fit,” according to her separation letter.

Jackson told *The BMJ* it was the first time she had been fired in her 20 year career in research.

Concerns raised

In her 25 September email to the FDA Jackson wrote that Ventavia had enrolled more than 1000 participants at three sites. The full trial (registered under NCT04368728) enrolled around 44 000 participants across 153 sites that included numerous commercial companies and academic centres. She then listed a dozen concerns she had witnessed, including:

- Participants placed in a hallway after injection and not being monitored by clinical staff
- Lack of timely follow-up of patients who experienced adverse events
- Protocol deviations not being reported
- Vaccines not being stored at proper temperatures
- Mislabeled laboratory specimens, and
- Targeting of Ventavia staff for reporting these types of problems.

Within hours Jackson received an email from the FDA thanking her for her concerns and notifying her that the FDA could not comment on any investigation that might result. A few days later Jackson received a call from an FDA inspector to discuss her report but was told that no further information could be provided. She heard nothing further in relation to her report.

In Pfizer’s briefing document submitted to an FDA advisory committee meeting held on 10 December 2020 to discuss Pfizer’s application for emergency use authorisation of its covid-19 vaccine, the company made no mention of problems at the Ventavia site. The next day the FDA issued the authorisation of the vaccine.⁸

In August this year, after the full approval of Pfizer’s vaccine, the FDA published a summary of its inspections of the company’s pivotal trial. Nine of the trial’s 153 sites were inspected. Ventavia’s sites were not listed among the nine, and no inspections of sites where adults were recruited took place in the eight months after the December 2020 emergency authorisation. The FDA’s inspection officer noted: “The data integrity and verification portion of the BIMO [bioresearch monitoring] inspections were limited because the study was ongoing, and the data required for verification and comparison were not yet available to the IND [investigational new drug].”

Other employees’ accounts

In recent months Jackson has reconnected with several former Ventavia employees who all left or were fired from the company. One of them was one of the officials who had taken part in the late September meeting. In a text message sent in June the former official apologised, saying that “everything that you complained about was spot on.”

Two former Ventavia employees spoke to *The BMJ* anonymously for fear of reprisal and loss of job prospects in the tightly knit research community. Both confirmed broad aspects of Jackson’s complaint. One said that she had worked on over four dozen clinical trials in her career, including many large trials, but had never experienced such a “helter skelter” work environment as with Ventavia on Pfizer’s trial.

“I’ve never had to do what they were asking me to do, ever,” she told *The BMJ*. “It just seemed like something a little different from normal—the things that were allowed and expected.”

She added that during her time at Ventavia the company expected a federal audit but that this never came.

After Jackson left the company problems persisted at Ventavia, this employee said. In several cases Ventavia lacked enough employees to swab all trial participants who reported covid-like symptoms, to test for infection. Laboratory confirmed symptomatic covid-19 was the trial’s primary endpoint, the employee noted. (An FDA review memorandum released in August this year states that across the full trial swabs were not taken from 477 people with suspected cases of symptomatic covid-19.)

“I don’t think it was good clean data,” the employee said of the data Ventavia generated for the Pfizer trial. “It’s a crazy mess.”

A second employee also described an environment at Ventavia unlike any she had experienced in her 20 years doing research. She told *The BMJ* that, shortly after Ventavia fired Jackson, Pfizer was notified of problems at Ventavia with the vaccine trial and that an audit took place.

Since Jackson reported problems with Ventavia to the FDA in September 2020, Pfizer has hired Ventavia as a research subcontractor on four other vaccine clinical trials (covid-19 vaccine in children and young adults, pregnant women, and a booster dose, as well as an RSV vaccine trial; NCT04816643, NCT04754594, NCT04955626, NCT05035212). The advisory committee for the Centers for Disease Control and Prevention is set to discuss the covid-19 paediatric vaccine trial on 2 November.

Provenance and peer review: commissioned; externally peer reviewed.

Competing interests: PDT has been doubly vaccinated with Pfizer’s vaccine.

ABSTRACT

This article examines issues related to COVID-19 inoculations for children. The bulk of the official COVID-19-attributed deaths per capita occur in the elderly with high comorbidities, and the COVID-19 attributed deaths per capita are negligible in children. The bulk of the normalized post-inoculation deaths also occur in the elderly with high comorbidities, while the normalized post-inoculation deaths are small, but not negligible, in children. Clinical trials for these inoculations were very short-term (a few months), had samples not representative of the total population, and for adolescents/children, had poor predictive power because of their small size. Further, the clinical trials did not address changes in biomarkers that could serve as early warning indicators of elevated predisposition to serious diseases. Most importantly, the clinical trials did not address long-term effects that, if serious, would be borne by children/adolescents for potentially decades.

A novel *best-case scenario* cost-benefit analysis showed *very conservatively* that there are five times the number of deaths attributable to each inoculation vs those attributable to COVID-19 in the most vulnerable 65+ demographic. The risk of death from COVID-19 decreases drastically as age decreases, and the longer-term effects of the inoculations on lower age groups will increase their risk-benefit ratio, perhaps substantially.

1. Introduction

Currently, we are in the fifteenth month of the WHO-declared global COVID-19 pandemic. Restrictions of different severity are still in effect throughout the world [1]. The global COVID-19 mass inoculation is in its eighth month. As of this writing in mid-June 2021, over 800,000,000 people globally have received at least one dose of the inoculation and roughly half that number have been fully inoculated [2]. In the USA, about 170,000,000 people have received at least one dose and roughly 80 % of that number have been fully inoculated [2].

Also, in the USA, nearly 600,000 deaths have been officially attributed to COVID-19. Almost 5,000 deaths following inoculation have been reported to VAERS by late May 2021; specifically, “Over 285 million doses of COVID-19 vaccines were administered in the United States from December 14, 2020, through May 24, 2021. During this time, VAERS received 4,863 reports of death (0.0017 %) among people who received

a COVID-19 vaccine.” [3] (the Vaccine Adverse Events Reporting System (VAERS) is a passive surveillance system managed jointly by the CDC and FDA [3]. Historically, VAERS has been shown to report about 1% of actual vaccine/inoculation adverse events [4]. See Appendix 1 for a first-principles confirmation of that result). By mid-June, deaths following COVID-19 inoculations had reached the 6000 levels.

A vaccine is legally defined as any substance designed to be administered to a human being for the prevention of one or more diseases [5]. For example, a January 2000 patent application that defined vaccines as “compositions or mixtures that when introduced into the circulatory system of an animal will evoke a protective response to a pathogen.” was rejected by the U.S. Patent Office because “The immune response produced by a vaccine must be more than merely some immune response but must be protective. As noted in the previous Office Action, the art recognizes the term “vaccine” to be a compound which prevents infection” [6]. In the remainder of this article, we use the term

‘inoculated’ rather than vaccinated, because the injected material in the present COVID-19 inoculations prevents neither viral infection nor transmission. Since its main function in practice appears to be symptom suppression, it is operationally a “treatment”.

In the USA, inoculations were administered on a priority basis. Initially, first responders and frontline health workers, as well as the frailest elderly, had the highest priority. Then the campaign became more inclusive of lower age groups. Currently, approval has been granted for inoculation administration to the 12–17 years demographic, and the target for this demographic is to achieve the largest number of inoculations possible by the start of school in the Fall. The schedule for inoculation administration to the 5–11 years demographic has been accelerated to start somewhere in the second half of 2021, and there is the possibility that infants as young as six months may begin to get inoculated before the end of 2021 [7].

The remainder of this article will focus on the USA situation, and address mainly the pros and cons of inoculating children under eighteen. The article is structured as follows:

Section 1 (the present section) introduces the problem.

Section 2 (Background):

- 1) provides the background for the declared COVID-19 “pandemic” that led to the present inoculations;
- 2) describes the clinical trials that provided the justification for obtaining Emergency Use Authorization (EUA) from the FDA to administer the inoculations to the larger population;
- 3) shows why the clinical trials did not predict either the seriousness of adverse events that have occurred so far (as reported in VAERS) or the potential extent of the underlying pre-symptomatic damage that has occurred as a result of the inoculations.

Section 3 (Mass Inoculation) summarizes the adverse events that have occurred already (through reporting in VAERS) from the mass inoculation and will present biological evidence to support the potential occurrence of many more adverse effects from these inoculations in the mid-and long-term.

Section 4 (Discussion) addresses these effects further

Section 5 (Summary and Conclusions) presents the conclusions of this study.

There are four appendices to this paper.

Appendix A provides some idea of the level of under-reporting of post-inoculation adverse events to VAERS and presents estimations of the actual number of post-inoculation deaths based on extrapolating the VAERS results to real-world experiences.

Appendix B provides a detailed analysis of the major clinical trials that were used to justify EUA for the inoculants presently being administered in the USA.

Appendix C summarizes potential adverse effects shown to have resulted from past vaccines, all of which could potentially occur as a result of the present inoculations.

Appendix D presents a novel *best-case scenario* cost-benefit analysis of the COVID-19 inoculations that have been administered in the USA.

2. Background

2.1. Pandemic history

In December 2019, a viral outbreak was reported in Wuhan, China, and the responsible coronavirus was termed Severe Acute Respiratory Syndrome Coronavirus 2 (SARS-CoV-2) [8,9]. The associated disease was called Coronavirus Disease 2019, or COVID-2019. The virus spread worldwide, and a global pandemic was declared by the WHO in March 2020 [10,11]. Restrictive measures of differing severity were implemented by countries globally, and included social distancing, quarantining, face masks, frequent hand sanitation, etc. [12,13]. In the USA, these measures were taken as well, differing from state-to-state [14]. At

the same time, vaccine development was initiated to control COVID-19 [15]. In the USA, non-vaccine treatments were not encouraged at the Federal level, but different treatment regimens were pursued by some healthcare practitioners on an individual level [11,16,17].

By the end of May 2021, the official CDC death count attributed to COVID-19 was approaching 600,000, as stated previously. This number has been disputed for many reasons. First, before COVID-19 testing began, or in the absence of testing, after it was available, the diagnosis of COVID-19 (in the USA) could be made by the presumption of the healthcare practitioner that COVID-19 existed [4,18]. Second, after testing began, the main diagnostic used was the RT-PCR test. This test was done at very high amplification cycles, ranging up to 45 [19–21]. In this range, very high numbers of false positives are possible [22].

Third, most deaths attributed to COVID-19 were elderly with high comorbidities [1,22]. As we showed in a previous study [22], attribution of death to one of many possible comorbidities or especially toxic exposures in combinations [23] is highly arbitrary and can be viewed as a political decision more than a medical decision. For over 5 % of these deaths, COVID-19 was the only cause mentioned on the death certificate. For deaths with conditions or causes in addition to COVID-19, on average, there were 4.0 additional conditions or causes per death [24]. These deaths with comorbidities could equally have been ascribed to any of the comorbidities [22]. Thus, the actual number of COVID-19-based deaths in the USA may have been on the order of 35,000 or less, characteristic of a mild flu season.

Even the 35,000 deaths may be an overestimate. Comorbidities were based on the clinical definition of specific diseases, using threshold biomarker levels and relevant symptoms for the disease(s) of interest [25,26]. But many people have what are known as pre-clinical conditions. The biomarkers have not reached the threshold level for official disease diagnosis, but their abnormality reflects some degree of underlying dysfunction. The immune system response (including pre-clinical conditions) to the COVID-19 viral trigger should not be expected to be the same as the response of a healthy immune system [27]. If pre-clinical conditions had been taken into account and coupled with the false positives as well, the CDC estimate of 94 % misdiagnosis would be substantially higher.

2.2. Clinical trials

2.2.1. Clinical trials to gain FDA Emergency Use Authorization (EUA) approval

The unprecedented accelerated development of COVID-19 vaccines in the USA, dubbed Operation Warp Speed, resulted in a handful of substances available for clinical trials by mid-2020 [28]. These clinical trials were conducted to predict the safety and efficacy of the potential vaccines (which have turned out to be treatments/inoculations as stated previously), and thereby gain approval for inoculating the public at large [29]. An overview of the Pfizer clinical trials is presented in this section, and a more detailed description of the main clinical trials is shown in Appendix B.

Two types of inoculants have gained FDA EUA in the US: mRNA-based inoculants and viral vector-based inoculants, with the mRNA inoculants having the widest distribution so far. Comirnaty is the brand name of the mRNA-based inoculant developed by Pfizer/BioNTech, and Moderna COVID-19 Vaccine is the brand name of the mRNA-based inoculant developed by Moderna [30]. Both inoculants contain the genetic information needed for the production of the viral protein S (spike), which stimulates the development of a protective immune response against COVID-19 [31]. Janssen COVID-19 Vaccine is the brand name of the viral vector-based inoculant developed by Johnson and Johnson. Janssen COVID-19 vaccine uses an adenovirus to transport a gene from the coronavirus into human cells, which then produce the coronavirus spike protein. This spike protein primes the immune system to fight off potential coronavirus infection [32].

The results of these trials that allowed granting of EUA by the FDA

Table 1

Demographics (population for the primary efficacy endpoint). The number of participants who received vaccine and placebo, stratified by age.

AGE GROUP	Pfizer-BioNTech COVID-19 Vaccine (N = 18,242) n (%)	Placebo (N = 18,379) n (%)
≥12 through 15 years ^b	46 (0.3 %)	42 (0.2 %)
≥16 through 17 years	66 (0.4 %)	68 (0.4 %)
≥16 through 64 years	14,216 (77.9 %)	14,299 (77.8 %)
≥65 through 74 years	3176 (17.4 %)	3226 (17.6 %)
≥75 years	804 (4.4 %)	812 (4.4 %)

Symbols: b: “100 participants 12 through 15 years of age with limited follow-up in the randomized population received at least one dose (49 in the vaccine group and 51 in the placebo group). Some of these participants were included in the efficacy evaluation depending on the population analyzed. They contributed to exposure information but with no confirmed COVID-19 cases, and did not affect efficacy conclusions.”; N: number of test subjects, n: number of controls.

