To: The Washington State Board of Health Members
From: Dr. AnnRené Joseph

Subject: Petition for a New Rule Adoption Prohibiting the Addition to the Daycare or School Requirement any Emergency Use Authorization product or any licensed medical formulation that has not completed Phase III clinical trials unless specific pediatric hospitalization and death rates are reached.

Dear Board of Health Members:

We are requesting that the WA State Board of Health (BOH) adopt a new permanent rule prohibiting the Board from adding to the daycare and school requirements any drug under an Emergency Use Authorization (EUA) or any licensed product formulation that has not yet completed Phase III clinical trials unless pediatric hospital capacity in the state of Washington is greater than 50% and the pediatric death rate is >1% for the disease the drug or formulation is intended to prevent or treat.

This new rule request pertains to all avenues through which the Board has authority to add medical intervention requirements, including through regular or emergency rule-making. We are requesting this rule because the BOH has assembled a Technical Advisory Group (TAG) to consider the addition of COVID-19 mRNA vaccines to the list of immunizations required for children to attend daycare and school in WA state.

After more than two years of individual states in the US and countries all over the world analyzing and documenting the effects of Covid-19 infection on the population as well as the side effects and transmission of the virus, it has been demonstrated worldwide that children are at low risk for negative outcomes from Covid-19. The pediatric hospitalization and death rates resulting from the contraction of Covid-19 are low. **Mandating a Covid-19 vaccine under an EUA for children who are not at high risk for hospitalization or death from Covid-19 is unwarranted at this time.**

This new rule would affect and impact minor children and their parents and guardians in WA State. The Addendum below provides a list of resources to support this petition.

Please provide adequate time to present more information if requested.

Sincerely,

Dr. AnnRené Joseph

Addendum:

1. The CDC's best estimate of the infection fatality ratio for children ages 0-17 years is 0.00002, meaning that infected children have a 99.998% infection survivability rate. Source: www.cdc.gov/coronavirus/2019-ncov/hcp/planning-scenarios.html
2. COVID-19 Infection, Hospitalization, and Death By Age Group

5. Hospitalizations in 5-11 year-olds is the lowest for all pediatric age groups Hospitalizations in the 5-11 yo age has always been the lowest for all pediatric age groups since the start of the pandemic, at currently at 0.5 hospitalizations /100k persons per week. Cumulatively, there have been roughly 20 hospitalizations/100k over the entire course of the pandemic.