Fig. 1. COVID-19 Deaths per capita by age in the United States (as of Jun 5, 2021). Population-based on U.S. CDC WONDER Bridge-Race Population Estimate 2019. Data obtained from <https://wonder.cdc.gov/bridged-race-v2019.html> on 6/15/2021. Provisional COVID-19 deaths based on CDC data provided by the National Center for Health Statistics for the period 1/1/2020 – 6/5/2021. Data obtained from <https://data.cdc.gov/NCHS/Provisional-COVID-19-Deaths-by-Sex-and-Age/9bhg-hcku> on 6/10/2021.

can be found in the inserts to the inoculation materials. For example, the Pfizer inoculation trial results are contained in the fact sheet for healthcare providers administering vaccine (vaccination providers) [33].

There were two clinical trials conducted to gain FDA EUA for Pfizer: a smaller Phase 1/2 study, and a larger Phase 1/2/3 study. The age demographics for the larger clinical study are as follows (from the Pfizer insert): “Of the total number of Pfizer-BioNTech COVID-19 Vaccine recipients in Study 2 (N = 20,033), 21.4 % (n = 4,294) were 65 years of age and older and 4.3 % (n = 860) were 75 years of age and older.” Additionally: “In an analysis of Study 2, based on data up to the cutoff date of March 13, 2021, 2,260 adolescents (1,131 Pfizer-BioNTech COVID-19 Vaccine; 1,129 placebo) were 12 through 15 years of age. Of these, 1,308 (660 Pfizer-BioNTech COVID-19 Vaccine and 648 placebo) adolescents have been followed for at least 2 months after the second dose of Pfizer-BioNTech COVID-19 Vaccine. The safety evaluation in Study 2 is ongoing.”

The relevant demographics are presented in Table 7 on p.31 of the Pfizer insert. The age component of those demographics is shown below in Table 1.

There are very minor differences between most of the data in the above table and the preceding narrative shown, and they are probably due to different time horizons. The major difference is the number of adolescents used and appears to result from a much later reporting time.

Fig. 1 uses the official large CDC numbers (coupled with USA census data estimates from CDC Wonder) to show the COVID-19 deaths per capita as a function of age, circa early June 2021. Unfortunately, the most critical range, 85+, has the least resolution. It is obvious that most of the deaths occurred in the 55 to 100+ range, and the remaining individuals in the other ranges (especially under 35) have negligible risk of dying from the disease.

The age distribution in Fig. 1 differs substantially from the age distribution in Table 1. Why is this important? When designing a trial for the efficacy and safety of a potential treatment, the focus should be on the target population who could benefit from that treatment. There is little rationale for including participants in a trial for whom the treatment would not be relevant or warranted.

For the COVID-19 Pfizer trials, based on the data from Fig. 1, the trial population should have been limited at most to the 45–100+ age segment, appropriately weighted toward the higher end where the deaths per capita are most frequent. That was almost the exact opposite of what was done in the Pfizer clinical trials. In Fig. 1, approximately 58 % of the deaths occurred in the age range 75+, whereas 4.4 % of the participants in the Pfizer clinical trial were 75+. Thus, the age range most impacted by COVID-19 deaths was minimally represented in the Pfizer clinical trials, and the age range least impacted by COVID-19 deaths was maximally represented in the Pfizer clinical trials. This skewed sampling has major implications for predicting the expected numbers of deaths for the target population from the clinical trials.

Besides age, the other metric of importance in determining COVID-19 deaths is the presence of comorbidities. The more comorbidities, and the more severe the comorbidities, the greater the chances of death or severe adverse outcomes from COVID-19. It is not clear how well the number and severity of comorbidities in the clinical trial sample matched those reflected in Fig. 1, but the insert does mention the large number of conditions that excluded participation in the trials. In sum, the results from the clinical trials could not be expected to reflect the results that could occur (and have occurred) from mass inoculation of the public, given the unaffected nature of the bulk of the trial population from SARS-CoV-2 exposure.

The prior discussion on the clinical trials has focused on the efficacy and safety of the inoculants, and the relationship of the trial test population to the total target population. We have limited the focus so far to the safety and efficacy issues since these constituted the core of what was presented to the FDA for EUA approval. We have not focused on the trials from an early warning indicator perspective.

We will address summarily the science/early warning indicator issues associated with the Pfizer trials, and how the neglect of these issues has translated into disastrous consequences during the mass inoculation rollout. Standard practice for determining and understanding the impact of new technology (such as mRNA “vaccines”) on a system involves measuring the state and flux variables of the system before the new technology intervention, measuring the state and flux variables of the system after the new technology intervention, and identifying the types and magnitudes of changes in the state and flux variables attributable to the intervention. This would be in addition to evaluating performance metrics before and after the intervention.

In Pfizer’s proposed clinical trials for the mRNA “vaccine” (Study to Describe the Safety, Tolerability, Immunogenicity, and Efficacy of RNA Vaccine Candidates Against COVID-19 in Healthy Individuals - <https://clinicaltrials.gov/ct2/show/NCT04368728>), the focus was on determining 1) adverse events/symptoms, 2) SARS-CoV-2 serum neutralizing antibody levels, 3) SARS-CoV-2 anti-S1 binding antibody levels and anti-RBD binding antibody levels, and 4) effectiveness. These metrics are all related to safety at the symptom level and performance.

However, symptoms/diseases are typically end points of processes

Fig. 2. Post-inoculation deaths per dose of inoculant. 7-day COVID-19 vaccine deaths per inoculation by age in the United States (as of 5/28/2021). Data shown includes the total number of all deaths up to 7 days after receiving the vaccine for both those administered 1 dose and the complete series of doses by age in the United States as of 5/28/2021 reported in VAERS (updated on 5/28/2021). COVID-19 Vaccinations (Inoculations) based on CDC data provided by ISSInfo up thru 5/28/2021. Data obtained from <https://data.cdc.gov/Vaccinations/COVID-19-Vaccination-Demographics-in-the-United-St/km4m-vcsb> on 6/10/2021. COVID-19 Vaccinations Deaths based on CDC WONDER VAERS Database as of 5/28/2021, obtained from <https://wonder.cdc.gov/controller/datarequest/D8;jsessionid=4B5522C8D1DA68F1A364646B0DA5> on 6/9/2021.

that can take months, years, or decades to surface. During that symptom/disease development period, many biomarker early warning indicators tend to exhibit increasing abnormalities that reflect an increasing predisposition to the eventual symptom/disease. Thus, serious symptoms/diseases that ordinarily take long periods to develop would be expected to be rare events if they occurred shortly following an inoculation. If the clinical trials that were performed by Pfizer and Moderna were designed to focus on efficacy and *only adverse effects at the symptom level of description* as an indicator of safety, the trial results would be limited to the identification of rare events, and the trial results would potentially under-estimate the actual pre-symptom level damage from the inoculations.

Credible safety science applied to this experiment would have required a much more expansive approach to determining effects on a wide variety of state and flux metrics that could serve as early warning indicators of potentially serious symptoms/disease, and might occur with much higher frequencies at this early stage than the rare serious symptoms. The only mention of these other metrics in the above proposal is in the Phase I trial description: “Percentage of Phase 1 participants with abnormal haematology and chemistry laboratory values”, to be generated seven days after dose 1 and dose 2.

A paper published in NEJM in December 2020 [34] summarized the Phase 1 results. The focus was on local and systemic adverse events and efficacy metrics (antibody responses). The only metrics other than these reported were transiently decreased lymphocyte counts.

We view this level of reporting as poor safety science for the following reasons. Before the clinical trials had started, many published articles were reporting serious effects associated with the presence of the SARS-CoV-2 virus such as hyperinflammation, hypercoagulation, hypoxia, etc. SARS-CoV-2 includes the S1 Subunit (spike protein), and it was not known how much of the damage was associated with the spike protein component of SARS-CoV-2. A credible high-quality safety science experiment would have required state measurements of specific biomarkers associated with each of these abnormal general biomarkers before and after the inoculations, such as d-dimers for evidence of enhanced coagulation/clotting; CRP for evidence of enhanced inflammation; troponins for evidence of cardiac damage; occludin and claudin for evidence of enhanced barrier permeability; blood oxygen levels for evidence of enhanced hypoxia; amyloid-beta and phosphorylated tau for

evidence of increased predisposition to Alzheimer’s disease; Serum HMGB1, CXCL13, Dickkopf-1 for evidence of an increased disposition to autoimmune disease, etc. A credible high-quality safety science experiment would have required flux measurements of products resulting from the mRNA interactions, from the LNP shell interactions, from dormant viruses that might have been stimulated by the mRNA-generated spike protein, etc., emitted through the sweat glands, faeces, saliva, exhalation, etc.

Most importantly, these types of measurements would have shown changes in the host that did not reach the symptom level of expression but raised the general level of host abnormality that could predispose the host to a higher probability of serious symptoms and diseases at some point in the future. Instead, in the absence of high-quality safety science reflected in these experiments, all that could be determined were short-term adverse effects and deaths. This focus on symptoms masked the true costs of the mRNA intervention, which would probably include much larger numbers of people whose health could have been degraded by the intervention as evidenced by increased abnormal values of these biomarkers. For example, the trials and VAERS reported clots that resulted in serious symptoms and deaths but gave no indication of the enhanced predisposition to forming serious clots in the future with a higher base of micro-clots formed because of the mRNA intervention. The latter is particularly relevant to children, who have a long future that could be seriously affected by having an increased predisposition to multiple clot-based (and other) serious diseases resulting from these inoculations.

3. Mass inoculation

3.1. Adverse events reported for adults

This section describes the adverse effects that followed COVID-19 mass inoculation in the USA. The main source of adverse effects data used was VAERS. Because VAERS is used to estimate adverse event information by many other countries as well, a short overview of VAERS and its intrinsic problems is summarized in Appendix 1.

The period in the present study covered by the reported inoculations is mid-December 2020 to the end of May 2021. The population inoculated during this period is mainly adults. Child inoculations did not begin until mid-May. Because the different age groups were inoculated starting at different times based on priority, the elapsed times after inoculation will be different, and any adverse event comparisons across age groups will require some type of elapsed post-inoculation time normalization.

We examined VAERS-reported deaths by age group, normalized to:

- 1) the number of inoculations given
- 2) the period within seven days after inoculation.

This allows a credible comparison of very short-term adverse effects post-inoculation for all age groups. During this period, which is eight days post-inoculation (where day zero is the day of inoculation), sixty percent of all post-inoculation deaths are reported in VAERS.

Fig. 2 below shows the results circa late May 2021 [3]. The age band ranges are different from those in Fig. 1 because the CDC provides inoculation after-effect age bands differently from COVID-19 death age bands. In general, the inoculation deaths by age per inoculant roughly parallel the COVID-19 deaths by age per capita (the curve structures are very similar), with one exception: the 0–17 demographic. In the normalized COVID-19 death graph (Fig. 1), the deaths per capita in the 0–17 demographic are negligible, while in the normalized inoculant death graphs (Fig. 2) the normalized deaths are small, but not negligible. The members of the 65+ demographic, where the bulk of deaths are occurring in Figs. 1 and 2, have been receiving inoculations for five months, whereas the members of the youngest demographic have been receiving inoculations only for a few weeks. More time needs to pass

before more definitive conclusions can be drawn about the youngest demographic, and how its members are impacted adversely following the inoculations.

The high death rates from both COVID-19 and the inoculations in the 65+ demographic should not be surprising. In both cases, the immune system is challenged, and in both cases, a dysfunctional immune system characteristic of many elderly people with multiple comorbidities cannot respond adequately to the challenge.

3.1.1. Specific short-term adverse events reported in VAERS

The most comprehensive single evaluation of VAERS-reported adverse events (mainly for adult recipients of the COVID-19 “vaccines”) we have seen is a non-peer-reviewed collection of possible side effects by Dr. Ray Sahelian [35]. We recommend reading this short data-rich summary of the broad types of events reported already, in the context that these events are very short-term. Dr. Sahelian identifies five mechanisms he believes are responsible for most of these events, with research potentially uncovering other mechanisms. These five mechanisms include:

- 1 “An overreacting inflammatory response is known as systemic inflammatory response syndrome (SIRS). This SIRS reaction, perhaps a cytokine storm, can range from very mild to very severe. It can begin the very first day of the shot or begin days or weeks later as a delayed reaction.”
- 2 “Interaction of the spike proteins with ACE2 receptors on cell membranes. Such cells are found widely in the body including the skin, lungs, blood vessels, heart, mouth, gastrointestinal tract, kidneys, and brain.”
- 3 “Interaction of spike proteins with platelets and/or endothelial cells that line the inside of blood vessels. This can lead to clotting or bleeding (low number of circulating platelets in the bloodstream). Some of the clots, even if tiny, cause certain neurological symptoms if the blood supply to nerves is compromised.”
- 4 “Immediate or delayed release of histamine from mast cells and basophils (mast cell activation syndrome, MCAS).”
- 5 “Swelling of lymph nodes in various areas of the body could interfere with blood flow, put pressure on nerves causing pain, or compromise their proper function.”

These reactions can be classified as Hyperinflammation, Hypercoagulation, Allergy, and Neurological, and can contribute to many symptoms and diseases, as VAERS is showing.

An excellent review of acute and potential long-term pathologies resulting from the COVID-19 inoculations [36] showed potential relationships to blood disorders, neurodegenerative diseases and autoimmune diseases. This review discussed the relevance of prion-protein-related amino acid sequences within the spike protein.

3.1.2. Potential mid- and long-term events and serious illnesses for adults and children from past vaccines

A detailed description of potential mid- and long-term events and serious illnesses for adults and children from past vaccines is presented in Appendix C. Most of these events and illnesses are not predictable, and most, if not all, would be possible for the COVID-19 inoculations in the mid- and long-term for adults and children.

3.1.3. Potential short-, mid-, and long-term risks of mass COVID-19 inoculation for children

3.1.3.1. Intrinsic inoculant toxicity. Children are unique relative to COVID-19. They have negligible risks of serious effects from the disease, as shown in Fig. 1. Given that the COVID-19 inoculants were only tested for a few months, and mid-or long-term adverse effects are unknown, any mid- or long-term adverse events that emerge could impact children

adversely for decades.

We believe that mid-or long-term adverse effects are possible based on the recent emergence of evidence that would support the probability of mid-and long-term adverse effects from the COVID-19 inoculants, such as:

- 1) The spike protein itself can be a toxin/pathogenic protein:
- 2) S protein alone can damage vascular endothelial cells (ECs) by downregulating ACE2 and consequently inhibiting mitochondrial function [37].
- 3) it is concluded that ACE2 and endothelial damage is a central part of SARS-CoV2 pathology and may be induced by the spike protein alone [38].
- 4) the spike protein of SARS-CoV-1 (without the rest of the virus) reduces ACE2 expression, increases angiotensin II levels, exacerbates lung injury, and triggers cell signaling events that may promote pulmonary vascular remodeling and Pulmonary Arterial Hypertension (PAH) as well as possibly other cardiovascular complications [39].
- 5) the recombinant S protein alone elicits functional alterations in cardiac vascular pericytes (PCs) [40]. This was documented as:
- 6) increased migration
- 7) reduced ability to support EC network formation on Matrigel
- 8) secretion of pro-inflammatory molecules typically involved in the cytokine storm
- 9) production of pro-apoptotic factors responsible for EC death. Furthermore, the S protein stimulates the phosphorylation/activation of the extracellular signal-regulated kinase 1/2 (ERK1/2) through the CD147 receptor, but not ACE2, in cardiac PCs, the S protein may elicit vascular cell dysfunction, potentially amplifying, or perpetuating, the damage caused by the whole coronavirus [40].
- 10) “even in the absence of the angiotensin-converting enzyme 2 receptors, the S1 subunit from SARS-CoV-2 spike protein binding to neutral phospholipid membranes leads to their mechanical destabilization and permeabilization. A similar cytotoxic effect of the protein was seen in human lung epithelial cells.” [125].
- 11) The LNP layer encapsulating the mRNA of the inoculant is highly inflammatory in both intradermal and intranasal inoculation [41] and “Polyethylene glycol (PEG) is a cause of anaphylaxis to the Pfizer/BioNTech mRNA COVID-19 vaccine” [42]. “Humans are likely developing PEG antibodies because of exposure to everyday products containing PEG. Therefore, some of the immediate allergic responses observed with the first shot of mRNA-LNP vaccines might be related to pre-existing PEG antibodies. Since these vaccines often require a booster shot, anti-PEG antibody formation is expected after the first shot. Thus, the allergic events are likely to increase upon re-vaccination” [43].
- There is also the possibility that the components of the LNP shell could induce the ASIA Syndrome (auto-immune/inflammatory syndrome induced by adjuvants), as shown by studies on post-inoculation thyroid hyperactivity [44] and post-inoculation subacute thyroiditis [45].
- 12 The spike protein has been found in the plasma of post-inoculation individuals, implying that it could circulate to, and impact adversely, any part of the body [46].
- 13 The spike protein of SARS-CoV-2 crosses the blood-brain barrier in mice [47], and “the SARS-CoV-2 spike proteins trigger a pro-inflammatory response on brain endothelial cells that may contribute to an altered state of BBB function” [48].
- 14 The spike proteins manufactured in vivo by the present COVID-19 inoculations could potentially “precipitate the onset of autoimmunity in susceptible subgroups, and potentially exacerbate autoimmunity in subjects that have pre-existing autoimmune diseases”, based on the finding that anti-SARS-CoV-2 protein

antibodies cross-reacted with 28 of 55 diverse human tissue antigens [49].

- 15 “The biodistribution of ChaAdOx1 [Astra Zeneca’s recombinant adenovirus vaccine candidate against SARS-CoV-2] in mice confirmed the delivery of vaccine into the brain tissues [50]. The vaccine may therefore spur the brain cells to produce CoViD spike proteins that may lead to an immune response against brain cells, or it may spark a spike protein-induced thrombosis. This may explain the peculiar incidences of the fatal cerebral venous sinus thrombosis (CVST) observed with viral vector-based CoViD-19 vaccines” [51,52].

A complementary perspective to explain adenovirus-based vaccine-induced thrombocytopenia is that “transcription of wildtype and codon-optimized Spike open reading frames enables alternative splice events that lead to C-terminal truncated, soluble Spike protein variants. These soluble Spike variants may initiate severe side effects when binding to ACE2-expressing endothelial cells in blood vessels.” [100].

- 16 A Pfizer Confidential study performed in Japan showed that “modRNA encoding luciferase formulated in LNP comparable to BNT162b2” injected intramuscularly concentrated in many organs/tissues in addition to the injection site [53]. The main organs/sites identified were adrenal glands, liver, spleen, bone marrow, and ovaries. While damage to any of these organs/sites could be serious (if real for humans), adverse effects on the ovaries could be potentially catastrophic for women of child-bearing or pre-childbearing age.

The main objective of credible biodistribution studies (of inoculants for eventual human use) is to identify the spatio-temporal distribution of the actual inoculant in humans; i.e., how much of the final desired product (in this case, expressed protein antigen/spike protein) is produced in different human tissues and organs as a function of time. That’s not what was reported in the Pfizer Confidential study.

Rats were used for the *in vivo* studies; the relationship of their biodistribution to that of humans is unclear. They were injected in different locations (hindpaw/intramuscular); the relationship to human injections in the deltoid muscle is unclear. They were injected with “modRNA encoding luciferase formulated in LNP comparable to BNT162b2”; it is unclear why they weren’t injected with BNT162b2, it is unclear why spike protein expression wasn’t evaluated rather than LNP concentration, and it is unclear how well the biodistribution from the actual inoculant used in the experiments compares to the biodistribution from BNT162b2.

They were injected once per rat. Given that a second injection would not be in the same exact location as the first, and that the circulatory system might have changed due to clotting effects from the first injection and other potential vascular complications, it is unclear how the biodistribution change with the second injection would compare with the first. If a booster injection is given to counter variants, it is unclear how its biodistribution would be altered as a consequence of the preceding two injections.

Clotting will occur with the highest probability where the blood flow is reduced (and more time is available for LNP-endothelial cell interaction). It is unclear whether the clotting process would show *positive feedback* behaviour where the initial inoculation constricts the flow in low-velocity regions even further by enhanced clotting, and subsequent inoculations further amplify this reduced flow-enhanced clotting cycle.

The rats were injected under pristine conditions; how that compares with humans, who have been, are being, and will continue to be exposed to multiple toxic substances in combination, is open to question. We know these combinations can act synergistically to adversely impact myriad organs and tissues throughout the body [23]. We don’t know how these toxic exposures in humans affect the permeability of the blood/tissue barriers, and especially the ability of the injected material to diffuse into the bloodstream (and also the ability of the manufactured

spike proteins to diffuse from the bloodstream into the surrounding tissue).

Higher-level primates should have been used for these short-term experiments, to obtain a more realistic picture of the biodistribution of inoculant in human organs and tissues. In other words, these laboratory experiments may be just the tip of the iceberg of estimating the amount of inoculant that concentrates in critical organs and tissues of human beings.

The many studies referenced above indicate collectively that the mRNA-based COVID-19 inoculations (the most prolific inoculations used in the USA for COVID-19 so far) consist of (at least) two major toxins: the instructions for the spike protein (mRNA) and the mRNA-encapsulating synthetic fat LNP. The vaccine is injected into the deltoid muscle, at which time it contributes to inflammation at the injection site due in part to the LNP and potentially to anaphylaxis from the LNP PEG-2000 component. Some of the injected material stays at the injection site, where it combines with cells through endocytosis to express spike protein on the cell surface, stimulating the adaptive immune system to eventually produce antibodies to the spike protein [54].

The remainder of the injected material enters the lymphatic system and the bloodstream, and is distributed to tissues and organs throughout the body: e.g., “Drugs administered by the intramuscular (IM) route are deposited into vascular muscle tissue, which allows for rapid absorption into the circulation” [55]. The basis of this process is that the bulky muscles have good vascularity, and therefore the injected drug quickly reaches the systemic circulation and thereafter into the specific region of action, bypassing the first-pass metabolism [56]. The widespread distribution is greatly enhanced by the LNP PEG-2000 coating as follows: building from the success of PEGylating proteins to improve systemic circulation time and decrease immunogenicity [57]. PEG coatings on nanoparticles shield the surface from aggregation, opsonization, and phagocytosis, prolonging systemic circulation time. [57]. PEG coatings on nanoparticles have also been utilized for overcoming various biological barriers to efficient drug and gene delivery associated with other modes of administration. [57]

In the bloodstream, one possible outcome is that the LNPs coalesce with the endothelial cells on the inner lining of the blood vessels and transfer the mRNA to the cells through endocytosis. The endothelial cells would then express the spike protein on their surface. Platelets flowing by the spike protein express ACE2 receptors on their surface; therefore, one possible outcome would be activation of the platelets by the spike protein and initiation of clotting. Another possible outcome would be the modified endothelial cells being recognized by innate immune system cells as foreign. These immune killer cells would then destroy parts of the endothelium and weaken the blood-organ barriers. The LNPs would inflame the endothelium as well, both increasing barrier permeability and increasing the blood vessel diameter. This weakening of the blood-organ barriers would be superimposed on any inflammation due to the myriad toxic contributing factors operable [4]. The newly-formed cells with spike proteins would penetrate the blood-organ barriers and bind to tissue with expressed ACE2 receptors. Any LNPs that did not coalesce with the endothelial cells, but remained intact, could also pass through the permeable blood-organ barrier, and coalesce directly with the organ cells. This could lead to an attack by innate immune system cells, and be a precursor to autoimmunity [4].

In the preceding discussion of the Pfizer biodistribution studies, the issue of multiple inoculations on changes in biodistribution was raised. Similarly, the alteration of effects as described above by multiple inoculations must be considered. Each inoculation will have positive aspects and negative aspects. The positive aspects are the formation of antibodies in the muscle cells and lymphatic system. The negative aspects include, but are not limited to, the potential clotting effects and permeability increases for that fraction of the inoculant that enters the bloodstream. The first inoculant dose can be viewed as priming the immune system. The immune response will be relatively modest. The second inoculant dose can be expected to elicit a more vigorous immune

Table A1
Expected deaths from non-COVID-19 causes for inoculees (Thousands).

Potential covid deaths/# non-covid expected	Mean time location/five months									
	0	%REP	1/3	%REP	1/2	%REP	2/3	%REP	1	%REP
0	723	0.5	482	0.74	362	0.98	242	1.47	4.77	75
.5	1085	0.33	723	0.5	543	0.66	363	0.98	7.14	50
1	1446	0.25	964	0.37	724	0.49	484	0.74	9.51	37

Fig. A1. Figure A1-1 is a plot of number of deaths from COVID-19 inoculation (reported to VAERS and obtained from the CDC search engine CDC Wonder) as a function of days from inoculation (zero reflects day of inoculation). If there were no effect from the inoculation, as claimed by the CDC and other official government agencies, the curve would be essentially a straight horizontal line, reflecting normal expected deaths in a non-COVID-19 year. The curve is stepped past the tenth day because the data after that point is provided in bands by CDC Wonder. The knee of the curve, which will denote the beginning of the transition of 1) deaths **from** inoculation to 2) deaths **expected**, appears somewhere in the range between day ten and day thirty.

Table A2

response. This will enhance the desired antibody production in the muscle cells and lymphatic system, but may also enhance the immune response to both the blood vessel-lining endothelial cells displaying the spike protein and the platelets, causing more severe damage. If a booster (s) inoculation is also required, this may further enhance both the positive and negative immune responses resulting from the second inoculation. While the positive effects are reversible (antibody levels decrease with time), adverse effects may be cumulative and irreversible, and therefore injury and death rates may increase with every additional inoculation [58].

These effects can occur throughout the body in the short term, as we are seeing with the VAERS results. They can occur in the mid- and long-term as well, due to the time required for destructive processes to have full effect and the administration of further inoculations. For example, micro-clots resulting from the inoculation that were insufficient to cause observable symptoms could in effect raise the baseline for thrombotic disease [92]. Lifestyle activities that contribute to enhanced blood clotting would have less distance to travel to produce observable symptoms, and thus the serious effects of clotting would have been accelerated [59,60]. As an example: the risk of venous thrombosis is approximately 2- to 4-fold increased after air travel [61]. How much this rate would increase after the inoculations, where microthrombi have formed in some recipients, is unknown. These potential baseline-raising effects could impact the interpretation of the VAERS results, as we show at the end of Appendix 1.

3.1.3.2. Adverse inoculant effects on children. What are the potential mid- and long-term adverse health effects from the COVID-19 inoculation on children specifically, taking into account that they will be exposed not only to the spike protein component of the SARS-CoV-2 virus but also to the toxic LNP encapsulating-shell? This toxic combination will have bypassed many defensive safeguards (typically provided by the innate immune system) through direct injection [62]. As we have shown, the main reasons why we believe the spike protein could be harmful to children even though they don't seem to get sick from exposure to SARS-CoV-2 are 1) the bypassing of the innate immune system by inoculation, 2) the larger volume of spike protein that enters the bloodstream, and 3) the additional toxic effects of the encapsulating LNP layer.

3.1.3.2.1. Potential mid-term adverse health effects. Examination of the myriad post-COVID-19 inoculation symptoms/biomarker changes for the 0–17 age demographic reported to VAERS circa mid-June 2021 provides some indication of very early damage [84]. Main regions/systems affected adversely (VAERS symptoms/biomarkers shown in parentheses) include:

- Cardiovascular (blood creatine phosphokinase increased, cardiac imaging procedure abnormal, echocardiogram abnormal, electrocardiogram abnormal, heart rate increased, myocarditis, palpitations, pericarditis, tachycardia, troponin I increased, troponin increased, fibrin D-Dimer increased, platelet count decreased, blood pressure increased, bradycardia, brain natriuretic peptide increased, ejection fraction decreased, migraine)
- Gastrointestinal (abdominal pain, diarrhoea, vomiting, alanine aminotransferase increased, aspartate aminotransferase increased.)
- Neural (gait disturbance, mobility decreased, muscle spasms, muscle twitching, seizure, tremor, Bell's Palsy, dyskinesia)

- Immune (C-Reactive Protein increased, red blood cell sedimentation rate increased, white blood cell counts increased, inflammation, anaphylactic reaction, pruritis, rash, lymphadenopathy)
- Endocrine (heavy menstrual bleeding, menstrual disorder)

In addition, there were large numbers of different vision and breathing problems reported.

All the major systems of the body are impacted, and many of the major organs as well. Given the lag times in entering data into VAERS and the fact that inoculations of children started fairly recently, we would expect the emphasis to be immediate symptomatic and biomarker reactions. More time is required for organ and system damage to develop and emerge. Cardiovascular problems dominate, as our model for spike protein/LNP circulation and damage predicts, and it is unknown how reversible such problems are. Many of the VAERS symptoms listed above were also found in COVID-19 adult patients [64].

Consider the example of Multisystem Inflammatory Syndrome in Children (MIS-C). It has emerged in VAERS with modest frequency so far, and it also occurred about a month after COVID-19 infection [65]. In both cases, the presence of the spike protein was a common feature. Many of its characteristic symptoms are those listed above from VAERS. MIS-C has similarities with known disease entities like Kawasaki Disease (KD), toxic shock syndrome (TSS) and macrophage activation syndrome (MAS)/secondary hemophagocytic lymphohistiocytosis (HLH) [66]. One presentation of MIS-C is in adolescents with a high disease burden as evidenced by more organ systems involved, almost universally including cardiac and gastrointestinal systems, and with a higher incidence of shock, lymphopenia, and elevated cardiac biomarkers indicating myocarditis [67]. Since the first reports of children developing MIS-C, it was evident that others presented with some of the classic symptoms of the well-recognized childhood illness KD [68]. Further, despite KD being ordinarily incredibly rare in adults, patients with MIS-A have also been reported with KD-like features. [68] Thus, an examination of the adverse effects from COVID-19 as evidenced through these diseases might shed some light on what can be expected further down the line from the inoculations.

The following section addresses Kawasaki disease (KD) and Multisystem Inflammatory Syndrome in Children (MIS-C) [65].

KD is an acute vasculitis and inflammation that predominantly affects the coronary arteries and can cause coronary artery aneurysms. Other KD manifestations include systemic inflammation of arteries, organs, and tissues, with consequent hepatitis and abdominal pain; lung interstitial pneumonitis, aseptic meningitis due to brain membrane inflammations; myocarditis, pericarditis, and valvulitis; urinary tract pyuria, pancreatitis; and lymph-node enlargement [69]. In general, although almost all children fully recover, some of them later develop coronary artery dilation or aneurysm [70]. Etiologically and pathologically, numerous studies indicate that KD is triggered by an abnormal autoimmune response caused by an infection [71]. The infection hypothesis is supported by epidemiology data showing that an infectious disease is involved at least as a starting point. Previously proposed infectious agents include Herpesviridae, retroviruses, Parvovirus B19, bocavirus, and bacterial infections such as staphylococci, streptococci, Bartonella, and Yersinia infections [72].

SARS-CoV-2 adds to these infectious agents by eliciting autoantibodies likely via molecular mimicry and cross-reactivity with autoantigens [72,73].

Then, the formation of antigen–antibody immune complexes can lead to KD symptoms via activation of the receptors of mast cells, neutrophils, and macrophages with consequent release of pro-inflammatory cytokines and increase of blood vessel permeability; activation of the complement system, stimulation of neutrophils and macrophages to secrete proteases and more proinflammatory cytokines [74], thus merging into the “cytokine storm” that characterizes MIS-C [75]. Indeed, features of KD are raised levels of Interleukin (IL)-6, IL-8, IL-15, and IL-17, with the cytokine level predicting coronary aneurysm

formation in KD patients [76,77]

3.1.3.2.2. Potential long-term adverse health effects. In the long-term, SARS-CoV-2-induced KD vasculitis can lead to severe pathologies. Vasculitis has a predilection for coronary arteries with a high complication rate across the lifespan for those with medium to large coronary artery aneurysms [78]. The cytokine-induced inflammation produces endothelial dysfunction and damage to the vascular wall, leading to aneurysmal dilatation. Successively, vascular remodeling can also occur, but this does not imply resolution of the disease or reduction of risk for future complications. A rigorous follow-up to detect progressive stenosis, thrombosis and luminal occlusion that may lead to myocardial ischemia and infarction becomes mandatory [78]. Of equal importance, among other long-term outcomes, children with KD may have increased risks not only for ischemic heart disease, but also for autoimmune disorders, cancer as well as an increased all-cause mortality [71].

Additional questions regarding mass inoculation of children and adolescents include:

- a) Do children, being asymptomatic carriers of SARS-CoV-2, transmit the virus?
- b) Do recently vaccinated people, infected with SARS-CoV-2, transmit the virus?

There is evidence of children transmitting SARS-CoV-2 in community settings, but the existing literature is heterogeneous with regards to the relative rate at which they do so compared to adults [79].

Studies from South Korea and Thailand found a very limited number of secondary cases [80,81]. On the contrary, a large contact tracing study from India concluded that the highest probability of transmission was between case-contact pairs of similar age and that this pattern of enhanced transmission risk was highest among children 0–4 years of age as well as adults 65 years of age and older [80].

With regard to the second question, it was shown that household members of healthcare workers inoculated with a single dose of either Pfizer or Astra Zeneca COVID-19 inoculant were at significantly reduced risk of PCR-confirmed SARS-CoV-2 infection but at non-statistically significant reduced risk of hospitalization, compared to household members of uninoculated healthcare workers, fourteen days after inoculation [82]. This finding again underlines the association of severe disease to the characteristics of the infected person and not directly to the transmission, implying that the elderly should be inoculated and not the children.

3.2. Novel best-case scenario cost-benefit analysis of COVID-19 inoculations for most vulnerable

Traditional cost-benefit analyses are typically financial tools used to estimate the potential value of a proposed project. They involve generating cost streams over time, benefit streams over time, and then comparing the net present value of these two streams (including risk) to see whether the risk-adjusted discounted benefits outweigh the risk-adjusted discounted costs. Appendix D presents a detailed non-traditional *best-case scenario* pseudo-cost-benefit analysis of inoculating people in the 65+ demographic in the USA. In this incarnation of a cost-benefit analysis, the costs are the number of deaths resulting from the inoculations, and the benefits are the lives saved by the inoculations. The time range used was from December 2019 to end-of-May 2021. No discounting was done; an inoculation-based death occurring immediately post-inoculation was given the same importance/weighting as an inoculation-based death months after inoculation.

Why was this non-traditional approach selected for a cost-benefit analysis? In a traditional non-financial cost-benefit analysis relative to inoculations, the adverse events prevented by the inoculations would be compared with the adverse events resulting from the inoculations. Presently, in the USA, definitions, test criteria, and reporting incentives

for COVID-19 and its inoculants have shifted over time, and we believe a standard approach could not be performed credibly. Appendix Da presents some of the problems with the COVID-19 diagnostic criteria on which the above statements are based.

In contrast to the pandemic buildup phase, where many who died *with* COVID-19 were assumed to have died *from* COVID-19 by the medical community and the CDC, the post-inoculation deaths reported in VAERS are assumed by the CDC to be mostly from causes other than the inoculations. We wanted to use a modified cost-benefit analysis that would have less dependence on arbitrary criteria and subjective judgments.

The approach selected can be viewed as a *best-case scenario* pseudo-cost-benefit analysis. We assume the inoculations prevent *all* the deaths *truly* attributable to COVID-19 (these are the total deaths attributed to COVID-19 officially minus 1) the number of false positives resulting from the PCR tests run at very high amplification cycles and 2) the number of deaths that could have been attributed to one of the many comorbidities that were typical of those who succumbed, as shown in our results section) over the period December 2019 to end-of-May 2021, and relate that number to the deaths *truly* attributable to the inoculation (from January 2021 to end-of-May 2021) based on our computations in the results section. The results show *conservatively* that there are five times the number of deaths *truly* attributable to each inoculation vs those *truly* attributable to COVID-19 in the 65+ demographic. As age decreases, and the risk for COVID-19 decreases, the cost-benefit increases. Thus, if the best-case scenario looks *poor* for benefits from the inoculations, any realistic scenario will look *very poor*. For children the chances of death from COVID-19 are negligible, but the chances of serious damage over their lifetime from the toxic inoculations are not negligible.

4. Discussion

Two issues arise from these results.

First, where is the data justifying inoculation for children, much less most people under forty? It's not found on Fig. 1, where the most vulnerable are almost exclusively the elderly with many comorbidities [83]. Yet, in the USA, Pfizer has been approved to inoculate children 12–17, and the goal is to accomplish this by the start of the school year in the Fall. As stated previously, there are plans to inoculate children as young as six months starting before the end of 2021.

What is the rush for a group at essentially zero risks? Given that the inoculations were tested only for a few months, only very short-term adverse effects could be obtained. It is questionable how well even these short-term effects obtained from the clinical trials reflect the short-term effects from the initial mass inoculation results reported in VAERS.

Figs. 1 and 2 reflect only these very short-term results. A number of researchers have suggested the possibility of severe longer-term autoimmune, Antibody-Dependent Enhancement, neurological, and other potentially serious effects, with lag periods ranging from months to years. If such effects do turn out to be real, the children are the ones who will have to bear the brunt of the suffering. There appear to be no benefits for the children and young adults from the inoculations and only Costs!

The second issue is why the deaths shown on Fig. 2 were not predicted by the clinical trials. We examined the Pfizer trial results (based on a few months of testing) and did not see how (potentially) hundreds of thousands of deaths could have been predicted from the trials' mortality results. Why this gap?

As we showed in the clinical trials section, 17.4 % of the Pfizer sample members were over 65, and 4.4 % were over 75. When the later phases of the trials started in late July 2020, the managers knew the COVID-19 age demographics affected from the July 2020 analog of Fig. 1. Rather than sampling from the age region most affected, they sampled mainly from the age region least affected! And even in the very limited sampling from the oldest groups, it is unclear whether they

selected from those with the most serious comorbidities. Our impression is that the sickest were excluded from the trials, but were first in line for the inoculants.

It is becoming clear that the central ingredient of the injection, the recipe for the spike protein, will produce a product that can have three effects. Two of the three occur with the production of antibodies to the spike protein. These antibodies could allegedly offer protection against the virus (although with all the "breakthrough" cases reported, that is questionable), or could suppress serious symptoms to some extent. They could also cross-react with human tissue antigen, leading to potential autoimmune effects. The third occurs when the injected material enters the bloodstream and circulates widely, which is enabled by the highly vascular injection site and the use of the PEG-2000 coating.

This allows spike protein to be manufactured/expressed in endothelial cells at any location in the body, both activating platelets to cause clotting and causing vascular damage. It is difficult to believe this effect is unknown to the manufacturer, and in any case, has been demonstrated in myriad locations in the body using VAERS data. There appears to be modest benefit from the inoculations to the elderly population most at risk, no benefit to the younger population not at risk, and much potential for harm from the inoculations to both populations. It is unclear why this mass inoculation for all groups is being done, being allowed, and being promoted.

5. Overall conclusions

The people with myriad comorbidities in the age range where most deaths with COVID-19 occurred were in very poor health. Their deaths did not seem to increase all-cause mortality as shown in several studies. If they hadn't died with COVID-19, they probably would have died from the flu or many of the other comorbidities they had. We can't say for sure that many/most died from COVID-19 because of: 1) how the PCR tests were manipulated to give copious false positives and 2) how deaths were arbitrarily attributed to COVID-19 in the presence of myriad comorbidities.

The graphs presented in this paper indicate that the frail injection recipients receive minimal benefit from the inoculation. Their basic problem is a dysfunctional immune system, resulting in part or in whole from a lifetime of toxic exposures and toxic behaviors. They are susceptible to either the wild virus triggering the dysfunctional immune system into over-reacting or under-reacting, leading to poor outcomes or the injection doing the same.

This can be illustrated by the following analogy. A person stands in a bare metal enclosure. What happens when the person lights a match and drops it on the floor depends on what is on the floor. If the floor remains bare metal, the match burns for a few seconds until extinguished. If there is a sheet of paper on the floor under the match, the match and the paper will burn for a short time until both are extinguished. If, however, the floor is covered with ammonium nitrate and similar combustible/explosive materials, a major explosion will result! For COVID-19, the wild virus is the match. The combustible materials are the toxic exposures and toxic behaviors. If there are no biomarker 'footprints' from toxic exposures and toxic behaviors, nothing happens. If there are significant biomarker 'footprints' from toxic exposures and toxic behaviors, bad outcomes result.

Adequate safety testing of the COVID-19 inoculations would have provided a distribution of the outcomes to be expected from 'lighting the match'. Since adequate testing was not performed, we have no idea how many combustible materials are on the floor, and what the expected outcomes will be from 'lighting the match'.

The injection goes two steps further than the wild virus because 1) it contains the instructions for making the spike protein, which several experiments are showing can cause vascular and other forms of damage, and 2) it bypasses many front-line defenses of the innate immune system to enter the bloodstream directly in part. Unlike the virus example, the injection ensures there will always be some combustible materials on the

floor, even if there are no other toxic exposures or behaviors. In other words, the spike protein and the surrounding LNP are toxins with the potential to cause myriad short-, mid-, and long-term adverse health effects even in the absence of other contributing factors! Where and when these effects occur will depend on the biodistribution of the injected material. Pfizer's own biodistribution studies have shown the injected material can be found in myriad critical organs throughout the body, leading to the possibility of multi-organ failure. And these studies were from a single injection. Multiple injections and booster shots may have cumulative effects on organ distributions of inoculant!

The COVID-19 reported deaths are people who died **with** COVID-19, not necessarily **from** COVID-19. Likewise, the VAERS deaths are people who have died **following** inoculation, not necessarily **from** inoculation.

As stated before, CDC showed that 94 % of the reported deaths had multiple comorbidities, thereby reducing the CDC's numbers attributed strictly to COVID-19 to about 35,000 for all age groups. Given the number of high false positives from the high amplification cycle PCR tests, and the willingness of healthcare professionals to attribute death to COVID-19 in the absence of tests or sometimes even with negative PCR tests, this 35,000 number is probably highly inflated as well.

On the latter issue, both Virginia Stoner [85] and Jessica Rose [86] have shown independently that the deaths **following** inoculation are not coincidental and are **strongly related to** inoculation through strong clustering around the time of injection. Our independent analyses of the VAERS database reported in Appendix 1 confirmed these clustering findings.

Additionally, VAERS historically has under-reported adverse events by about two orders-of-magnitude, so COVID-19 inoculation deaths **in the short-term** could be in the hundreds of thousands for the USA for the period mid-December 2020 to the end of May 2021, potentially swamping the *real* COVID-19 deaths. Finally, the VAERS deaths reported so far are for the very short term. We have no idea what the death numbers will be in the intermediate and long-term; the clinical trials did not test for those.

The clinical trials used a non-representative younger and healthier sample to get EUA for the injection. Following EUA, the mass inoculations were administered to the very sick (and first responders) initially, and many died quite rapidly. However, because the elderly

who died following COVID-19 inoculation were very frail with multiple comorbidities, their deaths could easily be attributed to causes other than the injection (as should have been the case for COVID-19 deaths as well).

Now the objective is the inoculation of the total USA population. Since many of these potential serious adverse effects have built-in lag times of at least six months or more, we won't know what they are until most of the population has been inoculated, and corrective action may be too late.

Appendix A

EXPECTED DEATHS IN 65+ DEMOGRAPHIC VS COVID-19 INOCULATION DEATHS

The goal of this appendix is to estimate the number of actual deaths from the COVID-19 inoculation based on the number of deaths following inoculation reported in VAERS [93,94,101]. The approach used will:

- 1) identify the number of deaths following COVID-19 inoculation that would have been **expected** without COVID-19 inoculation (i.e., pre-COVID-19 death statistics);
- 2) relate the VAERS **expected** death data to the actual number of deaths **expected** based on historical death statistics; and
- 3) apply this ratio to scale-up the deaths attributed to COVID-19 inoculation reported in VAERS to arrive at actual deaths attributable to COVID-19 inoculation.

For example, if ten deaths could be shown in VAERS to reflect expected pre-COVID-19 deaths, and the actual number of expected pre-COVID-19 deaths from historical data was 100, the scaling factor of deaths would be ten to translate VAERS-reported deaths to actual deaths. Then, the deaths reported in VAERS that can be attributed to the COVID-19 inoculation will be multiplied by the expected deaths scaling factor, ten, to arrive at the actual number of deaths resulting from the COVID-19 inoculation. Thus, if VAERS shows fifty deaths that can be attributed to the COVID-19 inoculation, then the actual number of deaths attributed to COVID-19 will be 500 with these assumptions [3].

The basis for our approach is the following statement from the USA Federal government: "Healthcare providers are required to report to VAERS the following adverse events after COVID-19 vaccination [33] and other adverse events if later revised by FDA" [96,102,103]. "Serious AEs regardless of causality.", including death [3,95].

If there had been full compliance with this requirement in VAERS, then the VAERS-reported deaths would have equaled the sum of

- 1) actual expected deaths (based on past statistics)

2) actual deaths over and above expected deaths that could be attributed to the COVID-19 inoculations.

Based on this requirement, we will generate a rough estimate (in the simplest form possible) of the number of deaths that would have occurred in the 65+ demographic if there had been no COVID-19 “pandemic”. Then, we will relate this number to the number of deaths reported to VAERS following COVID-19 inoculations in the 65+ demographic. This would provide a “floor” for estimating the fraction of actual deaths reported to VAERS. This will be followed by parameterizing potential deaths attributable to the COVID-19 inoculations and displaying the effects on ratio of reported deaths to actual deaths. We will perform a global analysis and a local analysis, to see whether major or minor differences occur. The local analysis (Section A1-a2) may be somewhat easier to comprehend than the global analysis, but both come to similar conclusions.

A1-a Deaths Following COVID-19 Inoculations Reported to VAERS Compared to Expected Deaths

A1-a . Problems with VAERS

Before we discuss numbers of adverse events reported by VAERS, we need to identify potential shortcomings of, and problems with, VAERS, so these numbers of adverse events can be understood in their proper context. As stated previously, VAERS is a passive surveillance system managed jointly by the CDC and FDA, and historically has been shown to report about 1% of actual vaccine/inoculation adverse events (confirmed by the first principles analysis that follows in this appendix). There is no evidence that even the 1% reported have been selected randomly.

Some of this gross underreporting of adverse events reflects a major conflict-of-interest of CDC with respect to VAERS. CDC provides funding for administration of many vaccines, including the COVID-19 inoculations. Prior to COVID-19, the CDC provided about five billion dollars annually to the Vaccines for Children Program alone [102].

For COVID-19, the CDC has received many billions of dollars in supplemental funding for myriad activities, including vaccine distribution. It is difficult to separate out the CDC funding available for vaccine distribution from other CDC COVID-19 related activities, but one budget item (of many) should illustrate the magnitude of the effort: “Coronavirus Response and Relief Supplemental Appropriations Act, 2021 (P.L. 116–260): P.L. 116–260 provided \$8.75 billion to CDC to plan, prepare for, promote, distribute, administer, monitor, and track coronavirus vaccines to ensure broad-based distribution, access, and vaccine coverage.” [3]. Low reporting rates of actual adverse events in VAERS should not be surprising, since the same organization that receives multi-billions of dollars in funding annually for promoting and administering vaccines also has responsibility for monitoring the safety of these products (whose liability has been waived).

In addition, the 1% reporting rates came from a thirty-day tracking study [22], and therefore are strictly applicable to *very near-term* adverse events. For mid-term and especially long-term events, the reporting rates would be much lower, since the links between inoculation and adverse events would be less obvious. That doesn’t mean these non-very-short-term adverse events don’t exist; it just means they haven’t been tracked. Absence of evidence is not evidence of absence. Thus, the VAERS numbers should be viewed as a very low “floor” of the numbers and types of adverse events from COVID-19 inoculations that exist in the real-world.

A1-a2 Global analysis

We used 2019 death statistics from CDC to start the analysis. According to search results from CDC Wonder [104] obtained 11 June 2021, there were 2,117,332 deaths from all causes for people aged 65+ in the United States in 2019. Assuming uniformity throughout the year, there would have been 882,000 deaths occurring the first five months of the year, and that number will be used as the expected deaths for the first five months of 2021. From the same source, the population estimate is 54,000,000 for the 65+ age range. From CDC COVID-19 data tracker, the number of people 65+ vaccinated with at least one dose is 44,000,000 [24].

For those who were inoculated somewhere in the time frame 1 January 2021 to 31 May 2021, the number who would have been expected to die in the period from inoculation to 31 May will be a function of the duration of this period. For example, if all 44,000,000 people had been fully inoculated on 1 January 2021, then the number expected to die post-inoculation from non-COVID-19 inoculation causes would be simply $(44,000,000 / 54,000,000) \times 882,000$, or 723,000 deaths. Conversely, if all 44,000,000 people had been fully inoculated on 31 May 2021, then the number expected to die post-inoculation from non-COVID-19 inoculation causes would be extremely small [24].

For an accurate estimation of the number expected to die post-inoculation from non-COVID-19 causes, one would need to integrate the time between inoculation and 31 May over the inoculation temporal distribution function. For present purposes, we will do a very rough approximation by modeling the inoculation distribution function as a delta function occurring at a mean temporal location. In other words, we compress all inoculations an individual receives into one, identify the mean temporal location from the actual inoculation distribution function, and compute the expected deaths based on the distance from 31 May to the temporal mean point.

From a graph of inoculation trends in the CDC data tracker [101] the distribution appears to be non-symmetrical pyramidal, rising to a peak in mid-April. This is slightly over the 2/3 point in the five-month range of interest. We will approximate the mean time point as 2/3 of the distance.

Table A1 displays the mean time normalized to the five-month study window vs potential deaths from COVID-19 inoculation (not expected from prior census data) normalized to the deaths expected from prior census data. Each cell represents the percent of deaths reported in VAERS following inoculation relative to total deaths (number of deaths expected from prior census data plus number of deaths following COVID-19 inoculation not contained in the expected death group). The model on which the table is based is as follows: there are two classes of deaths for the period following COVID-19 inoculation. One is the deaths expected from prior census data, and the other is deaths attributable mainly to COVID-19 inoculation. There would be potentially substantial overlap between the two in this age group (and perhaps other age groups as well). We assume that we can tag those individuals who would be expected to die based on prior census data. The remaining deaths attributable to COVID-19 inoculation not contained within the tagged group are classified as potential COVID deaths in Table A1.

Consider the cell (2/3,0). The mean time is about mid-April 2021 and the only deaths occurring are those expected (some may have died because of the inoculation, but they were sufficiently ill that they would have died during that period without the inoculation). There were 723,000 expected deaths and 3560 reported, yielding a ratio of deaths reported in VAERS to actual deaths of ½%.

Consider the cell (1/2,1). The mean time would have been about mid-March 2021 and the inoculation distribution would have resembled an isosceles triangle. The total deaths occurring are those expected and an equal number whose deaths were attributed to COVID-19 inoculation but did not overlap with those in the tagged expected group (there still could have been some/many in the latter group that may have died because of the

inoculation, but they were sufficiently ill that they would have died during that period without the inoculation). There were 724,000 total deaths that occurred during that period and 3560 reported, yielding a ratio of deaths reported in VAERS to actual deaths of $\frac{1}{200}$. [3]

So, according to Table A1, focusing on the parameter most closely reflecting the actual inoculation distribution (2/3), the reporting percentages of actual to total are about 1%. This mirrors the Harvard Pilgrim study results (referenced in our vaccine safety study) which were obtained through an entirely different empirical approach [4]. At least for deaths reporting, there appears to be an approximately two order of magnitude difference between actual and reported deaths in VAERS.

Table A1 used two parameters to examine a broad spectrum of possible results, the mean time and the number of deaths solely attributable to COVID-19 inoculation. The mean time parameter was fairly well known and constrained in interpretation, because it was based on an empirical inoculation distribution function. The number of deaths solely attributable to COVID-19 inoculation is completely unknown.

As will be shown in the next section, the numbers of deaths reported in VAERS are strongly related to the inoculation date by clustering, but those who died might also have been those who would have died anyway because they were expected to die. There were probably some of each in that group reported. But we have no idea of the total number whose death could be directly attributed to COVID-19 inoculation and who were not in the group expected to die. For all we know, there could have been ten million people in that group, and only an extremely small fraction of that total group was reported in VAERS.

Suppose, for example, that the actual number of deaths reported in VAERS came from two groups: 90 % were from the inoculation-attributable death group and 10 % were from the expected death group. Assume there is no overlap between the two groups. In that case, what VAERS shows is not that 1% of actual expected deaths were reported, but rather that 1/10 of one percent of the expected deaths were reported. If that metric is used as the standard to scale up to total deaths, then the number in the actual inoculation-attributable death group is not 100 times the VAERS reported deaths, but rather 1000 times the VAERS-reported deaths! The point is we can't "reverse-engineer" the reported VAERS death numbers to get the actual inoculation-attributable deaths because it depends on the unknown contribution of each of the two groups (expected deaths and inoculation-attributable deaths) to the VAERS reported deaths, and we can't separate those out.

All this analysis shows is that, at best, only about 1% of the number expected to die was reported, and because the number reported in VAERS included deaths from both groups, the fraction from each actual group of deaths could not be determined. Realistically, we may have to wait until mid-2022, when the 2021 total deaths for each age group are finalized, to ascertain whether we can see increases in all-cause mortality that could have come from the inoculation-attributable deaths.

A1-a3 Local Analysis

Another way of estimating VAERS reporting efficiency is to perform a local analysis, focused on clustering about date of COVID-19 inoculation. For the 65+ demographic, the post-inoculation deaths cluster near the vaccination date, providing evidence of a **strong link to the inoculation**.

Following the approach in the first section of this appendix, we calculate the deaths expected in any ten-day period based on 2019 pre-COVID-19 death statistics. For the inoculated group, the number of deaths expected for any ten-day period are (2,117, 332 deaths/per year) x (44,000,000/54,000,000 fraction of population in age range inoculated) x (10/365 fraction of year), or 47,270 deaths.

BEST-CASE SCENARIO

Consider the ten days following inoculation (including day of inoculation). Approximately 2,000 deaths were reported in VAERS. Assume hypothetically that all these deaths were in the expected category; this can be viewed as a *best-case scenario*. In this *best-case scenario*, where the concentration of deaths is the highest and is normalized to the expected number of non-COVID-19 inoculation deaths (excluding deaths due solely to COVID-19 inoculation), 2,000/47,270 % of actual deaths (inoculation-related or not), or 4.23%, are reported in VAERS. Thus, at best, VAERS is underreporting by a factor of 20.

Suppose in that ten-day interval there had been 10,000 deaths that could be directly attributed to COVID-19 inoculation in addition to the expected deaths. This would have given a ratio of 2,000/57,270 actual total deaths, or 3.5 % reported in VAERS. This latter approach requires less assumptions than the former approach, but still yields results of only a few percent actual deaths reported in VAERS.

The Harvard Pilgrim electronic tracking study of post-vaccination events reported to VAERS performed in 2010 [4] showed a 1 % reporting rate for a thirty-day period. In the present case, 2900 post-inoculation deaths were reported to VAERS within thirty days of inoculation, or 82 % of total deaths for the 65+ demographic. Substituting thirty days for ten in the above computation yields 141,810 expected non-COVID-19 post-inoculation deaths for the thirty-day period, or 2% that are reported in VAERS. The Harvard study used an electronic system that automatically tracked every event that occurred, no matter how small. Because of the effort (time and cost) required to submit event reports to VAERS, we suspect that only the more serious events, such as death, would be reported, and even in this case, the numbers reported are miniscule.

We also did an analysis for sixty days post-inoculation. In the present case, 3300 post-inoculation deaths were reported to VAERS within sixty days of inoculation, or 93 % of total deaths for the 65+ demographic. Substituting sixty days for ten in the above computation yields 283620 expected non-COVID-19 post-inoculation deaths for the thirty-day period, or 1.2 % that are reported in VAERS. Remember, this normalization is based only on expected deaths. If 100,000 deaths attributable mainly to the COVID-19 inoculation beyond those that overlapped with the expected group occurred during this period, then the denominator would have to be increased by 100,000, yielding a VAERS reporting rate of 0.86 %.

Thus, both the global and local analyses, and the Harvard Pilgrim empirical analysis, are converging on the same two orders-of-magnitude difference between the actual number of deaths that occurred in the USA and those reported in VAERS. Depending on how many people have really died as a result of the COVID-19 inoculation, this reporting rate could well be a fraction of a percent!

A1-a3a Local Clustering Analysis

We end this appendix with one more example from the local analysis. Some background perspective is required. In the buildup to the pandemic (putting aside the issue of high false positives from PCR tests run at high numbers of amplification cycles), almost anyone who died **with** COVID-19 was assumed to have died **from** COVID-19, irrespective of the number of potentially lethal comorbidities they had. The CDC admitted later that about

94 % of the deaths attributed to COVID-19 would ordinarily have been attributed to one of the comorbidities.

For this example, we adopt a similar philosophy for the COVID-19 inoculations. People in the 65+ demographic who have died following inoculation are divided into two groups: those who died **from** the inoculation and those who died as **expected** based on pre-COVID-19 death data. The two groups range from being entirely separate to completely overlapping. We will examine two cases: entirely separate and completely overlapping.

How are the members of each group determined? The death **from** inoculation group consists of those whose deaths cluster significantly around the date of inoculation. The deaths expected group are the number who would have died in the absence of COVID-19. We allow for overlap, where each person who died can be double-valued (a member of both groups), but not double-counted.

To obtain a relatively precise estimate of expected deaths, we would want to select a region of time where the distribution function has substantially leveled off. From Fig. A1, the thirty-sixty-day range appears reasonable. However, there is a time issue here. Given the lag time in data reported by VAERS, most of the data in this range will probably have come from inoculations in January and February, and early-mid March, approximately 35 percent of the total inoculations. Therefore, we could multiply the thirty-sixty-day average number of deaths by 3 to obtain 40 expected deaths per day. An even simpler way to estimate the expected deaths reported in VAERS is to use the 15–30-day average shown, which will represent most of the range. This value is 37, which is close to the 40 obtained with the above approximation. This analysis should be re-run in three-four months, when more of the long-range data has been filled in.

Table A2 shows the results of our analysis. As stated previously, two separate cases were analyzed: completely separate groups and completely overlapping groups. Two values of daily expected deaths were used: the 37 as described above, and 20 to account for potentially lower expected death reporting when the VAERS data has filled in more completely.

Thus, based on the deaths reported in VAERS following COVID-19 inoculation, and assuming the inoculation-related deaths are reported in the same ratio as expected deaths, the actual number of deaths strongly related to the COVID-19 inoculation should be scaled up by factors of 100–200. For the broadest definition of VAERS coverage provided by CDC Wonder, which includes the USA and all territories, protectorates, and possessions, the total deaths following COVID-19 were 5200 in early June 2021. Using our scaling factors, this translates into somewhere between one-half million and one-million deaths, and this has not taken into account the lag times associated with entering data into VAERS. Compared with the 28,000 deaths the CDC stated were due to COVID-19 and not associated morbidities for the 65+ age range, the **inoculation-based deaths are an order-of-magnitude greater than the COVID-19 deaths!** It should be remembered these are only the **very-short-term inoculation-based deaths**, and could increase dramatically if mid- and long-term adverse effects come to fruition.

We end this appendix with an even more unsettling possibility. The main assumption upon which the results in Table A2 were based is that the post-inoculation temporal distribution function shown in Fig. A1 could be divided into two regions. The strongly varying region originating from the inoculation date reflected deaths from the inoculation, and the essentially flat region that followed reflected expected deaths (that flat region also started at the inoculation date, and formed the base on which the highly varying region is positioned). This model excludes the possibility that deaths from the inoculation extend well beyond the limits of the highly varying region.

We know in general this is not true. There can be lag effects such as ADE in the Fall viral season, and longer-term effects such as autoimmune diseases. We postulate that there are other effects from the inoculation that could result in the same flat death profile as that for expected deaths.

Consider the following. Some of the damage we have seen following the inoculations in VAERS includes coagulation/clotting effects and neurological effects of all types [63]. If these effects are not lethal initially, they raise the level of dysfunction. Thus, platelet aggregation has increased to a new base level, and micro-clots have raised the probability of serious clots forming from other lifestyle factors [105]. Death of specific neurons can increase the risk of Alzheimer's disease or Parkinson's disease, and can accelerate the onset of these and many other diseases. Thus, the adverse impacts of the COVID-19 inoculations could be viewed as raising the level of expected deaths in the future. Any deaths of this nature reported in VAERS would need to be viewed as inoculation-driven, and the expected deaths used in the computations would be reduced accordingly.

Consider Table A3 below. The “expected deaths reported” have been reduced below their counterparts in Table A2 to illustrate parametrically how the total inoculation-based deaths would change from VAERS reporting if this baseline effect is operable. While Table A2 used values of 37 and 20 for expected deaths, Table A3 uses values of 10 and 15.

Thus, if the baseline of the host for coagulation/clotting, inflammation, hypoxia, neurodegeneration, etc., has been raised by the inoculations, translating into an increase in expected deaths and accelerated deaths, then it is entirely plausible that the VAERS death numbers reflect over a million deaths from COVID-19 inoculations so far. These are very short-term-effects only, and time will tell whether the large potential waves of ADE-driven deaths and autoimmune-driven deaths come to pass.

Appendix B

DETAILED ANALYSIS OF MAJOR COVID-19 INOCULANT CLINICAL TRIALS

A2-a Clinical Trials in the Mainly Adult Population

Definitions. *Efficacy* is the degree to which a vaccine prevents disease, and possibly also transmission, under ideal and controlled circumstances – comparing a vaccinated group with a placebo group [106].

Effectiveness refers to how well a vaccine performs in the real world [107]

Relative Risk (RR) is computed by dividing the percentage of patients that contracted disease in the vaccine arm by the percentage of patients that contracted disease in the placebo arm.

Relative Risk Reduction (RRR) is computed by subtracting the RR from 1.

Absolute Risk Reduction (ARR) is computed by subtracting the percentage that contracted disease in the vaccine arm from the percentage that contracted disease in the placebo arm.

Absolute Risk = probability = incidence.

Cumulative Incidence represents the number of new cases in a period of time / population at risk.

Incidence Density is the number of new cases of a given disease during a given period in specified population; also, the rate at which new events occur in a defined population.

Immunogenicity is the ability of a molecule or substance to provoke an immune response or the strength or magnitude of an immune response. It can be a positive (wanted) or negative (unwanted) effect, depending on the context.

Immune Response is an integrated systemic response to an antigen (Ag), especially one mediated by lymphocytes and involving recognition of Ags by specific antibodies (Abs) or previously sensitized lymphocytes [108]

Safety data for Pfizer and Moderna trials:

There were two major COVID-19 inoculant clinical trials: Pfizer/BioNTech and Moderna.

The Pfizer clinical trials were titled officially “a phase 1/2/3, placebo-controlled, randomized, observer-blind, dose-finding study to evaluate the safety, tolerability, immunogenicity, and efficacy of sars-cov-2 rna vaccine candidates against covid-19 in healthy individuals” [98]. The “Actual Study Start Date” was 29 April 2020, the “Estimated Primary Completion Date” was 2 November 2020, and the “Estimated Study Completion Date” is 2 May 2023. Thus, the mass inoculation rollout so far has been conducted in parallel with the Pfizer Phase III Clinical Trial. For all practical purposes, the mass global inoculation of the Pfizer inoculant recipients can be considered Phase III 2.0 of the Clinical Trials! The inclusion criteria for the official Phase III Clinical Trials incorporated (as stated in the title and in the protocol document) healthy individuals, while the criteria for mass inoculation went well beyond healthy individuals. In essence, we have an official Phase III Clinical Trial with 73,000+ healthy individuals, and an unofficial Phase III Clinical Trial with billions of individuals covering a wide spectrum of health levels [98].

The Pfizer Phase III trials were initiated July 2020, the efficacy data were submitted to the FDA for EUA approval in November 2020, and FDA approval was granted in December 2020. Six deaths occurred in the Pfizer trial, two in the inoculated group and four in the placebo group (which received saline) [33]. The two inoculated, both over the age of 55, died of cardiovascular causes. One died three days after inoculation and the other died 62 days after inoculation [109]. These two deaths were comparable (in frequency and cause) to placebo group deaths and perhaps more importantly, similar to the general population at that age. In the case of Moderna, there were 13 deaths, six in the inoculated group, seven in the placebo group (normal saline placebo, a mixture of sodium chloride in water 0.90 % w/v) at 21–57 days after the inoculation ([103]b).

In a report by the Norwegian National Medicines Association, published on 15 January 2021, there were 23 elderly people (all over the age of 75 and frail) in nursing homes, who died at various intervals from the time of inoculation with mRNA inoculant. The report then suggested that, following the assessment, 13 of the 23 deaths would have been a direct result of the side effects of inoculation. It is possible that the other 10 deaths were post-inoculation, but not directly related to side effects, so not necessarily related to the inoculant itself [109].

It is no surprise that frail elderly people can be fatally destabilized by adverse reactions associated with post-inoculation inflammation, which in a young adult would have been considered minor. It is also no surprise that frail elderly people with comorbidities can be fatally destabilized from COVID-19 infection, which in a young adult or child would have been considered minor. A frail elderly person can be fatally destabilized by a simple coughing fit! This does not mean that these deaths are not events that need to be taken very seriously; on the contrary, if confirmed, they should guide inoculation policies in this category of patients from now on. Specifically, each case should be carefully assessed and an inoculation decision made based on the risk-benefit ratio [110].

In light of these data, the question may arise as to why there were no inoculant-attributed deaths in clinical testing of inoculants. The answer is that neither Pfizer nor Moderna included frail patients and included only a small number of very elderly patients - those over 75 accounted for 4.4 % of the total tested for Pfizer and 4.1 % for Moderna. While they could not in fact determine a causal relationship between inoculation and death, they also could not rule out that the inoculations had accelerated the deterioration of the condition of those patients [33].

Effectiveness data

As defined previously, the effectiveness of a vaccine lies in its ability to prevent a particular disease. If designed, tested, and administered correctly, authorized vaccines are effective in preventing disease and protecting the population. Like medicines, vaccines are not 100 % effective in all vaccinated people. Their effectiveness in a person depends on several factors. These include: age; other possible diseases or conditions; time elapsed since vaccination; previous contact with the disease.

To be declared safe and effective, a vaccine against COVID-19 infection must pass a series of tests and must meet regulatory standards, like any other vaccine or drug approved on the pharmaceutical market [111].

Regarding Pfizer and Moderna trials:

The first important note is that maximum efficiency does not come immediately, because the immune response needs time.

In the case of Pfizer, the chance of developing COVID-19 becoming virtually the same between the inoculated and placebo groups increases up to 12 days after the first inoculation, then gradually decreases for those inoculated. The inoculum efficiency between the first and second doses is 52 % [106], but it is unclear what long-term protection a single dose provides. After the second dose, the effectiveness rises to 91 % and only beyond 7 days after the second dose is 95 % reached. However, the ARR for the latter case is only 0.7 % [112]. In other words, within 12 days after the first dose we can get COVID-19 as if we had not been inoculated. Another important aspect is that we still do not know if the Pfizer inoculant prevents severe cases. Seven days after the second dose, there were four severe cases of COVID-19, one in the inoculated group and three in the placebo group, which is far too low for us to make a statistical assessment. There are as yet no data on the inoculant’s ability to prevent community transmission. Realistically, the effectiveness of the inoculant in preventing asymptomatic cases has not been tested.

For Moderna, the effectiveness is only 50 % in the first 14 days after the first dose and reaches a maximum of 92.1 % on the edge of the second dose (ARR of 1.1 %, which is 28 days, not 21 as in the case of Pfizer) [46]. Moderna also did not test the long-term efficacy of a single dose. Then, 14 days after the second dose, the effectiveness rises to 94.1 %, with the amendment being an average. Thus, in people over 65 it was 86.4 %, compared to 95.6 % in the 18–65 age range ([103]). It is a minor difference from Pfizer, which declares equal efficiency in all age groups. An important observation is the statement by Moderna that their inoculant prevents severe cases, but only more than 14 days after both doses [126]. All 30 severe cases were in the placebo group, suggesting 100 % efficacy. After a single dose, there were two severe cases among those inoculated and four in the placebo group [33]. Last, but not least, unlike Pfizer, Moderna tested the presence of asymptomatic infection by RT-PCR before the second dose: there were 39 asymptomatic cases in the placebo group and 15 in the inoculated group. It is difficult to draw definitive conclusions due to the small number of cases. These data suggest that the inoculant reduces, but does not prevent, asymptomatic transmission [126].

A2-b Ongoing Clinical Trials in the Pediatric Population

In a recent Phase III study performed in the pediatric population, Comirnaty (Pfizer) was tested on a group of 2,260 children, aged 12–15, years who had no previous clinical signs of SARS-CoV-2 infection. They were divided into two groups, one placebo (978 children) and the other with Comirnaty (1005 children). In the Comirnaty group, of the 1005 children in whom the serum was administered, none developed COVID-19 disease,

compared with the placebo group in which 16 children in 978 had clinical signs of the disease. The Pfizer study showed that the children's immune response was comparable to the immune response in the 16–25 age group (measured by the level of antibodies against SARS-CoV-2). It could be concluded that in this study, Comirnaty was 100 % effective in preventing SARS-CoV-2 infection, although the actual rate could be between 75 % and 100 %. [63]. The results will be evaluated by the FDA and EMA.

The predictive value (for mass inoculation results) of the Comirnaty trial for the children aged 12–15 years is questionable. There were 1005 children who were inoculated with Comirnaty. Using the rule of three in statistics, where to obtain a predictive result of 1/x with high confidence (e.g., 1 in a thousand), 3x participants are required for the test sample. For the Comirnaty test sample of 1005, an adverse event of about 1/340 could be detected with high confidence.

What does this mean in the real world? In the USA, there are approximately 4,000,000 children in each age year for adolescents. Thus, there are 16,000,000 children in the 12–15 age band. A serious adverse event, including death, that occurred at a 1/800 rate would not be detectable with high confidence in a sample of 1005 people. Thus, the results of the trials for 1005 children would allow for 20,000 children to suffer a non-trial-detected serious adverse event, including death, when extrapolated to potential inoculation of all children in the 12–15 age group! Given that the risk of contracting COVID-19 with serious outcomes is negligible in this population, ***proceeding with mass inoculation of children 12–15 years old based on the trials that were conducted cannot be justified on any cost-benefit ratio findings.***

Also, the evaluation of efficacy in children aged 6 months to 11 years has recently begun and continues [24]. Pfizer began enrolling children under 12 to evaluate the COVID-19 mRNA inoculant. Also, Comirnaty will be evaluated in a new clinical trial for children aged 6 months to 11 years. In the first phase, the study will enroll 144 people and will identify the required dose for 3 age groups (6 months - 2 years, 2–5 years and 5–11 years). After a 6-month follow-up period, the parents/guardians of children in the placebo group will have the option of allowing their children to receive the inoculation. The results are expected in the second half of 2021.

Moderna also began a study to evaluate the mRNA inoculation in children aged 6 months to 12 years. Both companies have already started testing vaccines in 14-year-olds. In the US, children make up 23 % of the population [113].

Data on the risks and benefits of possible inoculation in children and adolescents are currently insufficient and no recommendation can be made. Specifically, mass child inoculations cannot be recommended until the benefits and minimal projected risks have been demonstrated in a sufficiently large trial to provide confidence that mass inoculation will have an acceptable level of adverse effects relative to the demonstrated benefits. On the other hand, children often experience COVID-19 asymptotically, and the SARS-CoV-2 infection progresses harmlessly. Currently, in the context of limited inoculation capacities, there is no indication of urgent inoculation of children. In the context of declining incidences of SARS-CoV-2 infections and demonstrated low serious adverse effects from COVID-19 infections for children and adolescents, the issue of inoculating children and adolescents is no longer paramount. Authorized forums must calculate what prevails for children and adolescents: the benefits or risks.

A2-c Clinical Trial Issues for Other Categories

Although people with severe comorbidities such as obesity or oncological conditions were not initially included in the clinical trials that led to obtaining EUA, they were included in subsequent studies, some even ongoing. In their case, it seems that the efficacy was lower compared to the results obtained initially with healthy adults.

The interim analysis of data from a prospective observational study indicates the need to prioritize cancer patients for timely (respectively 21-day) booster administration in the case of administration against COVID-19 with Comirnaty. According to the study, the effectiveness of a single dose of Comirnaty among cancer patients is low, but the immunogenicity of patients with solid cancers increased at 2 weeks after receiving the second dose of inoculant 21 days after the first dose. Because the study was conducted in the UK, participants inoculated before December 29, 2020 received two doses of Comirnaty 21 days apart, and those who started the regimen after this date were scheduled to receive a second dose of Comirnaty 12 weeks apart. first administration. Thus, the study continues to collect data from participants receiving Comirnaty 12 weeks after the first dose.

Approximately 21 days after a single dose of Comirnaty, the proportion of study participants who tested positive for anti-S IgG antibodies was [114]:

- 94 % among healthy participants;
- 38 % among patients with solid cancers;
- 18 % among patients with hematological cancers.

Among participants who received the 21-day booster and for whom biological samples were available two weeks after the second dose, the following proportions of confirmation as seropositive for anti-S IgG antibodies were reported [114].

- 100 % of healthy participants, compared to 86 % of the same group of participants who did not receive the second dose;
- 95 % of patients with solid cancers, compared with 30 % of the same group of participants who did not receive the second dose;
- 60 % of patients with hematological cancers, compared with 11 % of the same group of participants who did not receive the second dose.

Two other studies suggest low immunogenicity in the context of Comirnaty administration in patients with hematological cancers. In one study, patients with chronic lymphocytic leukemia (CLL) had significantly reduced immune response rates to COVID-19 inoculation compared to healthy participants of the same age. Considerable variations in post-administration immune response have been reported among patients with CLL depending on their stage of treatment

The effectiveness of Comirnaty administration was also evaluated in elderly patients with multiple myeloma [115]. 21 days after administration of the first dose of Comirnaty inoculation (before receiving the second dose), 20.5 % of patients with multiple myeloma compared to 32.5 % of control participants had neutralizing antibodies against SARS-CoV-2. One possible explanation could be that the therapy negatively affects the production of antibodies. However, the administration of the second dose is important for the development of the immune response in these patients [115].

Preliminary data from the v-safe surveillance system, the v-safe pregnancy registry and the Vaccine Adverse Event Reporting System (VAERS) do not indicate obvious safety signals regarding pregnancy or the associated neonatal implications with mRNA injections against COVID-19 *in the third trimester of pregnancy* [3]. The study included 35,691 pregnant women [116]. Compared to non-pregnant women, pregnant women reported more frequent pain at the injection site as an adverse event associated with mRNA COVID-19 vaccination, and headache, myalgia, chills, and fever were reported less frequently. In the context where initial clinical trials of messenger RNA-based inoculants have not evaluated the efficacy and safety of innovative technology among pregnant women, these preliminary data *from the third trimester only* help to inform both pregnant women and health professionals in making the inoculation decision. However, continuous monitoring through large-scale longitudinal studies remains necessary to investigate the effects associated with maternal anti-COVID-19 inoculation on mothers, pregnancies, the neonatal period and childhood.

On the other hand, the inoculation landscape has become even more complex due to new circulating viral variants. Authorities recommend genomic surveillance and adaptation in order to be effective against new variants (different from the initial strain that was detected at the end of 2019). The efficacy data of Comirnaty against circulating viral variants are highlighted in a very recent study in Israel which showed that the protection offered by the Pfizer inoculant against variant B.1.351 (first identified in South Africa) is lower [112].

The results have not yet been submitted to the expertise of specialists. The study compared nearly 400 adults who were diagnosed with COVID-19 at least 14 days after receiving one or two doses of the inoculant to the same number of uninoculated people. It was found that B.1.351 represents approximately 1 % of the COVID-19 cases studied. But among patients who received two doses of inoculant, the prevalence rate of the variant was eight times higher than in those not inoculated - 5.4 % compared to 0.7 %. This suggests that Comirnaty is less effective against variant B.1.351, compared to the original variant and variant B.1.1.7. The limitation of the study comes from the small number of adult people studied, but it is an alarm signal for a closer study of these cases. In addition, it seems that at present, the prevalence of this variant is low. On the other hand, in early April, Pfizer announced that according to the results of the Phase III study in the adult population, Comirnaty also demonstrated 100 % efficacy in the prevention of Covid-19 disease caused by SARS-CoV-2 variant B.1.351 (9 cases of Covid-19 were recorded, all in the placebo group, and after sequencing it was found that 6 had been determined by B.1.351) [117].

Appendix C

MID- AND LONG-TERM ADVERSE EFFECTS FROM PRIOR VACCINES

A 2020 study emphasizing mid- and long-term adverse effects from prior vaccines [4] identified the following sixteen mid- and longer-term potential issues concerning vaccines. These include:

- 3.1. Antibody-Dependent Enhancement** (where enhanced virus entry and replication in a number of cell types is enabled by antibodies);
 - 1a. Intrinsic Antibody-Dependent Enhancement (where non-neutralizing antibodies raised by natural infection with one virus may enhance infection with a different virus);
 - 1b. Immune Enhancement (enhancement of secondary infections via immune interactions);
 - 1c. Cross-Reactivity (an antibody raised against one specific antigen has a competing high affinity toward a different antigen.);
 - 1d. Cross-Infection Enhancement (infection enhancement of one virus by antibodies from another virus);
- 3.2. Vaccine-Associated Virus Interference** (where vaccinated individuals may be at increased risk for other respiratory viruses because they do not receive the non-specific immunity associated with natural infection);
 3. Vaccine-Associated Imprinting Reduction (where vaccinations could also reduce the benefits of ‘imprinting’, a protection conferred upon children who experienced infection at an early age)
 4. Non-Specific Vaccine Effects on Immune System (where previous infections can alter an individual’s susceptibility to unrelated diseases);
 5. Impact of Infection Route on Immune System (where immune protection can be influenced by the route of exposure/delivery);
 6. Impact of Combinations of Toxic Stimuli (where people are exposed over their lifetime to myriad toxic stimuli that may impact the influence of any vaccine);
 7. Antigenic Distance Hypothesis (negative interference from prior season’s influenza vaccine (v1) on the current season’s vaccine (v2) protection may occur when the antigenic distance is small between v1 and v2 ($v1 \approx v2$) but large between v1 and the current epidemic (e) strain ($v1 \neq e$).);
 8. Bystander Activation (activation of T cells specific for an antigen X during an immune response against antigen Y);
 9. Gut Microbiota (Impact of gut microbial composition on vaccine response);
 10. Homologous Challenge Infection Enhancement (the strain of challenge virus used in the testing assay is very closely related to the seed virus strain used to produce the vaccine that a subject received);
 11. Immune Evasion (evasion of host response to viral infection);
 12. Immune Interference (interference from circulating antibody to the vaccine virus);
 - 12a. Original Antigenic Sin (propensity of the body’s immune system to preferentially utilize immunological memory based on a previous infection when a second slightly different version of that foreign entity (e.g. a virus or bacterium) is encountered.);
 13. Prior Influenza Infection/Vaccination (effects of prior influenza infection/vaccination on severity of future disease symptoms);
 14. Timing between Viral Exposures (elapsed time between viral exposures);
 15. Vaccine-Associated Enhanced Respiratory Disease (where vaccination enhances respiratory disease); and
 16. Chronic Immune Activation (continuous innate immune responses).

Most of these events are not predictable, and most, if not all, would be possible for the COVID-19 inoculant in the mid- and long-term for adults and children.
- 3.3. Mid- and Long-Term Serious Illnesses for Adults and Children from Past Vaccines**

As stated in the aforementioned 2020 study on vaccine safety: “The biomedical literature is very sparse with studies on long-term vaccine effects, especially long-term adverse effects. Large numbers of people and long periods of time are required to identify such adverse events, and draw statistically-valid connections between vaccinations and disease. These efforts would be very resource-intensive, and there appears to be little motivation among the vaccine producers and regulators to make these resources available for such studies. Thus, the following examples reflect the extremely small tip of an extremely large iceberg of long-term adverse vaccine effects.” [4]

“The two main categories of diseases reported in the biomedical literature triggered by past vaccinations are “Autoimmune (e.g., Systemic Lupus Erythematosus, Psoriasis, Arthritis, Multiple Sclerosis, Hepatitis, Uveitis, Pseudolymphoma, Guillain-Barre Syndrome, Thrombocytopenic Purpura, etc.) and Neurological (e.g., Central Demyelinating Diseases, Developmental Disability, Febrile seizures, Narcolepsy, Encephalomyelitis, Autonomic Dysfunction, etc.). Others include Diabetes, Gastrointestinal, Joint-related, Necrobiotic Granuloma, Neutropenia, Pulmonary Fibrosis, etc.”

“Vaccinations may also contribute to the mosaic of autoimmunity [118]. Infrequently reported post-vaccination autoimmune diseases include systemic lupus erythematosus, rheumatoid arthritis, inflammatory myopathies, multiple sclerosis, Guillain-Barre syndrome, and vasculitis”.

“Studies have demonstrated a latency period of years between Hib vaccination and diabetes mellitus, and between HBV vaccination and demyelinating events [118] latency periods can range from days to years for postinfection and postvaccination autoimmunity”.

“Most of the extra cases of IDDM appeared in statistically significant clusters that occurred in periods starting approximately 38 months after

immunization and lasting approximately 6–8 months. Immunization with pediatric vaccines increased the risk of insulin diabetes in NOD mice. Exposure to HiB immunization is associated with an increased risk of IDDM.” [4]

Thus, even the sparse past vaccine studies that went beyond the short-term showed latency effects of serious diseases occurring **three years or more** post-vaccination.

Appendix D

COST-BENEFIT ANALYSIS OF COVID-19 INOCULATIONS

This appendix presents a non-traditional *best-case scenario* pseudo-cost-benefit analysis of the COVID-19 inoculations for the 65+ demographic in the USA. In this incarnation of a cost-benefit analysis, the costs are the number of deaths resulting from the inoculations, and the benefits are the lives saved by the inoculations. The time range used was from December 2019 to end-of-May 2021.

It is assumed, in this best-case scenario, that all the deaths truly attributable to COVID-19 only could have been eliminated by the inoculations given (about half the USA population has been inoculated at this time) [88,119]. It can be conceptualized as the vaccines having been available in Summer 2019, and subsequent administration having eliminated all the deaths experienced that were truly attributable to COVID-19. If the cost-benefit ratio is **poor** for this *best-case scenario*, it will be **very poor** for any real-world scenario [120].

We will use Figs. 1 and 2 as starting points to conduct a cost-benefit analysis of COVID-19 inoculations for the most vulnerable demographic, those 65+. We start with the official government numbers for COVID-19 and post-inoculation deaths, and modify them to arrive at actual deaths resulting from COVID-19 and the inoculations. We compare the two numbers (appropriately normalized) to ascertain costs vs benefits.

As Fig. 1 shows, there are three age bands that comprise the 65+ demographic. We weight the COVID-19 deaths per capita in each band by the band's population, and divide the sum of these three products by the total 65+ population to arrive at an average COVID-19 deaths per capita of 0.0087 for the total 65+ demographic.

Fig. 2 contains two normalizations. First, the deaths were normalized by total inoculations given, not by people inoculated or people who had completed the full series of inoculations. We will retain the normalization by total inoculations given, since it will provide the **most conservative results** (largest denominator) for estimation purposes. Second, the deaths were normalized/restricted to those occurring within seven days post-inoculation. This normalization was done to compare across age bands, where the inoculations started at very different points in time. For the present cost-benefit purpose, where we are concentrating on the 65+ band, we remove this latter normalization, and include all post-inoculation deaths. Removing this normalization increases deaths per inoculation by about 40 % to a value of 0.000032, and offers a more credible comparison to the numbers from Fig. 1.

Thus, based on the CDC's official numbers, there are an average COVID-19 deaths per capita of 0.0087 and an average deaths per inoculation of 0.000032 for the 65+ demographic. The chances of a person 65+ dying from an inoculation relative to their chances of dying from COVID-19 are approximately 0.0037, or about 1/270, based on these official CDC figures.

However, as we have shown previously, three corrections to these numbers are required to convert them to real-world effects. First, as the Harvard Pilgrim study has shown and as our results in Appendix 1 confirm, VAERS is underreporting actual deaths by about two orders of magnitude. Applying this correction alone to the above 1/270 ratio changes the risk benefit to about 1/3. Second, as the CDC has stated, approximately 94 % of the COVID-19 deaths could have been attributed to any of the comorbidities these patients had, and only 6% of the deaths could actually be attributed to COVID-19. As we pointed out, if pre-clinical comorbidities had been included, this number of 6% would probably be decreased further. For **conservative** purposes, we will remain with the 6%. Applying this correction to the 1/3 risk-benefit ratio changes it to 5/1! Third, as a comprehensive survey of false positives from RT-PCR tests concluded: “evidence from external quality assessments and real-world data indicate enough a high enough false positive rate to make positive results highly unreliable over a broad range of scenarios” [127]. Because of the myriad RT-PCR tests performed in the USA to screen for/diagnose COVID-19 using different values for Ct and different procedures, a specific number for false positives cannot be obtained at this point in time. Again, these false positives would reduce the 6% number, perhaps substantially. And again, for **conservative** purposes, we will remain with the 6% number.

Thus, our **extremely conservative** estimate for risk-benefit ratio is about 5/1. In plain English, people in the 65+ demographic are five times as likely to die from the inoculation as from COVID-19 under the most favorable assumptions! This demographic is the most vulnerable to adverse effects from COVID-19. As the age demographics go below about 35 years old, the chances of death from COVID-19 become very small, and when they go below 18, become negligible.

It should be remembered that the deaths from the inoculations shown in VAERS are short-term only (six months for those inoculated initially), and for children, extremely short-term (one month) [3]. Intermediate and long-term deaths remain to be identified, and are possible from ADE, auto-immune effects, further clotting and vascular diseases, etc., that take time to develop. Thus, the long-term cost-benefit ratio under the *best-case scenario* could well be on the order of 10/1, 20/1, or more for all the demographics, increasing with decreasing age, and an order-of-magnitude higher under real-world scenarios! In summary, the value of these COVID-19 inoculations is not obvious from a cost-benefit perspective for the most vulnerable age demographic, and is not obvious from any perspective for the least vulnerable age demographic.

Appendix Da

PROBLEMS WITH TEST CRITERIA FOR DETERMINING COVID-19

Consider the criteria for determining whether an RT-PCR test result is positive for SARS-CoV-2. The CDC instruction (until 1 May 2021) specifies running the RT-PCR tests for 45 amplification cycles. Then, to interpret the data: when all controls exhibit the expected performance, a specimen is considered positive for SARS-CoV-2 if all SARS-CoV-2 marker (N1, N2) cycle threshold growth curves cross the threshold line within 40.00 cycles (< 40.00 Ct). The RNase P may or may not be positive as described above, but the SARS-CoV-2 result is still valid ([103]a).

Many false positives are possible in the upper part of this cycle threshold range, especially in areas of low prevalence. In particular, virus culture has been found to be unfeasible in cases with a Ct value exceeding 33. A prospective cohort study involving the first 100 COVID-19 patients in Singapore also showed that attempts to culture the virus failed in all PCR-positive samples with a Ct value >30” [121]. During mass testing in Germany, it was found “that more than half of individuals with positive PCR test results are unlikely to have been infectious” [122]. Another study

found that tests with low specificity (deriving from use of many cycles) cannot provide strong evidence for the presence of an infection [123]. A systematic review of PCR testing concluded “Complete live viruses are necessary for transmission, not the fragments identified by PCR. Prospective routine testing of reference and culture specimens and their relationship to symptoms, signs and patient co-factors should be used to define the reliability of PCR for assessing infectious potential. Those with high cycle threshold are unlikely to have infectious potential.” [89].

As skeptics have argued, in the buildup of the pandemic, the rapid increase in numbers of COVID-19 cases was due in part to the high values of cycle threshold used in the tests. Unfortunately, the true numbers of false positives will probably be unobtainable if an audit were performed, since these values are not reported with the test results: all currently-available nucleic acid tests for SARS-CoV-2 are FDA-authorized as qualitative tests, and Ct values from qualitative tests should never be used to direct or inform patient management decisions. Therefore, it is not good for laboratories to include Ct values on patient reports [124].

After mass inoculations started, a large number of “breakthrough” cases emerged, and a total of 10,262 SARS-CoV-2 vaccine breakthrough infections had been reported from 46 U.S. states and territories as of April 30, 2021 [18]; the number of reported COVID-19 vaccine breakthrough cases is likely a substantial undercount of all SARS-CoV-2 infections among fully vaccinated persons. The national surveillance system relies on passive and voluntary reporting, and data might not be complete or representative. Many persons with vaccine breakthrough infections, especially those who are asymptomatic or who experience mild illness, might not seek testing [18].

This negative outcome of increased “breakthrough” cases motivated the CDC to change a number of reporting and test procedures and issue new regulations for identifying and investigating hospitalized or fatal vaccine breakthrough cases starting 1 May 2021, stating: “For cases with a known RT-PCR cycle threshold (Ct) value, submit only specimens with Ct value ≤ 28 to CDC for sequencing. (Sequencing is not feasible with higher Ct values.)”. Thus, the Ct values for sequencing were lowered from the high false positive range allowed during the pandemic buildup to a limit that would eliminate many of these false positives in the ‘breakthrough case’ identification phase [101].

Subject: We should have faith in our school district to watch out for the best interest of our children DO NOT REQUIRE COVID VACCINES
Date: Monday, January 3, 2022 1:06:08 PM

External Email

Don't put our children at risk, it's not your right!

Quoting from 246-105-010: "The purpose of this rule is to protect children and the public against certain vaccine-preventable diseases. Under the authority of the board of health, this rule describes the immunization requirements of children attending schools and child care centers."

The facts are the current COVID vaccines do not prevent catching the disease, and therefore are ineligible for inclusion in the list of "vaccine-preventable" diseases. The current COVID "vaccines", as is demonstrated by the vast number of "breakthrough" cases, are not able to prevent COVID to a comparable level as actually effective vaccines for the section 030 listed diseases, but merely to be a pre-treatment for the disease that generally reduces the severity.

Compare and contrast the number of COVID breakthrough cases (and rates) to breakthroughs for those vaccinated against the diseases listed in 246-105-030. Who has heard of breakthrough cases of chickenpox?

Diphtheria? Rubella? Measles? Mumps? Pertussis? And the rest of the list, for that matter. The simple fact is, the number of "breakthrough" cases of the -030 currently listed diseases is so small as to be negligible –

it would be major local news of an outbreak of Measles or Mumps in our local schools, yet these are all but unheard of. Yet the number of COVID cases that breakthrough the current vaccines is significant.

Therefore, as a matter of definition, COVID is not a vaccine preventable disease. Compare and contrast COVID to one of the listed diseases with an actually effective vaccine - Mumps. According to the CDC,

there were only 139 cases in 2021.

Considering that the best available evidence as of this writing indicates that on average children suffer no worse from COVID than the normal seasonal flu, and considering the unknown potential long term side effects

of the current COVID vaccines, the risk-reward profile indicates negligible benefit to the children of Washington, while imposing unquantified potential risk upon them. Compare to the current policy for seasonal flu: Flu is an equal,

if not a greater risk to children (and never mind the ability of children to spread seasonal flu to adults) AND the seasonal flu vaccine risk profile is well known and low,

yet there is no mandate to vaccinate children for the seasonal flu. Yet, this Board is considering mandating a vaccine for a disease, COVID, that is equal or lower risk to children AND has a vaccine with an

unknown long term risk profile? That would be illogical and would indicate other non-fact based motivations for such a mandate.

I respectfully urge the board to not add COVID to the list of diseases in WAC 24-105-030.

I am opposed to making COVID-19 shots mandatory for school admission or childcare in our State for the following Reasons. This vaccine is still in early developmental stages and once you inject these kids that are at little to no risk of death from Covid, you cannot undo the side effects which are vastly unknown for years to come. Your actions now will determine your place in history as either compassionate or as a dictatorial medical tyrant. A tyrant that has no real concrete backing for your actions and god, as well as history will judge you accordingly. I say this to compel you to understand what your pushing on others, make your own medical decisions as should others make their own.

Subject: Christy-Listen What the FDA Advisory Board Says About Mandating COVID Vaccine for Children

External Email

Hello Christy,

I am writing as a concerned parent of two children in the Bellevue School District. Before you vote on whether or not to make this vaccine a requirement for school, I am asking you to listen to this 1- hour compilation of critical questions brought up by the FDA Advisory Board when deciding to approve Pfizer's COVID vaccine for 5-11 year old's. In case you are unable to listen, I have provided key points from the meeting below. Please note myself and thousands of other parents will be unenrolling our children if this is required to attend school. Before you vote - please make sure you are informed on the benefits and risks to our children.

Key Points from the FDA Advisory Board Meeting - Oct 26th:

***Link to 1-hour highlights video here.

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.youtube.com%2Fwatch%3Fv=qdhoBvRM&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7C8e2c2133933047eaffcf08d9d14c08d9%7C>>

- * Advisors do not recommend healthy children get this vaccine
- * Advisors do not recommend this vaccine be required to attend school
- * Doctors do not expect the vaccine to prevent infection
- * They have no data or expectations it will prevent transmission
- * Based on current data and modeling, the risks of the vaccine to children outweigh the benefits
- * Children's vaccine is based on the alpha variant and has little to no protection against Delta or Omnicron
- * Children's vaccine includes Tris (hydroxymethyl)aminomethane), a stabilizing agent, however the vaccines given during the clinical trials did not include this new ingredient so no one knows the potential risks to our children.

- * Advisors very concerned about increase in myocarditis and pericarditis especially in young boys
- * Approval was given based on the vaccine being available to immune compromised children

I will leave you with a quote from Dr. Eric Rubin

<<https://gcc02.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.hsph.harvard.edu%2Feric-rubin%2F&data=04%7C01%7CWSBOH%40SBOH.WA.GOV%7C8e2c2133933047eaffcf08d9d14c08d9%7C1>>
, an adjunct professor of immunology and infectious diseases at Harvard University and editor-in-chief of the New England Journal of Medicine. Referring to approving the Pfizer vaccine for 5-11 year olds, "We'll never know how safe it is until we start using it"

Thank you in advance,

LaRena Archer

I was very disappointed when I saw you are having a meeting regarding the above WACs on January 12, I would like to remind you of a few things:

forcing WA unvaccinated into "isolation in quarantine facilities" sounds very much like what Hitler/Germany did in WWII for the Jews for "their own good" ..sounds just like concentration camps and the WA residents will not take that sitting down!

as far as vaccination requirements for students, may I remind you of a few things,

Children are at an extremely low risk for Covid..

The 'vaccines' are still only EUA...(emergency use authorized)

There are no long-term studies to document any history of safety for children receiving these vaccines...

Studies document that vaccinated and unvaccinated can both transmit Covid, therefore apparently the vaccine does not stop the spread of the disease...

I encourage you to think very careful about these decisions, the changing science does not support what you are considering.

Sincerely,

Mariann Kirkland

Subject: Comments for consideration regarding COVID vaccine requirement for schools

External Email

Good morning,

I am providing comments for the DOH meeting to consider requiring the COVID-19 vaccine for schools. There is no evidence that these products prevent infection or transmission and their long term safety are still being studied. I urge you not to add this to the list of requirements for our children to have the benefit of attending school.

* Pursuant to the CDC, the fatality rate for children from COVID-19 nationwide is .00003% and the state average for Washington on a seven-day rolling basis is 0%. Accordingly, children are not warranted to be vaccinated for COVID-19. Fauci himself recently urged the public to consider the difference between children hospitalized WITH COVID as opposed to BECAUSE of COVID.

* Pursuant to the CDC, the CDC Director and Dr. Fauci in his New York Times November 12 interview, the COVID-19 vaccine will not prevent infection or transmission of the COVID-19 virus, nor will it prevent serious injury, hospitalization or death any longer. Therefore, the vaccine is no longer the best tool for prevention of transmission. It is now a medical treatment, at best, hence it cannot be mandated as treatments are a personal medical choice pursuant to the state and federal Constitutions.

* Pursuant to the FDA, the vaccine manufacturers, and multiple scientists across the nation and the world, these vaccines pose grave risks of severe myocarditis, blood clotting, and neurological damage to name a few, predominantly prevalent in adolescents. As such, the risks of taking the vaccine strongly and significantly outweigh the benefits especially as it pertains to the pediatric community.

I ask you, as a parent, to carefully consider the ramifications of a politically charged and short term decision that will have disastrous long term effects on children's health and the public school system of our state.

Attached here are videos relevant to the decision:

Subject: COVID vaccine for children

External Email

Please consider this message regarding COVID vaccines for children. This is sent with great respect and belief that you are looking out for the best of all people in Washington. I believe the Covid shots should absolutely NOT be a requirement for our children to attend school or childcare. As a reminder, children are at extremely low risk for Covid and the vaccines are still only EUA (emergency use authorized). I am not against vaccines as a whole. Other vaccines have saved many lives. In contrast, the COVID vaccine's effectiveness has been slight if any at all. This is a very good reason to not mandate the vaccine for our children in Washington.

Best regards,

Cari Foster

Please do NOT mandate the jab for all pre-school and school children. The science that drives these decisions changes constantly and hardly any agree. Please do not do this!

The following survey response is submitted:

1.

State Board of Health Meeting Date:

January 11, 2022

2.

Agenda Item or Issue:

WAC 246-100-070, 246-100-045m 246100-045

3.

Your Name:

Ann Sundstrom

4.

Do you have a professional title?

2. No

5.

Are you representing an organization?

2. No

6.

Address:

East Wenatchee, WA

7.

Email:

asundstrom92@gmail.com

8.

Phone Number (Include Area Code):

9.

Do you have any special expertise relevant to this topic?

1. Yes

Personal experience

10.

Are you testifying on a specific proposal under consideration by the board?

1. Yes

inclusion of Covid-19 in WAC rules as noted above

11.

Are you Pro or Con on the proposal?

2.

Con

I am completely against any of the proposal Covid Policies that are overarching and immoral. We stand against the proposed WAC's: WAC 246-100-070, WAC 246-100-045, WAC 246-100-040, WAC 246-100, WAC 246-105.

Sincerely,
Brandon L. Vo

I oppose WAC-246-100 that would expand any authority to involuntarily quarantine individuals against their will. I also oppose adding a C-19 vaccine to the WAC 246-105 required list of vaccines for children to attend school.
